**IMPEDANCE CONTROL DESIGN FOR ROBOT TASKS INVOLVING FREE AND CONTACT MOTION Ph.D. Thesis**

Shih-Tin George Lin 1992 134 p

Avail: Univ. Microfilms Order No. DA9235871

Robot motion can be classified into free and contact motion. A position controller is required for free motion and a position and force controller is required for contact motion. In this thesis, the manipulator task is assumed to entail both free and contact motion, a controller design strategy is proposed for such a task. Position control is first developed in free motion. Then, using impedance control, force control is added through the contact force feedback loop. A compensator in this feedback loop helps to reach the target impedance when the end-effector is in contact with the environment. A wrist force sensor is used to detect contact forces. Since the force sensor signal also contains inertial forces, a Kalman filter is used to extract contact force from the signal. When compliant motion control is applied with the computed torque method, an accurate dynamic model of the manipulator and environment is required. This thesis presents a method for estimating the inertial parameters of a rigid body load and the unknown parameters of the constraint environment. The inertial parameters include the mass, center of gravity, and moment of inertia. The unknown parameters of the constraint environment consist of environmental stiffness and the geometric parameters of the constraint surface. The identification equation is written in the Newton-Euler formulation with the assumption that joint information (position, velocity, and acceleration) and force sensor output are available. Since the identification equation is

nonlinear in terms of the unknown parameters of the environment, the extended Kalman filter is used to produce an optimal estimation.

**TELEPROGRAMMING: REMOTE SITE ROBOT TASK EXECUTION Ph.D. Thesis**
Thomas Stewart Lindsay 1992 107 p
Avail: Univ. Microfilms Order No. DA9235172

This dissertation describes a remote site robot workcell for teleoperation with communication delays on the order of 20 seconds. In these situations, direct teleoperation becomes impossible due to the delays in visual and force feedback. Teleprogramming has been developed in order to overcome this problem. An integral part of teleprogramming is a semi-autonomous remote site robot system. The remote system is composed of a robot manipulator, sensors, controlling computer, and manipulator tools. The constraints on the remote site system and the amount of autonomy needed are defined partially by the teleprogramming system and partially by the needs of the remote system. Development of the remote site system for teleprogramming evokes some pertinent research issues: low level manipulator control, semi-autonomous command execution, and remote site tool usage. Low level manipulator control is based on a hybrid control scheme using wrist-based sensory feedback. Implementation of this control is presented and problems related to controlling the manipulator in an arbitrary frame are investigated. High level commands are executed at the remote site in small autonomous steps. Implementation of tolerance checks and guarded moves are presented, including error detection and the detection of motion termination conditions in a partially known environment. Power tools introduce redundant degrees of freedom into the manipulator/tool system. To control this redundant system, the tool is actively controlled in its natural degree of freedom and the corresponding degree of freedom in the manipulator becomes passive. Feedback for the manipulator/tool system is supplied by the wrist-based sensor. Two examples of sensing and control for tools are presented. This research has resulted in the development of a remote site system for teleprogramming. The remote system, however, is both time-delay and input independent. The characteristics of the system, including the compliance, flexibility, and semi-autonomity, are useful to a wide variety of robotics applications, including manufacturing and direct teleoperation. Dissert. Abstr.

**AN OPTIMAL CONTROL STRATEGY FOR COLLISION AVOIDANCE OF MOBILE ROBOTS IN NON-STATIONARY ENVIRONMENTS**
K. J. Kyriakopoulos and G. N. Saridis Feb. 1991 18 p
(Grant NAGw-1333)
(NASA-CR-191868; NAS 1.26:191868; CIRSSE-83) Avail: CASI HC A03/MF A01

An optimal control formulation of the problem of collision avoidance of mobile robots in environments containing moving obstacles is presented. Collision avoidance is guaranteed if the minimum distance between the robot and the objects is nonzero. A nominal trajectory is assumed to be known from off-line planning. The main idea is to change the velocity along the nominal trajectory so that collisions are avoided. Furthermore, time consistency with the nominal plan is desirable. A numerical solution of the optimization problem is obtained. Simulation results verify the value of the proposed strategy. Author

The disturbance rejection control problem for a 6-DOF (degree of freedom) PUMA manipulator mounted on a 3-DOF platform is investigated. A control algorithm is designed to track the desired position and attitude of the end-effector in inertial space, subject to unknown disturbances in the platform axes. Conditions for the stability of the closed-loop system are derived. The performance of the controller is compared for step, sinusoidal, and random disturbances in the platform rotational axis and in the neighborhood of kinematic singularities. Author

(Grant NAGw-1333)
(NASA-CR-191864; NAS 1.26:191864; CIRSSE-98) Avail: CASI HC A03/MF A01

Engineering systems designed specifically for space applications often exhibit a high level of autonomy in the control and decision-making architecture. As the level of autonomy increases, more emphasis must be placed on assimilating the safety functions normally executed at the hardware level or by human supervisors into the control architecture of the system. The development of a decision-making structure which utilizes information on system safety is detailed. A quantitative measure of system safety, called the safety self-information, is defined. This measure is analogous to the reliability self-information defined by McInroy and Saridis, but includes weighting of task constraints to provide a measure of both reliability and cost. An example is presented in which the safety self-information is used as a decision criterion in a mobile robot controller. The safety self-information is shown to be consistent with the entropy-based Theory of Intelligent Machines defined by Saridis. Author

**UNIFIED APPROACH FOR COMPUTER VISION PROBLEMS: MATHEMATICAL MORPHOLOGY [UMA ABORDAGEM UNIFICADA PARA PROBLEMAS DE VISAO COMPUTACIONAL: A MORFOLOGIA MATEMATICA]**
Junior Barrera Jul. 1992 253 p In PORTUGESE
(INPE-5391-TAE/012) Avail: CASI HC A12/MF A03

The concept of a Morphological Language (ML) is defined: a finite number of complete lattices; the operators of infimum and supremum for each of these lattices; and the mappings of erosion, dilation, anti-erosion, and anti-dilation inside each lattice as well as between different lattices. The implementation of a ML is called a Morphological Machine (MMC). A particular MMC was defined and used to solve two problems in Computer Vision: restoration of the stripe effect on images of the satellite SPOT; and a study of cell proliferation by the analysis of microscopic images of tissue samples of AIDS patients. It is proved that an ML can describe any mapping between complete lattices by presenting two canonic decompositions. The proposed decompositions are obtained by introducing the concept of Galois connection. The definitions of sup-generator mapping, kernel and basis, inside the domain of complete lattices, are given, The decompositions are built by analyzing the kernel and can be simplified from the basis. The results are specialized to the cases of inf-separable, increasing and decreasing mappings as well as to lattices which have a sup-generating family. The decompositions presented are dual. Some examples, including the case of Boolean function simplification, illustrate the key concepts and the decomposition expressions. Author

This document summarizes the University of Chicago Artificial Intelligence laboratory's work on applying case-based methods to intelligent real-time problem solving. An approach to problem solving involving the storage, retrieval, adaptation, and re-use of successful strategies is outlined. The report describes work on an overall control architecture, on methodological issues in the development of representation vocabularies, and on memory organization for efficient storage and retrieval of cases. Work on six projects is described including work on robot planning, the dynamic repair of transportation schedules, multi-agent cooperative planning, case-based design, and active perception. The result of this work is a model of planning and execution that handles the complexity and instability of a dynamic, real-time environment by making use of known plans stored in memory. GRA

**THE LAMBEK CALCULUS ENRICHED WITH ADDITIONAL CONNECTIVES**
Makoto Kanazawa (Stanford Univ., CA.) Aug. 1991 27 p
(LP-91-04; ETN-93-93096) Avail: CASI HC A03/MF A01

Certain logically natural extensions of the Lambek calculus, which have analogs of conjunction and disjunction, are studied. The Lambek calculus, which underlies a flexible version of categorical grammar, is a special kind of implicational logic, with its slashes corresponding to logical implication. Viewed from this perspective, it makes sense to add other connectives to it, for example, those corresponding to conjunction and disjunction in more standard logics. Some of the formal properties of this enrichment are investigated, especially with respect to the recognizing power of the resulting extended categorical grammars. ESA

**CATEGORICAL GRAMMAR AND NATURAL REASONING**
Victor SanchezValencia Oct. 1991 47 p
(LP-91-08; ETN-93-93100) Avail: CASI HC A03/MF A01

Natural logic, a system of reasoning whose vehicles of inference ('logical forms') are in close accord with natural language, is described. The claim is made that an adequate local proof system for natural language is possible. The aim is to show that there is no opposition between a semantical and a proof theoretical approach to natural reasoning: the proof system begins where the semantics leaves off. This assertion has not only a systematical value but also a heuristic one. The empirical strength of Categorical Natural Logic (CNL) is demonstrated by applying it to several standard examples of natural reasoning. The architecture of CNL described involves the principles of monotonicity, discourse referent introduction, substitution of anaphora, and generalized Boolean coordination. Prerequisites for these principles are shown to be: a system of monotonicity marking, a system of wide scope marking, a system of anamorphic marking, and a general definition of coordination. ESA

**QUANTIFIERS INTO THE WORLD OF TYPES**
Johan vanBenthem Aug. 1992 21 p Revised Submitted for publication
(LP-92-09; ETN-93-93109) Avail: CASI HC A03/MF A01

The 'interaction' between the existing notions in quantification and their more general linguistic and logical environment is addressed. Special semantic properties and general phenomena are discussed and generalized quantifiers in Lambda calculus are shown. First order predicate logic is addressed as a point of departure. Axiomatizing inference and the characterization of general monotinicity are addressed. The general linguistics environment of generalized quantifiers is shown to be of interest as such, and is shown to raise unresolved questions concerning logical type theory. Other general mechanisms are concluded as needing investigation, in particular various connections between quantification and the dynamics of interpretation and information flow. ESA

The conjugate gradient method for the solution of symmetric systems, and the conjugate gradient squared method for unsymmetric systems, are considered. Application of the method of lines to partial differential equations leads to very large, sparse systems of ordinary differential equations, which are usually stiff. Implicit Runge-Kutta methods for the time integration of these systems, and the use of iterative methods for the solution of the resulting linear systems, are considered. The effect of preconditioners, and their performance on vector and parallel computers is discussed. Some results for iterative methods applied to the incompressible Navier-Stokes equation are presented. ESA

**STRUCTURAL SIMULATION COUPLING FOR TRANSIENT ANALYSIS M.S. Thesis**

Howard T. Clark May 1992 165 p

(AD-A258192; AFIT/CI/CIA-92/101) Avail: CASI HC A08/MF A02

Analysis of the transient time response of many modern engineering systems requires simulation by means of direct time integration of sets of coupled-field equations. In the past, the simulation of such coupled problems has created difficulties which are not seen in analogous singlefield problems. Perhaps the most important of these difficulties is the fact that existing engineering analysis packages have been oriented to solving only single-field problems. This suggests one particularly attractive option: the use of existing, single-field analysis software while imposing certain modular requirements. If modularity can be maintained, direct integration of the equations can proceed by sequential or parallel operation of the separate analyzers. This research develops the theory by which the numerical simulations of two or more separate fields may be combined to solve the coupled-field problem. This theory allows simulations to be used with little or no change by considering the constraints that provide for field coupling. The development takes into account the various numerical methods which may be used by individual simulations to solve their separate problems. Above all, this paper does not seek to suggest that simulation coupling is the best or foremost simulation methodology available, merely that it is a viable and cost saving alternative to solving the larger, more involved coupled-field problem. The specific discipline of focus will be multibody dynamics. The goal is to show that it is possible to couple multiple single body dynamic analysis packages and come up with solutions comparable to the full multibody dynamic case. GRA

**FEASIBLE INTERPRETABILITY**

Rineke Verbrugge Oct. 1991 32 p Sponsored by Netherlands Organization for Scientific Research

(ML-91-11; ETN-93-93089) Avail: CASI HC A03/MF A01

A concept of interpretability called feasible interpretability, in which the complexity of the interpretation is bounded in a certain way, is investigated. In PA (Peani Arithmetic), or even in I(Delta(sub 0)) + EXP, the concept of feasible interpretability can be defined. Informally stated, U feasibly interprets V iff: for some interpretation, U proves the interpretations of all axioms of V by proofs with Goedel numbers of length polynomial in the length of the Goedel numbers of those axioms. Here both U and V are Sigma(sup b)(sub 1) axiomatized theories. Many interpretations encountered in every day mathematics (e.g., the interpretation of Peano arithmetic into ZF) are feasible. However, by fixed point constructions theories can be found that are interpretable in PA in the usual sense but not by a feasible interpretation. By making polynomial analogs of the usual proofs, the bimodal interpretability logic ILM is shown to be sound for feasible interpretability over the base theory PA. Here, A (triangle pointing to the right) B is translated as PA + A(sup *) (triangle pointing to the right(sub f)) PA + B(sup *), where (sup *) is the translation. In PA, a polynomial version of Orey's theorem for feasible interpretability can be proved. This paves the way for a polynomial adaptation of Berarducci's proof of arithmetical completeness of ILM with respect to PA. Thus, ILM is shown to be arithmetically sound and complete with respect to feasible interpretability over PA. ESA

**MODAL FRAME CLASSES REVISITED**

Johan vanBenthem Nov. 1991 16 p Submitted for publication

(ML-91-12; ETN-93-93090) Avail: CASI HC A03/MF A01

Notes for a discussion of the interplay between algebraic and model-theoretic methods in modal logic are presented. The removal of the 'algebra' from standard modal results is discussed. The theorem of Goldblatt and Thomason, which transformed the Birkhoff characterization of equational varieties into a structural characterization of modally definable frame classes, is addressed. A model theoretic proof without the algebras is shown. An extension to richer modal formalisms and a specialization to finite frames are given. Ultrafilter extensions are considered. ESA

**ON THE STRUCTURE OF KRIPKE MODELS OF HEYTING ARITHMETIC**

Zoran Markovic (Belgrade Univ., Yugoslavia ) Jul. 1992 12 p Sponsored by Science Fund of Serbia, and Amsterdam Univ.
(ML-92-03; ETN-93-93093) Avail: CASI HC A03/MF A01

Partial answers to the following questions were obtained in referenced papers. Since in Heyting Arithmetic (HA) all atomic formulas are decidable, a Kripke model for HA may be regarded classically as a collection of classical structures for the language of arithmetic, partially ordered by the submodel relation. The obvious question are the following: are these classical structures models of Peano Arithmetic (PA)?; and if a collection of models of PA, partially ordered by the submodel relation, is regarded as a Kripke model, is it a model of HA? Some results in the same direction are presented. In particular, it is proved that the classical structures at the nodes of Kripke model of HA must be models of I(delta(sub 1))(PA(sup -) with induction for provably Delta(sub 1) formulas) and that the relation between these classical structures must be that of a Delta(sub 1) elementary submodel. **A MODAL THEORY OF ARROWS: ARROWS LOGICS 1**

Dimiter Vakarelov (Sofia Univ., Bulgaria ) Jul. 1992 28 p
(ML-92-04; ETN-93-93094) Avail: CASI HC A03/MF A01

The notion of Arrow Structure (AS) is introduced as an algebraic version of the notion of directed multigraph. By means of a special kind of a representation theorem for arrow structures, it is shown that the whole information of an AS is contained in the set of its arrows equipped with four binary relations describing the four possibilites for two arrows to have a common point. This makes possible the use of arrow structures as a semantic base for a special polymodal logic called BAL (Basic Arrow Logic). BAL and various kinds of its extensions are used for expressing in a modal setting different properties of arrow structures. Several kinds of completeness theorems for BAL and some other arrow logics are proved, including completeness with respect to classes of finite models. Some open problems and possibilities for further development of the arrow approach are formulated. ESA

**APPLICATION OF THE TOTAL LEAST SQUARES TECHNIQUE TO FREQUENCY ESTIMATION M.S. Thesis**

Chung-Jung Chiang Sep. 1992 98 p
(AD-A257562) Avail: CASI HC A05/MF A02

Estimating the frequencies of signals in a noisy environment has numerous applications in digital signal processing. In December 1980, Golub and Van Loan proposed a spectral estimator called the Total Least Squares (TLS) technique which is a refinement of the Least Squares (LS) technique. In this thesis, we first describe the origin of the TLS technique and its applications to frequency estimation. Furthermore, we present a numerical implementation for resolving two damped/undamped closely-spaced sinusoidal signals in white noise. Next, we introduce TLS extensions such as the Constrained Total Least Squares (CTLS) technique and the Linear Constraint Total Least Squares (LCTLS) technique. The CTLS addresses the case where the noise components are related and the LCTLS addresses the case where one desires to resolve between two narrowband signals close in frequency, one of which is known. Finally, we present a numerical implementation of the Recursive Total Least Squares (RTLS) technique and apply it to the case of a signal with a fixed frequency together with a signal with a time-varying frequency. **A HARMONIC HALF-SPACE FUNDAMENTAL SOLUTION Ph.D. Thesis**

Ole Vilmann 1991 133 p Sponsored by Otto Moensteds Fond; Thomas B. Thriges Fond; Knud Hoejgaards Fond; and Direktoer Ib Henriksens Fond
(Grant DTRC-16-3950-B)
(Ser-R-271; ISBN-87-7740-072-0; ETN-93-93359) Copyright Avail: CASI HC A07/MF A02

The fundamental solution for a harmonic point force in a half-space of a linear elastic media is established. The fundamental solution consists of the displacements for both a vertical and a horizontal acting point force. The solution is given in cylindrical coordinates. The solution is based on continuous wavesystems through a second order Fourier transform, i.e., a Hankel transform of the horizontal geometrical coordinates. The solution of all displacement components from the wave equation is established as infinite horizontal wavenumber integrals, here inverse Hankel transforms. The solution of each displacement component consists of both an analytical part describing the full space solution and a part describing the influence of the free surface. Accurate numerical schemes for integration of infinite wavenumber integrals are known to be difficult to establish. Therefore, a complex contour integration technique is used to set up an alternative solution method that for certain source-receiver configurations is more efficient than the direct integration method of the infinite wavenumber integral. Two integration methods are shown to be efficient in their complementary parameter domain. An adaptive numerical integration scheme is set up and tested on an infinite wavenumber integral with known analytical solution. The established adaptive numerical integration scheme is used for computation of one fundamental solution displacement component as an example. Possibilities of alternative solution methods and alternative numerical integration schemes and aspects by use of the established fundamental solution in a boundary element method are discussed. ESA

**AHARONOV-CASHER EFFECT AND GEOMETRICAL PHASES**

R. Mignani (Istituto Nazionale di Fisica Nucleare, Rome, Italy ) 6 Feb. 1991 6 p Submitted for publication
(Preprint-783; ETN-93-92894) Avail: CASI HC A02/MF A01

A study to show that the Aharonov-Casher (AC) phase is a special case of Berry's phases is presented. The original form of Berry's phase, and the gauge invariant Yang phase are used. AC suggested that a neural particle with a magnetic moment experiences a phase shift as it encircles

an infinite line of charge with the particle spin parallel to the charged line. Theoretical contributions to the understanding of the AC effect and experimental evidence of the AC effect are mentioned. An analogous result can be derived for the case of a magnetic or electric dipole in an electromagnetic field. ESA

**INFINITE RELATIVISTIC TODA LATTICE: SCATTERING PROBLEM AND CANONICAL STRUCTURE**
S. Cosentino 12 Feb. 1991 19 p Submitted for publication
(Preprint-785; ETN-93-92895) Avail: CASI HC A03/MF A01

The integrability of the infinite relativistic Toda lattice is proved via the inverse scattering technique. The canonical structure of the scattering coordinates is derived in the famework of the matrix formalism. The Hamiltonian system is described and useful changes of variables are given. The equations of motion in the form of a zero curvature condition are presented. A set of variables is constructed via the monodromy matrix for the linear problem associated to the lattice, that linearize the evolution. The change of coordinates is analyzed and its invertibility proved. A way to solve the Cauchy problem is provided. In the framework of the r matrix formalism, the canonical structure of the scattering coordinates is found. As expected, the relativistic Toda is a member of a hierarcy of completely integrable hamiltonian systems, for which a set of action-angle type coordinates can be defined. ESA

**TESTING SUPERPERFECTION OF k-TREES**
T. Kloks and H. Bodlaender Feb. 1992 17 p Sponsored by Netherlands Foundation for Computer Science
(Contract EEC-3075)
(RUU-CS-92-09; ETN-93-92809) Avail: CASI HC A03/MF A01

A complete characterization of superperfect 2-trees is given by means of forbidden induced subgraphs. A k-tree is a graph which can be recursively defined as follows. A clique with k + 1 vertices is a k-tree. Given a k-tree with n vertices, a k-tree with n + 1 vertices can be obtained by making a new vertex adjacent to all vertices of a k-clique in the k-tree. For each constant k, a linear time algorithm to test if a k-tree is superperfect is presented. For each constant k, a constant time algorithm to produce a complete characterization of superperfect k-trees is given. A complete list of critical non superperfect 2-trees is presented. This shows the existence of triangulated graphs which are superperfect but not comparability graphs. ESA

**YANG PHASE FOR NON-HERMITIAN SYSTEMS AND BIUNITARY TRANSFORMATIONS**
R. Mignani (Istituto Nazionale di Fisica Nucleare, Rome, Italy ) 6 Feb. 1991 20 p Submitted for publication
(Preprint-782; ETN-93-92893) Avail: CASI HC A03/MF A01

The invariance of geometrical phases under nonunitary (bicanonical) transformations for quantum systems ruled by non-Hermitian (nH) Hamiltonians is studied. It is shown that the nH generalization of Berry's phase is not invariant under biunitary transformations, while the geometrical plus dynamical phase is invariant. An nH generalization of the Yang phase is defined. The nH Yang phase arises for a system evolution that is neither adiabatic nor cyclic, but reduces to a nH generalization of the Aharonov-Anandan phase for cyclic processes and to the nH Berry phase for both adiabatic and cyclic evolution. The result is found to be invariant indeed under biunitary transformations, as well as all the terms separately which compose the total phase. ESA

In this paper, we present a probabilistic analysis of the time versus solution quality tradeoff of different implementations of a basic sequential edge exchange procedure for a Traveling Salesman Problem. Our TSP will be on a complete graph with edge weights assigned independently and identically according to a Bernoulli distribution. One implementation of the procedure is a generalization of the Lin-Kernighan heuristic. For this implementation, we find asymptotic performance guarantees which decrease geometrically as the depth of the search increases. The basic search procedure may be implemented using a 2-change neighborhood structure. This enables us to find an asymptotic performance guarantee for a 2-opt procedure. GRA

**DIAGNOSING KNOWLEDGE STATES IN ALGEBRA USING THE RULE SPACE MODEL Interim Report, Apr. 1989 - Aug. 1992**
Menucha Birenbaum, Anthony E. Kelly, and Kikumi K. Tatsuoka 1 Oct. 1992 32 p
(Contract N00014-90-J-1307; DA Proj. RR0-4204)
(AD-A257757; ETS-RR-92-57-ONR) Avail: CASI HC A03/MF A01

This paper illustrates the use of rule space as a tool to support cognitive analysis of students' mathematical behavior. The rule space approach is explained and is then used to classify students into one of two methods for solving linear algebraic equations in one unknown and to diagnose their knowledge states in this topic. A 32-item test with open-ended questions was administered to 231 eighth and ninth graders. The following outcomes of the rule space model were presented: (1) a classification of examinees into knowledge states resulting from the two solution approaches at the group level along with individual examples; and (2) tree-diagrams of the transitional relationships among the states for each strategy. Implications for using the feedback provided by the rule space model in the context of instruction and assessment are discussed. GRA

**AN ALGORITHM FOR THE SOLUTION OF A TRAVELING SALESMAN PROBLEM TO MINIMIZE THE AVERAGE TIME TO DEMAND SATISFACTION M.S. Thesis**
James P. Ryan Aug. 1992 64 p
(AD-A258301; AFIT/CI/CIA-92-093) Avail: CASI HC A04/MF A01

This paper presents a solution approach for solving a modified traveling salesman problem. In this problem, each city which the salesman must visit contains a quantity of demand (in units) which the salesman must satisfy. The objective of the salesman is to minimize the average time until satisfaction for each unit of demand. The solution approach presented is a branch-and-bound approach in which the total set of feasible tours are broken down into subsets. Lower bounds are calculated for each subset and compared against a known upper bound to determine if this subset can be fathomed or if an improved upper bound has been found. The solution approach presented ensures optimality. A computer code was created and is presented which implements the solution approach developed. GRA

**DEVELOP, APPLY AND EVALUATE WAVELET TECHNOLOGY Final Summary Report**
Howard L. Resnikoff 20 Oct. 1992 212 p
(Contract F49620-89-C-0125)
(AD-A258484) Avail: CASI HC A10/MF A03

On this contract, work was completed in three major areas: (1) the

mathematical foundations of wavelet theory; (2) application of wavelets to signal processing; and (3) application of wavelets to partial differential equations. In the area of mathematical foundations, they have investigated both discrete and continuous aspects of wavelet theory. The investigation of the application of wavelets to signal processing, has had two major foci: image compression and computational algorithms. Furthermore, connections between the wavelet and Fourier transforms were investigated and used to describe the characteristics of some fundamental signals in wavelet phase space. Wavelet based numerical methods were applied to the solution of partial differential equations. Specifically, they are used to compare the Wavelet-Galerkin method to standard numerical methods for the numerical solution of the Euler equations of a two-dimensional, incompressible fluid in a Periodic domain, the Biharmonic Helmholtz equation, and the Reduced Wave equation in nonseparable, two-dimensional geometry and the Euler and Navier-Stokes equations in nonseparable, two dimensional geometry. The wavelet methods have significant advantages with regard to stability, accuracy, and rate of convergence. GRA

**LAMBDA-CALCULI FOR (STRICT) PARALLEL FUNCTIONS [LAMBDA-CALCULS POUR LES FONCTIONS PARALLELES (STRICTES)]**

Gerard Boudol Jan. 1991 60 p Sponsored in part by Commission of the European Communities

(INRIA-RR-1387; ETN-93-92630) Avail: CASI HC A04/MF A01

Two lambda calculi are introduced and they are shown to be expressive for two canonical domains of parallel functions. The first calculus is an enrichment of the lazy, call-by-name lambda calculus with call-by-value abstractions and parallel composition, while in the second the usual call-by-name abstractions are disallowed. The corresponding domains are respectively Abramsky's domain, a lifted function space, and a lifted domain of strict functions. These domains are lattices, and the parallelism is shown to be adequately represented by the join operator, while call-by-value abstractions correspond to strict functions. The proofs of the results rely on a completeness theorem for the logical presentation of the semantics. ESA

**STUDY AND IMPLEMENTATION OF A SET OF PRIMITIVES FOR CONSTRAINT SATISFACTION IN FINITE DOMAINS [ETUDE ET REALISATION D'UN ENSEMBLE DE PRIMITIVES POUR LA SATISFACTION DE CONTRAINTES EN DOMAINES FINIS]**

Pierre Berlandier Jan. 1991 70 p In FRENCH

(INRIA-RR-1389; ETN-93-92631) Avail: CASI HC A04/MF A01

A survey on the state of the art in the field of constraint satisfaction is presented. Within the framework of n-ary constraints, some techniques that take advantage of the active nature of some constraints, the tree structure of some problems and the exhaustive traversal of the search space, are studied. A module that operates over the LE LISP language to state and solve constraint problems is described. The motivation for writing this module was the integration of constraint satisfaction tools in the SMECI expert system shell. It is implemented using an abstract model for constraints. As a consequence, it is independent from the constraint representation which is handled via functional interface. ESA

**RECONSTRUCTION OF LINEAR AND NONLINEAR CONTINUOUS TIME MODELS FROM DISCRETE TIME SAMPLED-DATA SYSTEMS**

K. M. Tsang (Hong Kong Polytechnic, Kowloon.) and S. A. Billings Sep. 1990 22 p

(RR-406; ETN-92-92765) Avail: CASI HC A03/MF A01

A new approach for identifying continuous time models from discrete time sampled data records is presented. The proposed method involves estimating and validating a discrete time model, linear or nonlinear, based on sampled data records. The discrete time linear and nonlinear frequency response functions are evaluated and the curve is fitted to the frequency response data to yield a continuous time model. No numerical differentiation and integration is involved. Errors introduced by the numerical approximation of differentiation and integration are eliminated. The orthogonal estimator provides information on the model structure and the unknown parameter values for linear and nonlinear continuous time models. The advantage of this approach is that nonlinear differential equation models can be readily computed from discrete time data. ESA

**ON CORNER AND VERTEX DETECTION [SUR LA DETECTION DES JONCTIONS ET DES POINTS ANGULEUX]**

Gerard Giraudon and Rachid Deriche Jun. 1991 36 p Sponsored in part by Commission of the European Communities

(INRIA-RR-1439; ETN-93-92646) Avail: CASI HC A03/MF A01

An extension of previous work on the problem of the characterization and detection of vertices in real images is presented. An analytical study for a general vertex model that allows better understanding of the behavior of this important feature in the scale-space is addressed. In particular, a trihedral vertex is shown to have two elliptic maxima on extremal constrast surfaces if the contrast is sufficient, and this allows classification of vertices into two classes: 'vertex' and 'vertex as corner'. The corner detection approach previously developed is applied to accurately detect trihedral vertices. A test is executed to make a distinction between vertex and corner among detected features. Several promising experimental results carried out using noisy synthetic and real images including corners and vertices are reported. ESA

**FLOW MODELS OF DISTRIBUTED COMPUTATIONS: EVENT STRUCTURES AND NETS [STRUCTURES D'EVENEMENTS ET RESEAUX A FLUX]**

Gerard Boudol and Ilaria Castellani Jul. 1991 38 p Sponsored in part by Commission of the European Communities
(INRIA-RR-1482; ETN-93-92653) Avail: CASI HC A03/MF A01

Flow event structures, which provide an intermediate between prime and stable event structures, are introduced. These three kinds of event structures are abstractly equivalent in that they give concrete presentations for the same kind of domains, namely dI-domains. However, regarded as means of defining families of configurations, these event structures are increasingly more powerful. From this point of view, flow event structures are related to a new kind of Petri nets, called flow nets; for each flow event structure, it is shown that a flow net having the same configurations can be built, a configuration of a net being a set of events firable in sequence, and conversely. This generalizes earlier results that relate prime event structures and occurrence nets. Safe flow nets are shown which correspond to bundle event structures introduced recently. This establishes a strict hierarchy upon the various kinds of event structures: prime, bundle, flow, and stable ones. ESA

C. H. Chuang 23 Feb. 1993 27 p
(Grant NAG1-1397)
(NASA-CR-192246; NAS 1.26:192246) Avail: CASI HC A03/MF A01

This report presents a robust control design using strictly positive realness for second-order dynamic systems. The robust strictly positive real controller allows the system to be stabilized with only acceleration measurements. An important property of this design is that stabilization of the system is independent of the system parameters. The control design connects a virtual system to the given plant. The combined system is positive real regardless of system parameter uncertainty. Then any strictly positive real controllers can be used to achieve robust stability. A spring-mass system example and its computer simulations are presented to demonstrate this controller design. Author

**A HIGHER ORDER EXPONENTIAL FUNCTION FOR FITTING NONLINEAR CURVES Final Report**
Henry Rachele, Lisa Manguso, and Neal H. Kilmer Dec. 1992 19 p
(AD-A258431; ARL-MR-24) Avail: CASI HC A03/MF A01

Numerous mathematical methods have evolved over the years for fitting curves that exhibit nonlinear character. In this technical memorandum, the authors present a continuous function, the Rachele/Kilmer (R/K) optical profile function, that was originally configured by R/K to fit model simulated vertical profiles of extinction and backscatter coefficients in very low stratus clouds and subcloud regions. The R/K function fits most of the nonlinear optical profiles so well that the authors were encouraged to investigate its potential for fitting nonlinear curves that were produced by other physical/mathematical models. Results are presented that demonstrate the versatility and power of the R/K function when fitting simulated data from three different models. GRA

(ETN-92-92554) Avail: CASI HC A04/MF A01

A method for the optimization and error evaluation of incompressible and nearly incompressible three dimensional meshes is presented. The error concept and techniques are applied to construct the stress field and the possible displacements controlling the error due to finite element discretization. Available error calculations were extended to commonly used three dimensional incompressible or nearly compressible materials. The method is also extended to the Hermann model, which is adapted to calculations on materials such as propergols. The development is particularly useful for reducing calculation costs. The results were used to test the quality of a finite element method. The parameters to construct optimal meshes are obtained. ESA

**EXTENDED LYAPUNOV EXPONENTS FOR SECOND ORDER SYSTEMS M.S. Thesis**
Janice M. Horn Dec. 1992 126 p
(AD-A258838; AFIT/GA/ENY/92D-09) Avail: CASI HC A07/MF A02

It is shown that the concept of the Lyapunov exponent can be extended to include an imaginary part. A numerical technique used to calculate these extended Lyapunov exponents for second order systems is presented. There are two requirements to make this extension possible: the definition of a coordinate frame on the tangent space of the differential equation, and an extension of the classical limit, called the limit of the mean. An

application of the technique to the van der Pol equation for the constant coefficient and periodic coefficient cases is given. The extended Lyapunov exponents found using this technique totally agrees with the eigenvalues for the constant coefficient case. In the periodic coefficient case, not only do the extended Lyapunov exponents agree with the Poincare exponents calculated using standard Floquet theory, they confirm that the imaginary parts of the Poincare exponents are equal to the quotient plus or minus (i(2pi)/tau) where tau is the period of the trajectory. This imaginary part is uncertain when using standard Floquet theory. Additionally, fast Fourier transform (FFT) techniques are used to validate the existence of the extended Lyapunov exponent and the values obtained for its imaginary part. These techniques show that the power spectrum of relative motion is discrete for the trial cases presented, with the fundamental frequency almost exactly equal to the calculated imaginary part of the extended Lyapunov exponent. Coupled with the successful comparison of characteristic exponents for the constant coefficient and periodic coefficient cases, this power spectrum serves to decisively validate the existence of the extended Lyapunov exponent. **IMPROVEMENTS TO LQGI/LTR METHODOLOGY FOR PLANTS WITH LIGHTLY DAMPED OR LOW FREQUENCY POLES M.S. Thesis**
An-Chi Ju Dec. 1992 133 p
(AD-A258841; AFIT/GAE/ENY/92D-14) Avail: CASI HC A07/MF A02

The Linear Quadratic Gaussian/Loop Transfer Recovery (LQG/LTR) design has a tendency to invert the plant's dynamics, which is undesirable if there are plant poles near the imaginary axis. Static Output Feedback (SOF) is applied to reassign plant poles before LQG/LTR is applied. Alternatively, Robust Eigenstructure Assignment (REA) was used to design the target loop transfer function with an ideal eigenstructure to avoid the undesirable cancellations. Both methods were applied to several aircraft design problems. Results showed that the methods can be effectively used so that the LQG/LTR design has improved stability and performance; however, it was found that each method had strengths and weaknesses. GRA

**ALTERNATIVE FORMULATIONS OF THE LAPLACE TRANSFORM BOUNDARY ELEMENT (LTBE) NUMERICAL METHOD FOR THE SOLUTION OF DIFFUSION-TYPE EQUATIONS**
G. Moridis Mar. 1992 19 p Presented at the 7th International Conference on Boundary Element Technology, Albuquerque, NM, 3-5 Jun. 1992
(Contract DE-AC03-76SF-00098)
(DE92-041172; LBL-32021; CONF-920664-2) Avail: CASI HC A03/MF A01

The Laplace Transform Boundary Element (LTBE) method is a recently introduced numerical method. It is used for the solution of diffusion-type PDE's. It completely eliminates the time dependency of the problem and the need for time discretization, yielding solutions numerical in space and semi-analytical in time. The LTBE solutions are obtained in the Laplace spare. The solutions are then inverted numerically to yield the solution in time. The Stehfest and the DeHoog formulations of LTBE, based on two different inversion algorithms, are investigated. Both formulations produce comparable, extremely accurate solutions. DOE

**ROBUST MULTIVARIABLE FEEDBACK DESIGN FOR UNCERTAIN LINEAR SYSTEMS Ph.D. Thesis**
Mark C. Crews 1992 223 p
(AD-A258257; AFIT/CI/CIA-92-025D) Avail: CASI HC A10/MF A03

Realistic control strategies must address the inevitable uncertainty which accompanies nominal system descriptions. Even though uncertainty can often be characterized mathematically, effective robust control techniques have been slow to appear. This work investigates robust control methods directed at both the analysis and design of multivariable feedback systems in the presence of system uncertainty. The first part of the thesis examines perturbed interaction from the generalized Nyquist/characteristic locus perspective. This work establishes that, for a given class of uncertainty and a specific class of gain-limited controllers, feedback compensation can be optimally deployed to reduce perturbed interaction. Subsequently, this treatment exploits the geometric eigen-structure embodied in the characteristic locus framework along with the appropriate stationary conditions in order to characterize the worst case uncertainty which produces the largest interaction as measured by the perturbed misalignment angles. Furthermore. the structure of the worst case perturbation has a particularly simple representation which facilitates the determination of the worst case interaction based on simple open-loop quantities. These results together with the previous development of the E-Contour method complete the overall development of the characteristic locus approach as a convenient robust analysis tool. GRA

**AN INTRODUCTION TO THE STATISTICAL ANALYSIS OF ENGINEERING DATA**
Dec. 1992 22 p
(ESDU-92040; ISBN-0-85679-848-7) Avail: ESDU

ESDU 92040 is directed to making statistical methods of analysis

accessible to engineering users. It summarizes the basic statistical terms and principles involved and discusses techniques most commonly used. It is restricted to consideration of a single random variable and covers fundamental concepts. After discussing the probability of random events and of discrete and continuous random variables it considers measures of location and dispersion and introduces the concept of the standard distribution. Sampling is then explained together with the influence of censoring. Statistical techniques are introduced in terms of the use of tests for goodness-of-fit, point and interval estimation and hypothesis testing. Brief mention is included of distribution-free (non-parametric) techniques and simulation (Monte Carlo) methods. ESDU 91041 covers the analysis of data from the Normal distribution and includes statistical tables. ESDU

**AN EXAMINATION OF THE PERFORMANCE OF A NATURAL TRUNCATION POINT AND ACCEPTANCE RULE FOR A CURTAILED WALD SEQUENTIAL SAMPLING PLAN WITH BERNOULLI PARAMETERS M.S. Thesis**
Cameron J. Lewis Sep. 1992 128 p
(AD-A257579) Avail: CASI HC A07/MF A02

This paper examines the performance of a proposed truncation and acceptance rule for the Wald Sequential Probability Ratio test for Bernoulli parameters and the rules influence on errors of the first and second kind as well as the average number of items sampled for inspection. The proposed truncation and acceptance rule suggest that there exists a natural truncation point for every Sequential Probability Ratio test such that the desired error probabilities are not exceeded, or that one of the true errors is smaller than desired, and the other will be exceeded by an insignificant amount. A computer program is used to simulate the sampling process and provide estimates of the true values of a plan's Operating Characteristic curve, its average sample number, as well as the probability of implementing the truncation and acceptance rule. Results suggest that truncation and rejection of a lot at the natural truncation point will maintain a plan's desired Operating Characteristic curve. The cases examined also suggest that any modifications to the natural truncation point truncation and acceptance rule may cause an unacceptable deviation from the desired Operating Characteristic curve. Finally, a linear equation was developed which provides an estimate of the upper limit on the probability of implementing a truncation and acceptance rule and that in most cases, this upper limit is less than 0.15. **FIXED AND DATA ADAPTIVE KERNELS IN COHEN'S CLASS OF TIME-FREQUENCY DISTRIBUTIONS M.S. Thesis**
Robert E. Parker, Jr. Sep. 1992 87 p
(AD-A257979) Avail: CASI HC A05/MF A01

Estimating the spectra of non-stationary signals represents a difficult challenge. Classical techniques employing the Fourier transform and local stationarity have been employed with limited success. A more promising approach is the use of time-frequency distributions. The majority of useful distributions have been unified under Cohen's class of distributions, a bilinear transformation with an arbitrary, fixed kernel function. The properties of several popular distributions developed from Cohen's class of distribution are examined. The ability of the kernel to suppress spurious cross-terms resulting from the bilinear nature of these distributions is examined along with their characteristics. Distributions employing a fixed kernel usually give good results only for a small class of signals. A data adaptive kernel is also examined which promises to give superior results for a broad class of signals. Results are shown for several test cases employing synthetic analytic signals. GRA

**A STRUCTURE DETECTION ALGORITHM FOR NONLINEAR DYNAMIC RATIONAL MODELS**
S. A. Billings and Q. M. Zhu Mar. 1992 34 p
(Grant SERC-GR/F2417-7)
(RR-439; ETN-92-92767) Avail: CASI HC A03/MF A01

A general structure detection and parameter estimation algorithm is derived. The algorithm is to be used in the identification of nonlinear systems which can be approximated by a stochastic nonlinear rational model defined as the ratio of two polynomial expansions of past inputs, outputs, and noise sequences. The algorithm includes an intelligent structure detection module which learns the structure of the model from the input output data. Simulation results are included to illustrate the application of the new algorithms. The study shows that fitting models to data is easy if you know which terms to regress upon. This information is rarely available to the experimenter and a combined intelligent structure detection. The parameter estimation algorithm is presented as one possible solution to this problem for the class of nonlinear rational models. ESA

**TOOLS OF MODELING, IDENTIFICATION, AND SIGNAL PROCESSING FOR FAULT DIAGNOSIS IN CONTINUOUS-TIME SYSTEMS Ph.D. Thesis - Inst. National des Sciences Appliquees [OUTILS DE MODELISATION, IDENTIFICATION ET TRAITEMENT DU SIGNAL POUR LE DIAGNOSTIC DES DEFAUTS DANS LES SYSTEMES CONTINUS]**
Louay Homssi 1992 177 p In FRENCH
(LAAS-92153; ETN-93-92728) Avail: CASI HC A09/MF A02

Analytical tools for diagnosis of slowly developing faults in continuous time systems are presented. A methodology of diagnosis based on modeling and parametric identification of the supervised system is presented. It has several advantages: richness analysis of the input signal to choose time intervals adequate for identification; detection and localization of internal faults by observing the estimated parameters; and possibility of sensor faults localization. A great deal of the work is for parametric identification of continuous time models: classification of identification methods; presentation, numerical and qualitative comparison of eight identification methods. Several problems related to identification are discussed (continuous time stochastic models, delay, initial conditions and measurements bias, and input richness). Recursive algorithms for the computation of Fourier's coefficients, discrete Fourier transform, and Legendre's coefficients on moving window are established. A package for simulation and identification of continuous time models were implemented in parallel with the work. ESA

**COMPARISON PROPERTIES OF STOCHASTIC DECISION FREE PETRI NETS [PROPRIETES DE COMPARAISON STOCHASTIQUE DANS LES GRAPHES D'EVENEMENTS ALEATOIRES]**
Francois Baccelli and Zhen Liu May 1991 33 p
(INRIA-RR-1433; ETN-93-92643) Avail: CASI HC A03/MF A01

Stochastic comparison problems arising in the analysis of stochastic decision free Petri nets are addressed. The analysis is based on the evolution equations satisfied by firing times. Various structural properties are obtained including the association of the firing times and their stochastic and convex monotonicity with respect to the holding time sequences and to the initial marking. The association and the stochastic monotonicity properties are extended to the counters using an inversion relation. The counters and the throughput are proved to be stochastically concave in the initial marking provided the holding times are i.i.d. and belong to a subclass of log-concave distribution functions. Various bounds for the asymptotic cycle time and the throughput are then derived from these stochastic ordering results. Results concerning the stochastic and convex monotonicity of the transient and the stationary marking distributions are presented. ESA

**MODELING EXPERT OPINION: LIKELIHOODS UNDER INCOMPLETE PROBABILISTIC SPECIFICATION**
Alan E. Gelfand, Bani K. Mallick, and Dipak K. Dey 9 Dec. 1992 31 p
(Contract N00014-92-J-1264)
(AD-A258775; SU-TR-464) Avail: CASI HC A03/MF A01

Expert opinion is often sought with regard to unknowns in a decision-making setting. Our presumption is that such opinion is elicited as an incomplete probabilistic specification either in the form of probability assignments to fixed intervals or in the form of selected quantiles. We present likelihoods for such specification which arise through random mixtures of Beta distributions. We presume that a supra-Bayesian presides over the opinion collection resulting in the posterior distribution as the

mechanism for pooling opinion. The models are applied to opinion collected regarding points per game for participants in the 1991 NBA championship basketball series. GRA

**MODEL DETERMINATION USING PREDICTIVE DISTRIBUTIONS WITH IMPLEMENTATION VIA SAMPLING-BASED METHODS**
Alan E. Gelfand, Dipak K. Dey, and Hong Chang 4 Dec. 1992 45 p
(Contract N00014-92-J-1264)
(AD-A258777; SU-TR-462) Avail: CASI HC A03/MF A01

Model determination is divided into the issues of model adequacy and model selection. Predictive distributions are used to address both issues. This seems natural since, typically, prediction is a primary purpose for the chosen model. A cross-validation viewpoint is argued. In particular, for a given model, it is proposed to validate conditional predictive distributions arising from single point deletion against observed responses. Sampling based methods are used to carry out required calculations. An example investigates the adequacy of and rather subtle choice between two sigmoidal growth models of the same dimension. GRA

**A CENTRAL LIMIT THEOREM FOR AUTOREGRESSIVE INTEGRATED MOVING AVERAGE PROCESSES Final Report, Jun. - Aug. 1992**
John E. Angus Aug. 1992 14 p
(AD-A258923; NHRC-92-15) Avail: CASI HC A03/MF A01

A modification of the classical compound Poisson process has been shown to be a viable model for describing total claims and compensation costs associated with hazardous material exposure. This model assumes that the successive claim awards form an autoregressive integrated moving average (ARIMA) process. In order to make practical approximations to the distribution of total claim and compensation costs with this model, it is necessary to develop approximations to the distribution of the sum of successive elements from an ARIMA process. In this investigation, a central limit theorem is developed for ARIMA processes, that makes this approximation possible in the case where the number of summands is large. GRA

Acceptance of the discovery of amplification of intrinsic fluctuations by chaotic dynamics has been slow. They have been able to identify several of the mental blocks experienced by others and have successfully clarified their position for some of these people. But it has been a slow process. The principal problem has been that some earlier researchers saw amplification of intrinsic fluctuations in their own work but failed to recognize its significance. These include Robert Graham and B. Huberman. The two conceptual insights they have missed are: (1) such amplification invalidates the contraction of the description from the mesoscopic level to the macroscopic level; and (2) the centrality of the Jacobi matrix in the theory since it connects the magnitude (and sign) of the largest Liapunov exponent with the growth of the fluctuations. The first oversight by others follows from their failure to embed the phenomenon in the context of levels of description. Rather, in their work, they have simply added fluctuations to macroscopic equations and investigated what happens. The second oversight results from not suspecting a connection in the first place. **TOWARD AN OPTIMAL STRATEGY FOR SAMPLING CHAOTIC TIME SERIES USING THE SMALE-WILLIAMS DYNAMICAL SYSTEM M.S. Thesis**
Mark A. Sellers Dec. 1992 108 p
(AD-A258550; AFIT/CI/CIA-92-111) Avail: CASI HC A06/MF A02

Chaotic dynamical systems such as the atmosphere can be characterized by their associated geometrical structures in phase space that are known as strange attractors. Time series data obtained from these dynamical systems must be sampled properly in order to estimate the fractal dimensions of these strange attractors with the greatest possible accuracy. The Smale-Williams attractor is used here because the value of the correlation dimension for this attractor can be determined analytically. Two types of sampling strategies are considered to determine how a time series might be best used to estimate the characteristics of the attractor. This attractor can be characterized by either a histogram of distances from the origin to each point on the attractor or by an estimate of its correlation dimension. Differences between histograms of a sufficiently long control series and subsets of this series are used to quantify the accuracy of representations of the attractor. Differences between analytic and estimated values of the correlation dimension are also used. Finally, the independence of the time series data is quantified in a new way and the relationship between the independence of sampled data and the accuracy of characterizations of the attractor by histograms of sampled data or by estimates of the correlation dimension is examined. **DEVELOPMENTAL STRATEGY FOR UNITED STATES SPACE POWER**
Roger B. Graves Apr. 1992 31 p
(AD-A258356) Avail: CASI HC A03/MF A01

The demise of the Soviet Union as the major adversary of the United States has created an unusual challenge for senior military leaders. The Soviet threat has been a major justification for the development of military space capabilities that represent a large share of defense spending. The Desert Storm experience was a watershed for space power as military leaders discovered how dependent combat forces had become on space support. With a pressing need for budget reductions because of the national deficit, the perceived decline of the Soviet threat, and the increased dependence on space power, our leaders must convince taxpayers and Congress that developing space power is vital to our national security interests. To ensure that no scarce resources are wasted, a careful space force development strategy must be built to support our space force employment strategy. Many factors influence that strategy, and the strategy maker must understand their effects. GRA

**LIE-ADMISSIBLE PERTURBATION METHODS FOR OPEN QUANTUM SYSTEMS**
A. Jannussis (Patras Univ., Greece ), R. Mignani (Institute for Basic Research, Palm Harbor, FL.), and D. Skaltsas (Patras Univ., Greece ) 3 Dec. 1992 12 p
(Preprint-845; ETN-93-92947) Avail: CASI HC A03/MF A01

Open quantum systems described by a Hamiltonian of the type H(sub 0) + (lambda)V where lambda is a small parameter are considered. Perturbative methods of solution of the corresponding Liouville-Von Neumann and Schroedinger equations are developed, by introducing 'dissipation' operators which connect conservative to dissipative systems. In the case of the density matrix, the corresponding operator lambda is the non-unitary lambda transformation of Misra, Prigogine and Courbage. The perturbative approach possesses a Lie admissible structure, since the 'dissipation' operators obey time evolution equations whose brackets are the product of a Lie admissible algebra. Explicit solutions for such operators are found in the form of series expansions in lambda. The matrix formulation of the results is given. ESA

**LAGRANGIAN CHAOS: TRANSPORT, MIXING, AND DIFFUSION IN FLUIDS**
A. Crisanti, M. Falcioni, G. Paladin (Aquila Univ., Italy ), and A. Vulpiani 23 Nov. 1991 120 p Submitted for publication Sponsored in part by Ist. Nazionale di Fisica Nucleare
(Nota-Interna-988; ETN-93-93352) Avail: CASI HC A06/MF A02

The problem of Lagrangian chaos (of the chaotic motion of fluid particles) is reviewed using methods and tools borrowed from the theory of dynamical systems. The main subject is the behavior of fluid particles which move according to regular velocity fields, that is, in the absence of Eulerian chaos or turbulence. In this framework, particular attention is given to the relation with mixing, transport, and diffusion phenomena in fluids. A possible general mechanism for the onset of Lagrangian chaos in two dimensional fluids is discussed. Evidence that the presence of a chaotic velocity field (Eulerian chaos) is not relevant for many properties of the particle motion is provided. Similar methods are applied to the analysis of the properties of the small scale statistics of passive scalar and magnetic fields. The long time diffusion features of contaminant particles, which show the importance of the combined effect of the molecular diffusion and the geometrical structures of the velocity field, are also studied. (NASA-CR-189741; NAS 1.26:189741; ICASE-92-67) Avail: CASI HC A03/MF A01

A detailed numerical investigation of the coupling between the vibration of a flexible plate and the acoustic radiation is performed. The nonlinear Euler equations are used to describe the acoustic fluid while the nonlinear plate equation is used to describe the plate vibration. Linear, nonlinear, and quasi-periodic or chaotic vibrations and the resultant acoustic radiation are analyzed. We find that for the linear plate response, acoustic coupling is negligible. However, for the nonlinear and chaotic responses, acoustic coupling has a significant effect on the vibration level as the loading increases. The radiated pressure from a plate undergoing nonlinear or chaotic vibrations is found to propagate nonlinearly into the far-field. However, the nonlinearity due to wave propagation is much weaker than that due to the plate vibrations. As the acoustic wave propagates into the far-field, the relative difference in level between the fundamental and its harmonics and subharmonics decreases with distance. Author

(INRIA-RR-1438; ETN-93-92645) Avail: CASI HC A03/MF A01

The problem of computing the three-dimensional (3D) motions of objects in a long sequence of stereo frames is addressed. The approach is bottom-up and consists of two levels. The first level deals with the tracking of 3D tokens from frame to frame and the estimation of their kinetics. The processing is completely parallel for each token. The second level groups tokens into objects based on their kinematic parameters, controls the processing at the low level to cope with problems such as occlusion, disappearance and appearance of tokens, and provides information to other components of the system. This approach is implemented using 3D line segments obtained from stereo as the tokens. Classical kinematics are used and closed form solutions are derived for some special, but useful, cases of motions. The motion computation problem is then formulated as a tracking problem in order to apply the extended Kalman filter. The tracking is performed in a prediction-matching-update loop in which multiple matches can be handled. Tokens are labeled by a number called its support of existence which measures their adequation to the measurements. If this number goes beyond a threshold, the token disappears. The individual line segments can be grouped into rigid objects according to the similarity of their kinematic parameters. Experiments using synthetic and real data were carried out, and the results were found to be quite good. ESA

**A DYNAMIC ANALYSIS OF PIEZOELECTRIC STRAINED ELEMENTS**
**Final Report**
M. C. Dokmeci Jun. 1992 283 p
(AD-A259011) Avail: CASI HC A13/MF A03

This report is addressed to the dynamic analysis of piezoelectric structural elements under a static mechanical bias. In the first part of the report, the current literature pertaining to the dynamic applications of piezoelectric crystals is reviewed; attention is confined to vibrations of structural elements. In the second part, the fundamental equations of piezoelectric media are expressed in variational form as the Euler-Lagrange equations of certain integral and differential types of variational principles. These variational principles are deduced from a general principle of physics by augmenting it through Friedrichs's transformation. In the third part, the system of approximate lower order governing equations of piezoelectric strained elements is systematically and consistently deduced in invariant form from the three-dimensional equations of piezoelectricity by means of the variational principles. The governing equations accommodate all the types of extensional, flexural, and torsional as well as coupled motions of piezoelectric one- and two-dimensional elements. Also, the uniqueness of solutions is examined and two unified numerical algorithms which are based on Kantorovich's method and the method of moments are described for solutions of the governing equations. Eric L. Scarborough Dec. 1992 129 p
(AD-A259041; AFIT/GE/ENG/92D-34) Avail: CASI HC A07/MF A02

An audio localization cue synthesizer, the DIRectional Audio Display (DIRAD) was used to simulate auditory distance, room reflections, and to provide spatial audio for computer graphics images. The DIRAD processes input audio signals to generate spatially located sounds for headphone listening. The DIRAD can position audio sources around the head and these sounds are stable with respect to the listener's head position. An interactive, real-time simulation of auditory distance and room reflections was accomplished using the DIRAD in combination with a Silicon Graphics audio processor board installed in a Personal Iris 4D/35. Several demonstrations of auditory distance and the effects of early reflections are detailed, including a simulation of a direct sound source and three reflections that employed two DIRAD systems. Stored sound files were used to accompany three dimensional graphics images that were displayed on both a Silicon Graphics CRT and a three dimensional optical display device. The use of the 4D/35 audio processor board proved to be an effective means of preprocessing audio for the DIRAD for these simulations. The combination of AFIT's Silicon Graphics workstations and the DIRAD proved to be a practical solution to the problem of combining virtual visual and audio cues. GRA

(Contract DAAD07-89-C-0209)
(AD-A258865; ASL-CR-92-0209-1) Avail: CASI HC A04/MF A01

The noise assessment and prediction system (NAPS) model provides an estimate of the surface peak noise intensity in all directions surrounding a blast source. The model makes use of a personal computer. An essential feature of the model is its ability to account for meteorological and topographical variations in the calculation of blast sound propagation. In performing noise intensity estimates, acoustic ray traces are generated over a sufficient range of azimuth and elevation angles to define the focusing and shadow regions in the area surrounding the airblast. The acoustics of the model include the effects of spherical acoustic spreading, absorption, focusing, shadow zones, reflection of rays from water, interference of multiple rays arriving at the same location, and the directional asymmetry of a blastwave. The NAPS model has been implemented at Aberdeen Proving Ground, Maryland, using acoustic sounder, upper air, and surface station data to provide on-line meteorological input. Plots of ray trace trajectories and sound intensity contour levels on a background map of the Aberdeen area, along with tabular data, are included as model features. This user's reference guide describes the procedures for running the NAPS model. It also includes examples of the required input data files and examples of the graphic outputs generated by the model. **RAY METHODS FOR ACOUSTIC SCATTERING, OPTICS OF BUBBLES, DIFFRACTION CATASTROPHES, AND NONLINEAR ACOUSTICS Final Technical Report, 1 Jan. 1985 - 30 Sep. 1991**
Philip L. Marston 24 Nov. 1992 ~49 p
(Contract N00014-85-C-0141)
(AD-A258938) Avail: CASI HC A03/MF A01

This report indexes research completed in several areas. The first area was ray methods for the scattering of sound by elastic objects in water. In this area, glory scattering was analyzed for solid and fluid spheres and calibration targets. Ray methods were extended to leaky Rayleigh and whispering gallery waves and then to leaky Lamb waves on shells. A related product expansion of the S function was studied. The second area was acoustical and optical diffraction catastrophes. These were observed and calculated for several situations of varying degree of complexity. The third area was light scattering by bubbles in water. In this area observations and physical optics approximations were made for backward and forward glories, critical angle scattering, optical levitation, and photoacoustic emission. The fourth area was nonlinear acoustics and radiation pressure. This area included studies of the interaction of sound with sound in bubble layers and free surfaces, radiation pressure and torques on drops, rapid cavitation due to shock reflection, and the response of hydrodynamic shear layers to oscillations. (Contract DAAD07-86-C0034)
(AD-A258783; ASL-CR-92-0001-2) Avail: CASI HC A03/MF A01

Theory is developed for acoustical scattering by localized quasistatic turbulent structures (turbules) that contain both flow and density variations. The quasistatic density variation is shown to be proportional to v(sup 2), where v is the (presumably small) ratio of flow speed to asymptotic acoustical wavespeed. The flow contributes terms O(v(sup 2)) to the scattering cross sections, while the density variations contribute terms O(v(sup 4)). Differential and total cross sections are calculated for a Gaussian spinning turbule model of effective radius a, for size parameters ka from 0.25 to 2.0, where k = 2 pi/lambda, lambda = wavelength, using the first Born approximation which is estimated to be valid for ka 2 for v(sub max) is less than 0.1. The contributions of the density variation are about three orders of magnitude smaller than those of the flow. The latter are proportional to (ka(sup 6)) and ((sin(theta))(sup 2)) x ((cos(theta))(sup 2)) x ((sin(theta(sub alpha)))(sup 2)) x sin(phi - phi(sub alpha)), where (theta, phi) are the P(polar, azimuthal) scattering angles, and (theta(sub alpha), phi(sub alpha)) are the spin axis angles. The contributions of the density variations go like (ka(sup 4)) and have a somewhat Rayleigh-like dependence on theta. A digitized Green function approach and computer algorithm are also developed, for the O(v(sup 2)) flow contributions only. In principle, this method would allow treatment of turbules of arbitrary structure, shape, and size. GRA

**PROPFAN NOISE PROPAGATION Final Report, Sep. 1990 - Aug. 1992**
Albert R. George and Ben Wel-C. Sim 15 Feb. 1993 22 p
(Grant NAG1-1078)
(NASA-CR-192221; NAS 1.26:192221) Avail: CASI HC A03/MF A01

The unconventional supersonic tip speed of advanced propellers has led to uncertainties about Propfan's noise acceptability and compliance with Federal Aviation Noise Regulation (FAR 36). Overhead flight testing of the Propfan with an SR-7L blade during 1989's Propfan Test Assessment (PTA) Program have shown unexpectedly high far-field sound pressure levels. This study here attempts to provide insights into the acoustics of a single-rotating propeller (SRP) with supersonic tip speed. At the same time, the role of the atmosphere in shaping the far-field noise characteristics is investigated. Derived from text

**LIE-ISOTROPIC ENERGY-DEPENDENCE OF THE NEUTRAL K(SUB S) LIFETIME**

F. Cardone, R. Mignani (Institute for Basic Research, Palm Harbor, FL.), and R. M. Santilli 16 Mar. 1992 9 p
(Preprint-874; ETN-93-92974) Avail: CASI HC A02/MF A01

The currently available phenomenological data on the behavior of the mean life of unstable hadrons with energy are studied. Fits to the experimental data in the neutral K(sub S) lifetime in the energy range 30 to 350 GeV show a good agreement with a generalized expression for time dilation, obtained by a Lie isotropic lifting of the Poincare symmetry. Results on the energy dependence of the parameters that, in the Lie isotropic theory, determine the deformed Minkowski metric inside hadrons, are given. ESA

(Nota-Interna-986; ETN-93-93350) Avail: CASI HC A02/MF A01

A covariant generalization of a recently introduced relativistic two body equation is proposed. The result for the case of two spin 1/2 particles is formally different from the one given by other authors. The theory is adapted to the study of interactions of isovector nature. The work may be considered as a starting point to study relativistic effects in three-body systems and in the electromagnetic interactions of the few body nuclear systems. ESA

**SOLID STATE AND THE STANDARD MODEL**
Luciano Pietronero and Giorgio Salvani 20 May 1991 13 p
(Nota-Interna-980; ETN-93-93344) Avail: CASI HC A03/MF A01

An attempt is made to look for links among the coupling constants and masses which are necessary for a proper formulation of the measurement process and that are left unspecified by the electroweak theory and quantum chromodynamics (that is the Standard Model). According to Landau and Lifshitz and further developments, the existence of classical objects (the detectors) are required for a satisfactory formulation of the measurement process. It is conjectured that these statements imply the existence of a 'solid state' of matter, in order to give operational meaning to the theory. In fact stable matter is necessary to establish a unit of length and to measure the coordinates of an event. From this perpective, the conditions of stability of the solid state with respect to quantum fluctuations are analyzed in order to define their implications in the fundamental constants and in the masses of particles. The result is that the requirement of a stable solid state implies the condition that the electron should be much lighter than the proton, regardless of the values of Planck contant and electron charge. This condition results from any attempt to give an experimental significance to the Standard Model. ESA

**IDENTIFICATION OF HIGH Pt JET EVENTS PRODUCED BY A RESOLVED PHOTON AT HERA AND RECONSTRUCTION OF THE INITIAL STATE PARTON KINEMATICS**
Giulio DAgostini (Istituto Nazionale di Fisica Nucleare, Rome, Italy ) and Daniela Monaldi (Istituto Nazionale di Fisica Nucleare, Rome, Italy ) 4 Feb. 1992 8 p Presented at Workshop on Physics at HERA, Hamburg, Germany, Oct. 1991 Submitted for publication
(Nota-Interna-991; ETN-93-93355) Avail: CASI HC A02/MF A01

A study of the possibility offered by the HERA (German acronym for hadron electron storage ring) detectors to identify the events where a parton of the proton interacts with a parton of the (quasi) real photon is presented. The presence of hadronic fragments in the direction of the photon outside of the beam is found to allow the identification of the two jet events produced by a resolved photon, with good efficiency and low background from the direct photon events. The possibility of reconstructing the fractional momenta of the two incoming partons is demonstrated. ESA

**DISCRIMINATION OF IONIC SPECIES FROM BROAD-BEAM ION SOURCES**
J. R. Anderson Washington Jan. 1993 123 p
(Grant NGT-50370)
(NASA-CR-4483; M-708; NAS 1.26:4483) Avail: CASI HC A06/MF A02

The performance of a broad-beam, three-grid, ion extraction system incorporating radio frequency (RF) mass discrimination was investigated experimentally. This testing demonstrated that the system, based on a modified single-stage Bennett mass spectrometer, can discriminate between ionic species having about a 2-to-1 mass ratio while producing a broad-beam of ions with low kinetic energy (less than 15 eV). Testing was conducted using either argon and krypton ions or atomic and diatomic oxygen ions. A simple one-dimensional model, which ignores magnetic field and space-charge effects, was developed to predict the species separation capabilities as well as the kinetic energies of the extracted ions. The experimental results correlated well with the model predictions. This RF mass discrimination system can be used in applications where both atomic and diatomic ions are produced, but a beam of only one of the species is desired. An example of such an application is a 5 eV atomic oxygen source. This source would produce a beam of atomic oxygen with 5 eV kinetic energy, which would be directed onto a material specimen, to simulate the interaction between the surface of a satellite and the rarefied atmosphere encountered in low-Earth orbit. **HEAVY QUARKS IN LATTICE QCD**
Luciano Maiani (Istituto Nazionale di Fisica Nucleare, Rome, Italy ) 14 Feb. 1991 22 p Presented at Present and Future of Collider Physics, Rome, Italy, 20-22 Sep. 1990 Submitted for publication Sponsored by Ministero della Pubblica Istruzione
(Preprint-786; ETN-93-92896) Avail: CASI HC A03/MF A01

Lattice calculations of the weak coupling of D and B mesons are reviewed. Investigations with lattice Quantum Chromodynamics (QCD) techniques, on the properties of mesons made by the heaviest quarks, charmed and beauty mesons, are summarized. The interaction of quarks and gluons in QCD is described. The equations show that the charm mass is not asymptotic for weak lifetimes. Several form factors at zero momentum transfer are given. The f sub B in the static limit is considered. Lattice QCD calculation gave interesting results, but a clear sign that the deep nonperturbative aspects of the strong interactions can be reproduced in this way is lacking. The quark model is less reliable, it is not protected by the nonrenormalization theorems, so useful for light quark systems, and lattice calculations to 20 to 30 percent accuracy are adequate. ESA

The MOCAL code is a Monte Carlo code that uses pre-existing albedo data files to determine neutron penetrations into shielding air gaps. By using the albedos along the bounding surfaces of the gaps, expensive computational tracking of neutrons through material regions is eliminated. Thus, the run-time for MOCAL is relatively short, compared to conventional Monte Carlo methods of tracking neutrons completely through the materials. Also as a result of this albedo treatment, MOCAL is very easy to use, with the time required to prepare a typical input data file to be less than 15 minutes in most cases. DOE

The most important aspect of the wind-up of UNISOR-based research is completion of student theses. Analysis is proceeding on extensive studies in the neutron-deficient rare earth isotopes with N less than 82 and the neutron-deficient region below Z = 82. These studies address the onset of deformation in the N less than 82, Z greater than 50 open shell region and shape coexistence in the N is approximately 104, Z less than 82 region, respectively. The main ongoing topics are shape coexistence in nuclei and the microscopic structure of collective motion in nuclei from a phenomenological point of view. New topics this year focus on the structure of nuclei near the N = Z line. Two topics have been chosen for detailed study: shape coexistence and electric monopole transition strengths. DOE

The purpose of this research program is to obtain experimental information on the different fundamental ways in which metals bond and activate organic molecules. Our approach has been to directly probe the electronic interactions between metals and molecules through a wide variety of ionization spectroscopies and other techniques and to investigate the relationships with bonding modes, structures, and chemical behavior. During this period, we have done the following: (1) characterized the electronic features of diphosphines and monophosphines in their coordination to metals; (2) carried out theoretical and experimental investigations of the bonding capabilities of C60 to transition metals; (3) developed techniques for the imaging of single molecules on gold substrates that emphasizes the electronic backbonding from the metal to the molecule; (4) obtained the high resolution photoelectron spectrum of pure C70 in the gas phase; (5) compared the bonding of eta(sup 1)-acetylide ligands to the bonding of other small organic molecules with metals; and (6) reported the photoelectron spectra and bonding of (eta)(sup 3)-cyclopropenyl groups to metals. The activities of this group are primarily concerned with experiments using the Crystal Barrel Detector. This detector is installed and operating at the Low Energy Antiproton Ring (LEAR) at CERN. QCD, the modern theory of the strong interaction, is reasonably well understood at high energies, but unfortunately, low-energy QCD is still not well understood, and is far from being adequately tested. The Crystal Barrel experiments are designed to provide some of the tests. The basic line of research involves meson spectroscopy, analyses bearing on the quark and/or gluon content of nuclear states, and the exploration of mechanisms and rules which govern p(-p) annihilation dynamics. The Crystal Barrel Detector detects and identifies charged and neutral particles with a geometric acceptance close to 100 percent. The principal component of the detector is an array of 1,380 CsI(T1) crystals. These crystals surround a Jet Drift Chamber (JDC), located in a 1.5 Tesla magnetic field, which measures the momentum and dE/dx of charged particles. One of the very interesting physics goals of the detector is a search for exotic mesonic states -- glueballs and hybrids. Annihilation at rest will be studied with both liquid and gaseous hydrogen targets. The gaseous target offers the possibility of triggering on atomic L-shell X rays so that specific initial angular momentum states can be studied. These topics as well as other related topics are discussed in this report. DOE

The analysis of the deuterium content in the CD target used in an experiment to study the pi + d yields 2p reaction at incident pion energies from 4 to 20 MeV was completed. The final paper describing this experiment will be submitted for publication this summer. Analysis of LAMPF Exp. on pion absorption in He-4 is continuing. In 1991, we collaborated with D. Pocanic from the Univ. of Virginia on a measurement at LAMPF of the pi(0) production in pi(+) p interactions. This run proved the validity of the method and additional data were obtained in a second run during the summer of 1992, using a new target. Current collaborations at LAMPF include the search for the decay mu(+) yields e(+) + gamma(MEGA) and a measurement of the Michel rho parameter in the decay mu yields e + nu + nu. A U.Va.--PSI collaboration is measuring pion beta decay to an accuracy of less than 1 percent, using a large acceptance CsI detector to measure the pi(0) following decay of stopped pi(+) mesons. Most of the U.Va. effort is devoted to the CEBAF Large Acceptance Spectrometer (CLAS) program to the construction of the CLAS forward calorimeter. An apparatus to measure the properties of the scintillators with light from a

N2 laser was built in the spring of 1992. The electronic circuitry for the energy signal from the EGN detector and the circuitry needed to route the signals from all the photomultipliers to the TDC and ADC circuits are being developed. Experimental proposals for the study of electroproduction of nucleon resonances at CEBAF, including measurements with polarized beam and targets, are being developed. DOE

Synchrotron Radiation induced X-ray micro-Fluorescence analysis ((mu)-SRXRF) is compared with more conventional microanalytical techniques such as Secondary Ion Microscopy (SIMS) and Electron Probe X-ray Microanalysis (EPXMA) for two typical microanalytical applications. SRXRF and EPXMA are employed for the analysis of individual particles, showing the complementary character of the techniques. By means of element mapping of trace constituents in a heterogeneous feldspar, the strong and weak points of SRXRF in comparison to EPXMA and SIMS are illustrated. The most striking difference between SRXRF and the other two microanalytical methods is the ability of SRXRF to probe deep into the investigated material, whereas SIMS and EPXMA only investigate the upper surface of the material. The possibilities of SRXRF at third generation synchrotron rings is also briefly discussed. DOE

(NASA-RP-1286; NAS 1.61:1286) Avail: CASI HC A07/MF A02

Stennis Space Center (SSC) is pursuing the advancement of experimental techniques and theoretical developments in the field of plume spectroscopy for application to rocket development testing programs and engine health monitoring. Exhaust plume spectral data for the Space Shuttle Main Engine (SSME) are routinely acquired. The usefulness of this data depends upon qualitative and quantitative interpretation of spectral features and their correlation with the engine performance. A knowledge of the emission spectral characteristics of effluent materials in the exhaust plume is essential. A study of SSME critical components and their materials identified 30 elements and 53 materials whose engine exhaust plume spectral might be required. The most important were evaluated using SSC's Diagnostic Testbed Facility Thruster (DTFT), a 1200-lbf, liquid oxygen/gaseous hydrogen rocket engine which very nearly replicates the temperature and pressure conditions of the SSME exhaust plume in the first Mach diamond. This report presents the spectral data for the 10 most important elements and 27 most important materials which are strongly to moderately emitting in the DTFT exhaust plume. The covered spectral range is 300 to 426 nm and the spectral resolution is 0.25 nm. Spectral line identification information is provided and line interference effects are considered. Author

Fourier Transform Mass Spectrometry (FTMS) is used to make energy resolved ion-neutral reaction measurements at high translational energies (up to several hundred eV). The technique is demonstrated for collisional detachment of anions, and should be easily applied to other inelastic reactions. Collisional detachment cross sections of iodine anions onto gas phase targets of neon, xenon, and trifluoromethyl iodide are measured for 1-300 eV (lab frame). Peak detachment cross sections are roughly 2, 8.5, and 7 square angstroms, respectively. Ion kinetic measurements show the iodine anion is unreactive in trifluoromethyl iodide at thermal energies. Positive ion chemistry is consistent with previous results from well established techniques. However, the influence of internal energy is quantified for the first time by varying the electron energy of ion formation. Changes in the observed reactions of iodine cations and trifluoromethyl iodide cations are attributed to ion formation in excited states. Ionization and attachment cross sections for electron impact on trifluoromethyl iodide are reported for the first time over the energy range 10-50 eV. The ion motion in the FTMS ion trap is modelled and the relationship between the ion trajectory and the ion image current is quantified. GRA

**CLASSICAL AND QUANTUM DYNAMICS OF THE IMPULSIVELY DRIVEN HYDROGEN ATOM**
M. Melles (Tennessee Univ., Knoxville.), C. O. Reinhold (Tennessee Univ., Knoxville.), and J. Burgdoerfer (Tennessee Univ., Knoxville.) 1992 13 p Presented at the 12th International Conference on the Application of Accelerators in Research and Industry, Denton, TX, 2-5 Nov. 1992
(Contract DE-AC05-84OR-21400)
(DE93-002430; CONF-921116-3) Avail: CASI HC A03/MF A01

We investigate the classical and quantum dynamics of the hydrogen atom in a Rydberg state subject to a sequence of periodic and random pulses. One goal of this study is to test the validity of classical electron transport theories. We analyze the critical momentum transfer for which 10 percent of the Rydberg atoms are ionized after a large number of pulses as a function of the frequency of the perturbation. The quantum mechanical results for a periodic sequence of pulses exhibit clear structures which are not present in a classical simulation. These structures are shown to vanish for the case of stochastic pulses for which agreement is obtained between the classical and quantum mechanical results. The dynamics of the quantum mechanical periodic system is analyzed in terms of quasi-eigenstates of the period-one time evolution operator. DOE

The recently developed ability to synthesize materials from atomic precursors under controlled conditions on a nanometer size scale (below 100 nm) has the potential for revolutionizing materials science and engineering. Such nanostructured materials can now be synthesized with modulation dimensionalities from zero (clusters) to three (nanophase materials), each with their own particular advantages. These advantages stem from such diverse effects as for example quantum confinement elastic strain accommodation, and grain size limitations. The general principles of nanostructured materials are considered and the particular opportunities for producing bulk nanophase materials with engineered properties, via the synthesis of metal and ceramic atom clusters followed by their in-situ assembly under controlled conditions, are presented as an example. The objective of this three-year study is to develop a technique called 'channel theory' that can be used in interpreting particle transport analysis such as frequently required in radiation shielding design and assessment. Channel theory is a technique used to provide insight into the mechanisms by which particles emitted from a source are transported through a complex system and register a response on some detector. It is based on the behavior of a pseudo particle called a 'contributon', which is the response carrier through space and energy channels that connect the source and detector. 'Contributons' are those particles among all the ones contained in the system which will eventually contribute some amount of response to the detector. The specific goals of this projects are to provide a more fundamental theoretical understanding of the method, and to develop computer programs to apply the techniques to practical problems encountered in radiation transport analysis. The overall project can be divided into three components to meet these objectives: (1) Theoretical Development; (2) Code Development; and (3) Sample Applications. During the present third year of this study, an application of contributon theory to the analysis of radiation heating in a nuclear rocket has been completed, and a paper on the assessment of radiation damage response of an LWR pressure vessel and analysis of radiation propagation through space and energy channels in air at the Hiroshima weapon burst was accepted for publication. A major effort was devoted to developing a new 'Contributon Monte Carlo' method, which can improve the efficiency of Monte Carlo calculations of radiation transport by tracking only contributons. The theoretical basis for Contributon Monte Carlo has been completed, and the implementation and testing of the technique is presently being performed. DOE

The Center for Analysis of Particle Scattering (CAPS) in the Department of Physics at Virginia Polytechnic Institute and State University has analyzed basic two-body hadron reactions below 2 GeV for the last two decades. Reactions studied were nucleon-nucleon, pion - nucleon, K+ - nucleon and pion photoproduction systems. In addition to analyses of these reactions, a computer graphics system (SAID) has been developed and disseminated to over 250 research institutions using VAX computers. The computer-interactive system for disseminating information on basic scattering reactions is also accessible to the physics community through TELNET on the VPI&SU physics department VAX. DOE

A proposal for theoretical nuclear physics research is made for the period April 1, 1993 through March 31, 1996. Research is proposed in the following areas: relativistic many-body theory of nuclei and nuclear matter, quasifree electroweak scattering and strange quarks in nuclei, dynamical effects in (e,e'p) scattering at large momentum transfer, investigating the nucleon's parton sea with polarized leptoproduction, physics of ultrarelativistic nucleus-nucleus collisions, QCD sum rules and hadronic properties, non-relativistic models of nuclear reactions, and spin and color correlations in a quark-exchange model of nuclear matter. Highlights of recent research, vitae of principal investigators, and lists of publications and invited talks are also given. Recent research dealt primarily with medium-energy nuclear physics, relativistic theories of nuclei and the nuclear response, the nuclear equation of state under extreme conditions, the dynamics of the quark-gluon plasma in relativistic heavy-ion collisions, and theories of the nucleon-nucleon force. This report summarizes the work carried out by personnel from the University of Texas at Austin at the Los Alamos Clinton P. Anderson Meson Physics Facility (LAMPF). The research activities involved experiments done with the Energetic Pion Channel and Spectrometer (EPICS), the Low Energy Pion Channel (LEP), the Pion and Particle Physics Channel (P(sup 3)), the High Resolution Spectrometer (HRS), and planning a new experimental program associated with the new high-resolution Neutral Meson Spectrometer (NMS) at LAMPF. A brief overview of work supported by this grant is given followed by an account of the study of the double giant resonances in pion double charge exchange on V-51, In-115, and Au-197. This report contains a list of published papers and preprints, abstracts, and invited talks. These papers summarize experiments involving participants supported by this grant and indicate the work accomplished by these participants in this program of medium energy nuclear physics research. Lists of the most recent proposals on which we have participation at LAMPF, proposals which have been approved this past year to run as experiments, personnel who have participated in this research program are included. The research cited in this report is, in many cases, the collaborative effort of many groups associated with research at LAMPF. DOE

Numerical solution techniques for deterministic models of the transport of neutral and charged particles is developed and their effectiveness in both a production environment and on advanced architecture computers is demonstrated. The primary focus is on various versions of the linear Boltzman equation. These equations are fundamental in many important applications. This project is an attempt to integrate the development of numerical algorithms with the process of developing production software. A major thrust of this project will be the implementation of these algorithms on advanced architecture machines that reside at the Advanced Computing Laboratory (ACL) at Los Alamos National Laboratories (LANL). (Contract W-7405-eng-36)
(DE93-002623; LA-12390-MS) Avail: CASI HC A03/MF A01

Analog and digital methods for gain stabilization and gain-drift compensation in scintillator gamma-ray spectroscopy are discussed and compared. A digital method that uses gamma-ray reference sources (instead of alpha-particle reference sources embedded as seeds within the scintillators) and software (instead of hardware) for detecting and compensating for gain drifts can be applied to any scintillator spectrometer, including those with crystals that are too small to seed. Its applications extend to other types of gamma-ray detectors as well. The results of an experimental evaluation of this method, using a compact NaI(Tl) detector and gamma-ray spectra for plutonium of variable burnup, are presented. Reliable performance was demonstrated with changing total count rate, varying continuum background and changing gain. Applications for the method are discussed. DOE

High resolution He 1(alpha) photoelectron spectroscopy of formaldehyde and ketene and their deuterated compounds, are reported. The combination of a (H2CO) double-pass high-resolution electron-energy analyzer and effective rotational cooling of the sample by supersonic expansion enable the spectroscopy of these molecular cations. The vibrational autocorrelation functions are calculated from the high-resolution photoelectron spectra, shedding light on the ultrafast intramolecular dynamics of the molecular cations. This study reveals much more vibrational structural detail in the first electronic excited state of H2CO cations. The first electronic excited state of H2CO cations may have nonplanar equilibrium geometry. Strong isotope effects on vibronic (vibrational) coupling are observed in the second electronic excited state of H2CO. Vibrational autocorrelation functions are calculated for all four observed electronic states of H2CO. The correlation function of the first electronic excited state of H2CO shows a slow decay rate on the femtosecond time scale. The ultrafast decay of the H2CO cations in the third electronic excited state implies that dissociation and intramolecular processes are the main decay pathways. The present spectra of the ground states of ketene cations have more fine structure than before. The AIE's of the first and fifth excited states are determined unambiguously more accurately. The doublet-like fine structures present in the lint excited state of ketene implies the excitation of a 'soft' mode not observed before. The vibrational autocorrelation functions are calculated for 4 of the 6 observed electronic states. The dynamics of the ground states of the cations are characterized by a wave packet oscillating with small amplitude around the minimum on the upper PES. The decay dynamics of the first and the fifth excited states of ketene are characterized by ultra-fast intramolecular processes like predissociation. DOE

Neutron energy distributions (spectra) in differential neutron cross section measurements are represented conventionally by giving the energies (not well defined) and full widths at half maximum of the spectra. In most modern experiments, it is possible for investigators to provide a much more thorough representation of neutron spectra. However, reporting such information would entail more numerical detail than appears practical to document. Therefore, it is suggested that such spectra be represented in publications and files of experimental data by providing the following four moments of each distribution: mean value (energy), standard deviation (resolution), skewness (asymmetry), and kurtosis (sharpness). Implementation of such a standard for data reporting would offer evaluators a much more complete and rational basis for comparing reported values and performing evaluations than previously possible. Some examples are provided to illustrate the concepts. DOE

**SOLVATION EFFECTS ON REACTIVE INTERMEDIATES: THE BENZYL RADICAL AND ITS CLUSTERS WITH Ar, N2, CH4, C2H6, AND C3H88**
R. Disselkamp and E. R. Bernstein 11 Dec. 1992 50 p

(Contract N00014-89-J-1237)
(AD-A258764; TR-82) Avail: CASI HC A03/MF A01

Mass resolved excitation spectra are presented for the benzyl radical and its clusters with Ar, N2, CH4, C2H6, and C3H8. The cluster spectra exhibit small red shifts (less than 50 cm(sup -1)) relative to the unclustered benzyl radical for the D(sub 1)(1(sup 2)A(sub 2)) reverse transition D(sub 0)(1(sup 2)B(sub 2)) and D(sub 2)(2(sup 2)B(sub 2) reverse transition D(sub 0)(1(sup 2)B(sub 2)) electronic transition regions. A unique set of low energy van der Waals modes is observed for these clusters for each excited electronic state investigated. The cluster spectra also reveal significant vibronic coupling between the two excited electronic states of the benzyl radical, as evidenced by a single vibrational predissociation threshold for each cluster. Ab initio calculations are performed on the benzyl radical to examine excited electronic state structure, predict transition energies, estimate ionization energy, and determine partial atomic charges in the electronic states of interest. The resulting partial charges are used in empirical atom-atom potential energy calculations to aid in the understanding of cluster spectroscopic shifts, binding energies, and van der Waals modes. The Counter Group continues to work on data analysis for Fermilab Experiment E653. Altogether, they expect several thousand reconstructed charm events and approximately 25 B pair events of which 12 have been observed thus far. Preparation continue for Fermilab Experiment E781, a high statistics study of charm barycn production. In the Theory Group, Cutkosky and collaborators study hadron phenomenology and non-perturbative QCD calculations. Levine has a long standing program in computational QED to obtain improved theoretical values for g-2 of the electron. Wolfenstein, Li, and their collaborators have worked on areas of weak interaction phenomenology that may yield insights beyond the standard model, e.g., CP violation and non-zero neutrino masses. Holman has been concerned with phase transitions in gauge theories relevant to cosmological problems. During 1991 most of the group effort was concentrated on the L3 experiment at CERN. Highlights of the results from the analysis of the Z degrees resonance include (1) a measurement of the strong coupling constant alpha(sub s) for b quarks, (2) a precision measurement of the average time of B hadrons, and (3) a direct determination of the number of light neutrino faculties from the reaction e(+)e(-) yields nu bar-nu gamma. We also began a major upgrade of the L3 luminosity monitor by replacing PWC chamber by a Si strip system in front of the BGO calorimeters. Finally we have continued our SSC R&D work on BaF2 by joining the GEM collaboration. DOE

**THE FIRST LEVEL ENERGY TRIGGER OF THE L3 EXPERIMENT/DESCRIPTION OF THE HARDWARE**
R. Bizzarri, F. Cesaroni (Istituto Nazionale di Fisica Nucleare, Rome, Italy), S. Gentile (Calabria Univ., Cosenza, Italy), G. Lunadei, M. Fukushima (Massachusetts Inst. of Tech., Cambridge.), and T. Hebbeker (European Organization for Nuclear Research, Geneva, Switzerland ) 15 Oct. 1991 37 p
(Nota-Interna-987; ETN-93-93351) Avail: CASI HC A03/MF A01

The design and the performance of the first level energy trigger, as used in the L3 experiment at LEP (Large Electron Positron) collider, are described. The trigger is based on energy measurements in the electromagnetic and hadronic calorimeters and the luminosity monitors. The bunch crossing time at LEP is 22.2 microseconds; the information from these detectors is digitized and analyzed in 20 microseconds. The trigger is a fast processor that makes use of about 350 CAMAC modules. Each of them performs a dedicated function and is connected with the other modules via front-panel buses. The CAMAC dataway is used only for initialization and checking purposes. The whole processor operates synchronously with a clock period of 60 ns. The trigger decision is mainly based on the total and electromagnetic energy in the event, on the cluster finding algorithm, which searches localized energy deposits in the calorimeters, and on the presence of a single photon, where the most of the electromagnetic energy is confined to a few crystals in the electromagnetic calorimeter. The system also includes the luminosity trigger, to detect small angle Bhabha events for the measurements of the luminosity. ESA

Pontecorvo (Istituto Nazionale di Fisica Nucleare, Rome, Italy ) 9 Dec. 1991 17 p Presented at 77th Congresso Nazionale delle Societa Italiana di Fisica, L'Aquila, Italy, 1-5 Oct. 1991
(Nota-Interna-990; ETN-93-93354) Avail: CASI HC A03/MF A01

Measurement of the distribution of hits in Resistive Plate Chambers (RPC's) equipped with digital readout of the charge induced on strips of 31 mm pitch is reported. The probability that the pulses induced in the strips are over threshold is parametrized in terms of a charge density function and the parameters of the distribution are extracted from the data. Using the hit probability measured in a detailed simulation of the response of RPCs, the size of the clusters measured with a 70 GeV/c momentum muon beam could be reproduced. ESA

(NASA-CR-189180; NAS 1.26:189180) Avail: CASI HC A09/MF A03

The results of a study to identify potential hazards arising from nuclear reactor power systems for use on the lunar and Martian surfaces, related safety issues, and resolutions of such issues by system design changes,

operating procedures, and other means are presented. All safety aspects of nuclear reactor power systems from prelaunch ground handling to eventual disposal were examined consistent with the level of detail for SP-100 reactor design at the 1988 System Design Review and for launch vehicle and space transport vehicle designs and mission descriptions as defined in the 90-day Space Exploration Initiative (SEI) study. Information from previous aerospace nuclear safety studies was used where appropriate. Safety requirements for the SP-100 space nuclear reactor system were compiled. Mission profiles were defined with emphasis on activities after low earth orbit insertion. Accident scenarios were then qualitatively defined for each mission phase. Safety issues were identified for all mission phases with the aid of simplified event trees. Safety issue resolution approaches of the SP-100 program were compiled. Resolution approaches for those safety issues not covered by the SP-100 program were identified. Additionally, the resolution approaches of the SP-100 program were examined in light of the moon and Mars missions. Author

**IDENTIFICATION OF TOROIDAL FIELD ERRORS IN A MODIFIED BETATRON ACCELERATOR Interim Report**
P. Loschialpo, C. A. Kapetanakos, S. J. Marsh (SFA, Inc., Landover, MD.), L. K. Len (FM Technologies, Inc., Fairfax, VA.), and T. Smith (FM Technologies, Inc., Fairfax, VA.) 27 Nov. 1992 26 p
(AD-A257983; NRL/MR/4795-92-7141) Avail: CASI HC A03/MF A01

A newly developed probe has been used to detect errors in the toroidal magnetic field of the NRL modified betatron accelerator. Measurements indicate that the radial field components (errors) are 0.1 to 1 percent of the applied toroidal field. Such errors, in the typically 5 kG toroidal field, can excite resonances which drive the beam to the wall. Two sources of detected field errors are discussed. The first is due to the discrete nature of the twelve single turn coils which generate the toroidal field. Measurements and computer calculations indicate that it's amplitude varies from 0 to 0.2 percent as a function of radius. This error is a good suspect for causing the excitation of the damaging I is approximately equal to 12 resonance seen in our experiments. The other source of field error is due to the current feed gaps in the vertical magnetic field coils. A magnetic field is induced inside the vertical field coils' conductor in the opposite direction of the applied toroidal fields. Fringe fields at the gaps lead to additional field errors which have been measured as large as 1.0 percent. GRA

**NON-CONVENTIONAL MEASUREMENT TECHNIQUES FOR THE DETERMINATION OF SOME LONG-LIVED RADIONUCLIDES PRODUCED ION NUCLEAR FUEL: LITERATURE SURVEY**
R. J. Rosenberg Apr. 1992 37 p Sponsored by Ministry of Trade and Industry
(VTT-TIED-1357; ISBN-951-38-4170-7; ETN-93-93068) Copyright Avail: CASI HC A03/MF A01

The results of a literature survey of nonradiometric analytical techniques for the determination of long lived radionuclides are described. The methods which were considered are accelerator mass spectrometry, inductively coupled plasma mass spectrometry, thermal ionization mass spectrometry, resonance ionization spectrometry, resonance ionization mass spectrometry, and neutron activation analysis. Neutron activation analysis was commonly used for the determination of I-129 and Np-237 in environmental samples. Inductively coupled mass spectrometry seems likely to become the method of choice for the determination of Tc-99, Np-237, and Pu isotopes. The methods are discussed and the chemical separation methods are described. ESA

The purpose of the analysis is to ensure that the plant safety and reliability are maintained at a desired level through the designed, and a possibly extended, lifetime. The use of probabilistic models in the evaluation of the ageing of nuclear power plant components is discussed. The principles of nuclear power plant ageing studies are described and examples of ageing management programs are given. The use of time dependent probabilistic models to evaluate the ageing of various components and structures is described. The application of models is demonstrated with two case studies. In the case study of motor operated closing valves the analyses are based on failure data obtained from a power plant. In the example, the environmentally assisted crack growth is modeled with a computer code and the applicability of the model is evaluated on the basis of operating experience. ESA

(CEBAF-PR-92-023) Avail: CASI HC A01/MF A01; also available from CEBAF Library, 12000 Jefferson Ave., Newport News, VA 23606

The CEBAF superconducting linac is capable of accelerating electron beams suitable for driving high-power free-electron lasers (FEL's). The 45 MeV injector linac with a 6 cm period wiggler can produce kilowatt output powers of infrared light (3.6-17 microns), while the 400 MeV north linac can produce ultraviolet light (approximately 200 nm) at similar powers. The FEL's require the addition of a high-peak intensity electron source (approximately 60 A peak current) and extraction beam lines to wigglers with appropriate electron and photon optics. FEL operation is compatible with simultaneous baseline CEBAF nuclear physics operation. A design for a CEBAF-based FEL facility was developed. The current status of the FEL project is reported. Avail: CASI HC A01/MF A01

An experiment at the Stanford Linear Accelerator Center (SLAC) to test the LPM (Landau-Pomeranchuk-Migda) effect is being prepared. In bremsstrahlung from high energy electrons, the longitudinal momentum transferred from the nucleus is very small. Then, by the uncertainty principle, the interaction must occur over a distance much larger than the atomic scale. In the LPM effect, multiple scattering changes the electron trajectory within the interaction distance, and so suppresses the bremsstrahlung. This effect, predicted in the 1950's, has never been quantitatively studied. For dense, high Z, targets in a 25 GeV electron beam, suppression is significant for photons below a few hundred MeV. By comparing

bremsstrahlung from targets of different materials (Pb, U, W, and C), it is possible to measure the suppression accurately. The longitudinal density effect, where very low energy photon emission is suppressed due to the dielectric effect of the medium, is studied. DOE

Traditionally, light distributions in scattering media are calculated using average optical parameters. But, for example in a medium like biological tissue, the optical parameters may vary widely within a small volume. Variations in the optical parameters cause variations in the light dose. Separately, four optical parameters are modeled at each point in the medium as stochastic samples of correlated Gaussian distributions. Using diffusion theory, the mean value and the standard deviation of the resulting stochastic fluence rate are quantified. The mean value differs only slightly from the fluence rate calculated with the average optical parameters. The standard deviation of the stochastic fluence rate is zero at the light source and increases almost exponentially with depth. Of the total reflection the standard deviation is zero but of the total transmission it is large. ESA

This report describes continued development of a sensor simulation code for high fidelity simulation of active and passive optical detection systems. The primary goal of this work has been to develop a toolbox of procedures which can be combined arbitrarily to model a wide variety of optical detector systems at the component, subsystem, and system level. The simulation is text file (script) driven, allowing libraries of detectors and detection systems to be assembled. The lowest level routines are primarily mathematical operations, and thus other systems, such as sensor signal processing, can also be modeled. The report provides an overview and results of model operation. Detailed descriptions of the noise model, the syntax of the modeling language, the available mathematical routines, and the prototype code structure are provided. GRA

**NONLINEAR JOINT TRANSFORM CORRELATOR Final Report, Jun. 1989 - Apr. 1992**
Bahram Javidi Jun. 1992 41 p
(Contract F19628-89-K-0035)
(AD-A258329; RL-TR-92-141) Avail: CASI HC A03/MF A01

Experiments are provided to investigate the nonlinear joint transform correlator (JTC). Experiments are used to determine the correlation peak intensity, signal to noise ratio (SNR), peak to sidelobe ratio (PSR), and correlation width for various degrees of the nonlinearity used at the Fourier plane. The system is implemented using an optically addressed spatial light modulator in the Fourier plane. The experiments show that for the images used here, nonlinear compression of the joint power spectrum is necessary to pull the signal out of scene noise and produce a peak to sidelobe ratio of larger than unity. In addition, the sensitivity of the nonlinear JTC to the scaling and rotational changes of the input objects for various degrees of the nonlinearity applied to the joint power spectrum is investigated. The effect of the modulation transfer function of the spatial light modulator on the nonlinear JTC performance in the presence of multiple input targets is discussed. GRA

**TRACK-BEFORE-DECLARE METHODS IN IR IMAGE SEQUENCES**
Steven M. Bolen Sep. 1992 37 p
(AF Proj. 4506)
(AD-A257517; RL-TR-92-188) Avail: CASI HC A03/MF A01

The development of low observable (LO) targets, such as cruise missiles and cruise-missile-carrying aircraft, can severely stress the detection and tracking capabilities of infrared (IR) surveillance systems. Long-range surveillance requires the detection and tracking of targets that are spatially unresolved and often maneuvering in a low signal-to-clutter ratio (SCR) environment. These characteristics make the LO target difficult to detect in single-frame processing techniques. However, by combining intensity information from each pixel over many frames of data it is possible to improve target detection capability. A class of long-term integration techniques for weak target detection, known as track-before-declare (TBD), will be discussed in this paper. GRA

Roger S. Putnam Aug. 1992 44 p
(Contract F19628-91-C-0106)
(AD-A257594; ARI-RR-934; RL-TR-92-218) Avail: CASI HC A03/MF A01

The phase-only Consensus Correlator improves the probability of detection of targets obscured by other objects such as a stand of trees. The technique involves masking out most of the input scene and using a standard correlator to search for small pieces of the expected target shape. The areas of the input scene that are found to contain pieces of the target are combined in a final correlation. The Consensus Correlator reduces the transfer of noise that is interspersed with pieces of the target in the input scene to the vicinity of the correlation spike in the correlation plane. A preliminary investigation of an appropriate figure of merit for comparing correlation spikes produced by different inputs and phase-only filters is also presented. GRA

**PROCEEDINGS FOR OPTICAL FIBER SENSORS**
31 Jan. 1992 448 p Conference held in Monterey, CA, 29-31 Jan. 1992
(AD-A257801) Avail: CASI HC A19/MF A04

This conference is the eighth in the Optical Fiber Sensor (OFS) Series, the first being held in London in 1983. There has been considerable progress over the past nine years and recently a number of the technological hurdles which have slowed the development of this technology have been overcome. The number of commercially available fiber optic sensors is still growing, however workers in the fiber sensor area now have a better appreciation of the strengths of conventional sensor technology and realize the stiffness of the competition. However a number of workers in the user community, initially skeptical, are beginning to see the real advantages fiber optic sensor technology has to offer. It has always been the OFS conference charter to publish original, significant research in the area of fiber optic sensors. As the technology matures it is natural that emphasis shifts towards applications-oriented research and development. Since the last OFS conference, there have been a number of important demonstrations of fiber optic sensor technology - for example a 48 channel all optical towed array was successfully tested at sea by the U.S. Navy. In the area of fiber optic gyroscopes, progress has also been rapid towards the demonstration of the viability of this technology for wide ranging applications. As these areas mature a number of other applications--especially smart skins, are rapidly expanding. This gives opportunities for the development of new sensing and interrogation techniques. GRA

**EXACT CALCULATION OF LIGHT SCATTERING FROM A PARTICLE ON A MIRROR**
B. R. Johnson 15 Nov. 1992 29 p
(AD-A258464; ATR-92(8476)-1) Avail: CASI HC A03/MF A01

Exact methods have been developed for calculating light scattering from particles on a perfectly reflecting surface. The computed solutions obey Maxwell's equations and the appropriate boundary conditions. A brief discussion of the theory is followed by a presentation and discussion of selected scattering results. Comparisons are made with the predictions of Young's forward scatter Mie theory model. Under certain conditions, the exact results differ significantly from Mie theory. The exact differential cross sections exhibit large amplitude oscillations that are not predicted by Mie theory. The bidirectional reflectance distribution function (BRDF) is also calculated using exact scattering theory for both spherical and hemispherical particles that are both absorptive (complex index of refraction) and nonabsorptive (real index of refraction). These exact BRDF results are compared to the predictions of Young's model. GRA

The apparatus for a near real-time stereo vision system for use with a robotic vehicle is described. The system is comprised of two cameras mounted on three-axis rotation platforms, image-processing boards, a CPU, and specialized stereo vision algorithms. Bandpass-filtered image pyramids are computed, stereo matching is performed by least-squares correlation, and confidence ranges are estimated by means of Bayes' theorem. In particular, Laplacian image pyramids are built and disparity maps are produced from the 60 x 64 level of the pyramids at rates of up to 2 seconds per image pair. The first autonomous cross-country robotic traverses (of up to 100 meters) have been achieved using the stereo vision system of the present invention with all computing done onboard the vehicle. The overall approach disclosed herein provides a unifying paradigm for practical domain-independent stereo ranging.

**DESIGN AND IMPLEMENTATION OF A FIBER OPTIC LINK FOR A TOKEN RING LOCAL AREA NETWORK M.S. Thesis**
Thomas J. Doran Sep. 1992 66 p
(AD-A257868) Avail: CASI HC A04/MF A01

This thesis describes the design and implementation of a fiber optic link for a token ring local area network (LAN). It features the use of fiber optic channels as the transmission medium between a computer system and a wiring concentrator to convert a physical ring design into a starwired configuration. The LAN was controlled by the TMS380 LAN Adapter chipset, which provided all diagnostic and network management features to include the 4 Mb/s electrical signal for operation. Since this adapter was developed for systems using twisted wire pair adapter cables, design modifications required that the fiber link be able to simulate impedance and current characteristics of copper wire link. This allows the use of adapter diagnostic checks for ring continuity and proper ring operation. Design evaluations using test signals and adapter signals from within the computer-concentrator link showed mixed results. All transmission objectives were met but the circuit loaded down the LAN adapter causing hardware error messages. GRA

**N93-18442#** Technische Univ., Delft (Netherlands).
**IMMERSION OBJECTIVE LENSES IN ELECTRON OPTICS Ph.D. Thesis**
Michal Lenc 1992 88 p
(ETN-92-92799) Avail: CASI HC A05/MF A01

A theoretical study of immersion objective lenses in electron optics is presented. Immersion objective lenses place the object inside high electrostatic and magnetic field, and thus they enable a significant improvement of the resolution. With this definition, cathode lenses belong to a class of electrostatic immersion objective lenses. Magnetic objective lenses of most commercial microscopes are also immersion lenses. The role of immersion objective lenses in electron optics is explained and the electron light optics analogy of these rational symmetric lenses is discussed. An overview of historical interest in these lenses is given. Mathematical tools are summarized: the perturbation theory for the optical eikonal calculation; the hamiltonian formulation of charged particle optics; and the wave optical description. The following are considered with respect to electrostatic immersion objective lenses and magnetic objective lenses: basic paraxial properties; the full set of aberration formulas for the third order geometrical and the first order chromatic aberrations; the resolution of immersion objectives by the axial aberrations. The results and aberration expression derived can be used for the optimization of objective lenses, for example the objective lens of the emission electron microscope or the scanning electron microscope with very low energy electrons. ESA

**APPLICATION OF PHOTOREFRACTIVE CRYSTALS TO SOLVE MATRIX ALGEBRA PROBLEMS OPTICALLY Final Report**
Sing H. Lee 27 Oct. 1992 15 p
(Contract N00014-86-K-0697)
(AD-A259067) Avail: CASI HC A03/MF A01

The goals for the project are to solve matrix algebraic problems at high speed by applying photorefractive crystals in optical processing systems, and to study the photorefractives for such application. Although our interest was primarily on solving matrix algebraic problems, in order to improve system performance we found it important to optimize crystal operation

and to improve the photorefractive memory performance. For example, a fast response and large coupling gain bandwidth photorefractive amplifier is required in the matrix inversion system, and high photorefractive efficiency and large storage capacity are required for the correlation matrix-tensor multiplier system. The report is divided into four sections. Section 2.1 describes an all-optical implementation of an iterative algorithm for matrix inversion. Section 2.2 reports the implementation of a correlation matrix tensor multiplier algorithm in photorefractive crystals. Section 2.3 summarizes the results that have been obtained in improving photorefractive performance, which includes 450-cut BaTiO3, applying electrical field and moving grating on SBN and GaP. Section 2.4 reviews our work on photorefractive memory, which includes circulating memory, incremental recording, orthogonal phase encoding, and selective erasure. A list of publications resulted from the research is included at the end of this report. GRA

**INCREASING THE CORRECTED FIELD OF VIEW OF AN ADAPTIVE OPTICAL TELESCOPE Ph.D. Thesis**

Dustin C. Johnston Dec. 1992 137 p

(AD-A258816; AFIT/DS/ENG/92-06) Avail: CASI HC A07/MF A02

Current adaptive optical telescope designs use a single deformable mirror (DM) to compensate for atmospheric distortion. The corrected field of view (FOV) of an adaptive optics system could be increased through the use of multiple DM's optically conjugated to corresponding planes which sample the turbulence region in altitude. Often, the atmospheric turbulence responsible for the degradation of telescope images is concentrated in several layers. Each DM would correct for the component of the total wavefront in the pupil contributed by one or more layers. If the atmosphere does not possess a layered structure, the best fit of the turbulence profile can be made to a layered model. This dissertation describes and analyzes two novel methods for estimating the proper DM surfaces which would result in wide-FOV compensation. Both methods use multiple wavefront sensor measurements to estimate the three-dimensional turbulence structure. The wavefront measurements are made using artificial guide stars created by scattered laser light. The analysis includes the effects of noise, realistic models of systems components, and the limitations of artificial guide stars. It is shown that multiple-DM, multiple-guide-star systems can significantly increase the compensated FOV relative to single-DM, single-guide star systems. GRA

**THE EFFECT OF AN ADAPTIVE OPTICAL SYSTEM'S SPATIO-TEMPORAL RESPONSE ON IMAGING PERFORMANCE M.S. Thesis**

Patrick M. Harrington Dec. 1992 49 p

(AD-A258848; AFIT/GEO/ENG/92D-06) Avail: CASI HC A03/MF A01

Ideally, an adaptive optical control system would have instantaneous temporal response and infinite spatial bandwidth. In real systems, the response time of the adaptive optical control system is limited by the integration time of the wave front sensor, the computational time of the control algorithm, and the actuator response time. Additionally, finite inter-actuator spacing limits the deformable mirror's ability to reproduce spatial frequencies having a period less than twice this spacing. Although analyses general enough to account for both the temporal and spatial characteristics of the adaptive optical system exist, they are complex and require detailed information regarding the wave front sensor, the deformable mirror, and the control algorithm. A frequency domain model that describes performance effects of an adaptive optical system's temporal response taking into account aperture piston and tilt removal and spatial bandwidth limitations due to finite subaperture size is developed. The unique aspect of this model is the relative ease with which performance characteristics of different spatial and temporal system response functions can be investigated. GRA

This final report describes research in optical neural networks performed under DARPA sponsorship at Hughes Aircraft Company during the period 1989-1992. The objective of demonstrating a programmable optical computer for flexible implementation of multi-layer neural network models was successfully achieved. The advantages of optics for neural network implementations include large storage capacity, high connectivity, and massive parallelism which result in high computation rates. The optical neurocomputer developed on this program is based on a new type of holography, cascaded grating holography (CGH), in which the neural network weights are distributed among angularly- and spatially-multiplexed gratings generated by stimulated processes in photorefractive crystals. This approach reduces crosstalk and improves the utilization of the optical input device. Successfully implemented neural networks include the Perceptron, Bidirectional Associative Memory, and multi-layer backpropagation networks. Up to 104 neurons, 2x10(7) weights, and processing rates of 2x10(7) connection updates per second were achieved. Packaging concepts for future versions of the neurocomputer were also studied. GRA

**EFFICIENT VISUAL GRASPING ALIGNMENT FOR CYLINDERS**

Keith E. Nicewarner and Robert B. Kelley Dec. 1991 13 p

(Grant NAGw-1333)

(NASA-CR-191863; NAS 1.26:191863; CIRSSE-110) Avail: CASI HC A03/MF A01

Monocular information from a gripper-mounted camera is used to servo the robot gripper to grasp a cylinder. The fundamental concept for rapid pose estimation is to reduce the amount of information that needs to be processed during each vision update interval. The grasping procedure is divided into four phases: learn, recognition, alignment, and approach. In the learn phase, a cylinder is placed in the gripper and the pose estimate is stored and later used as the servo target. This is performed once as a calibration step. The recognition phase verifies the presence of a cylinder in the camera field of view. An initial pose estimate is computed and uncluttered scan regions are selected. The radius of the cylinder is estimated by moving the robot a fixed distance toward the cylinder and observing the change in the image. The alignment phase processes only the scan regions obtained previously. Rapid pose estimates are used to align the robot with the cylinder at a fixed distance from it. The relative motion of the cylinder is used to generate an extrapolated pose-based trajectory for the robot controller. The approach phase guides the robot gripper to a grasping position. The cylinder can be grasped with a minimal reaction force and torque when only rough global pose information is initially available. Author

**OPTICAL FIBER STRAIN SENSOR WITH IMPROVED LINEARITY Patent Application**

Claudio Oliveira Egalon, inventor (to NASA) (Analytical Services and Materials, Inc., Hampton, VA.) and Robert S. Rogowski, inventor (to NASA) 21 Dec. 1992 10 p

(NASA-Case-LAR-14857-1-SB; NAS 1.71:LAR-14857-1-SB;

US-Patent-Appl-SN-994593) Avail: CASI HC A02/MF A01

A strain sensor is constructed from a two mode optical fiber. When the optical fiber is surface mounted in a straight line and the object to which

the optical fiber is mounted is subjected to strain within a predetermined range, the light intensity of any point at the output of the optical fiber will have a linear relationship to strain, provided the intermodal phase difference is less than 0.17 radians. NASA

J. B. Murphy, A. A. MacDowell, D. L. White (Bell Telephone Labs., Inc., Murray Hill, NJ.), and O. R. Wood, II (Bell Telephone Labs., Inc., Holmdel, NJ.) 1992 29 p Presented at the Soft X Ray Projection Lithography Topical Meeting, Monterey, CA, 6-8 Apr. 1992
(Contract DE-AC02-76CH-00016)
(DE93-002964; BNL-48033; CONF-9204120-4) Avail: CASI HC A03/MF A01

The design requirements for a compact electron storage ring that could be used as a soft x-ray source for projection lithography are discussed. The design concepts of the x-ray optics that are required to collect and condition the radiation in divergence, uniformity and direction to properly illuminate the mask and the particular x-ray projection camera used are discussed. Preliminary designs for an entire soft x-ray projection lithography system using an electron storage ring as a soft X-ray source are presented. It is shown that by combining the existing technology of storage rings with large collection angle condensers, a powerful and reliable source of 130 A photons for production line projection x-ray lithography is possible. **N93-17947#** Swedish Inst. of Space Physics, Kiruna.
**[ACTIVITIES REPORT OF THE INSTITUTE OF SPACE PHYSICS] Annual Report, 1991**
Lars Eliasson, ed. 1992 68 p
(ETN-93-93360) Avail: CASI HC A04/MF A01

Activities at the Swedish Institute of Space Physics (IRF), whose main task is to conduct research and perform observatory measurements in the field of space physics, are addressed. Additionally, the IRF also provides education in space physics. Facts about the IRF and its board, staff, finances, and personnel are given. The research carried out in the four divisions is reviewed. The research covers the following topics: hot magnetospheric plasma investigations; research in the field of mechanical waves, especially concerning infrasound and vibration; space plasma theory, with an emphasis on plasma waves and wave particle interactions in the magnetosphere; experimental studies of waves and wave interactions in space plasmas; and electrodynamic processes related to ionosphere magnetosphere coupling. The observatory program which carried out ground based observations in Kiruna, Lycksele, and Uppsala (Sweden) is reviewed, as is the educational program. Committee appointments, participation in conferences and contributions, and publication and reports of 1991 are also addessed. ESA

(Contract MDA972-90-C-0006)
(AD-A257944; EMC2-1191-02) Avail: CASI HC A03/MF A01

In an earlier paper, a comprehensive study was made of the recirculation and losses of electrons in their flow through simple inverse power-law potential wells bounded by similarly inverse power-law dependent magnetic fields. This study examined electron flow and loss behavior in the simplest approximation invoked to describe Polywell(tm) confinement systems. The importance of this study, and of the present paper, is that the power balance in Polywell(tm) systems is determined entirely by the rate of electron losses; if these are large, then the system can not yield net power. A large body of work has been undertaken over the past 35 or so years in the study of general cusp confinement of plasmas. Nearly all of this has examined single particle electron (or ion) motion or the motion of particles in neutral plasmas within cusped magnetic systems, generally without internal electric potential fields. Furthermore, almost all of this work on plasmas has been limited to plasmas in local thermodynamic equilibrium (LTE); non applied to non-neutral systems. GRA

**A LOW VELOCITY APPROXIMATION FOR THE RELATIVISTIC VLASOV-MAXWELL SYSTEM Ph.D. Thesis**
Donald J. McGillen Jun. 1992 108 p
(AD-A258300; AFIT/CI/CIA-92-021D) Avail: CASI HC A06/MF A02

The Relativistic Vlasov-Maxwell (RVM) system is a nonlinear system of first order partial differential equations that models the time evolution of a collisionless plasma, e.g., a high temperature, low density ionized gas. Numerical computation of solutions of this system is prohibitively expensive in part because of the six-dimensional phase space for the Vlasov density function. For computational feasibility, we consider a version (RVM) in which the Vlasov density f depends on one spatial variable, x, and two momentum variables, v sub 1 and v sub 2. This is the simplest version of the problem which retains the hyperbolic structure of Maxwell's equations and for which there is a nontrivial magnetic field. GRA

M. Rosenberg (Energy/Matter Conversion Corp., Manassas, VA.) and Nicholas A. Krall (Krall Associates, Del Mar, CA.) Jun. 1992 46 p
(AD-A257651; EMC2-0692-03) Avail: CASI HC A03/MF A01

The Polywell is a magnetic version of a Spherically Convergent Ion Focus (SCIF) device which was proposed as a significant variation of earlier studies on electrostatic confinement. The idea of this device is to inject high energy electrons into a quasi-spherical magnetic field; the electrons create a potential well of sufficient depth to accelerate ions from low energy at the periphery to fusion energies within a focus at the center of the sphere. Injection of electrons keeps the system electrically nonneutral, so that the potential well which accelerates the ions is maintained at a constant value sufficient to confine the ions within the device, returning them again and again at high velocity to the central focus. Essential to the success of the scheme is that the ions maintain their nonthermal velocity distribution, with primarily radial flow, long enough to produce fusion in the dense focus at the center of the sphere. GRA

(Contract MDA972-90-C-0006)
(AD-A257689) Avail: CASI HC A01/MF A01

Electron gyromagnetic motion parallel to the external surface can (and will) produce internal currents that create magnetic fields of opposite sign to that of the externally-driven cusp field. Only those electrons whose gyro orbits encircle the cusp axis have any net effect on this process. The volume of the diamagnetically-effective electrons is bounded roughly by a torus of major and minor radius equal to the gyro radius in the effective cusp field. GRA

(AD-A258477; R/D-6867-CH-02) Avail: CASI HC A09/MF A02

Acid rain, global warming, ozone depletion, and smog are preeminent environmental problems facing the world today. Non-thermal plasma techniques offer an innovative approach to the cost-effective solution of these problems. Many potential applications of non-thermal plasmas to air pollution control have already been demonstrated. On 21-25 Sept. 1992, leading experts from academia, government laboratories, and industry met at Cambridge University, England to discuss laboratory studies and industrial implementation of non-thermal plasmas for the abatement of hazardous gaseous wastes. Papers presented at the workshop are included. L.R.R.

K. Sato (Himeji Inst. of Tech., Japan ), H. Katayama (Himeji Inst. of Tech., Japan ), and F. Miyawaki (Himeji Inst. of Tech., Japan ) Jun. 1992 29 p Submitted for publication
(NIFS-155) Avail: CASI HC A03/MF A01

Formation of the steady-state potential in a collisionless plasma flow along nonuniform magnetic field lines terminated at a wall is studied theoretically under the condition that a particle source in a plasma can be neglected. It is found that the plasma flow is required to satisfy the generalized Bohm criterion over the whole region for the formation of the steady-state continuous potential in the divergent magnetic field. A monotonically falling potential can build up from the inside of the magnetic throat to the wall only if the Bohm criterion is marginally satisfied at the throat. Numerical solutions to Poisson's equation show that a potential profile outside the throat is strongly dependent upon the particle density of electrons trapped between the throat and the wall. Controllability of the potential by increasing the trapped-electron density is discussed briefly. Author

**BIAS-SUSTAINED SHIELD PLASMA**
G. M. Staebler, A. W. Hyatt, M. J. Schaffer, and M. A. Mahdavi Sep. 1992 13 p Presented at the International Atomic Energy Agency (IAEA) Technical Committee Meeting on Tokamak Plasma Biasing, Montreal, Ontario, 8-10 Sep. 1992
(Contract DE-AC03-89ER-51114)
(DE93-001908; GA-A-21041; CONF-9209181-2) Avail: CASI HC A03/MF A01

Divertor biasing may provide a method for density and impurity control by enhancing the shielding efficiency of the scrape-off layer. The idea is to make the scrape-off plasma denser and thicker by heating it with a bias-driven current, and by inducing a radial E x B drift. If the bias is applied to flux surfaces at the outer edge of the usual scrape-off layer, a new layer of plasma can be added which is sustained by the bias-supplied power. A simple theoretical model is presented which shows that there is a threshold condition which must be satisfied in order for the bias-heated plasma to be self-sustaining. The bias-sustained plasma must also be opaque enough to neutrals in order for it to be fueled by a gas puff, which means that it will serve as a shield to the core plasma against neutral impurities and hydrogen. Experiments performed on D3-D have demonstrated both a modification of the central nickel impurity concentration and an increase in the ionization of hydrogen within the scrape-off layer due to biasing. DOE

The radial structure of poloidal flows and radial electric fields in the tokamak plasma edge plays an important role in determining global confinement properties. In a turbulent plasma, poloidal flow can be generated through the Reynolds stress. At the same time, this poloidal flow controls the level of fluctuations. Therefore, self-consistent calculations of plasma turbulence in the presence of flows are needed to identify the mechanism of confinement improvement. Here, we study the interaction between flows and turbulence for the case of resistive pressure-gradient-driven turbulence. Linearly, both the shear flow, V(sub theta)prime does not = 0, and the curvature flow, V(sub theta)double-prime does not = 0, are stabilizing. Nonlinearly, the effect of the shear flow is weak, while the curvature flow is robust and survives in the nonlinear regime. DOE

**A POSTULATIONAL FORMULATION OF MAGNETOHYDRODYNAMICS Ph.D. Thesis**
Gerard Coutu 1992 90 p
Avail: Univ. Microfilms Order No. DA9300927

A postulational formulation of magnetohydrodynamics is derived. In particular, two competing postulates are shown to result in two different electrodynamic forces between moving charged particles. The first force term is based on the usual assumptions of absolute velocity and, hence, is called the classical force. The second formulation contends that the force depends on the relative motion of the two charged particles and is called the relative velocity formulation. Three physical problems were examined for the predicted behavior of the two different force terms. The first problem is the well known pinch effect. Both formulations result in an identical predicted force. The second problem is the Hering Furnace. In this example, the predicted forces are not the same. Only the force predicted by the relative velocity formulation adequately describes the experiment. The last problem is the weld problem. Again, the relative velocity formulation is the only adequate choice to match the experiment. Dissert. Abstr.

**MAGNETOHYDRODYNAMIC WAVE-ASSOCIATED PLASMA DENSITY FLUCTUATIONS IN THE EARTH'S FORESHOCK REGION Ph.D. Thesis**
James Arlan Leckband 1992 292 p
Avail: Univ. Microfilms Order No. DA9235865

Twenty episodes of magnetohydrodynamic wave activity in the Earth's ion foreshock region have been analyzed. Fluctuations in the electron density and magnetic field were analyzed to identify the various linear and nonlinear plasma processes that may be occurring in this region. Correlations between the density and various magnetic field components were performed. One major finding is that the component of the magnetic field parallel to the mean field is strongly correlated with the density fluctuations over a wide variety of scales. In addition two distinct wave populations were seen to exist. These findings have been interpreted as being the result of nonlinear parametric instabilities acting on obliquely propagating MHD waves. Dissert. Abstr.

Several regimes of improved confinement and stability have been obtained in recent experiments in the DIII-D tokamak by dynamically varying the toroidal current density profile to transiently produce a poloidal magnetic field profile with more favorable confinement and stability properties. A very peaked current density profile with high plasma internal inductance, l(sub i), is produced either by a rapid change in the plasma poloidal cross section or by a rapid change in the total plasma current. Values of thermal energy confinement times nearly 1.8 times the JET/DIII-D ELM-free H-mode thermal confinement scaling are obtained. The confinement enhancement factor over the ITER89-P L-mode confinement scaling, H, is as high as 3. Normalized toroidal beta, beta(sub N), greater than 6 percent-m-T/MA and values of the product (beta(sub N))H greater than 15 were also obtained. Both the confinement and the maximum achievable beta vary with l(sub i) and decrease as the current profile relaxes. For strongly shaped H-mode discharges, in addition to the current density profile peakedness, as measured by l(sub i) other current profile parameters, such as its distribution near the edge region, may also affect the confinement enhancement. A summary of DIII-D boundary and diverter experiments directed at solving the scientific and technical problems of high power, long-pulse tokamak diverters is presented. Single-null poloidal diverters were studied in the standard DIII-D open diverter configuration and in interaction with the toroidally symmetric ring biasing electrode and exhaust gas collection plenum. New results are reported for: scrape-off layer (SOL) transport; SOL density and unpurity influx; SOL density and diverter bias; Edge Localized Mode (ELM) particle and energy content; ELMing SOL transport; open radiative diverter; passive exhaust gas collection; diverter bias and exhaust gas collection; and diverter bias and H-mode threshold. Future plans for diverter research at DIII-D are included. DOE

This paper describes developments in the theory of edge plasma turbulence in a differentially rotating plasma. The thesis that such systems are dynamically self-regulating is presented. Results indicate that relevant fluctuations will generate a predominantly curved flow. Similarly, curvature is shown to be the predominant flow profile effect on fluctuations. A system fixed point is identified, the eigenfrequencies for small oscillations around it are calculated, and an over-all stability criterion is determined. DOE

**THE CQL3D FOKKER-PLANCK CODE**
R. W. Harvey and M. G. McCoy (Lawrence Livermore National Lab., CA.) Nov. 1992 38 p Presented at the International Atomic Energy Agency (IAEA) Technical Committee Meeting on Advances in Simulation and Modeling of Thermonuclear Plasmas, Montreal, Quebec, 15 Jun. 1992
(Contracts DE-AC03-89ER-53277; W-7405-eng-48)
(DE93-002962; GA-A-20978; CONF-9206235-3) Avail: CASI HC A03/MF A01

CQL3D is a general purpose computer code for modeling auxiliary heating in tokamaks. It calculates the radial distribution of 2D in momentum-space bounce-averaged, ion and electron distribution functions in toroidal geometry, consistent with deposition of rf and/or neutral beam injected power and a diffusive radial transport model. This calculation is carried out with an array of bounce-averaged Fokker-Planck (FP) solvers running on noncircular magnetic flux surfaces, giving the steady-state, toroidally-averaged distribution resulting from a balance between collisions, dc electric field, rf quasilinear diffusion, synchrotron radiation, neutral beam injection, and radial diffusion. CQL3D is coupled to ray-tracing codes for electron cyclotron, lower hybrid, and fast waves, to a neutral beam deposition code, and to a noncircular equilibrium code. We describe the code, providing expressions and methodology for calculation of the FP coefficients from each of the constituent processes, and give benchmark applications in order to validate the major components of the code. This report describes the activities in a project to study waves and turbulence in plasmas which are being conducted by the French LAP and the LPGP. Studies aimed at studying resonant absorption of electromagnetic waves in quiescent plasma with a controlled density gradient were conducted in April and May. These studies are serving as a basis for assembling an experiment on generation of nonlinear Langmuir waves through collision of two electromagnetic waves of different frequencies. Also conducted during this period, in agencies of the LAP, were studies on the viability of constructing a magnetized quiescent plasma machine for whistler wave research. The plasma wave and turbulence studies program in France was concluded with a visit to the space plasma experiments in progress at the Centre D'Etude Spatiale des Reyonnements, located in the Complex Scientifique de Rangueil in Toulouse. **MULTI-FLUID MODELING OF INTERPENETRATING PLASMAS**
P. W. Rambo and J. Denavit Sep. 1992 20 p Presented at the 1992 CECAM Workshop, Orsay, France, 7-11 Sep. 1992
(Contract W-7405-eng-48)
(DE93-002893; UCRL-JC-111893; CONF-9209268-1) Avail: CASI HC A03/MF A01

One dimensional multi-fluid simulations of interpenetrating plasmas are presented. Separate fluid equations for multiple species are solved with coupling between the different species due to the electric field and Coulomb collisions. These simulations show initial interpenetration followed by stagnation. We present scaling results for colliding plasmas characteristic of opposing, laser heated discs. Simulations of colliding CH plasmas with separate ion fluids for the Carbon and Hydrogen are presented showing appreciable atomic separation. We also show results from hybrid particle and fluid simulations, where particles are used in addition to fluids to represent physical species. DOE

**SUGGESTIONS FOR THE MAGNETIC DIAGNOSTIC FIXING SYSTEM IN THE INSIDE OF TOKAMAK TBR-E [SUGESTOES PARA O SISTEMA DE FIXACAO DE DIAGNOSTICOS MAGNETICOS NO INTERIOR DO TOKAMAK TBR-E]**
Jose Leonardo Ferreira Jun. 1991 8 p In PORTUGESE
(INPE-5277-NTC/298) Avail: CASI HC A02/MF A01

In small tokamaks, access of magnetic coils to the space between the vacuum vessel and the ohmic heating transformer is limited by the lack of room. The best answer for magnetic diagnostic devices which need to have a polar orientation is to put them in the toroidal vacuum chamber. The big advantage of putting magnetic coils and probes inside the vessel is reduction of magnetic signal delay and attenuation. At the same time, some technical problems arise, such as the need to encapsulate and cool the probes and coils, which are generally made of material which is quite volatile in a high vacuum environment. There is also the problem of protecting these structures from the intense plasma current, which in the TBR-E must go as high as 240 kA. The coils must, therefore, be protected at all times by the shade of the on-board plasma limiter. Two design suggestions for the system of fixing the tubes which contain the coils are presented. All retaining pins or screws should be of 304 or 316 L stainless steel (unmagnetizable). The pins can be welded to the inside of the vacuum vessel before its various parts are assembled. It is important to note that the 16 fixer lines must be welded in a manner so as to coincide with the positions of the 16 toroidal coils. The placement of the protection plates and screws can be made later, through the vacuum ports. Author

**A KINETIC SIMULATION OF LOW-FREQUENCY ELECTROMAGNETIC PHENOMENA IN INHOMOGENEOUS PLASMAS OF THREE-DIMENSIONS**
Motohiko Tanaka Nov. 1992 65 p Submitted for publication
(NIFS-199) Avail: CASI HC A04/MF A01

An advanced implicit particle simulation method was developed and implemented in the HIDENEK code to study large space-scale, low-frequency electromagnetic phenomena occurring in inhomogeneous plasmas. The present method is specially designed for high magnetic field (omega(sub ce) is greater than or equal to omega(sub pe)), inhomogeneous plasma simulations. The guiding-center approximation with magnetic drifts is adopted to the perpendicular motion of the electrons whereas the inertia effect is retained in their parallel motion. Also, a slightly backward time-decentered scheme is introduced to the equations of motion and the Maxwell equations. These equations are combined to yield the full-implicit, coupled field-particle equations which allow us to determine the future electromagnetic field in a large time step compared to the electron time scales with the diamagnetic drift and magnetization currents being included. Three physics applications are shown as a demonstration in terms of the electromagnetic beam-plasma instability, the temperature anisotropy-driven Alfven-ion-cyclotron instability, and the external kink instability of the peaked-density current beam. A remarkable pitch-angle scattering of the ions is observed in the first two applications in association with the plasma instabilities. In the third application to an inhomogeneous, finite-beta plasma of the three-dimensions, a helical deformation is shown to take place to the initially straight beam and magnetic axis in an ideal magnetohydrodynamic time scale. **ROLES OF ELECTRIC FIELD ON TOROIDAL MAGNETIC CONFINEMENT**
Kimitaka Itoh, Sanae-I. Itoh (Kyushu Univ., Fukuoka, Japan ), Heiji Sanuki, and Atsushi Fukuyama (Okayama Univ., Japan ) Nov. 1992 50 p Sponsored in part by the Scientific Research of the Ministry of Education of Japan
(NIFS-200) Avail: CASI HC A03/MF A01

Theoretical research on the influence of the electric field on the toroidal magnetic confinement is surveyed. The static electric field is first described. Physics pictures on the generation of the radial electric field and the influence on the confinement are shown. Neoclassical effects as well as the nonclassical processes are discussed. Emphasis is made on the connection with the improved confinement. Convective cell, i.e., the nonuniform potential on the magnetic surface, is also discussed. The roles of the fluctuating electric field are then reviewed. The progress in the recent theories on the anomalous transport is addressed. Through these surveys, the impact of the experiments using the heavy ion beam probes on the modern plasma physics is illustrated. Author

**HAMILTONIAN FOR THE TOROIDAL HELICAL MAGNETIC FIELD LINES IN THE VACUUM**
G. Gnudi (Hiroshima Univ., Japan ) and T. Hatori Nov. 1992 20 p Sponsored in part by the Japanese Ministry of Education
(NIFS-201) Avail: CASI HC A03/MF A01

The toroidal helical magnetic field possesses magnetic surfaces in the proximity of the magnetic axis, while in regions far from the magnetic axis such surfaces to not exist. The domain in which magnetic surfaces do not exist is called magnetic chaos domain, and between the magnetic axis and the magnetic chaos domain lies the outermost surface, whose position is an important information from the point of view of magnetic confinement. Since the divergence of the magnetic field is zero, the magnetic field lines system can be treated as a hamiltonian system. For hamiltonian systems the phase space structure is subdivided into chaotic and non-chaotic regions, and this subdivision has a correspondence with the magnetic chaos domain and the magnetic surfaces domain discussed above. In order to further advance this research it is necessary to approach the problem form the point of view of hamiltonian theory, in which the divergence-free property is rigorously respected. Besides, for hamiltonian systems it is possible to use symplectic integration techniques to solve the equation of motion, techniques which are free from secular, or dissipative errors. This fact make the application of symplectic techniques very attractive. The research approaching the toroidal helical magnetic field problem from the hamiltonian point of view ends with works done more than ten years ago, partly because of the strong push towards research on tokamaks. However, two good reasons to revive the hamiltonian approach to the toroidal helical magnetic field problem are: (1) the Japanese Ministry of Education is pushing the research concerning the helical systems approach to magnetic confinement; and (2) the last ten years have seen an impetuous development of chaos physics, and times are ripe for research about the chaotic properties of the toroidal helical magnetic field lines system. An explicit form for the Boozer's magnetic coordinates in the first order toroidal correction to the cylindrical helical magnetic configuration was obtained using the lie perturbation expansion technique to proceed to higher orders. A study of the sensitivity of the width of the H-mode transport barrier on the energy, particle and momentum sources has led to a possible explanation for the very high confinement (VH-mode) presented in Part A of this paper. In Part B recent progress in the development of Gyro-Landau Fluid (GLF) models n described. GLF models with a few moment equations encompass with high accuracy both linearly and nonlinearly the effects of finite gyroradius to all orders and of the Landau resonances in both parallel field and curvature drift motion. Numerical simulation of turbulence with a novel application of a nonlinear ballooning mode representation of these models is given. DOE

**STABILITY OF TAE MODES IN DIII-D**
E. J. Strait, M. S. Chu, L. L. Lao, A. D. Turnbull, W. W. Heidbrink (California Univ., Davis.), and H. H. Duong (California Univ., Davis.) Sep. 1992 8 p Presented at the 14th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Wuerzburg, Germany, 30 Sep. - 7 Oct. 1992
(Contracts DE-AC03-89ER-51114; DE-FG03-89ER-51121)
(DE93-002677; GA-A-21045; CONF-920913-23) Avail: CASI HC A02/MF A01

TAE modes driven by neutral beam injection have been observed in DIII-D. The measured frequency agrees very well with theoretical predictions for DIII-D discharges. At large amplitude these instabilities can lead to loss of over 50 percent of the beam power, as well as large loss of non-resonant MeV fusion products. The threshold value of fast ion beta for destabilization and the observed range of unstable mode numbers are in reasonable agreement with predictions for the mode growth rate. Continuum damping dominates at low mode numbers, while damping by electron kinetic effects dominates at high mode numbers. Preliminary experiments suggest that TAB modes can be stabilized by current profile control. DOE

(NIFS-157) Avail: CASI HC A03/MF A01

The catastrophic phenomena which are associated with disruption and sawtooth physics contain three key processes: (1) sudden acceleration of the growth of the helical deformation; (2) central electron temperature crash; and (3) rearrangement of the plasma current. Based on the theoretical model that the magnetic stochasticity plays a key role in these processes, the critical issues and possible experimental tests are proposed. Present experimental observations would be sufficient to study the detailed sequences and causes. Though the models may not be complete, comparison with experimental findings improves our understanding.

The liquid propellant used in the 155-mm regenerative liquid propellant gun is XM46. XM46 is a solution of 60 percent hydroxyl ammonium nitrate (HAN), 20 percent triethanolammonium nitrate (TEAN), and 20 percent water. This material exhibits rather unusual liquid properties that have been attributed to its being a 'molten eutectic' of fused salts rather than a normal aqueous solution of two different nitrate salts. A hydrogen-bonded liquid structure for eutectic LP1946 was proposed previously based on the known structures of neat HAN and water and a best-guess estimate of the TEAN structure. To verify this estimate, the molecular structure of neat TEAN was recently determined. This investigation revealed TEAN has very unusual and interesting bifurcated intermolecular and trifurcated intramolecular hydrogen bonding configurations within the crystal. If these hydrogen bonding configurations are retained in aqueous solution, they could be responsible in some part to the observed unusual liquid properties of liquid propellant XM46. GRA

(AD-A258175; MTL-TR-92-67) Avail: CASI HC A03/MF A01

We have studied the pre-onset deviation-from-linearity region, the transitional regime, and the foot region in the resistance versus temperature behavior of high-T sub c oxide superconductors, employing time varying magnetic fields and carefully controlled precise temperatures. We have shown that the best value of T sub c can be extrapolated from the magnetic field induced divergence of the resistance versus inverse absolute temperature data as derived from the transitional and/or foot regions. These data are in accord with results from previous Hall effect studies. The pre-onset region however, shows a differing behavior (in R versus 1000/T as a function of B) which we believe links it to an incipient Cooper pairing that suffers a kinetic barrier opposing formation of a full supercurrent. This kinetic dependence is believed to be associated with the lifetime of the mediator particle. This particle is interpreted to be the virtual exciton formed from internal-field induced charge-transfer excitations which transiently neutralize the multivalence cations and establish bound holes on the oxygens. During the first year of research our OMVPE system has been retrofitted with a charcoal exhaust scrubber, toxic gas detector, and process gas delivery system. All components have been fully tested and calibrated for GaAs deposition. High quality undoped GaAs epilayers have been deposited with following characteristics: specular morphology, low free carrier concentration (p = 1(10)(exp 15) cm(exp -3)) and high mobility (4,000sq cm/Vs at 77K). The dominant acceptor is carbon originating from gallium source as determined by the high resolution photoluminescence. Doping of GaAs epilayers with dimethylaluminum methoxide resulted in incorporation of both oxygen and aluminum in concentrations up to 5(10)(exp 18) cm(exp -3) and 7(10)(exp 19) cm(exp -3), respectively. Oxygen concentration increases rapidly with decreasing deposition temperature. Heavily oxygen doped layers (obtained either by high DMAlMO flow or growth at temperatures below 600 C) are highly resistive and exhibit extremely low carrier lifetime. Photoluminescence measurements detected new luminescence bands in 850 - 1000 nm range which are assigned to deep oxygen induced traps. GRA

Work at Research Triangle Institute during this quarter concentrated on establishing directions and meaningful collaborations through which progress towards large-area, single-crystal diamond could be obtained. Three formal subcontracts on the RTI prime have been established to pursue ab initio diamond surface kinetics, ion implantation studies, and atomic scale characterization of diamond respectively. The program here at RTI has adopted two approaches to pursue large-area, single crystal diamond: (1) heteroepitaxial diamond growth, and (2) diamond bonding, consolidation, and lift-off. These two approaches have dictated the experimented directions for the program. GRA

**INFRARED-INDUCED PHOTOCONDUCTIVITY AND ELECTROLUMINESCENCE IN FORWARD-BIASED a-Si:H PIN-DIODES**
Joerg Wind (Technische Univ., Munich, Germany ) and Gerhard Mueller 1991 5 p Repr. from Journal of Non-Crystalline Solids, v. 137-138, 1991 p 1267-1270 Presented at 14th ICAS, Garmisch-Partenkirchen, Germany, 19-23 Aug. 1991
(MBB-Z-0376-91-PUB; ETN-92-92750) Avail: CASI HC A01/MF A01

The electronic properties of amorphous (a-)Si:H pin diodes were investigated under conditions of forward bias and low temperature operations. The experiments demonstrate that, under these conditions, a-Si:H pin diodes can respond to infrared (IR) radiation through an enhancement in the diode currents and, through an enhancement in the electroluminescence signal. It is proposed that the IR photoeffect is due to the reexcitation of band tail trapped excess carriers injected into the localized conduction and valence band tail states in the vicinity of the n(+) and p(+) contact regions. (MBB-Z-0367-91-PUB; ETN-92-92747) Avail: CASI HC A01/MF A01

The feasibility of producing electronically active nanometer scale structures in thin amorphous Si:H films up to 100 nm thickness by use of a Scanning Tunneling Microscope (STM) (writing cycle) was demonstrated. These structures arise from a modification of the local structural arrangement of dopant and Si atoms, induced by tunnel voltage and tunnel current. Owing to the different electronic nature, they are detected as apparent protrusions in STM images (reading cycle). ESA

The crystallization of stochiometric amorphous SiC:H films, deposited onto crystalline Si and highly transparent sapphire substrates, was investigated. After annealing, transparent polycrystalline material is obtained due to an emerging indirect band gap. Irradiation of the crystallized films with energetic Ar(+) ions transforms the films into a heavily absorbing amorphous state. Possible applications of this effect with regard to submicron lithography and to high density optical storage are discussed. ESA

Synthesis of YBa2Cu3O7-a superconductor powders by freeze-drying was developed. The freeze-drying process consists of forming a solution of Y and Cu nitrates and Ba acetate, freezing, sublimating the water and calcination. The effect of processing variables on the powder characteristics, including surface area, size, stoichiometry, agglomeration, were investigated. Stoichiometry control requires control of the chemistry of the system, and careful analysis of starting solutions is required to prepare powders of the desired composition. Powders were sintered into pellets and the superconducting behavior was evaluated. Stanford University served as a subcontractor and was responsible for most of the critical transition temperature and critical current measurements. GRA

GaInSb/InAs superlattices have been grown and analyzed for use as high performance, high operating temperature 8 to 12 micron infrared detectors. Optical and transport properties favorable for long wavelength IR detection have been measured, and preliminary photoconductive and photovoltaic device structures have been fabricated and tested. Our results underscore the considerable potential of GaInSb/InAs superlattices to achieve detectivities comparable to HgCdTe at considerably higher operating temperatures. Such an improvement would be of significant benefit, both in reduced cost and complexity, to high performance DoD IR sensing systems. Molecular beam epitaxial (MBE) growth techniques were developed, yielding superlattices of exceptionally high structural quality, with uncompensated background doping in the low-to-mid 10(exp 15) cm(exp -3) range, n-type. Methods for silicon doping the superlattices were established, allowing n-on-p and p-on-n photojunctions to be grown. Superlattice energy gaps were shown to span the infrared, and a 10-micron absorption coefficient comparable to that of HgCdTe was measured, in agreement with theory. Initial unpassivated photovoltaic test devices show R(0)A = 0.1 Omega-cm(exp 2) at 77 K, for a 12-micron cutoff. GRA

Our goal is to develop an understanding of how nucleation of diamond growth can be beneficially enhanced. Our research has concentrated on how different types of surface passivator might positively impact diamond nucleation and growth. We have focused these studies on the fluorinated and hydrogenated (100) surfaces, which have some chemical similarities (and some differences) but have considerably different sizes. We have initiated work on boron-doped and beryllium-doped diamond (100) surfaces with a view towards alternative passivation of the diamond surface. The idea was to investigate how atoms other than carbon could maintain an unreconstructed diamond (100) surface, but lead to better growth and nucleation rates. The working assumption is that better growth rates will be obtained if passivators prevent surface reconstruction but promote the adsorption of carbon in four-fold configurations. GRA

(Contract N00014-91-C-0216; DARPA Order 8100)
(AD-A258481) Avail: CASI HC A03/MF A01

The objective of this program is to identify suitable low loss, low dielectric constant substrates and develop and optimize deposition processes for high quality YBCO films including the necessary buffer layers. Ultimate goals are large area substrates having double-sided HTS coating with a surface resistance ten times lower than copper at 40 GHz. High quality HTS films on low dielectric constant substrates are expected to find widespread use in advanced millimeter wave components, in extending the power handling capability of microwave and millimeter wave circuitry, and in facilitating high speed computer interconnects. Sample demonstration circuits will be built toward the end of the program. We have successfully deposited a high quality YBCO film on a good low loss and low dielectric constant substrate, magnesium fluoride (epsilon approximately 5). With the use of two buffer layers (magnesium oxide and strontium titanate) between the YBCO and the substrate, transition temperatures of 89 K and transition widths of about 0.5 K were achieved. The critical current density J(sub c) of 4(10)(exp 6) A/sq cm at 77 K in zero field is among the highest reported for YBCO films. The magnesium fluoride (MgF2) substrate has a tetragonal structure with a dielectric constant of 5.2 in the plane of the substrate and 4.6 perpendicular to the substrate surface. It has a good hardness (approximately 575 Knoop) and a linear thermal expansion coefficient that closely matches YBCO and the buffer layers. GRA

**SOLID-STATE DYNAMICS AND QUANTUM TRANSPORT IN NOVEL SEMICONDUCTOR NANOSTRUCTURES Annual Report, 1 Oct. 1991 - 30 Sep. 1992**
K. W. Kim 30 Sep. 1992 40 p
(Contract N00014-90-J-1835)
(AD-A258482) Avail: CASI HC A03/MF A01

The objective of this research program is to study theoretically the underlying principles of solid-state dynamics and quantum mechanical transport of carriers in ultrasmall novel semiconductor devices. The areas of research to be investigated are the following: (1) theory of optical phonon modes in heterostructures; and (2) quantum transport in solids with special emphasis on the non-perturbative role of high-electric fields, many-body effects, and band-mixing in dynamical processes. These problems will be treated analytically through the development of macroscopic and microscopic physical models with an emphasis on quantum mechanical principles. Specific subjects discussed in this proposal include the effects of confined and interface phonon modes, two-electron quantum transport theory under hot-electron conditions, dielectric response function theory, and the effects of band-mixing in tunneling. The knowledge developed in this work will be of major importance in explaining the novel phenomena and fundamental questions relating to the breakdown of classical solid-state electronics, as device dimensional scales are reduced to the submicron and ultra-submicron regime. Thin films of pure and Al-doped Beta-SiC have been grown on 4 deg off-axis Si(100) and c-axis oriented alpha(6H)SiC in the temperature range of 1025-1250 C using gas-source molecular-beam epitaxy. Cross-sectional TEM confirmed the epitaxial relationship between the films and the substrates. Double positioning boundaries have not been observed in the material grown on the 6H-SiC substrates. Platinum and Ti circular contacts were epitaxially deposited on alpha(6H)-SiC via electron beam MBE at room temperature. Leakage currents at -10V were as low as 5 x 10-18 A/cm(exp 2). The ideality factors were approximately unity. Barrier heights for the as-grown Ti and Pt contacts were determined from C-V measurements to be 0.88 eV and 1.02 eV, respectively. Theoretical investigations of the physical limitations to the RF operation of SiC IMPATT diodes have shown that good RF output power can be obtained from these devices. However, the low magnitude of the charge carrier mobility in SiC limits the magnitude of the RF voltage that can be supported, and thereby prevents efficient dc to RF power conversion. MESFET's have been fabricated with values of f(sub t) and f(sub max), of 4.5 GHz and 3.0 GHz, respectively. The measured DC power density was extremely high with a value of 12.4 W/mm. Solutions to the problems of parasitics from source and gate resistances are described. GRA

An unusual frequency and temperature variation of the spin susceptibility for electrons or holes whose Fermi surfaces exhibit nesting is discussed. This explains the electronic transport properties of high temperature superconductors (HTS), including optical reflectivity and Raman spectra. Direct evidence for predicted scaling of susceptibility as a function of frequency/T was detected by neutron scattering on two series of cuprate

superconductors. Calculations were extended to electronic structure models for generating lineshapes that may be tested. Good agreement with T and frequency variation of susceptibility measured by neutrons is achieved in the nesting regime. These findings are relevant to anomalous linear temperature variations of electrical resistivity characteristic of HTS. Electron-electron scattering processes become dominant in nested surfaces if the Coulomb interaction between charges is of intermediate strength. DOE

High purity KMF6 and K2MF6 salts (M = Mo, Re, Ru, Os, Ir, and Pt) are obtained from reduction hexafluorides. A rhombohedral unit cell is observed for KReF6. Fluoride ion capture by Lewis acids from the hexafluorometallate(IV)salts affords high purity tetrafluorides for M = Mo, Re, Ru, Os, and Pd. The structure of RuF4 is determined from x-ray synchrotron and neutron powder data. Unit cells based on the orthorhombic PdF4 type cell are derived from x-ray powder data for ReF4 and OsF4. Fluoride ion capture from KAgF4 provides the thermally unstable trifluoride as a bright, red, diamagnetic solid. The structure solution of AgF3 and redetermination of the AuF3 structure from x-ray synchrotron and neutron powder data demonstrate that the two are isostructural. The thermal decomposition product of AgF3 is the mixed valence compound Ag(+2)Ag2(+3)F8. Several new salts containing the (Ag-F)n(n+) chain cation are prepared. The first linear (Ag-F)n(n+) chain is observed in AgF(+)BF4(-) which crystallizes in a tetragonal unit. AgFAuF4 has a triclinic unit cell and is isostructural with CuFAuF4. AgFAuF6 has an orthorhombic unit cell and appears to be isostructural with AgFAsF6. A second mixed valence silver fluoride, Ag(+2)Ag(+3)F5, is prepared, which magnetic measurements indicate is probably an AgF(+) salt. Magnetic data for all of the AgF(+) salts exhibit low magnitude, temperature independent paramagnetism characteristic of metallic systems. Cationic Ag(+3) in acidic AHF solutions is a powerful oxidizer, capable of oxidizing Xe to Xe(+2) and O2 to O2(+). Reactions with C6F and C3F6 suggest an electron capture mechanism for cationic Ag(+2) oxidations. DOE

(ETN-92-92798) Avail: CASI HC A07/MF A02

The fabrication, analysis, and applications of copper oxide superconducting thin films was studied. Superconducting copper oxides, and YBaCuO system specifically, are introduced. Technical aspects of the particular method that were used for the thin film growth, the evaporation method, are considered. These include: the control of the evaporation flux of electron beam evaporators (a good control of the evaporation flux is very important in obtaining films with desired stoichiometry), the vacuum system, ozone generation, substrate heating and substrate temperature measurement, and stabilization of Knudsen cells. Some of the analysis methods used to characterize the films are discussed and analysis results of the produced films are given. The existing growth processes of YBaCuO films can roughly be divided in two types, the post anneal process and the in situ process. Both processes were used to make YBaCuO films. Properties of films that were made with the post anneal process and with the in situ process are reported. Results obtained making submicrometer structures in YBaCuO films are reported. ESA

Spectroscopic investigations of the optical and electronic properties of layered crystalline semiconductor structures are described. Two types of semiconductor structure were studied, the quantum well and the superlattice. The principal experimental techniques employed are photoluminescence and photoluminescence excitation spectroscopy. The effects of electronic coupling on the band alignment of thin GaAs-AlAs quantum well structures are reported. Details of optical properties and electronic structure of short period GaAs-AlAs superlattices are given. The evolution of electronic states of coupled (InGA)As-GaAs quantum wells into superlattice minibands is described. Miniband dispersion in (InGa)As-GaAs strained layer superlattices is considered. Hole state reversal and the role of residual strain in (InGa)As-GaAs superlattices is also considered. ESA

**AREA DETECTORS FOR NEUTRON PROTEIN CRYSTALLOGRAPHY**
B. P. Schoenborn 1992 8 p Presented at the Society of Photo-Optical Instrumentation Engineers International Symposium on Optical Applied Science and Engineering, San Diego, CA, 19-24 Jul. 1992
(Contract DE-AC02-76CH-00016)
(DE93-001973; BNL-47955; CONF-920792-39) Avail: CASI HC A02/MF A01

The main problem in neutron protein crystallography is the low flux of present reactor based or pulsed neutron sources. This low flux is well matched with presently available multiwire area detectors. One way to increase the flux at the sample is to increase the wavelength bandwidth. The conventional technique uses a monochromator with a bandwidth of the order of 1 percent. This bandwidth can be increased by using a multilayer monochromator composed of different 'd' spacings. This provides a large delta lambda increasing the flux manifold. In this case, a reflection in diffraction condition is scanned by the wavelength bandwidth and not by rotation of the reciprocal lattice point through the Ewald sphere. In order to collect most of the simultaneous diffraction, a large cylindrical area detector covering an angular width of 120 degrees with a height of approximately 20 cm is needed. Such a detector should have a spacial resolution of 1.1 mm, an efficiency of 80 percent at 2.0 A and a counting rate of one million events per second. This detector will be subdivided into 4 sectors that will be decoded simultaneously into a Motorola based computer system. This data acquisition system allows time slicing and this

detector is therefore useful for similar experiments using pulsed neutron sources. DOE

**INTERFACIAL REACTION IN a-Si/Au AND a-Si/Cu THIN FILM BILAYERS**
S. M. Heald and Z. Tan 1992 5 p Presented at the 7th International Conference on X Ray Absorption Fine Structure, Kobe, Japan, 23-29 Aug. 1992
(Contracts DE-AC02-76CH-00016; DE-AS05-80ER-10742)
(DE93-002324; BNL-47544; CONF-9208160-4) Avail: CASI HC A01/MF A01

The interdiffusion and compound formation at the a-Si/Au and a-Si/Cu thin film interfaces using x-ray reflectivity and grazing incidence Extended X-ray Absoprtion Fine Structure (EXAFS) techniques are studied. In the 0 C as-deposited samples, reaction between Si and Au is minimal, but reaction between Si and Cu is significant. Upon annealing for ten minutes in argon, the a-Si crystallized and reacted quite extensively with Au at 160 C. Further reaction between Si and Cu proceeded at 130 C. The compounds formed appear to be metal-rich silicides in both the Si/Au and Si/Cu systems. For Au/Si the silicide is likely stabilized on the surface of the newly formed crystallites. DOE

**DETERMINATION OF CLEAVAGE PLANES AND FRACTURE CHARACTERIZATION OF Ni-BASED SINGLE CRYSTAL SUPERALLOYS Final Progress Report**
John M. Merrill and Roy C. Wilcox 1 Dec. 1992 25 p
(Grant NAG8-188)
(NASA-CR-191932; NAS 1.26:191932) Avail: CASI HC A03/MF A01

The room temperature fracture behavior of the Ge Rene N-4, CMSX-2, and CMSX-4C single crystal Ni-based superalloys was studied. All crystals were grown along the (001) direction and tensile tested in both helium and hydrogen atmospheres. A stereoscopic technique developed for use with a scanning electron microscope was applied to determine cleavage planes. Planar gamma(') morphologies also were examined to help determine cleavage planes. Helium charged specimens failed on a number of planes including the (111), (110), and (320). In most cases planes of the (111)-type initiated at the notch region and became smaller and smaller as they moved in radially. Tensile strengths in helium averaged 1000 MPa higher than that of the hydrogen charged specimens. Specimens tested in hydrogen generally failed on (100)-type planes originating from the notch region. This (100) region comprised 60 to 80 percent of the total fracture surface on most samples and appeared as large flat planes perpendicular to the growth direction of the crystal. The interior regions contained (100)-type planes as well as (321), (320), (210), and (111)-types. Hydrogen charged specimens also showed a high percentage of large cracks oriented at 90 deg to one another, indicative of the (100)-type fracture. The Ge Rene N4 and the CMSX-4C samples contained 3-5 percent gamma/gamma(') eutectic, while the CMSX-2 samples had little or no gamma/gamma(') eutectic. The relationship between gamma/gamma(') eutectic and the fracture surface has not been fully determined, but it is thought that the gamma/gamma(') eutectic may serve as a possible trapping site for hydrogen. Neutron scattering measurements have been performed on a single crystal sample of CsCo(0.83)Mg(0.17)Br3, a quasi-one-dimensional, Ising-like, antiferromagnet. Residual three-dimensional interactions between the dilute magnetic chains precipitate a phase transition to long range order at T(sub N) is approximately 8.5 K, and short range correlations persist as high as 40 K. Relatively high energy inelastic scattering from both 'bulk' spin wave modes and 'end' modes is observed from the finite chains. The low energy inelastic spectrum is dominated by soliton scattering due to anti-phase domain walls propagating along the finite chains. DOE

This paper describes the application of an AC surface probe, similar to presently used eddy current probes, to the measurement of DC transport critical currents and critical state dissipation in high T(sub c) superconductors. It has been shown that the probe can provide quantitative measurement of the full field penetration in superconducting samples by measuring the response of AC induced screening currents for superconducting materials in the form of tapes with overlayers of silver. In this manner, the AC probe can be used to replace the contact DC probe for determining critical currents in a noncontacting and local manner suitable for scanning over or along the sample. DOE

Using a tight-binding Hamiltonian, we study the lattice configurations and electronic structures of three forms of polyaniline: leucoemeraldine base (LEB), emeraldine base (EB), and pernigraniline base (PNB). Both bond length and ring rotation angle are considered in the structure relaxation. The dominant elementary excitations of isolated chains are found to be solitons in PNB and bipolarons in EB and in LEB. Optical absorptions of the ground states and of the solitonic and polaronic excitations are calculated and compared with experiments. The spin density profile of a single neutral soliton in PNB is discussed in connection with magnetic measurements. DOE

**CATHODOLUMINESCENCE SPECTROSCOPY OF ZINC GERMANIUM PHOSPHIDE ZnGeP2 M.S. Thesis**
Michael R. Gregg 3 Dec. 1992 108 p
(AD-A258996; AFIT/GEP/ENP/92D-4) Avail: CASI HC A06/MF A02

Zinc Germanium Phosphide (ZnGeP2) is a nonlinear semiconductor suitable for use as a laser tuning element over the two to six micron wavelength range. Although this crystal has been studied in the past, its luminescent properties are not yet well understood. In this present study, ZnGeP2 has been examined using cathodoluminescence spectroscopy (CL). Specifically, the spectral dependence of the CL was obtained as a function of electron beam energy, beam current, and temperature. The resulting CL was found to be polarized with a peak structure that was dependent on the polarization. This peak structure observed by CL is difficult to detect by photoluminescence (PL). It is believed that the peaks are due to transitions between the conduction band and the spin orbit split acceptor level ALI. It is also believed that the excitation mechanism is in part responsible for the different structure observed. GRA

Rates of self-diffusion on the (100) and (110) surfaces of nickel have been calculated using variational transition state theory (VTST) and four different interatomic potential energy functions based on the embedded-atom method (EAM). Static properties of a single nickel atom on the (111) surface, as well as on the (100) and (110) surfaces, are also presented. The embedded-atom par functionals consist of effective pairwise additive and many-body cohesive interactions parameterized to the bulk and a few

defect properties of nickel. VTST calculations of surface diffusion provide parameters and diffusion coefficients for comparison with experiment and among the four EAM potentials employed. analysis of the estimated diffusion rates based on hopping mechanism and the four pair functionals reveals that diffusion will occur more readily on (111) surface and that self-diffusion on (110) surface exhibits directional anisotropy. Diffusion rate variation from one par functional to another is interpreted in terms of the effective pair potentials. GRA

(Contract N00014-86-K-0686)
(AD-A258804) Avail: CASI HC A04/MF A01

An atomic layer epitaxy deposition system configured for the growth of thin films of the III-V nitrides of Al, Ga, and In has been designed, constructed and commissioned. The system allows the introduction of up to 16 gases without mixing. Self-terminating growth of crystalline GaN films has been achieved on single crystal wafers of (0001) alpha(6H)-SiC. Results of analyses via Auger spectroscopy, electron microscopy and electron diffraction are described. Deposition of AlN and GaN via gas-source MBE was also continued during this period. The principal emphasis concerned the initial stages of growth of both compounds on the substrates of (00001) alpha(6H)-SiC and (0001) sapphire, as determined using X-ray photoelectron spectroscopy. An initial layer of silicon nitride formed on the surface of SiC prior to the deposition of either nitride. The deposition of GaN on sapphire followed the Stranski-Krastanov mode of nucleation and growth, while on SiC, characteristics of three-dimensional growth were evident. By contrast, AlN grew initially in a layer-by-layer mode. Deposition of GaN on vicinal (100) Beta-SiC during UV irradiation resulted in the formation of a new 4H polytype of this material. Deposition of BN via gas-source MBE on Cu(110) resulted in nanocrystalline cBN; films grown on (111) Cu resulted in h-BN (graphitic phase). Similar studies using Si(100) substrates also resulted in the occurrence of cBN. The occurrence of the cubic polytype was enhanced while that of h-BN was discouraged with the use of the UV light at 400-500 C. GRA

Electrical and optical characterization have been performed on GaAs and Al(x)Ga(1-x)As samples doped with Er either by ion implantation or during Molecular Beam Epitaxial (MBE) growth. Deep Level Transient Spectroscopy (DLTS) and Temperature-Dependent Hall Effect (TDH) measurements indicated the presence of two hole traps in Er-doped GaAs, at 35 and 360 meV above the valence band maximum. The former (shallower) center was thought to be due to Er substituting for a Ga atom (ErGa) and giving rise to an isoelectronic impurity potential. The second center was attributed to an Er atom occupying an interstitial position (Er(i)). Annealing studies performed on Er-implanted GaAs indicated that the ErGa center preferentially formed at higher annealing temperatures (greater than 850 C), with the Er(i) reaching a maximum concentration at an annealing temperature of around 750 C. Optical characterization performed by Photoluminescence (PL) measurements showed that the Er(i) center gave a much stronger Er-related intra-4f shell emission. Mechanisms for the excitation of the 4f shells of these two centers are discussed. Similar optically active Eri centers may be forming in AlGaAs. GRA

(Contract DE-AC02-76CH-00016)
(DE93-003142; BNL-48084; CONF-9208160-5) Avail: CASI HC A01/MF A01

Electron-yield XAFS measurements using the NSLS were made on e-beam evaporated Co/Pd multilayers with various sublayer thicknesses and different thickness ratios of Co to Pd sublayers. The Co K-edge and the Pd K-edge XAFS data were obtained for the Co/Pd multilayers with

sublayer thicknesses of 3 A/4 A, 15 A/4 A, 3 A/15 A, 2.1 A/13.5 A, and 2.2 A/4.5 A. Fourier transforms of Co K XAFS for most samples show a splitting of major peak, and the magnitude ratio of these split peaks varies systematically with the thickness ratio of the Pd sublayer to the Co sublayer, whereas the Fourier transforms of the Pd K XAFS for the same samples do not show a splitting of peaks. As a preliminary analysis, the Co K XAFS and the split peaks in the Fourier transform for the Co/Pd(3 A/4 A) case were simulated by using the FEFF calculations, and the Co K XAFS and the major peak in the fourier transform for the Co/Pd(15 A/4 A) case were also simulated consistently. We discuss the application of the positron annihilation angular correlation (ACAR) spectroscopy for investigating the electronic structure and Fermiology of the high-T(sub c) superconductors, with focus on the YBa2Cu3O7 system where most of the experimental and theoretical work has to date been concentrated. Comparisons between measured 2D-ACAR positron spectra and band theory predictions show a remarkable agreement (for the normal state), indicating that the electronic structure and Fermi surface of this material is described reasonably by the conventional picture. A wide variety of layered materials have been found to be superconducting. Among these are graphite intercalation donor compounds, transition metal dichalcogenides, intercalated transition metal dichalcogenides, organic layered superconductors, artificial superlattices, and the cuprates. The normal state properties of all of these compounds are very similar, due to the fact that they all have well-defined Fermi surfaces, and quasi-linear in-plane resistivities at high temperatures. At lower temperatures, charge- or spin-density waves are common in these systems. With the exception of the graphite intercalation compounds, all of the layered superconductors are type-2, and generally highly anisotropic in their superconducting properties. Dimensional crossover from anisotropic bulk to thin film behavior is common to many of these materials. DOE

Picosecond electrical pulses were used to measure the broadband quasiparticle response of a Nb trilayer SIS (superconductor insulator superconductor) junction in both the linear and nonlinear regimes. The electrical pulses were generated by illuminating a Si photoconducting switch using a Ti-sapphire laser. The SIS response is inferred by measuring the dc current induced by interfering two electrical pulses at the junction, as a function of the time delay between them. Results are obtained for bias voltages of 1.0 and 2.0 mV; at the latter, two-photon absorption was detected. DOE

Chang (Northwestern Univ., Evanston, IL.) 1992 30 p Presented at the NATO Advanced Study Institute on Multicomponent and Multilayered Thin Films for Advanced Microtechnologies, Techniques, Fundamentals and Devices, Bad Windsheim, Germany, 22 Sep. - 6 Oct. 1992
(Contract W-31-109-eng-38)
(DE93-003004; ANL/CHM/CP-73956; CONF-9209264-1) Avail: CASI HC A03/MF A01

Fabrication of thin film layered structures of multi-component materials such as high temperature superconductors, ferroelectric and electro-optic materials, and alloy semiconductors, and the development of hybrid materials requires understanding of film growth and interface properties. For High Temperature Superconductors, the superconducting coherence length is extremely short (5-15 (Angstrom)), and fabrication of reliable devices will require control of film properties at extremely sharp interfaces; it will be necessary to verify the integrity of thin layers and layered structure devices over thicknesses comparable to the atomic layer spacing. Analytical techniques which probe the first 1-2 atomic layers are therefore necessary for in-situ characterization of relevant thin film growth processes. However, most surface-analytical techniques are sensitive to a region within 10-40 A of the surface and are physically incompatible with thin film deposition and are typically restricted to ultra high vacuum conditions. A review of ion beam-based analytical methods for the characterization of thin film and multi-layered thin film structures incorporating layers of multicomponent oxides is presented. Particular attention will be paid to the use of time-of-flight techniques based on the use of 1- 15 key ion beams which show potential for use as nondestructive, real-time, in-situ surface diagnostics for the growth of multicomponent metal and metal oxide thin films. Ni/Mo and Ni/V multilayer magnetic anisotropy has been investigated as a function of Ni layer thickness, frequency and temperature. Variable frequency ferromagnetic resonance (FMR) measurements show, for the first time, significant frequency dependence associated with the multilayer magnetic anisotropy. The thickness dependence allows one to extract the interface contribution from the total anisotropy. Temperature dependent FMR (9 GHz) and room temperature magnetization indicate that strain between Ni and the non-magnetic layers is contributing significantly to the source of the interface anisotropy and the state of the interfacial magnetization. In order to examine the interface properties of other transition metal multilayer systems, investigations on Fe/Cu are underway and CoCr/Ag is being proposed. ESR measurements have been reported on Gd substituted YBaCuO superconductors and a novel quasi-equilibrium method has been developed to determine quickly and precisely the transition temperature. **POLYCRYSTALLINE TETRAGONAL ZIRCONIA IN THE SYSTEM CeO2-ZrO2 (Ce-TZP) [CERAMICAS DE ZIRCONIA TETRAGONAL POLICRISTALINA NO SISTEMA CEO2-ZRO2 (CE-TZP)]**
Maria doCarmo deAndradeNono 1991 155 p In PORTUGESE
(INPE-5285-TAE/007) Avail: CASI HC A08/MF A02

The development and the characterization of CeO2-stabilized tetragonal ZrO2 polycrystals (Ce-TZP ceramics) is presented since it is considered candidate material for applications as structural high performance ceramics. Sintered ceramics were fabricated from mixtures of powders containing different CeO2 content prepared by conventional and nonconventional techniques. The choice of these techniques of powder preparation was based on confiability and reproductibility of the resultant ceramics. It utilized conventional oxide mixtures (CeO2 and ZrO2) for manufacture of some Ce-TZP ceramics for comparative studies. The nonconventional technique of powder preparation that was developed and/or optimized were a

coprecipitation of hydrous oxides and drying by conventional and freeze methods, and precipitation and drying of Ce and Zr with low polarity alcohols. These powders and their resultant sintered ceramics were specified by chemical and physical characterization, compactation state, and mechanical properties. The chemical characteristics were determined by chemical analysis and the physical characteristics were evaluated by phase content, particle and agglomerate size and aspect, and powder porosity. The compactation state was analyzed from porosimetry results and electronic microscopy observations. It adopted the bending strength, Vickers hardness, and fracture toughness techniques to the determination of the mechanical properties. The mechanical properties were strongly dependent on the CeO2 content, the microstructure, and the fraction of tetragonal-to-monoclinic stress-induced transformation. Some Ce-TZP ceramics fabricated showed mechanical property values that can be comparable to those published in the international literature. Author

(DE93-002325; BNL-47369; CONF-920802-28) Avail: CASI HC A01/MF A01

We report a comparative study of the superconducting behavior in YBa2Cu3O7 epitaxial films irradiated with Ag and Au ions of several hundred MeV energy. The irradiation results in columnar defects of average diameter (approximately) 55 and (approximately) 110 A for Ag(+21) and Au(+24) ions respectively. A universal linear scaling is observed between the fractional areal damage vs. the superconducting transition temperature and normal state resistivity. Our results also show that in these films with intrinsically strong pinning, a marginal enhancement in the critical current density (J(sub c)) occurs when the defect density is less than 5(10)(exp 10)/sq cm and the defect diameter is of the order of coherence length. This criterion is satisfied by the silver ions. The damage due to Au(+24) ions is much too severe to improve the J(sub c). DOE

Materials composed of nanometer-sized structures are becoming technologically relevant as the sizes of electronic devices approach the nanometer scale. Questions as to the performance and durability of these devices can be partially addressed through the characterization and understanding of the magnetic structures and properties of nanometer-sized materials. The purpose of the present work is to understand the relationship between the microstructure of nanocrystalline materials and their magnetic structures and properties. This paper summarizes three separate experiments: (1) an X-ray diffraction and anomalous absorption (XANES) study of nanocrystalline Dy; (2) neutron diffraction measurements of the magnetic structure of nanocrystalline Cr; and (3) the measurement of the magnetization density of a single twist grain boundary in Ni. We are developing superconducting tunnel junction devices for use as high-resolution, high-efficiency x-ray spectrometers. We have tested devices with niobium x-ray absorbing layers coupled to aluminum layers which serve as quasiparticle traps. These devices were fabricated photolithographically using a modified niobium/aluminum/niobium trilayer fabrication process. Our first devices have a very thin barrier with specific normal state resistance of 1.5 x 10(exp -6) Ohm cm(exp 2), and also exhibit very low leakage current of 15nA below 200 mK. The energy resolution at 6 keV is 1990 eV FWHM, and is limited both by electronic noise and by the non-linear response of the detector. DOE

**MICROPHOTOGRAPHY OF SHOCKS IN CRYSTALS**
A. M. Frank 20 Aug. 1992 10 p Presented at the 20th International Congress on High Speed Photography and Photonics, Victoria, British Columbia, 25-26 Sep. 1992
(Contract W-7405-eng-48)
(DE93-002888; UCRL-JC-108962; CONF-9209188-6) Avail: CASI HC A02/MF A01

Recent advances in high-speed photographic capabilities of Micro Detonics Facility (micro DF) and miniature electric gun drivers have allowed real-time stop motion examination of shock waves passing through single crystals. Examination of defects and growth of dislocations from greater than 5 GPa shocks, requires temporal resolutions of a nanosecond or better and spatial resolutions better than 10 micron. As the defects and dislocations are highly inhomogeneous, simultaneous frame and streak records of the same location within the crystal are also required. Cameras and laser illuminators, discussed previously, have been upgraded and combined into a coaxial streak and frame system. Both laser beams are tailored and aimed separately. The dye laser is spatially filtered and focused to cover the frame. The argon laser is focused to a line on the target which is then imaged to the streak camera slit. The ability to see the focal line of the argon laser on the frame camera allows precise collocation of the fields of view of the two cameras. The focused argon laser and the slit are confocal resulting in the ability to obtain good streak data for crystals of poor optical quality. DOE

(Contract W-31-109-eng-38)
(DE93-002909; ANL/MSD/CP-75815; CONF-9208177-1) Avail: CASI HC A03/MF A01

In this paper a review of the thermodynamic, electrical and structural properties of liquid alkali-tellurium alloys is presented with a special emphasis on the interplay between these properties. The thermodynamic properties indicate ordering of the solutions at compositions corresponding to about 12, 50, and 67 atom percent of alkali atoms. The electrical conductivity and thermopower data confirm that these liquids are true semiconductors. The neutron diffraction patterns coupled with the above information indicate that in the case of liquid K(0.12)Te(0.88) the measured structure is dominated by the Te-Te contribution, and is remarkably similar to that of pure liquid tellurium, while the equiatomic alloy K(0.50)Te(0.50) is shown to contain mostly Te pairs which are identified with Zintl ions, Te2(2-). An integrated growth and surface characterization system containing a hot filament reactor, sample transfer station, ESD, and XPS was established to investigate the ALE of diamond films. Complementary experiments

concerned with the nucleation of diamond on molten surfaces, e.g., Al and Ge were also conducted. Formation of GeO2 or an aluminum carbide and the degradation of the diamond by the molten material inhibited nucleation on the melted area. Monocrystalline thin films of Beta-SiC were achieved in the temperature range of 850-980 C by atomic layer-by-layer deposition of Si and C species via sequential exposures of Si(100) substrates to Si2H6 and C2H4. A UHV analytical system containing TPD, AES, and XPS is being constructed in concert with the SiC ALE studies to determine the reaction chemistry important to this process. An eximer laser ablation system for the ALE of CeO2 has been completed and employed to successfully deposit films of this material on Si(100). GRA

The structure of atomic clusters is investigated using methods of ab initio quantum chemistry in conjunction with scanning tunneling microscopy (STM). Gold sols are imaged via STM and their sizes characterized. Atomic resolution reveals facets, steps, and reconstructed surfaces of the sols. STM images of graphite surfaces are characterized by two mechanisms: a twisted top layer configuration and a graphite-flake contaminated tip. A crystalline tip model reproduces anomalous long range periodicity, attributed to defect-mediated tip-substate convolution. Ab initio calculations of electronic states of a 135 atom Be cluster show bulk behavior for many properties centered at the middle of the cluster. The density of states agrees well with band theory models. Full spin-orbit CI calculations of the electronic spectrum and potential energy curves of LiBe, including Rydberg states, are definitive and accurate. A procedure for the incorporation of core/valence polarization effects in all-valence electron calculations is presented for use with relativistic effective core potentials. The method allows the treatment of large clusters at the ab initio level including procedures for the inclusion of electron correlation. GRA

During this period of support they have continued long-term program of investigating the shapes of surfaces in mathematical models for crystals (including polycrystalline materials), both in equilibrium and in growth. The accomplishments included the completion of seven papers, all of which have either appeared in print or are in press, and working on five more, three of which have since been finished and accepted for publication. Also completed one videotape that will soon be published. Four Papers that had previously been written appeared in print during the period of this grant. In addition, one AMA Special Session was organized and one week long workshop at The Geometry Center, and initiated and edited the proceedings of both (the second after this grant expired). These proceedings are highly innovative in that they include videotapes. The PI gave a large number of invited talks at a variety of meetings. GRA

**X RAY CHARACTERIZATION OF Au/Ni MULTILAYER THIN FILMS**

J. Chaudhuri, S. M. Alyan, and A. F. Jankowski (Lawrence Livermore National Lab., CA.) May 1992 21 p

(NIAR-92-7) Avail: CASI HC A03/MF A01

Au/Ni multilayer thin films of single phase structure are analyzed using kinematical x-ray diffraction theories to determine the composition modulation and structure of this multilayer system. The repeat period of the multilayers used ranges from 0.82x10(exp -9) m to 4.26x10(exp -9) m. The composition modulation is found to be a near square wave. The strain at the Au/Ni interface is predicted to be 9.8 percent at repeat period 1.65x10(exp -9) m with decreasing values above and below this repeat period. Author

**X RAY CRYSTAL STRUCTURE OF InCl3(DOT)2THF, A NEURAL FIVE-COORDINATE BIS-ADDUCT OF AN In3 TRIHALIDE**

Mark F. Self, Andrew T. McPhail, and Richard L. Wells 18 Nov. 1992 6 p

(Contract N00014-89-J-1545)

(AD-A258551; DU/DC/TR-32) Avail: CASI HC A02/MF A01

The 2:1 mole ratio reaction of InCl3 and P(SiMe3)3 in a toluene/THF mixture was investigated. Reaction appears to occur in a 1:1 mole fashion, since the products obtained are unreacted InCl3 (48.5 percent recovered) as InCl3(dot)2THF and a fine powder which roughly analyzes to be Cl2In3P3(SiMe3)2)(n). The latter was characterized by melting point and partial elemental analysis. The X-ray crystal structure of InCl3(dot)2THF is reported. InCl3(dot)2THF crystallizes in the orthorhombic space group Pbcn ((D(2h)(sup 14)), No.60) with unit cell parameters of a = 10.802(1) A, b = 10.101(1) A, c = 13.083(1) A, v = 1427.5(4) A3, and D(sub calcd) = 1.700 g/cu cm for Z = 4 (R = 0.042 (R(sub w) = 0.058)) and is an example of a neutral pentacoordinated bis-adduct of an indium(III) trihalide. The crystal structure consists of discrete monomeric units with no abnormally short intermolecular separations. The geometry about the indium atom approximates to trigonal bipyramidal with oxygen atoms of each of the THF molecules occupying axial positions In-O = 2.257(9) A, O-In-O = 178.5(3) deg while the three chlorine atoms (mean In-Cl = 2.321 A) lie in the equatorial plane. This report is a description of studies performed to evaluate the performance of the Facility for the Analysis of Chemical Thermodynamics (F*A*C*T) EQUILIB and REACT computational package programs for applications involving the study of the chemical equilibria of non-aqueous inorganic systems. The REACT code was verified by comparing code results to the results of hand calculations; the EQUILIB code was verified by comparing code results to the results of hand calculations, published phase diagrams, and the results of the F*A*C*T REACT code (which was verified prior to its use to verify the EQUILIB code). The results of the verification tests identified two failures of the REACT code to compute reliable results and identifies the conditions when the quality of the computed results are affected. The verification tests for the EQUILIB code identified no failures of the code to produce reliable results. DOE

It is well known that any multimode positive definite quadratic Hamiltonian can be transformed into a hamiltonian of uncoupled harmonic oscillators. Based on this theorem, the multimode thermal squeezed coherent states are constructed in terms of density operators. Decoherence of multimode thermal squeezed coherent states is investigated via the characteristic function and it is shown that the decohered (reduced) states are still thermal squeezed coherent states in general. **THE 1992 NASA/ASEE SUMMER FACULTY FELLOWSHIP PROGRAM Final Administrative Report**
Oct. 1992 150 p
(Grant NGT-01-002-099)
(NASA-CR-191266; NAS 1.26:191266; BER-575-94) Avail: CASI HC A07/MF A02

This is the administrative report for the 1992 NASA/ASEE Summer Faculty Fellowship Program which was held at the George C. Marshall Space Flight Center (MSFC) for the 28th consecutive year. The nominal starting and finishing dates for the ten week program were June 1, 1992 through August 7, 1992. The program was sponsored by NASA Headquarters, Washington, D.C., and operated under the auspices of the American Society for Engineering Education (ASEE). The program was one of eight such programs at eight NASA centers sponsored and funded by NASA Headquarters. The basic objectives of the program are the following: (1) to further the professional knowledge of qualified engineering and science faculty members; (2) to stimulate an exchange of ideas between participants and NASA; (3) to enrich and refresh the research and teaching activities at the participants' institutions; and (4) to contribute to the research objectives of the NASA centers. The major activities of the 1992 program were the following: (1) recruitment, selection, and assignment of faculty fellows; (2) research performed by the participants in collaboration with the MSFC colleague; (3) a seminar and tour program aimed at providing information concerning activities at MSFC; (4) an activities program of a social/non-technical nature aimed at providing the fellows and their families a means of learning about the MSFC/Huntsville area; and (5) preparation of a volume containing the written reports of the details of the research performed by each of the summer faculty. The success of the 1992 program activities in meeting the stated objectives was measured through questionnaires, which were filled out by participants and their MSFC colleagues. The following sections describe the major activities in more detail and the results of the questionnaires are summarized showing that the 1992 program was highly successful. This year's program also included 19 participants in the Summer Teacher Enrichment Program (STEP) which is comprised of middle school and high school math and science teachers. Author

As the number of spacefaring nations of the world increases, so does the difficulty of competing in a global economy. The development of high technology products and services for space programs, and the economic exploitation of these technologies for national economic growth, requires professionals versed in both technical and commercial aspects of space. Meeting this requirement academically presents two challenges. On the technical side, enrollment in science and engineering is decreasing in some of the spacefaring nations. From the commerce perspective, very few colleges and universities offer specific courses in space business. Author

The effort to make the United States number one in math and science achievement must reflect the diversity of our country and our democratic approach to education. Everyone, not just a select few, must reap the benefits of our efforts to provide a world-class education to our students. There are many reasons for seeking to provide a world-class education. One reason is that education is important for its own sake. But education for its own sake is not as compelling an argument for government support as is the fact that a world-class education system is essential if we are to improve our standard of living and the quality of life on our planet. Described are the diverse and vigorous education and human resource programs the Foundation has developed and supported over the last ten years - activities that reach out to all, recognizing the needs of a changing U.S. population and a changing workplace. **THE 1992 SCIENCE OLYMPIAD NATIONAL TOURNAMENT Final Report**

W. D. Perry and Marllin L. Simon 27 Aug. 1992 133 p Tournament held 15-16 May 1992, Auburn, AL
(NASA Order H-07987-D)
(NASA-CR-191379; NAS 1.26:191379) Avail: CASI HC A07/MF A02

In the fall of 1991, approximately 8000 Junior and Senior High Schools from 39 states in the country registered one or more teams with the National Science Olympiad Headquarters, and started working their way towards the Science Olympiad National Tournament, which was held at Auburn University, Alabama on May 15 and 16, 1992. Teams that made it to the Science Olympiad National Tournament had to compete at the regional (e.g., Alabama had five regional tournaments) and state levels. In most cases a team had to be number one in the state in order to make it into the National Tournament. Since the decision was made to invite 50 teams from each division (division B is Junior High and division C is Senior High), for each state that did not participate, another state could send two teams. The selection of states that could send a second team was based on statewide registration with the National Headquarters. Author

**THE INTERNATIONAL FORUM ON AIRLINE QUALITY TEACHING GUIDE**
Dean E. Headley, ed., Brent D. Bowen, ed., and Sanda Moore, ed. Jul. 1992 74 p
(NIAR-92-13) Avail: CASI HC A04/MF A01

The International Forum on Airline Quality (IFAQ) Teaching Guide was created at the suggestion of the many people who recognized the potential for education inherent to the Forum proceedings. The purpose of the Guide, in addition to its primary function of reporting on the latest trends, debates, and general information, is to introduce students and professionals alike to the tremendous variety of issues regarding airline quality and the people who are at the forefront of innovation and change. The discussion questions at the end of each presentation were developed to assist the student in the clarification of the issues and to encourage thought that extends beyond the theories and arguments provided by the contributing authors. Some questions are deliberately open-ended; the student must thoroughly understand the issue and apply what has been learned in order to formulate an appropriate, reasonable response. The Teaching Guide may thus be used to test retention and comprehension. The Teacher's Edition includes a helpful key that supplies focus and specific examples where concrete answers are required; to this end, the key responses are direct quotations from each particular discourse. (Grant NAGw-2924)
(NASA-CR-191362; NAS 1.26:191362) Avail: CASI HC A11/MF A03

This report documents the efforts and outcomes of our research and educational programs at NASA-CORE in NCA&TSU. The goal of the center was to establish a quality aerospace research base and to develop an educational program to increase the participation of minority faculty and students in the areas of aerospace engineering. The major accomplishments of this center in the first year are summarized in terms of three different areas, namely, the center's research programs area, the center's educational programs area, and the center's management area. In the center's research programs area, we focus on developing capabilities needed to support the development of the aerospace plane and high speed civil transportation system technologies. In the educational programs area, we developed an aerospace engineering option program ready for university approval. For individual titles, see N93-19453 through N93-19466.

**STRUCTURES RESEARCH** **c05**
Elias Abu-Saba, Williams McGinley, and Ji-Yao Shen *In its* The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University 12 Dec. 1992 10 p (For primary document see N93-19452 06-80)
Avail: CASI HC A02/MF A03

The main objective of the structures group is to provide quality aerospace research with the Center for Aerospace Research - A NASA Center for Excellence at North Carolina Agricultural and Technical State University. The group includes dedicated faculty and students who have a proven record in the area of structures, in particular space structures. The participating faculty developed accurate mathematical models and effective computational algorithms to characterize the flexibility parameters of joint dominated beam-truss structures. Both experimental and theoretical modelling has been applied to the dynamic mode shapes and mode frequencies for a large truss system. During the past few months, the above procedures has been applied to the hypersonic transport plane model. The plane structure has been modeled as a lumped mass system by Doctor Abu-Saba while Doctor Shen applied the transfer matrix method with a piecewise continuous Timoshenko tapered beam model. Results from both procedures compare favorably with those obtained using the finite element method. These two methods are more compact and require less computer time than the finite element method. The group intends to perform experiments on structural systems including the hypersonic plane model to verify the results from the theoretical models. Author

The objectives of the control group are concentrated on research and education. The control problem of the hypersonic space vehicle represents an important and challenging issue in aerospace engineering. The work described in this report is part of our effort in developing advanced control strategies for such a system. In order to achieve the objectives stated in the NASA-CORE proposal, the tasks were divided among the group based upon their educational expertise. Within the educational component we are offering a Linear Systems and Control course for students in electrical and mechanical engineering. Also, we are proposing a new course in Digital Control Systems with a corresponding laboratory. Author

**FLIGHT SIMULATOR FOR HYPERSONIC VEHICLE AND A STUDY OF NASP HANDLING QUALITIES** **c09**
Celestine A. Ntuen, Eui H. Park, Joseph M. Deeb, and Jung H. Kim *In its* The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University 12 Dec. 1992 8 p (For primary document see N93-19452 06-80)
Avail: CASI HC A02/MF A03

The research goal of the Human-Machine Systems Engineering Group was to study the existing handling quality studies in aircraft with sonic to supersonic speeds and power in order to understand information requirements needed for a hypersonic vehicle flight simulator. This goal

falls within the NASA task statements: (1) develop flight simulator for hypersonic vehicle; (2) study NASP handling qualities; and (3) study effects of flexibility on handling qualities and on control system performance. Following the above statement of work, the group has developed three research strategies. These are: (1) to study existing handling quality studies and the associated aircraft and develop flight simulation data characterization; (2) to develop a profile for flight simulation data acquisition based on objective statement no. 1 above; and (3) to develop a simulator and an embedded expert system platform which can be used in handling quality experiments for hypersonic aircraft/flight simulation training. **AEROSPACE ENGINEERING EDUCATIONAL PROGRAM**

William Craft, David Klett, and Steven Lai *In its* The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University 12 Dec. 1992 24 p (For primary document see N93-19452 06-80)

Avail: CASI HC A03/MF A03

The principle goal of the educational component of NASA CORE is the creation of aerospace engineering options in the mechanical engineering program at both the undergraduate and graduate levels. To accomplish this goal, a concerted effort during the past year has resulted in detailed plans for the initiation of aerospace options in both the BSME and MSME programs in the fall of 1993. All proposed new courses and the BSME aerospace option curriculum must undergo a lengthy approval process involving two cirriculum oversight committees (School of Engineering and University level) and three levels of general faculty approval. Assuming approval is obtained from all levels, the options will officially take effect in Fall '93. In anticipation of this, certain courses in the proposed curriculum are being offered during the current academic year under special topics headings so that current junior level students may graduate in May '94 under the BSME aerospace option. The proposed undergraduate aerospace option curriculum (along with the regular mechanical engineering curriculum for reference) is attached at the end of this report, and course outlines for the new courses are included in the appendix. **DYNAMIC CHARACTERIZATION, MONITORING AND CONTROL OF ROTATING FLEXIBLE BEAM-MASS STRUCTURES VIA PIEZO-EMBEDDED TECHNIQUES** **c39**

Steven H.-Y. Lai *In its* The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical StateUniversity 12 Dec. 1992 10 p (For primary document see N93-19452 06-80)

Avail: CASI HC A02/MF A03

A variational principle and a finite element discretization technique were used to derive the dynamic equations for a high speed rotating flexible beam-mass system embedded with piezo-electric materials. The dynamic equation thus obtained allows the development of finite element models which accommodate both the original structural element and the piezoelectric element. The solutions of finite element models provide system dynamics needed to design a sensing system. The characterization of gyroscopic effect and damping capacity of smart rotating devices are addressed. Several simulation examples are presented to validate the analytical solution. Author

McGinley (North Carolina Agricultural and Technical State Univ., Greensboro.), Lonnie Sharpe, Jr. (North Carolina Agricultural and Technical State Univ., Greensboro.), and Lawrence W. Taylor, Jr. *In* North Carolina Agricultural and Technical State Univ., The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University 12 Dec. 1992 13 p Submitted for publication (For primary document see N93-19452 06-80)

Avail: CASI HC A03/MF A03

Distributed parameter modeling offers a viable alternative to the finite element approach for modeling large flexible space structures. The introduction of the transfer matrix method into the continuum modeling process provides a very useful tool to facilitate the distributed parameter model applied to some more complex configurations. A uniform Timoshenko beam model for the estimation of the dynamic properties of beam-like structures has given comparable results. But many aeronautical and aerospace structures are comprised of non-uniform sections or sectional properties, such as aircraft wings and satellite antennas. This paper proposes a piecewise continuous Timoshenko beam model which is used for the dynamic analysis of tapered beam-like structures. A tapered beam is divided into several segments of uniform beam elements. Instead of arbitrarily assumed shape functions used in finite element analysis, the closed-form solution of the Timoshenko beam equation is used. Application of the transfer matrix method relates all the elements as a whole. By corresponding boundary conditions and compatible conditions a characteristic equation for the global tapered beam has been developed, from which natural frequencies can be derived. A computer simulation is shown in this paper, and compared with the results obtained from the finite element analysis. While piecewise continuous Timoshenko beam model decreases the number of elements significantly; comparable results to the finite element method are obtained. Author

Aircraft structures may be modelled by lumping the masses at particular strategic points and the flexibility or stiffness of the structure is obtained with reference to these points. Equivalent moments of inertia for the section at these positions are determined. The lumped masses are calculated based on the assumption that each point will represent the mass spread on one half of the space on each side. Then these parameters are used in the differential equation of motion and the eigen characteristics are determined. A comparison is made with results obtained by other established methods. The lumped mass approach in the dynamic analysis of complicated structures provides an easier means of predicting the dynamic characteristics of these structures. It involves less computer time and avoids computational errors that are inherent in the numerical solution of complicated systems. Author

This paper examines the applicability of genetic algorithms (GA) in the complete design of fuzzy logic controllers. While GA has been used before in the development of rule sets or high performance membership functions, the interdependence between these two components dictates that they should be designed together simultaneously. GA is fully capable of creating complete fuzzy controllers given the equations of motion of the system, eliminating the need for human input in the design loop. We show the application of this new method to the development of a cart controller. Author

This work is concerned with the control problem of a multi-robot system handling a payload with unknown mass properties. Force constraints at the grasp points are considered. Robust control schemes are proposed that cope with the model uncertainty and achieve asymptotic path tracking. To deal with the force constraints, a strategy for optimally sharing the task is suggested. This strategy basically consists of two steps. The first detects the robots that need help and the second arranges that help. It is shown that the overall system is not only robust to uncertain payload parameters, but also satisfies the force constraints. Author

This paper presents a control theoretic approach to modeling human response errors (HRE) in the flight simulation domain. The human pilot is modeled as a supervisor of a highly automated system. The synthesis uses the theory of optimal control pilot modeling for integrating the pilot's observation error and the error due to the simulation model (experimental error). Methods for solving the HRE problem are suggested. Experimental verification of the models will be tested in a flight quality handling simulation. Author

Current advances in computing technology are devoid of formal methods that describe the theories of how information is shared between humans and machines. Specifically, in the domain of human-machine interaction, a common mathematical foundation is lacking. The aim of this paper is to propose a formal method of human-machine (H-M) interaction paradigm from the information view point. The methods presented are interpretation- and context-free and can be used both in experimental analysis as well as in modeling problems. Author

Recognition of partially occluded objects has been an important issue to airport security because occlusion causes significant problems in identifying and locating objects during baggage inspection. The neural network approach is suitable for the problems in the sense that the inherent parallelism of neural networks pursues many hypotheses in parallel resulting in high computation rates. Moreover, they provide a greater degree of robustness or fault tolerance than conventional computers. The annealed Hopfield network which is derived from the mean field annealing (MFA) has been developed to find global solutions of a nonlinear system. In the study, it has been proven that the system temperature of MFA is equivalent to the gain of the sigmoid function of a Hopfield network. In our early work, we developed the hybrid Hopfield network (HHN) for fast and reliable matching. However, HHN doesn't guarantee global solutions and yields false matching under heavily occluded conditions because HHN is dependent on initial states by its nature. In this paper, we present the annealed Hopfield network (AHN) for occluded object matching problems. In AHN, the mean field theory is applied to the hybird Hopfield network in order to improve computational complexity of the annealed Hopfield network and provide reliable matching under heavily occluded conditions. AHN is slower than HHN. However, AHN provides near global solutions without initial restrictions and provides less false matching than HHN. In conclusion, a new algorithm based upon a neural network approach was developed to demonstrate the feasibility of the automated inspection of threat objects from x-ray images. The robustness of the algorithm is proved by identifying occluded target objects with large tolerance of their features. Author

Data modeling of manufacturing systems where the decision system is considered as a hierarchical set of decision centers is discussed. This modeling problem is frequently met while analyzing the management systems of industrial enterprises. Since the decision system is decomposed into decision levels, a data modeling framework corresponding to this decomposition is proposed. A generic model of the most detailed decision level is defined and rules ensuring data consistency are set. This basic model and these rules are used to study interactions between data models relevant to successive decision levels of a hierarchical stucture. Structural data is aggregated and decisional data is disaggregated. The 'horizontal' data consistency of each decision level and the 'vertical' consistency of data belonging to successive levels are analyzed. ESA

**AN ANALYSIS OF CONTRACT COST OVERRUNS AND THEIR IMPACTS M.S. Thesis**

Brian D. Wilson Sep. 1992 134 p

(AD-A258422; AFIT/GCA/LSY/92S-8) Avail: CASI HC A07/MF A02

This study examines the tendency of major program DoD contracts, once in an overrun status, to remain in that status and in many cases, further deteriorate. In these times of budgetary constraints, it is important that government program managers and other key decision makers understand the ramifications of contract overruns especially early in a program's life. The overruns on the A-12 program, for instance, could have possibly been predicted much earlier and the program cancellation avoided if only the program manager had understood the implications of significant cost overruns early in the life of the program. **CATEGORY SCALING WITHIN A GIVEN CONTEXT AS A COMMON BASIS FOR THE AHP, SMART AND ELECTRE**

F. A. Lootsma 1992 17 p

(Rept-92-22; ETN-93-93116) Copyright Avail: CASI HC A03/MF A01

Three methods for multicriteria decision analysis are addressed: the direct rating method in the Simple Multi-Attribute Rating Technique (SMART); the pairwise comparison methods in the Analytic Hierarchy Process (AHP); and the French set of ELECTRE systems. Since decisions are invariably made within a given context, relative preferences are modeled as ratios of increments or decrements in an interval on the axis of desirability. The ratio magnitudes are sorted into a small number of categories, represented by numerical values in a geometric scale. An explanation as to why AHP and ELECTRE are concerned with category judgement of ratio magnitudes, whereas SMART essentially uses the orders of mgnitude of these ratios, is given. This provides a common basis for the analysis of the methods in question and for a cross validation of their results. ESA

**APPLYING COMMERCIAL STYLE ACQUISITION PRACTICES TO THE PROCUREMENT OF COMMERCIALLY AVAILABLE AIRCRAFT M.S. Thesis**

Douglas W. Humerick and Steven H. Minnich Sep. 1992 192 p

(AD-A258143; AFIT/GCM/LSY/92-6) Avail: CASI HC A09/MF A02

This study was performed to recommend which commercial acquisition practices should be adopted in government acquisitions of commercially available aircraft. Previous studies, dating to 1972, illustrate the value of adopting commercial style acquisition practices in government acquisitions. Using commercial style acquisition practices can provide the government with lower costs and faster delivery with no sacrifice of quality. As a customer of the aircraft manufacturing community, the government must adapt to global market changes. Procedure reviews and changes must occur on an ongoing basis to take advantage of standard industry practices. Telephone interviews of nineteen top level personnel representing twelve domestic aircraft manufacturers revealed difficulties encountered in selling to the government: oversight and bureaucracy; payment practices; contract complexity; clause application; and MILSPEC's which go beyond FAA certification requirements. A qualitative analysis methodology was selected and recommendations for commercially available aircraft acquisitions include the following points: creating a separate regulation to govern use of commercial practices; using commercial payment practices; requiring cost benefit analysis for MILSPEC's and MILSTD's which exceed FAA certifications; removing CAS requirements; establishing a commercial advocate similar to the position of competition advocate; relying on commercial marker forces to ensure the manufacturers produce at a low cost and sell at a fair price; and empowering program managers and contracting officers to keep decisions at the lowest possible level to streamline the decision making process. **GRAPHIC REPRESENTATION IN MANAGERIAL DECISION MAKING: THE EFFECT OF SCALE BREAK ON THE DEPENDENT AXIS M.S. Thesis**

Clark R. Carvalho and Michael D. McMillan Sep. 1992 118 p

(AD-A258989; AFIT/GSM/LSY/92S-5) Avail: CASI HC A06/MF A02

This thesis investigated whether a scale break on the dependent axis of a graph affects a decision maker's interpretation of the data presented in the graph. A literature search revealed criteria for constructing high integrity graphs and formatting scale breaks. An experiment was conducted to determine the effect of a scale break on the dependent axis. Graphs following the criteria for high integrity graphs were presented to the control group, while graphs following the criteria for high integrity graphs, with the exception of the scale break, were presented to the experimental group. Using a parametric two-sample t test and a non-parametric Rank Sum test, it was shown that data presented in a graph with a scale break was interpreted differently from data presented in a graph without a scale break. Analysis of variance was conducted on the demographic factors for each subject. In the experimental group, sex and professional experience were factors that led to different interpretations of graphs with a scale break. The level of experience using graphs in decision making was also a factor that led to different interpretations of graphs in both groups. GRA

The purpose of this AGARD publication is to assist members of the

Aeronautical and Space Community by: (1) informing them about many scheduled international scientific and technical meetings; and (2) avoiding the need for them to consult several sources in order to find out what meetings have been planned, their dates, and locations. The AGARD Calendar is published every six months, in June and December of each year. Details concerning the meetings listed in this particular issue of the calendar have been obtained from national and international organizations which sponsor aeronautical and space meetings and from other sources (journals, periodicals, etc.). Three kinds of events are covered by this calendar: (1) technical meetings, conferences, and symposia, held in all parts of the world, in the field of aerospace research and development as well as in other directly related scientific fields, such as energy, geophysics, and acoustics; (2) exhibitions and technical displays covering the same fields of interest; and (3) educational courses, short or long, given by certain specialized institutions. **UNIVERSITY RESEARCH: CONTROLLING INAPPROPRIATE ACCESS TO FEDERALLY FUNDED RESEARCH RESULTS. REPORT TO THE CHAIRMAN, HUMAN RESOURCES AND INTERGOVERNMENTAL RELATIONS SUBCOMMITTEE, COMMITTEE ON GOVERNMENT OPERATIONS, HOUSE OF REPRESENTATIVES**

4 May 1992 36 p

(GAO/RCED-92-104; B-247087) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

The Chairman, Human Resources and Intergovernmental Relations Subcommittee, House Committee on Government Operations, has expressed concern that closer links between universities and businesses have increased the potential for conflicts of interest that would give businesses inappropriate access to, and therefore an unfair advantage in commercializing, the results of federally funded research. To assess the extent of these linkages, the Chairman requested that we survey the universities receiving the most funding from NIH and NSF in fiscal year 1989 about: (1) the extent of licensing activities for technologies developed in whole or in part with NIH or NSF funding; (2) foreign participation in industrial liaison programs that, in return for membership fees, provide companies with access to research programs; and (3) policies and procedures to control potential conflicts of interest by faculty or administrators that could give companies inappropriate access to research results. As agreed with the Subcommittee, we assessed the overall relationship between universities and businesses without seeking to identify specific instances of inappropriate access. To obtain information about the extent of linkages between universities and businesses, we sent a questionnaire to 37 universities that were among the 25 leading university recipients of funding from NIH and/or the 25 leading university recipients of funding from NSF in fiscal year 1989. All of the universities, except the Baylor College of Medicine and the University of Pennsylvania, responded to the questionnaire. We also obtained additional data through telephone interviews with administrators at the 35 universities that responded. We did not independently verify the accuracy of data that the universities reported. Author

**TOTAL QUALITY MANAGEMENT: IT WORKS FOR AEROSPACE INFORMATION SERVICES**

James Erwin, Carl Eberline, and Wanda Colquitt Jan. 1993 13 p Previously announced in IAA as A93-23312

(NASA-TM-108980; NAS 1.15:108980) Avail: CASI HC A03/MF A01

Today we are in the midst of information and 'total quality' revolutions. At the NASA STI Program's Center for AeroSpace Information (CASI), we are focused on using continuous improvements techniques to enrich today's services and products and to ensure that tomorrow's technology supports the TQM-based improvement of future STI program products and services. The Continuous Improvements Program at CASI is the foundation for Total Quality Management in products and services. The focus is customer-driven; its goal, to identify processes and procedures that can be improved and new technologies that can be integrated with the processes to gain efficiencies, provide effectiveness, and promote customer satisfaction. This Program seeks to establish quality through an iterative defect prevention approach that is based on the incorporation of standards and measurements into the processing cycle. Four projects are described that utilize cross-functional, problem-solving teams for identifying requirements and defining tasks and task standards, management participation, attention to critical processes, and measurable long-term goals. The implementation of these projects provides the customer with measurably improved access to information that is provided through several channels: the NASA STI Database, document requests for microfiche and hardcopy, and the Centralized Help Desk. (Contract F04606-89-D-0040)

(AD-A258444; WL-TR-92-1068) Avail: CASI HC A03/MF A01

Current and planned avionics radar systems are highly sophisticated in their capabilities and heavily dependent on Embedded Computer Systems (ECS) for their operation. Avionics radar systems containing ECS provide a high level of flexibility in both system configuration and capability. However, increased flexibility requires increased logistical support. This support includes both hardware and software maintenance. Air Force Logistics Command (AFLC) is conducting a concentrated effort to limit the rising cost of ECS support while responding to user requests for improving these systems. This effort and the ECS Support Improvement Program (ESIP), a program implemented to address the problem of developing a rapid turnaround capability for airborne avionics radar systems, have as one of their research and development objectives to develop the necessary rapid turnaround capabilities to support mission critical ECS. Rapid Turnaround (RT) is defined as correcting a system deficiency in a timely fashion through some combination of software, firmware, and/or hardware modifications. The RT concept evolved from the overall AFLC objective to decrease the time and resources required to implement operational or maintenance changes in deployed ECS. Avionics systems are designed with internal data buses which can provide access to vast amounts of data. The data buses contain data, such as MIL-STD-1553 and H009, and are located primarily in the programmable signal processor. The need for an instrumentation system hosted on-board a tactical aircraft resulted in the development of the Data Integration and Collection Environment (DICE) System by TRW and the Air Force. GRA

**USING AN OBJECT-ORIENTED DATABASE MANAGEMENT SYSTEM TO ENHANCE THE REUSABILITY OF CLASS DEFINITIONS M.S. Thesis**
Tilemahos Poulis Sep. 1992 119 p
(AD-A257559) Avail: CASI HC A06/MF A02

One of the main benefits of object-orientation is reusability which allows modules (classes/objects) developed for a previous application to be used again for a new application. A Browser in object-oriented systems is a highly specialized system used in class libraries for viewing, writing, changing, and saving code. However, as the number of classes grows from the hundreds to the thousands to the tens of thousands, the Browser approach is not sufficient. The Class Storage and Retrieval System (CSRS) is a proposed system based on the Computer Aided Prototyping System that aims to overcome the insufficiencies of the Browser approach and, therefore, to enhance the reusability of classes in object-oriented systems. **DEVELOPMENT OF A PROTOTYPE AIR FORCE INSTITUTE OF TECHNOLOGY (AFIT) RESEARCH MANAGEMENT SYSTEM (ARMS) M.S. Thesis**
David N. Schaaf and Carl W. Scott Dec. 1992 197 p
(AD-A258267; AFIT/GSS/LSC/92D-5) Avail: CASI HC A09/MF A03

The goal of this study was to design, develop, test, and evaluate an initial prototype information system to enhance the conduct and management of research in the School of Systems and Logistics at the Air Force Institute of Technology (AFIT). To accomplish this goal, the researchers developed and completed a methodology that was generally patterned after the milestones in a typical system development life cycle. The proof-of-concept nature of this research caused the researchers to also map the study's seven major objectives into a second system development model called the Spiral Model (Boehm, 1988:61). This hybrid approach provided better defined steps to a model that allows for iterative prototyping and served as the framework for this project. The prototype AFTT Research Management System (APRMS) produced by this study is comprised of subsystems that support research topic selection, research products reuse, research management, and database administration. An operational test of the system was completed and the results validated the desirability of the system concept and provided many recommendations for improving the ARMS. The recommendations for future research listed in Chapter 5 concern the follow-on development of the prototype and the conduct of important corollary studies. GRA

**INCREASE OF OPERATIONAL RELIABILITY BY FEEDBACK EXPERIENCE/RETURN IN THE TECHNICAL AND INDUSTRIAL FIELD [LA CROISSANCE DE LA SURETE DE FONCTIONNEMENT PAR LE RETOUR D'EXPERIENCE DANS LE DOMAINE TECHNIQUE ET INDUSTRIEL]**
R. Vogin, G. Sciez, and J. C. Derbes 1992 7 p In FRENCH
Presented at Colloque Lambda-Mu, Grenoble, France, 6-8 Oct. 1992
(ETN-93-93014) Avail: CASI HC A02/MF A01

The compilation and exploitation of information gained from experience in technical and industrial domains, necessary in order to avoid repeating past errors, are discussed. The problem of passing on experience is addressed. The importance of collecting qualitative and quantitative information from both inside and outside a company is stressed. This information must include: source reference, technical description of the product (engine, type, thrust, etc.), problem observed, conditions in which it was seen, observed effect and potential, causes, and methods taken to reduce the risk. The construction of a data base, the standardization of data and its exploitation are addressed. ESA

**AN INFORMATION THEORETIC APPROACH TO DISTRIBUTED INFERENCE AND LEARNING Final Report, 1 Feb. 1990 - 31 May 1992**
Padhraic Smyth 1 Oct. 1992 35 p
(Contract N00014-92-J-1860; AF-AFOSR-0199-90; AF Proj. 7013)
(AD-A257935; AFOSR-92-0912TR) Avail: CASI HC A03/MF A01

This report describes research work which was funded under grant number AFOSR90-00199 during the period 1 Feb. 1990 - 31 May 1992. Our work has focused on developing information-theoretic and probabilistic models for neural network computation. This theoretical basis is then used to develop novel hybrid network architectures, which combine techniques from the fields of statistics and artificial intelligence with neural approaches. The report describes a number of significant results including the following: identification of the general class of energy functions which lead to proper probability estimation, a new algorithm which builds hybrid rule-based network models from data, Markov random field theory and algorithms for constructing network models from large databases, new results on sparse Markov models, a new hybrid unsupervised/supervised learning algorithm with applications to computer vision problems, a novel recurrent network structure, and prototype VLSI hardware implementations of these ideas. A total of 30 technical papers have resulted from this grant. GRA

**A MODEL FOR SECURITY AND DISTRIBUTION OF MANAGEMENT INFORMATION SYSTEMS Ph.D. Thesis [EIN MODELL FUER SICHERHEIT UND VERTEILTHEIT VON MANAGEMENTINFORMATIONSSYSTEMEN]**
Lutz Kleinholz 1992 187 p In GERMAN
(ETN-93-93029) Avail: CASI HC A09/MF A02

A model which integrates the aspects of safety and distribution for the special requirements of MIS (Management Information Systems) is presented. The model can be partially realized by the implementation of known mechanisms and architectures, although it is necessary to develop new formulations and processes in the safety area. The architecture model is designed to allow high parallelism capacities and availability of distributed MIS. Central and distributed data base management systems are combined in an homogeneous system by means of a distributed transaction processing and a communication model. The security is guaranteed by an authentification process and a flexible access control. Communication states of the distributed MIS are subdivided to reach to safety level of the server. A client-server model based on the concept of remote procedure calls is presented and examples are given and analyzed in terms of naming, heterogeneity, transparence, protection, and data exhange. The usability of semantic data control, object oriented design, and cyclic redundancy check is discussed and an implementation strategy of a prototype of the current model is described. ESA

(NASA-TM-107714; NAS 1.15:107714) Avail: CASI HC A04/MF A01

As part of Phase 4 of the NASA/DoD Aerospace Knowledge Diffusion Project, two studies were conducted that investigated the technical communications practices of Russian and U.S. aerospace engineers and scientists. Both studies have the same five objectives: first, to solicit the opinions of aerospace engineers and scientists regarding the importance of technical communications to their profession; second, to determine the use and production of technical communications by aerospace engineers and scientists; third, to seek their views about the appropriate content of an undergraduate course in technical communications; fourth, to determine aerospace engineers' and scientists' use of libraries, technical information centers, and on-line data bases; and fifth, to determine the use and importance of computer and information technology to them. A self-administered questionnaire was distributed to aerospace engineers and scientists at the Central Aero-Hydrodynamic Institute (TsAGI), NASA ARC, and NASA LaRC. The completion rates for the Russian and U.S. surveys were 64 and 61 percent, respectively. The responses of the Russian and U.S. participants, to selected questions, are presented in this report.

**DESIGN AND IMPLEMENTATION OF A GRAPHICAL USER INTERFACE FOR A MULTIMEDIA DATABASE MANAGEMENT SYSTEM M.S. Thesis**

Metin Balci and Erhan Saridogan Sep. 1992 136 p

(AD-A257577) Avail: CASI HC A07/MF A02

The purpose of this thesis was to design and implement a graphical user interface for a multimedia database management system prototype previously implemented at the Naval Postgraduate School. Because of complexity of data types and difficulty of manipulating them, it was very hard for a casual user to use the previous system. Since graphical interaction simplifies control dialogue, we designed and implemented a graphical user interface using C++ and InterViews 3.0.1 for a Sun-3 workstation under Unix X-Windows environment with mouse support. We then connected this interface to the multimedia database system prototype. Our interface supports incremental query specification using extended SQL and can be connected to database applications in several different ways. An embedded global data structure, a text file or character string can be used for connections. A second version of the interface for a Sun-4 workstation was built and connected to another database system using the character string and text file. This version demonstrated even better performance.

Keiko Tanaka, Andre Luiz MouradosSantos, and Joao RobertodosSantos Aug. 1991 63 p In PORTUGESE

(INPE-5354-RPQ/654) Avail: CASI HC A04/MF A01

A brief outline of the steps of the operational procedure of preprocessing of the Advanced Very High Resolution Radiometer (AVHRR) images obtained from the NOAA-9, NOAA-10, and NOAA-11 polar orbit satellites, using the SPARC SERVER 390 - SUN workstation is presented. It describes, in detail, the mathematical algorithm and the application program manual to preprocess the AVHRR data. Also, the computer code (in C language) is available for transforming the original raw data into a more feasible form of direct access for the image processing system; displaying and visualizing the images; and transforming the image coordinates (row and column) into geographical coordinates (latitude and longitude). This procedure is an important stage to provide the AVHRR data users an operational mode, generating products such as vegetation index mosaics which are useful for vegetation cover studies.

**DATA MANAGEMENT: IMPLEMENTATION AND LESSONS LEARNED FROM DEPARTMENT OF THE ARMY DATA MANAGEMENT PROGRAM M.S. Thesis**

Christine M. Donohue and Gregory A. Hayes Sep. 1992 86 p

(AD-A257858) Avail: CASI HC A05/MF A01

Information systems executives within the Department of Defense (DoD) are being challenged to develop innovative ways in which information technology can contribute to the streamlining of DoD organizations. A key step in developing information systems that will meet the future needs of DoD organizations is to manage the data resource. This thesis examines the concepts, implementation strategies, and issues relating to data management and illustrates, using a case study of the Department of the Army data management methodology, the critical success factors required to implement data management programs throughout the DoD.

**THE OBSTACLES ENCOUNTERED IN THE DEVELOPMENT OF SMMS: A CASE STUDY M.S. Thesis**

David G. Broadwater Jun. 1992 81 p

(AD-A257880) Avail: CASI HC A05/MF A01

Automated data processing for non-tactical applications afloat was first implemented on large platforms with the SNAP 1 system. This system provided excellent inventory management and financial and accounting service in the punch card and magnetic tape environment in which it was introduced. Subsequent modifications have been made to take advantage of changing technologies and increased user expectations. Automated data processing on smaller platforms was implemented with the SNAP 2 program. While serving many of the same functions this implementation was designed separately and for a different user group. The SMMS program discussed here in a case format was an attempt to consolidate and enhance the two SNAP programs.

**IMPLEMENTATION OF A CONFIGURATION AND MAINTENANCE MANAGEMENT SYSTEM FOR LOCAL AREA NETWORKS M.S. Thesis**

David G. Dickison Sep. 1992 151 p

(AD-A257837) Avail: CASI HC A08/MF A02

The management of Local Area Networks today is one of the most challenging tasks which face a system manager. The plethora of system software, application software and accessories available combined with the various computer clones, and open architecture present in microcomputers makes tracking Local Area Network configuration and maintenance a very daunting task. This thesis modifies a previous design for a Local Area Network configuration and maintenance database and implements the new design in Dbase 4 version 1.1 using the Naval Postgraduate School Administrative Science Department Local Area Networks as a prototype database. The database was designed to be simple to use, to protect data integrity and to be expandable to new equipment, new technology and new data applications. Due to its general nature, the Local Area Network Maintenance and Configuration System can be used on virtually any Local Area Network application.

**THE INTEGRATION OF SPECIFICATION ASPECTS IN DATABASE DESIGN Ph.D. Thesis**
Rudolphus Antonius deBy 1991 219 p
(ISBN-90-9004461-2; ETN-92-92827) Copyright Avail: CASI HC A10/MF A03

The conceptual design of databases is discussed. An investigation into the possibilities of exploiting already specified parts of a database to deduce specifications of the parts is presented. The objective is to obtain a design process that is both efficient and integrated. Three sublanguages which can be used in the design processs are defined. The basic semantic data model is introduced as a sublanguage with which data structure can be specified. The possibilities of using already obtained partial specifications is studied. It turns out that the use of partial specifications from the first design step is mainly of a direct verifying nature, or a type checking nature. Repair actions themselves are taken, as the sources for update propagation. The conclusion is that an integrated approach of conceptual database design is feasible. ESA

The Data Management Plan (DMP) describes the data management objectives, system components, data base structure and contents, system maintenance, data processing, and user interface for the prototype phase of the Oak Ridge Environmental Information System (OREIS). The major goals of OREIS data management are to compile data of known quality, to maintain the integrity of the data base, and to provide data to users. The DMP defines the requirements, describes the responsibilities, and references the procedures for meeting the data management objectives. Emphasis is on management of measurement data and the associated metadata used to support its proper interpretation and legal defensibility. The DMP covers transmittal, processing, storage, and data access activities associated with OREIS. The OREIS data dictionary is provided as an appendix. DOE

**IMPROVING THE QUALITY OF MACHINE TRANSLATIONS BY PROVIDING STYLISTIC GUIDELINES TO AUTHORS AND EDITORS M.S. Thesis**
Edward J. Walsh Dec. 1992 154 p
(AD-A258786; AFIT/GIR/DEM/92D-9) Avail: CASI HC A08/MF A02

This research sought to identify stylistic guidelines which could be used by the authors and editors of English language texts in order to improve the quality of subsequent machine translations to other languages. A literature review was conducted to provide background information and to determine what guidelines would be appropriate. Nine guidelines were developed on the basis of the review. The guidelines were then tested. They were applied to five paragraphs from a Royal Australian Air Force technical publication by the researcher and an independent volunteer. Both the resulting texts and the original paragraphs were translated into French using the Globalink Translation System and the quality of the translations obtained was evaluated by four human translators. While the translations of the paragraphs which had been edited by the volunteer were significantly better than the translations of the original texts, the translations of the paragraphs edited by the researcher were not. Use of the guidelines by authors and editors cannot be recommended on the basis of this result. However, analysis of the conduct and results of the research suggested potentially fruitful alternative approaches to the development and testing of guidelines. These approaches are presented as specific recommendations for further research. GRA

**CORPORATE INFORMATION MANAGEMENT AND BUSINESS PROCESS IMPROVEMENT UNDER THE UNIT COST PROGRAM: AN ANALYSIS OF A SYSTEM FOR THE AIR FORCE INSTITUTE OF TECHNOLOGY M.S. Thesis**
Kevin D. Kettell and Fredrick T. Ziegler, II Dec. 1992 374 p
(AD-A258984; AFIT/GIR/LSP/92D-7) Avail: CASI HC A16/MF A03

DOD has been undergoing changes toward a competitive business-type environment as a result of the Packard Commission and the

Goldwater-Nichols Act. As a result of the Goldwater-Nichols Act, two programs directly affect the Air Force Institute of Technology (AFIT): Defense Management Report Decision 971, better known as the Defense Business Operations Fund (DBOF); and, the Corporate Information Management (CIM) initiative. DBOF requires that organizations provide unit cost per output figures as the basis for organizational funding. Unit cost resourcing changes the way federal managers manage and allocate resources, and promotes quality management and continuous improvement principles. Defense Information Management recognizes information as a resource to be managed. CIM initiatives use information as the basis to improve the way organizations operate. This research effort purports to identify strategic level requirements that will allow the establishment of an integrated information system which will provide AFIT insight into the cost and value of their products and services. **PROCEEDINGS OF THE ML-92 WORKSHOP ON MACHINE DISCOVERY (MD-92)**
Jan M. Zytkow, ed. Jul. 1992 179 p Workshop held in Aberdeen, Scotland, 4 Jul. 1992
(NIAR-92-12) Copyright Avail: Issuing Activity

Machine Discovery (MD) originated arguably in the late 1970s, and grew steadily throughout the 1980s. In recent years, MD has seen significant expansions, which may be contributed to the belief that machine discovery systems can offer practical solutions in large scale data exploration, satisfying a definite and critical need for automation. Traditionally, the main focus in MD has been on scientific discovery. In the last four years, however, a new area of knowledge discovery in databases has been established, focusing on practical problems of search for knowledge in databases and fueled by enormous sizes of existing and expected databases. Papers on the following topics from the workshop are presented: knowledge discovery in databases; scientific discovery; concept discovery; automated data analysis; exploration environment; discovery of mathematics; and evaluation of machine discovery systems. For individual titles, see N93-19712 through N93-19736.

We describe a typology of some patterns which are useful for knowledge discovery in databases (KDD). At first, the requirements of KDD are treated, referring to the main terms of a KDD definition which are nontrivial extraction, high-level presentation, and interesting information. Then we collect some distinguishing features of patterns as a base to develop a typology of patterns. The main dimensions of a typology for dependency patterns are the number of subpopulations compared in a pattern, type of variables, deterministic or probabilistic verification methods, the number of dependent variables integrated within a pattern, and the kind of language used to form subgroups, target groups, and subpopulations. According to this typology, patterns are described in more detail. This paper concludes with a general discussion of search strategies that work on spaces of hypotheses to discover instances of patterns. Author

Knowing inter-field dependencies is important for understanding the data and has many applications in analyzing databases. I analyze several measures of dependencies between nominal field values and give examples of how dependency graphs can be useful for interpreting changes in data. I show how to determine the significance of dependency using the randomization approach and present an experimentally supported simple formula for determining the expected value of a dependency measure. I also outline a way to extend dependency analysis to relationships among individual field values. Author

Large databases, common in typical business, educational, health-related, scientific, or engineering enterprises, can be a source of useful knowledge. Yet this knowledge is only implicit in the data. It must be mined and expressed in a concise, useful form of statistical patterns, equations, rules, conceptual hierarchies, and the like. Automation of knowledge mining is important because databases are very large, numerous, and rapidly growing. We present Forty-Niner (49er), a general-purpose database mining system, which conducts a large-scale search for useful knowledge. We define a regularity, which is the basic form of knowledge discovered by 49er. The 49er searches for regularities in the form of statistical patterns and equations, conducting a more costly search for equations only when data indicate a functional relationship between variables. The 49er combines several searches, each contributing to different aspect of regularity. Correspondence between the search components and the components of knowledge makes the system easy to understand, use, and expand. Regularities can be further refined by 49er, typically yielding much stronger regularities and useful concepts. Finally, we discuss 49er's performance in four categories of tests. First, we applied 49er to large databases. Search in a megabyte-size database typically yields many regularities, but it would take human experts weeks to verify the optimality of 49er's results. The second type of testing aims at reproduction of human findings. Databases which have been extensively studied are rare, however. To evaluate 49er on large scale against known results, we use hide-and-seek testing on artificially created data. In the fourth approach, we analyze discovery of regularities in randomly generated databases.

The necessity of verification of expert knowledge, especially that

contained in knowledge bases, against real life data is widely recognized, however, in case of uncertainty modeling via MYCIN-like Certainty Factors such a procedure is hard to operationalize due to missing probabilistic interpretation. Only approximate solutions are possible in general. The paper describes and justifies our approach to this task based on the defendable assumption, that all the strong independence assumptions implied by the CF-model will hold true if rule probabilities are high. The paper points at a close relationship between several probabilistic CF interpretations with Pearson's r correlation coefficient being the starting point of our statistical knowledge acquisition strategy. **SELF-QUESTIONING AND EXPERIMENTATION IN AN EXPLORATORY DISCOVERY SYSTEM**

Ruediger Oehlmann, Derek Sleeman, and Peter Edwards *In* Wichita State Univ., Proceedings of the ML-92 Workshop on Machine Discovery (MD-92) Jul. 1992 p 41-50 (For primary document see N93-19711 06-82)

Copyright Avail: Issuing Activity

In contrast to experimental scientists, current discovery systems very rarely make use of previous experience. Furthermore, these systems do not employ strategies which support the controlled exploration of different options for experimentation. In our implementation, IULIAN, we overcome these limitations by an integration of self-questioning, experimentation, and self-answering, all implemented as case-based planners. We refer to this integrated approach as exploratory discovery, because it enables the system to investigate optional experiments as well as optional methods of reasoning. In particular, it is the interaction between Self-Questioning and Experimentation that accounts for additional plan modifications. In order to explain the overall architecture representing an integration of aspects of machine discovery and case-based reasoning, we use an example addressing the revision of a casual model in the domain of electrical circuits. After describing the generation of questions, answers, and experiments as case-based planning tasks, we argue for a tight interaction between self-questioning and experimentation to facilitate additional modifications of question and experimentation plans. These modifications enable the system to learn how to improve its methods for revising its underlying casual model rather than merely learning a revised model. Author

Raul E. Valdes-Perez, Herbert A. Simon, and Robert F. Murphy *In* Wichita State Univ., Proceedings of the ML-92 Workshop on Machine Discovery (MD-92) Jul. 1992 p 51-57 (For primary document see N93-19711 06-82)

(Grant NSF DIR-89-20118)

Copyright Avail: Issuing Activity

Pathway discovery is a generic task in science. Analogous instances of it can be drawn from the domains of chemistry, cognitive psychology, cellular biology, and genealogy, despite the apparent dissimilarity of these domains. Except for genealogy, computer systems have been built to automate partially each of these pathway-discovery tasks. The MECHEM system dealing with chemical reaction pathways is a current instance. We are working on a general account of pathway discovery in science that provides a conceptual base for systematic analyses of suitable search algorithms. This paper identifies the pathway-discovery task, contributes a definition of pathway and a hierarchical analysis of pathway processes, shows how search proceeds across hierarchical levels in different domains, and examines how domain knowledge constrains plausibility. The four domains above are discussed in some detail. Author

**MACHINE DISCOVERY APPROACH TO DYNAMIC SYSTEMS IN THE REAL LABORATORY**

Marek W. Bielecki *In* Wichita State Univ., Proceedings of the ML-92 Workshop on Machine Discovery (MD-92) Jul. 1992 p 58-62 (For primary document see N93-19711 06-82)

Copyright Avail: Issuing Activity

This paper argues that the application of machine discovery (MD) methods can help in modeling complex dynamic systems, the systems that have recently become an object of intensive scientific study in terms of chaos theory. MD research itself can also benefit from shifting its focus from artificial models to actual scientific systems. The paper outlines the architecture for an MD system designed to serve as an 'intelligent scientist's assistant' (ISA) in the domain of dynamic systems. It involves three major modules: the Data Analyzer, the Model Generator, and the Model Evaluator. Their interactions are intended to simulate a recursive process of data analyzing and model building that is characteristic of the actual scientific activity. The Data Analyzer discovers regularities in empirical data. The Model Generator postulates differential equations that describe the system's dynamics. The Model Evaluator compares the experimentally obtained data with the numeric data generated from the equations, requests new data, and postulates changes to the parameters and initial conditions of the dynamic system. The discovery system halts when a desired level of compatibility between the numeric and experimental data is achieved. All modules may combine geometric and symbolic reasoning processes and utilize both domain-specific and domain-independent knowledge. The paper points out similarities and differences between the systems such as KAM and FAHRENHEIT and the corresponding modules of ISA. Author

We describe a program, CER, which models the research tasks carried out in the process of the discovery of high-temperature superconductors in 1986 and 1987. The program simulates some of these research tasks through the activities of its autonomous operators. Each of these operators carries out a research task, applying several different learning methods at three different levels. In its knowledge organization and control of research tasks, CER constitutes a step towards developing a more comprehensive model of scientific research. The paper describes the system in terms of its knowledge representation and learning and discovery methods; examines its merits and shortcomings; and provides ideas for its improvement. Author

Machine discovery has often been idealized as the discovery of new phenomena in the absence of any prior knowledge. Knowledge-free discovery is not the norm in science, however. A central challenge for machine discovery is to develop techniques that combine prior knowledge with data to discover knowledge that is beyond the reach of traditional methods that rely only on data and weak prior biases. A critical task is to develop representations that capture prior knowledge while also supporting efficient discovery algorithms. In this paper, we present such a representation and propose a discovery algorithm that operates on this representation. The representation is intended to capture and refine simple models of plant physiology and apply these models to predict the consequences of global warming on the geographical distribution of plant ecosystems. One method for making analogies is to access and instantiate abstract domain principles, and one for acquiring knowledge of abstract principles is to discover them from experience. We view the task of hypothesis formation, a subtask of discovery, as generalization over experiences in the absence of any prior knowledge of the target principle. In this paper, we focus on discovery of physical principles by generalization over design experiences in the domain of physical devices. Some important issues in generalization from experiences are what to generalize from an experience, how far to generalize, and what methods to use. We represent a reasoner's comprehension of specific designs in the form of structure-behavior-function (SBF) models. An SBF model provides a functional and casual explanation of the working of a device. We represent domain principles as device-independent behavior-function (BF) models. We show that the function of a device determines what to generalize from its SBF model. The SBF model suggests how far to generalize, and the typology of functions indicates what method to use. The modeling of complex systems and their emergent behaviors requires successive refinement of a model. The task for the discovery system is to, with the aid of the scientist, refine and experiment with that model. By coupling a scientific discovery system to a dynamical systems simulation engine, in this case, a cellular automata (CA) machine, it is possible to successively refine models of a dynamical system. This paper focuses on the coupling of a scientific discovery system, called The Scholar's Companion, with a cellular automata engine, serving as a discreet dynamical model of the human immune system. This CA 'laboratory', when fully connected to the Scholar's Companion, should be an interesting arena for experimentation with cellular automata models. Author

Analogical reasoning is a crucial inference mechanism in science. We claim that abstract models of scientific situations play a central role in the discovery process and in the search for analogy. We propose a novel mechanism for analogy access and mapping, model driven analogy (MDA), based on the use of abstract models synthesized from a given target situation. We also propose the development of a discovery system, ASIS (Analogical Scientific Investigation System), that uses MDA to find solutions to knowledge problems and that uses experimentation and empirical law discovery to validate the hypotheses formulated by the analogy mechanism. Doing either pure data-driven or pure theory-driven discovery is problematic. Integrating the two techniques can alleviate to some extent the problems arising from the use of each in isolation. It is suggested in this paper that informal qualitative model's (IQM's) offer a framework within which to undertake an integrated discovery strategy. Early stages in the implementation of IQM's in the discovery system HUME are described. Author

Discovering structure has been a universal research task in physics, chemistry, biology, philosophy, and other disciplines. Discovering hidden structure is especially challenging. Not only must all the elements of hidden structure be postulated by the discoverer, but they can only be verified by indirect evidence, available at the level of observable objects. We describe a framework for hidden structure discovery, illustrated with a large scale incremental search for quark models. We present a constructive definition of structure and the operators that can build models of hidden structure step by step, postulating hidden objects, their combinations and attributes, a mapping between the hidden and the observed structure, and reactions described in terms of hidden objects. We demonstrate how domain knowledge on the visible level is useful in operator instantiation and in the global control of search. Because hidden structure cannot be verified by direct observations, a successful model must pass two stages of evaluation. First, its observational consequences must be confirmed, and second, the model must be unique in its simplicity class. We demonstrate the role of additivity and conservation principles at the first stage, and we discuss the uniqueness requirement applied to incremental discovery. Author

This paper describes the application of a machine discovery technique to the domain of molecular classification. We present an incremental concept formation system which manipulates relational, spatial descriptions in the form of images, and learns a subsumption hierarchy of image concepts. As an illustration, the system was tested on 249 hexopyranose sugars extracted from the Cambridge Structural Database. The system was able to discover all 14 configurational classes of the hexopyranose sugars present in the database. Author

We describe the application of machine classification techniques to the development of an automated tool for the reduction of a large scientific data set. The 2nd Palomer Observatory Sky Survey is nearly completed. This survey provides comprehensive coverage of the northern celestial hemisphere in the form of photographic plates. The plates are being transformed into digitized images whose quality will probably not be surpassed in the next ten to twenty years. The images are expected to contain on the order of 10(exp 7) galaxies and 10(exp 8) stars. Astronomers wish to determine which of these sky objects belong to various classes of galaxies and stars. The size of this data set precludes manual analysis. Our approach is to develop a software system which integrates the functions of independently developed techniques for image processing and data classification. Digitized sky images are passed through image processing

routines to identify sky objects and to extract a set of features for each object. These routines are used to help select a useful set of attributes for classifying sky objects. Then GID3* and O-BTree, two inductive learning techniques, learn classification decision trees from examples. These classifiers will be used to process the rest of the data. This paper gives an overview of the machine learning techniques used, describes the details of our specific application, and reports the initial encouraging results. The results indicate that our approach is well-suited to the problem. The primary benefits of the approach are increased data reduction throughput and consistency of classification. The classification rules which are the product of the inductive learning techniques will form an object, examinable basis for classifying sky objects. A final, not to be underestimated benefit is that astronomers will be freed from the tedium of an intensely visual task to pursue more challenging analysis and interpretation problems based on automatically cataloged data. Raw data derived from experiments or numerical simulations in a certain domain is at an abstraction level far too low to be used for the interpretation by a computer. In order to detect similarities, relations or dependencies within different data sets, it is often advisable to construct a qualitative description using various transformational steps. Ideally, this process should lead to the same high-level symbolic form that human researchers are used to dealing with themselves. Enabling a system to perform this transformation and to make inferences based on the symbolic description represents a first step towards automatic discovery. In this paper, we report on the above-mentioned aspects of the MOBIS (Modeling of Biological Systems) project, a case-based, interactive simulation environment which is designed to assist neurophysiologists to step through the experiment life-cycle of design, simulation, and analysis of neurophysiological simulation experiments. We are going to present one component of the intelligent assistant whose purpose is to automatically simplify, analyze, and interpret complex numerical neurophysiological data derived from real experiments or - as in our case - from the results of computerized simulation. When scientific discovery deals with the problem of discovery of numeric laws, it does similar work as some statistical techniques like regression. It seems natural then to make them collaborate, but some divergences of method make their integration difficult. Mainly, regression needs a specific model of the law that the user usually provides, and that the discovery system should be able to automatically compute. In this paper, we analyze these difficulties and we propose new methods to solve them. We propose to integrate regression as a new operator in our scientific discovery system ARC.2, an improvement of ABACUS (Falkenhainer & Michalski 1986). Some other discovery systems already used the regression, but rather in a theory-driven approach when we integrate it in a wholly data-driven approach. Author

This paper describes a theory called Goal-Directed Learning (GDL) that uses the principle of decision theory to choose learning tasks. The expected utility of being able to predict various features of the environment is computed and those with highest expected utility can be used as learning goals, which an agent's inductive mechanism should form theories to predict. We present a general decision-theoretic formula for the utility of learning goals, formalizing the concept that the best learning goals are those which, if learned, would maximize the agent's expected utility. The performance element of PAGODA (Probabilistic Autonomous GOal-Directed Agent), an autonomous agent design presented in (desJardins, 1992), is described, and a formula is given for the utility of learning goals in PAGODA. This article describes CYRANO-3, an autonomous discovery system in the domain of mathematical invention. CYRANO-3 uses a typed functional combinator language as its base representation and a control structure based on a variation of Solomonoff's 'algorithmic probability'. Constructed definitions are assessed by identifying those 'polygenic behaviors' which can be computed in many different ways. The results of this assessment are used to bias future generation towards those operations and fragments which produced the convergent behaviors. In addition, procedural reification transforms domain operations at one level into domain objects at another level; the operations at this higher level are the higher order operations which were successful at the lower level. CYRANO-3 surpasses AM in certain regards but had its own failures; our analysis of these failures points to a framework for understanding representational invention which focuses on the distinction between the representational design constraints 'obvious things should be interesting' and 'interesting things should be obvious'; the first of these is important to an effective discovery system which produces significant results with limited resources; the second is vital to an adaptable whose descriptive scope must embrace the range of possibly interesting constructions. For several decades there has been considerable interest within artificial intelligence (AI) and cognitive science in building computer simulations of the processes of scientific discovery, in the spirit of constructing expert systems (automated discovery), or directed toward understanding how human scientists make discoveries. Here, we will consider both lines of inquiry, but with emphasis on the AI aspects. Our central concern will be with specificity and generality. How do we compare the merits of discovery programs that are efficacious in one domain with those that have generality over several or many? How can we develop a common language to describe systems for different domains, thereby carrying the experience gained in systems into explorations of others? Most of what we have to say is not peculiar to discovery systems, but applies to all kinds of expert systems. Hence, we will not entirely limit our discussion to discovery tasks.

We will focus on computer programs as research vehicles, without implying that all worthwhile research on the subject should result in a computer program. Author

Computational modeling of scientific discovery is emerging as one of the most interesting and active research fields in artificial intelligence (AI). The number of systems designed for modeling discovery in various fields of science has been steadily increasing. Involvement in this field is not confined to several small research groups in AI any more. Philosophers and historians of science, as well as cognitive psychologists, are also becoming increasingly interested in research in this field. In current systems, different methods of representation, learning, and discovery are implemented. Also, the degree of reliance on background knowledge varies from one system to another. Moreover, each system focuses on a certain type of scientific discovery. Therefore, a sound methodology for evaluating these computational models seems to be necessary. Author

**EVALUATION OF THE GEOMETRIC QUALITY OF CARTOGRAPHIC DOCUMENTS THROUGH THE USE OF SCANNING IMAGERY DEVICES [AVALIACAO DA QUALIDADE GEOMETRICA DE DOCUMENTOS CARTOGRAFICOS OBTIDOS ATRAVES DE DISPOSITIVOS IMAGEADORES POR VARREDURA]**
Julio Cesar Lima DAlge and Guaraci Jose Erthal Oct. 1991 7 p In PORTUGESE
(INPE-5298-PRE/1703) Avail: CASI HC A02/MF A01

Manual digitizing of cartographic documents is a difficult task, which yields questionable results in terms of precision. An alternative is quick acquisition by means of a scanning device. The processing cost is then transferred to the next steps: radiometric correction, segmentation, data reduction, image navigation, vectorizing, symbol and character recognition, edition, and generation of topological structure. Image navigation is a very important step in this procedure. It associates image coordinates to their original projection coordinates. This work presents a geometric quality evaluation of maps obtained through a scanner, with the purpose of verifying its performance. The evaluation results can also determine which mathematical model shall be used in the image navigation step. Author

This paper provides a general overview of information access. The issues identified and discussed ultimately have implications for both developed and developing countries. It is important that developing countries recognize and address these issues in national plans and in practice, for the issues relate to information resources management and use, and to scientific, economic, technological, and societal advancement. The proposed research agenda represents an initial effort to offer direction in an information and electronic age. The agenda provides nations, international bodies, agencies, and organizations with a flexible framework for producing change and for linking that change to decision making and policy review, formulation, and implementation. **THE ORGANIZATION AND TRANSFER OF INFORMATION**
Bill Tuck *In* AGARD, A Research Agenda for Scientific and Technical Information Nov. 1992 11 p (For primary document see N93-19796 06-82)
Avail: CASI HC A03/MF A01

The objective of this workshop is to develop a research agenda for management and policy issues relating to scientific and technical information. The intention is not only to inform but also to elicit recommendations for further research and study. In particular, it will be important to determine just what it is we do not fully understand, and also to assess the effectiveness of our programs. These two concepts - 'understanding' and 'effectiveness' - form the underlying themes of the following paper. They are not unrelated: it is clearly a possibility that our programs may be ineffective because we do not fully understand the issues on which they are dependent. Conversely, improving their effectiveness will almost certainly require more detailed knowledge of the underlying dynamics. The class of problems toward which this paper is addressed is concerned with the organization and transfer of information. What barriers exist to the effective retrieval and transfer of scientific and technical information? And how does one ensure the quality and integrity of that information? These are complex issues only partly addressed in the present paper, which is intended to provoke discussion rather than provide detailed solutions. Author

The NASA system of automatically converting sets of terms assigned by Department of Defense indexers to sets of NASA's authorized terms is described. This little-touted system, which has been operating successfully since 1983, matches concepts, rather than words. Subject Switching uses a translation table, known as the Lexical Dictionary, accessed by a program that determines which rules to follow in making the transition from DTIC's to NASA's authorized terms. The authors describe the four phases of development of Subject Switching, changes that have been made, evaluating the system, and benefits. Benefits to NASA include saving indexers' time, the addition of access points for documents indexed, the utilization of other government indexing, and a contribution towards the now-operational NASA, online, interactive, machine aided indexing. (NASA-TM-108984; NAS 1.15:108984) Avail: CASI HC A02/MF A01

The NASA Scientific and Technical Information Program utilizes a technology infrastructure assembled in the mid 1960s to late 1970s to process and disseminate its information products. When this infrastructure was developed it placed NASA as a leader in processing STI. The retrieval engine for the STI database was the first of its kind and was used as the basis for developing commercial, other U.S., and foreign government agency retrieval systems. Due to the combination of changes in user requirements and the tremendous increase in technological capabilities readily available in the marketplace, this infrastructure is no longer the most cost-effective or efficient methodology available. Consequently, the NASA STI Program is pursuing a modernization effort that applies new technology to current processes to provide near-term benefits to the user. In conjunction with this activity, we are developing a long-term modernization strategy designed to transition the Program to a multimedia, global 'library without walls.' Critical pieces of the long-term strategy include streamlining access to sources of STI by using advances in computer networking and graphical user interfaces; creating and disseminating technical information in various electronic media including optical disks, video, and full text; and establishing a Technology Focus Group to maintain a current awareness of emerging technology and to plan for the future. Access to online information sources of aerospace, scientific, and engineering data, a mission focus for NASA's Scientific and Technical Information Program, has always been limited to factors such as telecommunications, query language syntax, lack of standardization in the information, and the lack of adequate tools to assist in searching. Today, the NASA STI Program's NASA Access Mechanism (NAM) prototype offers a solution to these problems by providing the user with a set of tools that provide a graphical interface to remote, heterogeneous, and distributed information in a manner adaptable to both casual and expert users. Additionally, the NAM provides access to many Internet-based services such as Electronic Mail, the Wide Area Information Servers system, Peer Locating tools, and electronic bulletin boards. Author

**STRATEGIC FACTORS IN THE DEVELOPMENT OF THE NATIONAL TECHNOLOGY TRANSFER NETWORK**
Jonathan F. Root and Barbara A. Stone 1993 9 p Proposed for presentation at the Thirtieth Space Congress, Cocoa Beach, FL, 27-30 Apr. 1993
(NASA-TM-108594; NAS 1.15:108594) Avail: CASI HC A02/MF A01

Broad consensus among industry and government leaders has developed over the last decade on the importance of applying the U.S. leadership in research and development (R&D) to strengthen competitiveness in the global marketplace, and thus enhance national prosperity. This consensus has emerged against the backdrop of increasing economic competition, and the dramatic reduction of military threats to national security with the end of the Cold War. This paper reviews the key factors and considerations that shaped - and continue to influence - the development of the Regional Technoloty Transfer Centers (RTTC) and the National Technology Transfer Center (NTTC). Also, the future role of the national network in support of emerging technology policy initiatives will be explored. I.I.C.

**HIGHLIGHTS OF ENGINEERING RESEARCH CENTERS TECHNOLOGY TRANSFER**
1992 52 p
(NSF-92-6) Avail: CASI HC A04/MF A01

The Engineering Research Centers (ERC) Program of the National Science Foundation (NSF) is one of the NSF's most ambitious undertakings in recent years; it represents the largest single initiative in engineering that NSF has ever embarked upon. Established by the NSF Directorate for Engineering in 1985, the ERC Program was charged with a vital mission: strengthening competitiveness by bringing new approaches and goals to academic engineering research and education, and by forging vital new links between universities and industry. The three main elements of this mission are cross-disciplinary research, education, and industrial collaboration and technology transfer. A description of each center is provided in terms of industry technology transfer. Author

**TECH TRANSFER OUTREACH**
S. Liebetrau, ed. 1992 45 p Presented at the First Technology/Communications Conference: Tech Transfer Outreach, Richland, WA, 19-21 May 1992
(Contract DE-AC06-76RL-01830)
(DE93-001553; PNL-SA-21348; CONF-9205241) Avail: CASI HC A03/MF A01

This document provides an informal summary of the conference workshop sessions. 'Tech Transfer Outreach' was originally designed as an opportunity for national laboratory communications and technology transfer staff to become better acquainted and to discuss matters of mutual interest. When DOE field office personnel asked if they could attend, and then when one of our keynote speakers became a participant in the discussions, the actual event grew in importance. The conference participants--the laboratories and DOE representatives from across the nation--worked to brainstorm ideas. Their objective: identify ways to cooperate for effective (and cost-effective) technology transfer outreach. Thus, this proceedings is truly a product of ten national laboratories and DOE, working together. It candidly presents the discussion of issues and the ideas generated by each working group. The issues and recommendations are a consensus of their views. DOE

**ADVANCED TURBINE TECHNOLOGY APPLICATIONS PROJECT (ATTAP) Annual Report, 1991**
Jun. 1992 149 p Sponsored by DOE, Washington, DC
(Contract DEN3-335)
(NASA-CR-189228; NAS 1.26:189228; Rept-31-8071(04); DOE/NASA/0335-4) Avail: CASI HC A07/MF A02

This report is the fourth in a series of Annual Technical Summary Reports for the Advanced Turbine Technology Applications Project (ATTAP). This report covers plans and progress on ceramics development for commercial automotive applications over the period 1 Jan. - 31 Dec. 1991. Project effort conducted under this contract is part of the DOE Gas Turbine Highway Vehicle System program. This program is directed to provide the U.S. automotive industry the high-risk, long-range technology necessary to produce gas turbine engines for automobiles with reduced fuel consumption, reduced environmental impact, and a decreased reliance on scarce materials and resources. The program is oriented toward developing the high-risk technology of ceramic structural component design and fabrication, such that industry can carry this technology forward to production in the 1990s. The ATTAP test bed engine, carried over from the previous AGT101 project, is being used for verification testing of the durability of next-generation ceramic components, and their suitability for service at Reference Powertrain Design conditions. This document reports the technical effort conducted by GAPD and the ATTAP subcontractors during the fourth year of the project. Topics covered include ceramic processing definition and refinement, design improvements to the ATTAP test bed engine and test rigs and the methodology development of ceramic impact and fracture mechanisms. Appendices include reports by ATTAP subcontractors in the development of silicon nitride and silicon carbide families of materials and processes. Author

(NASA-CR-192331; NAS 1.26:192331; LC-93-83194) Copyright Avail: CASI HC A06/MF A02; the Aeronautics and Space Engineering Board and the Space Studies Board, 2101 Constitution Avenue, NW, Washington, DC 20418

The continued advance of the nation's space program is directly dependent upon the development and use of new technology. Technology is the foundation for every aspect of space missions and ground operations. The improvements in technology that will enable future advances are not only in device and system performance, but also in permitting missions to be carried out more rapidly and at lower cost. Although more can be done with current technology, NASA's recent call for new and innovative approaches should not be answered by employing only today's technologies; new technologies with revolutionary potential should be sought. The study reported here was performed to identify means to enhance the development of technologies for the space sciences and applications. Author

**TECHNOLOGY ABSORPTION AND TECHNOLOGICAL LEARNING: A STUDY OF THE DYNAMICS OF THE PROCESS AND INTERVENING FACTORS [A ABSORCAO DE TECNOLOGIA E O APRENDIZADO TECNOLOGICO: UM ESTUDO DA DINAMICA DO PROCESSO E DE FATORES INTERVENIENTES]**
Antonio Marcio Piccina Apr. 1992 199 p In PORTUGESE
(INPE-5392-TAE/013) Avail: CASI HC A09/MF A03

This work intends to identify and analyze some of the factors that influence the process of technological absorption and learning, focusing on Brazilian organizations both in the productive and in the R&D sectors. It is composed of three major parts. The first one searches for factors that have been identified and analyzed in the literature on models of the technological innovation process, on technology transfer, and on technological learning. The second part proposes a conceptual model for the subject and describes the methodology chosen for the analytical treatment of the problem. The last part presents the results obtained from a survey involving 32 organizations (29 firms and 3 R&D institutes), based on interviews guided by a questionnaire. It also offers conclusions and recommendations which are drawn upon the results of the study and take into account the present economic situation of the country.

**DESIGN OF A MICROPROCESSOR-BASED CONTROL SYSTEM CONTROL SYSTEM FOR THE MONTEREY INSTITUTE FOR RESEARCH IN ASTRONOMY 36 IN. TELESCOPE M.S. Thesis**
David P. Wood Jun. 1992 171 p
(AD-A257554) Avail: CASI HC A08/MF A02

The use of computer technology to control large pointing systems can significantly improve performance and reduce human work load. The goal of this thesis was to design software for an inexpensive, yet accurate and efficient control system for the 36-inch reflecting telescope owned and operated by the Monterey Institute for Research in Astronomy. Within this thesis, a computer program is developed to automatically move the telescope to a set of celestial coordinates and track with an accuracy of one-tenth of an arc second for five minutes within 75 deg of the zenith. Set times are anticipated to be between four and thirty seconds. Corrections are made to celestial coordinates to account for precession, nutation, aberration, and atmospheric refraction effects. The user is provided an interface to the computer-based system that allows storage and editing of 100 star positions, editing of the system parameters, and display of the telescope's status. Manual control of the telescope is also permitted at any time. Safety of the telescope structure is the primary concern of system software. GRA

**PARAS PROGRAM: PHASED ARRAY RADIO ASTRONOMY FROM SPACE**
Antoni K. Jakubowski, David A. Haynes (National Aeronautics and Space Administration. Langley Research Center, Hampton, VA.), Ken Nuss, Chris Hoffmann, Michael Madden, and Michael Dungan 1992 211 p
(Contract NASw-4435)
(NASA-CR-192025; NAS 1.26:192025) Avail: CASI HC A10/MF A03

An orbiting radio telescope is proposed which, when operated in a Very Long Baseline Interferometry (VLBI) scheme, would allow higher (than currently available) angular resolution and dynamic range in the maps, and the ability of observing rapidly changing astronomical sources. Using a passive phases array technology, the proposed design consists of 656 hexagonal modules forming a 150 meter diameter dish. Each observatory module is largely autonomous, having its own photovoltaic power supply and low-noise receiver and processor for phase shifting. The signals received by the modules are channeled via fiber optics to the central control computer in the central bus module. After processing and multiplexing, the data is transmitted to telemetry stations on the ground. The truss frame supporting each observatory pane is a hybrid structure consisting of a bottom graphite/epoxy tubular triangle and rigidized inflatable Kevlar tubes connecting the top observatory panel and bottom triangle. Attitude control and stationkeeping functions are performed by a system of momentum wheels in the bus and four propulsion modules located at the compass points on the periphery of the observatory dish. Each propulsion module has four monopropellant thrusters and six hydrazine arcjets, the latter supported by a nuclear reactor. The total mass of the spacecraft is 22,060 kg. Author

(Contract NASw-4435)
(NASA-CR-192029; NAS 1.26:192029) Avail: CASI HC A08/MF A02

This document outlines the design completed by members of Lone Star Aerospace, Inc. (L.S.A.) of a lunar observatory on the far side of the Moon. Such a base would not only establish a long term human presence on the Moon, but would also allow more accurate astronomical data to be obtained. A lunar observatory is more desirable than an Earth based observatory for the following reasons: instrument weight is reduced due to the Moon's weaker gravity; near vacuum conditions exist on the Moon; the Moon has slow rotation to reveal the entire sky; and the lunar surface is stable for long baseline instruments. All the conditions listed above are favorable for astronomical data recording. The technical aspects investigated in the completion of this project included site selection, mission scenario, scientific instruments, communication and power systems, habitation and transportation, cargo spacecraft design, thermal systems, robotic systems, and trajectory analysis. The site selection group focused its efforts on finding a suitable location for the observatory. Hertzsprung, a large equatorial crater on the eastern limb, was chosen as the base site. Author

**PRE-PHASE A: DEVELOPMENT OF A FAR-ULTRAVIOLET PHOTOMETRIC- AND SPECTROSCOPIC-SURVEY SMALL-EXPLORER EXPERIMENT Final Technical Report, 1 Nov. 1991 - 31 Oct. 1992**

Christopher Martin Feb. 1993 149 p

(Grant NAGw-1887)

(NASA-CR-192092; NAS 1.26:192092; CAL-2064) Avail: CASI HC A07/MF A02

We propose to perform a far ultraviolet photometric and spectroscopic survey covering the lambda lambda 1300-2000 band with a sensitivity comparable to that of the Palomar Sky Survey. This survey will proceed in three phases: an all-sky survey in three bands to 18-19.5(sup m), deep surveys of selected targets of interest in the same bands to 21-22(sup m), and a spectroscopic survey of 2 percent of the sky to 18(sup m) with a resolution of 3-20A. This mission, the Joint Ultraviolet Nightsky Observer (JUNO), can be performed by a Small-Explorer-class satellite. Author

**EXITE/IPC OBSERVATIONS OF SN1987A AND SOUTHERN TARGETS Final Report**

Jonathan E. Grindlay 17 Sep. 1991 8 p

(Grant NAGw-1721)

(NASA-CR-192133; NAS 1.26:192133) Avail: CASI HC A02/MF A01

The Energetic X-ray Imaging Telescope Experiment (EXITE) was developed to a flight-ready status and conducted two flights (May 18, 1988, and May 8-10, 1989) from Alice Springs, Australia, as part of the campaigns to observe the supernova SN1987A. The basic operation of the detector and gondola systems in the laboratory was tested on the first flight and found to meet expected performance values. A bizarre 'balloon tape' insulation problem, however, prevented normal telescope pointing on the first flight so no data on SN1987A or other targets were obtained. Following a successful second EXITE flight from Ft. Sumner, NM, in October 1988, the experiment was flown again on a successful 30 hour flight as part of the final 1989 supernova campaign. A second x-ray imaging experiment from MSFC was also flown (piggy-back) for this third flight. Good data were obtained on the supernova and a variety of high priority galactic targets, and final analysis is still in progress. Preliminary results from this flight are presented. Author

**FLUCTUATIONS AT THE BLUE EDGE OF SATURATED WIND LINES IN IUE SPECTRA OF O-TYPE STARS Semiannual Report, 1 Jul. - 31 Dec. 1992**

Stanley P. Owocki and Alex Fullerton 8 Jan. 1993 8 p

(Grant NAG5-1657)

(NASA-CR-191887; NAS 1.26:191887) Avail: CASI HC A02/MF A01

We examine basic issues involved in synthesizing resonance-line profiles from 1-D, dynamical models of highly structured hot-star winds. Although these models exhibit extensive variations in density as well as velocity, the density scale length is still typically much greater than the Sobolev length. The line transfer is thus treated using a Sobolev approach, as generalized by Rybicki & Hummer (1978) to take proper account of the multiple Sobolev resonances arising from the nonmonotonic velocity field. The resulting reduced-Lambda-matrix equation describing nonlocal coupling of the source function is solved by iteration, and line profiles and then derived from formal solution integration using this source function. The more appropriate methods that instead use either a stationary or a structured, local source function yield qualitatively similar line-profiles, but are found to violate photon conservation by 10 percent or more. The full results suggest that such models may indeed be able to reproduce naturally some of the qualitative properties long noted in observed UV line profiles, such as discrete absorption components in unsaturated lines, or the blue-edge variability in saturated lines. However, these particular models do not yet produce the black absorption troughs commonly observed in saturated lines, and it seems that this and other important discrepancies (e.g., in acceleration time scale of absorption components) may require development of more complete models that include rotation and other 2-D and/or 3-D effects. **TWO HIGH-SENSITIVITY PULSAR SEARCHES Ph.D. Thesis**

David John Nice 1992 125 p

Avail: Univ. Microfilms Order No. DA9235267

We have undertaken a program of two searches at radio wavelengths for pulsars using the Arecibo Observatory. One search covered 70 square degrees of sky along the Galactic plane with sensitivity to pulsars with periods as short as 1 ms. The second search covered 170 square degrees between galactic latitudes -50 degrees and -30 degrees with sensitivity to pulsars with periods of 0.5 ms or more. The sensitivity to long-period pulsars in both surveys was of order 1 mJy, with reduced sensitivity at the shortest periods. Twenty-five pulsars were detected between the two surveys. Ten of these had previously been discovered. Of the remaining fifteen new pulsars, thirteen are relatively young, slow pulsars, with periods between 0.212 s and 5.094 s. The latter period is the longest of any known radio pulsar; this pulsar also has an extraordinarily short duty cycle of 0.4 percent. Two millisecond pulsars were found. PSR J2019+2425 has a period of 3.934 ms and is at a distance of approx. 1 kpc. It is in a 76.5-day binary orbit with an approx. 0.3 solar mass companion. Its orbital eccentricity is 1.1 x 10(exp -4). The spin-down rate of this pulsar is extremely small, and its evolutionary timescales of 9 x 10(exp 9) yr is the longest of any known pulsar. Both the low eccentricity and the long evolutionary timescale put limits on violations of the strong equivalence principle which are competitive with the best previous limits. The second newly found millisecond pulsar, PSR J2322+2057, has a period of 4.808 ms and a distance of approx. 0.8 kpc. It is the second isolated millisecond pulsar found outside a globular cluster. Its distance of nearly approx. 0.5 kpc from the galactic plane suggests that millisecond pulsars have a large scale height.

The Earth is nearing depletion of its natural resources at a time when human beings are rapidly expanding the frontiers of space. The resources which may exist on asteroids could have enormous potential for aiding and enhancing human space exploration as well as life on Earth. With the possibly limitless opportunities that exist, it is clear that asteroids are the next step for human existence in space. This report comprises the efforts of NEW WORLDS, Inc. to develop a comprehensive design for an asteroid exploration/sample return mission. This mission is a precursor to proof-of-concept missions that will investigate the validity of mining and materials processing on an asteroid. Project STONER (Systematic Transfer of Near Earth Resources) is based on two utilization scenarios: (1) moving an asteroid to an advantageous location for use by Earth; and (2) mining an asteroids and transporting raw materials back to Earth. The asteroid explorer/sample return mission is designed in the context of both scenarios and is the first phase of a long range plane for humans to utilize asteroid resources. The report concentrates specifically on the selection of the most promising asteroids for exploration and the development of an exploration scenario. Future utilization as well as subsystem requirements of an asteroid sample return probe are also addressed. Author

Three Advanced Design Projects have been completed this academic year at Penn State. At the beginning of the fall semester the students were organized into eight groups and given their choice of either a comet nucleus or an asteroid sample return mission. Once a mission had been chosen, the students developed conceptual designs. These were evaluated at the end of the fall semester and combined into three separate mission plans, including a comet nucleus same return (CNSR), a single asteroid sample return (SASR), and a multiple asteroid sample return (MASR). To facilitate the work required for each mission, the class was reorganized in the spring semester by combining groups to form three mission teams. An integration team consisting of two members from each group was formed for each mission so that communication and information exchange would be easier among the groups. The types of projects designed by the students evolved from numerous discussions with Penn State faculty and mission planners at the Johnson Space Center Human/Robotic Spacecraft Office. Robotic sample return missions are widely considered valuable precursors to manned missions in that they can provide details about a site's environment and scientific value. For example, a sample return from an asteroid might reveal valuable resources that, once mined, could be utilized for propulsion. These missions are also more adaptable when considering the risk to humans visiting unknown and potentially dangerous locations, such as a comet nucleus. Author

The role of Polycyclic Aromatic Hydrocarbons (PAH) in short wavelength extinction and in the infrared emission of the interstellar medium is examined. A dust model which considers big grains of silicate and glassy carbon, small graphite particles and PAH, is presented. An efficient numerical method was achieved to solve the equation of radiative transfer in dense spherical dusty objects with particular consideration of PAH: the emission from centrally heated opaque clouds was calculated and the results were compared with

former models. To access the validity of the dust model, it was applied to the infrared emission from various astrophysical objects, such as reflection nebulae, planetary nebulae, active galactic nuclei, H II regions and the diffuse interstellar medium in the solar neighborhood. The influence of the model parameters, such as the atom number in PAH molecules and clusters and the variation of star temperature, is discussed. It is shown that in areas of harsh ultraviolet fields, the small particles reduce the temperature of the big grains by more than 15 percent compared to the calculations of former models. ESA

The Extreme Ultraviolet Explorer (EUVE) will map the entire sky to determine the existence, direction, brightness, and temperature of thousands of objects that are sources of so-called extreme ultraviolet (EUV) radiation. The EUV spectral region is located between the x-ray and ultraviolet regions of the electromagnetic spectrum. From the sky survey by EUVE, astronomers will determine the nature of sources of EUV light in our galaxy, and infer the distribution of interstellar gas for hundreds of light years around the solar system. It is from this gas and the accompanying dust in space that new stars and solar systems are born and to which evolving and dying stars return much of their material in an endless cosmic cycle of birth, death, and rebirth. Besides surveying the sky, astronomers will make detailed studies of selected objects with EUVE to determine their physical properties and chemical compositions. Also, they will learn about the conditions that prevail and the processes at work in stars, planets, and other sources of EUV radiation, maybe even quasars. The EUVE mission and instruments are described. The objects that EUVE will likely find are described. Author

**LIGHT CURVE AND FAN-SHAPED COMA OF COMET P/TEMPEL 2 IN 1988-1989**
Hiroki Akisawa, Mitsunori Tsumura (Wakayama City Children's Science Center, Japan ), Akimasa Nakamura, and Jun-Ichi Watanabe (Tokyo Astronomical Observatory, Mitaka, Japan ) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 1-4 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Visual and Photographic Monitoring observations of comet P/Tempel 2 were carried out by a Japanese amateur group 'Hoshi-no-Hiroba' in 1988-1989. We analyzed the light curve and the time variation of the fan-shaped coma. The light curve was asymmetric to the perihelion passage. The fan angle in September-October was wider than that in December. The direction of the fan generally coincided with Sekanina's prediction (1988). Author

A particular group of sporadic meteors are picked out from analysis of meteor catalogs derived from results of radar observations in Mogadisho and Kharkov. The semi-major axes are equal or more than 1.73 AU and inclinations of orbits are equal or more than 90 degrees for these meteors. The distributions of radiants, velocities, and elements of orbits were derived. The probable source of meteor bodies of this peculiar group is the long-period comets, in particular, the comets of the Kreutz's group. Author

V. V. Andreev and Oleg I. Belkovich *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 9-15 (For primary document see N93-19113 06-90)
Avail: CASI HC A02/MF A04

Data of Pioneer 10 meteoroid penetration detectors were revised taking into account the orientation of detectors and the spacecraft velocity relative to the sporadic meteor flux. The meteor flux density increases as an exponent to the orbit of Mars for two times for the particles with masses greater than 10(exp -6) g and six times for the particles with masses greater than 10(exp -12) - 10(exp -9) g then decreases after the orbit. Ejections of secondary meteoroid particles from surfaces of Phobos and Deimos are a possible explanation for the increase in meteoroid flux. Author

Avail: CASI HC A02/MF A04

A new method of determination of meteor flux density distribution over the celestial sphere is discussed. The flux density was derived from observations by radar together with measurements of angles of arrival of radio waves reflected from meteor trails. The role of small meteor showers over the sporadic background is shown. Author

Pulat B. Babadzhanov *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 23-26 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Photographic observations of meteors carried out in Dushanbe by the method of instantaneous exposure have shown clearly that meteoroids entering the Earth's atmosphere are subjected to different types of fragmentation. The quasi-continuous fragmentation of meteoroids is mostly widespread. Using the physical theory of meteors which takes into account the quasi-continuous fragmentation of meteoroids and on the basis of light curves of meteors the densities of meteoroids of different streams have been determined. The results enable us to conclude that the densities of meteoroids are over an order of magnitude higher than they have been assumed before. Moreover they are close to the densities of carbonaceous and ordinary chondrites. Author

**P/MACHHOLZ 1986 8 AND QUADRANTID METEOROID STREAM. ORBITAL EVOLUTION AND RELATIONSHIP**
Pulat B. Babadzhanov and Y. V. Obrubov *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 27-32 (For primary document see N93-19113 06-90)
Avail: CASI HC A02/MF A04

The evolution of the P/Machholz's meteoroid stream was simulated. It shows that this stream may produce eight meteor showers. There are the known observed meteor showers such as the Quadrantids, Ursids, Northern and Southern delta-Aquarids, Daytime Arietids, and alpha-Cetids. A

satisfactory agreement of the theoretical and observed geocentric radiants and orbits allows one to conclude that the above showers could have been resulted from the decay of the P/Machholz nucleus. The age of the stream is estimated to be 7.5 millennia. Author

Avail: CASI HC A01/MF A04

A meteor radar system has been operated on a routine basis near Christchurch, New Zealand, to determine the orbits of Earth-impacting interplanetary dust and meteoroids. The system sensitivity is +13 visual magnitude, corresponding to approximately 100 micron sized meteoroids. With an orbital precision of 2 degrees in angular elements and 10 percent in orbital energy (1/a), the operation yields an average of 1500 orbits daily with a total to date in excess of 10(exp 5). The use of pc's and automated data reduction permit the large orbital data sets we collect to be routinely reduced. Some illustrative examples are presented of the signal formats/processing and the results of data reduction, giving the individual orbital elements and hence the overall distributions. Current studies include the distribution of dust in the inner solar system; the influx of meteoroids associated with near-Earth asteroids; and the orbital structure existing in comet-produced streams. For several years many experimental results have been obtained on the chemical and physical changes induced by ion and electron irradiation of materials with a view to their Astrophysical relevance. Among the studied effects, one of particular interest is the formation of an organic refractory residue left over after ion irradiation and warming-up at room temperature. We call this residue IPHAC (ion produced hydrogenated amorphous carbon). Although 'in situ' infrared spectroscopy points out the formation of new molecular species during bombardment at low temperature, it is not clear if IPHAC is already formed or if its formation is triggered by temperature increase during warming-up of the irradiated target. Since Raman Spectroscopy is a technique particularly suitable for the analysis of carbonaceous materials, we have thought and build-up an experimental apparatus to obtain Raman Spectra of frozen hydrocarbons during ion irradiation. The present experimental results point out clearly to the formation of IPHAC already at low T and low energy deposition (approximately equal to a few eV/C-atom). Author

Some asteroids with peculiar light curves were chosen for more detail investigation. We present the first results of that study. Observations were obtained in 1989 and 1990 using the 70-cm telescope of Kharkov Observatory; the 40-cm telescope of Abastumani Observatory (Georgia), and the 60-cm telescope of the Main Astronomical Observatory of Ukrainian Academy of Sciences (Mt. Majdanak, Middle Asia). Observations and their reduction were carried out in a standard way. The aspect data, absolute magnitude of primary maximum, and lightcurve amplitude are given. Author

We propose a series of low-cost flyby missions to perform a reconnaissance of near-Earth cometary nuclei and asteroids. The primary scientific goal is to study the physical and chemical diversity in these objects. The mission concept is based on the Pegasus launch vehicle. Mission costs, inclusive of launch, development, mission operations, and analysis are expected to be near $50 M per mission. Launch opportunities occur in all years. The benefits of this reconnaissance to society are stressed. Author

The asteroid family determination has been analysis method dependent for a longtime. A new cluster analysis based on the wavelet transform has allowed an automatic definition of families with a degree of significance versus randomness. Actually this method is rather general and can be applied to any kind of structural analysis. We will rather concentrate on the main features of the method. The analysis has been performed on the set of 4100 asteroid proper elements computed by Milani and Knezevic (see Milani and Knezevic 1990). Twenty one families have been found and influence of the chosen metric has been tested. The results have beem compared to Zappala et al.'s ones (see Zappala et al 1990) obtained by the use of a completely different method applied to the same set of data. For the first time, a good overlapping has been found between both method results, not only for the big well known families but also for the smallest ones. Author

Knowledge of the population size and physical characteristics (albedo, size, and rotation rate) of near-Earth asteroids (NEA's) is biased by observational selection effects which are functions of the population's intrinsic properties and the size of the telescope, detector sensitivity, and search strategy used. The NEA population is modeled in terms of orbital and physical elements: a, e, i, omega, Omega, M, albedo, and diameter, and an asteroid search program is simulated using actual telescope pointings of right ascension, declination, date, and time. The position of each object in the model population is calculated at the date and time of each telescope pointing. The program tests to see if that object is within the field of view (FOV = 8.75 degrees) of the telescope and above the limiting magnitude (V = +1.65) of the film. The effect of the starting population on the outcome of the simulation's discoveries is compared to the actual discoveries in order to define a most probable starting population. Author

**STOCHASTICITY OF COMET P/SLAUGHTER-BURNHAM**
Daniel Benest and R. Gonczi *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 69-72 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Three comets are now known to be at or near the 1/1 resonance with Jupiter: P/Slaughter-Burnham, P/Boethin and the newly discovered P/Ge-Wang. Although details of the individual orbits differ, the three comets have very similar dynamical behavior: their orbits show many transitions between the different types of resonant motion (satellite libration, anti-satellite libration, and circulating motion). The stochastic character of such cometary orbits, mainly due to encounters with Jupiter is investigated using Lyapunov Characteristic Indicators. For each comet of the group, we study the influences on the stochasticity of initial eccentricity, inclination, longitude of node, and l-l(sub J) (mean longitude of comet minus mean longitude of Jupiter). We present here our first results for P/Slaughter-Burnham.

From the brightness development and a sequence of imaging observations of the coma activity onset of comet P/Tempel 2 in 1988, it is concluded that there might have happened eruptive events of strong dust and gas outbursts during May and June 1988. A comparison of dust coma modeling calculations with CCD observations of the coma widely confirms Sekanina's nucleus model for the comet. Author

Avail: CASI HC A01/MF A04

Comet P/Brorsen-Metcalf was observed on 1989/07/28+30 and on 1989/08/04+12(+14) with the 3.5 m telescope and the 0.8 m Schmidt camera at Calar Alto/Spain. The images exhibit a narrow plasma tail pointing into anti-solar direction. On 1989/07/30 a triple tail was found which can be interpreted as tail ray event. The coma isophotes show prominent asymmetries with the nucleus located on the tailward side of the isophote foci and with a slightly higher brightness in the Northern Hemisphere of the coma. A strong curved jet feature was detected in the coma on 1989/07/30. The jet extended at least 30,000 km into the sunward coma hemisphere. The rotation period of about 1.3 days, estimated from the curvature of the coma jet, needs verification by other observations.

**CCD IMAGING OF THE INNER COMA JETS OF COMET P/HALLEY**
James Boswell and David W. Hughes *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 89-92 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

We analyze the inner coma section of a CCD image of comet P/Halley taken at 1807 UT on 13 March 1986 using a C2 filter (wavelength 5000 to 5200A, half maximum) with the 3.8 m Anglo Australian Telescope at Siding Springs, Australia. Atmospheric turbulence leads to a spreading of the image detail and this produces a blander image of the inner coma region with a slower radial decrease of brightness in comparison to the unaffected image. We remove this smearing by utilizing the point spread function of a star on the same CCD image. Jets were then revealed by removing the average background. Analysis of the jet structure enabled us to estimate the lower limit of the parent molecule velocity. This is found to be 0.3 km s(exp -1). Author

**INITIAL OVERVIEW OF DISCONNECTION EVENTS IN HALLEY'S COMET 1986**
John C. Brandt, Cora E. Randall, M. Snow, and Y. Yi *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 93-96 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

We present an initial overview of the disconnection events (DE's) in Comet Halley in 1986. Although disconnection events are arguably the most spectacular of all dynamic comet phenomena, the mechanisms by which they occur are not fully understood. It is generally believed that the solar wind plays a major role in determining when disconnection events occur, but the details of the solar wind/cometary interactions responsible for initiating the tail disconnection are still under debate. The three most widely accepted models are: (1) high speed streams in the solar wind cause the tail to disconnect due to pressure effects; (2) decreased production

of cometary ions in a high speed stream allows magnetic field to slip away from the comet; and (3) the tail disconnects after frontside reconnection of the interplanetary magnetic field (IMF) as the comet crosses a magnetic field sector boundary. We find that the front-side magnetic reconnection model is the best explanation for the DE's we have considered. Author

We have obtained high velocity and spatial resolution long-slit H alpha spectra of comets Austin (1989c1) and Levy (1990c). Spectra of both comets clearly show the existence of a low velocity thermalized component of hydrogen gas. The amount of slow hydrogen is estimated for comet Austin. The Levy spectrum shows an unusual high-velocity spatially-confined blob of hydrogen emission of unknown origin. Author

We summarize several recent findings on the size and shape of the region within which material can stably orbit an asteroid. If the asteroid (with assumed density 2.38 g/cu cm) circles the Sun at 2.55 AU, co-planar prograde material will remain trapped whenever started on unperturbed circular orbits at less than about 220 R(sub A) (asteroid radii); co-planar retrograde particles are stable out twice as far. Our 3-D stability surface, which encloses several hundred numerically calculated orbits that start with various inclinations, is shaped like a sphere with its top and bottom sliced off; its dimensions scale like the Hill radius =(mu/3)(exp 1/3)R, where mu is the asteroid-to-solar mass ratio and R is the asteroid's orbital radius. If the asteroid moves along an elliptical orbit, a fairly reliable indicator of the dimensions of the hazard zone is the size of its Hill sphere at the orbit's pericenter. Grains with radii less than a few mm will be lost through the action of radiation forces which can induce escape or cause collisions with the asteroid on times scales of a few years; interplanetary micrometeoroids produce collisional break-up of these particles in approximately 10(exp 4) yrs. The effects of Jupiter and of asteroids that pass close to the target asteroid allow particles to diffuse from the system, again shrinking the hazard zone. None of the considered sources-primordial formation, debris spalled off the asteroid during micrometeoroid impact, captured interplanetary particles, feeder satellites, etc., seem capable of densely populating distant orbits from the asteroid. No certain detections of debris clouds or of binary asteroids have been made. Thus, it seems highly unlikely that a spacecraft fly-by targeted at 100 R(sub A) from the asteroid over its orbital pole would encounter any material. Author

The explicit solution of the drag and ablation equations of a single nonfragmenting meteoroid moving in any actual atmosphere was published several years ago. The solution yields the theoretical relation of I, the distance flown by the meteoroid in its trajectory, as a function of time, t, assuming that the height, h, is a known function of I. The photographic records of meteors and fireballs are coded by time marks, using a rotating shutter or a similar device to break the moving image. Time is, thus, the independent variable and for each time mark on a meteoroid trajector, the observed distance along the trajectory, I sub obs, as well as the double- or multiple- station photographs of the same meteoroid. Applying this solution to all available Prairie Network (PN) fireball-records, we recognized that the majority of them gave good solutions with standard deviations somewhat bigger than the intrinsic geometrical precision of the data. We also noticed that, on an average, previous methods of evaluation of the meteoroid velocities (interpolation polynomials, numerical differenciation of the observed I sub obs) used up to only several tens of percent of the intrinsic precision of the PN observational data. When residuals of these solutions, i.e. I sub obs - I sub com, were represented as a function of time for about 75 percent of solutions. The remaining 25 percent of residuals showed systematic changes with time exceeding one standard deviation. We tried to explain these systematic time course of residuals by using different meteoroids first computed theoretically and then analyzed by the same model as the natural PN fireballs were. The conclusion of these model computations is that systematic time changes of residuals in the nonfragmenting model exceeding one standard of deviation are caused by sudden gross fragmentation at one or more trajectory points. Thus, we generalized the explicit solution of the drag and ablation equations of a single nonfragmenting meteoroid by allowing for one or more points, where sudden gross fragmentation can occur. Using this generalized solution, the distances along the meteoroid trajectory can be computed for any choice of input parameters and compared with the observed distances flown by the meteoroid. For the most precise and long fireball trajectories, the least-squares solution can, thus, yield the initial velocities, the ablation coefficients, the dynamical masses, the positions of gross-fragmentation points, and the terminal mass. At a gross-fragmentation point, the ratio of the main mass to all the remaining fragments can be compared with the dynamic mass determined from our gross-fragmentation model and, thus, the meteoroid bulk density can be evaluated. We applied the gross-fragmentation model to sever PN fireballs showing time changes of residuals, and we recognized that, in all these cases, the new computed bulk densities of meteoroids resulted higher in comparison with the meteoroid densities determined with the non-gross-fragmentation model. Other aspects of the study are discussed. Author

We investigate the effect on the dynamics of a binary asteroid in the case of a near encounter with a third body. The dynamics of the binary is modeled as a two-body problem perturbed by an approaching body in the following ways: near encounters and collisions with a component of the system. In each case, the typical value of the two-body energy variation is estimated, and a random walk for the cumulative effect is assumed. Results are applied to some binary asteroid candidates. The main conclusion is that the collisional disruption is the dominant effect, giving lifetimes comparable to or larger than the age of the solar system. Author

The distribution of dust-scattered intensity in Halley's inner coma is measured with the Vega three-channel spectrometer at three selected wavelengths: 377, 482, and 607 nm. The variation along a cometo-centric radius may be described by a p(sup -s) law where p is the distance between nucleus and optical axis and s is an exponent which is equal to 1 except in an intermediate 3000 less than p less than 7000 km region where s = 1.5. The shape of the radial distribution may be explained with a model including solar radiation pressure effect and quantum scattering efficiencies calculated from Mie theory. Monochromatic images inside an angular sector having its apex at the nucleus show evidence of two dust jets which extend to 40,000 Km. The pixel-to-pixel ratio of two images of dust intensity at 377 and 482 nm shows that the scattered intensity presents an excess of blue coloration in a zone located around the jets between 10,000 and 25,000 km. This coloration is interpreted as being due to a population of sub-micronic grains which result of the fragmentation of dust particles transported in the jets. It is suggested that the diffuse source where an additional quantity of CO was detected might be connected with the presence of a dust jet. In the present scheme, grain particles with a size of several micron or 10 micron would be transported inside a dust jet to distances of several 10,000 km where they would suffer fragmentation and produce sub-micronic particles and a release of gas which would be at the origin of the diffuse source. Avail: CASI HC A01/MF A04

Numerical integrations of the orbits of ten asteroids with osculating elements near the 4:1 mean-motion resonance with Jupiter have been performed over 200,000 years into the future. A variety of orbital evolutions was found, depending on the start values of the semi-major axis. The orbit of asteroid 1983 RJ4, which lies almost exactly at the resonance center, experiences large variations in eccentricity, evolving into an Earth-crosser on a time-scale of a few 10(exp 4) years. This makes this region a potential source for Apollo objects and meteoritic material, although the width of the resonance region in semi-major axis seems to be very narrow. Author

In a time-dependent three dimensional MHD simulation for cometary plasmas, Schmidt-Voigt (1989) could observe the formation of condensations in the plasma tail after a 90 degree change in the interplanetary magnetic field (IMF) sweeping over the comet. We investigated the IMF measurements of the Vega SC in the vicinity of the comet Halley for 90 degree changes in the clock angle and studied the relation between them and optical observations of condensations in the plasma tail. For the time interval 24 Feb. 86 to 14 Mar. 86, we could not find a correlation between such changes and the release of condensations from the cometary head. Author

We have now analyzed a substantial fraction of the IRAS observations of the zodiacal cloud, particularly in the 25 micron waveband. We have developed a gravitational perturbation theory that incorporates the effects of Poynting-Robertson light drag (Gomes and Dermott, 1992). We have also developed a numerical model, the SIMUL mode, that reproduces the

exact viewing geometry of the IRAS telescope and calculates the distribution of thermal flux produced by any particular distribution of dust particle orbits (Dermott and Nicholson, 1989). With these tools, and using a distribution of orbits based on those of asteroidal particles with 3.4 micron radii whose orbits decay due to Poynting-Robertson light drag and are perturbed by the planets, we have been able to: (1) account for the inclination and node of the background zodiacal cloud observed by IRAS in the 25 micron waveband; (2) relate the distribution of orbits in the Hirayama asteroid families to the observed shapes of the IRAS solar system dustbands; and (3) show that there is observational evidence in the IRAS data for the transport of asteroidal particles from the main belt to the Earth by Poynting-Robertson light drag. Since 1989, we have been conducting a research program devoted to the study of the Trojans and outer belt asteroids (Hilda and Cybele groups), in order to characterize their rotational properties and shapes. As an outcome of several observational campaigns, we determined rotational periods and lightcurve amplitudes for 23 distant asteroids, using both CCD and photoelectric photometry. In this paper, we compare the rotational properties of main belt asteroids and Trojans, based on the preliminary results of this survey. Author

The production rate of dust associated with the prominent Hirayama asteroid families and the background asteroidal population are modeled with the intent of using the families as a calibrator of mainbelt dust production. However, the dust production rates of asteroid families may be highly stochastic; there is probably more than an order of magnitude variation in the total area of dust associated with a family. Over 4.5 x 10(exp 9) years of collisional evolution, the volume (mass) of a family is ground down by an order of magnitude, suggesting a similar loss from the entire mainbelt population. Our collisional models show that the number of meteoroids deliverable to Earth also varies stochastically, but only by a factor of 2 to 3. Author

We have quantitatively modeled the chance insertion of asteroid collisional fragments into the 3:1 and g = g(sub 6) resonances, through which they can achieve Earth-approaching orbits. Although the results depend on some poorly known parameters, they indicate that most meteorites and near-earth asteroids probably come from a small and non-representative sample of asteroids, located in the neighborhood of the two resonances. Comet P/d'Arrest is a potential target for a rendezvous mission to a short period comet. Its light curve is rather peculiar, the comet being active only after perihelion passage. One apparition out of two is easy to observe from the ground. The 1995 apparition of the comet will offer a unique opportunity to characterize the outgassing properties of its nucleus. Author

Since comet P/Temple-2 is one of the potential targets for the CRAF (Comet Rendezvous Asteroid Flyby) mission, we obtained long slit spectroscopic data with our CCD spectrograph during its 1988 apparition. As the same spectrograph was extensively used for observations of P/Halley, this allowed a direct spectroscopic comparison between the two objects. Furthermore we could choose a P/Halley spectrum which was taken at a heliocentric distance very close to that of P/Temple-2. Finally, we could adjust the integration windows along the slit to compensate for the different

geocentric distances, so that roughly the same projected distance of the comets' comae was observed. The parameters for our observations are given. Author

**P/HALLEY: SPATIAL DISTRIBUTION AND SCALE LENGTHS FOR C2, CN, NH2, AND H2O**
Uwe Fink, Michael Combi (Michigan Univ., Ann Arbor.), and Michael A. DiSanti *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 187-189 Prepared in cooperation with Arizona Univ., Tucson (For primary document see N93-19113 06-90)
(Grants NAGw-1549; NAGw-1907)
Avail: CASI HC A01/MF A04

From P/Halley, long slit spectroscopic exposures on 12 dates, extending from Oct. 1985 to May 1986, spatial profiles were obtained for emissions by C2, CN, NH2, and OI ((sup 1)D). Examples of our derived spatial profiles are given. The qualitative trend of the scale lengths for the different species is nicely exemplified in this example. C2 has the longest parent scale length followed by CN and NH2. OI which tracks the parent H2O distribution is quite narrow but slightly wider than the continuum profile which has a center essentially indistinguishable from the stellar seeing disk. Comparison of C2 and CN also shows that C2 is falling off faster in the wings so that the daughter scale length of CN must be larger than that of C2. Author

**ATMOSPHERIC ENTRY SURVIVAL OF LARGE MICROMETEORITES: IMPLICATIONS FOR THEIR SOURCES AND FOR THE COMETARY CONTRIBUTION TO THE ZODIACAL CLOUD**
George J. Flynn *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 195-199 (For primary document see N93-19113 06-90)
(Grant NAG9-469)
Avail: CASI HC A01/MF A04

Atmospheric entry heating simulations indicate that a large fraction of the micrometeorites larger than 100 microns in diameter which survive atmospheric entry must have entered the Earth's atmosphere with velocities very near the Earth's escape velocity. Thus, these particles must have been captured by Earth from heliocentric orbits with small eccentricities and low inclinations, indicating a main-belt asteroidal source. Space exposure ages measured on these large micrometeorites are also consistent with a main-belt asteroidal source. However, dynamical calculations have previously indicated that particles larger than 100 microns in diameter were likely to be destroyed by catastrophic collisions in the time required for orbital evolution from the main-belt to Earth capture by Poynting-Robertson drag. The absence of a large amount of collisional debris in the less than 50 microns size range indicates these large micrometeorites are not the few, rare survivors of a mostly collisionally disrupted population. The measured space exposure ages, which are about an order of magnitude larger than their calculated catastrophic collision lifetimes, confirm the survival of these large micrometeorites for times much longer than the calculated catastrophic collision lifetimes. Since collisions with cometary dust less than 20 microns in size were expected to be the major contributor to the collisional destruction of these larger particles, the contribution of cometary material to the zodiacal cloud is likely to be much smaller than previously believed. **POLYNOMIAL APPROXIMATION OF POINCARE MAPS FOR HAMILTONIAN SYSTEM** **c67**
Claude Froeschle and Jean-Marc Petit *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 201-204 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Different methods are proposed and tested for transforming a non-linear differential system, and more particularly a Hamiltonian one, into a map without integrating the whole orbit as in the well-known Poincare return map technique. We construct piecewise polynomial maps by coarse-graining the phase-space surface of section into parallelograms and using either only values of the Poincare maps at the vertices or also the gradient information at the nearest neighbors to define a polynomial approximation within each cell. The numerical experiments are in good agreement with both the real symplectic and Poincare maps. Author

**THE EFFECT OF SECULAR RESONANCES IN THE ASTEROID REGION BETWEEN 2.1 AND 2.4 AU**
Christiane Froeschle and Hans Scholl *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 205-209 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The asteroid region between 2.1 and 2.4 AU appears to be depopulated at inclinations i greater than 12 deg. This region is surrounded by the three main secular resonances nu(sub 5), nu(sub 6), and nu(sub 16) and is crossed by higher order secular resonances. Secular resonances appear to overlap in this region. Numerical integrations of the orbits of seventeen fictituous asteroids with initial inclinations 12 deg less than or equal to i less than or equal to 20 deg show the following: (1) this particular asteroid region is not depopulated in our computer experiment on timescales of 2.7 Myrs; (2) inclinations are pumped up by successive crossings through higher order secular resonances while eccentricities are not increased sufficiently to produce planet-crossers; (3) bodies located in the bordering nu(sub 6) resonance with semi-major axes a less than or equal to 2.4 AU become Earth-crossers on a time scale of 1 Myr; and (4) we confirm the result that modes due to higher order secular resonances must be eliminated when proper elements are computed. Tokunaga (Hawaii Univ., Honolulu.) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 211-214 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

High resolution 2.8-4.0 micron spectra of the 'new' comet Austin 1989c1, taken on 15-16 May 1990 confirm the presence of the broad emission features around 3.4 and 3.52 micron seen in a number of bright comets and ascribed to organic material. Both the 3.4 micron band strength and the 3.52/3.36 micron flux ratios are among the largest so far observed. The data are consistent with the relationship between band strength and water production rate that was recently derived. Excess emission at 3.28 and 3.6 micron cannot be unambiguously identified as features due to the poor signal-to-noise ratio. Author

**DEIMOS: A REDDISH, D-TYPE ASTEROID SPECTRUM**
William M. Grundy and Uwe Fink *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 215-218 (For primary document see N93-19113 06-90)
(Grants NAGw-1549; NGT-50661)
Avail: CASI HC A01/MF A04

We have obtained high quality CCD spectra of Deimos from 0.5 to 1.0 microns at a spectral resolution of 15 A. The spectra are remarkably red,

similar to the spectra of D type asteroids rather than those of carbonaceous chondrites or C type asteroids. During the 1988 opposition of Mars, we obtained new CCD spectra of its outer satellite, Deimos. The data were obtained over a 2 1/2 hour period on the night of 9 Oct., using the 1.54 meter Catalina telescope and the LPL long-slit CCD spectrometer. From 0.5 to 1.1 microns, the spectrum is dispersed across an 800 x 800 Texas Instruments CCD chip at a scale of 7.21 A per pixel for an effective lambda/delta(lambda) approximately equals 500. The primary observational difficulty in ground based spectroscopy of Deimos was its proximity to Mars. To minimize scattered light from Mars, Deimos was observed near greatest elongation. The spectrograph slit was narrowed to 2.5 arcseconds, slightly larger than the seeing disk. An apodizing mask at the re-imaged telescope primary, to remove the diffraction cross of Mars light caused by the telescope's secondary mirror mount. Residual scattered light was modeled and removed in data reduction. Solar analog stars BS560, BS2007, and BS8931 were observed to allow removal of telluric absorptions. The resulting spectrum is plotted with other data. Author

**LONG-TERM EVOLUTION OF 1991 DA: A DYNAMICALLY EVOLVED EXTINCT HALLEY-TYPE COMET**
Gerhard Hahn and M. E. Bailey *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 227-230 Sponsored in part by Science Research Council (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The long-term dynamical evolution of 21 variational orbits for the intermediate-period asteroid 1991 DA was followed for up to +/-10(exp 5) years from the present. 1991 DA is close to the 2:7 resonance with Jupiter; it has avoided close encounters, within 1 AU, with this planet for at least the past 30,000 years, even at the node crossing. The future evolution typically shows no close encounters with Jupiter within at least 50,000 years. This corresponds to the mean time between node crossings with either Jupiter or Saturn. Close encounters with Saturn and Jupiter lead to a chaotic evolution for the whole ensemble, while secular perturbations cause large-amplitude swings in eccentricity and inclination (the latter covering the range 15 deg approximately less than i approximately less than 85 deg) which correlate with deep excursions of the perihelion distance to values much less than 1 AU. These variations are similar to those found in P/Machholz and a variety of other high-inclination orbits, e.g., P/Hartley-IRAS. We emphasize the connection between the orbital evolution of 1991 DA and that of Halley-type comets. If 1991 DA was once a comet, it is not surprising that it is now extinct. Author

Avail: CASI HC A01/MF A04

Brightness variations of comet Austin(1989c1) were investigated in terms of the variations of water production rate. We translated the visual brightness data into water production rates using Newburn's semi-empirical law. The curve of the water production rates as a function of heliocentric distance was compared with the model calculations that assumed energy balance between the solar incident and vaporization of water. Thermal flow in a dust mantle at a surface of the nucleus is also included in the model. The model calculations including the dust mantle are more favorable for the observed rate than non-dust mantle cases. The extinction after the perihelion passage suggests that the dust mantle developed gradually. Author

Rodney Heyd, Susan Wyckoff, Peter Wehinger, and Peter Mack (Massachusetts Inst. of Tech., South Dartmouth.) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 241-244 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Longslit CCD spectra (lambda = 5100-6400 A, delta(lambda) approximately 3 A) were obtained with the Michigan-Dartmouth-MIT 1.3 meter telescope in May 1990 (r = 0.74 AU, delta = 0.50 AU). The spectra were reduced with the Interactive data Reduction and Analysis Facility (IRAF). Spectral extractions offset sunward and tailward from the nucleus were analyzed. Species identified in the spectra include the following: C2, NH2(10-0), NH2(9-0), H2O(+), and CO(+). Spatial extractions of rotational line intensities in the NH2(10-0) band extend approximately 10(exp 4.5) km from the nucleus. A fit of the vectorial model to the NH2(10-0) spatial profile is consistent with an NH3 parent molecule. The NH2 production rate and an ammonia to water abundance ratio, NH3/H2O approximately 3 percent, were derived. The ammonia abundance obtained for comet Austin is consistent with that found for several other comets and is indicative of comet formation under very homogeneous conditions. Author

**METALLIC ATOMS AND IONS IN COMETS: COMET HALLEY 1986 3**
S. Ibadov *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 241-244 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The origin of metallic atoms and ions in the cometary comae is investigated theoretically. Two effects are revealed in the comas of bright comets: (1) the Na anomalous type effect is possible within the gas-dust jets of comet P/Halley 1986 3 due to cooling cometary dust by cryogenic gas flow from the nucleus; and (2) the production of ions of refractory elements (Fe(+), Si(+), etc.) at large heliocentric distances is possible in the comas of the Halley type dusty comets due to high-velocity impacts

between cometary and zodiacal dust particles. Spectral observations of comets with high sensitivity and spatial resolution are important for studying both comets and interplanetary dust. Author

**ASTEROID-TYPE ORBIT EVOLUTION NEAR THE 5:2 RESONANCE**

S. I. Ipatov *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 245-248 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

In this case of the 5:2 commensurability with the motion of Jupiter, an asteroid can reach the orbits of Mars, Earth, and Venus when eccentricity e is greater than 0.41, 0.65, and 0.74, respectively. For individual fictitious asteroids, Ipatov and Yoshikawa obtained a growth in e from 0.15 to 074-0.76. Rates of changes in orbital orientations are different for Mars, Earth, Venus, and the asteroid. Therefore, for corresponding values of e, the asteroid could encounter these planets and leave the gap at those encounters. In order to investigate this hypothesis of the 5:2 Kirkwood gap formation, Ipatov studied the regions of initial data for which the eccentricities of asteroids located near the 5:2 commensurability exceeded 0.41 during evolution. The orbit evolution for 500 fictitious asteroids was investigated by numerical integration of the complete (unaveraged) equations of motion for the three-body problem (Sun-Jupiter-asteroid). The equations of motion were integrated in the time intervals T is greater than or equal to 5(10)(exp 3)t(sub J) (t(sub J) is the heliocentric orbital period of Jupiter) in the planar model, T is greater than or equal to 10(exp 4)t(sub J) at initial inclination 5 deg is less than or equal to i(sub 0) is less than or equal to 20 deg and T = 10(exp 5)t(sub J) at i(sub 0) = 40 deg. The larger interval T was taken at i(sub 0) = 40 deg because in this case for the majority of runs maximum values of e and i were reached in the time delta(t) is greater than 2(10)(exp 4)t(sub J). **FORMATION OF IONS AND RADICALS FROM ICY GRAINS IN COMETS**

William M. Jackson *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 249-252 (For primary document see N93-19113 06-90)
(Grant NAGw-1144)
Avail: CASI HC A01/MF A04

Two theoretical models for the formation of radicals from ice grains are examined to determine if this can explain the jets in comets. It is shown that the production rates for these radicals by the photolysis of molecules in the icy grains are not high enough to explain the jets. A new mechanism is proposed involving the release of cations and anions in the gas phase as the icy mantle surrounding the grains is evaporated. Solar visible radiation can then form radicals by photodetachment of the electrons from these anions. The production rate of radicals formed in this manner is in accord with the production rates of the observed radicals. Author

**COMETARY IMPLICATIONS OF RECENT LABORATORY EXPERIMENTS ON THE PHOTOCHEMISTRY OF THE C2H AND C3H2 RADICALS**

William M. Jackson, Yihan Bao, Randall S. Urdahl, Xueyu Song, Jai Gosine, and Chi Lu *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 253-256 (For primary document see N93-19113 06-90)
(Grant NAGw-903)
Avail: CASI HC A01/MF A04

Recent laboratory results on the photodissociation of the C2H and C3H2 radicals are described. These studies show that the C2 and C3 radicals are produced by the 193 nm photolysis of the C2H and C3H2 radicals, respectively. The quantum state distributions that were determined for the C2 radicals put certain constraints on the initial conditions for any models of the observed C2 cometary spectra. Experimental observations of C2 formed by the 212.8 nm photolysis of C2H are used to calculate a range of photochemical lifetimes for the C2H radical. Author

**FIRST IMAGES OF A POSSIBLE CO(+)-TAIL OF COMET P/SCHWASSMANN-WACHMANN 1 OBSERVED AGAINST THE DUST COMA BACKGROUND**

Klaus Jockers, T. Bonev (Bulgarian Academy of Sciences, Sofia.), Violeta Ivanova (Bulgarian Academy of Sciences, Sofia.), and H. Rauer *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 261-264 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Comet P/Schwassmann-Wachmann 1 was observed with the 2m-Ritchey-Cretien Telescope of the Bulgarian National Observatory, Rozhen, Bulgaria, using the CCD-camera and focal reducer of the Max-Planck-Institute for Aeronomy. Images were taken in a red continuum window and in the 2-0 A(exp 2)Pi - X(exp 2)Sigma(+) band of CO(+) located in the blue part of the spectrum. The red images reveal an extended dust coma. From a comparison of the red and blue images a dust reddening of 13.2 percent per 1000 A is derived. At 642 nm the magnitude of the comet with a square diaphragm of 4.5 arcsec is 16.6. The blue images, taken in the CO(+) band, show a significantly different brightness distribution which is interpreted as presence of a CO(+) coma and tail superimposed on the continuum. A column density of several 10(exp 10) CO(+) molecules cm(exp -2) is derived. The tail thickness of 10(exp 5) km is unexpectedly small. We estimate the CO(+) production rate to about 6 x 10(exp 26) CO(+) particles s(exp -1). This value does not support the idea that the outbursts of this comet are caused by crystallization of amorphous water ice. Author

**EVOLUTION OF THE QUADRANTID METEOR STREAM**

James Jones and William Jones (Sheffield Univ., England ) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 269-272 Sponsored by Natural Sciences and Engineering Council (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

According to previous orbital calculations, the last close approach of the Quadrantid stream with Jupiter occurred 3200 years ago at which time the parent comet of the stream may have been captured into its present short-period orbit. If this is the case the stream may only be a few thousand years old. We have modeled the evolution of the stream to determine if such a short time scale is consistent with the observed features of the Quadrantid/ delta- Aquarid/Arietid/Ursid complex. A detailed modeling of a stream consisting of 500 test particles released 4000 yr ago and which included the effects of the gravitational perturbations of 6 planets as well as the likely spread in the initial orbital elements resulting from the ejection of the grains from the comet was carried out. Our calculations indicate that an intense shower should be seen a few days before the Quadrantid shower, and that, 4000 yr is too short a period for the branch corresponding to the D-Arietid branch to appear. We have considered the

quasi-constants of motion 1/a and J, the Tisserand quantity, and find that the Ursids and the D-Arietids are unlikely to be members of the complex, and that, the complex is probably be less than 4000 yr old. Author

**FORWARD-SCATTER RADIANT MAPPING** **c89**
James Jones and A. R. Webster *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 273-276 Sponsored by Supply and Services Canada (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Forward-scatter systems have been much neglected for the study of meteors and meteor streams. A great deal of this neglect stems from the complicated geometry which has made the interpretation of results difficult in the past. This no longer presents a problem because of the computer power now available. There are practical advantages in using forward-scatter in that low-power transmitters are much easier to handle than the high-power ones used in pulsed back-scatter radars. The data reduction of the CW signals is also significantly simpler. Because the forward-scatter reflection geometry increases the duration of the echoes relative to the back-scatter case, the problem of the underdense ceiling is partially alleviated. We have built a 'short hop' forward-scatter system between Ottawa and London (Ont) for which the transmitter and receiver are separated by about 500 km. With it, we are able to measure unambiguously the directions of arrival of the echoes using a 5-antenna interferometer. Morton and Jones (1982, MN, 198, 737) have shown how the echo direction distribution can be deconvolved to yield the meteor radiant distribution for back-scatter data. We have extended the technique to the forward-scatter case and present some preliminary meteor radiant distribution maps. Author

**EFFECT OF THE GEOMAGNETIC FIELD ON THE DIFFUSION OF METEOR TRAINS**
William Jones and James Jones (University of Western Ontario, London.) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 277-280 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

A solution to the problem of the diffusion of a meteor train in the geomagnetic field from an initial line density may be written in closed form in terms of effective diffusion coefficients depending on direction, enabling detailed calculations across the entire range of angle of train to field and relevant heights. While the effective diffusion coefficient in the plane of train and field then remains close to the zero field ambipolar value right up to 90 deg, the effective coefficient in the direction of the normal to plane of train and field drops steadily to its theta = 0 value at theta = 90 deg. At 95 km this corresponds to a change of almost 5 km, in 'diffusion height', that is, the height of an underdense meteor calculated on the basis of the exponential decay of its radar echo. We have estimated the consequent changes in the expected distribution of diffusion heights for various orientations of radar antenna and find the dependence on azimuth is very marked. The effect of the field is relatively minor for a south pointing beam but very strong if the beam is pointing north. Author

**OBSERVATION OF METEORS BY MST RADAR** **c89**
William Jones and S. P. Kingsley *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 281-284 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The observation of meteor trails by a vertical mesosphere - stratosphere - troposphere (MST) radar beam has the advantage of good height resolution and an approximate knowledge of the zenith angle since the trails are horizontal or near-horizontal. An extension of the ablation theory of meteors was developed for near horizontal trails which takes into account the curvature of the earth. Observations of the Geminid meteor shower by MST radar reveal the 'diffusion heights' to be in fair agreement with the true height, but with some discrepancies that can amount to 4 km. The true heights are almost entirely confined to the range 87-91 km, although the upper limit is attributed to the coherent integration time of the existing MST radar processing. Author

Frozen CH4 and CH4/Ar mixtures closed into metal cuvettes and open to the vacuum were irradiated at 15 and 77 K with 10 - 20 MeV p and He-3(2+) ions in order to simulate the effect of cosmic rays on solid organic matter in space. Ices exposed to vacuum represent surfaces of icy systems whereas closed systems stand for bulk ices. The products were analyzed by MS, SEM, RBS, ERDA, H-1-NMR, HPLC, GC-MS, NEXAFS, and FT-IR. Volatile products consisted of a mixture of low molecular species, e.g., C2H2, C2H4, C2H6, and long linear aliphatic and olefinic compounds. The formation of polycyclic aromatic hydrocarbons (PAH's) and related species in solid CH4 is due to a multi-center reaction within one collision cascade and is governed by energy density effects with critical linear energy transfer values L(sub T) between 2 and 10 keV/micron. Open ices exhibit preferential hydrogen release resulting in an increased carbonization as compared to more hydrogen rich molecules protected inside large icy bodies. Author

**METEOR FIREBALL SOUNDS IDENTIFIED**
Colin Keay *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 297-300 Sponsored in part by Science Research Council (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Sounds heard simultaneously with the flight of large meteor fireballs are electrical in origin. Confirmation that Extra/Very Low Frequency (ELF/VLF) electromagnetic radiation is produced by the fireball was obtained by Japanese researchers. Although the generation mechanism is not fully understood, studies of the Meteorite Observation and Recovery Project (MORP) and other fireball data indicate that interaction with the atmosphere is definitely responsible and the cut-off magnitude of -9 found for sustained electrophonic sounds is supported by theory. Brief bursts of ELF/VLF radiation may accompany flares or explosions of smaller fireballs, producing transient sounds near favorably placed observers. Laboratory studies show that mundane physical objects can respond to electrical excitation and produce audible sounds. Reports of electrophonic sounds should no longer be discarded. A catalog of over 300 reports relating to electrophonic phenomena associated with meteor fireballs, aurorae, and lightning was

assembled. Many other reports have been cataloged in Russian. These may assist the full solution of the similar long-standing and contentious mystery of audible auroral displays. Author

In a series of papers (e.g., Knezevic, 1991; Milani and Knezevic, 1990; 1991) we reported on the progress we were making in computing asteroid proper elements, both as regards their accuracy and long-term stability. Additionally, we reported on the efficiency and 'intelligence' of our software. At the same time, we studied the associated problems of resonance effects, and we introduced the new class of 'nonlinear' secular resonances; we determined the locations of these secular resonances in proper-element phase space and analyzed their impact on the asteroid family classification. Here we would like to summarize the current status of our work and possible further developments. Author

During KOSI (comet simulation) experiments, mineral-ice mixtures are observed in simulated space conditions. Emission of ice-/dust particles from the sample surface is observed by means of different devices. The particle trajectories are recorded with a video system. In the following analysis we extracted the parameters: particle count rate, spatial distribution of starting points on the sample surface, and elevation angle and particle velocity at distances up to 5 cm from the sample surface. Different kinds of detectors are mounted on a frame in front of the sample to register the emitted particles and to collect their dust residues. By means of these instruments the particle count rates, the particle sizes and the composition of the particles can be correlated. The results are related to the gas flux density and the temperature on the sample surface during the insolation period. The particle emission is interpreted in terms of phenomena on the sample surface, e.g., formation of a dust mantle. Author

It is likely that large parts of a cometary surface layer consist of porous ices, which are covered by a thin layer of non-volatile debris, whose structure is also fluffy and porous. In this paper the results of model calculations are presented. The calculations show the effect of ice and dust pore sizes and of the dust mantle thickness upon the thermal behavior of such a dust-ice system, when it is irradiated by the sun. In particular, it is found that the average pore size of the ice and the dust material has a large influence both on the dust surface temperature and on the temperature at the dust-ice interface. In the solar wind a comet plays the role of a windvane that moves three-dimensionally in the heliomagnetosphere. Among the solar systems bodies, only comets have a wide range of inclination angles of their orbital planes to the ecliptic plane ranging from 0 to 90 deg. Therefore, observations of cometary plasma tails are useful in probing the heliomagnetospheric conditions in the high heliolatitudinal region. A comet can be compared to a polar-orbiting probe encircling the Sun. We will introduce two rare cases in which the magnetospheres of both the comet and the Earth are disturbed by a single solar flare. Author

The plasma tail of Comet Austin (1989c1) showed remarkable disturbances because of the solar maximum periods and its orbit. Figure 1

shows photographs of Comet Austin taken in Shibata, Japan, on 29 Apr. 1990 UT, during about 20 minutes with the exposure times of 90 to 120 s. There are two main features in the disturbance; one is many bowed structures, which seem to move tailwards; and the other is a large-scale wavy structure. The bowed structures can be interpreted as arcade structures brushing the surface of both sides of the cometary plasma surrounding the nucleus. We identified thirteen structures of the arcades from each of the five photographs and calculated the relation between the distance of each structure from the cometary nucleus, chi, and the velocity, upsilon. The result is shown. This indicates that the velocity of the structures increases with distance. This is consistent with the result obtained from the observation at the Kiso Observatory. Author

Herculina has been observed during 7 oppositions: 1954 (Groeneveld and Kuiper), 1963 (Chang and Chang), 1978 (Harris and Young), 1982 (Drummond et al.; Weidenschilling et al.), 1984 (Taylor et al.), 1985 (Erikson et al.), and 1987 (Lebofsky et al.; Weidenschilling et al.). This asteroid has very unusual lightcurves. They exhibit two maxima and minima in 1978, 1984, and 1987, and only one maximum and minimum in 1954, 1963, and 1982 per rotation cycle of about 9.4 hours. The 1985 lightcurve, which is very close in aspect to those from 1963, shows two maxima and minima. The primary minimum is very similar to a single minimum in 1963, while the secondary one is only 0.06 mag deep. In 1963 no secondary minimum was visible. Author

Digital enhancement of cometary images is a necessary tool in studying cometary morphology. Many image processing algorithms, some developed specifically for comets, have been used to enhance the subtle, low contrast coma and tail features. We compare some of the most commonly used algorithms on two different images to evaluate their strong and weak points, and conclude that there currently exists no single 'ideal' algorithm, although the radial gradient spatial filter gives the best overall result. This comparison should aid users in selecting the best algorithm to enhance particular features of interest. Author

Anny-Chantal Levasseur-Regourd, J. B. Renard, and E. Hadamcik *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 349-352 Sponsored in part by Programme National de Planetologie (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

The evolution with the phase angle alpha of the polarization degree P of light scattered by comet Halley's dust is well documented. No significant discrepancy is found between Halley and Levy polarization curves near the inversion point. From all available cometary observations, we have derived polarimetric synthetic curves. Typically, a set of about 200 data points in the red wavelengths range exhibits a minimum for (alpha approximately equals 10.3 degrees, P approximately equals 1.8 percent) and an inversion point for (alpha approximately equals 22.4 degrees, P = 0 percent), with a slop of about 0.27 percent per degree. A significant spreading of some data (comets Austin 1982VI, Austin 1989c1, West 1976VI) is found at large phase angles. The analysis of our polarimetric maps of Levy reveals that the inner coma is heterogeneous. The increase of the inversion angle value with increasing distance from the photometric center is suspected to be due to the evolution with time of grains ejected from the nucleus. A fan like structure could be produced by a jet of grains freshly ejected. Author

**THE STATE OF KNOWLEDGE CONCERNING THE KUIPER BELT**

Harold F. Levison *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 353-357 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

The arguments for and against the idea that most short-period comets originate in the Kuiper belt are discussed. Observational constraints on the distribution of mass in the Kuiper belt are reviewed as well as a model of the physical conditions that now exist. Finally, predictions from this model about the detectability of the Kuiper belt are compared to optical surveys. Author

Most observations of comets are done photometrically or spectrophotometrically. The interpretation of the aperture-averaged flux is relatively simple for an isotropic, radially expanding coma of infinite extent - the canonical model. However, the interpretation of the observations is not so clear when the motion of the dust is affected by radiation pressure, or when the emission is time-varying and anisotropic. For example, in a sample of CCD images of 10 comets, Jewitt and Meech (1987, Ap.J. 317, 992) found that the photometric profiles of only three comets were consistent, within the observational errors, with the profiles predicted form the canonical model. Photometric observations with large apertures, however, seem to suggest that the canonical model may be quite adequate (c.f. Osip, Schleicher, and Millis, 1992, Icarus 98, 115). The dust itself is characterized by a size distribution, with size dependencies on the expansion velocity, the scattered and thermal radiation, the response to radiation pressure, and probably the density. How good then are the approximations normally used in determining the production rates of the dust when these effects are present? As part of a program to better understand the dynamics of cometary dust and gas, a computer program has been developed which numerically simulates the emission of both dust and gas from a tilted rotating nucleus. **ACTIVITY OF THE LYRID METEOR STREAM**
Bertil A. Lindblad and V. Porubcan (Slovak Academy of Sciences, Bratislava, Czechoslovakia ) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 367-370 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The activity of the Lyrid meteor stream is in most years fairly low with a visual rate at maximum (21-22 April) of 5-10 meteors per hour. Short bursts of very high Lyrid activity, with visual hourly rates of 100 or more, have sometimes been reported. These observations generally refer to faint visual meteors. The reported bursts of high activity have occurred in a very narrow interval of solar longitudes (deg 31.24 to 31.38 equinox 1950.0), while the recurrent or 'normal' maximum for bright meteors occurs at solar longitude deg 31.6, or slightly later. A mass separation of the meteors in the shower is thus indicated. Author

Activity in distant comets remains a mystery in the sense that we still have no complete theory to explain the various types of activity exhibited by different comets at large distances. This paper explores the factors that should play a role in determining activity in a distant comet, especially in the cases of comet P/Tempel 2, comet Schwassmann-Wachmann 1, and 2060 Chiron. Author

Numerical integrations of fictitious objects are carried out in order to elucidate the dynamical behavior of potential short-period comets when they move in orbits at distances from the Sun comparable to those of Uranus and Neptune. As in the case of observed short-period comets, close encounters with the planets play a major role for the orbital evolution, and this is especially true for encounters with initial orbits nearly tangent to that of the planet. A comparison with integrations in which the planetary masses are larger by a factor 10 shows that, in the latter case, the orbital evolution is greatly accelerated, but the dynamical paths in phase space followed by the comets are altered. It is shown that a generalization of the use of 'Vaisala orbits', briefly mentioned at the Asteroids 2 Conference, can be very conveniently accomplished by means of an inversion of the 'GEM' form of the Gauss method. The procedure can also be applied to Apollo objects and to indeterminate cases of normal three-observation orbit computation, and there is also a simple extension to situations involving four or more observations. We have considered those comets whose original orbits have been determined to be hyperbolic when only planetary perturbations are accounted for. It is found that formally unbound incident trajectories correlate most confidently with orbits that have small perihelion distances and move in a retrograde sense relative to planetary motion. Arguments are presented that these results are not due to measurement error or to selection effects. We conclude that the phenomenon is attributable to enhanced volatility leading to abnormally large nongravitational forces. Since the effect is absent in the prograde small-perihelia population, increased insolation is not the sole explanation. It is suggested that the significance of the retrograde correlation is connected with a larger energy of relative motion between retrograde comets and a population of prograde ecliptic meteoroids which impact the comet mantle exposing the underlying volatiles. The subsequent enhanced outgassing is the cause of the larger nongravitational forces. Author

Definition of the Low Earth Orbit (LEO) particulate environment has been refined considerably with the analysis of data from NASA's Long Duration Exposure Facility (LDEF). Measurements of the impact rates from particulates ranging from sub-micron to millimetres in dimension and, especially, information on their directionality has permitted new scrunity of the sources of the particulates. Modelling of the dynamics of both bound (Earth orbital) and unbound (hyperbolic interplanetary) particulates intercepting LDEF's faces leads to the conclusion that the source is dominantly interplanetary for particle dimensions of greater than some 5 microns diameter; however the anisotropy below this dimension demands lower velocities and is compatible with an orbital component. Characteristics of the LDEF interplanetary component are compatible with familiar meteoroid sources and deep space measurements. Understanding of the orbital component which exceeds the interplanetary flux by a factor of 4 is less clear; although the very small particulates in orbit have been associated with space debris (Lawrance and Brownlee, 1986) this data conflicts with other measurements (McDonnell, Carey and Dixon, 1984) at the same epoch. By analysis of trajectories approaching the Earth and its atmosphere, we have shown that a significant contribution could be captured by aerocapture, i.e., atmospheric drag, from either asteroidal or cometary sources; such enhancement is unlikely however to provide the temporal and spatial fluctuations observed by the LDEF Interplanetary Dust Experiment (Mullholland et al. 1992). A further new mechanism is also examined, that of aerofragmentation capture, where an atmospheric grazing trajectory, which would not normally lead to capture, leads to fragmentation by thermal or mechanical shock; the microparticulates thus created can be injected in large numbers, but only into short-lifetime orbits. The concentration in one particular orbit plane, could explain the temporal fluctuations seen on LDEF; space debris could also explain the phenomenon. Author

An observing program designed to search for evidence of ordinary chondrite parent bodies near the 3:1 Kirkwood Gap was carried out in 1985 and 1986. Studies by Wisdom (1985), Wetherill (1985), and subsequent work by Milani et al. (1989) indicate that the 3:1 Kirkwood gap is the most probable source region for the majority of ordinary chondrite meteorites. The diversity of the reflectance spectra among this small data set is surprising. Early work by Gaffey and McCord (1978) showed that the inner region of the main asteroid belt is dominated by high albedo objects with mafic silicate surfaces. One would expect to see mostly spectra with 1- and 2-micron absorption bands based on this earlier work. Only 5 (of 12) spectra have these expected features. The distribution of taxonomic types presented by Gradie and Tedesco (1982) is in most cases a useful simplification of the compositional structure of the asteroid belt. The range of spectral characteristics seen with higher resolution in the near-IR has not been previously reported and is not represented in the standard asteroid taxonomy. Near-IR spectra contain valuable mineralogical information which enhances knowledge of the composition and structure of asteroids. Author

Avail: CASI HC A01/MF A04

We present a rigorous Bayesian theory for asteroid orbital error estimation in which the probability density of the orbital elements is derived from the noise statistics of the observations. For Gaussian noise in a linearized approximation the probability density is also Gaussian, and the errors of the orbital elements at a given epoch are fully described by the covariance matrix. The law of error propagation can then be applied to calculate past and future positional uncertainty ellipsoids (Cappellari et al. 1976, Yeomans et al. 1987, Whipple et al. 1991). To our knowledge, this is the first time a Bayesian approach has been formulated for orbital element estimation. In contrast to the classical Fisherian school of statistics, the Bayesian school allows a priori information to be formally present in the final estimation. However, Bayesian estimation does give the same results as Fisherian estimation when no priori information is assumed (Lehtinen 1988, and reference therein). Author

Orbital evolutions of about 160 short-period (SP) comets are numerically integrated for 4400 years in the framework of a realistic dynamical model. By the round-trip error in closure test, a reliable time space of the integrated orbits is estimated for each comet. Majority of the SP comets with their Tisserand's constant(J) between 2.8 and 3.1 are found to evolve within the past 1000-2000 years from the orbits whose perihelia are near the Jovian orbit to the orbits with perihelia of 1-2 AU. This evolution is much more rapid than that expected from Monte Carlo simulations based on symmetric distribution of planetary perturbations, thus suggesting that asymmetry of perturbation distribution play an important role in cometary evolution. Several comets are shown to evolve from the near-Saturn orbits and then to be handed over under the control of Jupiter. We also find that a few comets were captured from long-period orbits (a = 75-125 AU) via only a few close encounters with Jupiter. It is confirmed that the captured SP comets of low-inclination with 2.7 less than J less than 3.1 show more or less strong chaotic behavior. On the other hand, comets with longer orbital period and/or of high inclination reveal slow or quasi-periodic orbital evolution. Author

A dynamical qualitative study of the rotational motion for cometary-type bodies submitted to gravitational perturbations has been performed by numerical simulations, including the Sun and Jupiter's disturbing torques in the model. Results show small gravitational disturbing effects from the Sun on Halley-type orbits, as well as from Jupiter on most close-approach configurations. Only a very close-approach induces notable effects, presenting then some interesting sensitivity to initial conditions. Author

Avail: CASI HC A01/MF A04

Lightcurves obtained for 1917 Cuyo at solar phase angles near 54 degrees have an amplitude delta m = 0.44 mag. However, convex-profile inversion of the lightcurves yields an estimate of the asteroid's mean cross section (C, a 2-D average of the 3-D shape) that is only slightly noncircular, with an elongation approximately 1.15. The estimate of C undoubtedly contains systematic errors, the most severe of which could arise from non-equatorial viewing/illumination geometry. However, Cuyo's radar echo shows very little variation in bandwidth vs. rotation phase, supporting the hypothesis that this asteroid's elongation is rather modest. Author

**ON LAM'S AND SAM'S FOR HALLEY'S ROTATION**
Stanton J. Peale *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 459-467 (For primary document see N93-19113 06-90)
(Grant NAGw-2061)
Avail: CASI HC A02/MF A04

Non principal axis rotation for comet Halley is inferred from dual periodicities evident in the observations. The modes where the spin axis precesses around the axis of minimum moment of inertia (long axis mode or LAM) and where it precesses around the axis of maximum moment of inertia (short axis mode or SAM) are described from an inertial point of view. The currently favored LAM model for Halley's rotation state satisfies observational and dynamical constraints that apparently no SAM can satisfy. But it cannot reproduce the observed post perihelion brightening through seasonal illumination of localized sources on the nucleus, whereas a SAM can easily produce post or pre perihelion brightening by this mechanism. However, the likelihood of a LAM rotation for elongated nuclei of periodic comets such as Halley together with Halley's extreme post perihelion behavior far from the Sun suggest that Halley's post perihelion brightening may be due to effects other than seasonal illumination of localized sources, and therefore such brightening may not constrain its rotation state. **BURST OF THE 1969 LEONIDS AND 1982 LYRIDS**
V. Porubcan and Jan Stohl *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 469-472 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Radar observations of the last bursts of the Leonids in 1969 and Lyrids in 1982, carried out at the Springhill Meteor Observatory, Canada, both of very short duration, with the rates exceeding a quarter-maximum rate within 50-55 minutes, are used for a study of the mass distribution of meteoroids. In both cases the mass distribution exponents of the meteoroids in the dense clouds largely differ from the values obtained for the older populations of the streams. The highest mass exponent s approximately 2.2-2.4 is found around the peak of the activity, confirming high contribution

of smaller meteoroids, and thus also a recent origin of the dense clouds. Consequences of these findings are discussed. Author

We have observed the comet Levy 1990c during 16-25 August 1990 using the MPAE focal reducer system based Fabry-Perot etalon coupled with the 1 meter telescope of the Observatory of Hoher List. The free spectral range and resolution limit of the interferometer was approximately 2.18 A and approximately 0.171 A respectively. Classical Fabry-Perot fringes were recorded on a CCD in the cometary (OI) 6300 A line. They are well resolved from telluric air glow and cometary NH2 emission. Our observations indicate that the (OI) is distributed asymmetrically with respect to the center of the comet. In this paper we report the spatial distribution of (OI) emission and its line width in the coma of comet Levy. Author

**THE FLUX OF SMALL ASTEROIDS NEAR THE EARTH**

David L. Rabinowitz *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 481-485 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

Fifteen new EA's (Earth approachers) have been discovered since September, among them the smallest asteroids on record: 1990 UN, 1991 BA, and 1991 JR, which are in the 10 to 100 m size range (Scotti et al. 1991b). For the first time, we can make estimates of the fluxes near the Earth of these small objects, thought to be the immediate parents of meteorites, from direct observation. In this paper, I show that for EA's larger than a few 100 m, the magnitude-frequency dependence we observe is consistent with the cumulative magnitude-frequency relation, m(H), established for the main belt asteroids. Assuming this relation extends to smaller sizes, however, the probability for discovering both 1990 UN and 1991 JR was 15 percent, and for discovering 1991 BA only 1 percent. Objects smaller than approx. 100 m are therefore increasingly overabundant compared to an extrapolation from larger objects, with the excess increasing with decreasing size. Near 10 m, the most probable flux near the Earth is two orders of magnitude higher. This is in agreement with the flux extrapolated from observations of bright meteors and fireballs. It is thus likely that processes other than collisional breakup of asteroidal material begin to supply the population of small objects near the Earth at sizes near 100 m. Tantalizing clues from spectral measurements and orbital associations suggest that these objects may be the debris from extinct, short-period comets. Author

R. Rajamohan and S. G. Bhargavi *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 487-491 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

The CCD photometry of selected asteroids was carried out to check for possible cometary activity in them. To distinguish the asteroids with possible cometary activity from those of the main belt, each object of interest was observed in two filters; one centered on the C2 emission band at 5140A (90A bandpass) and the other centered on the nearby continuum at 4845A (65A bandpass). None of the observed asteroids appear to have any C2 emission. Author

**THE DISCONNECTION EVENT OF 16.0 MARCH 1986 IN COMET HALLEY**

Cora E. Randall, John C. Brandt, Y. Yi, and M. Snow *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 493-495 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

From kinematic extrapolation of tail/nucleus distance measurements on photographic images in the International Halley Watch (IHW) archive, we calculated the disconnection time of the 16-19 March 1986 event to be 16.0 (plus or minus 0.1) March. The solar wind conditions around Comet Halley at the time of the DE, inferred by corotation of IMP-8 satellite data to the comet, were such that (1) Comet Halley had just crossed the interplanetary magnetic field (IMF) sector boundary; (2) the solar wind density was approximately 8 cm(exp -3); (3) the solar wind speed was approximately 600 km/sec; (4) the IMF magnitude was approximately 8 nT. Given these conditions, we conclude that the most likely cause of the 16.0 March DE was front-side magnetic reconnection, as described in the model of Niedner and Brandt (1978). Author

**LABORATORY STUDIES ON COMETARY CRUST FORMATION: THE IMPORTANCE OF SINTERING**

L. Ratke, Hermann Kochan, and H. Thomas *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 497-500 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

It is demonstrated by experiments and theoretical considerations that sintering processes, so far used to describe the densification of metal and ceramic powders, are relevant for icy materials and therefore probably also for comets. A theoretical model is presented which describes the evolution of so called sinter necks, the contact zone between ice particles. With this model the strength increase of a porous, loosley packed icy body is calculated in which the sinter necks grow by evaporation and condensation of water vapor at a constant temperature. Experiments with ice powders validate the model qualitatively. An increase in strength up to a factor of four is observed during isothermal sintering. In order to check the relevance of the experimental results and the basic theoretical ideas with respect to real comets, more exact theories and improved experiments taking into account additional mass transport mechanisms are needed. **VISUAL DATA OF MINOR METEOR SHOWERS LIMITS OF THE METHOD**

Jurgen Rendtel and R. Koschack *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 501-504 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

Visual meteor observations are carried out on a regular basis by many experienced observers worldwide, thus supplying information about activity of meteor showers. The limits of the method are determined by the accuracy of the detection of the meteor trail. This study shows that visual meteor observations provide reliable data for an observable hourly rate of greater than or equal to 3. Author

Avail: CASI HC A01/MF A04

Long-slit spectra of comets Halley, Wilson and Nishikawa-Takamizawa-Tago were obtained with the 3.9 meter Anglo-Australian Telescope. Spectra of comets Halley and Wilson were obtained with the IPCS at a spectral resolution of 0.5 A and a spatial resolution of 10(exp 3) km. Spectra of comets Wilson and Nishikawa-Takamizawa-Tago were obtained with a CCD at a spectral resolution of 1.5 A and a spatial resolution of approximately 3 x 10(exp 3) km. Surface brightness profiles for NH2 were extracted from the long-slit spectra of each comet. The observed surface brightness profiles extend along the slit to approximately 6 x 10(exp 4) km from the nucleus in both sunward and tailward directions. By comparing surface distribution calculated from an appropriate coma model with observed surface brightness distributions, the photodissociation timescale of the parent molecule of NH2 can be inferred. The observed NH2 surface brightness profiles in all three comets compares well with a surface brightness profile calculated using the vectorial model, an NH3 photodissociation timescale of 7 x 10(exp 3) seconds, and an NH2 photodissociation timescale of 34,000 seconds. Avail: CASI HC A01/MF A04

Observations of P/Tempel 2 from 1899 to 1988 corresponding to 13 apparitions are analyzed in order to estimate the perihelion asymmetry of the gas production curve for different periods of its evolution. Using the correlation found by Festou et al. (1990) between the perihelion asymmetries and the delay in perihelion passage due to the action of nongravitational forces, we estimate the mass of the comet to be M approximately equals 1.6 plus or minus 0.5 x 10(exp 14) kg. Assuming a volume of 500 cu km, based on nuclear observations, a density of 0.3 plus or minus 0.1 g/cu cm is obtained. Author

Chondritic porous (CP) interplanetary dust particles (IDP's) are collected in the Earth's stratosphere. There exists an extensive database on major and minor element chemistry, stable isotopes, noble gas abundances and mineralogy of many CP IDP's, as well as infrared and Raman spectroscopic properties. For details on the mineralogy, chemistry and physical properties of IDP's, I refer to the reviews by Mackinnon and Rietmeijer (1987), Bradley et al. (1988) and Sandford (1987). Texture, mineralogy (Mackinnon and Rietmeijer, 1987) and chemistry (Schramm et al., 1989; Flynn and Sutton, 1991) support the notion that CP IDP's are a unique group of ultrafine-grained extraterrestiral materials that are distinct from any known meteorite class. Their fluffy, or porous, morphology suggests that CP IDP's probably endured minimal alteration by protoplanetary processes since their formation. It is generally accepted that CP IDP's are solid debris from short-period comets. The evidence is mostly circumstantial but this notion gained significant support based on the comet Halley dust data (Brownlee, 1990). In this paper, I will accept that CP IDP's are indeed cometary dust. The C/Si ratio in CP IDP's is 3.3 times higher than in CI carbonaceous chondrites (Schramm et al. 1989). The intraparticle carbon distribution is heteorogeneous (Rietmeijer and McKay, 1986). Carbon occurs both in oxidized and reduced forms. Analytical electron microscope (AEM) and Raman spectroscopic analyses have shown the presence of several carbon forms in CP IDP's but the data are scattered in the literature. Carbons in cometary CP IDP's are among the most pristine Solar System carbons available for laboratory study. Similar to a recently developed petrological model for the diversity of layer silicates in CP IDP's (Zolensky, 1991) that is useful to constrain in situ aqueous alteration in comets (Rietmeijer and Mackinnon, 1987a), I here present the first effort to develop a petrological concept of carbons in CP IDP's. This concept is useful to constrain comet evolution. I also present the philosophical constraint facing Earth Scientists in studies of protoplanets that require a new approach to cometary dust studies. Author

The two component dustball model was used in numerical lag computation. Detached grain lag is typically less than 2 km, with expected wakes of a few hundred meters. True wake in television meteors is masked by apparent wake due to the combined effects of image persistence and blooming. To partially circumvent this problem, we modified a dual MCP intensified CID video system by addition of a rotating shutter to reduce the effective exposure time to about 2.0 ms. Preliminary observations showed that only 2 of 27 analyzed meteors displayed statistically significant wake. Author

A direct way to observe the photodissociation of water vapor in a cometary coma is to detect the OH prompt emission. This emission is shifted of delta lambda = 4 nm with respect to the OH 309 nm fluorescence band. The extended data set obtained with the three-channel spectrometer on-board Vega 2 reveals at short distance of the nucleus (i.e., less than 600 km) an excess of emission on the right wing of the OH band which may be interpreted as being mainly due to prompt emission. On April 29, 1990, the plasma tail of Comet Austin was observed with a CCD camera on the 105-cm Schmidt telescope at the Kiso Observatory

of the University of Tokyo. The area of the CCD used in this observation is only about 1 sq cm. When this CCD is used on the 105-cm Schmidt telescope at the Kiso Observatory, the area corresponds to a narrow square view of 12 ft x 12 ft. By comparison with the photograph of Comet Austin taken by Numazawa (personal communication) on the same night, we see that only a small part of the plasma tail can be photographed at one time with the CCD. However, by shifting the view on the CCD after each exposure, we succeeded in imaging the entire length of the cometary magnetosphere of 1.6 x 10(exp 6) km. This new technique is called 'the mosaic CCD method'. In order to study the dynamics of cometary plasma tails, seven frames of the comet from the head to the tail region were twice imaged with the mosaic CCD method and two sets of images were obtained. Six microstructures, including arcade structures, were identified in both the images. Sketches of the plasma tail including microstructures are included. Author

Observations of HCN and H2CO in Comet Levy (1990c) obtained at the Caltech Submillimeter Observatory during August 1990 are presented. The HCN J=3-2 rotational line was measured at high spectral resolution (0.1 km/s) and mapped at 13 points over a region of approximately 1.5 arcmin. Analysis of the line profile and the map suggest only slight deviations from the distribution expected for isotropic outgassing of HCN from the nucleus at a velocity of 0.7 plus or minus 0.1 km/s. Observations of the HCN J=4-3 and H2CO5(sub 15)4(sub 14) transitions were obtained simultaneously on two days following the HCN J=3-2 measurements. These transitions are the first submillimeter spectral lines to be detected in a comet. Five point maps of the emission show good consistency between the J=3-2 and J=4-3 HCN observations for an HCN production rate of 2 x 10(exp 26) and a rotational temperature of approximately 30 K. The map of H2CO emission indicates that it is more extended than the prediction of models in which H2CO originates entirely from the nucleus. H2CO may also originate from an extended source in the coma. Author

**AUTOMATED DETECTION OF ASTEROIDS IN REAL-TIME WITH THE SPACEWATCH TELESCOPE** **c89**

James Vernon Scotti, T. Gehrels, and David L. Rabinowitz *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 541-544 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

The Spacewatch telescope on Kitt Peak is being used to survey for near-earth asteroids using a Tektronix TK2048 CCD in scanning mode. We hope to identify suitable low delta v candidates amongst the near-earth asteroid population as possible exploration targets, to identify those objects which pose a danger to life on earth, and to study the physical properties of the objects in near-earth space. Between Sep. 1990 and Jun. 1991, 14 new earth-approaching asteroids including 1 Aten, 9 Apollo, and 4 Amor type asteroids were detected by automated software and discriminated by their angular rates from the rest of the detected asteroids in near-real time by the observer. The average of about 1.5 earth-approaching asteroids per month is comparable to the total number found by all other observatories combined. One other Apollo type asteroid was detected by the observer as a long trailed image. The positions of this last object were measured and the object was tracked by the observer in real time. This object was determined to be a 5-10 meter diameter object which passed within 170,000 kilometers of earth. Of the 14 automatically detected earth-approaching asteroids, 10 have been found at distances in excess of 0.5 AU from earth. An average of more than 2000 asteroids are detected each month. Positions, angular rates, and brightnesses are determined for each of these asteroids in real-time. Author

**SUBLIMATION RATES OF CARBON MONOXIDE AND CARBON DIOXIDE FROM COMETS AT LARGE HELIOCENTRIC DISTANCES**

Zdenek Sekanina *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 545-548 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

Using a simple model for outgassing from a small flat surface area, the sublimation rates of carbon monoxide and carbon dioxide, two species more volatile than water ice that are known to be present in comets, are calculated for a suddenly activated discrete source on the rotating nucleus. The instantaneous sublimation rate depends upon the comet's heliocentric distance and the Sun's zenith angle at the location of the source. The values are derived for the constants of CO and CO2 in an expression that yields the local rotation-averaged sublimation rate as a function of the comet's spin parameters and the source's cometocentric latitude. **INTERPRETING ASTEROID PHOTOMETRY AND POLARIMETRY USING A MODEL OF SHADOWING AND COHERENT BACKSCATTERING** **c89**

Y. G. Shkuratov and Karri Muinonen (Lowell Observatory, Flagstaff, AZ.) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 549-552 (For primary document see N93-19113 06-90)

Avail: CASI HC A01/MF A04

The shadow-hiding models for the opposition effect and negative polarization of atmosphereless solar system bodies do not explain some experimental findings, such as the enhancing opposition effect and negative polarization with decreasing particle size down to wavelength scales. The enhancement for laboratory photometric and polarimetric data on artificial glass samples with different particle size is shown. These results are in agreement with the so-called coherent backscattering or interference mechanism proposed for the interpretation of the opposition effect and negative polarization. Two different approaches for describing the opposition effect and negative polarization produced by the shadow-interference mechanism were developed. One is based on exact electromagnetic solutions for simple scattering systems that include dipole-dipole and dipole-surface coupling; The other is based on a point-scatterer approximation characterized by model photometric and polarimetric phase functions, and the mutual shadowing effect is derived using virtual volumes associated with the point-scatterers. Both approaches yield qualitatively similar results, although neither is entirely satisfactory. We regard them as prototypes for a future unified model of shadowing and coherent backscattering. The sharp opposition effect of 44 Nysa and the asteroid albedo-polarization rule are here explained using the point-scatterer approach. Author

Avail: CASI HC A01/MF A04

The diurnal variation of the median duration of overdense sporadic radar meteor echoes is examined. The meteors recorded in August, December, and January by the Ondrejov meteor radar during the period 1958-1990 were used for the analysis. A maximum median echo duration 1-3 hours after the time of local sunrise in the meteor region confirms the already known sunrise effect. Minimum echo duration occurring at the time of sunset seems to be the most important point of diurnal variation of the echo duration, when ozone is no longer dissociated by solar UV radiation. The effect of diurnal changes of the echo duration should be considered when the mass distribution of meteor showers is analyzed. Author

**MELTING, VAPORIZATION, AND ENERGY PARTITIONING FOR IMPACTS ON ASTEROIDAL AND PLANETARY OBJECTS**

Catherine L. Smither and Thomas J. Ahrens *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 561-564 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

A three-dimensional smoothed particle hydrodynamics code was used to model normal and oblique impacts of silicate projectiles on asteroidal and planetary bodies. The energy of the system, initially in the kinetic energy of the impactor, is partitioned after impact into internal and kinetic energy of the impactor and the target body. These simulations show that, unlike the case of impacts onto a half-space, a significant amount of energy remains in the kinetic energy of the impacting body, as parts of it travel past the main planet and escape the system. This effect is greater for more oblique impacts, and for impacts onto the small planets. Melting and vaporization of both bodies were also examined. The amount of the target body melted was much greater in the case of smaller targets than for an impact of a similar scale on a larger body. Author

Evidence is discussed that the wide-spread fires ca. 800 years ago which denuded the southern provinces of the South Island of New Zealand of the extensive forests present at that time were due to the entry of a large bolide into the atmosphere, the conflagration being ignited by the intense heat generated as this extraterrestrial projectile ablated/detonated in a similar manner to that of the Tunguska object of 1908. These fires led to the extinction of the giant terrestrial bird known as the Moa, and the end of the archaic epoch of Maori history known as the Moa Hunter period. This interpretation is well attested to in Maori myth and legend. Author

**1991 DA: AN ASTEROID IN A BIZARRE ORBIT**

Duncan Steel, Robert H. McNaught, and David Asher (Oxford Univ., England) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 573-576 Sponsored by Australian Research Council and Science Research Council (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Asteroidal object 1991 DA has an orbit of high inclination, crossing the planets from Mars to Uranus. This is unique for an asteroid, but not unusual for a comet of the Halley-type: it therefore seems likely that 1991 DA is an extinct or dormant comet. Previous CCD imaging has shown no indication of a coma; spectroscopic observations of 1991 DA which lack any evidence of strong comet-like emissions are reported. Numerical integrations of the orbit of this object were performed which show that is has been remarkably stable for the past approximately 20,000 yr, but chaotic before that. This may allow a new estimate to be made of the physical lifetimes of comets. Author

Avail: CASI HC A01/MF A04

The results of CCD searches for satellites of asteroids 146 Lucina and 3 Juno are reported. Juno is one of the largest asteroids (D = 244 km); no previous deep imaging search for satellites around it has been reported. A potential occultation detection of a small satellite orbiting 146 Lucina (D = 137 km) km was reported by Arlot et al. (1985), but has not been confirmed. Using the 2.1 m reflector at McDonald Observatory in 1990 and 1991 with a CCD camera equipped with a 2.7 arc-sec radius occulting disk, limiting magnitudes of m(sub R) = 19.5 and m(sub R) = 21.4 were achieved around these two asteroids. This corresponds to objects of 1.6 km radius at Juno's albedo and distance, and 0.6 km radius at Lucina's albedo and distance. No satellite detections were made. Unless satellites were located behind our occultation mask, these two asteroids do not have satellites larger than the radii given above. Author

**CARTOGRAPHY OF ASTEROIDS AND COMET NUCLEI FROM LOW RESOLUTION DATA**

Philip J. Stooke *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 583-586 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

High resolution images of non-spherical objects, such as Viking images of Phobos and the anticipated Galileo images of Gaspra, lend themselves to conventional planetary cartographic procedures: control network analysis, stereophotogrammetry, image mosaicking in 2D or 3D, and airbrush mapping. There remains the problem of a suitable map projection for bodies which are extremely elongated or irregular in shape. Many bodies will soon be seen at lower resolution (5-30 pixels across the disk) in images from speckle interferometry, the Hubble Space Telescope, ground-based radar, distinct spacecraft encounters, and closer images degraded by smear. Different data with similar effective resolutions are available from stellar occultations, radar or lightcurve convex hulls, lightcurve modeling of albedo variations, and cometary jet modeling. With such low resolution, conventional methods of shape determination will be less useful or will fail altogether, leaving limb and terminator topography as the principal sources of topographic information. A method for shape determination based on limb and terminator topography was developed. It has been applied to the nucleus of Comet Halley and the jovian satellite Amalthea. The Amalthea results are described to give an example of the cartographic possibilities and problems of anticipated data sets. Author

The icy-conglomerate model of comet nuclei has dominated all others since its introduction. It provided a basis for understanding the non-gravitational motions of comets which had perplexed dynamicists up to that time, and provided a focus for understanding cometary composition and origin. The image of comets as dirty snowballs was quickly adopted. Comet nuclei including their trail mass loss rates and refractory to volatile mass ratios are described. Author

**FORCED PRECESSION OF THE COMETARY NUCLEUS WITH RANDOMLY PLACED ACTIVE REGIONS**
Slawomira Szutowicz *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 593-596 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The cometary nucleus is assumed to be triaxial or axisymmetric spheroid rotating about its axis of maximum moment of inertia and is forced to precess due to jets of ejected material. Randomly placed regions of exposed ice on the surface of the nucleus are assumed to produce gas and dust. The solution of the heat conduction equation for each active region is used to find the gas sublimation rate and the jet acceleration. Precession of the comet nucleus is followed numerically using a phase-averaged system of equations. The gas production curves and the variation of the spin axis during the orbital motion of the comet are presented. Author

**VELOCITY DISTRIBUTION OF FRAGMENTS OF CATASTROPHIC IMPACTS**
Yasuhiko Takagi, Manabu Kato (Nagoya Univ., Japan ), and Hitoshi Mizutani (Tokyo Univ., Japan ) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 597-600 Sponsored by Ministry of Education, Science and Culture (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Three dimensional velocities of fragments produced by laboratory impact experiments were measured for basalts and pyrophyllites. The velocity distribution of fragments obtained shows that the velocity range of the major fragments is rather narrow, at most within a factor of 3 and that no clear dependence of velocity on the fragment mass is observed. The NonDimensional Impact Stress (NDIS) defined by Mizutani et al. (1990) is found to be an appropriate scaling parameter to describe the overall fragment velocity as well as the antipodal velocity. Gonzalo Tancredi (Universidad de la Republica, Montevideo, Uruguay ) and Mats Lindgren *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 601-604 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Low-relative velocity and long-lasting encounters can dramatically change the orbital elements of a comet; the object could be temporarily bound to Jupiter for a period of several years. It is well stated that most of the discoveries of comets occurred just after a close encounter with the planet and a decrease of the perihelion distance of the comet. So, why don't we look for comets during close encounters with Jupiter rather than waiting to find them afterwards? To estimate the feasibility of this proposal, dynamical computations and observational analysis of the Jupiter family of comets were made. A criterion to distinguish comets during an encounter from other moving objects in the field is discussed. Author

To improve the orbits, all the positional observations of the comets were collected. The observations were selected and weighted according to objective mathematical criteria and the mean residuals a priori were calculated for both comets. We took into account nongravitational effects in the comets' motion using Marsden's method applied in two ways: either determining the three constant parameters, A(sub 1), A(sub 2), A(sub 3) or the four parameters A, eta, I, phi connected with the rotating nucleus of the comet. To link successfully all the observations, we had to assume for both comets that A(t) = A(sub O)exp(-B x t) where B was an additional nongravitational parameter. Author

**MINOR SATELLITES AND THE GASPRA ENCOUNTER**
Thomas C. VanFlandern *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 609-612 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Observational evidence, especially from occultations and radar, indicate that satellites of minor planets are numerous and commonplace. This leads to the prediction that the Galileo spacecraft will find many such 'minor satellites' at the upcoming close encounter with minor planet 951 Gaspra. If such objects are found, this argues strongly against the current theory of minor planet origin from the primeval solar nebula. Author

Avail: CASI HC A01/MF A04

Infrared images of P/Tempel 1 and P/Tempel 2 were constructed from IRAS survey data using a computer algorithm based on the Maximum Correlation Method for Image Construction (Aumann et al, 1990). The resulting images are of sufficiently high quality and resolution to delineate coma and tail morphology, and permit accurate photometry of the total dust complex. Comparisons of the infrared colors and photometric profiles of Tempel 1 and Tempel 2 at similar heliocentric distances show that the grains produced by the two comets are quite similar in radiometric and dynamic properties. Tempel 1 is found to produce about 30 percent more dust in its coma and tail than Tempel 2. The comae of Tempel 1 and Tempel 2 are expanding with mean velocities of 5.8 plus or minus 0.07 and 6.1 plus or minus 0.17 m/sec respectively, indicative of the ejection of large grains. The IRAS cataloged infrared fluxes (Walker, 1986) are found to be underestimated by as much as a factor of three for the comets. Therefore, it is essential to create images of the comets to obtain meaningful IRAS photometry. Author

Avail: CASI HC A01/MF A04

A simple model for the rotational motion of split cometary nuclei is studied. A large-amplitude precession is easily excited due to the change of the moments of inertia even if the perturbation is small at the splitting. The damping timescale of the excited precession is widely ranged because of the uncertainty of the physical parameter of cometary nuclei. Another possibility for clarifying the evolution of the short period comets by studying the split cometary nuclei is also discussed. Author

The Comet Rendezvous Asteroid Flyby (CRAF) mission was approved for a New Start by the United States Congress in 1989. CRAF will be developed in parallel with the Cassini (Saturn orbiter/Titan probe) mission. The two missions have been combined into a joint program because of the substantial cost savings (approximately $500 M, or greater than 25 percent) which can be realized by using a common spacecraft design, several identical science instruments, a single management team, and a joint ground operations and data handling system for the two missions. CRAF and Cassini will be the first users of the new Mariner Mark 2 spacecraft which has been designed to carry out the next generation of planetary missions to the outer planets and to small bodies. CRAF is a joint mission between the United States, Germany, and Italy. Each partner will provide both engineering hardware and science experiments. Cassini is a joint mission between the United States, Germany, Italy, and the European Space Agency (ESA), with ESA providing the Titan atmospheric entry probe, called Huygens. Author

Avail: CASI HC A02/MF A04

An activity index, AI, is derived from observational data to measure the increase of activity in magnitudes for comets when brightest near perihelion as compared to their inactive reflective brightness at great solar distances. Because the observational data are still instrumentally limited in the latter case and because many comets carry particulate clouds about them at great solar distances, the application of the activity index is still limited. A tentative application is made for the comets observed by Max Beyer over a period of nearly 40 years, providing a uniform magnitude system for the near-perihelion observations. In all, 32 determinations are made for long-period (L-P) comets and 15 for short-period (S-P). Although the correlations are scarcely definitive, the data suggest that the faintest comets are just as active as the brightest and that the S-P comets are almost as active as those with periods (P) exceeding 10(exp 4) years or those with orbital inclinations of i less than 120 deg. Comets in the range 10(exp 2) less than P less than 10(exp 4) yr. or with i greater than 120 deg appear to be somewhat more active than the others. There is no evidence to suggest aging among the L-P comets or to suggest other than a common nature for comets generally. Author

**THE MASS OF (1) CERES FROM PERTURBATIONS ON (348) MAY**
Gareth V. Williams *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 641-643 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The most promising ground-based technique for determining the mass of a minor planet is the observation of the perturbations it induces in the motion of another minor planet. This method requires careful observation of both minor planets over extended periods of time. The mass of (1) Ceres has been determined from the perturbations on (348) May, which made three close approaches to Ceres at intervals of 46 years between 1891 and 1984. The motion of May is clearly influenced by Ceres, and by using different test masses for Ceres, a search was made to determine the mass of Ceres that minimizes the residuals in the observations of May. The Galileo flyby candidates 951 Gaspra and 243 Ida are both in families. The former is in a complex of families associated with 8 Flora and the latter is in the Koronis family. The Flora and the Koronis families are described. The Galileo spacecraft will have the opportunity to sample fragments from two types of impacts; one impact totally destroyed the parent body and the other left a large body behind. The types of Ss are also different, the colors of Gaspra and the other Ss in the complex of families near 8 Flora are much redder in U-V than Ida and the Ss of the Koronis family. L.R.R.

Asteroid families are clusters of asteroids in proper element space which are thought to be fragments from former collisions. Studies of families promise to improve understanding of large collision events and a large event can open up the interior of a former parent body to view. While a variety of searches for families have found the same heavily populated families, and some searches have found the same families of lower population, there is much apparent disagreement between proposed families of lower population of different investigations. Indicators of reliability, factors compromising reliability, an illustration of the influence of different data samples, and a discussion of how several investigations perceived families in the same region of proper element space are given. (Grants NAGw-1924; NSF ATM-87-22482; NSF DMR-88-21625)
Avail: CASI HC A01/MF A04

The calculated velocity distributions of atomic hydrogen and hydroxyl radicals produced through solar photodissociation of gaseous water molecules are presented. Under collisionless conditions, the calculation was carried out using the most recent available data for the production of H and OH through photodissociation of H2O from its dissociation onset throughout the EUV region. Because the lack of data in certain spectral regions, only upper and lower bounds to the velocity distributions can be obtained. The results show that the H atoms and OH radicals produced exhibit multiple velocity groups. Since most of the current cometary modeling uses a single velocity of 20 km/s associated with the photodissociation of H2O, the present results may be useful in interpreting the many peaks observed in the velocity distributions of cometary atomic hydrogen.

**FORMATION OF THE LEONID METEOR STREAM AND STORM**
Zidian Wu and I. P. Williams *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 661-665 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

It is well known that some meteor showers display a very high level of activity at certain times, the most famous being the Leonid shower with very spectacular displays at roughly 33 year intervals. This period being also the period of the parent comet of the stream, Comet Tempel-Tuttle. An investigation of the geometry of the comet and the Earth at the time of each high activity occurrence by Yeomans suggests that most of the meteoroids are found outside the cometary orbit and lagging the comet. The formation process of such a stream by numerically integrating the orbits of dust particles ejected from the comet and moving under the influence of gravity and radiation pressure are simulated. The intersection of these dust particles with the Earth is also considered and it is concluded that about 12 percent of the ejected particles may be observed and that of those observable, 63 percent will be outside the cometary orbit and behind the comet. **THE CONTRIBUTION OF ELECTRON COLLISIONS TO ROTATIONAL EXCITATIONS OF COMETARY WATER**
Xingfa Xie (Pennsylvania Univ., Philadelphia.) and Michael J. Mumma *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 667-670 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

The e-H2O collisional rate for exciting rotational transitions in cometary water is evaluated for conditions found in comet Halley during the Giotto spacecraft encounter. In the case of the O(sub 00) yields 1(sub 11) rotational transition, the e-H2O collisional rate exceeds that for excitation by neutral-neutral collisions at distances exceeding 3000 km from the cometary nucleus. Thus, the rotational temperature of the water molecule in the intermediate coma may be controlled by collisions with electrons rather than with neutral collisions, and the rotational temperature retrieved from high resolution infrared spectra of water in comet Halley may reflect electron temperatures rather than neutral gas temperature in the intermediate coma. **A COMPARISON BETWEEN FAMILIES OBTAINED FROM DIFFERENT PROPER ELEMENTS**
Vincenzo Zappala, Alberto Cellino, and Paolo Farinella (Pisa Univ., Italy ) *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 675-678 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Using the hierarchical method of family identification developed by Zappala et al., the results coming from the data set of proper elements computed by Williams (about 2100 numbered + about 1200 PLS 2 asteroids) and by Milani and Knezevic (5.7 version, about 4200 asteroids) are compared. Apart from some expected discrepancies due to the different data sets and/or low accuracy of proper elements computed in peculiar dynamical zones, a good agreement was found in several cases. It follows that these high reliability families represent a sample which can be considered independent on the methods used for their proper elements computation. Therefore, they should be considered as the best candidates for detailed physical studies. Author

**A CANDIDATE FOR THE PARENT BODY OF THE TAURID COMPLEX AND ITS SEARCH EPHEMERIS**
Krzysztof Ziolkowski *In* Lunar and Planetary Inst., Asteroids, Comets, Meteors 1991 1992 p 679-681 (For primary document see N93-19113 06-90)
Avail: CASI HC A01/MF A04

Untypical asteroid 5025 P-L, with its perihelion close to the orbit of Mercury and its aphelion between the orbits of Jupiter and Saturn, seems to be a good candidate for the parent body of the Taurid complex of small interplanetary objects. Evidence that this asteroid is a major source of meteoroids as well as an analysis of the orbits of asteroidal and cometary members of the Taurid complex, lead to the conclusion that 5025 P-L might be regarded as a remnant of a giant comet which was a progenitor of the overall complex according to the hypothesis of Clube and Napier. Unfortunately, the orbit of 5025 P-L is very poorly determined because the computations were based upon only three positional observations over an arc of only four days in October 1960. Any further research on the problem of origin and evolution of the Taurid complex needs better determined orbit of this key asteroid. Therefore its new positions are necessary. In order to enable the search of eventual trails of 5025 P-L on plates which can be found in archives, its ephemeris for the opposition in 1960, when the asteroid passed about 0.5 AU from the Earth, is presented. **CANONICAL FLOQUET PERTURBATION THEORY M.S. Thesis**
David J. Pohlen 15 Dec. 1992 161 p
(AD-A258970; AFIT/GA/ENY/92D-03) Avail: CASI HC A08/MF A02

Classical Floquet theory is examined in order to generate a canonical transformation to modal variables for periodic system. This transformation is considered canonical if the periodic matrix of eigenvectors is symplectic at the initial time. Approaches for symplectic normalization of the eigenvectors had to be examined for each of the different Poincare eigenvalue cases. Particular attention was required in the degenerate case, which depended on the solution of a generalized eigenvector. Transformation techniques to ensure real modal variables and real periodic eigenvectors

were also needed. Periodic trajectories in the restricted three-body case were then evaluated using the canonical Floquet solution. The system used for analyses is the Sun-Jupiter system. This system was especially useful since it contained two of the more difficult Poincare eigenvalue cases, the degenerate case and the imaginary eigenvalue case. The perturbation solution to the canonical modal variables was examined using both an expansion of the Hamiltonian and using a representation that was considered exact. Both methods compared quite well for small perturbations to the initial condition. As expected, the expansion solution failed first due to truncation after the third order term of the expansion. GRA

**A CASE STUDY OF TWO AURORAL ARCS USING OPTICAL AND RADAR MEASUREMENTS Abstract Only**
Kari U. Kaila, Reijo Rasinkangas, Jyrki Manninen, and Tauno Turunen (Geophysical Observatory, Sodankyla, Finland ) *In its* Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Two auroral arcs were measured with optical instruments and EISCAT radar along the Tromso (Norway) field line on 16 Dec. 1990 at 16.35 UT. The radar integration time in this special experiment was 0.2 seconds for power profiles, and 3 seconds for the autocorrelation functions. The first arc is recorded only by radar because of clouds, but the second arc is measured also with a television camera and multichannel photometer. The radar measurements show clear differences between these arcs. Only the first arc has a strong northward, arc related electric field, and shows E region electron heating. The second arc has weak electric field and precipitation induced heating in the F region. The photometric data and electron density profiles show relatively soft precipitation. The latter weak auroral arc (intensity 15 kR in 557.7 nm) moved quickly across the photometer and radar beams. These measurements give information about the fine structure of the arc. ESA

Avail: CASI HC A01/MF A01

EISCAT incoherent scatter radar and optical observations of an auroral arc on the premidnight sector are presented. The EISCAT measurement is a short scan between Tromso (Norway) and Kiruna (Sweden) south of the arc. A four channel photometer scans through the arc. Strong electric field enhancements south of the arc and optical intensification of the arc are seen simultaneously. The intensification of the arc is accompanied by its equatorward movement. Movement stops when the arc fades and a new arc appears in the orthogonal location. Processes giving rise to these observations are discussed. ESA

Avail: CASI HC A01/MF A01

During Autumn 1984 and 1985, observational campaigns involving EISCAT and AMPTE were performed. EISCAT was operated in the special program United Kingdom polar measuring F region plasma parameters at high time resolution while AMPTE was probing the solar wind. Occasionally, bursts of rapid flows in the ionosphere were observed. With the help of ground magnetometers, most of the events could be identified as traveling convection vortices triggered by pressure variations in the solar wind. Data from the most prominent event occurring on 27 Oct. 1984 is presented. Data from a network of magnetometers is used to determine the movement of the current structure in the ionosphere. Subsequently, the temporal variations of the observed plasma drifts could be translated into a moving convection pattern. A striking result emerging was that the plasma flow (electric field) turned out to be much higher above the convection cell fed by the upward FAC than above the other cell, although the magnetic field recordings indicate equal current densities in both cells. The discrepancy strongly suggests that there was a potential drop along the upward Field Aligned Current even below 300 km (height of EISCAT observation). ESA

Avail: CASI HC A01/MF A01

Field aligned currents are due to pressure gradients created during the convection of the ionic component of the plasmasheet. The linear theory (i.e. linearizing the transport equations) predicts a phase quadrature between the convection electric potential and the field aligned current distributions (Blanc and Caudal, 1985). Statistical Kp dependent models of the field aligned currents inferred from the EISCAT radar (Fontaine et al, 1981) are used together with the electrostatic convection potential models derived from the same EISCAT data base by Senior et al (1990) to compute the phase difference between these two distributions. The resulting phase opposition is predicted by linear theory when including the effect of losses (Caudal, 1987; Peyrimat et al, 1991). ESA

Common Program (CP) 3 experiments were analyzed from 1984 to 1987 to provide a statistical model of the distribution of field aligned currents from 61 to 72 degree invariant latitude. Statistics are first performed on horizontal currents computed from EISCAT measurements of electric fields and from a conductivity model. This conductivity model results from the combination of the model of solar produced conductivities statistically determined from the same data base by Senior et al (1991) and of the statistical model of conductivities due to particle precipitation (Hardy at al, 1987). The distribution of field aligned currents is computed from the divergence of height integrated horizontal currents. It is examined as a function of magnetic activity. ESA

The high latitude ionospheric convection is one of the few global results that can be derived from EISCAT data. The convection reversals and Harang discontinuity give an idea about the magnetospheric particle population morphology and the location of field aligned currents. To study how relevant this connection is, convection results need to be compared with satellite data. This was done in one case study in connection with the Aureld VIP high rocket flight during Viking pass number 1408. In this case, the asymmetric convection measured by EISCAT fit very well with the particle population morphology, the field aligned currents and the auroral forms measured with different instruments on Viking. A continued study was initiated with all Viking magnetic midnight passes being at least under relatively disturbed conditions (Kp greater than or equal to 3+) while EISCAT was running a long scan program. There are about ten comparable cases to be studied. The preliminary results are reported. ESA

Avail: CASI HC A01/MF A01

EISCAT observations (from UHF as well as VHF) of large field aligned bulk ion outflows from the topside ionosphere during auroral activity are presented. The ions (mainly O+) may reach field aligned ion fluxes of 2 x 10 exp 14/(sq. m)(s) which is a factor ten times larger than previously observed. In many cases, the flux is not constant within a magnetic flux tube. Two different types of ion outflows were identified. The first type is related to periods of strong perpendicular electric fields, enhanced ion temperatures, lifted F region (if existing), and low electron densities below 300 km, indicating a small amount of auroral precipitation. The second type is related to auroral arcs, enhanced electron temperatures, and occasional presence of ion acoustic turbulence. An extra ionization source within the F region seems also to be required from observations. Auroral arcs are also known from other observations than EISCAT to be characterized by upgoing field aligned currents, ion cyclotron wave activity, and ion conics down to an altitude of a few hundred km. The mechanism causing type 2 ion outflows is discussed. ESA

**DETERMINATION OF E REGION EFFECTIVE RECOMBINATION COEFFICIENT USING IMPULSIVE PRECIPITATION EVENTS Abstract Only**
Tuomo Nygren, Kari U. Kaila, Asko Huuskonen, and Tauno Turunen (Geophysical Observatory, Sodankyla, Finland ) *In its* Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

A set of sudden increases followed by slow decay was observed in E region electron density on 17 Dec. 1990 using the EISCAT UHF radar. Simultaneous photometer observations indicate that the density enhancements are caused by impulsive particle precipitation with a very short duration, usually no more than 10 s. Effective recombination coefficient profiles in the E region are calculated from decaying electron densities using the ion continuity equation, and the results are compared with previous observations. The height resolution is about 1 km. Within the height interval 85 to 115 km, the recombination coefficient decreases approximately from 3.5 x 10 exp -13 to 2 x 10 exp -13 cu m/s. Theoretical recombination profiles for NO(+) and O2(+) ions are calculated using a model temperature profile. The measured profile lies close to the O2(+) curve, which seems to indicate that O2(+) is the main ion species in the E region. This result is in agreement with the theory which suggests that the O2(+) composition should increase shortly after a precipitation burst. It is pointed out that, due to a difference in ion composition, the effective recombination coefficient during short lived precipitation burst may be different from the steady state value. ESA

**NOCTURNAL HIGH LATITUDE E-REGION IN WINTER DURING EXTREMELY QUIET CONDITIONS Abstract Only**
Tauno Turunen, Tuomo Nygren (Oulu Univ., Finland ), and Asko Huuskonen (Oulu Univ., Finland ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

In Dec. 1990, a series of experiments was carried out using EISCAT UHF radar especially for studying ionospheric phenomena in the E region during very rapidly varying auroral conditions. In some nights, the magnetic activity was practically zero and no aurora was detected. An experiment designed to reveal rapidly varying ionospheric conditions is, however, an excellent experiment for monitoring slowly varying phenomena at very low density levels. Using integration times of a few minutes, reasonably accurate electron profiles well below the 10 exp 10 m(exp -3) level were obtained with spatial resolution of the order of 1 km. This kind of E layer cannot be seen by a standard ionosonde at all, and other methods are seldomly used for monitoring that kind of a layer, too. Behavior of extremely low density layers in quiet Winter nights is reported and many of the features are shown. Wave activity and narrow low density layers resembling sporadic E layers are seen almost continuously. Relative importance of the metallic ions and normal E layer ions in these extreme conditions is discussed. Some estimates for the ion production is given. Conductivities were reduced from the measured profiles. ESA

**AN INCOHERENT SCATTER EXPERIMENT FOR THE MEASUREMENT OF PARTICLE COLLISIONS Abstract Only**
Volker Grassmann *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

The effect of particle collisions on incoherent scatter spectra depends on scatter altitude and radar frequency. For this reason, normalized incoherent scatter spectra obtained at very different radar frequencies are not identical, even when they have been measured at the same time in the same scatter volume. From a theoretical point of view this is valid for any nonzero collision frequency. Analyzing the spectral difference in a double frequency incoherent scatter experiment will improve the collision frequency resolution. The European Incoherent Scatter Association (EISCAT) which operates a UHF and VHF radar at the same location in Norway can perform simultaneous measurements on frequencies that differ by a factor of four, which is sufficient for the above mentioned purpose. ESA

**SPORADIC E LAYER FORMATION DURING THE GEMINID METEOR SHOWER Abstract Only**
Asta Pellinen-Wannberg, Gundmund Wannberg, and S. Kirkwood (Swedish Inst. of Space Physics, Kiruna.) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Sporadic E layers are considered to consist of particles of meteoric origin. However, the correlation between these two phenomena has not been studied systematically with the incoherent scatter method. The most intensive and a well defined meteor shower, the Geminids, occurs every year around 12 to 15 Dec. A Barker coded alternating code program especially designed for this experiment was run to get the highest possible simultaneous spatial (450 m) and time resolution (2 s). This was the first time such modulation was applied in a real experiment. Hundreds of meteor tracks and several sporadic E layers were detected. The quantitative and preliminary qualitative results are reported. ESA

During three days of quiet geomagnetic conditions in Aug. 1988, both the EISCAT UHF radar and the NOAA advanced ionosonde (Dynasonde) were operated from 12 to 22 UT. Sporadic E layers were observed on all three days, controlled by the action of the semidiurnal tide. Gravity wave activity was very evident in both data sets, and particularly visible in the changes of intensity and position of the layers. By combining the two data sets of measurements, it is possible to build up a spatial picture of the phase fronts passing over Tromso (Norway) with sporadic E layers acting as tracers for them in the E region. Structures in the electron density associated with gravity waves were observed to descend from the F region through the E region to merge with the increases in the layer intensity. The enhancements in the layers are ribbonlike and aligned along the gravity wave fronts in the east-west direction, traveling northwards at 60 km/h and about 30 km apart. ESA

From Jan. 1993, the heating facility at Ramfjordmon (Norway) will be fully available to the EISCAT scientific community for experiments. A description of the technical capabilities of the facility and the broad range of geophysical and plasma physical experiments which are thereby made possible is given. An overview of the physical effects that a powerful HF electromagnetic wave incident on the ionosphere can produce on timescales ranging from tens of microseconds to minutes in height regions ranging from 20 to hundreds of km is presented. Emphasis is placed on the practical implementation of ionospheric heating experiments using the EISCAT radars as the main diagnostic, but other diagnostic techniques using ground based radars, radio links, receivers, photometers, and rocket and satellite instrumentation are described. ESA

One of the main problems of ionospheric heating experiments that can be investigated using incoherent scattering radars is the excitation of 'parametric decay instabilities', where the heater produces high frequency (close to the heater frequency) and low frequency (ion acoustic) unstable waves. Observations are discussed in the light of this theory and unsolved problems are pointed out. Recently, the applicability of this kind of theory on ionospheric heating experiments was questioned. Instead, a strong Langmuir turbulence theory was developed. The differences and consequences are discussed. ESA

Avail: CASI HC A01/MF A01

The measurement of the ion and electron components of the incoherent scatter spectrum can be made substantially routine under certain circumstances. However, the traditional interpretation of the resulting data sets in terms of ionospheric current flows leads to considerable problems of interpretation. Electron line techniques are reviewed, with particular reference to those which allow continuous observation of plasma parameters over extended time scales (many hours). Data sets obtained with the EISCAT UHF radar are presented and interpreted in terms of the underlying plasma physics. The implications for the routine exploitation of such methods are defined and some of the inherent limitations considered. ESA

Numerical calculations are carried out to investigate the possibilities of observing plasma and gyro lines with the proposed EISCAT polar cap radar in Svalbard (Arctic). The dependence of these lines on ionospheric parameters and on the scattering geometry is discussed. ESA

**N93-19535#** Auroral Observatory, Tromso (Norway).
**ENHANCEMENT OF THE GYRO LINES BY SUPRATHERMAL PARTICLES Abstract Only**
E. Malnes and N. Bjoernaa *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

The gyro lines are a pair of resonance lines in the power spectrum of incoherent scattering. They correspond to the electrostatic wavemode Omega(sub r) = + or - Omega(sub e)cos(theta) of a magnetized plasma where theta is the angle between the magnetic field and the scattering wave vector, and Omega(sub e) is the electron gyro frequency. The effects of suprathermal particles (precipitating electrons and protons, photoelectrons and secondary electrons) on the gyro lines are investigated. It is shown that the gyro lines can be enhanced if the velocity component of the suprathermal particles in the direction of the wave matches the phase velocity of the wave. The suprathermal particles are represented both by a shifted bi-Maxwellian, and by a power law velocity distribution. ESA

Avail: CASI HC A01/MF A01

Results from plasma line intensity measurements in Aug. 1990 with the EISCAT UHF radar at angles with the geomagnetic field lines are presented. In one experiment the antenna was pointed northwards at 73 degrees off the field line. At this angle, signals were detected with 30 min integration time at 3.75, 5 and 6.4 MHz, approximately 0.4 MHz below harmonics of the electron gyrofrequency. In another experiment, the antenna was pointed at angles from 0 to 50 degrees off the magnetic field in steps of 3 to 5 degrees. At offset frequencies between 6.0 and 6.75 MHz

plasma lines were readily detected with 10 min integration at angles up to 40 degrees off the field lines. Power measurements proved most reliable when the plasma line width was smaller but comparable to the filter bandwidth. The measured plasma line intensities were compared to theoretical intensities from full numerical calculations, based on a model of the Boltzman transport equation. ESA

Avail: CASI HC A01/MF A01

The application of the superposition of dressed particle concept to the problem of the electron density fluctuations in a plasma with embedded, charged dust grains is discussed. It is shown that the dressed particle approach breaks down when the dust grain separation r(sub d) and the charge Z become large, and that the scattering cross section then may be strongly enhanced. The criteria for the transition from one regime to the other are established and applied to the specific problem of scattering of electromagnetic waves from the polar mesopause. The calculations show that it is unlikely that the presence of dust grains, even when highly charged, can fully account for the observed enhanced polar mesospheric echoes. ESA

**THEORY OF RADAR SCATTERING FROM DUSTY PLASMAS Abstract Only** **c32**
Cesar LaHoz *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

A calculation of the scattering cross section of charged dust particles in a plasma is carried out for an incident electromagnetic wave with frequency much larger than the electron plasma frequency. The derivation employs the formalism embodied by the dressed test particle theorem of Hubbard and Rostoker. A critical discussion on the applicability of conventional plasma theory employed is given. It is shown that there is a range of values of the relevant parameters for which the underlying assumptions implied by the plasma approximation are applicable. The results depend crucially on neglecting the collective interactions of the dust particles with the plasma. This is justified when the number of dust particles in a Debye sphere is not large. The calculation is applied subsequently to the case of charged dust in the Earth's mesosphere in connection with polar mesospheric Summer echoes. Given efficient charging mechanisms of mesospheric dust, some features of charged dust scattering fit favorably with the observations, whereas others do not. At VHF radar frequencies the scattering cross section from a plasma with embedded charged dust particles depends strongly on the charge number of the dust particles. The enhancement of the dust scattering over the usual incoherent scattering due to ion acoustic thermal fluctuations can be several orders of magnitude, provided that the dust particles attain charges of several hundred. In addition, the scattering cross section decreases almost linearly as the radar frequency is increased. ESA

**SOLAR WIND VELOCITY MEASUREMENTS WITH THE EISCAT UHF ANTENNA ARRAY Abstract Only** **c92**
U. P. Loevhaug, William A. Coles (California Univ., San Diego.), R. Esser (Tromsoe Univ., Norway ), and J. Markkanen (EISCAT Scientific Association, Sodankylae, Finland ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

The EISCAT UHF antenna array was used extensively during the Summer of 1990 to measure the solar wind velocity, between ten and one hundred solar radii from the surface, by observing the scintillation of cosmic radio sources. It was possible, for the first time, to select observations such that the same solar wind stream was measured simultaneously at several radial distances from the Sun. Since the solar wind is highly variable in latitude, longitude and time, this selection is crucial for the comparison of the observed speeds with those derived from solar wind expansion models. Half the observations agreed well with an MHD (Magnetohydrodynamic) model where a moderate amount of Alfven wave energy is added to the flow. A further quarter show low velocities inside twenty solar radii, but accelerate rapidly beyond. The remainder apparently accelerate close to the Sun and remain steady beyond twenty solar radii. Simple modifications to the MHD model itself, or to the boundary conditions, can match neither of the later two classes. The observations reported are the most accurate of their type. This is primarily due to the long baselines available between the three EISCAT antennas which allow time delay measurements between the receivers to be made very precisely. EISCAT scintillation observations will provide unique support for future spacecraft missions, such as the solar polar passage of Ulysses. ESA

**TWO-DIMENSIONAL CHIRP MAPPING OF DEEP, FLUCTUATING RADAR TARGETS Abstract Only** **c32**
Tor Hagfors (Max-Planck-Inst. fuer Aeronomie, Katlenburg-Lindau, Germany)

and E. D. Tereshchenko (Academy of Sciences, USSR, Murmansk) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

A procedure for the mapping of radar targets which are spread both in delay and frequency offset is described. The procedure is based on transmitted pulses with linearly chirped frequency variation. The reconstruction of the properties of the target scattering function is achieved by combining observations made with a large number of different chirp rates. The procedure is closely related to tomography methods employed in other observational contexts. The relationship between tomographic reconstruction and multiple chirp reconstruction is discussed. Possible applications of this reconstruction method exist in HF ionospheric modification experiments, in MST (Mesosphere, Stratosphere, Troposphere) radar applications as well as on the radar astronomy of planetary bodies. Avail: CASI HC A01/MF A01

The INTERBALL mission planned to be launched at the end of 1992, will consist of two pairs of satellites. Its present status is presented with particular emphasis on the auroral probe, the orbit of which should be well suited for coordinated observations with ground based instruments. Scientific aims to be achieved during the mission, which require the definition of some specifically designed modes to be operated with the EISCAT UHF/VHF system, are reviewed. Principles for the creation of an EISCAT/INTERBALL working group are discussed on the basis of what was successfully done during the previous EISCAT/VIKING coordination. ESA

**ION COMPOSITION IN THE AURORAL F REGION: COMPARISON OF EISCAT DATA AND IONOSPHERIC MODEL PREDICTIONS Abstract Only**
C. Lathuillere, J. J. Sojka (Utah State Univ., Logan.), and R. W. Schunk (Utah State Univ., Logan.) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Statistical analysis was made on EISCAT ion composition data obtained from the CP0 (Common Program 0) and CP1 experiments performed between 1981 and 1986. The diurnal variation of the transition altitude between molecular and oxygen ions was found to be 26 km, which is much larger than the seasonal variation (8 km between Summer and Winter) and the magnetic activity variation (10 km for Kp ranging from 0 to 4). In addition, it was found that the extent of the transitioon region increases with the transition altitude. These results are compared with the TDIM model. The EISCAT Winter observations and the TDIM database were found to agree well for low magnetic activity and solar minimum conditions. Summer model and observations do not show the same agreement. Differences are discussed. In addition a comparison for different magnetic activity level, as given by Kp, is made, so as to separate electrodynamic effects and neutral atmosphere effects on the ion composition profile. ESA

**NUMERICAL CALCULATION ON IONOSPHERIC ELECTRON AND ION TEMPERATURES IN THE PRESENCE OF TURBULENCE Abstract Only**
F. R. E. Forme, J.-E. Wahlund, H. J. Opgenoorth, and Maths A. L. Persson *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

A numerical study of the effects of anomalous transport properties on the thermal structure of the topside ionosphere (250 km to 3000 km) for both ions and electrons was performed. In a plasma with a constant field aligned current density, current driven instabilities were introduced if their threshold conditions were fulfilled. The coupled electron and ion energy differential equations were solved both for the classical and the anomalous transport case. In a plasma which is stable to current driven instabilities turbulence may still be introduced for example by the interaction of an auroral mean with the ambient plasma. The energy equations were therefore solved for this case. Turbulence can result in a localized parallel enhanced electric field and a strong heating of the plasma, which in turn can produce ion outflows from the ionosphere. The first results of this numerical calculation are discussed. ESA

Farrugia *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Concurrent observations from two widely spaced radar experiments of quasi periodic flow bursts in the nightside are presented. The flow bursts closely resemble single radar observations reported by Williams et al. By using the Polar Anglo-American Conjugate Experiment (PACE) HF radar array at Halley Bay in conjunction with the EISCAT Common Program (CP) 2-D experiment, the flow bursts are shown to be a global phenomenon and important information as to their development and propagation can be determined. **PLASMA FLOW BURSTS IN THE AURORAL ZONE Abstract Only**
P. J. S. Williams, T. S. Virdi, R. V. Lewis, and M. Lester (Leicester Univ., England ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

EISCAT measurements of the night time ionosphere often show rapid variations in plasma velocity. These correspond to two different phenomena: a short lived flow burst which occurs simultaneously over several degrees of latitude and longitude; and a band of enhanced electric field, less than

20 km wide in the meridional direction, which drifts through the EISCAT field of view. In order to relate such enhancements of the electric field to the sequence of events in a substorm it is essential to distinguish between the two categories. With EISCAT this is best done using a rapid scanning program such as Common Program (CP) 2 or the United Kingdom special program FLUX. ESA

**HIGH ALTITUDE MEASUREMENTS WITH THE EISCAT VHF RADAR AND THE DEVELOPMENT OF COMMON PROGRAMME SEVEN**
**Abstract Only**
U. P. Loevhaug, A. P. vanEyken, and Gudmund Wannberg (EISCAT Scientific Association, Kiruna, Sweden ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

EISCAT's VHF Common Program Seven (CP7) is being developed to make measurements at altitudes well above the range of the UHF Common Programs and it is hoped to produce reliable data above 1000 km. It is expected that this program will allow the polar wind to be studied routinely from the ground for the first time. The theory of the polar wind requires light ions, predominantly H+, to be accelerated upwards, with a transition from sub to supersonic flow, in an ionosphere dominated by O+ ions. Theoretical models suggest that the critical point (where the Mach number becomes equal to unity) can sometimes be as low as 1500 km. However, the relative abundance of high velocity H+ ions will always be very low and the routine derivation of H+ parameters consequently difficult. Data recorded during the development of CP7 is used to illustrate the special problems of this work and attention is directed towards some of the high altitude phenomena observed. ESA

**NON MAXWELLIAN ION DISTRIBUTIONS IN THE AURORAL IONOSPHERE IN THE PRESENCE OF LARGE ELECTRIC FIELDS. PART 1: THE LOWER PART OF THE F REGION Abstract Only**
D. Hubert and E. Kinzelin *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

The atomic O+ and molecular NO+ distributions of ions drifting in a realistic ionosphere composed of atomic O and molecular neutrals is discussed. The atomic O+ ion oxygen and molecular NO+ ion nitrogen temperature and temperature anisotropy throughout the F auroral region in the presence of large electric fields are studied. The O+ ion temperature is smaller than the NO+ ion temperature in the lower part of the F region, and this effect increases with the increasing of the neutral temperature as well as the ion-neutral drift velocity. The O+ ion temperature anisotropy is maximum around 290 km in altitude for a constant neutral temperature as well as a constant ion-neutral drift velocity throughout the F region. For similar conditions the NO+ ion temperature anisotropy is constant between 175 km and 250 km in altitude, and decreases for higher altitudes. The properties of the line of sight ion distributions are displayed. The O+ distribution shows two different shapes. The fitting of these distributions by a one dimensional toroidal distribution is discussed. ESA

**NON MAXWELLIAN ION DISTRIBUTIONS IN THE AURORAL IONOSPHERE IN THE PRESENCE OF LARGE ELECTRIC FIELDS. PART 2: THE UPPER PART OF THE F REGION Abstract Only**
E. Kinzelin and D. Hubert *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

The influence of O+ - O+ and O+ - O collisions on the distribution function of O+ ions is investigated by using a modified relaxation model. The nonequilibrium distribution function is a linear combination of a Maxwellian term and a toroidal one. The coefficient of the former depends on the ion-ion collision frequency nu(sub ii) although the coefficient of the latter is a function of ion-neutral collision frequency nu(sub in). Those frequencies are obtained self consistently with the model taking into account the non Maxwellian state of the plasma. The present study predicts that the nu(sub ii)/nu(sub in) ratio is greater than in the case of a Maxwellian steady state. It yields a distribution function at 500 km in altitude close to a local Maxwellian state for typical values of the electric field. The model also suggests that the conditions for the occurrence of ion-cyclotron instability and an electrostatic one are more drastic than it was expected so far. The properties of a semiphenomenological model in the presence of a realistic ionosphere composed of atomic oxygen and molecular nitrogen neutral is discussed. ESA

**NON MAXWELLIAN ION DISTRIBUTIONS IN THE AURORAL IONOSPHERE IN THE PRESENCE OF LARGE ELECTRIC FIELDS. PART 3: THE MEASUREMENT PROBLEMS WITH A RADAR Abstract Only**
D. Hubert, E. Kinzelin, and C. Lathuillere (Grenoble-1 Univ., France ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

The three dimensional Raman distribution as a model for fitting non-Maxwellian distributions is revisited. The three dimensional Raman's model is demonstrated as unable to quantitatively predict the Post-Rosenbluth or ion cyclotron instability threshold. The application of this model to deduce ion temperature anisotropy from only one radar spectra measurement is shown to be restricted to specific aspect angles and small electric field intensities. This model provides the line of sight temperature and then the thermodynamical temperature for aspect angle equal to 54.7 degrees. A strategy to measure the plasma parameters in nonequilibrium state is discussed. It is based on new properties of the non-Maxwellian distribution functions. The possibility of measuring the microscopic state of the ionospheric plasma in terms of distribution functions from three different line of sight spectra is shown. ESA

**RESEARCH OF THE POLAR MIDDLE AND LOWER ATMOSPHERE WITH AN MST RADAR ON SPITSBERGEN (SVALBARD, ARCTIC) Abstract Only** **c46**
Juergen Roettger *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Research directions to studying the Arctic Mesosphere Stratosphere and Troposphere (MST) with radar are described. These are effects of Joule heating and high energy particle precipitation on the mesosphere. Possible influences in the dynamics and chemistry of the middle atmosphere are pointed out. The stratospheric fine structure, as seen by radar, is discussed and similarities to ozone layer structures indicated. Vertical transport, the structure and dynamics of tropopause folding, polar stratospheric clouds, gravity wave breaking and momentum deposition as well as turbulence, investigated by radar, are discussed. Certain tropospheric phenomena, such as polar lows, can also be studied by an MST radar. Instrumental specifications, which should be fulfilled for a polar MST radar and which would not add substantial costs to the total investment, are outlined. ESA

**POLAR CAP ABSORPTION EVENTS OBSERVED DURING THE EISCAT OPERATION IN 1981-1989 Abstract Only** **c92**
Hilkka Ranta and Aarne Ranta *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

During the years 1981-1989 a total of 71 solar proton events were observed. Polar Cap Absorption (PCA) events are an ionospheric signature of the precipitation of energetic protons into the Earth's atmosphere. The protons penetrate into the mesosphere causing enhanced D region electron densities. Dividing the events into strong, pfu greater than 1000 (where pfu is the proton flux measured at geosynchronous satellite orbit in units of ((cu cm ssr) to the -1 power), medium pfu greater than 100 and less than 1000, and weak events pfu less than 100, only strong and medium events have a considerable effect in the lower ionosphere. During the

strong events the mean daily absorption at 30 MHz measured in the auroral zone is greater than 2 dB, during the medium events less than 2 dB and during weak events less than 1 dB. The most active year during the EISCAT operation was 1989 when 23 solar proton events were observed including 6 strong events. Variation of the electron density in the D region during PCA events is discussed. ESA

**EISCAT INCOHERENT SCATTER RADAR OBSERVATIONS AND MODEL STUDIES ON DAY TO NIGHT VARIATIONS IN THE IONOSPHERIC D-REGION DURING THE PCA EVENT OF AUGUST 1989 Abstract Only**
Esa Turunen *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p Previously announced as N92-10559 (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

An intense solar proton event causing enhanced ionization in ionospheric D region occurred on 12 Aug., 1989. The event was partially observed during three successive nights by the EISCAT incoherent scatter radar at Ramfjormon near Tromso (Norway). Ion production rate calculation for GOES-7 satellite measurements of proton flux and a detailed steady state ion chemistry model of the D region are used together with the raw radar data to deduce the time variations of the electron concentration, negative ion to electron density ratio, neutral temperature and mean ion mass. The quantitative interpretation of EISCAT data as physical parameters and the solar radiation control of the deduced time variation are discussed. The deduced temperature variations are compared with simultaneous temperature measurements at Andoya (Norway) based on lidar technique. ESA

**INITIAL RESULTS FROM THE LOW ALTITUDE EXPERIMENTS CP-6 AND UP-1 Abstract Only**
P. N. Collis and M. T. Rietveld (EISCAT Scientific Association, Ramfjordbotn, Norway ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Measurements of the lowest part of the ionosphere using the EISCAT VHF system are provided by Common Program (CP)-6, which was introduced in 1990. Spectral width, Doppler shift and electron density are obtained with a resolution of 1.05 km, from 70 km altitude up to about 95 km altitude, using a vertically directed antenna. Approximately 250 hours of observations have been obtained to date, often simultaneously with UHF CP operation. Experiment UP-1 uses the same pulse scheme as CP-6 and is intended for operation at short notice during Polar Cap Absorption (PCA) events. Antenna pointing is selected by the experimenter, depending on the lowest altitude required for the observations. Spectra have been measured from altitude required for the observations. Versions of UP-1 exist for both the VHF and UHF radars. Six separate PCA events have been monitored by UP-1 since early 1988, in a total of more than 100 hours of observations. UHF measurements were obtained during all these events but VHF cooperation was only possible for one of them. Initial results from these experiment schemes, relating to atmospheric dynamics and ion chemistry, are presented. ESA

**D-REGION INCOHERENT SCATTER SPECTRA: DISCREPANCIES BETWEEN OBSERVATIONS AND CURRENT THEORY Abstract Only**
Ulf-Peter Hoppe, Georg Hansen, Esa Turunen (Geophysical Observatory, Sodankyla, Finland ), and Paivio Pollari (Oulu Univ., Finland ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Extended D region observations were performed with the EISCAT UHF radar during the Aug. 1989 PCA (Polar Cap Absorption) event. The excellent quality of this data, together with temperature measurements by lidar about 130 km from Tromso (Norway) makes it possible to compare the observed incoherent scatter spectra with current theory. The discrepancy found, (also in data collected before the PCA event), leads to examination of other published observed D region spectral measurements. In the absence of temperature or density observations together with these earlier measurements, the new CIRA 86 model is used. The spectra of incoherent scatter from the D region are generally found to be narrower than current theory predicts, independent of radar frequency, latitude, or season. Some possible reasons for this discrepancy are discussed. ESA

**N93-19560#** Geophysical Observatory, Sodankyla (Finland).
**INTERPRETATION OF INCOHERENT SCATTER SPECTRAL WIDTH CHANGES IN THE D-REGION DURING AN AURORAL PRECIPITATION EVENT Abstract Only**
Esa Turunen *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Auroral high energy electron precipitation, which causes excess ionization also in the D region heights, gives condition of high signal to noise ratio in incoherent scatter radar measurements of the lowest ionosphere and makes it possible to get reliable measurements of scattered spectral width. However the interpretation of the spectral width may not be straightforward. During auroral precipitation events recorded by the EISCAT VHF radar on 17 Apr. 1987 between 19.05 and 20.30 UT, large variations in the spectral width were detected. The nearby 32 MHz riometer in Ramfjordmoen (Norway) recorded 1.5 dB maximum absorption during the precipitation. The possible interpretations of the observed variations are discussed. ESA

**N93-19561#** EISCAT Scientific Association, Kiruna (Sweden).
**POSSIBLE CAUSE AND CONSEQUENCE OF LAMINATED POLAR MESOSPHERE SUMMER ECHOES Abstract Only**
Juergen Roettger *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Polar Mesosphere Summer Echoes (PMSE) observed with the EISCAT VHF radar as well as other high (and middle) latitude MST (Mesosphere, Troposhere, Stratosphere) radars often show thin layering of structures, which sometimes can be quasiperiodic in altitude. Typical examples of these echo structures, called laminated PMSE, are presented. The enhanced scatter cross section of PMSE is very likely related to the low temperatures occurring near the high altitude mesopause in Summer. Long period waves, which can be steepened, are proposed to periodically modulate the temperature profile. In the wave phases with low temperature, the scatter cross sections will be enhanced locally giving rise to laminated PMSE. These laminated structures, originating from atmospheric waves move downward with the phase velocity of these waves. The downward progressing laminae are often thinner than the range resolution of radars. The mean vertical velocity, measured during PMSE conditions, will then be affected by the vertical phase velocity of waves and, thus, does not reflect the real fluid velocity. This effect can explain the unsettled question as to why polar MST radars measure a substantial downward velocity instead of an upward velocity, which is reasonably expected from the existence of the cold polar mesopause in Summer as well as from model computations. ESA

**DETERMINATION OF D-REGION PLASMA VELOCITY VECTOR FROM SCANNING GEN-11 DATA Abstract Only**
Paivio Pollari *In its* Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

The Polar Mesosphere Summer Echoes (PMSE) campaigns of the last two summers have provided a lot of data where the D region has been measured using a monostatic three position scan. During the good signal to noise ratio this gives (among other information) three independent components of plasma velocity as a function of time. The determination of plasma velocity vector was examined by using spline interpolation in height and altitude for each measured velocity component. Velocity vector is then obtained using the beam swing approach. The reliability check of the results is based on using error bars of fitted results as weights in spline interpolation. The effect of different postintegration times is also discussed. ESA

**ALTITUDE VARIATIONS IN AMPLITUDE AND PHASE OF TIDAL OSCILLATIONS AT HIGH LATITUDE Abstract Only**

T. S. Virdi and P. J. S. Williams *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)

Avail: CASI HC A01/MF A01

In previous works on EISCAT observations of tidal oscillations, Common Program 1 (CP1) data, where the method of determining tides was based on tristatic measurements of plasma velocities, provided only a limited measure of altitude variations in amplitude and phase oscillations, as the data were only available at four altitudes in the E region. Common Program 2 (CP2), using the monostatic method provides velocity data at every 2.7 km between 100 and 130 km. CP2 data are used to determine the variations of tidal amplitude and phase with altitude, using the improved height resolution. Day to day variations in amplitude and phase are studied. The results are discussed in light of the previous works. ESA

**THE IONOSPHERIC RESPONSE TO ATMOSPHERIC GRAVITY WAVES IN THE EISCAT REGION Abstract Only**

G. Kirchengast, R. Leitinger, and Kristian Schlegel (Max-Planck-Inst. fuer Aeronomie, Katlenburg-Lindau, Germany ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)

Avail: CASI HC A01/MF A01

The equations of continuity and momentum for the electrons were used to construct a numerical model particularly adequate for the F layer of the high latitude ionosphere. It yields the spatial temporal evolution of the plasma parameters 'electron density' and 'magnetic field parallel ion velocity'. The main properties and capabilities of the model at the present stage of development and results of the simulation of the response of the high latitude ionosphere to model large scale atmospheric gravity waves, which are overlaid upon the neutral atmosphere as disturbances, are presented. This is done in the presence of varying background neutral winds and electric fields. Several important features of the observed ionospheric signatures are discussed. Future aims are addressed, and (maybe) first results of comparison with genuine EISCAT data are presented. ESA

**N93-19568#** Max-Planck-Inst. fuer Aeronomie, Katlenburg-Lindau (Germany).

**NONLINEAR INTERACTIONS ASSOCIATED WITH TID'S IN THE QUIET POLAR F-REGION FROM EISCAT OBSERVATIONS Abstract Only** **c46**

Shuying Ma and Kristian Schlegel *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)

Avail: CASI HC A01/MF A01

Observational evidences of nonlinear wave-wave interactions associated with TID's (Traveling Ionospheric Disturbances) in the quiet day time polar F region are acquired from EISCAT CP1 (Common Program 1) measurements. The dynamic frequency spectra in the upper F region and the one dimensional wave number spectra of TID's show an energy cascading from longer periods (larger scales) to shorter ones (smaller scales). The bispectra and the change rates of the action density suggest that a chain of resonant triple interactions take place. The observed nonlinear interactions are generally associated with unusually large gradients of the background ion temperatures and a change of the direction of the field aligned mean neutral wind. The TID including gravity wave wavenumbers along the magnetic field k(sub xi) are calculated by a newly developed inverse method suitable for the upper F region with a negligible perpendicular electric field. The k(sub xi) obtained as a function of period and altitude covering altitudes from 256 km to 587 km show a decrease with height and a nearly nondispersive character at greater heights. The nonlinear processes in the higher F region are accompanied by a turn of k(sub xi) around zero which indicates reflections. The weakness of the dispersion together with the reflections seem to enable the reasonable selection conditions. In addition, the lower F region containing a temperature discontinuity is another main area for nonlinear processes, where more dramatic and complicated nonlinear evolutions of TID spectra are observed. ESA

A vertical structure of AGW (Atmospheric Gravity Wave) associated fluctuation of ionospheric plasma parameters for the 100 to 240 km altitude range was investigated by making use of the data provided from the Tromso (Norway) measurements in the EISCAT CP1 (Common Program 1) mode. The dominant fluctuation period and the distribution of line of sight

wavenumber (k(sub parallel)) were investigated over a period range of 20 to 300 min and a wavenumber range of -0.1 to 0.1 km(exp -1) with the aid of a space time spectrum analysis. By means of band pass filtering with various frequencies, fluctuation structures were further investigated in the time altitude section. In order to avoid a contamination of electrodynamical effects e.g., by electric field and particle precipitation in the detection of AGW activity, the present analyses were restricted to data taken during relatively low geomagnetic activity. For the majority of the cases, two wavenumber regions occupied by the dominant components of the upgoing and downcoming AGW's were found to be not symmetric. The region corresponding to a downcoming AGW is slightly extended to high-(absolute value of k(sub parallel)) values compared to the upgoing one. This asymmetry can be explained in terms of the southward tilt of the radar beam on the Tromso measurements. Through the analysis of fluctuation structures in the time altitude section, a clear downcoming AGW was identified simultaneously with its upgoing counterpart. The magnitude of the line of sight phase velocity of the former was observed to be much smaller than that of the latter. This agreed well with the statistical features deduced from the space time spectrum analyses. Some parts of the downcoming AGW spectrum might be interpreted in terms of the reflection of upgoing waves from the wind shear. ESA

Avail: CASI HC A01/MF A01

Coherent HF radars are presently in operation at Goose Bay and Schefferville (Canada) to study the convection in the high latitude ionosphere. From the line of sight components of the plasma velocity measured by beach radar over a common field of view nearly instantaneous maps of the two dimensional plasma flow are obtained over the auroral zone and the polar cap. These maps have a time resolution of a few minutes. They drift in MLT with the Earth rotation. From a time series of such convection maps, the variation with universal time (UT) of the latitudinal velocity profile at a fixed MLT are obtained. These represent 'true' UT time variations of the convection. Examples of such variations are shown. ESA

Transmitter replacement and radar theory improvement have lead to the decision to upgrade the STARE (Scandinavian Twin Auroral Radar Experiment) stations in Finland and Norway, thereby improving the system's spatial and time resolution and the reliability and amount of information. The modified radar with a new transmitter, experiment control and data processing facilities and an upgraded receiving system started its operation in the Spring of 1991. The new design allows time resolution down to 1 sec and spatial resolution down to 7.5 km. Experiments can be optimized for special purposes. The standard data contain power profiles and multipulse autocorrelation functions, from which velocities and spectra can be calculated. Examples from recent measurements are shown. For ionospheric electrodynamics studies the STARE data is supported by IMAGE (International Monitor for Auroral Geomagnetic Effects) two dimensional magnetometer network data and auroral images obtained by all sky cameras operated in or near the STARE field of view. A dedicated work station with appropriate software to integrate the various original data and to simulate conductivity profiles obtained from the optical information is under development. All these activities are focusing on effective operation during the forthcoming Freja, Interball and ISTP missions. ESA

Avail: CASI HC A01/MF A01

With the 500 W COSCAT transmitter, a program of passive observations were undertaken with the aims: to find the optimum observing direction for the detection of backscatter; and to obtain a statistical dataset of spectral moments such as backscatter power, Doppler velocity, and spectral width. Results are presented from four observing campaigns and compared with previous coherent scatter observations. A new finding was that the most narrow spectra appear to be associated with phase speeds of order 420 ms(exp -1), in accordance with recent theoretical predictions for irregularities stabilized by anomalous collisions. The most recent passive observations are performed with increased spectral resolution to detect detailed structure in the coherent scatter spectra. The initial coordinated coherent and incoherent scatter observations attempted to make simultaneous measurements of E region irregularities and F region plasma flows on the same magnetic field line. Some preliminary analysis of the recent data are presented and the results discussed. ESA

Generation of the electric field and currents in the cusp region of the Earth's magnetosphere is an important problem of magnetospheric physics. A diffusion process on the magnetopause is a relevant model responsible for such generation. With the suggestion that the plasma flow in the diffusion layer has a slight feedback influence from the ionosphere, there

is a solution for the electric field potential distribution into and in a vicinity of the dayside cusp. The model allows the ionospheric current flow to be built for different IMF (Interplanetary Magnetic Field) parameters as well as quantitative comparison of the model with experimental data to be made. A relevant agreement of the mentioned model experiment comparison suggests that the diffusion model under consideration can be a realistic part of the magnetospheric electrodynamics and that the diffusion process has an important role in the boundary layer formation. An investigation that attempts to find the common features behind all different types of incoherent scatter measurements, so that it becomes possible to describe the most general incoherent scatter measurement using a single, well defined set of variables, is presented. The system presently makes use of the GUISDAP analysis package. The general experiment design parameters make it possible to further develop the system as an experiment design tool for defining the pulse form and signal processing algorithms that are used in actual experiments. The use of statistical inversion theory guarantees the use of optimal analysis methods. To be general enough, the experiment description parameters must provide all the information necessary for statistical inversion methods. At the same time it is possible to build an experiment evaluation system where the behavior of different experiments can be analyzed and/or simulated in the design phase. How this is accomplished is discussed, as well as further plans for experiment design. Fully developed, the system will integrate together many of the tasks presently performed by the various languages (like TLAN, ELAN, and CLAN) in EISCAT. Because of the integrated analysis and experiment evaluation capabilities, and because of easy portability to different computers, it is felt that there is a great deal of promise for making incoherent scatter experiment design, running, and analysis more straightforward. ESA

In recent years, changing requirements and new developments in coding techniques have created a demand for the use of complementary and alternating codes in EISCAT experiments and for the possibility of mixing these with more conventional modulations. The original signal processing and experiment control hardware was unable to cope with this demand, so several major hardware upgrades (e.g. decoder for alternating codes, data loading channel for the buffer memory) were designed and integrated into the system over the period 1988-1991. As the GEN-SYSTEM tools can only address the pre-1988 hardware, new software was developed and existing system software was enhanced to make the new hardware devices fully accessible from user programs. This upgrading program is now completed at all EISCAT sites. To make optimum use of the new tools, certain experiment design rules should be followed. These can be regarded as a superset of the GEN-SYSTEM and have been named the G2-SYSTEM. A program library containing alternating code analogs to most GEN-SYSTEM experiments is being developed. An overview of the G2-SYSTEM tools is given and G2-SYSTEM analogs to the present CP-1 (Common Program 1) and UP-3 programs are presented. ESA

**REAL AND SPURIOUS ANTICORRELATIONS BETWEEN V(PARALLEL) AND V(PERPENDICULARS) IN EISCAT DATA Abstract Only** **c32**
A. R. Breen and P. J. S. Williams (University Coll. of Wales, Aberystwyth.) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Tristatic measurements of the field parallel and field perpendicular components of the plasma velocity in the F2 layer made by the EISCAT radar system frequently show evidence of an anticorrelation between these components, with no detectable lag of V(parallel) from antiphase of V(perpendiculars). It can be shown that spurious anticorrelations between V(parallel) and V(perpendiculars) may be introduced by random noise errors in measurements made at the individual sites being combined in the tristatic calculation. An alternative method of calculating the field parallel plasma velocity is suggested, and it is shown that, when the signal to noise ratio is sufficiently high, genuine anticorrelations between the variations of V(parallel) and V(perpendiculars) may be detected by this method. **THE EISCAT UHF RADAR AS A METEOR RADAR: METEOR RADIAL VELOCITIES DETERMINED FROM A BARKER CODED POWER PROFILE Abstract Only** **c32**
Gudmund Wannberg and Asta Pellinen-Wannberg (Swedish Inst. of Space Physics, Kiruna.) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Under certain conditions, Barker coded power profiles with baud lengths of a few microns can be used to measure Doppler velocities in the interesting range in addition to serving their basic purpose of measuring electron densities. The method is based on the fact that the range ambiguity function of a Barker coded modulation is singly peaked when the target velocity is so small that the phase shift across the code is a small fraction of a full turn, but collapses into a successfully broader, multiply peaked response as the phase shift increases. Meteors moving through the beam with constant speed should then produce echos which would appear to be very broad in range but which would also have a symmetric multiple peak structure. These echos could then be fitted for velocity and range using a simple hard target, constant velocity model. An overview of an experiment designed to study the relationship between the Geminids meteor shower and the possible occurrence of sporadic E is given together with a display of typical raw power profiles, and the results of the range velocity fit are compared to present best estimates of the speed and disintegration height of Geminid meteors. Avail: CASI HC A01/MF A01

Since the recent discovery of strongly enhanced but short lived ion acoustic lines in some of EISCAT's experiments, the need for an automatic means of detecting such echoes, preferably in real time, became apparent. An algorithm which finds and stores, in real time as well as from archived data, long pulse spectra with large asymmetries is in use. Spectra resulting both from echoes off orbiting satellites as well as the enhanced ion acoustic shoulders caused by large thermal drifts are found, but the latter are usually distinguishable from the former by their range extent, duration, and spectra width. Preliminary results of searching through data from Common Programs 1,2,3, and 5 are presented in the form of a statistical survey. Most of the hundreds of spectra found with enhanced shoulders come from field aligned antenna positions, but spectra have also been found at other aspect angles. Enhancements in the common volume are difficult to find, because of the combined effects of an occurrence minimum at about 250 km and the remote site antenna scans to the E region. The occurrence statistics and characteristics of the spectra are presented as functions of height, aspect angle, time, and season. Correlations are shown with other geophysical parameters such as electron temperature, occurrence of aurora, and ion upflows. Possible interpretations and implications of these data are presented. **EISCAT RADAR OBSERVATIONS OF ENHANCED INCOHERENT SCATTER SPECTRA: THEIR RELATION TO RED AURORA AND FIELD-ALIGNED CURRENTS Abstract Only** **c32**
P. N. Collis, I. Haeggstroem (Swedish Inst. of Space Physics, Kiruna.), Kari U. Kaila (Oulu Univ., Finland ), and M. T. Rietveld (EISCAT Scientific Association, Ramfjordbotn, Norway ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Enhancements of one or both of the ion acoustic peaks of incoherent scatter spectra in the auroral ionosphere were observed with the EISCAT UHF and VHF radars. All such occurrences for which optical data are available show these events to coincide with times when active, unusually intense, red auroral forms were in the vicinity of the radar beam at high altitudes. Both the optical and the radar signatures are expected to be caused by large fluxes of low energy electrons. Analyses of the measured spectra, in which the electron drift speed is estimated, imply field aligned current densities up to several mA/sq m. The vertically directed VHF observations from approximately 1000 km altitude reveal that the spectral enhancements, which are transient features in field aligned measurements, can exist for up to several minutes. ESA

**TURBULENCE SCATTERING LAYERS IN THE MIDDLE-MESOSPHERE OBSERVED BY THE EISCAT 224 MHz RADAR Abstract Only**
P. N. Collis, M. T. Rietveld (EISCAT Scientific Association, Ramfjordbotn, Norway ), J. Roettger, and W. K. Hocking (Adelaide Univ., Australia ) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Spectral measurements of signals from altitudes well below 70 km were obtained with the EISCAT 224 MHz radar. Observations with the antenna pointing away from the vertical, show spectral power distributions departing markedly from those expected from collision dominated incoherent scatter theory. Separated peaks in the spectra occur in regions of abrupt shear in the velocity of the neutral wind within the scattering volume. Anomalously large backscattered power levels are sometimes observed in the vicinity of such shears at altitudes near 68 km. It is unlikely that these echoes are due to incoherent (Thomson) scatter. Instead, it is proposed that the abrupt velocity shears develop neutral turbulence in narrow layers, and that these layers cause the enhanced backscatter. Calculations of the expected backscatter power levels at 224 MHz for incoherent scatter and for turbulence scatter show that the turbulence component can be the dominant one at heights below about 68 km if the potential refractive index gradient and the turbulence energy dissipation rates are large enough. ESA

**NO(+)-ENHANCEMENT IN THE HEIGHT RANGE BETWEEN 180 AND 300 km DURING ION HEATING EVENTS Abstract Only**
N. Glatthor *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

At times of enhanced convective electric fields (e.g. at substorm onset), the F region ions drift in E by B direction and are heated by collisions with the neutrals at a time scale of the order of seconds. Besides several other effects model calculations predict an increase of the NO(+) concentration throughout all the F layer during ion heating events, because the conversion of O(+) to NO(+) is assumed to be strongly energy dependent. However it is difficult to derive the O(+):NO(+) ratio directly from the shape of the radar spectra. The O(+):NO(+) ratio during several ion heating events is calculated from the measured height profiles of the ion temperature. At maximum ion drift the height profiles show relative minima of several 100 K between 230 and 250 km, as compared to the lower and upper F region. These minima are thought to be due to an enhancement of the NO(+) concentration, which is interpreted as a lower ion tolerance by the standard EISCAT fit. Further the O(+):NO(+) ratio is calculated from the chemical region equations, considering the temperature dependence of the reaction rates. The results of the calculations show that the NO(+) concentration below 270 km increases considerably during ion heating events. The transition zone from molecular ion to O(+) dominance can rise from 200 km up to more than 240 km. ESA

**THE EFFECT OF DIFFERENT COLLISION OPERATORS ON THE STANDARD DATA ANALYSIS MODEL Abstract Only** **c75**
Volker Grassmann *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

A recent model of incoherent scattering is adopted for the case of a collisional plasma without external forces. However the BGK (Bhatnagar-Gross-Krook equation) collision term in its density conservative form is replaced by the BGK collision term in its density, momentum, and energy conservative form. It is shown that the original standard model overweights the action of particle collisions by about 60 percent. The same result is obtained by using the generalized Fokker-Planck collision term. The latter collision operator is more sophisticated, but Stubbe's BGK approach is more suitable for practical purposes. ESA

Avail: CASI HC A01/MF A01

During the last decade the EISCAT magnetometer cross has sampled a whole wealth of good data. IMAGE is the substitute for the earlier network. The main difference is that it will provide a longer north-south profile, from the Norwegian coast down the south of Finland. Prime objectives of the network will be to support the upcoming satellite projects Freja and Interball. The long profile allows simultaneous observation of the eastward and westward electrojets and permits the dynamics of both to be compared. In cooperation with the SAMNET stations the whole array will be a powerful tool to study auroral and subauroral wave phenomena. ESA

**NATURALLY ENHANCED ION-ACOUSTIC WAVES IN THE AURORAL IONOSPHERE OBSERVED WITH THE EISCAT 933 MHz RADAR Abstract Only**
M. T. Rietveld, P. N. Collis (EISCAT Scientific Association, Kiruna, Sweden), and J.-P. Saint-Maurice (University of Western Ontario, London.) *In* Oulu Univ., Fifth EISCAT Scientific Workshop: Programme and Abstracts 1991 1 p (For primary document see N93-19518 06-90)
Avail: CASI HC A01/MF A01

Observations of strongly enhanced ion acoustic shoulders of the incoherent scatter spectrum at 933 MHz at altitudes from 138 km to 587 km were obtained with the EISCAT UHF radar. The enhancements can be up to one or two orders of magnitude in total backscattered power and can occur at either one or both of the ion-acoustic shoulders. These unusual spectra appear in two preferred height regions having different characteristics, one below 200 km and one above about 350 km. The enhancements are associated with geomagnetic disturbance, high electron temperatures, auroral arc, and red aurora in the F region. The observations, which are mainly along the magnetic field direction, indicate that field aligned thermal electron drifts are destabilizing the ion acoustic waves. They confirm and extend the one other publication reporting on similar echoes. Field aligned flows of soft electrons depositing their energy at horizontally poor conducting G region heights are suggested as being the cause of parallel electric fields in the ionosphere. These fields then produce the thermal electron motions that are argued to be the cause of the observations. ESA

Project BICORE (Bistatic Coherent scatter Radar Experiment) is a proposal for a new 400 MKz continuous wave auroral radar facility in Karelia. Observational area of the BICORE radar covers the Kola peninsula as well as the area controlled by the EISCAT radars. The radar is planned to be built using existing industrial equipment which should be disconnected, moved, and reconnected in Karelia. The BICORE radar uses the same frequency band as the polar cap radar. The TX power can be from 10 to a few hundred kW, and allows (in principal), planning of cross receiving of signals over the EISCAT area. The TX antenna beam 0.3 to 0.4 deg in its azimuth width is frequency controlled. The remote RX site has multibeam antenna matrix where the width of each beam is around 1.5 deg. The important feature of the new auroral radar is the direct method of measuring the irregularity drift velocity which was not involved in the space convolution effect of the two or multipulse methods. The spatial resolution of the BICORE radar is approximately 5 by 60 sq km. The BICORE radar will be open for experiments for all EISCAT community members as well as for associated members. ESA

Avail: CASI HC A01/MF A01

EISCAT observations of periodic variations in the perpendicular electric field, topside ionospheric electron temperature, and weak E region ionization with a period beween 3 to 4 mHz are presented. The six hour long event occurred during quiet auroral conditions with a moderately strong F layer and almost absent E layer. The weak E region pulsations in electron density were well below 1.0 x 10(exp 11) cu m and occurred in the altitude interval 105 to 140 km indicating weak precipitation around 5 to 20 keV. The more energetic particles were usually leading the somewhat softer precipitation by about 1 minute. Electron temperature pulsations above 300 km showed enhancements of about 1000 K which probably cannot be explained by the very weak particle precipitation. The pulsations in the perpendicular electric field had amplitudes around 15 mV/m and seemed to be eliptically polarized and anticorrelated with the pulsations in electron temperatures and E region electron density. The averaged background perpendicular electric field was near 0 mV/m. Alfvenic waves are suggested to explain the observations. ESA

Avail: CASI HC A01/MF A01

Campaigns to study the relationship between the generation of large scale waves in the high latitude thermosphere, and the propagation of such waves to lower latitudes, were held. EISCAT was used to estimate Joule heating and Lorentz forcing in the auroral electrojet by making high resolution measurements of electric field strength and electron concentration. Magnetometer records indicated the geographical extent of the auroral activity. At mid-latitudes an HF Doppler network and a number of ionosondes were used to monitor the horizontal propagation and vertical structure of the waves. On frequent occasions, especially after sunset, an unambiguous link was observed between the onset of enhanced activity in the electrojet and the subsequent arrival of a large scale gravity wave at mid-latitude. During the afternoon sector, however, strong auroral events were sometimes observed with only weak signs of wave activity in the farfield. This is due partly to attenuation through ion drag and partly to reduced sensitivity of the measuring techniques in the daytime ionosphere. In a number of cases it was possible to relate time variation in the source to the period of the wave itself; as expected, the components of longer period propagate furthest before dissipation. ESA

The Earth Orbital Rendezvous (EOR) configuration for the piloted mission is composed of three propulsive elements in addition to the Crew Module (CM): Primary Trans-Lunar Injection (PTLI), Lunar Braking Module (LBM), and Earth Return Module (ERM). The precursor mission is also composed of three propulsive elements in addition to its surface payloads: PTLI, LBM and the Payload Landing Module (PLM). Refer to Volume 1, Section 5.1 and 5.2 for a break-up of the different stages into the four launches. A quick summary is as follows: PTLI is on Launch 1 and 3 while the LBM, PLM, and surface payloads are on Launch 2 and another LBM, ERM, and CM on Launch 4. The precursor mission is designed to be as modular as possible with the piloted mission for developmental cost considerations. The following topics are discussed: launch vehicle description; primary trans-lunar injection stage; lunar braking module; earth return module; crew module; payload landing module; and surface payload description. The authors, a group of 18 veteran space operations officers, explored the concept of placing a permanently manned station on Mars - Project Ares. Using a five phase plan involving an early moon base and three scientific missions to Mars followed by cargo missions and eventually manned trips to the planet, the authors analyzed, designed, and documented their approach. The report focuses on the second phase of the project - scientific expansion of our knowledge of Mars and proof of a reliable transportation system. Among the subjects discussed in the report are management, mission profile and environment, and mission systems. The latter subject contains a variety of systems proposed by various authorities in the space industry and selected to fulfill the unique requirements of the project. Because this phase is an integral part of the project, emphasis was on reusability and versatility. GRA

Because the President of the United States has begun the Space Exploration Initiative (SEI), which entails a manned mission to Mars by the year 2016, it is necessary to use the Moon as a stepping stone to this objective. In support of this mission, unmanned scientific exploration of the Moon will help re-establish man's presence there and will serve as a basis for possible lunar colonization, setting the stage for a manned Mars mission. The lunar landing platform must provide support to its payload in the form of power, communications, and thermal control. The design must be such that cost is held to a minimum, and so that a wide variety of payloads may be used with the lander. The objectives of this mission are (1) to further the SEI by returning to the moon with unmanned scientific experiments, (2) to demonstrate to the public that experimental payload missions are feasible, (3) to provide a common lunar lander platform so select scientific packages could be targeted to specific lunar locales, (4) to enable the lander to be built from off-the-shelf hardware, and (5) to provide first mission launch by 1996. Project Minerva is a low-cost manned Mars mission designed to deliver a crew of four to the Martian surface using only two sets of two launches from the Kennedy Space Center. Key concepts which make this mission realizable are the use of near-term technologies and in-situ propellant production, following the scenario originally proposed by R. Zubrin. The first set of launches delivers two unmanned payloads into low Earth orbit (LEO): the first payload consists of an Earth Return Vehicle (ERV), a propellant production plant, and a set of robotic vehicles; the second payload consists of the trans-Mars injection (TMI) upper stage. In LEO, the two payloads are docked and the configuration is injected into a Mars transfer orbit. The landing on Mars is performed with the aid of multiple aerobraking maneuvers. On the Martian surface, the propellant production plant uses a Sabatier/electrolysis type process to combine nine tons of hydrogen with carbon dioxide from the Martian atmosphere to produce over a hundred tons of liquid oxygen and liquid methane, which are later used as the propellants for the rover expeditions and the manned return journey of the ERV. The systems necessary for the flights to and from Mars, as well as those needed for the stay on Mars, are discussed. These systems include the transfer vehicle design, life support, guidance and communications, rovers and telepresence, power generation, and propellant manufacturing. Also included are the orbital mechanics, the scientific goals, and the estimated mission costs. Author

In response to the Report of the Advisory Committee on the future of the U.S. Space Program and a request from NASA's Exploration Office, the MIT Hunsaker Aerospace Corporation (HAC) conducted a feasibility study, known as Project Columbiad, on reestablishing human presence on the Moon before the year 2000. The mission criteria established were to transport a four person crew to the lunar surface at any latitude and back to Earth with a 14-28 day stay on the lunar surface. Safety followed by cost of the Columbiad Mission were the top level priorities of HAC. The resulting design has a precursor mission that emplaces the required surface payloads before the piloted mission arrives. Both the precursor and piloted missions require two National Launch System (NLS) launches. Both the precursor and piloted mission have an Earth orbit rendezvous (EOR) with a direct transit to the Moon post-EOR. The piloted mission returns to Earth via a direct transit. Included among the surface payloads preemplaced are a habitat, solar power plant (including fuel cells for the lunar night), lunar rover, and mechanisms used to cover the habitat with regolith (lunar soil) in order to protect the crew members from severe solar flare radiation. The progress accomplished in the first five months of the three-year grant period of Teaching, Learning, and Planetary Exploration is presented. The objectives of this project are to discover new education products and services based on space science, particularly planetary exploration. An Exploration in Education is the umbrella name for the education projects as they are seen by teachers and the interested public. As described in the proposal, our approach consists of: (1) increasing practical understanding of the potential role and capabilities of the research community to contribute to basic education using new discoveries; (2) developing an intellectual framework for these contributions by supplying criteria and templates for the teacher's stories; (3) attracting astronomers, engineers, and technical staff to the project and helping them form productive education partnerships for the future, (4) exploring relevant technologies and networks for authoring

and communicating the teacher's stories; (5) enlisting the participation of potential user's of the teacher's stories in defining the products; (6) actually producing and delivering many educationally useful teacher's stories; and (7) reporting the pilot study results with critical evaluation. Technical progress was made by assembling our electronic publishing stations, designing electronic publications based on space science, and developing distribution approaches for electronic products. Progress was made addressing critical issues by developing policies and procedures for securing intellectual property rights and assembling a focus group of teachers to test our ideas and assure the quality of our products. The following useful materials are being produced: the TOPS report; three electronic 'PictureBooks'; one 'ElectronicArticle'; three 'ElectronicReports'; ten 'PrinterPosters'; and the 'FaxForum' with an initial complement of printed materials. We have coordinated with planetary scientists and astronomers both at the technical and policy level to assure the efficiency and ultimate utility of these efforts to derive educational benefits from the space science and exploration program as a whole. The proposed research efforts funded by the UDAP grant to the BRI involve the study of magnetic field waves associated with the Uranian bow shock. This is a collaborative venture bringing together investigators at the BRI, Southwest Research Institute (SwRI), and Goddard Space Flight Center (GSFC). In addition, other collaborations have been formed with investigators granted UDAP funds for similar studies and with investigators affiliated with other Voyager experiments. These investigations and the corresponding collaborations are included in the report. The proposed effort as originally conceived included an examination of waves downstream from the shock within the magnetosheath. However, the observations of unexpected complexity and diversity within the upstream region have necessitated that we confine our efforts to those observations recorded upstream of the bow shock on the inbound and outbound legs of the encounter by the Voyager 2 spacecraft. The overall goal is to illuminate the mechanisms that control weather and climate on the Earth and other planets. Each planet presents its own puzzling behavior - the stability of jets and vortices in Jupiter's otherwise turbulent atmosphere, the superrotation of the Venus atmosphere, the interplay of dust, polar volatiles, and climate change in Mars, the supersonic meteorology of Io, and the counterintuitive equator-to-pole temperature gradients on the outer planets. The data sets are generally those obtained from spacecraft - cloud-tracked winds, radiometrically inferred temperatures, and the results of in situ observations where appropriate. The approach includes both data analysis and modeling, ranging from analytic modeling to time-dependent numerical modeling of atmospheric dynamics. The latter approach involves the use of supercomputers such as the San Diego Cray. Progress is generally made when a model with a small number of free parameters either fits a data set that has a large number of independent observations or applies to several planets at once. The first set of hydrogen reduction experiments to use actual lunar material was recently completed. The sample, 70035, is a coarse-grained vesicular basalt containing 18.46 wt. percent FeO and 12.97 wt. percent TiO2. The mineralogy includes pyroxene, ilmenite, plagioclase, and minor olivine. The sample was crushed to a grain size of less than 500 microns. The crushed basalt was reduced with hydrogen in seven tests at temperatures of 900-1050 C and pressures of 1-10 atm for 30-60 minutes. A capacitance probe, measuring the dew point of the gas stream, was used to follow reaction progress. Experiments were also conducted using a terrestrial basalt similar to some lunar mare samples. Minnesota Lunar Simulant (MLS-1) contains 13.29 wt. percent FeO, 2.96 wt. percent Fe2O3, and 6.56 wt. percent TiO2. The major minerals include plagioclase, pyroxene, olivine, ilmenite, and magnetite. The rock was ground and seived, and experiments were run on the less than 74- and 500-1168-micron fractions. Experiments were also conducted on less than 74-micron powders of olivine, pyroxene, synthetic ilmenite, and TiO2. The terrestrial rock and mineral samples were reduced with flowing hydrogen at 1100 C in a microbalance furnace, with reaction progress monitored by weight loss. Experiments were run at atmospheric pressure for durations of 3-4 hr. Solid samples from both sets of experiments were analyzed by Mossbauer spectroscopy, petrographic microscopy, scanning electron microscopy, tunneling electron microscopy, and x-ray diffraction. Apollo 17 soil 78221 was examined for evidence of natural reduction in the lunar environment. This sample was chosen based on its high maturity level (I sub s/FeO = 93.0). The FeO content is 11.68 wt. percent and the TiO2 content is 3.84 wt. percent. A polished thin section of the 90-150 micron size fraction was analyzed by petrographic microscopy and scanning electron microscopy. Author

**NORTH MASSIF LITHOLOGIES AND CHEMICAL COMPOSITIONS VIEWED FROM 2-4 mm PARTICLES OF SOIL SAMPLE 76503**
Kaylynn M. Bishop, Bradley L. Jolliff, Randy L. Korotev, and Larry A. Haskin *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 2-4 (For primary document see N93-18786 06-91)
(Grant NAG9-56)
Avail: CASI HC A01/MF A01

We identify the lithologic and compositional components of soil 76503 based on INAA of 243 2-4-mm particles and 72 thin sections from these and associated 1-2-mm particles (76502). We present a statistical distribution of the major compositional types as the first step of a detailed comparative study of the North and South Massifs. The soil sample was collected well away from any boulder and is more representative of typical North Massif material than any single large rock or boulder sample. So far, our examination of the 76503 particles has provided a better definition of precursor igneous lithologies and their petrogenetic relationships. It has enabled us to refine the nature of mixing components for the North Massif less than 1-mm fines. It has confirmed the differences in lithologies and their proportions between materials of the North and South Massifs; e.g., the North Massif is distinguished by the absence of a 72275-type KREEP component, the abundance of a highly magnesian igneous component, and the absence of certain types of melt compositions found in the South Massif samples. **REFINING THE GRANULITE SUITE**
G. Jeffrey Taylor, Marc D. Norman, Klaus Keil, and Janet A. Cushing *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 4-5 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

Early studies of rocks retrieved from the Moon during the Apollo missions defined a group of rocks as granulites or 'granulitic impactites'. This included rocks with cataclastic, granulitic, and poikilitic or poikiloblastic textures. Petrographic studies indicate that the textures of 'granulitic breccias' are significantly varied so as to redefine the granulitic suite into at least two distinct groups. The first group consists of rocks that have true granulitic textures: polygonal to rounded, equant grains that are annealed, and have triple junctions with small dispersions from the average 120 degrees. The second group of rocks have poikilitic or poikiloblastic textures, with subhedral to euhedral plagioclase and/or olivine grains enclosed in pyroxene oikocrysts. In some instances, the relationship between the minerals resembles an orthocumulate texture. Rocks previously thought of as granulites may have formed in more than one way. These formation mechanisms are briefly discussed. Author

**MARE VOLCANISM IN THE TAURUS-LITTROW REGION**
J. W. Delano *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 5-7 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

The products of mare volcanism at Taurus-Littrow occur in the form of crystalline basalts and volcanic glass beads. Both categories of samples define a compositionally diverse, but petrogenetically unrelated, suite of magmas derived by partial melting of a heterogenous, differentiated mantle beneath the region of the Apollo 17 landing site. This is a brief review of what is known and what is not known about mare volcanism at this location on the Moon. Author

**ABUNDANCES OF SODIUM, SULFUR, AND POTASSIUM IN LUNAR VOLCANIC GLASSES: EVIDENCE FOR VOLATILE LOSS DURING ERUPTION**
J. W. Delano and J. McGuire (State Univ. of New York, Stony Brook.) *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 7-9 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

Six varieties of lunar volcanic glass are known to occur within the Apollo 17 sample collection. Investigations have shown that 25 volatile elements are known to be concentrated on the exterior surfaces of individual volcanic glass spheres. Since bulk analyses of volcanic glass provide an integrated abundance of an element on and with the glass spherules, other methods must be relied on to determine the interior abundance of an element. The interior abundance of an element with a volcanic glass sphere establishes the abundance of that element in the melt at the time of quench. The current study is part of a comprehensive attempt to measure the abundance of three volatile elements (Na, S, and K) within representative spheres of the 25 varieties of lunar volcanic glass currently known to exist at the Apollo landing sites. Comparison of the measured abundances of these elements within the interiors of individual glasses with bulk analyses and crystalline mare basalts will furnish new constraints on the geochemical behavior of volatile elements during lunar mare volcanism. **RESOURCE AVAILABILITY AT TAURUS-LITTROW**
Larry A. Haskin and R. O. Colson *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 9-14 (For primary document see N93-18786 06-91)
Avail: CASI HC A02/MF A01

Early lunar technologies will probably use a common lunar material as ore. They will be robust to minor fluctuations in feedstock composition and will not require appreciable feedstock beneficiation such as rock grinding or mineral concentration. Technologies using unprocessed soil and indifferent to its composition will have the advantage. Nevertheless, the size and grade of the ore body must be confirmed for even the most indiscriminate process. Simple uses such as heaping unprocessed lunar soil for thermal insulation or radiation shielding onto a habitat require that we know the depth of the regolith, the size distributions of its soils, the locations of large boulders, and the ease of excavation. Costs of detailed site surveys trade against restrictions on site selection and conservative engineering design to accommodate unknown conditions of a poorly explored site. Given the above considerations, we consider briefly some abundant lunar materials, their proposed uses, and technologies for their preparation, with particular attention to the Taurus-Littrow site. In recent years, we have utilized the Apollo orbital geochemistry datasets and Earth-based spectral reflectance data to investigate the composition of highland units associated with lunar multiring basins. These include Imbrium, Orientale, and Nectaris Basins. We have also analyzed a large number of near-IR reflectance spectra and multispectral images in an attempt to answer a variety of questions concerning the Serenitatis Basin. These questions include the following: (1) What is the composition of highland units in the region and how do these compositions vary as a function of position around and distance from Serenitatis?; (2) What was the crustal stratigraphy of the Serenitatis preimpact target site?; (3) How do the Apollo 17 samples relate to geologic units in the surrounding highlands?; (4) What is the nature and origin of light plains deposits in the region?; and (5) Do cryptomare occur in the Serenitatis region? The purpose of this paper is to present the preliminary results of our analyses of spectral data obtained for the Serenitatis Basin region. Author

Avail: CASI HC A01/MF A01

The Apollo 17 highland collection is dominated by fragment-laden melt rocks, generally thought to represent impact melt from the Serenitatis basin-forming impact. Fortunately for our understanding of the lunar crust, the melt rocks contain unmelted clasts of preexisting rocks. Similar ancient rocks are also found in the regolith; most are probably clasts eroded out of melt rocks. The ancient rocks can be divided into groups by age, composition, and history. Oldest are plutonic igneous rocks, representing the magmatic components of the ancient crust. The younger are granulitic breccias, which are thoroughly recrystallized rocks of diverse parentages. The youngest are KREEPy basalts and felsites, products of relatively evolved magmas. Some characteristics of each group are given. Author

**neoKREEP: A NEW LUNAR COMPONENT AT APOLLO 17**
Eric A. Jerde, Gregory A. Snyder, and Lawrence A. Taylor *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 21-24 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

The Apollo 11 (Mare Tranquillitatis) and Apollo 17 (Mare Serenitatis) landing sites are important as the only sources of high-Ti basalt visited by the Apollo missions. The lunar high-Ti basalts (greater than 6 percent TiO2) have no volumetrically comparable analogs among terrestrial basalts and require the presence of ilmenite in the source region, probably representing cumulates produced late in the crystallization of the lunar magma ocean. Six principal groups of high-Ti basalts are described, three from each of the two sites. Author

**POSSIBLE PETROGENETIC ASSOCIATIONS AMONG IGNEOUS COMPONENTS IN NORTH MASSIF SOILS: EVIDENCE IN 2-4 mm SOIL PARTICLES FROM 76503**
Bradley L. Jolliff, Kaylynn M. Bishop, and Larry A. Haskin *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 24-26 (For primary document see N93-18786 06-91)
(Grant NAG9-56)
Avail: CASI HC A01/MF A01

Studies of Apollo 17 highland igneous rocks and clasts in breccias from the North and South Massifs have described magnesian troctolite, norite, anorthositic gabbro, dunite, spinel cataclasites, and granulitic lithologies that may have noritic anothosite or anorthositic norite/gabbro as igneous precursors, and have speculated on possible petrogenetic relationships among these rock types. Mineral compositions and relative proportions of plagioclase and plagioclase-olivine particles in samples 76503 indicate that the precursor lithology of those particles were troctolitic anorthosite, not troctolite. Mineral and chemical compositions of more pyroxene-rich, magnesian breccias and granulites in 76503 indicate that their precursor lithology was anorthositic norite/gabbro. The combination of mineral compositions and whole-rock trace-element compositional trends supports a genetic relationship among these two groups as would result from differentiation of a single pluton. Although highland igneous lithologies in Apollo 17 materials have been described previously, the proportions of different igneous lithologies present in the massifs, their frequency of association, and how they are related are not well known. We consider the proportions of, and associations among, the igneous lithologies found in a North Massif soil, which may represent those of the North Massif or a major part of it. Author

Avail: CASI HC A01/MF A01

Among Apollo landing sites, Apollo 17 provides the best opportunity to study the efficiency of formation and evolution of regolith by impacts, both large and small. The mare-highlands interface is crucial to this endeavor, but the Light Mantle avalanche and presence of fine-grained pyroclastics offer additional constraints. Compositional variation among soils from different locations and depths provides a means to quantify the extent of mixing by larger impacts. Because of their variety and complex history, Apollo 17 soils have been important in establishing agglutinate abundance, mean grain size, and abundance of fine-grained iron metal (as measured by (I(sub s)/FeO)) as simple index of maturity (relative extent of reworking by micrometeorite impact at the surface). The following topics are discussed: (1) surface soils; (2) cores taken on the mission; (3) gray soil from station 4; (4) components with unknown sources; (5) important points; and (6) future work. **GEOCHEMISTRY OF HASP, VLT, AND OTHER GLASSES FROM DOUBLE DRIVE TUBE 79001/2**
D. J. Lindstrom, S. J. Wentworth (Lockheed Engineering and Sciences Co., Houston, TX.), R. R. Martinez (Lockheed Engineering and Sciences Co., Houston, TX.), and D. S. McKay *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 29-31 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

The Apollo 17 double drive tube 79001/2 (station 9, Van Serg Crater) is distinctive because of its extreme maturity, abundance, and variety of glass clasts. It contains mare glasses of both high Ti and very low Ti (VLT) compositions, and highland glasses of all compositions common in lunar regolith samples: highland basalt (feldspathic; Al2O3 greater than 23 wt percent), KREEP (Al2O3 less than 23 wt percent, K2O greater than 0.25 wt percent), and low-K Fra Mauro (LKFM; Al2O3 less than 23 wt percent, K2O less than 0.25 wt percent). It also contains rare specimens of high-alumina, silica-poor (HASP), and ultra Mg glasses. HASP glasses contain insufficient SiO2 to permit the calculation of a standard norm, and are thought to be the product of volatilization during impact melting. They have been studied by electron microprobe major-element analysis techniques but have not previously been analyzed for trace elements. The samples analyzed for this study were polished grain mounts of the 90-160 micron fraction of four sieved samples from the 79001/2 core (depth range 2.3-11.5 cm). A total of 80 glasses were analyzed by SEM/EDS and electron microprobe, and a subset of 33 of the glasses, representing a wide range of compositional types, was chosen for high-sensitivity INAA. A microdrilling device removed disks (mostly 50-100 micron diameter, weighing approx. 0.1-0.5 micro-g) for INAA. Preliminary data reported here are based only on short counts done within two weeks of irradiation. Author

**THE TAURUS-LITTROW DARK MANTLE, LIGHT MANTLE, CRATER CLUSTER, AND SCARP**
Baerbel K. Lucchitta *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 31 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

The Taurus-Littrow landing site is on the floor of a grabenlike valley that is radial to the Serenitatis Basin; the valley is gently inclined to the east. It is bordered by steep-sided massifs that rise 2 km above the valley floor and form part of the Serenitatis Basin rim. The valley floor is exceptionally dark, and in one place it is overlain by a light-colored mantle apparently derived from the massif to the south. The floor is also peppered by overlapping craters. A scarp, up on the west, transects the valley floor and enters the highlands to the north. Pre- and post-mission analyses of this geological formation are presented. Author

**MORPHOLOGY AND COMPOSITION OF CONDENSATES ON APOLLO 17 ORANGE AND BLACK GLASS**
David S. McKay and Sue J. Wentworth (Lockheed Engineering and Sciences Co., Houston, TX.) *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 31-36 (For primary document see N93-18786 06-91)
Avail: CASI HC A02/MF A01

Lunar soil sample 74220 and core samples 74001/2 consist mainly of orange glass droplets, droplet fragments, and their crystallized equivalents. These samples are now generally accepted to be pyroclastic ejecta from early lunar volcanic eruptions. It has been known since early examination of these samples that they contain surface coatings and material rich in volatile condensible phases, including S, Zn, F, Cl, and many volatile

metals. The volatiles associated with these orange and black glasses (and the Apollo 15 green glasses) may provide important clues in understanding the differentiation and volcanic history of the Moon. In addition, condensible volatiles can be mobilized and concentrated by volcanic processes. We have reviewed many of our existing photomicrographs and energy dispersive analysis (EDXA) of grain surfaces and have reexamined some of our older SEM mounts using an improved EDXA system capable of light-element detection and analysis (oxygen, nitrogen, and carbon). The results from these investigations are presented. Author

**GEOLOGY OF THE APOLLO 17 SITE**
W. R. Muehlberger *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 36-37 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

The Apollo 17 landing site was unique in several aspects: (1) it was the only site that was not selected from telescopic-based geologic interpretation--interest in the site was generated by the visual observations of Al Worden, Apollo 15 Command Module pilot, who interpreted dark-haloed craters as possible cinder cones; (2) instead of 20-m-resolution photographs, as was the norm for all earlier missions, this site had Apollo 15 panoramic camera photography coverage that had 2-m resolution; and (3) it had a geologist-astronaut aboard who was intimately involved in all stages of planning and mission operation, and was also instrumental in the design of a long-handled sample bag holder that eliminated the need for crew to dismount before collecting a sample, which then permitted sampling between major stations. Details of site geology, sample description, and geologic synthesis of the site as viewed from studies through 1976 are summarized. Author

As we are all aware, the Apollo 17 mission marked the final manned lunar landing of the Apollo program. The lunar module (LM) landed approximately 0.7 km due east of Camelot Crater in the Taurus-Littrow region on the southwestern edge of Mare Serenitatis. Three extravehicular activities (EVA's) were performed, the first concentrating around the LM and including station 1 approximately 1.1 km south-southeast of the LM at the northwestern edge of Steno Crater. The second traversed approximately 8 km west of the LM to include stations 2, 3, 4, and 5, and the third EVA traversed approximately 4.5 km to the northwest of the LM to include stations 6, 7, 8, and 9. This final manned mission returned the largest quantity of lunar rock samples, 110.5 kg/243.7 lb, and included soils, breccias, highland samples, and mare basalts. This abstract concentrates upon the Apollo 17 mare basalt samples. Author

The Apollo 17 high-Ti mare basalts are derived from source regions containing plagioclase that was not retained in the residue. Ilmenite appears to remain as a residual phase, but plagioclase is exhausted. The open-system behavior of the type B2 basalts results in slightly higher Yb/Hf and La/Sm ratios. The nature of the added component is not clear, but may be a KREEP derivative or residue. The recognition of plagioclase in the source(s) of these basalts suggests that the location of the source region(s) would be more likely to be less than 150 km (i.e., closer to the plagioclase-rich crust), which would allow incorporation of plagioclase into the source through incomplete separation of crustal feldspar. **LITHOLOGIES CONTRIBUTING TO THE CLAST POPULATION IN APOLLO 17 LKFM BASALTIC IMPACT MELTS**
Marc D. Norman, G. Jeffrey Taylor, Paul Spudis (Lunar and Planetary Inst., Houston, TX.), and Graham Ryder (Lunar and Planetary Inst., Houston, TX.) *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 42-44 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

LKFM basaltic impact melts are abundant among Apollo lunar samples, especially those from Apollo 15, 16, and 17. They are generally basaltic in composition, but are found exclusively as impact melts. They seem to be related to basins and so could represent the composition of the lower lunar crust. They contain lithic clasts that cannot be mixed in any proportion to produce the composition of the melt matrix; components rich in transition elements (Ti, Cr, Sc) and REE are not considered. To search for the mysterious cryptic component, we previously investigated the mineral clast population in two Apollo 14 LKFM basaltic impact melts, 15445 and 15455. The cryptic component was not present in the mineral clast assemblage of these breccias either, but some olivine and pyroxene grains appeared to be from lithologies not represented among identified igneous rocks from the lunar highlands. In addition, none of the mineral clasts could be unambiguously assigned to a ferroan anorthosite source. We have now extended this study to Apollo 17, starting with two LKFM impact melt breccias (76295 and 76315) from the Apollo 17 station 6 boulder. The results from the study are presented. Author

Avail: CASI HC A01/MF A01

The chemical compositions of microscopic glasses produced during meteoroid impacts on the lunar surface provide information regarding the various fractionation processes that accompany these events. To learn more about these fractionation processes, we studied the compositions of submicrometer glass spheres from two Apollo 17 sampling sites using electron microscopy. The majority of the analyzed glasses show evidence for varying degrees of impact-induced chemical fractionation. Among these are HASP glasses (high-Al, Si-poor), which are believed to represent the refractory residuum left after the loss of volatile elements (e.g., Si, Fe, Na) from the precursor material. In addition to HASP-type glasses, we also observed a group of volatile-rich, Al-poor (VRAP) glasses that represent condensates of vaporized volatile constituents, and are complementary to the HASP compositions. High-Ti glasses were also found during the course of this study, and are documented here for the first time. Author

More than 50 kg of rock and regolith samples, a little less than half

the total Apollo 17 sample mass, was collected from the highland stations at Taurus-Littrow. Twice as much material was collected from the North Massif as from the South Massif and its landslide (the apparent disproportionate collecting at the mare sites is mainly a reflection of the large size of a few individual basalt samples). Descriptions of the collection, documentation, and nature of the samples are given. A comprehensive catalog is currently being produced. Many of the samples have been intensely studied over the last 20 years and some of the rocks have become very familiar and depicted in popular works, particularly the dunite clast (72415), the troctolite sample (76535), and the station 6 boulder samples. Most of the boulder samples have been studied in Consortium mode, and many of the rake samples have received a basic petrological/geochemical characterization. Author

**IMPACT MELT BRECCIAS AT THE APOLLO 17 LANDING SITE**
Graham Ryder *In its* Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 49-50 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

Impact melt breccias are by far the most common highland rock type collected on the Apollo 17 mission. They tend to be fine grained, with virtually no clast-free impact melt rocks having been identified. All the highland boulders sampled are impact melt breccia, with the possible exception of one South Massif boulder that might have a friable matrix (but nonetheless consists dominantly of impact melt) and a shocked igneous norite boulder from the North Massif. The impact melt breccias were originally described as metaclastic, but their melt origin became apparent as work progressed. Chemical compositions appear to allow natural groupings of the impact melt breccias. Various groupings of the impact melt breccias are discussed. Author

**MELTING OF COGNETIC DEPLETED AND ENRICHED RESERVOIRS AND THE PRODUCTION OF HIGH TI MARE BASALTS**
Gregory A. Snyder, Lawrence A. Taylor, and Alex N. Halliday (Michigan Univ., Ann Arbor.) *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 53-55 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

Implicit in current understanding of the location of terrestrial enriched and depleted reservoirs is the notion that they are spatially separated. The depleted reservoir on Earth is situated in the upper mantle, and the complementary enriched reservoir is located in the crust. However, Earth reservoirs are continually being modified by recycling driven by mantle convection. The Moon is demonstrably different from Earth in that its evolution was arrested relatively early - effectively with 1.5 Ga of its formation. It is possible that crystallized trapped liquids (from the late stages of a magma ocean) have been preserved as LILE-enriched portions of the lunar mantle. This would lead to depleted (cumulate) and enriched (magma ocean residual liquid) reservoirs in the lunar upper mantle. There is no evidence for significant recycling from the highland crust back into the mantle. Therefore, reservoirs created at the Moon's inception may have remained intact for over 4.0 Ga. The topics discussed include the following: (1) radiogenic isotopes in high-Ti mare basalts; (2) formation of cogenetic depleted and enriched reservoirs; and (3) melting of the source to achieve high-Ti mare basalts. Many of the rocks in the Apollo collections from the lunar highlands are impact melt breccias of basaltic bulk composition. They are known by a variety of names including low-K Fra Mauro basalt, VHA basalt, and basaltic impact melts. These rocks have been studied to understand the compositional nature of the lunar crust, to decipher the processes of large body impact, and to comprehend the record of impact bombardment of the Moon. Study of terrestrial craters has led to a model for impact melt generation whereby target lithologies are totally melted during impact. The impact melt makes up a few percent of the total volume of crater material; superheated silicate liquids of the impact melt have extremely low viscosities and mix intimately. This mixing thoroughly homogenizes the melt chemically during the excavation of the crater. Colder, unmelted debris is overridden by the melt sheet as the crater cavity grows. Incorporation of these cold clasts rapidly chills the melt, with zones of greater and lesser amounts of clasts being primarily responsible for modestly differing thermal regimes. The net effect of this process is the production of a suite of rocks that have extreme chemical homogeneity, but wide petrographic diversity. Strict application of this model to the petrogenesis of basaltic impact melts from the Moon has some fairly significant consequences for how we interpret early lunar history. The consequences are briefly discussed. Author

**FUTURE SCIENTIFIC EXPLORATION OF TAURUS-LITTROW**
G. Jeffrey Taylor *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 57-59 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

The Apollo 17 site was surveyed with great skill and the collected samples have been studied thoroughly (but not completely) in the 20 years since. Ironically, the success of the field and sample studies makes the site an excellent candidate for a return mission. Rather than solving all the problems, the Apollo 17 mission provided a set of sophisticated questions that can be answered only by returning to the site and exploring further. This paper addresses the major unsolved problems in lunar science and points out the units at the Apollo 17 site that are most suitable for addressing each problem. It then discusses how crucial data can be obtained by robotic rovers and human field work. I conclude that, in general, the most important information can be obtained only by human exploration. The paper ends with some guesses about what we could have learned at the Apollo 17 site from a fairly sophisticated rover capable of in situ analyses, instead of sending people. Author

**THE SUDBURY-SERENITATIS ANALOGY AND 'SO-CALLED' PRISTINE NONMARE ROCKS**
Paul H. Warren *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 59-61 (For primary document see N93-18786 06-91)
Avail: CASI HC A01/MF A01

The Serenitatis Basin is the one lunar basin from which we confidently identify a suite of samples as pieces of the impact melt sheet: the distinctive Apollo 17 noritic breccias. Recent studies of the Sudbury Complex indicate that its 'irruptive' is almost entirely of impact-melt origin, making it the closest terrestrial analog to the Serenitatis melt sheet. Any attempt to model the evolution of the Moon's crust should be compatible with the relatively well-understood Sudbury Complex. However, the Sudbury-Moon analogy might be a misleading oversimplification, if applied too rigidly. The cause of evolutionary differences between the Serenitatis impact melt and the Sudbury impact melt is discussed. Author

**TROCTOLITIC ANORTHOSITE FROM 77115: A MAGNESIAN MEMBER OF THE ALKALIC SUITE**

Paul H. Warren and Gregory W. Kallemeyn *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 61 (For primary document see N93-18786 06-91)

Avail: CASI HC A01/MF A01

Alkalic suite pristine nonmare rocks are distinctly enriched in plagiophile elements such as Na and K, as well as generally incompatible elements, despite modes and textures more characteristic of typical crustal cumulates (most commonly anorthosites) than of the basaltic KREEP rocks that appear to account for the bulk of the lunar crust's total complement of incompatible elements. Our studies indicate that the 77115 troctolitic clasts of Winzer et al. is actually a troctolitic anorthosite (or anorthositic troctolite), probably best classified as a member of the alkalic suite. We managed to obtain a thin section with pyroxene and olivine, and analyzed a 13.4-mg chip by instrumental neutron activation analysis (INAA). The results of this analysis are briefly discussed. D. E. Wilhelms *In* Lunar Science Inst., Workshop on Geology of the Apollo 17 Landing Site 2 Dec. 1992 p 61-63 (For primary document see N93-18786 06-91)

Avail: CASI HC A01/MF A01

By the fall of 1971, it was known that only two more Apollos would land on the Moon. Most geoscientists agreed that both should concentrate on the previously neglected terrae (highlands). In June 1991, the Apollo Site Selection Board (ASSB) had chosen Descartes as the site of the Apollo 16 terra landing, scheduled for April 1972. Therefore, we had to assess how many pre-Apollo objectives the first four landings had met, how many Apollo 16 was likely to meet, and how to meet the remaining ones with Apollo 17. Geologists convened at Caltech in November 1971 and formulated a list of major lunar problems. An edited version of the list is presented, and how the remaining problems influenced the Apollo 16 and 17 landing site selection process is discussed with particular emphasis on the selection of Taurus-Littrow as the landing site for Apollo 17. Apollo 17 returned a fine collection from the massifs, bright mantle, Sculptured Hills, subfloor basalt, and dark mantle of Taurus-Littrow. They answered many of 1971's questions, showed others to have been wrongly asked, and left others for us to ponder still today. A brief discussion of the problems solved and the questions raised by the Apollo Program are presented. Author

**GLACIATION IN ELYSIUM Abstract Only**

Duwayne M. Anderson *In its* Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, Part 1 1992 p 1 (For primary document see N93-19801 06-91)

Avail: CASI HC A01/MF A01

Results of a study of high resolution Viking Orbiter images of the northwestern slopes of Elysium Mons, using a variety of image analysis techniques, provide striking evidence of an extended period of glaciation that involved a large ice sheet of greater than 1.2 km thickness and subice fluvial activity that contributed to the formation of the channels of Hrad Valles and Granicus Valles. These two unusual channel systems begin on the lower slopes of Elysium Mons and extend into Utopia Planitia in the region lying between 215 and 230 degs W and between 25 and 45 degs N. Key indicators are the presence of serrated volcanic constructs whose dimensions and morphology indicate an origin involving successive, localized, subice fissure eruptions. The channels visible in Hrad Valles bear a striking resemblance to subice fluvial features found in the dry valleys of Antarctica at the periphery of this massive continental ice sheet. Crater size distributions and crater morphologies are quite consistent with this interpretation, as are certain other topographic features suggesting the presence in the past of ice-rich permafrost that, while having undergone significant degradation, still remains. **ORBITAL, ROTATIONAL, AND CLIMATIC INTERACTIONS: LESSONS FROM EARTH AND MARS**

Bruce G. Bills *In its* Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, Part 1 1992 p 1-4 (For primary document see N93-19801 06-91)

Avail: CASI HC A01/MF A01

Though variations in orbital and rotational parameters of the Earth and Mars are widely recognized as plausible sources of significant climatic variation on 10(exp 3) to 10(exp 8) yr timescales, many aspects of the connection between orbital, rotational, and climatic variations remain poorly understood. In general, the orbital histories are very well known, the rotational histories (especially for Mars) are very poorly known. A brief review is given of recent progress in computing orbital and rotational secular variations, and in connecting them to climatic change. The emphasis is on highlighting those areas that limit the present understanding. It is obvious that mass redistributions associated with climatic change (glaciation) are a source of crustal deformation and geodynamic change on the Earth, and may have played similar roles on Mars. It is much less appreciated, that rates, phases, and amplitudes of deformation of the deep interior of the planet can influence climate. The mantle and core, if decoupled, would precess at different rates, and even with plausible coupling strengths, some degree of differential precession is possible. Author

**CONDENSATION PHASE OF THE MARTIAN SOUTH POLAR CAP**

J. Capuano, M. Reed, and P. B. James *In its* Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, Part 1 1992 p 4-6 (For primary document see N93-19801 06-91)

Avail: CASI HC A01/MF A01

One type of database that can be useful in limiting models of the Mars surface-atmosphere system is the time dependent boundary of CO2 frost for the polar caps. Data acquired by the thermal infrared sensors on spacecraft are not limited by the lighting problems that hamper visual observations. The surface temperature of solid CO2 is limited by Clapeyron's equation as a function of the local partial pressure of CO2 gas. The growth was studied of the Martian south polar cap using the Viking IRTM dataset. These data are available in five bands, four of which should correspond to surface radiation in clear conditions; the 20 micron data was examined in the first phase. Author

**WATER ON MARS: INVENTORY, DISTRIBUTION, AND POSSIBLE SOURCES OF POLAR ICE**

S. M. Clifford *In its* Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, Part 1 1992 p 6- (For primary document see N93-19801 06-91)

Avail: CASI HC A01/MF A01

Theoretical considerations and various lines of morphologic evidence suggest that, in addition to the normal seasonal and climatic exchange of H2O that occurs between the Martian polar caps, atmosphere, and mid to high latitude regolith, large volumes of water have been introduced into the planet's long term hydrologic cycle by the sublimation of equatorial ground ice, impacts, catastrophic flooding, and volcanism. Under the climatic conditions that are thought to have prevailed on Mars throughout the past

3 to 4 b.y., much of this water is expected to have been cold trapped at the poles. The amount of polar ice contributed by each of the planet's potential crustal sources is discussed and estimated. The final analysis suggests that only 5 to 15 pct. of this potential inventory is now in residence at the poles. Author

Lab studies of the effects of hard particulates on the rheology of ice have been mainly directed at the evolution of the Galilean satellites, but yield results that may be applicable to the rheology of the Martian polar caps. The experiments have explored the ductile rheology as well as brittle behavior of water + particulate (mainly quartz) mixtures in particulate volume fractions ranging from 0.001 to 0.56, particulate sizes 1 to 150 microns, temperatures 77 to 224 K, and deformation rates 3.5 x 10(exp -7) to 3.5 x 10(exp -4)/s, under confining pressures of 50 to 100 MPa. Particulates act mainly to strengthen the material in the ductile field, although work by others has shown that very close to the melting temperature hard particulates can actually cause softening. So called dispersion hardening by the Orowan mechanism of pinning glide dislocations, often exploited in metallurgy for strengthening materials, appears not to be an issue in ice except at very low temperatures, less than approx. 135 K. The relative abundances of H2O and CO2 and their latitude, longitude, and depth profiles on Mars sensitively reflect, as well as help control, past and present Martian climate patterns. Seasonal variations of their distributions at high latitudes also reflect and help control global weather patterns and erosion through surface weathering. A combined analysis of gamma ray line and neutron flux maps constructed from data measured using the Mars Observer Gamma Ray Spectrometer (MOGRS) should allow a determination of seasonal changes in both the horizontal and vertical structure of CO2 ice that covers the north polar cap during winter and the south polar cap throughout the year and both the horizontal and vertical structure of residual H2O ice within the top meter of the surface that was predicted from Viking observations to exist primarily at high latitudes. Particularly important in this regard will be maps of thermal and epithermal neutron fluxes measured using the MOGRS anticoincidence shield, the intensity of the hydrogen, neutron capture gamma ray line at 2.223 MeV, the intensity of a capture gamma ray line as 1.725 MeV from iron, and the intensity of an inelastic scatter gamma ray line as 1.779 MeV from silicon. Among the problems in Martian geology are the cause of the off-axis and asymmetric distribution of the southern polar layered terrain and residual ice deposits and the cause of the orientation of scarps, valleys, and reentrant canyons that occur. A problem region is the small number of large (D greater than 500) impact basins seen in the relatively well preserved cratered terrain of the south polar region. This region was mapped in detail, searching for evidence of ancient, highly degraded impact basins for two reasons: To determine whether the apparent absence of large impact basins is due to incomplete mapping and recognition or a fundamental characteristic of the Martian crust related to the origin of the Martian crustal dichotomy, and whether ancient impact basins exert some control on the distribution of volcanic and polar deposits in the Southern Hemisphere and on the topography on which these deposits lie. The possible influence is examined of the candidate basins in localizing the asymmetric distribution of polar deposits and in controlling the orientation of structures found within these deposits. Lines of evidence indicate that early in Mars' history, it had a much thicker CO2 atmosphere than it does today. A model was constructed for the evolution of the Martian atmosphere that self consistently calculates the rates at which CO2 is stored in Mars' polar reservoirs. Given some initial abundance, which is assumed to be entirely in the atmosphere, the model calculates the annually averaged temperature of the equatorial region and the polar region, and the planetwide mean. Thus far, results obtained for the case where CO2 condensation in the atmosphere is not a limiting factor. Results fall into two categories: initial inventories above 1 bar and below 1 bar. For inventories above 1 bar, CO2 is partitioned between the atmosphere and regolith with the latter taking up almost 800 mbar of CO2. The rest remains in the atmosphere and is weathered out at a rate proportional to atmospheric pressure. For values less than 1 bar, the evolution scenario is different, polar caps form immediately since there is not enough greenhouse warming to prevent CO2 from going into the regolith and thereby reducing the atmospheric pressure to levels where caps can form. The results do not favor either scenario. Author

It is widely believed that the Martian polar layered deposits record climate variations over at least the last 10 to 100 m.y., but the details of the processes involved and their relative roles in layer formation and evolution remain obscure. Weathering of the Martian layered deposits by sublimation of water ice can account for the thermal inertias, water vapor abundances, and geologic relationships observed in the Martian polar regions. The nonvolatile components of the layered deposits appears to consist mainly of bright red dust, with small amounts of dark dust. Dark dust, perhaps similar to the magnetic material found at the Viking Lander sites, may preferentially form filamentary residue particles upon weathering of the deposits. Once eroded, these particles may saltate to form the dark dunes found in both polar regions. This scenario for the origin and evolution of the dark material within the polar layered deposits is consistent with the available imaging and thermal data. Further experimental measurements of the thermophysical properties of magnetite and maghemite under Martian conditions are needed to better test this hypothesis. Author

The Martian polar caps and layered terrain presumably evolves by the deposition and removal of small amounts of water and dust each year, the current cap attributes therefore represent the incremental transport during a single year as integrated over long periods of time. The role was studied of condensation and sublimation of water ice in this process by examining the seasonal water cycle during the last 10(exp 7) yr. In the model, axial obliquity, eccentricity, and L sub s of perihelion vary according to dynamical models. At each epoch, the seasonal variations in temperature are calculated at the two poles, keeping track of the seasonal CO2 cap and the summertime sublimation of water vapor into the atmosphere; net exchange of water between the two caps is calculated based on the difference in the summertime sublimation between the two caps (or on the sublimation from one cap if the other is covered with CO2 frost all year). Results from the model can help to explain (1) the apparent inconsistency between the timescales inferred for layer formation and the much older crater retention age of the cap and (2) the difference in sizes of the two residual caps, with the south being smaller than the north. Martian polar science began almost as soon as small telescopes were trained on the planet. The seasonal expansion and contraction of the polar caps and their high albedoes led most astronomers to think that water ice is the dominant constituent. In 1911 Lowell perceived a bluish band around the retreating edge of the polar caps, and interpreted it as water from melting polar ice and seasonal snow. An alternative idea in his time was that the polar caps consist of frozen carbonic acid. Lowell rejected the carbonic acid hypothesis on account of his blue band. He also pointed out that carbonic acid would sublimate rather than melt at confining pressures near and below one bar, hence, carbonic acid could not account for the blue band. In comparing Lowell's theories with today's knowledge, it is recognized that (1) sublimation is mainly responsible for the growth and contraction of Mars' polar caps, (2) carbon dioxide is a major component of the southern polar cap, and (3) Lowell's blue band was probably seasonal dust and/or clouds. Geomorphic evidence that glacial ice and glacial melt waters once flowed over broad areas of the southern polar region. Two aspects of the south polar region suggest possible glacial processes during two distinct eras in Mars' history. Author

Carbon dioxide ice has been inferred to exist at the south pole in summertime, but Earth based measurements in 1969 of water vapor in the Martian atmosphere suggest that all CO2 ice sublined from the southern polar cap and exposed underlying water ice. This implies that the observed summertime CO2 ice is of recent origin. It appears possible to construct an energy balance model that maintains seasonal CO2 ice at the south pole year round and still reasonably simulates the polar cap regression and atmospheric pressure data. This implies that the CO2 ice observed in the summertime south polar cap could be seasonal in origin, and that minor changes in climate could cause CO2 ice to completely vanish, as would appear to have happened in 1969. However, further research remains before it is certain whether the CO2 ice observed in the summertime south polar cap is seasonal or is part of a permanent reservoir. Author

The recessions of the polar ice caps are the most visible and most studied indication of seasonal change on Mars. Circumstantial evidence links these recessions to the seasonal cycles of CO2, water, and dust. The possible advent of a planet encircling storm during the Mars Observer (MO) mission will provide a detailed correlation with a cap recession for that one Martian year. That cap recession will then be compared with other storm and nonstorm years. MO data will also provide a stronger link between cap recessions and the water and CO2 cycles. Cap recession variability might also be used to determine the variability of these cycles. After nearly a century of valiant attempts at measuring polar cap recessions, including Mariner 9 and Viking data, MO will provide the first comprehensive dataset. In contrast to MO, the older data are much less detailed and precise and could be forgotten, except that it will still be the only information on interannual variability. By obtaining simultaneous Earth-based observations (including those from Hubble) during the MO mission, direct comparisons can be made between the datasets. Author

The presence of suspended dust in the Martian atmosphere, and its return to the planet's surface, is implicated in the formation of the polar layered terrain and the dichotomy in perennial CO2 polar cap retention in the two hemispheres. A three dimensional model was used to study Martian global dust storms. The model accounts for the interactive feedbacks between the atmospheric thermal and dynamical states and an evolving radiatively active suspended dust load. Results from dust storm experiments, as well as from simulations in which there is interest in identifying the conditions under which surface dust lifting occurs at various locations and times, indicate that dust transport due to atmospheric eddy motions is likely to be important in the arrival of suspended dust at polar latitudes. The layered terrain in both polar regions of Mars is interpreted as the reality of cyclical episodes of volatile (CO2, H2O) and dust deposition.

Data collected by Viking Landers have shown that the meteorology of the near surface Martian environment is analogous to desertlike terrestrial conditions. Geological evidence such as dunes and frost streaks indicate that the surface wind is a potentially important factor in scouring of the martian landscape. In particular, the north polar basin shows erosional features that suggest katabatic wind convergence into broad valleys near the margin of the polar cap. The pattern of katabatic wind drainage off the north polar cap is similar to that observed on Earth over Antarctica or Greenland. The sensitivity is explored of Martian drainage flows to variations in terrain slope and diurnal heating using a numerical modeling approach. The model used is a 2-D sigma coordinate primitive equation system that has been used for simulations of Antarctic drainage flows. Prognostic equations include the flux forms of the horizontal scalar momentum equations, temperature, and continuity. Parameterization of both longwave (terrestrial) and shortwave (solar) radiation is included. Turbulent transfer

of heat and momentum in the Martian atmosphere remains uncertain since relevant measurements are essentially nonexistent. Author

The perennial ice covered lakes of the Antarctic are considered to be excellent analogues to lakes that once existed on Mars. Field studies of ice covered lakes, paleolakes, and polar beaches were conducted in the Bunger Hills Oasis, Eastern Antarctica. These studies are extended to the Dry Valleys, Western Antarctica, and the Arctic. Important distinctions were made between ice covered and non-ice covered bodies of water in terms of the geomorphic signatures produced. The most notable landforms produced by ice covered lakes are ice shoved ridges. These features form discrete segmented ramparts of boulders and sediments pushed up along the shores of lakes and/or seas. Sub-ice lakes have been discovered under the Antarctic ice sheet using radio echo sounding. These lakes occur in regions of low surface slope, low surface accumulations, and low ice velocity, and occupy bedrock hollows. The presence of sub-ice lakes below the Martian polar caps is possible. The discovery of the Antarctic sub-ice lakes raises possibilities concerning Martian lakes and exobiology. Author

Avail: CASI HC A01/MF A01

MORS observations will focus on two major areas of study: (1) the gravity field of Mars and its interpretation in terms of internal structure and history and (2) the structure of the atmosphere, with emphasis on both temperature-pressure profiles of the background atmosphere and small scale inhomogeneities resulting from turbulence. Scattering of cm wavelength radio signals from Mars' surface at highly oblique angles will also be studied during the primary mission; nongrazing scattering experiments may be possible during an extended mission. During the MORS primary mission, measurements of the spacecraft distance and velocity with respect to Earth based tracking stations will be used to develop models of the global gravity field. The improvement in knowledge of the gravity field will be especially evident in polar regions. The spatial and temporal coverage of atmospheric radio occultation measurements are determined by the geometry of the spacecraft orbit and the direction to the Earth. Profiles of atmospheric temperature and pressure will extend from the surface to altitudes of 50 to 70 km. Author

Movement of sediment into and out of polar deposits is closely linked to the polar volatile budget and to changes in wind systems over the course of astronomically induced climate cycles. The present observations of the morphology of polar layered deposits, mantling sediments, dune fields, and variable surface features are the basis of inferences on the efficacy of polar sediment transport mechanisms. The time scales of formation of these features vary from days to perhaps 10(exp 6) yr, and latitudinal banding of dune fields near the poles may have been formed on timescales of 10(exp 7) yr. Orientations of intracrater dunes, dune crests, and wind streaks have been measured for latitudes -45 to -90 to compare features of likely different timescales of formation with models of wind flow from the south polar region. There is a complex variation with latitude of the indicated wind directions and of the efficacy of the resultant winds in orienting dune fields that suggests influence of frost cover on the ability of winds to move sediment in the spring and fall. Because of changes in the relative effectiveness of spring and fall winds expected with progression of the season of perihelion, the latitudinal variation in transport efficiency may mean that sediments at different latitudes dominantly respond to wind erosion and transport at different times during the perihelion cycle. Author

S. E. Wood and D. A. Paige *In its* Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, Part 1 1992 p 26-30 (For primary document see N93-19801 06-91)
Avail: CASI HC A01/MF A01

One aspect of the seasonal pressure variations measured at the Viking Lander sites is their nearly perfect interannual repeatability. This presents a problem because it implies that the behavior of the seasonal polar caps should be highly repeatable from year to year as well. There are a number of observations and theories suggesting that the presence of dust and water ice clouds in the Martian atmosphere should have significant direct and indirect effects on the rates of CO2 condensation and sublimation in the north and south polar regions. These effects include (1) reduced rates of CO2 frost condensation during polar night seasons due to the radiative effects of dust and water ice clouds and associated CO2 clouds or elevated atmospheric temperatures and (2) reduced or elevated rates of frost sublimation due to the radiative effects of atmospheric dust or to changes in frost emissivities and albedos due to contamination by water ice and dust. The Viking Landing pressure observations are examined to determine the range and character of the interannual variations present. Then a diurnal and seasonal thermal model is used to examine the effects of interannual variations in the polar heat balance on seasonal pressure variations. Author

**LARGE-SCALE VELOCITY FIELDS AND SMALL-SCALE MAGNETIC FIELDS DURING THE MAXIMUM OF SOLAR CYCLE 22 Annual Technical Report, 1 Oct. 1990 - 30 Sep. 1991**

Sara F. Martin and K. L. Harvey Nov. 1992 22 p

(Grant AF-AFOSR-0006-90)

(AD-A258172; AFOSR-92-0966TR) Avail: CASI HC A03/MF A01

One key accomplishment from the research during FY 1991 was the finding by K. Harvey and P. Foukal that the photospheric network is the third significant component that accounts for observed variations in the total solar irradiance (the first previously recognized component is the temporary decreases due to sunspots and the second is variation due to plage brightness). Other key accomplishments were the K. Harvey results from studying magnetic flux over the solar cycle: (1) increases in the total magnetic flux by a factor of 4 to 5 from solar minimum to solar maximum with the variation from active regions flux (greater than 25 Gauss) by more than a factor of 20 from cycle minimum to maximum while the variation from quiet sun fields (less than 25 Gauss) was no more than a factor of 2; (2) interpretation of (1) as meaning that more than 70 percent of the magnetic flux in active regions disappears without dispersing; (3) slower decreases of weak fields in phase with the decrease in strong fields; and (4) irregular pulses of new flux which appear to be primarily associated with active region complexes. It is well-known from both observation and theory that photospheric shear motion has played a key role in physical processes of the energy build-up and release for the solar flare. In order to further our understanding of the occurrence of solar flares it is necessary to investigate the triggering mechanism. One popular scenario for the onset of eruptive solar flares is that in response to photospheric shear motions the magnetic field evolves slowly through a series of magnetohydrodynamic-equilibria until a threshold is reached where magnetohydrodynamic (MHD) non-equilibrium sets in. Thus, a magnetic eruption occurs, causing the solar flare. To substantiate this claim we have employed our newly developed three-dimensional time-dependent MHD code with gravity to simulate the evolution of the coronal field. We use plasma beta = 0.1 to closely approximate the condition in the actual corona. Some preliminary results are presented. Author

**THE FLOW OF PLASMA IN THE SOLAR TERRESTRIAL ENVIRONMENT Semiannual Technical Report, 1 Apr. - 30 Sep. 1992**

R. W. Schunk 1992 17 p

(Grant NAG5-1484)

(NASA-CR-192106; NAS 1.26:192106) Avail: CASI HC A03/MF A01

The overall goal of our NASA Theory Program is to study the coupling, time delays, and feedback mechanisms between the various regions of the solar-terrestrial system in a self-consistent, quantitative manner. To accomplish this goal, it will eventually be necessary to have time-dependent macroscopic models of the different regions of the solar-terrestrial system and we are continually working toward this goal. However, our immediate emphasis is on the near-earth plasma environment, including the ionosphere, the plasmasphere, and the polar wind. In this area, we have developed unique global models that allow us to study the coupling between the different regions. Another important aspect of our NASA Theory Program concerns the effect that localized structure has on the macroscopic flow in the ionosphere, plasmasphere, thermosphere, and polar wind. The localized structure can be created by structured magnetospheric inputs (i.e., structured plasma convection, particle precipitation or Birkeland current patterns) or time variations in these inputs due to storms and substorms. Also, some of the plasma flows that we predict with our macroscopic models may be unstable, and another one of our goals is to examine the stability of our predicted flows. Because time-dependent, three-dimensional numerical models of the solar-terrestrial environment generally require extensive computer resources, they are usually based on relatively simple mathematical formulations (i.e., simple MHD or hydrodynamic formulation). Therefore, another long-range goal of our NASA Theory Program is to study the conditions under which various mathematical formulations can be applied to specific solar-terrestrial regions. This may involve a detailed comparison of kinetic, semikinetic, and hydrodynamic predictions for a given polar wind scenario or it may involve the comparison of a small-scale particle-in-cell (PIC) simulation of a plasma expansion event with a similar macroscopic expansion event. The different mathematical formulations have different strengths and weaknesses and a careful comparison of model predictions for similar geophysical situations will provide insight into when the various models can be used with confidence. **DETERMINATION OF CORONAL MAGNETIC FIELDS FROM VECTOR MAGNETOGRAMS Semiannual Progress Report, 30 Jun. - 31 Dec. 1992**

Zoran Mikic 31 Dec. 1992 33 p Original contains color illustrations

(Contract NASw-4728)

(NASA-CR-191386; NAS 1.26:191386) Avail: CASI HC A03/MF A01; 4 functional color pages

The determination of coronal magnetic fields from vector magnetograms, including the development and application of algorithms to determine force-free coronal fields above selected observations of active regions is studied. Two additional active regions were selected and analyzed. The restriction of periodicity in the 3-D code which is used to determine the coronal field was removed giving the new code variable mesh spacing and is thus able to provide a more realistic description of coronal fields. The NOAA active region AR5747 of 20 Oct. 1989 was studied. A brief account of progress during the research performed is reported. Author

**SOLAR EXTREME ULTRAVIOLET SENSOR AND ADVANCED LANGMUIR PROBE Progress Report**

N. R. Voronka, B. P. Block, and G. R. Carignan 14 Dec. 1992 80 p

(Grant NAG5-1619)

(NASA-CR-191972; NAS 1.26:191972) Avail: CASI HC A05/MF A01

For more than two decades, the staff of the Space Physics Research Laboratory (SPRL) has collaborated with the Goddard Space Flight Center (GSFC) in the design and implementation of Langmuir probes (LP). This program of probe development under the direction of Larry Brace of GSFC has evolved methodically with innovations to: improve measurement precision, increase the speed of measurement, and reduce the weight, size, power consumption and data rate of the instrument. Under contract NAG5-419 these improvements were implemented and are what characterize the Advanced Langmuir Probe (ALP). Using data from the Langmuir Probe on the Pioneer Venus Orbiter, Brace and Walter Hoegy of GSFC demonstrated a novel method of monitoring the solar extreme ultraviolet (EUV) flux. This led to the idea of developing a sensor similar to a

Langmuir probe specifically designed to measure solar EUV (SEUV) that uses a similar electronics package. Under this contract, a combined instrument package of the ALP and SEUV sensor was to be designed, constructed, and laboratory tested. Finally the instrument was to be flight tested as part of sounding rocket experiment to acquire the necessary data to validate this method for possible use in future earth and planetary aeronomy missions. The primary purpose of this contract was to develop the electronics hardware and software for this instrument, since the actual sensors were suppied by GSFC. Due to budget constraints, only a flight model was constructed. These electronics were tested and calibrated in the laboratory, and then the instrument was integrated into the rocket payload at Wallops Flight Facility where it underwent environmental testing. After instrument recalibration at SPRL, the payload was reintegrated and launched from the Poker Flat Research Range near Fairbanks Alaska. The payload was successfully recovered and after refurbishment underwent further testing and developing to improve its performance for future use.

**A SOLAR MAGNETIC AND VELOCITY FIELD MEASUREMENT SYSTEM FOR SPACELAB 2: THE SOLAR OPTICAL UNIVERSAL POLARIMETER (SOUP) Final Report, Sep. 1977 - Jan. 1991**
Theodore D. Tarbell and Alan M. Title Aug. 1992 56 p
(Contract NAS8-32805)
(NASA-CR-191443; NAS 1.26:191443; LMSC/F404726) Avail: CASI HC A04/MF A01

The Solar Optical Universal Polarimeter flew on the Shuttle Mission Spacelab 2 (STS-51F) in August, 1985, and collected historic solar observations. SOUP is the only solar telescope on either a spacecraft or balloon which has delivered long sequences of diffraction-limited images. These movies led to several discoveries about the solar atmosphere which were published in the scientific journals. After Spacelab 2, reflights were planned on the Space Shuttle Sunlab Mission, which was cancelled after the Challenger disaster, and on balloon flights, which were also cancelled for funding reasons. In the meantime, the instrument was used in a productive program of ground-based observing, which collected excellent scientific data and served as instrument tests. This report gives an overview of the history of the SOUP program, the scientific discoveries, and the instrument design and performance.

Pressure corrected data from the Rome (Italy) neutron monitor and barometric pressure data are given in tabular form for the year 1990. The graphs of the corrected intensity are also given. Details of the devices employed, the operational mode, and data handling are given. Additionally, the following topics are discussed: the monitor, atmospheric pressure measurement, data acquisition system, stability, efficiency changes, barometric correction, presentation of the data, references, relevant

particulars, normalization factors, pressure corrected rates and section ratios, barometric pressure, and normalized graphs. ESA

**EFFECTS OF RADIOBIOLOGICAL UNCERTAINTY ON SHIELD DESIGN FOR A 60-DAY LUNAR MISSION**
John W. Wilson, John E. Nealy, and Walter Schimmerling (Universities Space Research Association, Washington, DC.) Washington Feb. 1993 10 p
(RTOP 199-04-16-11)
(NASA-TM-4422; L-17136; NAS 1.15:4422) Avail: CASI HC A02/MF A01

Some consequences of uncertainties in radiobiological risk due to galactic cosmic ray exposure are analyzed to determine their effect on engineering designs for a first lunar outpost - a 60-day mission. Quantitative estimates of shield mass requirements as a function of a radiobiological uncertainty factor are given for a simplified vehicle structure. The additional shield mass required for compensation is calculated as a function of the uncertainty in galactic cosmic ray exposure, and this mass is found to be as large as a factor of 3 for a lunar transfer vehicle. The additional cost resulting from this mass is also calculated. These cost estimates are then used to exemplify the cost-effectiveness of research. Author

(Grant NAG8-212)
(NASA-CR-191997; NAS 1.26:191997) Avail: CASI HC A01/MF A01

If gamma-ray bursts (GRB) arise from a small number of distinctly different physical phenomena, then this might be revealed by a clustering of time profile characteristics into a small number of groups. A 'spike' counting algorithm was applied to 107 GRB profiles. Graphs of spike frequency and spike amplitude versus burst intensity and duration are presented. So far, no evidence of grouping is seen. **MARS SURFACE RADIATION EXPOSURE FOR SOLAR MAXIMUM CONDITIONS AND 1989 SOLAR PROTON EVENTS**
Lisa C. Simonsen and John E. Nealy Washington Feb. 1992 16 p
(RTOP 593-42-31-01)
(NASA-TP-3300; L-17152; NAS 1.60:3300) Avail: CASI HC A03/MF A01

The Langley heavy-ion/nucleon transport code, HZETRN, and the high-energy nucleon transport code, BRYNTRN, are used to predict the propagation of galactic cosmic rays (GCR's) and solar flare protons through the carbon dioxide atmosphere of Mars. Particle fluences and the resulting doses are estimated on the surface of Mars for GCR's during solar maximum conditions and the Aug., Sep., and Oct. 1989 solar proton events. These results extend previously calculated surface estimates for GCR's at solar minimum conditions and the Feb. 1956, Nov. 1960, and Aug. 1972 solar proton events. Surface doses are estimated with both a low-density and a high-density carbon dioxide model of the atmosphere for altitudes of 0, 4, 8, and 12 km above the surface. A solar modulation function is incorporated to estimate the GCR dose variation between solar minimum and maximum conditions over the 11-year solar cycle. By using current Mars mission scenarios, doses to the skin, eye, and blood-forming organs are predicted for short- and long-duration stay times on the Martian surface throughout the solar cycle. **A COSMIC RAY PROPAGATION MODEL Ph.D. Thesis**
Robert Russell Clinton 1992 117 p
Avail: Univ. Microfilms Order No. DA9233978

This work describes a stepwise program of interstellar cosmic ray propagation that is used to study the sensitivity of propagation models of ultra heavy cosmic ray nuclei (UH nuclei). We have evaluated the uncertainties introduced in the predicted abundances by calculating the fragmentation cross sections using different procedures, by varying the input energy, and by varying the escape length of the cosmic ray nuclei. These uncertainties have been compared with the predicted differences introduced by assuming that the source abundances resemble either solar system, pure r-, or pure s-process material. These comparisons allow us to determine how the uncertainties in the above mentioned parameters affect the abundances of the cosmic ray nuclei. We conclude that the uncertainties in nuclear cross sections presently prevent us from drawing any but the broadest conclusions from the measured abundances.

**DEEPLY PENETRATING EVENTS IN THE EXTREMELY HIGH-ENERGY COSMIC RAY FLUX Ph.D. Thesis**
Bruce L. Emerson 1992 108 p
Avail: Univ. Microfilms Order No. DA9236272

This dissertation will present the results of a search for deeply penetrating particles in the Extremely High Energy (EHE) (particle energy greater than or equal to 10(exp 17) eV) cosmic ray flux. The data are from the University of Utah Fly's Eye detector which is a unique detector for observing cosmic rays in this energy regime. Central to this search is the definition of a robust signature for deeply penetrating Extensive Air Showers (EAS) which is given as follows: Candidate deeply penetrating events are those whose plane normal angle (theta(sub n)) is less than 18 degrees. The absence of events in the Fly's Eye data set meeting this criterion is examined in the context of models of astrophysical neutrino flux and charm production at EHE energies. The use of the calculations in this dissertation to test other models for the production of deeply penetrating extensive air showers is described where needed. Dissert. Abstr.

This paper is a tribute to the unique contribution of Dr. Alexander H. Flax who served from 1963 to 1969 as Assistant Secretary for Research and Development, US Air Force. A number of pioneering efforts concerning aircraft flight have affected the Air Force. Since its beginning great innovators have emerged who improved upon the art and science of flight. One such person is Al Flax. This article identifies, describes, and assesses Flax's contributions to the field of aeronautics and to the United States Air Force's science and technology program. The study is based on open sources, research, and oral history interviews regarding Flax's life. Air power and the control of the battlefield offered by airborne equipment and personnel owe much to Flax's work. Flax contributed to decisive elements of aerospace power, aerodynamics and aeronautics. Rotorcraft, wide-body aircraft, aircraft materials, and spacecraft. GRA

This brochure presents brief summaries of the FY93 research efforts at the Naval Training Systems Center (NAVTRASYSCEN) in Orlando, FL. NAVTRASYSCEN has comprehensive simulation and training systems responsibilities ranging from research and technology base development through system acquisition and life cycle support. The NAVTRASYSCEN is unique in this integrated role because it performs research, specifies the training device's engineering, instructional, and operational requirements, selects the contractor, evaluates the trainer as it is being built, and ensures the trainer can be properly operated and maintained in the field. In addition to the Navy, NAVTRASYSCEN provides services for the Marine Corps, Army, Air Force, and foreign governments. The NAVTRASYSCEN's research mission is to plan and perform a full range of directed research and development in support of Naval training systems for all warfare areas and platforms, to maintain an expanding technology base, and to transition research results to the fleet. Research and development program emphasis is on fleet and training command requirements, rapid transition of products, industry/university coordination, improved planning, coordination with other services, and improved quality and cost effectiveness of products. The objective of this project is to explore the application of layered semiconductor structures fabricated by molecular-beam epitaxy (MBE) to the development of electronic and electro-optical devices of interest for space applications. The principal focus of this project was the development of high-performance long-wavelength infrared (LWIR) photodetectors comprising multiple quantum wells formed by alternating layers of gallium arsenide (GaAs) and aluminum gallium arsenide (AlGaAs). Previously, we successfully modeled, designed, fabricated, and characterized quantum-well infrared photodetectors (QWIPs) with high detectivities. In the just-completed year, we investigated further the physics responsible for limiting the performance of these devices, explored new structures to enhance device performance, and designed, fabricated, and characterized QWIPs with peak responsivity at wavelengths longer than 10 microns. Avail: CASI HC A01/MF A02

The performance advantages of ultra-thin silicon-on-insulator (SOI) make it especially attractive for space applications, but the sensitivity of the back silicon/oxide interface to interface state generation will degrade the radiation hardness of the metal oxide semiconductor field effect transistors (MOSFET's). The two reported experimental techniques for extracting the distribution of back interface states from observed drain current-gate-source-voltage characteristics of fully depleted SOI MOSFET's as the substrate voltage is varied, result in similar extracted values for D(sub itb) as a function of bandgap energy for fully depleted n-and p-MOSFETs. Using these techniques, the radiation hardness of the back SOI interface can be assessed for space applications. Author

The purpose of this continuing project is to develop state-of-the-art analysis tools for the CAD of nonlinear microwave circuits; specifically, it comprises two principal development tasks, one for analytical methods and one for solid-state-device models. The objectives of the first task are to evaluate currently available methods for the relative merit of their algorithmic characteristics, to develop new methods and numerical algorithms to redress deficiencies identified by this evaluation, and to optimize the computer implementation of these analytical approaches. The basic goal of the second task is to develop complete and accurate solid-state device models to be used in CAD, in particular, to model the large-signal behavior and phase noise of recently introduced device families that are finding increasing use, such as high-electron-mobility transistors (HEMTs) and heterojunction bipolar transistors (HBTs). We have grown high-quality YBCO high temperature superconducting

(HTS) thin films by pulsed laser ablation from a stoichiometric target and have determined the optimal substrate temperature, oxygen pressure, and laser power density to deposit films with transition temperatures of 89 K and transition widths of 0.5 K. We continued our investigation into the noise properties of HTS thin films by establishing a collaboration with Sandia National Laboratories to investigate the noise in single- and dual-phase Tl-Ba-Ca-Cu-O (TBCCO) thin films. The excess noise in the presence of a bias current is dominated by 1/f noise, and the presence of a peak or peaks in the noise power density at the foot of the superconducting transition is directly related to the number of superconducting phases. The anomalous behavior in the 1/f noise exponent can be described by a model in which that noise originates from random fluctuations associated with an activated process. We hypothesized that, for HTS films, the activated process is the depinning of magnetic vortices. Author

Avail: CASI HC A01/MF A02

We have completed the design of a cryogenic infrared photoluminescence (PL) spectrometer incorporating a new long wavelength infrared (LWIR) photon-counting detector (SSPM) with cold (T = 4K) optics. The photon-counting operation of the SSPM, used in this spectrometer, was confirmed by studying variation in pulse height distribution with temperature and bias in a reduced-background environment. To facilitate future photoluminescence research studies, we established relationships with institutions growing advanced infrared materials, developed the analytic tools to explain measured-PL transitions in superlattices and multiple quantum wells, and verified the accuracy of these tools in predicting the photoreflectance transition energies measured in those structures. In the coming year, we expect to complete construction of our spectrometer, write the computer code for controlling the scanning mechanism, and begin to take and analyze PL spectra from existing LWIR surveillance sensor materials. Avail: CASI HC A01/MF A02

We conducted preliminary studies to determine whether a high-energy, high-current-density beam from the scanning tunneling microscope (STM) tip could modify an uncoated graphite surface. Using voltage pulses, we successfully wrote reproducible single dots on graphite. Those dots were roughly circular, with diameters smaller than approximately 300 A. We were able to produce linear features by scanning the tip along a line while applying voltage pulses at regular intervals. The resulting line has a width of only approximately 100 A. Because the STM was digitally stepped between the voltage pulses, the line was not uniform, but had features that are consistent with an etching process or physical ablation of material by the STM electron beam. This etching process, which is the inverse of a beam-induced deposition process, can also be used for recording information on a nanometer scale. Author

We investigated the operation of a new, passive Fraunhofer-wavelength atomic filter well suited for underwater laser systems. The filter exhibits a 50 micro-s decay time and a single noise passband. Conversion efficiencies up to 45 percent and an adjustable optical bandwidth were demonstrated. The adjustable bandwidth is particularly useful for spacecraft applications. The demonstrated performance, combined with the simplicity of operation, strongly suggests that the passive strontium filter will gain wide acceptance in the atmospheric and ocean optics community. This project investigates the spectral signatures associated with high-energy laser-particle interactions. Our main research objective is to improve predictive modeling of laser interaction with atmospheric particles by systematically studying the emissions from atmospheric aerosols interacting with high-energy lasers as a function of laser wavelength and intensity. Development of the theoretical formalism to interpret the results is an important part of this effort. The samples that are being analyzed mimic atmospheric particles: droplets of water and water soluble salts, ammonium and calcium sulfates, and microsamples of sand and carbon. This year, our theoretical work emphasized the optics of cloud-sized water droplets, and experiments were conducted to detail the power dependence of the two strongest nonlinear signals: stimulated Raman scattering (SRS) and breakdown-induced plasma emission. The work this year sought to examine relevant issues concerning two laser materials, neodymium-doped yttrium aluminum garnet (Nd:YAG) and Cr:Forsterite, which are potential sources for future compact all-solid-state devices for applications in remote sensing and communications. In Nd:YAG, nonequivalent crystal field sites were observed and their effects on laser performance are being evaluated. In Cr:Forsterite, a tunable solid-state material, experiments are under way to identify the active laser ion that produces the tunable laser output in the 1.1-1.3 micron range. The laser emission is believed to result from a new tetravalent chromium center. Study of this system will increase our knowledge of chromium ion centers, which not only provide laser emission but are also responsible for radiation hardening of certain laser crystals, an issue pertinent to space-based laser systems. The goal of this project is to investigate ultrasensitive coherent detectors (USCD's) for surveillance applications. Two areas of research were proposed, and they are described in order of priority. The first is the study and characterization of a laboratory benchtop USCD using stannic chloride ($SnCl_4$) as the Brillouin medium. A Brillouin medium is a gas or liquid that,

under the influence of an intense beam of light, forms acoustic or density waves characterized by a spatial wavelength of one-half the optical wavelength and capable of causing scattering of an optical beam. A USCD is a combination of neodymium-doped yttrium aluminum garnet (Nd:YAG) amplifiers with a four-wave Brillouin mirror (FWBM). The FWBM consists of a cell containing the nonlinear Brillouin material into which three beams are overlapped in space and time; a return beam is produced and is detected. Methods to evaluate SnCl4 as the Brillouin medium will be developed. The second area of research is an investigation of the single-pass correction of aberrations (SPICA) methods of correcting images or aberrations. Holographic methods of implementing such corrections are well known; we propose to replace the holograms (photographic plates) with the FWBM to create real-time correction. This work will be reported next year. Author

The nitrogen fluoride/pumped bismuth monofluoride, NF(a)/BiF(A0(+)), reaction system continues to be investigated as a power source for a supersonic visible (blue) laser. Such a laser would capitalize on the many advantages of supersonic flow that have been successfully demonstrated by the familiar hydrogen fluoride/deuterium fluoride (HF/DF) infrared-emitting lasers and would take advantage of the beam propagation characteristic, i.e., reduced divergence of the beam, of shorter wavelengths. Recent experiments conducted in the pulse facility at the Rockwell Science Center have demonstrated gain on the blue electronic transition; and very recently, lasing in a supersonic flow was demonstrated. This year's efforts focused on analytical and experimental studies to determine the optimal injection scheme to produce the desired lasing. Described here is development of the supersonic nozzle-injection scheme that led to the successful demonstration. Author

We developed a capability for measuring the optical properties of nonlinear materials using a solid-state laser and demonstrated a continuously tunable light source over a wide range of wavelengths in the ultraviolet, visible, and near infrared. In demonstrating the second-harmonic generation capability, confidence was increased in the feasibility of the concept of constructing a space-qualified tunable laser using nonlinear optical processes. The preliminary optical measurements of the lithium barium triorbate (LBO) crystal indicate its usefulness for ultraviolet and visible wavelength conversion. Next year, project focus will be on SFG and DFG studies using the nonlinear crystals LBO, LiIO3, and silver gallium sulfide (AgGaS2). Author

We constructed and tested a molecular beam facility for the direct, mass spectrometric measurement of the products of gas-solid reactions and their velocities. To examine one mode of vibrational excitation in gas-solid collisions--inelastic scattering from inert surfaces--we designed, constructed, and installed a supersonic nozzle source that can be heated to between 700 and 800 C. Initial experiments to measure the velocity distribution of carbon dioxide (CO2) scattered from lithium fluoride (LiF) indicated that product detection will require single-ion counting detection. The CO2 + LiF experiments will be completed next year, and the surface mediated reactions of atomic oxygen, atomic nitrogen, and nitrogen oxides that can produce NO will be examined to help interpret SKIRT results. Indium phosphide (InP) solar cells are an alternative to silicon or gallium arsenide solar cells for spacecraft that accumulate high doses of radiation during missions, because they appear to be more resistant to radiation damage than Si or GaAs, and the damage that is incurred can be partially annealed at low temperatures. The InP cells will undergo some annealing during each orbit; therefore, whether the defect sites initially present upon irradiation continue to be the dominant factors in cell degradation after multiple cycles must be ascertained. The goals of this project were to examine the mechanism of irradiation damage and annealing in InP material, and to determine whether one or more mechanisms were dominant over many irradiation and anneal cycles. To determine how the formation of color centers degrades performance, a series of spectroscopic experiments to measure electron paramagnetic resonance (EPR) absorption, transmission, and threshold were performed before and after irradiation. Low-temperature EPR spectra of three Nd:YAG samples taken after exposure to 600-krad Co-60 gamma radiation revealed no change in the Nd(3+) signal, but clearly revealed the presence of paramagnetic color centers, results that agree with those of previous studies. The absorption measurements at the pump wavelength indicated that, for given input intensities, approximately the same amount of pump light was absorbed. Consistent with the EPR data, this result indicated that there was no alteration in the local Nd(3+) environment, and hence no change in the Nd(3+) energy-level structure. Furthermore, earlier work demonstrated that absorption resulting from color-center formation was fairly negligible compared with the Nd(3+) absorption in the wavelength region of the laser-diode pump (800 nm). However, whether color centers cause nonradiative depopulation of the excited Nd(3+) sites was not established. Author

**MECHANISM OF DIAMOND FILM GROWTH** **c76**

L. R. Martin *In its* Aerospace Sponsored Research 1 Dec. 1991 p 69-70 (For primary document see N93-18459 06-99)
Avail: CASI HC A01/MF A02

The current technologies for diamond formation involve chemically and physically complex systems of many species, very high temperatures, and steep gradients in temperature and in concentration. Such complexity makes it difficult to identify the scientific phenomena responsible for the formation of diamonds and, therefore, difficult to engineer improvements in the new technology. The long-range development of diamond films will require a better understanding of those phenomena. The objective of our research is to improve the scientific knowledge of the diamond-growth mechanism by achieving the simplest possible chemical and physical conditions for diamond growth. This approach makes it easier to interpret experiments, and lends itself to computer modeling. This year, our initial identification of the mechanism was confirmed by five different groups in the U.S. and Japan.

Many launch vehicles, including the Space Shuttle and the developing National Launch System, are equipped with a hydrogen/oxygen propulsion system that requires an external ignition source. Upper stages such as Centaur carry their own ignition mechanism to remotely start their hydrogen/oxygen motors. Often overlooked, but critical to Air Force space missions, is launch-site fire safety. The Air Force offices of Safety, Bioastronautical Engineering, and Environmental Planning have complementary responsibilities for identifying launch-site ignition hazards. With an increasing focus on the environmental safety of fire-suppression systems, a detailed understanding of spark ignition is essential to developing the new fire-safety systems that are required by federal law. To support these various Air Force programs, this project has as its principal objective establishment of the early-time behavior and microscopic details of the chemistry that leads to ignition. We focus primarily on spark ignition because it is the form of flame initiation that can be applied most generally to Air Force missions. We have sought to characterize the chemical kinetics of ignition, flame propagation, and combustion inhibition on the basis of time-resolved species identification and energy distributions in propagating flame fronts.

The study of time-resolved properties of clusters this year emphasized characterization of the mechanisms by which the structure of matter on a molecular level influences chemical reactivity. Very pronounced transitions in chemical reactivity were observed at the single-molecule level. In the coming year, the cluster effort will focus on atmospheric and environmental issues. The success of our efforts in the last two years places us at the forefront of time-resolved measurements of cluster dynamics. Furthermore, this project has led to the development of new technologies that are now being applied to Space Systems Division-related programs, such as laser ignition of fuels, fluorescence detection of thruster devices, and resonance ionization for trace environmental detection. The data and results of our research have also provided essential information to plume signature chemistry, combustion chemistry, contamination effects, and atmospheric phenomena.

The objective of this project is to examine by infrared spectroscopy the detailed chemistry underlying organometallic chemical vapor deposition (OMCVD) of thin-film materials. In OMCVD, an organometallic compound is decomposed at a relatively low temperature to form a high-melting thin-film material. For example, pure films of tungsten, a highly refractory metal with a melting point in excess of 3000 C, can be formed by decomposition of gaseous tungsten carbonyl at 200 C. It is a powerful and routinely used method for producing a wide range of thin-film materials, including metals, dielectrics, ceramics, and semiconductors that have space applications ranging from solar cells and novel optical filters to high-temperature protective coatings for rocket motors. OMCVD allows temperature-sensitive substrates to be coated and is the best way to achieve complete coverage of complex topographies, such as those found in integrated circuits.

We used the rapid solidification rate (RSR) melt-spinning technique in an argon atmosphere, and successfully produced chemically homogeneous Y-Ba-Cu-Ag metallic precursors in ribbon form. To convert the metallic precursor to a superconducting Ag/YBa2Cu3O7 composite ribbon without distortion, we developed a low-temperature, 450-550 C, oxidation treatment in pure oxygen and a high-temperature, 850 C, annealing process in air. The annealed ribbon revealed an interwoven microstructure consisting of a pure-Ag phase and a needlelike oxide phase; both phases appeared to be continuous. The oxide phase was further identified by x-ray diffraction to be the YBa2Cu3O7 superconducting oxide. Resistance measurement indicated a T(sub c) at about 84 K and zero resistance at about 69 K. Additional tests are being conducted to study the oxidation kinetics of the precursor material in order to raise the T(sub c) while maintaining the mechanical integrity of the superconducting ribbon.

The goal of this project is to describe the basic physical mechanisms that produce nonlinear coupling between acoustic and electromagnetic fields in various piezoelectric and magnetostrictive materials. The nonlinear effects of these materials can be exploited in acoustomagnetic embedded-sensor applications to overcome such fundamental shortcomings of linear technologies as the inability to measure absolute stresses. To determine the coefficients for the quadratic and higher order terms in the Taylor expansion of the coupling response, nonlinear coupling is investigated as a function of applied stress, magnetic induction, electric field, and temperature. Materials in which these coefficients display a strong dependence on the applied acoustic and electromagnetic fields are given particular attention. The resulting information will be used to investigate the enhancement of desirable nonlinear effects in those materials to maximize their efficiency as embedded sensors. Author

The overall objective of this investigation is to synthesize thermally stable organic monomers and polymers capable of coreacting with inorganic components through the sol-gel process to provide access to hybrid polymer-ceramic structures not otherwise easily obtained. The goal of this project is to understand how molecular network structure affects composite properties and apply this knowledge to the construction of advanced materials for future Space Systems Division application. The initial phase of this work comprised two tasks. The first task was to prepare a new organic precursor material, and the second task was to develop the sol-gel processing conditions for producing hybrid materials both as thin films and in bulk. Concurrent with the preparative task, two commercially available organic precursors were selected as substitute coreactants with the inorganic precursor, tetraethoxysilane (TEOS), in the processing task. Thin solid films of transition-metal dichalcogenide (TMD) compounds, such as molybdenum disulfide (MoS2) and niobium selenide (NbSe2), are used as lubricating and antiwear coatings in space systems. The friction and wear properties of these films are determined by the structural properties of the films--crystallinity and bond lengths--which are, in turn, determined by the electronic structure within the TMDs. This project combines theoretical calculations with experimental measurements of the atomic and electronic structures of TMDs. Currently, we are substituting different elements, for example, selenium (Se), silver (Ag), and niobium (Nb), into the TMD crystal lattice. Such substitution allows us to examine the effect of solid solution formation and metal doping on the atomic and electronic structures to learn ways of controlling the lubricity and conductivity of TMD compounds. Our goal, ultimately, is to predict the compositions that will optimize the tribological properties and conductivity of TMD-based solid lubricants for such space-oriented applications as sliding electrical contacts, latches, sensor gimbals, and cryogenic assemblies. The objective of this three-year project is to investigate techniques for the efficient production of metal-in-matrix fuels. Our approach depends on the selection and treatment of precursors that are expected to yield large quantities of free metal atoms. Here, 'treatment' may refer to simply dissolving the precursor in a solvent. This might be true for precursors that are nanometer sized particles. 'Treatment' may also refer to a more complex process, like photochemical decomposition, if the precursor is a dissolved metal-bearing organometallic molecule. In both treatments, the solvents are supercritical gases. Supercritical gases are gases at pressures exceeding their critical pressure and at temperatures at which the application of an external pressure alone will not cause them to liquefy. They posses unique solvating properties, originally identified in 1879 by Hannay and Hogarth. Their solvating potential was subsequently quantified, most notably with the studies of Smits on the diethylether/anthraquinone system and van Niewenberg and van Zon on the solubility of quartz in supercritical water. These gases are being applied in several chemical-process industries, their role in shale oil extraction being the most prominent. Their unique solvating characteristics motivated us to select supercritical gases as solvents for preparing metal-in-matrix fuels. These gases should be able to disperse sufficient precursor to produce the required metal-atom dispersion, and subsequently stabilize the resulting dispersed metal atoms by preventing their aggregation to the bulk. For the present benzene cluster experiments, we used the same supersonic cluster-beam apparatus as that for the previous work on silicon. We modified the apparatus substantially to develop the following technique as a universal source for producing cold cluster ions of any size organic molecule. A high-power laser-induced plasma generates cluster ions in the throat of a supersonic nozzle. The laser pulse is focused onto a metal surface, and the plasma ionizes benzene molecules seeded in a helium carrier gas. Expansion of the gas through the nozzle cools the benzene, and the clusters grow by accretion of neutral benzene molecules onto a molecular ion seed. The clusters continue to cool as the expansion proceeds, producing an intense beam of cold benzene cluster cations ranging in size from the dimer to about B(sub z(sub 20))(+). After the cluster ions exit the nozzle, they are separated by mass, and a single cluster size is selected for study using electric fields. The mass-selected beam is then intersected by the output of a tunable-frequency laser. If the light is of the correct frequency to be absorbed by the cluster, it fragments the cluster. The charged fragments are collected, mass-analyzed, and detected to produce a photofragmentation spectrum. The signals are collected in a difference mode, and the spectrum is displayed as the difference between the signal acquired with the fragmentation laser on and off. The spectra exhibit two types of peaks: positive peaks representing charged species produced by the fragmentation process, and negative peaks indicating destruction of parent-ion species. Author

J. H. Hecht and L. K. Johnson *In its* Aerospace Sponsored Research 1 Dec. 1991 p 119-123 (For primary document see N93-18459 06-99)

Avail: CASI HC A01/MF A02

This research project involves obtaining field and laboratory measurements for quantitative information with which to describe basic aeronomic phenomena and processes pertaining to Air Force missions and capabilities. During previous research, we developed a Fabry-Perot interferometer system that can measure weak auroral and airglow emissions. Using this system, we showed that, by measuring auroral emissions, the adequacy of an atmospheric model for predicting the atomic oxygen density could be determined. We also measured weak OH Meinel airglow emissions and demonstrated their application to study the propagation of gravity waves through the mesopause region. We improved on that technique by developing a charge coupled device (CCD) camera system that can take pictures of both the OH Meinel emission, which occurs near 85 km, and the O2 Atmospheric band emission, which occurs near 94 km. Measurements of both emissions simultaneously will enable vertical propagation of atmospheric gravity waves to be characterized. Author

Infrared light can penetrate the dense clouds of gas and dust that are present in the galactic plane; consequently, the appearance of the infrared sky is significantly different from that at visible wavelengths. Visible-light measurements are therefore useless for predicting the appearance of the infrared sky with any fidelity. Thus, space surveillance programs requiring knowledge of the infrared celestial background need direct infrared measurements at the wavelengths of interest. The purpose of this project is to identify the structure of the infrared sky at a wide range of spatial scales. Our work has concentrated on producing two new sources of information: measurements made at higher spatial resolutions than is possible with data from the Infrared Astronomical Satellite (IRAS); and information at spatial scales that is not available in previously published maps. The goal of this multiyear effort was to ascertain the physical phenomena that produce the spatial and spectral structure seen in the infrared sky. This information can then be used to predict the background that might be seen by a given infrared sensor that is attempting to locate targets against the infrared sky or to see celestial objects for calibration. We applied existing radar techniques to studies of a dynamically changing ionosphere to investigate their limitations. New radar observing strategies were formulated to improve range resolution and thereby reduce undesirable effects caused by the mixing of backscatter spectra within a single range cell. As part of a new initiative to develop improved observing methods that will significantly enhance our ability to monitor electron-temperature and -density changes in the auroral environment, we made high-resolution observations with the European Incoherent Scatter Radar Facility located near Tromso, Norway, as a testbed. Significant progress was made during this year to model the physics of the transfer of solar-wind energy to the Earth's magnetosphere. The transfer of energy and plasma across the boundary between open and closed magnetic field lines was measured, and the process was elucidated. The injection of particles into the region of the stormtime ring current was also charted, which should lead, in the near future, to a model of ring current formation. Author

This project encompasses an evolving series of small-scale data-analysis and theoretical studies of the conditions, constituents, and physical processes in space, and the solar-terrestrial physics of the influence of the sun on the Earth and near-Earth environment. The common objective of this multifaceted research is to characterize the space environment so that the ambient background of particles and electromagnetic radiation that influence space sensor performance can be determined. The project is sufficiently flexible that the investigators can take advantage of unexpected research opportunities within the overall framework of studies of the space environment. This year, the following research topics were addressed: (1) geomagnetic trapping of the anomalous component of cosmic rays; (2) the galactic magnetosphere; (3) the formation of emission features, particularly those of the iron cation Fe(+) in planetary nebulae and emission-line stars; (4) the Fe(+17) spectrum of the sun; and (5) solar abundances. Advances in Artificial Neural Network (ANN) technology exhibit great potential for solving such aerospace problems as optimization, control, pattern recognition, and signal processing. This project coordinates new and continuing investigations into applications of ANN technology. This year, it comprised four tasks: (1) implementing a Neural Network Simulator (NNS) to support neural network investigations; (2) solving message routing in dynamic topology networks; (3) performing vehicle-control-system fault detection and attitude estimation; and (4) applying ANN technology to estimation and identification techniques for determining spacecraft attitude. **BARRIER SYNCHRONIZATION OF DISTRIBUTED-MEMORY ARCHITECTURES** **c62**

C. A. Lee *In its* Aerospace Sponsored Research 1 Dec. 1991 p 147-149 (For primary document see N93-18459 06-99)

Avail: CASI HC A01/MF A02

Barrier synchronization on a distributed-memory machine entails message-passing among the nodes participating in the barrier. In general, a node must tell one or more other nodes that it has arrived at the barrier, by sending one or more messages. It must then wait to receive one or more messages from other nodes so that it can deduce that all nodes have arrived at the barrier and it may proceed past the barrier. The differences among barrier algorithms are the number of necessary messages and the order in which the messages are sent and received, variables that directly affect the efficiency of the algorithm. The objective of this project was to develop the best possible barrier algorithms for distributed-memory architectures as the next logical step of previous work done on barrier synchronization over multistage interconnection networks for shared-memory machines. For this study, seven algorithms were implemented on Aerospace's Intel iPSC/860, which is a distributed-memory machine with eight nodes, each with 16 Mbyte of memory, based on the Intel i860 microprocessor running at 40 MHz. Avail: CASI HC A01/MF A02

The original objective of this project was to make mathematical tools available to a heterogeneous modeling environment by 'wrapping' them in expert interfaces that contain explicit, unambiguous descriptions of their use, capabilities, limitations, and behavior. Such wrapping is part of an organizational principle that makes all knowledge of system tools explicit. Our current objective is to apply wrapping concepts more generally, to develop a new methodology for constructing open, integrated software environments. The wrappings will describe all computational resources, not just mathematical tools, and, as we have learned, the wrapping descriptions must be separated according to different uses, since the different applications of resources require different information. Wrappings provide standard interfaces to a software resource and knowledge about the resource, so that other tools in the environment can interact with the wrapped resource, either to provide it with information or to use its information effectively. Several overviews or applications of the wrapping methodology have been presented recently. Author

Image compression continues to generate interest because the ability to collect large amounts of data at high rates has grown faster than transmission and storage capacities. In our continuing studies of image compression techniques, we focus on retaining image quality using adaptive, variable-rate compression techniques. Inherent in most image compression schemes is concern for the quality of the final product. The basis of our variable-rate compression scheme is a relatively new and promising technique called vector quantization (VQ). Vector quantization promises theoretical improvements over many current compression algorithms; more importantly, VQ provides a flexible configuration for variable-rate compression. The objective of this year's project was to show that vector quantization could be configured into a more efficient, high-quality compression system using variable-rate compression. Author

**WAVELET IMAGE ANALYSIS** **c61**

J. R. LaFrieda, L. A. Campbell, and M. Jankins *In its* Aerospace Sponsored Research 1 Dec. 1991 p 156-158 (For primary document see N93-18459 06-99)

Avail: CASI HC A01/MF A02

Wavelet analysis is a new signal analysis technique that has shown significant promise in applications such as image compression and object detection. It is based on the wavelet transform, which is a tool similar to the Fourier and Hadamard transforms. An important goal of this project was to develop an understanding of wavelet analysis and its relation to more classical ideas, such as Fourier and Gabor transforms. Specific technical objectives were as follows: (1) implement an in-house capability for the multi-resolution analysis of signals and images, allowing for flexibility in the selection of the mother wavelet f; (2) examine the applicability of wavelet transforms to selected signal processing tasks, in particular, compression, and image processing tasks, in particular, edge detection; and (3) devise and implement an adaptive compression scheme, using wavelet transforms, in which the finest level of detail varies from point to point. This document is a collection of technical reports on research conducted by the participants in the 1992 NASA/ASEE Summer Faculty Fellowship Program at Kennedy Space Center (KSC). This was the eighth year that a NASA/ASEE program has been conducted at KSC. The 1992 program was administered by the University of Central Florida in cooperation with KSC. The program was operated under the auspices of the American Society for Engineering Education (ASEE) with sponsorship and funding from the Office of Educational Affairs, NASA Headquarters, Washington, D.C. The KSC program was one of nine such Aeronautics and Space Research Programs funded by NASA Headquarters in 1992. The basic common objectives are to further the professional knowledge, to stimulate an exchange of ideas, to enrich and refresh the research and teaching activities, and to contribute to the research objectives of the NASA centers. For individual titles, see N93-19391 through N93-19411.

**USE OF CYCLIC CURRENT REVERSAL POLARIZATION VOLTAMMETRY FOR INVESTIGATING THE RELATIONSHIP BETWEEN CORROSION RESISTANCE AND HEAT-TREATMENT INDUCED VARIATIONS IN MICROSTRUCTURES OF 400 C MARTENSITIC STAINLESS STEELS** **c26**

John R. Ambrose *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 1-30 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

Software for running a cyclic current reversal polarization voltammagram has been developed for use with a EG&G Princeton Applied Research Model 273 potentiostat/galvanostat system. The program, which controls the magnitude, direction and duration of an impressed galvanostatic current, will produce data in ASCII spreadsheets (Lotus, Quattro) for graphical representation of CCRPV voltammograms. The program was used to determine differences in corrosion resistance of 440 C martenstic stainless steel produced as a result of changes in microstructure effected by tempering. It was determined that tempering at all temperatures above 400 F resulted in increased polarizability of the material, with the increased likelihood that pitting would be initiated upon exposure to marine environments. These results will be used in development of remedial procedures for lowering the susceptibility of these alloys toward the stress corrosion cracking experienced in bearings used in high pressure oxygen turbopumps used in the main engines of space shuttle orbiters. **HYDROGEN LEAK DETECTION IN THE SPACE SHUTTLE** **c16**

Ronald G Barile *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 31-68 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

This study focuses on a helium gas jet flowing into room air. Measurements of helium concentration and velocity in the jet-air mixture are reported. The objective is to learn about jet characteristics so that dynamically similar hydrogen leaks may be located in the Space Shuttle. The hazardous gas detection system (HGDS) in the mobile launch pad uses mass spectrometers to monitor the shuttle environment for leaks. The mass spectrometers are fed by long sample tubes which draw gas from the payload bay, mid body, aft engine compartment and external tank. The overall purpose of this study is to improve the HGDS especially in its potential for locating hydrogen leaks. A rapid-response leak detection experiment was designed, built, and tested, following on the work done in this program last summer. The apparatus included a Perkin Elmer MGA-1200 mass spectrometer and air velocity transducer, both monitored by a Macintosh IIFX computer using LabVIEW software. A jet of helium flowing into the lab air simulated a gas leak. Steady helium or hydrogen-nitrogen jets were logged for concentration and velocity, and the power spectral density of each was computed. Last year, large eddies and vortices were visually seen with Schlieren imaging, and they were detected in the time plots of the various instruments. The response time of the MGA-1200 was found in the range of 0.05 to 0.1 sec. Pulsed concentration waves were clearly detected at 25 cycles per sec by spectral analysis of MGA data. No peaks were detected in the power spectrum, so in the present study, 10 Hz bandwidth-averaged power levels were examined at regular frequency intervals. The practical consequences of last year's study are as follows: sampling frequency should be increased above the present rate of 1 sample per second so that transients could be observed and analyzed with frequency response methods. Many more experiments and conditions were observed in this second summer, including the effects of orifice diameter, jet velocity, sample tube design, radial effects, vertical flow, and low hydrogen concentrations (1 percent). A frequent observation was that the power spectrum, calculated from the Fourier transform of concentration fluctuations, gives a separate piece of information from concentration. Many of the tests suggest that power is high where mixing occurs at the helium-air interface. This fact is apparently independent of the concentration level, which could be high or low, but depends on the sample location relative to the jet (leak) origin, whereas high concentration may be due to a strong leak far away or a small leak close to the sample tube. If the power is low for any concentration level, this would signify helium is arriving at the sample tube by diffusion, not chaotic mixing caused by the jet interaction with air. The practical result is to propose a modification of the HGDL mass spectrometer data sampling and software so that sampling rates could be capable of observing at least 25 Hz fluctuations. Author

**KINEMATIC ANALYSIS OF THE ARID MANIPULATOR** **c37**

Keith L Doty *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 69-80 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

The kinematic structure of the ARID manipulator lends itself to simple forward and inverse kinematics analysis. The purpose of this paper is to fully document and verify an existing analysis. The symbolic software package MATHEMATICA was used to produce and verify the equations presented here. In the analysis to follow, the standard Devenit-Hartenberg kinematic parameters of the ARID were employed. Author

**CALIBRATION OF THE ARID ROBOT** **c37**

Keith L Doty *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 81-113 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

The author has formulated a new, general model for specifying the kinematic properties of serial manipulators. The new model kinematic parameters do not suffer discontinuities when nominally parallel adjacent axes deviate from exact parallelism. From this new theory the author develops a first-order, lumped-parameter, calibration-model for the ARID manipulator. Next, the author develops a calibration methodology for the ARID based on visual and acoustic sensing. A sensor platform, consisting of a camera and four sonars attached to the ARID end frame, performs calibration measurements. A calibration measurement consists of processing one visual frame of an accurately placed calibration image and recording four acoustic range measurements. A minimum of two measurement protocols determine the kinematics calibration-model of the ARID for a particular region: assuming the joint displacements are accurately measured, the calibration surface is planar, and the kinematic parameters do not vary rapidly in the region. No theoretical or practical limitations appear to contra-indicate the feasibility of the calibration method developed here. Author

**ARID RELATIVE CALIBRATION EXPERIMENTAL DATA AND ANALYSIS c37**

Keith L Doty *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 115-142 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

Several experiments measure the orientation error of the ARID end-frame as well as linear displacements in the Orbiter's y- and z-axes. In each experiment the position of the ARID on the trolley is fixed and the manipulator extends and retracts along the Orbiter's y-axis. A sensor platform consisting of four sonars arranged in a '+' pattern measures the platform pitch about the Orbiter's y-axis (angle b) and yaw about the Orbiter's x-axis (angle alpha). Corroborating measurements of the yaw error were performed using a carpenter's level to keep the platform perpendicular to the gravity vector at each ARID pose being measured. Author

**WATER QUALITY MODELING USING GEOGRAPHIC INFORMATION SYSTEM (GIS) DATA c45**

Bernard A Engel *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 143-170 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

Protection of the environment and natural resources at the Kennedy Space Center (KSC) is of great concern. The potential for surface and ground water quality problems resulting from non-point sources of pollution was examined using models. Since spatial variation of parameters required was important, geographic information systems (GIS) and their data were used. The potential for groundwater contamination was examined using the SEEPAGE (System for Early Evaluation of the Pollution Potential of Agricultural Groundwater Environments) model. A watershed near the VAB was selected to examine potential for surface water pollution and erosion using the AGNPS (Agricultural Non-Point Source Pollution) model. Author

**NETWORK PROBLEM THRESHOLD c32**

Raghvendra Gejji, R. *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 171-198 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

Network transmission errors such as collisions, CRC errors, misalignment, etc. are statistical in nature. Although errors can vary randomly, a high level of errors does indicate specific network problems, e.g. equipment failure. In this project, we have studied the random nature of collisions theoretically as well as by gathering statistics, and established a numerical threshold above which a network problem is indicated with high probability. **REDUNDANT DRIVE CURRENT IMBALANCE PROBLEM OF THE AUTOMATIC RADIATOR INSPECTION DEVICE (ARID) c37**

Carl D. Latino *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 199-228 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A05

The Automatic Radiator Inspection Device (ARID) is a 4 Degree of Freedom (DOF) robot with redundant drive motors at each joint. The device is intended to automate the labor intensive task of space shuttle radiator inspection. For safety and redundancy, each joint is driven by two independent motor systems. Motors driving the same joint, however, draw vastly different currents. The concern was that the robot joints could be subjected to undue stress. It was the objective of this summer's project to determine the cause of this current imbalance. In addition it was to determine, in a quantitative manner, what was the cause, how serious the problem was in terms of damage or undue wear to the robot and find solutions if possible. It was concluded that most problems could be resolved with a better motor control design. This document discusses problems encountered and possible solutions. Author

**EVALUATION OF ULTRASONIC CAVITATION OF METALLIC AND NON-METALLIC SURFACES c71**

Narinder K. Mehta *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 261-317 (For primary document see N93-19390 06-99)
Avail: CASI HC A04/MF A06

1,1,2 trichloro-1,2,2 trifluoro ethane (CFC-113) commercially known as Freon-113 is the primary test solvent used for validating the cleaned hardware at the Kennedy Space Center (KSC). Due to the ozone depletion problem, the current United States policy calls for the phase out of Freons by 1995. NASAs chlorofluorocarbon (CFC) replacement group at KSC has opted to use water as a replacement fluid for the validation process since water is non-toxic, inexpensive, and is environmentally friendly. The replacement validation method calls for the ultrasonification of the small parts with water at 52 C for a cycle or two of 10 min duration wash using commercial ultrasonic baths. In this project, experimental data was obtained to assess the applicability of the proposed validation method for any damage of the metallic and non-metallic surfaces resulting from ultrasonic cavitation. **AUTOMATICALLY CALIBRATING ADMITTANCES IN KATE'S AUTONOMOUS LAUNCH OPERATIONS MODEL c15**

Steve Morgan *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 319-362 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

This report documents a 1000-line Symbolics LISP program that automatically calibrates all 15 fluid admittances in KATE's Autonomous Launch Operations (ALO) model. (KATE is Kennedy Space Center's

Knowledge-based Autonomous Test Engineer, a diagnosis and repair expert system created for use on the Space Shuttle's various fluid flow systems.) As a new KATE application, the calibrator described here breaks new ground for KSC's Artificial Intelligence Lab by allowing KATE to both control and measure the hardware she supervises. By automating a formerly manual process, the calibrator: (1) saves the ALO model builder untold amounts of labor; (2) enables quick repairs after workmen accidently adjust ALO's hand valves; and (3) frees the modeler to pursue new KATE applications that previously were too complicated. Also reported are suggestions for enhancing the program: (1) to calibrate ALO's TV cameras, pumps, and sensor tolerances; and (2) to calibrate devices in other KATE models, such as the shuttle's LOX and Environment Control System (ECS).

**MATERIAL SELECTION AND EVALUATION OF NEW ENCAPSULATION COMPOUNDS FOR ELECTRIC CABLES FOR LAUNCH SUPPORT SYSTEM** **c27**

Asit K. Ray *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 363-389 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

Eight urethane compounds were evaluated as possible replacement for the existing encapsulating compoounds for electrical cables for the Launch Support System at Kennedy Space Center (KSC). The existing encapsulating compound, PR-1535, contains the curative MOCA 4-4'-Methylene-BIS (2-chloroaniline), which is a suspect carcinogen and hence may be the subject of further restrictions of its use by the Occupational Safety and Health Administration (OSHA). The samples made in the configuration of cable joints and in the form of disks were evaluated for flammability and hypergolic compatibility. These also underwent accelerated weatherability tests that measured the residual hardness of the exposed samples. Three candidates and the existing compound passed the hardness test. Of these, only one candidate and the existing compound passed the flammability test. The thermal and hydrolytic stability (weatherability) of these samples was studied using thermogravimetric analysis (DSC) techniques. The TMA and DSC data correlated with the residual hardness data; whereas, the TGA data showed no correlation. A hypergolic compatibility test will be conducted on the compound V-356-HE80, which passed both the flammability and accelerated weatherability tests. Author

**DETERMINATION AND REPRESENTATION OF ELECTRIC CHARGE DISTRIBUTIONS ASSOCIATED WITH ADVERSE WEATHER CONDITIONS** **c47**

John T. Rompala *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 391-420 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

Algorithms are presented for determining the size and location of electric charges which model storm systems and lightning strikes. The analysis utilizes readings from a grid of ground level field mills and geometric constraints on parameters to arrive at a representative set of charges. This set is used to generate three dimensional graphical depictions of the set as well as contour maps of the ground level electrical environment over the grid. The composite, analytic and graphic package is demonstrated and evaluated using controlled input data and archived data from a storm system. The results demonstrate the packages utility as: an operational tool in appraising adverse weather conditions; a research tool in studies of topics such as storm structure, storm dynamics, and lightning; and a tool in designing and evaluating grid systems. **DEVELOPMENT OF A TASK ANALYSIS TOOL TO FACILITATE USER INTERFACE DESIGN** **c61**

Jean C. Scholtz *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 421-450 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

A good user interface is one that facilitates the user in carrying out his task. Such interfaces are difficult and costly to produce. The most important aspect in producing a good interface is the ability to communicate to the software designers what the user's task is. The Task Analysis Tool is a system for cooperative task analysis and specification of the user interface requirements. This tool is intended to serve as a guide to development of initial prototypes for user feedback. Author

**TRAINING EVALUATION FINAL REPORT** **c80**

Jose A. Sepulveda *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 451-458 (For primary document see N93-19390 06-99)

Avail: CASI HC A02/MF A06

In the area of management training, 'evaluation' refers both to the specific evaluation instrument used to determine whether a training effort was considered effective, and to the procedures followed to evaluate specific training requests. This report recommends to evaluate new training requests in the same way new procurement or new projects are evaluated. This includes examining training requests from the perspective of KSC goals and objectives, and determining expected ROI of proposed training program (does training result in improved productivity, through savings of time, improved outputs, and/or personnel reduction?). To determine whether a specific training course is effective, a statement of what constitutes 'good performance' is required. The user (NOT the Training Branch) must define what is 'required level of performance'. This 'model' will be the basis for the design and development of an objective, performance-based, training evaluation instrument. Author

**NEEDS ASSESSMENT FINAL REPORT** **c80**

Jose A. Sepulveda *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 459-481 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

The stated purposes of the Management Science Faculty Fellowship Project were to: (1) provide a comprehensive analysis of KSC management training for engineers and other management professionals from project/program lead through executive levels; and (2) development of evaluation methodologies which can be used to perform ongoing program-wide course-to-course assessments. This report will focus primarily in the first stated purpose for the project. Ideally, the analysis of KSC management training will build in the current system and efficiently propose improvements to achieve existing goals and objectives while helping to identify new visions and new outcomes for the Center's Management Training Mission. Section 2 describes the objectives, approach, and specific tasks used to analyze KSC's Management training System. Section 3 discusses the main conclusions derived from an analysis of the available training data. Section 4 discusses the characteristics and benefits envisioned for a Management Training System. Section 5 proposes a Training System as identified by the results of a Needs Assessment exercise conducted at KSC this summer. Section 6 presents a number of recommendations for future work. Author

**STUDY AND DEVELOPMENT OF AN AIR CONDITIONING SYSTEM OPERATING ON A MAGNETIC HEAT PUMP CYCLE (DESIGN AND TESTING OF FLOW DIRECTORS)** **c34**

Pao-Lien Wang *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 483-500 (For primary document see N93-19390 06-99)

Avail: CASI HC A03/MF A06

This report describes the fabrication, design of flow director, fluid flow direction analysis and testing of flow director of a magnetic heat pump. The objectives of the project are: (1) to fabricate a demonstration magnetic heat pump prototype with flow directors installed; and (2) analysis and testing of flow director and to make sure working fluid loops flow through correct directions with minor mixing. The prototype was fabricated and tested at the Development Testing Laboratory of Kennedy Space Center. The magnetic heat pump uses rear earth metal plates rotate in and out of a magnetic field in a clear plastic housing with water flowing through the

rotor plates to provide temperature lift. Obtaining the proper water flow direction has been a problem. Flow directors were installed as flow barriers between separating point of two parallel loops. Function of flow directors were proven to be excellent both analytically and experimentally. Author

**DESIGN AND EVALUATION OF FDDI FIBER OPTICS NETWORKFOR ETHERNETS, VAX'S AND INGRAPH WORK STATIONS** **c74**
M. Chris Wernicki *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 501-529 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

The purpose of this project is to design and evaluate the FDDI Fiber Optics Network for Ethernets, VAX's, and Ingraph work stations. From the KSC Headquarters communication requirement, it would be necessary to develop the FDDI network based on IEEE Standards outlined in the ANSI X3T9.5, Standard 802.3 and 802.5 topology - direct link via intermediate concentrator and bridge/router access. This analysis should examine the major factors that influence the operating conditions of the Headquarters Fiber plant. These factors would include, but are not limited to the interconnecting devices such as repeaters, bridges, routers and many other relevant or significant FDDI characteristics. This analysis is needed to gain a better understanding of overall FDDI performance. Author

**INVESTIGATION OF THE BANDWIDTH OF MULTIMODE OPTICAL FIBERS USED WITH 1550-nm LED AND LASER SOURCES** **c74**
Preston A. White, III *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 531-559 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

Multimode optical fibers are not intended to be used with 1550-nm sources; however, it is desirable to utilize 1300/1550-nm wavelength division multiplexing (WDM) on some multimode fibers at Kennedy Space Center (KSC). No information from fiber vendors nor from the literature is available to support this use. Preliminary studies at KSC have suggested that these fibers might be usable at 1550-nm if the fibers possessed enough bandwidth when sourced by LEDs. Detailed bandwidth studies were made on 12 multimode fibers using 1300- and 1550-nm lasers and LEDs. The results showed that the modal bandwidth at 1550-nm was about 50 percent of the 1300-nm value and that the chromatic dispersion could be predicted by extrapolating the vendor's specifications for wavelengths outside the 1550-nm region. Utilizing these data, predictions of the fiber's optical bandwidth were accurately made. Problems with launch conditions and possible differential attenuation at connectors was noted at 1300-nm but was less significant at 1550-nm. It appears that the multimode fibers studied will offer adequate performance in the 1550-nm region for a number of current KSC needs. Studies of additional fibers are encouraged to gain more confidence and better understanding of the 1550-nm bandwidth of KSC's multimode optical fibers before committing to 1300/1550-nm WDM. Author

**A LOGISTICS AND POTENTIAL HAZARD STUDY OF PROPELLANT SYSTEMS FOR A SATURN 5 DERIVED HEAVY LIFT (THREE-STAGE CORE) LAUNCH VEHICLE** **c20**
E. Dow Whitney *In its* NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 561-591 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A06

The Bush Administration has directed NASA to prepare for a return to the Moon and on to Mars - the Space Exploration Initiative. To meet this directive, powerful rocket boosters will be required in order to lift payloads that may reach the half-million pound range into low earth orbit. In this report an analysis is presented on logistics and potential hazards of the propellant systems envisioned for future Saturn 5 derived heavy lift launch vehicles. In discussing propellant logistics, particular attention has been given to possible problems associated with procurement, transportation, and storage of RP-1, HL2, and LOX, the heavy lift launch vehicle propellants. Current LOX producing facilities will need to be expanded and propellant storage and some support facilities will require relocation if current Launch Pads 39A and/or 39B are to be used for future heavy noise-abatement measures. Included in the report is a discussion of suggested additional studies, primarily economic and environmental, which should be undertaken in support of the goals of the Space Exploration Initiative. **HURRICANE RISK ASSESSMENT TO ROLLBACK OR RIDE OUT A COST VERSUS LOSS DECISION MAKING APPROACH** **c47**
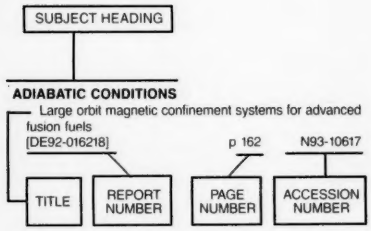
Richard A. Wohlman *In* Univ. of Central Florida, NASA/ASEE Summer Faculty Fellowship Program Sep. 1992 p 593-632 (For primary document see N93-19390 06-99)
Avail: CASI HC A03/MF A05

The potential exists that a hurricane striking the Kennedy Space Center while a Space Shuttle is on the pad. Winds in excess of 74.5 knots could cause the failure of the holddown bolts bringing about the catastrophic loss of the entire vehicle. Current plans call for the rollback of the shuttle when winds of that magnitude are forecast to strike the center. As this is costly, a new objective method for making rollback/rideout decisions based upon Bayesian Analysis and economic cost versus loss is presented. Author

## Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

**AERIAL PHOTOGRAPHY**
Updating topographic maps using orbital images in a microcomputer environment
[INPE-5409-PRE/1756] p 1567 N93-19739
Comparative analysis of the indices of vegetation in urban areas obtained from the TM-Landsat and HRV-Spot data: City of Taubate
[INPE-5418-TDI/482] p 1575 N93-19831
The image digitizing system
[AD-A258665] p 1628 N93-19948

**AERIAL RECONNAISSANCE**
The Geological Research Center's aerial geological measuring system p 1569 N93-19875

**AEROACOUSTICS**
Experimental analysis of the aeroacoustics of cascaded airfoils
[AD-A257945] p 1526 N93-18121

**AEROASSIST**
Improved methods for reusable aeroclassified orbital transfer vehicle optimization
[DLR-FB-91-41] p 1454 N93-18785

**AEROBES**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209

**AERODYNAMIC CHARACTERISTICS**
Aerodynamic design and analysis of fans using 3D computational codes
[DS-2140] p 1404 N93-17880
Beyond the frequency limits of time-linearized methods
[NLR-TP-91216-U] p 1405 N93-17929
Operational and research aspects of a radio-controlled model flight test program
[NASA-TM-104266] p 1440 N93-18616
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 4: Advanced fan section aerodynamic analysis computer program user's manual
[NASA-CR-187127] p 1449 N93-18702
Stall in axial flow aero engine compressors p 1530 N93-18723
A study of stall in a low hub/tip ratio fan p 1531 N93-18729
Numerical investigation of performance degradation of wings and rotors due to icing
[NASA-CR-192233] p 1440 N93-18783
System identification for X-31A project support: Lessons learned so far p 1444 N93-19914

**AERODYNAMIC COEFFICIENTS**
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899

**AERODYNAMIC CONFIGURATIONS**
The F-92 RELIANT: Air transport system design simulation
[NASA-CR-192050] p 1440 N93-18386
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275

**AERODYNAMIC DRAG**
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
Professor Wittenberg: His speciality and versatility
[ISBN-90-6275-670-0] p 1403 N93-19002
Propelling force and resistance p 1403 N93-19003
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899

**AERODYNAMIC FORCES**
Propelling force and resistance p 1403 N93-19003
Calculations of aerodynamic forces on a wing with thrust using BEM p 1410 N93-19286
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340

**AERODYNAMIC HEATING**
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud p 1706 N93-19159
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312

**AERODYNAMIC INTERFERENCE**
Aerodynamic aspects of offshore structures
[NLR-TP-91188-U] p 1405 N93-17928
Pitching moment of low aspect ratio wing-body combinations up to high angles of attack at supersonic speeds
[ESDU-92043] p 1435 N93-17958
A wall interference assessment/correction system
[NASA-CR-191889] p 1406 N93-18384
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320

**AERODYNAMIC LOADS**
Beyond the frequency limits of time-linearized methods
[NLR-TP-91216-U] p 1405 N93-17929
Study of statistical variations of load spectra and material properties on aircraft fatigue life
[AD-A257961] p 1440 N93-18451
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705
The effect of aircraft inlets on the behaviour of aero engine axial flow compressors p 1530 N93-18722
Assessment of helicopter component statistical reliability computations
[AD-A258931] p 1441 N93-19447

**AERODYNAMIC STABILITY**
The effect of aircraft inlets on the behaviour of aero engine axial flow compressors p 1530 N93-18722
Stall and surge in axial flow compressors p 1530 N93-18724

**AERODYNAMIC STALLING**
Lift enhancement using a close-coupled oscillating canard
[AD-A257877] p 1406 N93-18336
Axial Flow Compressors, volume 1
[VKI-LS-1992-02-VOL-1] p 1530 N93-18721
Stall in axial flow aero engine compressors p 1530 N93-18723
Stall and surge in axial flow compressors p 1530 N93-18724
Active control of stall and surge p 1530 N93-18725
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726
Experimental investigation of rotating stall in a mismatched three stage axial flow compressor p 1531 N93-18727
Application of recess vaned casing treatment to axial flow fans p 1531 N93-18728
A study of stall in a low hub/tip ratio fan p 1531 N93-18729
Axial Flow Compressors, volume 2
[VKI-LS-1992-02-VOL-2] p 1531 N93-18731
Determination of the zone of the stall cell by means of the baroclinic wave theory p 1531 N93-18733
Rotating stall cell and Von Karman vortex street: A meteorological theory p 1531 N93-18734
Stall departure resistance enhancer
[NASA-CASE-LAR-14221-1] p 1447 N93-19023
Characterization of stall inception in high-speed single-stage compressors
[AD-A258973] p 1449 N93-19093
Numerical calculations of separating flows around oscillating airfoil p 1410 N93-19284
Numerical simulation of unsteady large scale separated flow around oscillating airfoil p 1410 N93-19285
X-31A high angle of attack and initial post stall flight testing p 1443 N93-19911

**AERODYNAMICS**
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
Aeronautical engineering: A continuing bibliography with indexes (supplement 285)
[NASA-SP-7037(285)] p 1403 N93-18109
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155
High speed civil transport
[NASA-CR-192041] p 1438 N93-18161
Identification of system dynamics of a high incidence research model
[RR-407] p 1440 N93-18507
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 1417 N93-19922

**AEROELASTIC RESEARCH WINGS**
The unified method of aeroelasticity p 1450 N93-18143

**AEROELASTICITY**
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
The unified method of aeroelasticity p 1450 N93-18143
Computational Fluid Dynamics, volume 2
[VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Algorithm development with applications to aerodynamics and aeroelasticity p 1529 N93-18566

**AEROEMBOLISM**
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428

**AEROLOGY**
Atmospheric measurements taken from an aeroplane p 1569 N93-19876

**AERONAUTICAL ENGINEERING**
Dr. Alexander H. Flax: Technologist of aeronautics
[AD-A258441] p 1747 N93-17890
Aeronautical engineering: A continuing bibliography with indexes (supplement 285)
[NASA-SP-7037(285)] p 1403 N93-18109
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
LES turbulence modeling using DNS data base p 1409 N93-19274
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
Numerical computations using multi-domain technique p 1409 N93-19277
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279

**AERONAUTICS**
Calendar of selected aeronautical and space meetings, July 1991 onwards
[AGARD-CAL-91/2] p 1683 N93-19639

**AERONOMY**
Visible Airglow Experiment data analysis
[NASA-CR-192119] p 1577 N93-18361
Aeronomy of auroral and airglow emissions p 1584 N93-18496

**AEROSOLS**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
High-energy laser-particle interaction p 1543 N93-18469
An experimental study of growth and phase change of polar stratospheric cloud particles
[NASA-CR-192369] p 1588 N93-19887

**AEROSPACE ENGINEERING**
The 1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-191266] p 1679 N93-18033
NASA patent abstracts bibliography: A continuing bibliography. Section 1: Abstracts (supplement 42)
[NASA-SP-7039(42)-SECT-1] p 1685 N93-18110
NASA/DoD Aerospace Knowledge Diffusion Research Project: A comparison of the technical communications practices of Russian and US aerospace engineers and scientists
[NASA-TM-107714] p 1686 N93-18160
Aviation medicine research: A historical review
[AD-A258198] p 1596 N93-18217
NASA patent abstracts bibliography: A continuing bibliography. Section 2: Indexes (supplement 42)
[NASA-SP-7039(42)-SECT-2] p 1686 N93-18410
Transportation and platforms perspective p 1453 N93-18636
The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University
[NASA-CR-191362] p 1680 N93-19452
Aerospace engineering educational program p 1681 N93-19457
Discussions on the organizational outline and suggested institutional guidelines for the INPE
[INPE-5406-RPQ/660] p 1684 N93-19642

**AEROSPACE ENVIRONMENTS**
Aviation medicine research: A historical review
[AD-A258198] p 1596 N93-18217
Space is a different place
[AD-A258336] p 1453 N93-18219
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392

**AEROSPACE INDUSTRY**
Increase of operational reliability by feedback experience/return in the technical and industrial field
[ETN-93-93014] p 1685 N93-18075
NASA/DoD Aerospace Knowledge Diffusion Research Project: A comparison of the technical communications practices of Russian and US aerospace engineers and scientists
[NASA-TM-107714] p 1686 N93-18160
Preceramic polymers: Past, present and future
[AD-A258327] p 1493 N93-18265
Space education: Deriving benefits from industrial consortia
[NASA-TM-108593] p 1679 N93-18358
Professor Wittenberg: His speciality and versatility
[ISBN-90-6275-670-0] p 1403 N93-19002
Industrial aerospace activities p 1404 N93-19007

**AEROSPACE MEDICINE**
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 370)
[NASA-SP-7011(370)] p 1596 N93-18108
Aviation medicine research: A historical review
[AD-A258198] p 1596 N93-18217
A computer-based visual analog scale
[AD-A258152] p 1597 N93-18280
A study of illness related lost time in transport aircraft crewmembers
[AD-A258193] p 1602 N93-18298
Validity of clinical color vision tests for air traffic control specialists
[AD-A258219] p 1597 N93-18301
The Proceedings of the Hypobaric Decompression Sickness Workshop
[AD-A257612] p 1597 N93-18362
Space radiation health program plan
[NASA-TM-108036] p 1598 N93-18375
Publications of the Space Physiology and Countermeasures Program, Cardiopulmonary Discipline: 1980-1990
[NASA-CR-4475] p 1598 N93-18376
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428
Role of orientation reference selection in motion sickness
[NASA-CR-191912] p 1598 N93-18596
Cardiopulmonary discipline science plan
[NASA-TM-108040] p 1599 N93-19648
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 1422 N93-19653
An improved anthropometric test device p 1424 N93-19670
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 1427 N93-19690
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 1429 N93-19696
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 1429 N93-19697
Medical evaluation of spatial disorientation mishaps p 1430 N93-19703
Neuroscience discipline science plan
[NASA-TM-108041] p 1600 N93-19882
Regulatory physiology discipline science plan
[NASA-TM-108038] p 1594 N93-19891
Musculoskeletal discipline science plan
[NASA-TM-108039] p 1600 N93-19892

**AEROSPACE PLANES**
Increase of stagnation pressure and enthalpy in shock tunnels p 1417 N93-18086
Hypersonic flows as related to the national aerospace plane
[NASA-CR-191980] p 1406 N93-18378
Analytical solutions to constrained hypersonic flight trajectories
[NASA-CR-191987] p 1407 N93-18602
National aero-space plane: Restructuring future research and development efforts
[AD-A258799] p 1441 N93-18981
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089
The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University
[NASA-CR-191362] p 1680 N93-19452
Flight simulator for hypersonic vehicle and a study of NASP handling qualities p 1452 N93-19456
National Aero-Space Plane: Restructuring future research and development efforts. Report to Congressional requesters
[GAO-NSIAD-93-71] p 1442 N93-19845

The National Aero-Space Plane program: A revolutionary concept p 1443 N93-19908
**AEROSPACE SAFETY**
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973
Nuclear safety for the space exploration initiative
[NASA-CR-189180] p 1659 N93-18032
Rocket engine monitoring system: Application to the Vulcain engine
[ETN-93-93016] p 1472 N93-18078
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447
Debris about asteroids: Where and how much? p 1703 N93-19136
A safety-based decision making architecture for autonomous systems
[NASA-CR-191864] p 1641 N93-19362
NASA's Advanced solid rocket motor
[NASA-CR-191950] p 1475 N93-19825
**AEROSPACE SCIENCES**
The 1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-191266] p 1679 N93-18033
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108590] p 1564 N93-18070
Teaching, learning, and planetary exploration
[NASA-CR-192000] p 1734 N93-18569
Improving NASA's technology for space science
[NASA-CR-192331] p 1695 N93-19389
Calendar of selected aeronautical and space meetings, July 1991 onwards
[AGARD-CAL-91/2] p 1683 N93-19639
Discussions on the organizational outline and suggested institutional guidelines for the INPE
[INPE-5406-RPQ/660] p 1684 N93-19642
**AEROSPACE SYSTEMS**
Development of a standard set of software indicators for aeronautical systems center
[AD-A258424] p 1616 N93-17863
Systems design analysis applied to launch vehicle configuration
[NASA-TP-3326] p 1455 N93-18141
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
Fuzzy Set Methods for Object Recognition in Space Applications
[NASA-CR-191975] p 1618 N93-18224
Automatic rule generation for high-level vision p 1618 N93-18225
Possibility expectation and its decision making algorithm p 1618 N93-18226
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
Atmospheric dynamics and coupling p 1584 N93-18495
The National Aero-Space Plane program: A revolutionary concept p 1443 N93-19908
**AEROSPACE TECHNOLOGY TRANSFER**
The 1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-191266] p 1679 N93-18033
Increase of operational reliability by feedback experience/return in the technical and industrial field
[ETN-93-93014] p 1685 N93-18075
**AEROSPACE VEHICLES**
Increase of stagnation pressure and enthalpy in shock tunnels p 1417 N93-18086
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Advanced electromagnetic methods for aerospace vehicles
[NASA-CR-192180] p 1503 N93-18580
Analytical solutions to constrained hypersonic flight trajectories
[NASA-CR-191987] p 1407 N93-18602
NASA requirements and applications environments for electrical power wiring
[NASA-CR-191064] p 1475 N93-19652
**AEROTHERMOCHEMISTRY**
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011
**AEROTHERMODYNAMICS**
H-P adaptive methods for finite element analysis of aerothermal loads in high-speed flows
[NASA-CR-189739] p 1525 N93-18093
Advanced tactical fighter engine design: Front fan
[ETN-93-92998] p 1448 N93-18127
Improved methods for reusable aeroclassified orbital transfer vehicle optimization
[DLR-FB-91-41] p 1454 N93-18785
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
[NASA-TM-103937] p 1417 N93-19379
**AFRICA**
Urban climatology in Africa. Special issue of the African urban quarterly, volume 5, numbers 1 and 2, February and May, 1990
[WCASP-19] p 1587 N93-18592
**AFTERBODIES**
Hypersonic rarefied wake characterization
[NASA-TP-3327] p 1529 N93-18604
**AGE FACTOR**
Dual-task training strategies and aging
[AD-A258261] p 1602 N93-18027
**AGGLOMERATION**
Solid state, surface and catalytic studies of oxides
[DE93-004640] p 1483 N93-18424
**AGGLUTINATION**
The Apollo 17 regolith p 1737 N93-18799
**AGING (MATERIALS)**
Continuous measurement by eddy current methods of age hardening in an aluminum alloy
[AD-A257569] p 1486 N93-18176
**AGING (METALLURGY)**
Probabilistic methods in nuclear power plant component ageing analysis
[VTT-PUBS-94] p 1660 N93-18696
**AGRICULTURE**
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792
**AIR BAG RESTRAINT DEVICES**
US Army helicopter inertia reel locking failures p 1427 N93-19689
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 1428 N93-19691
**AIR BREATHING ENGINES**
Advanced hypersonic aircraft design
[NASA-CR-192046] p 1436 N93-18037
Contribution to the study of airbreathing burner combustion instabilities
[ONERA-NT-1992-2] p 1482 N93-18189
**AIR CONDITIONING EQUIPMENT**
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407
**AIR FLOW**
A numerical investigation of 3D transverse injection into the supersonic flow behind rearward facing step p 1415 N93-19316
**AIR INTAKES**
The effect of aircraft inlets on the behaviour of aero engine axial flow compressors p 1530 N93-18722
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726
Numerical simulation of flows in a supersonic air intake p 1415 N93-19314
A numerical simulations of inner flow of scramjet p 1415 N93-19318
**AIR LOCKS**
Pressurized lunar rover
[NASA-CR-192034] p 1544 N93-18015
**AIR NAVIGATION**
Detection of spoofing, jamming, or failure of a Global Positioning System (GPS)
[AD-A259023] p 1433 N93-18951
**AIR POLLUTION**
NATO Advanced Research Workshop on Non-Thermal Plasma Techniques for Pollution Control
[AD-A258477] p 1665 N93-18323
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587
Electric and hybrid vehicle technology: TOPTEC
[DE93-002810] p 1551 N93-19837
**AIR QUALITY**
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587
**AIR TO AIR MISSILES**
Plume: Instructions for use and description of a missile plume visibility program
[AD-A258201] p 1473 N93-18201
**AIR TRAFFIC**
Report to Congress: Long-term availability of adequate airport system capacity
[AD-A258209] p 1432 N93-18202
**AIR TRAFFIC CONTROL**
NARSIM and EFMS: Tools for research on integrated ATM
[NLR-TP-89336-U] p 1432 N93-17954
National Airspace System flight planning operational concept NAS-SR-131
[DOT/FAA/SE-92/4] p 1418 N93-18031
Validity of clinical color vision tests for air traffic control specialists
[AD-A258219] p 1597 N93-18301
En route air traffic controllers use of flight progress strips: A graph-theoretic analysis

Aircraft trajectory tracking and prediction
[AD-A259039] p 1441 N93-18999
RAFALE: Progress of the program
p 1442 N93-19905

**AIRCRAFT ENGINES**
The beta-CEZ, a new high performance titanium alloy for aerospace engines
[DS-2022] p 1485 N93-17852
The technological evolution of high thrust turbine engines
[DS-1881] p 1448 N93-17882
Control of in-service damage: Application to aircraft engines
[DS-2027] p 1448 N93-18151
The effect of aircraft inlets on the behaviour of aero engine axial flow compressors p 1530 N93-18722
Stall in axial flow aero engine compressors
p 1530 N93-18723
Stall and surge in axial flow compressors
p 1530 N93-18724
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726
Experimental investigation of rotating stall in a mismatched three stage axial flow compressor
p 1531 N93-18727
Development of an engine/airframe performance matching scheme for jet engine retrofit
[AD-A258822] p 1449 N93-18997
Professor Wittenberg: His speciality and versatility
[ISBN-90-6275-670-0] p 1403 N93-19002
Propelling force and resistance p 1403 N93-19003
What is the progress in propulsion?
p 1404 N93-19006
Role of wind tunnel tests and CFD analysis for the development of aero-engines in IHI
p 1417 N93-19326

**AIRCRAFT EQUIPMENT**
Ground clutter measurements using the NASA airborne doppler radar: Description of clutter at the Denver and Philadelphia airports p 1421 N93-19608
Aviation safety: Users differ in views of collision avoidance system and cite problems. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/RCED-92-113] p 1434 N93-19843

**AIRCRAFT GUIDANCE**
Concepts for pilot interaction with an automated NOE obstacle-avoidance system
[NASA-TM-103960] p 1451 N93-19105

**AIRCRAFT ICING**
Numerical investigation of performance degradation of wings and rotors due to icing
[NASA-CR-192233] p 1440 N93-18783

**AIRCRAFT INSTRUMENTS**
Realization of real time graphics in vehicles with high dynamic motion
[ETN-93-92739] p 1622 N93-18630
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Flight test operations p 1418 N93-19592
NASA wind shear flight test in situ results
p 1418 N93-19593
Airborne doppler radar research at Rockwell International p 1420 N93-19602
Equipment, more or less ready to be used in helicopters p 1612 N93-19785

**AIRCRAFT LANDING**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
Energy method for analysis of measured airspeed change in landing airborne manoeuvre
[ESDU-92020] p 1436 N93-18042
Aircraft landing gear shimmy p 1441 N93-19029
Carrier landing parameters from survey 45, fleet and training command aircraft landing aboard USS ENTERPRISE CVN-65, main text and appendix A
[AD-A258873] p 1433 N93-19078
A simulation study on take-off and landing dynamics of the aircraft of a fly-by-wire control system
[AD-A259286] p 1442 N93-19849

**AIRCRAFT LIGHTS**
Validity of clinical color vision tests for air traffic control specialists
[AD-A258219] p 1597 N93-18301

**AIRCRAFT MAINTENANCE**
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887

**AIRCRAFT MANEUVERS**
Aircraft turns into and down wind
[AERO-REPT-9201] p 1438 N93-18131
Automated control of aircraft in formation flight
[AD-A259020] p 1450 N93-19102
On automated analysis of flight test data
p 1444 N93-19913

**AIRCRAFT MODELS**
Hermes CX-7: Air transport system design simulation
[NASA-CR-192082] p 1437 N93-18056
Arrow 227: Air transport system design simulation
[NASA-CR-192053] p 1437 N93-18063
Operational and research aspects of a radio-controlled model flight test program

Aviation safety: Users differ in views of collision avoidance system and cite problems. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/RCED-92-113] p 1434 N93-19843
Consumer interest in the air safety data of the airline quality rating. Testimony to the US House of Representatives, Committee on Government Operations, Government Activities and Transportation Subcommittee
[NIAR-92-4] p 1432 N93-19941

**AIRCRAFT STABILITY**
Design of the advanced regional aircraft, the DART-75
[NASA-CR-192044] p 1435 N93-17972
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
The unified method of aeroelasticity
p 1450 N93-18143
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395

**AIRCRAFT STRUCTURES**
Design of the advanced regional aircraft, the DART-75
[NASA-CR-192044] p 1435 N93-17972
Study of statistical variations of load spectra and material properties on aircraft fatigue life
[AD-A257961] p 1440 N93-18451
Formulation of a structural model for flutter analysis of low aspect ratio composite aircraft wings
p 1450 N93-19019
Lumped mass modelling for the dynamic analysis of aircraft structures p 1447 N93-19460

**AIRFOIL OSCILLATIONS**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow
[AD-A258019] p 1404 N93-17819

**AIRFOIL PROFILES**
The aerodynamic characteristics of the Gottingen 797 and Wortmann FX63-137 aerofoil sections at very low Reynolds numbers
[ETN-93-92999] p 1406 N93-18128
Numerical investigation of swirl-airfoil interactions in transonic area
[MPIS-8/1991] p 1407 N93-18627

**AIRFOILS**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow
[AD-A258019] p 1404 N93-17819
Numerical calculations of separating flows around oscillating airfoil p 1410 N93-19284
Numerical simulation of unsteady large scale separated flow around oscillating airfoil p 1410 N93-19285
Application of the program profile for the design of low-speed, low-observable configuration airfoils
[AD-A258842] p 1417 N93-19364

**AIRFRAMES**
Basic research on design analysis methods for rotorcraft vibrations
[NASA-CR-191917] p 1556 N93-18576
Development of an engine/airframe performance matching scheme for jet engine retrofit
[AD-A258822] p 1449 N93-18997

**AIRGLOW**
Visible Airglow Experiment data analysis
[NASA-CR-192119] p 1577 N93-18361
Aeronomy of auroral and airglow emissions
p 1584 N93-18496

**AIRLINE OPERATIONS**
The airline quality report, 1992
[NIAR-92-11] p 1418 N93-18036
TBD(exp 3)
[NASA-CR-192075] p 1436 N93-18054
Scheduling of an aircraft fleet p 1635 N93-18665
IOPS advisor: Research in progress on knowledge-intensive methods for irregular operations airline scheduling p 1638 N93-18686
The international forum on airline quality teaching guide
[NIAR-92-13] p 1680 N93-19376

**AIRPORT PLANNING**
Report to Congress: Long-term availability of adequate airport system capacity
[AD-A258209] p 1432 N93-18202

**AIRPORT SECURITY**
Recognition of partially occluded threat objects using the annealed Hopefield network p 1612 N93-19466
Criminal acts against civil aviation [AD-A258760] p 1432 N93-19867
**AIRPORTS**
Scheduling of an aircraft fleet p 1635 N93-18665
Adverse weather test site selection study [AD-A259012] p 1440 N93-18895
**AIRSPEED**
Energy method for analysis of measured airspeed change in landing airborne manoeuvre [ESDU-92020] p 1436 N93-18042
Aircraft turns into and down wind [AERO-REPT-9201] p 1438 N93-18131
**ALBEDO**
MOCAL: A Monte Carlo albedo code [DE93-002049] p 1654 N93-18388
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Bias correction factors for near-Earth asteroids p 1701 N93-19127
Spectroscopy of D-type asteroids p 1697 N93-19158
Palomar Planet-Crossing Asteroid Survey (PCAS): Recent discovery rate p 1707 N93-19168
**ALCOHOLS**
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 1426 N93-19683
**ALGEBRA**
A system of dynamic modal logic [LP-92-08] p 1615 N93-17831
An intrinsic construction of the algebra of quaternions [REPT-92-31] p 1643 N93-17845
Modal frame classes revisited [ML-91-12] p 1643 N93-17869
A modal theory of arrows: Arrows logics 1 [ML-92-04] p 1644 N93-17915
Diagnosing knowledge states in algebra using the rule space model [AD-A257757] p 1645 N93-18246
Towards a meta simplifier [INRIA-RR-1402] p 1621 N93-18574
More box codes p 1505 N93-18906
Application of photorefractive crystals to solve matrix algebra problems optically [AD-A259067] p 1662 N93-18957
**ALGORITHMS**
Parallel contraction of binary dags [REPT-92-36] p 1616 N93-17848
Image matching strategies for the co-registration of CAESAR sea-images: An hierarchical area-based approach, part 2 [BCRS-90-40B-PT-2] p 1564 N93-17951
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements [AD-A257548] p 1476 N93-17964
Theory of algorithm structure and design [AD-A257948] p 1617 N93-18081
Testing superperfection of k-trees [RUU-CS-92-09] p 1645 N93-18196
Fuzzy Set Methods for Object Recognition in Space Applications [NASA-CR-191975] p 1618 N93-18224
Possibility expectation and its decision making algorithm p 1618 N93-18226
Membership generation using multilayer neural network p 1618 N93-18227
Possibilistic clustering for shape recognition p 1618 N93-18228
An algorithm for the solution of a traveling salesman problem to minimize the average time to demand satisfaction [AD-A258301] p 1645 N93-18302
Develop, apply and evaluate wavelet technology [AD-A258484] p 1645 N93-18315
The rudes and the shrewds: An experimental comparison of several evolutionary heuristics applied to the QAP problem [REPT-91-042] p 1620 N93-18325
Reconfiguration schemes for fault-tolerant processor arrays [AD-A257833] p 1520 N93-18365
Forward model and CO retrieval algorithm [NASA-CR-191306] p 1620 N93-18414
A parallel stereo algorithm that produces dense depth maps and preserves image features [INRIA-RR-1369] p 1620 N93-18433
Effectiveness of heuristics and simulated annealing for the scheduling of concurrent tasks: An empirical comparison [INRIA-RR-1379] p 1630 N93-18434
Study and implementation of a set of primitives for constraint satisfaction in finite domains [INRIA-RR-1389] p 1646 N93-18436
Bracketing to speed convergence illustrated on the Von Newmann algorithm for finding a feasible solution to a linear program with a convexity constraint [DE93-002660] p 1621 N93-18450
Randomization yields simple O(n log* n) algorithms for difficult Omega(n) problems [INRIA-RR-1412] p 1621 N93-18455
Output sensitive construction of the 3D Delaunay triangulation of constrained sets of points [INRIA-RR-1415] p 1646 N93-18456
Reconstruction of linear and nonlinear continuous time models from discrete time sampled-data systems [RR-406] p 1646 N93-18458
Nonlinear circuits and components p 1523 N93-18463
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
Identification of system dynamics of a high incidence research model [RR-407] p 1440 N93-18507
A structure detection algorithm for nonlinear dynamic rational models [RR-439] p 1649 N93-18508
Understanding curved detonation waves [DE93-000799] p 1528 N93-18529
Computational Fluid Dynamics, volume 2 [VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Algorithm development with applications to aerodynamics and aeroelasticity p 1529 N93-18566
An orthogonal estimation algorithm for complex number systems [RR-405] p 1621 N93-18568
Formulation and error analysis for a generalized image point correspondence algorithm [NASA-CR-192005] p 1621 N93-18570
Robust control of systems with real parameter uncertainty and unmodelled dynamics [NASA-CR-192008] p 1633 N93-18582
Estimation of displacements from two 3D frames obtained from stereo [INRIA-RR-1440] p 1537 N93-18595
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning [NASA-TM-108124] p 1634 N93-18659
Scheduling of an aircraft fleet p 1635 N93-18665
Real-time scheduling using minimum search p 1637 N93-18676
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas p 1638 N93-18688
Predit: A temporal predictive framework for scheduling systems p 1639 N93-18691
On recursive least-squares filtering algorithms and implementations [NASA-CR-191396] p 1623 N93-18775
The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report [DE92-041215] p 1624 N93-18867
Development of computational methods for heavy lift launch vehicles [NASA-CR-192298] p 1456 N93-18872
Technology test bed engine real-time failure control [NASA-CR-192414] p 1474 N93-18879
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna p 1505 N93-18902
Self-dual (48,24;12) codes p 1505 N93-18905
Model reduction in integrated controls-structures design p 1468 N93-18935
Modal characterization of the ASCIE segmented optics testbed: New algorithms and experimental results p 1469 N93-18940
Fault-tolerant fiber optic backplane [NASA-CASE-LAR-14785-1] p 1663 N93-19052
X-AAARF: An X window based version of the AFIT Algorithm Animation Research Facility [AD-A258832] p 1625 N93-19065
Plotting the magnitude and direction of waveguide surface currents in three dimensions [AD-A258872] p 1509 N93-19077
A comparison of multiprocessor scheduling methods for iterative data flow architectures [NASA-CR-189730] p 1521 N93-19107
Design and development of a high-speed Winograd fast Fourier transform processor board [AD-A258919] p 1522 N93-19342
Locally adaptive vector quantization: Data compression with feature preservation p 1513 N93-19425
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems [DE93-001403] p 1679 N93-19470
HModel: An X tool for global model search [DE93-002826] p 1627 N93-19512
Enhanced ion-acoustic lines in EISCAT's common programmes p 1517 N93-19580
NASA wind shear flight test in situ results p 1418 N93-19593
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
Charged particle track reconstruction using artificial neural networks [DE93-003014] p 1658 N93-19630
Discovery of pathways in science p 1689 N93-19718
Toward model-based discovery: A case study in ecosystem prediction p 1689 N93-19721
CYRANO-3: An experiment in representational invention p 1629 N93-19733
Use of the microcomputer to solve large p-median problems [INPE-5336-PRE/1735] p 1628 N93-19786
Algorithms and methods for processing Synthetic Aperture Radar (SAR) images [INPE-5301-PRE/1706] p 1515 N93-19787
An object-oriented computer aided design program for traditional control systems analysis [AD-A259231] p 1628 N93-19847
New methods for nonlinear tracking and nonlinear chaotic signal processing [AD-A259331] p 1516 N93-19850
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 1445 N93-19923
**ALIGNMENT**
A fuzzy logic based controller for the automated alignment of a laser-beam-smoothing spatial filter [NASA-TM-105994] p 1540 N93-18091
Efficient visual grasping alignment for cylinders [NASA-CR-191863] p 1663 N93-19346
**ALKALI METALS**
AMTEC vapor-vapor series connected cells [NASA-CASE-NPO-18667-1-CU] p 1522 N93-19330
**ALLOCATIONS**
Alternative optimization strategies for large-scale production-allocation problems [REPT-92-13] p 1615 N93-17833
**ALTERNATING CURRENT**
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon [DE93-001924] p 1674 N93-18619
Study of magnetic bearings with high temperature superconductors, phase 3 [NASA-CR-192229] p 1551 N93-19378
**ALTERNATING DIRECTION IMPLICIT METHODS**
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312
**ALTERNATIVES**
Transportation alternatives 92: Alternative fueled vehicles, volume 2 [DE93-001500] p 1548 N93-18531
**ALUMINATES**
Advanced helium magnetometer for space applications [NASA-CR-190880] p 1537 N93-18399
**ALUMINIDES**
Compatibility of potential reinforcing ceramics with Ni and Fe aluminides [NASA-CR-192232] p 1494 N93-18784
Mechanical behavior of titanium aluminide under engine operating conditions [AD-A258884] p 1550 N93-19079
**ALUMINUM**
Low cost, SPF aluminum cryogenic tank structure for ALS [NASA-CR-189654] p 1554 N93-18030
Novel interconnect deposition technology p 1523 N93-18465
Ignition and combustion characteristics of metallized propellants [NASA-CR-192285] p 1497 N93-19412
Superconducting tunnel junction x-ray detectors with niobium absorbers and aluminum quasiparticle traps [DE93-002885] p 1677 N93-19826
**ALUMINUM ALLOYS**
Continuous measurement by eddy current methods of age hardening in an aluminum alloy [AD-A257569] p 1486 N93-18176

Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity
[AD-A257859] p 1487 N93-18308
A first-principles study of the phase stability of fcc-based Ti-Al alloys
[DE93-002549] p 1487 N93-18390
Characterization and defect analysis of high temperature aluminum-based metal matrix composites
p 1480 N93-19060
A geometrical description of microstructure with application to Al powder metallurgy processing
p 1489 N93-19061
Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems
[DE93-002558] p 1489 N93-19486

**ALUMINUM ARSENIDES**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238

**ALUMINUM GALLIUM ARSENIDES**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991

**ALUMINUM GRAPHITE COMPOSITES**
Thermal cycling behavior of unidirectional and cross-plied P100 Gr/6061 aluminum composites
[AD-A257506] p 1477 N93-18077
Corrosion resistance of metal matrix composites
[AD-A258370] p 1478 N93-18266

**ALUMINUM OXIDES**
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572
High strain-rate compression testing of a ceramic matrix composite
[AD-A258802] p 1495 N93-19439
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485

**ALUMINUM SILICATES**
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572

**ALUMINUM-LITHIUM ALLOYS**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007

**AMAZON REGION (SOUTH AMERICA)**
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
Multiple study inventory method for tropical forest
[INPE-5319-PRE/1716] p 1568 N93-19790
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region
[INPE-5330-PRE/1728] p 1568 N93-19821

**AMBIENT TEMPERATURE**
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955

**AMBIGUITY**
Extended abstract: Managing disjunction for practical temporal reasoning p 1634 N93-18664

**AMINO RADICAL**
The first identification of C2 emission bands in comet Scorichenko-George (1989e1) spectrum
p 1703 N93-19139
P/Halley: Spatial distribution and scale lengths for C2, CN, NH2, and H2O p 1706 N93-19157
Long slit spectroscopy of NH2 in comets Halley, Wilson, and Nishikawa-Takamizawa-Tago p 1698 N93-19230

**AMMONIA**
Forced convection boiling and condensation on microgravity: A critical appraisal of the literature
[ETN-93-93362] p 1498 N93-17811

**AMMONIUM NITRATES**
The crystal and molecular structure of triethanol-ammonium nitrate
[AD-A258428] p 1670 N93-17864

**AMOR ASTEROID**
Did Earth-approaching asteroids 3551, 3908, or 4055 produce meteorites? p 1707 N93-19164
The unusual lightcurve of 1990 TR
p 1720 N93-19265

**AMORPHOUS MATERIALS**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser
[AD-A257551] p 1491 N93-17966
Picosecond studies of space optical materials
p 1664 N93-18475
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers
[DE93-002324] p 1674 N93-18521
Short range order in amorphous polycondensates
[DE93-001650] p 1494 N93-18708
Ion produced cometary organic crust
p 1701 N93-19122
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191

**AMORPHOUS SEMICONDUCTORS**
Writing electronically active nanometer-scale structures with a scanning tunneling microscope
[MBB-Z-0367-91-PUB] p 1671 N93-18117
Crystalline-amorphous contrast formation in thermally crystallized SiC
[MBB-Z-0373-91-PUB] p 1671 N93-18118

**AMORPHOUS SILICON**
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-000011] p 1571 N93-18657

**AMPHETAMINES**
Effects of dextromethamphetamine on subjective fatigue
[AD-A258252] p 1594 N93-17822

**AMPLIFICATION**
Experimental evaluation of software-driven digital gain-drift compensation in scintillator gamma ray spectroscopy
[DE93-002623] p 1657 N93-19616

**AMPLIFIERS**
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048

**AMPLITUDES**
An analysis of the structure of gamma ray burst time histories
[NASA-CR-191997] p 1746 N93-18583

**ANALOG TO DIGITAL CONVERTERS**
Analogue to digital transformation
[ESDU-92044] p 1517 N93-17959
The image digitizing system
[AD-A258665] p 1628 N93-19948

**ANALOGIES**
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815
Machine discovery by model driven analogy
p 1629 N93-19724

**ANALYSIS (MATHEMATICS)**
An interior point approach to postoptimal and parametric analysis in linear programming
[REPT-92-21] p 1615 N93-17834
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913
Analytica: An experiment in combining theorem proving and symbolic computation
[AD-A258656] p 1628 N93-19958

**ANALYZERS**
Mesh effect in a parallel plate analyzer
[NIFS-203] p 1669 N93-19931

**ANEMOMETERS**
The 1991 LLWAS anemometer test program
[AD-A258844] p 1538 N93-19365

**ANESTHESIOLOGY**
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas
p 1638 N93-18688

**ANGLE OF ATTACK**
Lift enhancement using a close-coupled oscillating canard
[AD-A257877] p 1406 N93-18336
Identification of system dynamics of a high incidence research model
[RR-407] p 1440 N93-18507
Stall departure resistance enhancer
[NASA-CASE-LAR-14221-1] p 1447 N93-19023
Longitudinal-control design approach for high-angle-of-attack aircraft
[NASA-TP-3302] p 1451 N93-19108
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110
AM-X high angle of attack flight test experience (single and two seat versions) p 1443 N93-19910
X-31A high angle of attack and initial post stall flight testing p 1443 N93-19911

**ANGLES (GEOMETRY)**
ARID relative calibration experimental data and analysis p 1552 N93-19395

**ANGULAR ACCELERATION**
Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633

**ANGULAR DISTRIBUTION**
Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413
Investigation of pion-nucleus interactions
[DE93-004375] p 1657 N93-19504

**ANGULAR MOMENTUM**
Rotational behavior of comet nuclei under gravitational perturbations p 1714 N93-19216

**ANGULAR RESOLUTION**
PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115

**ANGULAR VELOCITY**
Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633
Automated detection of asteroids in real-time with the Spacewatch telescope p 1698 N93-19239

**ANILINE**
Impedance and voltammetric studies of electrogenerated polyaniline conducting films
[AD-A258328] p 1493 N93-18256
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
Optical and magnetic signatures of localized excitations in polyaniline
[DE93-001954] p 1674 N93-18620

**ANIMATION**
Aid in investigation by figure animation
p 1422 N93-19659

**ANIONS**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
Collisional detachment of anions using Fourier transform mass spectrometry
[AD-A258972] p 1656 N93-19092

**ANISOTROPY**
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on Ni(0.5)Co(0.5)O
[DE93-000509] p 1487 N93-18528
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales
p 1563 N93-18717
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774
A performance model for thick composite cylinders subjected to external hydrostatic pressure
[DE93-002425] p 1560 N93-19476
Magnetic multilayer interface anisotropy
[DE93-004951] p 1676 N93-19634
A new approach to plasmasphere refilling: Anomalous plasma effects
[NASA-CR-192128] p 1670 N93-19945

**ANNEALING**
Crystalline-amorphous contrast formation in thermally crystallized SiC
[MBB-Z-0373-91-PUB] p 1671 N93-18118
Indium phosphide photovoltaic technology
p 1572 N93-18476

**ANNIHILATION REACTIONS**
Medium energy meson research
[DE93-004133] p 1655 N93-18449
Positron annihilation studies of the electronic structure and fermiology of the high-T(sub c) superconductors
[DE93-002982] p 1676 N93-19497

**ANNOTATIONS**
Formal development of Ada programs using Z and Anna: A case study
[AD-A235698] p 1623 N93-18847
Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494

**ANNUAL VARIATIONS**
Diagnostic studies of climate variability
[DE93-002837] p 1586 N93-18403
Effects of clouds on the Earth radiation budget; Seasonal and inter-annual patterns
[NASA-CR-191619] p 1574 N93-18870
Ion composition in the auroral F region: Comparison of EISCAT data and ionospheric model predictions
p 1726 N93-19547

The interannual variability of polar cap recessions as a measure of Martian climate and weather: Using Earth-based data to augment the time line for the Mars observer mapping mission p 1742 N93-19814
Modeling interannual variability in the Martian seasonal CO2 cycle p 1743 N93-19820

**ANNULAR NOZZLES**
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991

**ANODES**
Corrosion resistance of metal matrix composites
[AD-A258370] p 1478 N93-18266
Structural transformation of nickel hydroxide films during anodic oxidation
[DE93-001863] p 1488 N93-18535

**ANOMALIES**
Identification and interpretation of patterns in rocket engine data
[NASA-CR-192100] p 1473 N93-18401

**ANORTHOSITE**
Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816

**ANTARCTIC REGIONS**
Antarctic lakes (above and beneath the ice sheet): Analogues for Mars p 1743 N93-19817

**ANTENNA ARRAYS**
Coupling losses in multiple beam antennas
[AD-A257494] p 1500 N93-17903
Study of narrow-band dichroic plates with circular, rectangular, or Pyleguide apertures
p 1504 N93-18901
The effects of correlated noise in intra-complex DSN arrays for S-band Galileo telemetry reception
p 1458 N93-18910
A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923

**ANTENNA COMPONENTS**
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Parameter and configuration study of the DSS-13 antenna drives p 1514 N93-19432
Survey of antenna design computer models
[AD-A258765] p 1516 N93-19869

**ANTENNA DESIGN**
Finite difference time domain modeling of spiral antennas
[NASA-CR-192237] p 1503 N93-18586
Correction of high-frequency noise-temperature inaccuracies p 1507 N93-18920
C-SIDE: The control-structure interaction demonstration experiment p 1467 N93-18931
Parameter and configuration study of the DSS-13 antenna drives p 1514 N93-19432
SETI low-frequency feed design study for DSS 24
p 1514 N93-19433
Moment method analysis of linearly tapered slot antennas: Low loss components for switched beam radiometers
[NASA-CR-192094] p 1515 N93-19483
Survey of antenna design computer models
[AD-A258765] p 1516 N93-19869

**ANTENNA FEEDS**
Antenna pattern control using impedence surfaces
[NASA-CR-192182] p 1516 N93-19934

**ANTENNA RADIATION PATTERNS**
Finite difference time domain modeling of spiral antennas
[NASA-CR-192237] p 1503 N93-18586
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna
p 1505 N93-18902
A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923
Moment method analysis of linearly tapered slot antennas: Low loss components for switched beam radiometers
[NASA-CR-192094] p 1515 N93-19483

**ANTHROPOMETRY**
The design and use of automotive crash test dummies
p 1424 N93-19669
An improved anthropometric test device
p 1424 N93-19670

**ANTICYCLONES**
Radar based case study of a Northeast Colorado winter storm
[AD-A258256] p 1585 N93-17901

**ANTIFERROMAGNETISM**
Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on Ni(0.5)Co(0.5)O
[DE93-000509] p 1487 N93-18528
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706

**ANTIHISTAMINICS**
Effects of terfenadine and diphenhydramine on brain activity and performance in a UH-60 flight simulator
[AD-A258012] p 1594 N93-17817

**ANTIMISSILE DEFENSE**
Report to Congress on the strategic defense initiative, 1992
[AD-A258449] p 1650 N93-17992
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236

**ANTIPROTONS**
Medium energy meson research
[DE93-004133] p 1655 N93-18449

**ANTIREFLECTION COATINGS**
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-000011] p 1571 N93-18657
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm
[NASA-CR-192156] p 1541 N93-18772

**APERTURES**
Study of narrow-band dichroic plates with circular, rectangular, or Pyleguide apertures
p 1504 N93-18901
Antenna pattern control using impedence surfaces
[NASA-CR-192182] p 1516 N93-19934

**APEXES**
On corner and vertex detection
[INRIA-RR-1439] p 1646 N93-18594

**APOLLO ASTEROIDS**
On associations of Apollo asteroids with meteor streams p 1715 N93-19223

**APOLLO PROJECT**
Last chance at Taurus-Littrow p 1740 N93-18817

**APOLLO 17 FLIGHT**
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
Last chance at Taurus-Littrow p 1740 N93-18817

**APPLICATIONS PROGRAMS (COMPUTERS)**
Minimum size of disc cams with radial translating roller followers
[ESDU-92005] p 1544 N93-17998
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139
PACSIM: Using simulation in designing a communications satellite
[AD-A257857] p 1460 N93-18306
A simulated annealing approach to schedule optimization for the SES facility p 1634 N93-18662
Creating and manipulating a domain-specific formal object base to support a domain-oriented application composition system
[AD-A259018] p 1624 N93-19016
Space life support engineering program
[NASA-CR-192188] p 1607 N93-19039
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106
Integrated software package STAMP for minor planets
p 1628 N93-19187
Creating and manipulating formalized software architectures to support a domain-oriented application composition system
[AD-A258900] p 1626 N93-19335
Digital signal processing using lapped transforms with variable parameter windows and orthonormal bases
[AD-A258853] p 1511 N93-19368
Software for parallel processing applications
[DE93-002510] p 1627 N93-19744
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 1446 N93-19928

**APPROACH**
Flight simulation evaluation of the flyability of curved MLS approaches with wide-body aircraft
[NLR-TP-90238-U] p 1452 N93-17875

**APPROPRIATIONS**
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Information technology: Comments on Navy facility consolidation plan
[AD-A258964] p 1687 N93-19084

**APPROXIMATION**
Vector approximation problems in geometric vector optimization
[REPT-92-39] p 1643 N93-17871
CFD-based approximation concepts for aerodynamic design optimization with application to a 2-D scramjet vehicle
[AD-A258084] p 1435 N93-17893
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment
[AD-A258177] p 1524 N93-17908
Particle approximation for first order stochastic partial differential equations
[INRIA-RR-1502] p 1646 N93-18597
Discrete time system piecewise linear filtering with small observation noise
[INRIA-RR-1451] p 1633 N93-18611
A general approximation solution for the mass transfer in laminar multicomponent boundary layers along a streaming plate plane
[ETN-93-92738] p 1530 N93-18629
Polynomial approximation of Poincare maps for Hamiltonian system p 1651 N93-19160
An approximate solution for the linearized spinup dynamics of a dual-spin spacecraft
[AD-A258903] p 1470 N93-19350

**APTITUDE**
The unique contribution of selected personality tests to the prediction of success in naval pilot training
[AD-A258144] p 1602 N93-18291

**AQUATIC PLANTS**
Aquatic plant control research program. Biological control of Pistia stratiotes L. (waterlettuce) using Neohydronomus affinis hustache (coleoptera: curculionidae)
[AD-A257463] p 1574 N93-18945

**AQUEOUS SOLUTIONS**
The crystal and molecular structure of triethanol-ammonium nitrate
[AD-A258428] p 1670 N93-17864
Predicting viscosities of aqueous salt mixtures
[DE93-002421] p 1483 N93-18523

**ARABIAN SEA**
Late quaternary time series of Arabian Sea productivity: Global and regional signals p 1580 N93-18969

**ARC DISCHARGES**
NASA requirements and applications environments for electrical power wiring
[NASA-CR-191064] p 1475 N93-19652

**ARC WELDING**
Sensing the gas metal arc welding process
[DE93-001957] p 1548 N93-18658

**ARCHAEOLOGY**
Bibliographic study of georadar principles, applications, advantages, and inconvenience
[CR-35/91] p 1509 N93-18993

**ARCHITECTURE (COMPUTERS)**
Implementation of a configuration and maintenance management system for local area networks
[AD-A257837] p 1686 N93-18344
Architecture/environment evaluation
[AD-A257849] p 1613 N93-18348
Self-growing neural network architecture using crisp and fuzzy entropy
[NASA-TM-105677] p 1553 N93-18422
Artificial neural networks application simulator
p 1642 N93-18502
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
A proposal of an architecture for the coordination level of intelligent machines
[NASA-CR-191990] p 1613 N93-18516
O-Plan2: The open planning architecture
p 1637 N93-18678
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures
[NASA-CR-189742] p 1532 N93-18769
An intelligent real-time system architecture implemented in Ada
[AD-A259002] p 1640 N93-18893
Numerical Wind Tunnel: Requirements and the outline
p 1411 N93-19288
The operating system for Numerical Wind Tunnel
p 1411 N93-19290
Creating and manipulating formalized software architectures to support a domain-oriented application composition system
[AD-A258900] p 1626 N93-19335
A computer architecture for intelligent machines
[NASA-CR-191861] p 1614 N93-19347
Development of a task analysis tool to facilitate user interface design p 1628 N93-19404

**ARCTIC OCEAN**
Multi-discipline Arctic oceanography and acoustics program: The Geodesic Underice Tramway System (GUTS)
[AD-A258323] p 1589 N93-18254

**ARCTIC REGIONS**
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
Sea ice - atmosphere interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-192129] p 1566 N93-18571
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Precipitation associated electric field enhancements p 1722 N93-19520
Gravity waves and sporadic E layers as measured by EISCAT and AIS p 1724 N93-19530
The EISCAT Svalbard (Arctic) radar p 1517 N93-19574
The BICORE project p 1517 N93-19587
Antarctic lakes (above and beneath the ice sheet): Analogues for Mars p 1743 N93-19817
**ARGON**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140
**ARIANE LAUNCH VEHICLE**
Rocket engine monitoring system: Application to the Vulcain engine
[ETN-93-93016] p 1472 N93-18078
Vulcain: A cryogenic engine for Ariane 5
[ETN-93-93022] p 1472 N93-18082
The Vulcain MK2 engine for Ariane 5 performance improvement
[ETN-93-93019] p 1472 N93-18145
**ARITHMETIC**
Shavrukov's theorem on the subalgebras of diagonalizable algebras for theories containing I(delta(sub 0)) + exp
[ML-92-05] p 1642 N93-17825
Feasible interpretability
[ML-91-11] p 1643 N93-17868
On the structure of Kripke models of Heyting arithmetic
[ML-92-03] p 1644 N93-17914
**ARMED FORCES**
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 1429 N93-19696
**ARMED FORCES (UNITED STATES)**
Dr. Alexander H. Flax: Technologist of aeronautics
[AD-A258441] p 1747 N93-17890
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891
Report to Congress on the strategic defense initiative, 1992
[AD-A258449] p 1650 N93-17992
Air University Library index to military periodicals, volume 43, number 3, July - September 1992
[AD-A258452] p 1685 N93-18013
A paradigm shift in Air Force medicine
[AD-A258334] p 1596 N93-18159
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
JIGSAW: Preference-directed, co-operative scheduling p 1639 N93-18689
Data management: Implementation and lessons learned from the Department of the Army data management program
[AD-A258796] p 1687 N93-19063
**ARMOR**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007
**AROMATIC COMPOUNDS**
Model calculations of dust radiation from galactic and extragalactic sources by considering polycyclic aromatic hydrocarbons
[ETN-93-92729] p 1699 N93-18626
**AROUSAL**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
**ARTIFICIAL INTELLIGENCE**
Artificial intelligence for geologic mapping with imaging spectrometers
[NASA-CR-192086] p 1564 N93-17979
An information theoretic approach to distributed inference and learning
[AD-A257935] p 1685 N93-18099
Fuzzy Set Methods for Object Recognition in Space Applications
[NASA-CR-191975] p 1618 N93-18224
Automatic rule generation for high-level vision p 1618 N93-18225
General method of pattern classification using the two-domain theory
[NASA-CASE-MSC-21737-1] p 1619 N93-18282
Grammatica: An open software laboratory for artificial intelligence
[REPT-92-031] p 1632 N93-18331
Artificial neural networks application simulator p 1642 N93-18502
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660
Extended abstract: Managing disjunction for practical temporal reasoning p 1634 N93-18664
CABINS: Case-based interactive scheduler p 1635 N93-18670
O-Plan2: The open planning architecture p 1637 N93-18678
Learning to integrate reactivity and deliberation in uncertain planning and scheduling problems p 1638 N93-18684
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas p 1638 N93-18688
A hybrid job-shop scheduling system p 1639 N93-18690
SOCAP: Lessons learned in applying SIPE-2 to the military operations crisis action planning domain p 1639 N93-18694
An intelligent real-time system architecture implemented in Ada
[AD-A259002] p 1640 N93-18893
Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018
Evaluation of regional seismic discriminants using the intelligent seismic event identification system
[AD-A258936] p 1583 N93-19071
A computer architecture for intelligent machines
[NASA-CR-191861] p 1614 N93-19347
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Discovery of pathways in science p 1689 N93-19718
Machine discovery approach to dynamic systems in the real laboratory p 1689 N93-19719
Discovery of physical principles from design experiences p 1690 N93-19722
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723
Machine discovery by model driven analogy p 1629 N93-19724
Informal qualitative models in scientific discovery p 1690 N93-19725
Incremental generation and exploration of hidden structure p 1690 N93-19726
Discovery of spatial concepts in crystallographic databases p 1690 N93-19727
Knowledge acquisition from examples with mixed attributes p 1691 N93-19729
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods p 1691 N93-19730
ARC.2: Linear regression in ABACUS p 1629 N93-19731
Goal-directed learning: A decision-theoretic model for deciding what to learn next p 1629 N93-19732
CYRANO-3: An experiment in representational invention p 1629 N93-19733
The evaluation and reporting of discovery systems p 1691 N93-19734
Evaluating machine discovery systems p 1692 N93-19735
Evaluation of discovery systems p 1692 N93-19736
Adaptive autonomous target cuer p 1612 N93-19784
Natural selection and particle physics: A thrust for artificial intelligence research
[INPE-5335-PRE/1734] p 1641 N93-19823
Case-based reasoning for real-time problem solving
[AD-A258697] p 1641 N93-19865
**ARTIFICIAL SATELLITES**
Interactive satellite navigation for the Naval environmental operational nowcasting system
[AD-A257920] p 1459 N93-18004
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010
A synthetic environment for satellite modeling and satellite orbital motion
[AD-A258847] p 1470 N93-19068
Spectral and spatial pattern recognition in digital imagery
[AD-A258910] p 1627 N93-19355
**ASCENT TRAJECTORIES**
Analytical solutions to constrained hypersonic flight trajectories
[NASA-CR-191987] p 1407 N93-18602
**ASPECT RATIO**
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
**ASPHALT**
Asphalt mixtures modified with tall oil pitches and cellulose fibres
[VTT-PUBS-99] p 1494 N93-18699
**ASSESSMENTS**
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 1428 N93-19692
**ASSIMILATION**
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization
[AD-A258549] p 1587 N93-19481
**ASTEROID BELTS**
Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138
A photometric survey of outer belt asteroids p 1697 N93-19149
The effect of secular resonances in the asteroid region between 2.1 and 2.4 AU p 1706 N93-19161
Did Earth-approaching asteroids 3551, 3908, or 4055 produce meteorites? p 1707 N93-19164
Collisional and dynamic evolution of dust from the asteroid belt p 1707 N93-19165
On the asteroidal jet-stream Flora A p 1710 N93-19185
Asteroid proper elements and secular resonances p 1710 N93-19186
Near infrared reflectance spectra: Applications to problems in asteroid-meteorite relationships p 1698 N93-19210
On the distribution of minor planet inclinations p 1454 N93-19242
3-D orbital evolution model of outer asteroid belt p 1718 N93-19245
Gaspra and Ida in families p 1720 N93-19263
A comparison between families obtained from different proper elements p 1721 N93-19270
**ASTEROID MISSIONS**
Asteroid exploration and utilization: The Hawking explorer
[NASA-CR-192027] p 1699 N93-18164
Comet nucleus and asteroid sample return missions
[NASA-CR-192055] p 1699 N93-18171
Automated detection of asteroids in real-time with the Spacewatch telescope p 1698 N93-19239
Gaspra and Ida in families p 1720 N93-19263
**ASTEROIDS**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
A Southern Hemisphere radar meteor orbit survey p 1701 N93-19121
Asteroids with unusual lightcurves: 14 Irene and 51 Nemausa p 1701 N93-19123
Low cost missions to explore the diversity of near Earth objects p 1453 N93-19124
Simulated families: A test for different methods of family identification p 1701 N93-19125
The use of the wavelet cluster analysis for asteroid family determination p 1701 N93-19126

Evolution of the Quadrantid meteor stream p 1708 N93-19177
Dynamical timescales in the Jupiter family p 1712 N93-19201

**ASTRONOMICAL OBSERVATORIES**
PARAS program: Phased array radio astronomy from space [NASA-CR-192025] p 1695 N93-18115
FLARE: The Far Side Lunar Research Expedition. A design of a far side lunar observatory [NASA-CR-192029] p 1695 N93-18163
Decomposability and scalability in space-based observatory scheduling p 1634 N93-18663
Planning, scheduling, and control for automatic telescopes p 1637 N93-18677

**ASTRONOMICAL PHOTOGRAPHY**
Gross-fragmentation of meteoroids and bulk density of Geminids from photographic fireball records p 1703 N93-19137
A new method for astrometric observations of asteroids p 1698 N93-19220

**ASTRONOMICAL PHOTOMETRY**
Planning, scheduling, and control for automatic telescopes p 1637 N93-18677
Comet P/Tempel: Some highlights and conclusions from the 1988 apparition p 1702 N93-19130
A photometric survey of outer belt asteroids p 1697 N93-19149
Spectroscopy of D-type asteroids p 1697 N93-19158
Inversion methods for interpretation of asteroid lightcurves p 1698 N93-19182
Philosophy and updating of the asteroid photometric catalogue p 1693 N93-19203
CCD-photometry of comets at large heliocentric distances p 1698 N93-19213
15 years of comet photometry: A comparative analysis of 80 comets p 1698 N93-19217
Narrow band photometry of selected asteroids p 1698 N93-19226
Interpreting asteroid photometry and polarimetry using a model of shadowing and coherent backscattering p 1699 N93-19241

**ASTRONOMICAL POLARIMETRY**
Interpreting asteroid photometry and polarimetry using a model of shadowing and coherent backscattering p 1699 N93-19241

**ASTRONOMICAL SPECTROSCOPY**
Pre-phase A: Development of a far-ultraviolet photometric- and spectroscopic-survey small-explorer experiment [NASA-CR-192092] p 1696 N93-18415
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate [NASA-TM-108588] p 1561 N93-18709
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
Radio spectroscopy of comets: Recent results and future prospects p 1697 N93-19144
Production rates for comet P/Temple 2 from long slit CCD spectroscopy p 1705 N93-19156
Spectroscopy of D-type asteroids p 1697 N93-19158
Deimos: A reddish, D-type asteroid spectrum p 1706 N93-19163
Spectroscopic observations of comet Austin (1989c) p 1697 N93-19169
Long slit spectroscopy of NH2 in comets Halley, Wilson, and Nishikawa-Takamizawa-Tago p 1698 N93-19230

**ASTRONOMY**
Asteroids with unusual lightcurves: 14 Irene and 51 Nemausa p 1701 N93-19123
Automating sky object classification in astronomical survey images p 1690 N93-19728

**ASTROPHYSICS**
Activities report of the Institute of Space Physics [ETN-93-93360] p 1665 N93-17947
Nuclear structure studies [DE93-002791] p 1654 N93-18402
Aerospace Sponsored Research [ATR-91(8498)-1] p 1747 N93-18459
Solar-terrestrial physics and astrophysics p 1733 N93-18501
The solar system: Importance of research to the biological sciences p 1591 N93-18547
Recent progress on astrophysical opacity [DE93-002892] p 1722 N93-19513

**ASYMPTOTIC METHODS**
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment [AD-A258177] p 1524 N93-17908
Location and distribution of local optima [AD-A257791] p 1645 N93-18237
Modeling of composite beams and plates for static and dynamic analysis [NASA-CR-192222] p 1556 N93-18609
The stability of a trailing-line vortex in compressible flow [NASA-CR-189738] p 1408 N93-18771

**ATLANTIC OCEAN**
Annual, orbital, and enigmatic variations in tropical oceanography recorded by the Equatorial Atlantic amplifier p 1581 N93-18970
Thermohaline circulations and global climate change [DE93-004601] p 1574 N93-19505

**ATLAS LAUNCH VEHICLES**
Atlas mission planner's guide [AD-A258845] p 1470 N93-19366

**ATMOSPHERIC BOUNDARY LAYER**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler [AD-A258189] p 1584 N93-17858

**ATMOSPHERIC CHEMISTRY**
Visible Airglow Experiment data analysis [NASA-CR-192119] p 1577 N93-18361
Natural and anthropogenic climate change [DE93-003150] p 1573 N93-18393
Titan p 1592 N93-18553
Low level measurements of atmospheric DMS, H2S, and SO2 for GTE/CITE-3 [NASA-CR-191635] p 1573 N93-18863
Ion produced cometary organic crust p 1701 N93-19122
Radio spectroscopy of comets: Recent results and future prospects p 1697 N93-19144
Research of the polar middle and lower atmosphere with an MST radar on Spitsbergen (Svalbard, Arctic) p 1584 N93-19555
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558
An experimental study of growth and phase change of polar stratospheric cloud particles [NASA-CR-192369] p 1588 N93-19887

**ATMOSPHERIC CIRCULATION**
A dynamical theory for hurricane spiral bands [AD-A258190] p 1584 N93-17859
Measurements of F-region drift velocities at the dusk sector mid-latitude trough [AD-A257766] p 1575 N93-17907
Tropical cyclone motion and recurvature in TCM-90 [AD-A258258] p 1585 N93-18010
Predicting the movement of Carolina coastal fronts [AD-A258280] p 1585 N93-18012
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A [AD-A258299] p 1576 N93-18126
Diabatic dynamic initialization p 1563 N93-18719
Increasing the corrected field of view of an adaptive optical telescope [AD-A258816] p 1663 N93-18995
EISCAT-MICADO coordinated measurements of meridional neutral winds and temperatures in the F region p 1584 N93-19563

**ATMOSPHERIC COMPOSITION**
Spectral features (200 nm - 10 micrometers) of atmospheric molecules: A bibliography (1979-1990) [NOTA-INTERNA-982] p 1575 N93-17957
Global change research: Summaries of research in FY 1992 [DE93-002859] p 1573 N93-18405
Forward model and CO retrieval algorithm [NASA-CR-191306] p 1620 N93-18414
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures [NASA-CR-191916] p 1577 N93-18599

Low level measurements of atmospheric DMS, H2S, and SO2 for GTE/CITE-3
[NASA-CR-191635] p 1573 N93-18863
A first-order global model of Late Cenozoic climatic change: Orbital forcing as a pacemaker of the ice ages p 1581 N93-18973
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751
Martian volatiles determined using the Mars observer gamma ray spectrometer p 1741 N93-19807
Modeling interannual variability in the Martian seasonal CO2 cycle p 1743 N93-19820

**ATMOSPHERIC CORRECTION**
Atmospheric refraction correction for Ka-band blind pointing on the DSS-13 beam waveguide antenna p 1505 N93-18903
CCD imaging of the inner coma jets of comet P/Halley p 1702 N93-19133

**ATMOSPHERIC DENSITY**
Scattering of acoustical waves by a spinning atmospheric turbule
[AD-A258783] p 1652 N93-19111

**ATMOSPHERIC DIFFUSION**
Electric fields and currents in the cusp region as a result of diffusion effects on the magnetopause p 1730 N93-19575

**ATMOSPHERIC EFFECTS**
CCD imaging of the inner coma jets of comet P/Halley p 1702 N93-19133

**ATMOSPHERIC ELECTRICITY**
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524

**ATMOSPHERIC ENTRY**
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud p 1706 N93-19159
Did Earth-approaching asteroids 3551, 3908, or 4055 produce meteorites? p 1707 N93-19164

**ATMOSPHERIC GENERAL CIRCULATION MODELS**
Modelling studies in support of open-ocean convection field programs
[AD-A258324] p 1589 N93-18255
Natural and anthropogenic climate change
[DE93-003150] p 1573 N93-18393
A first-order global model of Late Cenozoic climatic change: Orbital forcing as a pacemaker of the ice ages p 1581 N93-18973
Thermohaline circulations and global climate change
[DE93-004601] p 1574 N93-19505

**ATMOSPHERIC HEATING**
Evolution of the Martian atmosphere: The role of the polar caps p 1741 N93-19809

**ATMOSPHERIC IONIZATION**
Diurnal variation of overdense meteor echo duration and ozone p 1718 N93-19243

**ATMOSPHERIC MODELS**
A dynamical theory for hurricane spiral bands
[AD-A258190] p 1584 N93-17859
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
Definition of mean environmental steering flow for TCM-90 tropical cyclones
[AD-A257886] p 1586 N93-18338
Forward model and CO retrieval algorithm
[NASA-CR-191306] p 1620 N93-18414
Aeronomy of auroral and airglow emissions p 1584 N93-18496
Titan p 1592 N93-18553
Sea ice - atmosphere interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-192129] p 1566 N93-18571
Climate model calculations of the effects of volcanoes on global climate
[NASA-CR-191999] p 1573 N93-18600
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108588] p 1561 N93-18709
Numerical experiments on consistent horizontal and vertical resolution for atmospheric models and observing systems p 1583 N93-18718
Diabatic dynamic initialization p 1563 N93-18719
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization
[AD-A258549] p 1587 N93-19481
Ion composition in the auroral F region: Comparison of EISCAT data and ionospheric model predictions p 1726 N93-19547
D-region incoherent scatter spectra: Discrepancies between observations and current theory p 1728 N93-19559
The ionospheric response to atmospheric gravity waves in the EISCAT region p 1729 N93-19567
Electric fields and currents in the cusp region as a result of diffusion effects on the magnetopause p 1730 N93-19575
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
A numerical field experiment approach for determining probabilities of microburst intensity p 1419 N93-19599
Comparison of simulated and actual wind shear radar data products p 1421 N93-19610
Atmospheric tides in the middle atmosphere
[INPE-5436-PUD/053] p 1583 N93-19791
Evolution of the Martian atmosphere: The role of the polar caps p 1741 N93-19809

**ATMOSPHERIC MOISTURE**
The effect of tropospheric fluctuations on the accuracy of water vapor radiometry p 1511 N93-19416

**ATMOSPHERIC OPTICS**
Studies of regional and global tectonics and the rotation of the earth using very-long-baseline interferometry
[NASA-CR-191902] p 1577 N93-18591
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886
The effect of an adaptive optical system's spatio-temporal response on imaging performance
[AD-A258848] p 1663 N93-19069
Remote sensing of turbulence and transverse atmospheric wind profiles using optical reference sources
[AD-A258855] p 1587 N93-19370

**ATMOSPHERIC PHYSICS**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459
Atmospheric dynamics and coupling p 1584 N93-18495
Space physics strategy: Implementation study. Volume 2: Program plan
[NASA-TM-108143] p 1453 N93-18544
Dynamics of planetary atmospheres
[NASA-CR-192117] p 1735 N93-18782
Research of the polar middle and lower atmosphere with an MST radar on Spitsbergen (Svalbard, Arctic) p 1584 N93-19555
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558

**ATMOSPHERIC PRESSURE**
Cosmic-ray NM-64 neutron monitor data-19 from Rome, Italy
[NOTA-INTERNA-989] p 1745 N93-17878

**ATMOSPHERIC RADIATION**
Natural and anthropogenic climate change
[DE93-003150] p 1573 N93-18393
Possible cause and consequence of laminated Polar Mesosphere Summer Echoes p 1728 N93-19561

**ATMOSPHERIC REFRACTION**
Atmospheric refraction correction for Ka-band blind pointing on the DSS-13 beam waveguide antenna p 1505 N93-18903

**ATMOSPHERIC SCATTERING**
The EISCAT Svalbard (Arctic) radar p 1517 N93-19574

**ATMOSPHERIC SOUNDING**
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704
Chemical Release and Radiation Effects Satellite (CRRES) program archiving and Puerto Rican sounding rocket campaign
[NASA-CR-184503] p 1579 N93-18773
RAWS 1992 progress report
[NASA-CR-191382] p 1587 N93-18849
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192305] p 1582 N93-19036
Precipitation associated electric field enhancements p 1722 N93-19520
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192098] p 1583 N93-19886

**ATMOSPHERIC STRATIFICATION**
SAR-related stress variability in the Marine Atmospheric Boundry Layer (MABL) (high resolution ARI)
[AD-A258317] p 1585 N93-17987
Possible cause and consequence of laminated Polar Mesosphere Summer Echoes p 1728 N93-19561

**ATMOSPHERIC TEMPERATURE**
Climate model calculations of the effects of volcanoes on global climate
[NASA-CR-191999] p 1573 N93-18600
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704
Modeling interannual variability in the Martian seasonal CO2 cycle p 1743 N93-19820

**ATMOSPHERIC TIDES**
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525
Atmospheric tides in the middle atmosphere
[INPE-5436-PUD/053] p 1583 N93-19791

**ATMOSPHERIC TURBULENCE**
Computer program for wind speeds and turbulence properties: Flat or hilly sites in terrain with roughness changes
[ESDU-92032] p 1585 N93-18043
Response of structures to atmospheric turbulence: Computer programs A9236 and B9236
[ESDU-92036] p 1554 N93-18045
Increasing the corrected field of view of an adaptive optical telescope
[AD-A258816] p 1663 N93-18995
CCD imaging of the inner coma jets of comet P/Halley p 1702 N93-19133
Remote sensing of turbulence and transverse atmospheric wind profiles using optical reference sources
[AD-A258855] p 1587 N93-19370

**ATOMIC BEAMS**
Spin effects in electron-atom collisions p 1659 N93-18494
Method and apparatus for producing a thermal atomic oxygen beam
[NASA-CASE-LEW-15614-1] p 1656 N93-19026

**ATOMIC CLOCKS**
Determining the effects of microwave power variations on the output frequency of a high-performance cesium frequency standard
[AD-A258342] p 1518 N93-17989
Chaotic dynamics of atoms p 1659 N93-18491

**ATOMIC COLLISIONS**
Spin effects in electron-atom collisions p 1659 N93-18494

**ATOMIC ENERGY LEVELS**
Advanced atomic filters p 1664 N93-18468
Overview of helium-like structure measurements: A focus on the N = 2 triplet states
[DE93-002913] p 1658 N93-19748

**ATOMIC EXCITATIONS**
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon
[DE93-002550] p 1482 N93-18411
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991

**ATOMIC PHYSICS**
Activities report of the Kernfysisch Versneller Institute
[ETN-93-93340] p 1653 N93-17931
Research programs at the Research Laboratory of Electronics p 1522 N93-19482
Recent progress on astrophysical opacity
[DE93-002892] p 1722 N93-19513

**ATOMIC STRUCTURE**
Solid state and the standard model
[NOTA-INTERNA-980] p 1653 N93-17932
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
Atomic and electronic structure of metals and alloys: Clean surfaces and chemisorbed molecules
[DE93-004371] p 1487 N93-18452
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490

Electronic structure of substitutionally disordered alloys: Direct configurational averaging
[DE93-002548] p 1489 N93-19480
Positron annihilation studies of the electronic structure and fermiology of the high-T(sub c) superconductors
[DE93-002982] p 1676 N93-19497
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems
[AD-A258693] p 1678 N93-19862

**ATOMS**
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848

**ATTACK AIRCRAFT**
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters
p 1428 N93-19691

**ATTENTION**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816

**ATTENUATORS**
Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053

**AUDIO SIGNALS**
Enhancement of audio localization cue synthesis by adding environmental and visual cues
[AD-A259041] p 1652 N93-19001
Fly-by voice, a technology demonstration
p 1444 N93-19918

**AUDITORY PERCEPTION**
An automated version of the dichotic listening test: Hardware, software, and procedural details
[AD-A258114] p 1594 N93-17895
An analysis of a sustained flight operation training mission in Navy attack aircraft
[AD-A258199] p 1602 N93-18205
Classification of complex sounds
[AD-A258405] p 1596 N93-18223

**AUDITORY SIGNALS**
NPSNET: Aural cues for virtual world immersion
[AD-A257835] p 1503 N93-18417
Enhancement of audio localization cue synthesis by adding environmental and visual cues
[AD-A259041] p 1652 N93-19001

**AUDITORY TASKS**
Effects of terfenadine and diphenhydramine on brain activity and performance in a UH-60 flight simulator
[AD-A258012] p 1594 N93-17817
An automated version of the dichotic listening test: Hardware, software, and procedural details
[AD-A258114] p 1594 N93-17895

**AUGMENTATION**
NO(+)-enhancement in the height range between 180 and 300 km during ion heating events
p 1732 N93-19583
Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar
p 1732 N93-19586

**AURORAL ARCS**
Evaluating auroral processes within a magnotospheric model
[NASA-CR-192122] p 1577 N93-18606
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Precipitation associated electric field enhancements
p 1722 N93-19520
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced?
p 1723 N93-19525

**AURORAL ELECTROJETS**
Overall results from the European sector of the worldwide atmospheric gravity-wave study: 1985-1990
p 1733 N93-19589

**AURORAL IONIZATION**
Precipitation associated electric field enhancements
p 1722 N93-19520

**AURORAL ZONES**
Ion composition in the auroral F region: Comparison of EISCAT data and ionospheric model predictions
p 1726 N93-19547
Plasma flow bursts in the auroral zone
p 1726 N93-19550
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 3: The measurement problems with a radar
p 1727 N93-19554
Polar cap absorption events observed during the EISCAT operation in 1981-1989 p 1727 N93-19556
Interpretation of incoherent scatter spectral width changes in the D-region during an auroral precipitation event p 1728 N93-19560
Dynamics of the auroral ionosphere deduced from EISCAT CP1 observations p 1729 N93-19564
STARE: A new coherent radar in Scandinavia
p 1517 N93-19572
Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar
p 1732 N93-19586
The BICORE project p 1517 N93-19587
Observations of Pc5 Alfven wave effects in the quiet time auroral ionosphere: Indications of energetic particle acceleration p 1733 N93-19588

**AURORAS**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
Aeronomy of auroral and airglow emissions
p 1584 N93-18496
Ionospheric processes p 1584 N93-18498
Auroral energization and geomagnetic disturbances
p 1584 N93-18499
EISCAT related satellites in near future
p 1578 N93-18738
Freja satellite program and its connection to EISCAT
p 1578 N93-18739
Campaigns to study the aurora borealis focused on myriametric waves in 1991 p 1578 N93-18740
Ground station operation in the EISCAT campaign focused on the aurora borealis in November 1991
p 1578 N93-18741
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced?
p 1723 N93-19525
Nocturnal high latitude E-region in winter during extremely quiet conditions p 1723 N93-19527
Proposal for a coordination between EISCAT and INTERBALL p 1726 N93-19544
Main ionospheric trough: Preliminary results from the 1990 Finnish-French EISCAT campaign
p 1726 N93-19545

**AUSTENITE**
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182

**AUSTIN COMET**
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
A strong 3.4 micron emission feature in comet Austin 1989c1 p 1706 N93-19162
Spectroscopic observations of comet Austin (1989c)
p 1697 N93-19169
H2O(+) structures in the inner plasma tail of comet Austin p 1708 N93-19174
The solar wind structure that caused a large-scale disturbance of the plasma tail of comet Austin
p 1710 N93-19192
Mosaic CCD method: A new technique for observing dynamics of cometary magnetospheres
p 1698 N93-19236

**AUTOCORRELATION**
Comparisons of theoretical limits for source coding with practical compression algorithms p 1513 N93-19428

**AUTOMATA THEORY**
A static view of localities
[INRIA-RR-1483] p 1622 N93-18650
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723
Incremental generation and exploration of hidden structure p 1690 N93-19726
Goal-directed learning: A decision-theoretic model for deciding what to learn next p 1629 N93-19732

**AUTOMATIC CONTROL**
Methodologies of automatic control including fuzzy logic
[LAAS-92257] p 1631 N93-17814
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192030] p 1605 N93-18018
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309
ORCCAD: Towards an open robot controller computer aided design system
[INRIA-RR-1396] p 1621 N93-18519
Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633
Planning, scheduling, and control for automatic telescopes p 1637 N93-18677
Fault detection using a two-model test for changes in the parameters of an autoregressive time series
p 1505 N93-18907
En route air traffic controllers use of flight progress strips: A graph-theoretic analysis
[AD-A259062] p 1433 N93-18927
Power analysis in flexible automation
[AD-A259080] p 1549 N93-18961
Automated control of aircraft in formation flight
[AD-A259020] p 1450 N93-19102
Formalization and transformation of informal analysis models into executive REFINE (tm) specifications
[AD-A258901] p 1627 N93-19442
Elements of scientific research: Modeling discoveries in oxide superconductivity p 1679 N93-19720
Automating sky object classification in astronomical survey images p 1690 N93-19728
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
CYRANO-3: An experiment in representational invention p 1629 N93-19733
Modeling the dynamics of mental workload and human performance in complex systems
[AD-A258553] p 1603 N93-19956

**AUTOMATIC FLIGHT CONTROL**
Concepts for pilot interaction with an automated NOE obstacle-avoidance system
[NASA-TM-103960] p 1451 N93-19105

**AUTOMATIC PILOTS**
Vehicle guidance and control along circular trajectories
[AD-A257570] p 1450 N93-18177

**AUTOMATIC TEST EQUIPMENT**
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762

**AUTOMATION**
General method of pattern classification using the two-domain theory
[NASA-CASE-MSC-21737-1] p 1619 N93-18282
Aircrew acceptance of automation in the cockpit
p 1608 N93-19761

**AUTOMOBILE ENGINES**
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762

**AUTOMOBILES**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Transportation alternatives 92: Alternative fueled vehicles, volume 2
[DE93-001500] p 1548 N93-18531
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762
The design and use of automotive crash test dummies
p 1424 N93-19669
Electric and hybrid vehicle technology: TOPTEC
[DE93-002810] p 1551 N93-19837

**AUTONOMOUS NAVIGATION**
Vehicle guidance and control along circular trajectories
[AD-A257570] p 1450 N93-18177
Automatic rule generation for high-level vision
p 1618 N93-18225
A parallel implementation of a multisensor feature-based range-estimation method
[NASA-TM-103999] p 1432 N93-18883

**AUTONOMY**
Scheduling lessons learned from the Autonomous Power System p 1636 N93-18671
A parallel implementation of a multisensor feature-based range-estimation method
[NASA-TM-103999] p 1432 N93-18883
A safety-based decision making architecture for autonomous systems
[NASA-CR-191864] p 1641 N93-19362
Automatically calibrating admittances in KATE's autonomous launch operations model
p 1456 N93-19401
Cooperation of mobile robots for accident scene inspection
[DE93-002487] p 1551 N93-19478

**AUTOPSIES**
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges
p 1429 N93-19696

**AUTOREGRESSIVE PROCESSES**
Identification of nonlinear wave forces. Part 2: Frequency-domain analysis
[RR-442-PT-2] p 1528 N93-18440
Identification of nonlinear wave forces. Part 1: Time domain-analysis
[RR-441-PT-1] p 1528 N93-18510
Fault detection using a two-model test for changes in the parameters of an autoregressive time series
p 1505 N93-18907
A central limit theorem for autoregressive integrated moving average processes
[AD-A258923] p 1650 N93-19445
**AVAILABILITY**
Availability analysis of the traveling-wave maser amplifiers in the deep space network. Part 1: The 70-meter antennas p 1514 N93-19435
**AVERAGE**
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
**AVIATION METEOROLOGY**
Adverse weather test site selection study
[AD-A259012] p 1440 N93-18895
The 1991 LLWAS anemometer test program
[AD-A258844] p 1538 N93-19365
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Program overview: 1991 flight test objectives
p 1418 N93-19591
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
**AVIATION PSYCHOLOGY**
The human factor problem in the Canadian Forces aviation p 1422 N93-19657
Underlying causes of accidents: Casual networks
p 1422 N93-19658
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 1423 N93-19660
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present
p 1425 N93-19673
**AVIONICS**
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891
Joint Integrated Avionics Working Group (JIAWG) object-oriented domain analysis method (JODA), version 3.1
[AD-A258468] p 1447 N93-18270
Detection of spoofing, jamming, or failure of a Global Positioning System (GPS)
[AD-A259023] p 1433 N93-18951
Management of avionics data in the cockpit
p 1611 N93-19777
Equipment, more or less ready to be used in helicopters p 1612 N93-19785
Software users manual for the generic avionics data bus tool kit of the Ada technology insertion program
[AD-A259364] p 1628 N93-19852
Software programmers manual for the generic avionics data bus tool kit to the Ada technology insertion program
[AD-A259379] p 1628 N93-19855
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview
p 1443 N93-19906
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 1445 N93-19923
**AXIAL FLOW**
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
Application of recess vaned casing treatment to axial flow fans p 1531 N93-18728
**AXIAL FLOW TURBINES**
Stall in axial flow aero engine compressors
p 1530 N93-18723
Stall and surge in axial flow compressors
p 1530 N93-18724
**AXISYMMETRIC BODIES**
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312
**AXISYMMETRIC FLOW**
An investigation of the near and induced flow fields of an axially symmetric jet, issuing normal to a plane surface, into a quiescent medium p 1533 N93-19041

## B

**B-2 AIRCRAFT**
Stealth in the storm: Sorting the facts from the fiction
[AD-A258440] p 1434 N93-17889
**BACK INJURIES**
The US Navy Healthy Back Program: Effect on back knowledge among recruits
[AD-A258368] p 1596 N93-18210
**BACKGROUND NOISE**
New methods for nonlinear tracking and nonlinear chaotic signal processing
[AD-A259331] p 1516 N93-19850
**BACKGROUND RADIATION**
Infrared studies of star-forming regions
p 1696 N93-18497
COBE Differential Microwave Radiometer (DMR) data processing techniques p 1562 N93-18715
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales
p 1563 N93-18717
**BACKSCATTERING**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Ionospheric processes p 1584 N93-18498
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886
Nondestructive evaluation of grain size distributions using multifractal analysis of backscattered ultrasonic signals
[AD-A259035] p 1553 N93-18956
Interpreting asteroid photometry and polarimetry using a model of shadowing and coherent backscattering
p 1699 N93-19241
The COSCAT experiment: EISCAT observations of coherent scatter at small aspect angles
p 1517 N93-19573
Turbulence scattering layers in the middle-mesosphere observed by the EISCAT 224 MHz radar
p 1732 N93-19582
Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar
p 1732 N93-19586
Heavy ion backscattering spectrometry for high sensitivity
[DE93-002489] p 1484 N93-19624
**BACKWARD FACING STEPS**
An experimental investigation of the separating/reattaching flow over a backstep
[NASA-CR-192105] p 1408 N93-18781
**BACKWARD WAVE TUBES**
An experimental investigation of a tandem relativistic backward wave oscillator-travelling wave tube amplifier system for generating high-power microwaves
p 1521 N93-19058
**BAGGAGE**
Recognition of partially occluded threat objects using the annealed Hopefield network p 1612 N93-19466
**BAINITE**
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343
**BALANCING**
Model reduction results for flexible space structures
p 1462 N93-18824
**BALLISTIC TRAJECTORIES**
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 1417 N93-19922
**BALLISTICS**
Plume: Instructions for use and description of a missile plume visibility program
[AD-A258201] p 1473 N93-18201
**BALLOON-BORNE INSTRUMENTS**
EXITE/IPC observations of SN1987A and southern targets
[NASA-CR-192133] p 1696 N93-18607
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales
p 1563 N93-18717
**BALLOONING MODES**
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896
**BAND STRUCTURE OF SOLIDS**
Solid-state dynamics and quantum transport in novel semiconductor nanostructures
[AD-A258482] p 1672 N93-18314
The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412
**BANDPASS FILTERS**
Remote sensing of turbulence and transverse atmospheric wind profiles using optical reference sources
[AD-A258855] p 1587 N93-19370
**BANDWIDTH**
A bandwidth extrapolation technique for improved range resolution of coherent radar data, revision 1
[AD-A258462] p 1502 N93-18262
Application of multirate digital filter banks to wideband all-digital phase-locked loops design
p 1505 N93-18908
Adaptive low-bandwidth tracking of Galileo and Pioneer 10 carriers p 1506 N93-18912
The use of subcarriers in future DSN missions
p 1507 N93-18915
Investigation of the bandwidth of multimode optical fibers used with 1550-nm LED and laser sources
p 1664 N93-19409
**BARIUM TITANATES**
Thin film processing of photorefractive BaTiO3
[NASA-CR-192194] p 1673 N93-18427
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
Phase conjugation in optical fiber via stimulated Brillouin scattering with feedback from a barium titanate crystal
[AD-A258824] p 1675 N93-19088
**BAROCLINIC WAVES**
Determination of the zone of the stall cell by means of the baroclinic wave theory p 1531 N93-18733
Rotating stall cell and Von Karman vortex street: A meteorological theory p 1531 N93-18734
**BARYON RESONANCE**
Theoretical aspects of electroweak and other interactions in medium energy physics
[DE93-003714] p 1657 N93-19507
**BASALT**
Mare volcanism in the Taurus-Littrow region
p 1736 N93-18790
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
neoKREEP: A new lunar component at Apollo 17
p 1737 N93-18797
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
Using Apollo 17 high-Ti mare basalts as windows to the lunar mantle p 1738 N93-18805
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded?
p 1739 N93-18813
**BATHYMETERS**
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430
Feasibility of airborne laserbathymetry with respect to turbidity in Dutch coastal waters
[BCRS-91-19] p 1589 N93-18432
**BATTERY CHARGERS**
Electric and hybrid vehicle technology: TOPTEC
[DE93-002810] p 1551 N93-19837
**BAYES THEOREM**
The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report
[DE92-041215] p 1624 N93-18867
Modeling expert opinion: Likelihoods under incomplete probabilistic specification
[AD-A258775] p 1649 N93-18946
Asteroid orbital error analysis: Theory and application
p 1454 N93-19214
HModel: An X tool for global model search
[DE93-002826] p 1627 N93-19512
**BCH CODES**
Self-dual (48,24;12) codes p 1505 N93-18905
More box codes p 1505 N93-18906

**BEACON SATELLITES**
SATCOM general purpose modem DSCS 3 SCT beacon telemetry display
[AD-A258849] p 1458 N93-19441
**BEACONS**
The Terminal Doppler Weather Radar (TDWR) Moving Target Simulator (MTS) at Orlando, Florida
[AD-A258885] p 1509 N93-19080
SATCOM general purpose modem DSCS 3 SCT beacon telemetry display
[AD-A258849] p 1458 N93-19441
**BEADS**
Mare volcanism in the Taurus-Littrow region
p 1736 N93-18790
**BEAM INJECTION**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244
The CQL3D Fokker-Planck code
[DE93-002962] p 1668 N93-19754
Stability of TAE modes in DIII-D
[DE93-002677] p 1669 N93-19897
**BEAM INTERACTIONS**
Mesh effect in a parallel plate analyzer
[NIFS-203] p 1669 N93-19931
**BEAM WAVEGUIDES**
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna
p 1505 N93-18902
Atmospheric refraction correction for Ka-band blind pointing on the DSS-13 beam waveguide antenna
p 1505 N93-18903
DSS-13 beam waveguide antenna frequency stability
p 1513 N93-19424
SETI low-frequency feed design study for DSS 24
p 1514 N93-19433
**BEAMS (RADIATION)**
Plasma-beam instabilities in cometary ionospheres
p 1704 N93-19141
**BEAMS (SUPPORTS)**
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain
[AD-A258908] p 1559 N93-19353
Dynamic characterization, monitoring and control of rotating flexible beam-mass structures via piezo-embedded techniques p 1561 N93-19458
**BEETLES**
Aquatic plant control research program. Biological control of Pistia stratiotes L. (waterlettuce) using Neohydronomus affinis hustache (coleoptera: curculionidae)
[AD-A257463] p 1574 N93-18945
**BELLOWS**
High-temperature, bellows hybrid seal
[NASA-CASE-LEW-15570-1] p 1549 N93-19027
**BENDING**
Fibre reinforced plastic structures
p 1557 N93-18752
P-adaptivity applied to plate in bending problems
p 1557 N93-18756
**BENDING FATIGUE**
Effect of bow-type initial imperfection on reliability of minimum-weight, stiffened structural panels
[NASA-TP-3263] p 1556 N93-18615
**BENDING MOMENTS**
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Response of structures to atmospheric turbulence: Computer programs A9236 and B9236
[ESDU-92036] p 1554 N93-18045
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705
**BENDING THEORY**
P-adaptivity applied to plate in bending problems
p 1557 N93-18756
**BENEFICIATION**
Resource availability at Taurus-Littrow
p 1736 N93-18792
**BENZENE**
Studies of metal-semiconductor clusters
p 1678 N93-18493
Solvation effects on reactive intermediates: The benzyl radical and its clusters with Ar, N2, CH4, C2H6, and C3H88
[AD-A258764] p 1658 N93-19868
**BERNOULLI THEOREM**
Location and distribution of local optima
[AD-A257791] p 1645 N93-18237
**BERYLLIUM OXIDES**
Pseudomorphic stabilization of diamond on non-diamond substrates, part 1. Diamond grown on single crystal beryllium oxide, Part 2. Anomalous band gap behavior and phase stability of c-BN/Diamond alloys
[AD-A257845] p 1493 N93-18345
**BESSEL FUNCTIONS**
A q-analogue of the Wronskian and a second solution of the Hahn-Exton q-Bessel difference equation
[REPT-92-18] p 1643 N93-17843
**BETA PARTICLES**
Nuclear structure studies
[DE93-002791] p 1654 N93-18402
**BETATRONS**
Identification of toroidal field errors in a modified betatron accelerator
[AD-A257983] p 1660 N93-18289
**BIAS**
A dynamic analysis of piezoelectric strained elements
[AD-A259011] p 1651 N93-19014
Bias correction factors for near-Earth asteroids
p 1701 N93-19127
Response of a Nb/Al2O3/Nb tunnel junction to picosecond electrical pulses
[DE93-002625] p 1676 N93-19617
Advanced divertor program results from D3-D
[DE93-002675] p 1668 N93-19619
**BIBLIOGRAPHIES**
A bibliography of the qualitative theory of quadratic systems of differential equations in the plane
[REPT-92-17] p 1642 N93-17842
Spectral features (200 nm - 10 micrometers) of atmospheric molecules: A bibliography (1979-1990)
[NOTA-INTERNA-982] p 1575 N93-17957
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 370)
[NASA-SP-7011(370)] p 1596 N93-18108
Aeronautical engineering: A continuing bibliography with indexes (supplement 285)
[NASA-SP-7037(285)] p 1403 N93-18109
NASA patent abstracts bibliography: A continuing bibliography. Section 1: Abstracts (supplement 42)
[NASA-SP-7039(42)-SECT-1] p 1685 N93-18110
A classification and bibliography of software prototyping
[AD-A258466] p 1619 N93-18268
Publications of the Space Physiology and Countermeasures Program, Cardiopulmonary Discipline: 1980-1990
[NASA-CR-4475] p 1598 N93-18376
NASA patent abstracts bibliography: A continuing bibliography. Section 2: Indexes (supplement 42)
[NASA-SP-7039(42)-SECT-2] p 1686 N93-18410
Bibliographic study of georadar principles, applications, advantages, and inconvenience
[CR-35/91] p 1509 N93-18993
Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494
Theoretical studies on the chromosphere, corona, and solar wind
[NASA-CR-192116] p 1745 N93-19932
**BIDIRECTIONAL REFLECTANCE**
Terrain background signature research
[AD-A257917] p 1565 N93-18213
Exact calculation of light scattering from a particle on a mirror
[AD-A258464] p 1662 N93-18247
**BIMETALS**
Chemical interactions in multimetal/zeolite catalysts
[DE93-005133] p 1484 N93-19491
**BINARY ALLOYS**
Electronic structure of substitutionally disordered alloys: Direct configurational averaging
[DE93-002548] p 1489 N93-19480
**BINARY CODES**
Maximal codeword lengths in Huffman codes
p 1513 N93-19427
Binary weight distributions of some Reed-Solomon codes p 1514 N93-19430
**BINARY DATA**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181
**BINARY PHASE SHIFT KEYING**
Multiple symbol partially coherent detection of MPSK
p 1514 N93-19431
**BINARY SYSTEMS (MATERIALS)**
A general approximation solution for the mass transfer in laminar multicomponent boundary layers along a streaming plate plane
[ETN-93-92738] p 1530 N93-18629
**BINDERS (MATERIALS)**
Method of preparing a diamond-abrasive mixture
[AD-A258228] p 1492 N93-18123
**BINOCULAR VISION**
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333
**BINOMIAL THEOREM**
Feasible interpretability
[ML-91-11] p 1643 N93-17868
**BIOACOUSTICS**
Classification of complex sounds
[AD-A258405] p 1596 N93-18223
**BIOASSAY**
Proposed Lower Limits of Detection (LLD), Decision Limits (LC), and error terms for identified analytes from the inorganic, isotopic, bioassay, and organic groups
[DE93-002942] p 1484 N93-19752
**BIOASTRONAUTICS**
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 370)
[NASA-SP-7011(370)] p 1596 N93-18108
Publications of the Space Physiology and Countermeasures Program, Cardiopulmonary Discipline: 1980-1990
[NASA-CR-4475] p 1598 N93-18376
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428
Cardiopulmonary discipline science plan
[NASA-TM-108040] p 1599 N93-19648
Neuroscience discipline science plan
[NASA-TM-108041] p 1600 N93-19882
Regulatory physiology discipline science plan
[NASA-TM-108038] p 1594 N93-19891
Musculoskeletal discipline science plan
[NASA-TM-108039] p 1600 N93-19892
**BIOCHEMISTRY**
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
**BIOCONTROL SYSTEMS**
Aquatic plant control research program. Biological control of Pistia stratiotes L. (waterlettuce) using Neohydronomus affinis hustache (coleoptera: curculionidae)
[AD-A257463] p 1574 N93-18945
**BIODEGRADATION**
Biodegradation of Jet Fuel-4 (JP-4) in sequencing batch reactors
[AD-A258020] p 1496 N93-17917
**BIODYNAMICS**
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident?
p 1423 N93-19664
Design/development of an enhanced biodynamic manikin p 1424 N93-19667
The design and use of automotive crash test dummies
p 1424 N93-19669
An improved anthropometric test device
p 1424 N93-19670
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672
**BIOELECTRICITY**
Applied Computational Electromagnetics Society Journal, volume 7, number 2, winter 1992
[AD-A258483] p 1502 N93-18263
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
**BIOGEOCHEMISTRY**
The voltammetric determination of trace metal concentrations and organic complexation in seawater
[AD-A257565] p 1588 N93-17984
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
**BIOGRAPHY**
Dr. Alexander H. Flax: Technologist of aeronautics
[AD-A258441] p 1747 N93-17890
The efficacy of biographical inventory data in predicting early attrition in naval aviation officer candidate training
[AD-A258025] p 1601 N93-17919
**BIOLOGICAL EFFECTS**
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model
[AD-A258197] p 1502 N93-18249
Target fragmentation in radiobiology
[NASA-TM-4408] p 1598 N93-18381
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751

Health effects of low-frequency electric and magnetic fields
[DE93-005675] p 1599 N93-19838

**BIOLOGICAL EVOLUTION**
Overview: Exobiology in solar system exploration p 1591 N93-18546
The solar system: Importance of research to the biological sciences p 1591 N93-18547
Venus: A search for clues to early biological possibilities p 1591 N93-18549
Mars: A reassessment of its interest to biology p 1591 N93-18550
Natural selection and particle physics: A thrust for artificial intelligence research
[INPE-5335-PRE/1734] p 1641 N93-19823

**BIOLOGICAL MODELS (MATHEMATICS)**
Target fragmentation in radiobiology
[NASA-TM-4408] p 1598 N93-18381
Image quality measurement techniques
[INPE-5362/NTC/302] p 1664 N93-19794

**BIOMAGNETISM**
Applied Computational Electromagnetics Society Journal, volume 7, number 2, winter 1992
[AD-A258483] p 1502 N93-18263

**BIOMETRICS**
Enabler operator station --- lunar surface vehicle
[NASA-CR-192067] p 1546 N93-18050

**BIOREACTORS**
High density cell culture system
[NASA-CASE-MSC-22060-1] p 1593 N93-19037

**BIPOLAR TRANSISTORS**
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191957] p 1523 N93-19893

**BIT ERROR RATE**
Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854
Multiple symbol partially coherent detection of MPSK p 1514 N93-19431

**BLACK HOLES (ASTRONOMY)**
Evidence for a massive stellar black hole in x ray Nova Muscae p 1562 N93-18714

**BLADE-VORTEX INTERACTION**
Numerical investigation of swirl-airfoil interactions in transonic area
[MPIS-8/1991] p 1407 N93-18627

**BLADES**
Structural dynamic testing of composite propfan blades for a cruise missile wind tunnel model
[NASA-TM-105272] p 1558 N93-18875

**BLEACHING**
Processability of polythiophene thin films by ultraviolet photo bleaching
[AD-A259043] p 1495 N93-19021

**BLOOD**
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 1426 N93-19683

**BLOOD CELLS**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**BLOOD FLOW**
Publications of the Space Physiology and Countermeasures Program, Cardiopulmonary Discipline: 1980-1990
[NASA-CR-4475] p 1598 N93-18376

**BLOOD PLASMA**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**BLOOD PRESSURE**
Development and enhancement of a mode of performance and decision making under stress in a real life setting
[AD-A257796] p 1598 N93-18363

**BLOWDOWN WIND TUNNELS**
Photoluminescent thermography in hypersonic blowdown wind tunnel: Feasibility study with pinpoint measurement
[ONERA-NT-1992-8] p 1407 N93-18617

**BLOWING**
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
Shock tube study of the effects of large density differences and blowing ratio on heat transfer to a film-cooled flat plate
[AD-A258813] p 1532 N93-18990

**BLUNT BODIES**
Computational study of real gas effects in high speed high temperature flow
[AERO-REPT-9102] p 1526 N93-18129
Code development for hypersonic real-gas flow simulations toward the design of space vehicles p 1411 N93-19293

**BOATS**
Modelling of interfacial and thermocline waves
[AERO-REPT-9209] p 1525 N93-18103

**BODY TEMPERATURE**
A review of models of the human temperature regulation system
[AD-A258023] p 1595 N93-17918
Validation of two temperature pill telemetry systems in humans during moderate and strenuous exercise
[AD-A259068] p 1599 N93-19072
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955

**BODY WEIGHT**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209

**BODY-WING CONFIGURATIONS**
Application of an Euler-equation method to a sharp-edged delta wing configuration with vortex flow
[NLR-TP-91] p 1404 N93-17809
Pitching moment of low aspect ratio wing-body combinations up to high angles of attack at supersonic speeds
[ESDU-92043] p 1435 N93-17958

**BOEING AIRCRAFT**
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 1423 N93-19661
Occupant kinematics simulation of the Kegworth air accident p 1423 N93-19662
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident? p 1423 N93-19664

**BOLIDES**
The Tapanui region of New Zealand: Site of a Tunguska around 800 years ago? p 1718 N93-19246

**BOLIVIA**
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia
[AD-A257847] p 1566 N93-18346

**BOLOMETERS**
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales p 1563 N93-18717
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487

**BOLTS**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299

**BOLTZMANN TRANSPORT EQUATION**
A simulated annealing approach to schedule optimization for the SES facility p 1634 N93-18662
Fast algorithms for transport models
[DE93-003881] p 1657 N93-19508

**BOMBER AIRCRAFT**
Methods for viewing radar cross section data in three dimensions
[AD-A258905] p 1626 N93-19352

**BONDED JOINTS**
A micromechanical fastening system and its applications p 1550 N93-19059

**BONDING**
Slit scan radiographic system for intermediate size rocket motors
[NASA-CR-191798] p 1471 N93-18058
Heteroepitaxial diamond growth
[AD-A257510] p 1671 N93-18079
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
Smart patch piezoceramic actuator issues p 1462 N93-18822

**BOOLEAN ALGEBRA**
Shavrukov's theorem on the subalgebras of diagonalizable algebras for theories containing I(delta(sub 0)) + exp
[ML-92-05] p 1642 N93-17825

**BOOMS (EQUIPMENT)**
Activities of the Boom and Chassis Group
[NASA-CR-192028] p 1544 N93-17975
Boom and chassis articulation joints
[NASA-CR-192059] p 1546 N93-18052

**BOOSTER ROCKET ENGINES**
Numerical computations using multi-domain technique p 1409 N93-19277
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410

**BORESIGHTS**
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna p 1505 N93-18902

**BORN APPROXIMATION**
Scattering of acoustical waves by a spinning atmospheric turbule
[AD-A258783] p 1652 N93-19111

**BORON**
Ductility and fracture in L1(sub 2) intermetallic alloys
[DE93-001644] p 1487 N93-18534

**BORON COMPOUNDS**
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158

**BORON-EPOXY COMPOSITES**
Damage tolerance assessment of boron/epoxy repairs to fuselage lap joints
[AD-A258383] p 1439 N93-18257

**BOROSILICATE GLASS**
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357

**BOSONS**
Relativistic two body equations and nuclear interactions
[NOTA-INTERNA-985] p 1653 N93-17876
A relativistic coupled-channel wave-equation with N and Delta degrees of freedom
[NOTA-INTERNA-993] p 1653 N93-17944
A relativistic study of nuclear interactions
[NOTA-INTERNA-981] p 1653 N93-17955

**BOTSWANA**
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525

**BOUNDARY CONDITIONS**
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Validation of central and upwind 3D compressible flow solvers p 1529 N93-18564
Parabolized Navier-Stokes methods for hypersonic flows p 1529 N93-18565
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298
Role of wind tunnel tests and CFD analysis for the development of aero-engines in IHI p 1417 N93-19326
Alternative formulations of the Laplace Transform Boundary Element (LTBE) numerical method for the solution of diffusion-type equations
[DE92-041172] p 1648 N93-19468

**BOUNDARY ELEMENT METHOD**
Development of a boundary element method program for numerical analysis of supersonic unsteady flow p 1410 N93-19283
Calculations of aerodynamic forces on a wing with thrust using BEM p 1410 N93-19286
Alternative formulations of the Laplace Transform Boundary Element (LTBE) numerical method for the solution of diffusion-type equations
[DE92-041172] p 1648 N93-19468

**BOUNDARY LAYER EQUATIONS**
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011

**BOUNDARY LAYER FLOW**
Investigation of wall bounded turbulence: Coherence and chaos in a model of turbulent boundary-layer
[AD-A257794] p 1528 N93-18416
Solution of the time-dependent incompressible Navier-Stokes equations by finite elements p 1528 N93-18542
Estimation of the direct acoustic radiation from turbulent spots. Using boundary layer velocity measurements
[AD-A258981] p 1534 N93-19097
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278
Application of the program profile for the design of low-speed, low-observable configuration airfoils
[AD-A258842] p 1417 N93-19364

**BOUNDARY LAYER SEPARATION**
Hypersonic flows as related to the national aerospace plane
[NASA-CR-191980] p 1406 N93-18378
Stall departure resistance enhancer
[NASA-CASE-LAR-14221-1] p 1447 N93-19023

Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321

**BOUNDARY LAYER TRANSITION**
Modeling the transition region
[NASA-CR-4492] p 1408 N93-19015
Estimation of the direct acoustic radiation from turbulent spots. Using boundary layer velocity measurements
[AD-A258981] p 1534 N93-19097

**BOUNDARY LAYERS**
SAR-related stress variability in the Marine Atmospheric Boundry Layer (MABL) (high resolution ARI)
[AD-A258317] p 1585 N93-17987
Topography-induced variation in benthic boundary layer particle dynamics and fauna
[AD-A258230] p 1589 N93-18124
A general approximation solution for the mass transfer in laminar multicomponent boundary layers along a streaming plate plane
[ETN-93-92738] p 1530 N93-18629
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312

**BOUNDARY VALUE PROBLEMS**
Penetrative and recirculating flows in enclosures with openings p 1533 N93-19040

**BRACKETS**
Bracketing to speed convergence illustrated on the Von Newmann algorithm for finding a feasible solution to a linear program with a convexity constraint
[DE93-002660] p 1621 N93-18450

**BRAGG ANGLE**
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618

**BRAIDED COMPOSITES**
Method and apparatus for three dimensional braiding
[NASA-CASE-LAR-14047-1] p 1500 N93-19038

**BRAIN**
Effects of terfenadine and diphenhydramine on brain activity and performance in a UH-60 flight simulator
[AD-A258012] p 1594 N93-17817

**BRAIN DAMAGE**
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 1428 N93-19691

**BRAYTON CYCLE**
Design of a pressurized lunar rover
[NASA-CR-192033] p 1545 N93-18016

**BRAZIL**
Evaluation of the current status of the multisensor approach to monitoring vegetation of Brazil
[INPE-5328-PRE/1724] p 1567 N93-19641
Discussions on the organizational outline and suggested institutional guidelines for the INPE
[INPE-5406-RPQ/660] p 1684 N93-19642
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
Technology absorption and technological learning: A study of the dynamics of the process and intervening factors
[INPE-5392-TAE/013] p 1695 N93-19741
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789
Use of teledetection in physiographic compartmentation to obtain multiple use geotechnic zoning in coastal regions
[INPE-5322-PRE/1720] p 1583 N93-19795

**BREADBOARD MODELS**
Three-phase inverter for small high speed motors
[NASA-CR-191331] p 1523 N93-19860

**BREATHING APPARATUS**
Statistically based decompression tables 8: Linear-exponential kinetics
[AD-A257613] p 1595 N93-17926

**BRECCIA**
Refining the granulite suite p 1736 N93-18789
Impact melt breccias at the Apollo 17 landing site p 1739 N93-18810
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded? p 1739 N93-18813
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815

**BREMSSTRAHLUNG**
An experimental test of the LPM effect: Bremsstrahlung suppression at high energies
[DE93-004019] p 1660 N93-19495

**BRIGHTNESS**
Comet P/Tempel: Some highlights and conclusions from the 1988 apparition p 1702 N93-19130
Lightcurve of comet Austin(1989c1) and its dust mantle development p 1707 N93-19167
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170
Automated detection of asteroids in real-time with the Spacewatch telescope p 1698 N93-19239
A new activity index for comets p 1699 N93-19261

**BRIGHTNESS DISTRIBUTION**
A strong 3.4 micron emission feature in comet Austin 1989c1 p 1706 N93-19162
First images of a possible CO(+)-tail of comet P/Schwassmann-Wachmann 1 observed against the dust coma background p 1708 N93-19175
Engineering the visibility of small features on electronic flight displays p 1607 N93-19758

**BRIGHTNESS TEMPERATURE**
Low cloud investigations for project FIRE: Island studies of cloud properties, surface radiation, and boundary layer dynamics. A simulation of the reflectivity over a stratocumulus cloud deck by the Monte Carlo method
[NASA-CR-192083] p 1585 N93-18001
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704

**BRILLOUIN EFFECT**
Stimulated Brillouin scattering phase conjugation p 1664 N93-18471
Phase conjugation in optical fiber via stimulated Brillouin scattering with feedback from a barium titanate crystal
[AD-A258824] p 1675 N93-19088

**BRITTLENESS**
Ductility and fracture in L1(sub 2) intermetallic alloys
[DE93-001644] p 1487 N93-18534
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357

**BROADBAND**
Variable wide band fiber optic delay line
[AD-D015539] p 1662 N93-18318
The broad-band x ray spectral variability of Mkn 841 p 1561 N93-18711
Application of multirate digital filter banks to wideband all-digital phase-locked loops design p 1505 N93-18908

**BROMIDES**
Toxicological investigations of flight accidetns: Findings and methods p 1428 N93-19695

**BRORSEN-METCALF COMET**
Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
Heliocentric distance dependencies of the C2 lifetime and C2 parent production rate in comet P/Brorsen-Metcalf (1989o) p 1711 N93-19195

**BRUSH SEALS**
Brush seal bristle flexure and hard-rub characteristics
[NASA-TM-105864] p 1547 N93-18321
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380

**BRUSHES**
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380

**BUBBLES**
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics
[AD-A258938] p 1652 N93-19082
A numerical simulation of flows around a deformable gas bubble p 1413 N93-19300
Numerical and physical modelling of bubbly flow phenomena
[DE93-003145] p 1535 N93-19500

**BUCKLING**
Equivalent lengths of struts (for use in buckling calculations)
[ESDU-92038] p 1554 N93-18046
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774

**BULK MODULUS**
The development of new, low-cost perfluoroalkylether fluids with excellent low and high-temperature properties
[NASA-CR-190865] p 1492 N93-18229

**BUNCHING**
Reducing bunch disruption in transition crossing by modification of the RF waveform
[DE93-002509] p 1515 N93-19625

**BURNERS**
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994

**BURSTS**
PACE and EISCAT radar observations of short-lived flow bursts on the nightside p 1726 N93-19549
Plasma flow bursts in the auroral zone p 1726 N93-19550

**BUS CONDUCTORS**
Software users manual for the generic avionics data bus tool kit of the Ada technology insertion program
[AD-A259364] p 1628 N93-19852

**BYPASS RATIO**
Improving military transport aircraft through highly integrated engine-wing design
[DS-1607] p 1434 N93-17850
Aerodynamic design and analysis of fans using 3D computational codes
[DS-2140] p 1404 N93-17880

## C

**C (PROGRAMMING LANGUAGE)**
A generic template extractor (GENTEX) in C for VLSI design verification
[AD-A259078] p 1521 N93-18959

**C-160 AIRCRAFT**
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 1446 N93-19925

**CABIN ATMOSPHERES**
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955

**CADMIUM ALLOYS**
Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems
[DE93-002558] p 1489 N93-19486

**CALCIUM CHLORIDES**
Application of molten salts in pyrochemical processing of reactive metals
[DE92-018618] p 1489 N93-19437

**CALCIUM OXIDES**
Application of molten salts in pyrochemical processing of reactive metals
[DE92-018618] p 1489 N93-19437

**CALCIUM PHOSPHATES**
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054

**CALCULUS**
The Lambek calculus enriched with additional connectives
[LP-91-04] p 1642 N93-17826
Lambda-calculi for (strict) parallel functions
[INRIA-RR-1387] p 1646 N93-18435

**CALCULUS OF VARIATIONS**
Variational iterative method for the calculation of heat flux and mean energy balance
[INPE-5236-RPQ/648] p 1583 N93-19824

**CALENDARS**
Calendar of selected aeronautical and space meetings, July 1991 onwards
[AGARD-CAL-91/2] p 1683 N93-19639

**CALIBRATING**
Positioning a camera from a photograph and a scene model
[TELECOM-PARIS-92-D-002] p 1537 N93-17948
Determining the effects of microwave power variations on the output frequency of a high-performance cesium frequency standard
[AD-A258342] p 1518 N93-17989
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235
Development and calibration of two and four wire water surface wave height measurement systems
[AD-A257900] p 1589 N93-18394
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna p 1505 N93-18902
Calibration of the ARID robot p 1552 N93-19394
ARID relative calibration experimental data and analysis p 1552 N93-19395
Automatically calibrating admittances in KATE's autonomous launch operations model p 1456 N93-19401
Measurement uncertainty analysis techniques applied to PV performance measurements
[DE93-000019] p 1553 N93-19438
Experimental evaluation of software-driven digital gain-drift compensation in scintillator gamma ray spectroscopy
[DE93-002623] p 1657 N93-19616
High precision navigation for flight testing (AERONAV) p 1434 N93-19920
Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus p 1446 N93-19926
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 1446 N93-19928

**CALORIMETERS**
The first level energy trigger of the L3 experiment/description of the hardware
[NOTA-INTERNA-987] p 1659 N93-17937
**CAMERAS**
Positioning a camera from a photograph and a scene model
[TELECOM-PARIS-92-D-002] p 1537 N93-17948
Near real-time stereo vision system
[NASA-CASE-NPO-18593-1-CU] p 1662 N93-18276
Study of optical techniques for the Ames unitary wind tunnel: Digital image processing, part 6
[NASA-CR-192164] p 1452 N93-18766
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924
Dark-cycle monitoring of biological subjects on Space Station Freedom
[NASA-TM-103976] p 1500 N93-19103
Mosaic CCD method: A new technique for observing dynamics of cometary magnetospheres p 1698 N93-19236
**CAMOUFLAGE**
Terrain background signature research
[AD-A257917] p 1565 N93-18213
**CAMS**
Minimum size of disc cams with radial translating roller followers
[ESDU-92005] p 1544 N93-17998
Blending profiles of disc cams with radial translating roller followers. Part 1: To reduce segment angle, reduce reference circle radius or increase follower lift
[ESDU-92014] p 1545 N93-18041
**CANADA**
Locating an imaging radar in Canada for identifying spaceborne objects
[AD-A258969] p 1510 N93-19087
**CANARD CONFIGURATIONS**
Lift enhancement using a close-coupled oscillating canard
[AD-A257877] p 1406 N93-18336
**CANCELLATION**
An analysis of contract cost overruns and their impacts
[AD-A258422] p 1683 N93-17862
Issues in requirements elicitation
[AD-A258932] p 1627 N93-19448
**CANONICAL FORMS**
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187
Lambda-calculi for (strict) parallel functions
[INRIA-RR-1387] p 1646 N93-18435
**CANOPIES (VEGETATION)**
A microwave scattering model for layered vegetation p 1565 N93-18074
Modeling energy and mass fluxes from prairie canopies
[NASA-CR-191801] p 1566 N93-18232
Variational iterative method for the calculation of heat flux and mean energy balance
[INPE-5236-RPQ/648] p 1583 N93-19824
**CAPACITANCE**
Capacifiector-based virtual force control and centering
[NASA-CR-191805] p 1520 N93-18764
**CAPACITORS**
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices
[NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278
**CAPILLARY FLOW**
Rewet performance of a rectangular grooved heat pipe wick after gravitationally induced dryout
[AD-A258852] p 1534 N93-19367
**CAPILLARY WAVES**
Inexpensive capillary discharge x ray laser driver, phase 1
[AD-A259032] p 1542 N93-19372
**CARBIDES**
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514
**CARBON**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser
[AD-A257551] p 1491 N93-17966
Ion produced cometary organic crust p 1701 N93-19122
The first identification of C2 emission bands in comet Scorichenko-George (1989e1) spectrum p 1703 N93-19139
Heliocentric distance dependencies of the C2 lifetime and C2 parent production rate in comet P/Brorsen-Metcalf (1989o) p 1711 N93-19195
Carbon petrology in cometary dust p 1716 N93-19232
**CARBON COMPOUNDS**
Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173
**CARBON CYCLE**
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
**CARBON DIOXIDE**
Radiation properties of high-temperature flames p 1485 N93-18477
Sublimation rates of carbon monoxide and carbon dioxide from comets at large heliocentric distances p 1717 N93-19240
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751
Condensation phase of the Martian south polar cap p 1740 N93-19804
Martian volatiles determined using the Mars observer gamma ray spectrometer p 1741 N93-19807
Evolution of the Martian atmosphere: The role of the polar caps p 1741 N93-19809
The Mars water cycle at other epochs: Recent history of the polar caps and layered terrain p 1741 N93-19811
Is CO2 ice permanent? p 1742 N93-19813
Dust transport into Martian polar latitudes p 1742 N93-19815
**CARBON DIOXIDE CONCENTRATION**
Forward model and CO retrieval algorithm
[NASA-CR-191306] p 1620 N93-18414
A first-order global model of Late Cenozoic climatic change: Orbital forcing as a pacemaker of the ice ages p 1581 N93-18973
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751
**CARBON DIOXIDE LASERS**
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840
**CARBON DIOXIDE REMOVAL**
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
**CARBON FIBERS**
Carbon and graphite matrices in carbon-carbon composites: An overview of their formation, structure, and properties
[AD-A258386] p 1478 N93-18259
Micromechanics of crenulated fibers in carbon/carbon composites
[NASA-CR-192170] p 1478 N93-18767
**CARBON MONOXIDE**
Sublimation rates of carbon monoxide and carbon dioxide from comets at large heliocentric distances p 1717 N93-19240
**CARBON STEELS**
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343
**CARBON TETRAFLUORIDE**
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967
**CARBON-CARBON COMPOSITES**
Carbon and graphite matrices in carbon-carbon composites: An overview of their formation, structure, and properties
[AD-A258386] p 1478 N93-18259
Micromechanics of crenulated fibers in carbon/carbon composites
[NASA-CR-192170] p 1478 N93-18767
**CARBONACEOUS CHONDRITES**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Fragmentation and densities of meteoroids p 1700 N93-19118
**CARBONACEOUS MATERIALS**
Cosmic dust p 1592 N93-18554
Ion produced cometary organic crust p 1701 N93-19122
**CARBONATES**
Simulated coal-gas-fueled molten carbonate fuel cell development program
[DE93-000205] p 1570 N93-18527
The cyclic carbonates of the Latemar Massif: Evidence for the orbital forcing of a carbonate platform during the Middle Triassic p 1582 N93-18976
Integration of carbonate fuel cells with advanced coal gasification systems
[DE93-003485] p 1572 N93-19622
**CARBONIC ACID**
Possible recent and ancient glacial ice flow in the south polar region of Mars p 1742 N93-19812
**CARBONYL COMPOUNDS**
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484
**CARCINOGENS**
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system p 1496 N93-19402
**CARDIOVASCULAR SYSTEM**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900
A review of models of the human temperature regulation system
[AD-A258023] p 1595 N93-17918
Publications of the Space Physiology and Countermeasures Program, Cardiopulmonary Discipline: 1980-1990
[NASA-CR-4475] p 1598 N93-18376
Cardiopulmonary discipline science plan
[NASA-TM-108040] p 1599 N93-19648
**CARGO AIRCRAFT**
Hermes CX-7: Air transport system design simulation
[NASA-CR-192082] p 1437 N93-18056
Arrow 227: Air transport system design simulation
[NASA-CR-192053] p 1437 N93-18063
JEFF: Air transport system design simulation
[NASA-CR-192069] p 1439 N93-18350
**CARRIER DENSITY (SOLID STATE)**
High resistivity GaAs epilayers by oxygen doping
[AD-A257931] p 1670 N93-18005
**CARRIER INJECTION**
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D015534] p 1519 N93-18316
**CARRIER MOBILITY**
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158
**CARRIER WAVES**
SNR degradation in square-wave subcarrier downconversion p 1507 N93-18914
The use of subcarriers in future DSN missions p 1507 N93-18915
**CARTESIAN COORDINATES**
Variational nodal transport methods for hexagonal and three-dimensional geometries
[DE93-002131] p 1648 N93-19472
**CASCADES**
Cascaded convolutional codes p 1458 N93-19429
**CASE HISTORIES**
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095
**CASSINI MISSION**
Cassini: Mission to Saturn and Titan p 1592 N93-18559
The comet rendezvous asteroid flyby mission p 1720 N93-19260
**CATALOGS (PUBLICATIONS)**
TRADOC Library and Information Network (TRALINET). Union list of periodicals (TULIP)
[AD-A258935] p 1688 N93-19451
Automating sky object classification in astronomical survey images p 1690 N93-19728
**CATALYSIS**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290
**CATALYSTS**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290
Solid state, surface and catalytic studies of oxides
[DE93-004640] p 1483 N93-18424
The effect of catalyst preparation on catalytic activity
[DE93-003890] p 1483 N93-18539
Chemical interactions in multimetal/zeolite catalysts
[DE93-005133] p 1484 N93-19491
Preconversion catalytic deoxygenation of phenolic functional groups
[DE93-002941] p 1484 N93-19517
**CATALYTIC ACTIVITY**
The effect of catalyst preparation on catalytic activity
[DE93-003890] p 1483 N93-18539

**CATHODE RAY TUBES**
Field-emitter arrays for RF vacuum microelectronics
[AD-A258211] p 1518 N93-18203
**CATHODES**
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048
**CATHODIC COATINGS**
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048
**CATHODOLUMINESCENCE**
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892
**CATIONS**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
Cation production and reactions induced by electron impact on tetraethoxysilane
[AD-A258830] p 1675 N93-19064
**CAUCHY PROBLEM**
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215
**CAVITATION FLOW**
Experimental investigations of radial loads induced by partial cavitation with the LH2 Vulcain inducer
[ETN-93-93023] p 1525 N93-18094
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics
[AD-A258938] p 1652 N93-19082
Comparative study of various difference schemes for some laminar channel flows p 1413 N93-19307
Evaluation of ultrasonic cavitation of metallic and non-metallic surfaces p 1652 N93-19400
**CAVITIES**
High speed laminar flow over cavities
[AERO-REPT-9110] p 1526 N93-18130
Computer codes for RF cavity design
[DE93-004002] p 1515 N93-19509
Design of RF conditioner cavities
[DE93-002576] p 1543 N93-19895
**CAVITY RESONATORS**
Experimental study of the selective properties of coaxial resonators
[INPE-5375-PRE/1748] p 1522 N93-19740
Suppression of mode-beating in a saturated hole-coupled FEL oscillator
[DE93-002554] p 1542 N93-19745
The multi-cavity free-electron laser
[DE93-002569] p 1543 N93-19747
Design of RF conditioner cavities
[DE93-002576] p 1543 N93-19895
**CELESTIAL BODIES**
Infrared studies of star-forming regions
p 1696 N93-18497
Optimal control of the Starfire Beam Director
[AD-A258839] p 1455 N93-19363
Automating sky object classification in astronomical survey images p 1690 N93-19728
**CELESTIAL MECHANICS**
1991 DA: An asteroid in a bizarre orbit
p 1718 N93-19247
Canonical floquet perturbation theory
[AD-A258970] p 1721 N93-19358
**CELESTIAL SPHERE**
Determination of meteor flux distribution over the celestial sphere p 1700 N93-19117
**CELLS (BIOLOGY)**
High density cell culture system
[NASA-CASE-MSC-22060-1] p 1593 N93-19037
**CENTRAL NERVOUS SYSTEM STIMULANTS**
Effects of dextromethamphetamine on subjective fatigue
[AD-A258252] p 1594 N93-17822
**CENTRAL PROCESSING UNITS**
Design and development of a high-speed Winograd fast Fourier transform processor board
[AD-A258919] p 1522 N93-19342
**CENTRIFUGAL COMPRESSORS**
Active control of stall and surge p 1530 N93-18725
Active stabilization to prevent surge in centrifugal compression systems
[NASA-CR-191625] p 1549 N93-18862
Three-phase inverter for small high speed motors
[NASA-CR-191331] p 1523 N93-19860
**CENTRIFUGAL FORCE**
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Numerical treatment of laminar flow in curved rectangular channels with inlet and outlet straight region
p 1413 N93-19304
**CENTRIFUGAL PUMPS**
Application of a neural network as a potential aid in predicting NTF pump failure
[NASA-TM-107667] p 1620 N93-18332
**CERAMIC COATINGS**
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572
**CERAMIC FIBERS**
Fiber coating by sputtering for high temperature composites
[AD-A258119] p 1476 N93-17897
High temperature chemistry of fibers and composites
[AD-A258788] p 1479 N93-18978
**CERAMIC MATRIX COMPOSITES**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146
Interface microstructure analysis of ceramic and metal-matrix composites: Sample preparation methods and analytical techniques
[DS-2154] p 1477 N93-18148
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
High temperature chemistry of fibers and composites
[AD-A258788] p 1479 N93-18978
Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336
Interface fracture in composite materials
p 1560 N93-19381
High strain-rate compression testing of a ceramic matrix composite
[AD-A258802] p 1495 N93-19439
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846
**CERAMICS**
Preceramic polymers: Past, present and future
[AD-A258327] p 1493 N93-18265
Molecular-scale hybrid polymer ceramics
p 1496 N93-18487
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
Materials development program, ceramic technology project addendum to program plan: Cost effective ceramics for heat engines
[DE93-003663] p 1494 N93-18537
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762
Compatibility of potential reinforcing ceramics with Ni and Fe aluminides
[NASA-CR-192232] p 1494 N93-18784
Ultrastructure processing of advanced materials
[AD-A258805] p 1479 N93-18984
Nanostructured materials
[DE93-002990] p 1656 N93-19499
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632
Polycrystalline tetragonal zirconia in the system CeO2-ZrO2 (Ce-TZP)
[INPE-5285-TAE/007] p 1676 N93-19643
**CEREBRAL CORTEX**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
**CERES ASTEROID**
The mass of (1) Ceres from perturbations on (348) May p 1720 N93-19262
**CESIUM**
Spin effects in electron-atom collisions
p 1659 N93-18494
**CESIUM IODIDES**
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
**CHALCOGENIDES**
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498
**CHANNEL FLOW**
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106
LES turbulence modeling using DNS data base
p 1409 N93-19274
Comparative study of various difference schemes for some laminar channel flows p 1413 N93-19307
**CHANNELS (DATA TRANSMISSION)**
A method of optimal radio frequency assignment for deep space missions p 1508 N93-18922
Fault-tolerant fiber optic backplane
[NASA-CASE-LAR-14785-1] p 1663 N93-19052
Advanced cockpit-mission and image management
p 1607 N93-19760
**CHAOS**
Lagrangian chaos: Transport, mixing, and diffusion in fluids
[NOTA-INTERNA-988] p 1651 N93-17939
Chaotic dynamics of atoms p 1659 N93-18491
Approximation of attractors and applications
[DE93-002420] p 1535 N93-19475
New methods for nonlinear tracking and nonlinear chaotic signal processing
[AD-A259331] p 1516 N93-19850
On the theory of turbulent dynamics
[AD-A258695] p 1650 N93-19864
Hamiltonian for the toroidal helical magnetic field lines in the vacuum
[NIFS-201] p 1669 N93-19885
Toward an optimal strategy for sampling chaotic time series using the Smale-Williams dynamical system
[AD-A258550] p 1650 N93-19953
**CHARACTERIZATION**
Growth and characterization of single crystals
[NOTA-INTERNA-984] p 1670 N93-17935
Characterization of alloy 718 microstructures
[DS-1935] p 1486 N93-18147
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848
X ray characterization of Au/Ni multilayer thin films
[NIAR-92-7] p 1678 N93-19881
**CHARGE CARRIERS**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
**CHARGE COUPLED DEVICES**
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960
Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131
CCD imaging of the inner coma jets of comet P/Halley
p 1702 N93-19133
Production rates for comet P/Temple 2 from long slit CCD spectroscopy p 1705 N93-19156
Palomar Planet-Crossing Asteroid Survey (PCAS): Recent discovery rate p 1707 N93-19168
Mosaic CCD method: A new technique for observing dynamics of cometary magnetospheres
p 1698 N93-19236
**CHARGE DISTRIBUTION**
Measurement of the hit distribution in resistive plate chambers equipped with a digital read out of the charge induced on strips
[NOTA-INTERNA-990] p 1659 N93-17940
Determination and representation of electric charge distributions associated with adverse weather conditions
p 1588 N93-19403
**CHARGE EXCHANGE**
Investigation of pion-nucleus interactions
[DE93-004375] p 1657 N93-19504
**CHARGE TRANSFER**
The pre-onset, transitional, and foot regions in resistance versus temperature behavior in high-T2 cuprates: Inferences regarding maximum T2
[AD-A258175] p 1670 N93-17923
Mesophase formation by specific interactions in low molecular and polymer systems
[ETN-93-93311] p 1491 N93-17949
Investigation of pion-nucleus interactions
[DE93-004375] p 1657 N93-19504
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854
**CHARGED PARTICLES**
On the time dependent hydrodynamic model for semiconductors
[ETN-93-93027] p 1518 N93-18098
Fast algorithms for transport models
[DE93-003881] p 1657 N93-19508
Note on the scattering of electromagnetic waves from charged dust particles in a plasma p 1725 N93-19539

Theory of radar scattering from dusty plasmas
p 1516 N93-19540
Charged particle track reconstruction using artificial neural networks
[DE93-003014] p 1658 N93-19630

**CHARON**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555

**CHARRING**
Thermal protection materials: Thermophysical property data
[NASA-RP-1289] p 1558 N93-18765

**CHARTS**
Interactive object-oriented display technologies: A study of two CD-ROM-based DMA products
[AD-A258896] p 1625 N93-19081

**CHASSIS**
Activities of the Boom and Chassis Group
[NASA-CR-192028] p 1544 N93-17975
Boom and chassis articulation joints
[NASA-CR-192059] p 1546 N93-18052
Mechanical Engineering Design Project report: Enabler control systems
[NASA-CR-192058] p 1546 N93-18062

**CHEMICAL ANALYSIS**
Compatibility of potential reinforcing ceramics with Ni and Fe aluminides
[NASA-CR-192232] p 1494 N93-18784
The Apollo 17 region: A compositional overview
p 1736 N93-18796
X ray crystal structure of InCl3(dot)2THF, a neural five-coordinate BIS-Adduct of an In3 trihalide
[AD-A258551] p 1678 N93-19954

**CHEMICAL BONDS**
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces
[DE93-004647] p 1483 N93-18453
Preconversion catalytic deoxygenation of phenolic functional groups
[DE93-002941] p 1484 N93-19517

**CHEMICAL COMPOSITION**
Cosmic dust p 1592 N93-18554
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Comets: Role and importance to exobiology
p 1592 N93-18556
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm
[NASA-CR-192156] p 1541 N93-18772
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503
p 1735 N93-18788
The Apollo 17 region: A compositional overview
p 1736 N93-18796
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221
p 1738 N93-18807
Impact melt breccias at the Apollo 17 landing site
p 1739 N93-18810
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812
Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816
Spectroscopic wear detector
[NASA-CASE-LEW-15200-1] p 1474 N93-18856
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
15 years of comet photometry: A comparative analysis of 80 comets p 1698 N93-19217
Long slit spectroscopy of NH2 in comets Halley, Wilson, and Nishikawa-Takamizawa-Tago p 1698 N93-19230

**CHEMICAL EQUILIBRIUM**
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems
[DE93-001403] p 1679 N93-19470

**CHEMICAL EVOLUTION**
Overview: Exobiology in solar system exploration
p 1591 N93-18546
The solar system: Importance of research to the biological sciences p 1591 N93-18547
The Moon: Biogenic elements p 1591 N93-18548
Cosmic dust p 1592 N93-18554

**CHEMICAL FRACTIONATION**
Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221
p 1738 N93-18807

**CHEMICAL LASERS**
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234
Novel short-wavelength lasers p 1543 N93-18472

**CHEMICAL PROPERTIES**
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Polycrystalline tetragonal zirconia in the system CeO2-ZrO2 (Ce-TZP)
[INPE-5285-TAE/007] p 1676 N93-19643

**CHEMICAL REACTIONS**
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
Picosecond molecular-beam studies of chemical reactivity p 1659 N93-18483
Energy storage in supercritical solvents
p 1498 N93-18492
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers
[DE93-002324] p 1674 N93-18521
A numerical investigation of 3D transverse injection into the supersonic flow behind rearward facing step
p 1415 N93-19316
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems
[DE93-001403] p 1679 N93-19470
Chemical interactions in multimetal/zeolite catalysts
[DE93-005133] p 1484 N93-19491
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840
Computational reacting gas dynamics
[NASA-CR-192089] p 1535 N93-19859

**CHEMISORPTION**
Atomic and electronic structure of metals and alloys: Clean surfaces and chemisorbed molecules
[DE93-004371] p 1487 N93-18452

**CHILD-LANGMUIR LAW**
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328

**CHIPS (ELECTRONICS)**
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958

**CHIRON**
A preliminary model of the coma of 2060 Chiron
p 1702 N93-19132

**CHIRP**
Two-dimensional chirp mapping of deep, fluctuating radar targets p 1517 N93-19543

**CHLORIDES**
Stimulated Brillouin scattering phase conjugation
p 1664 N93-18471

**CHLORINATION**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290

**CHLOROBENZENES**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290

**CHLOROFLUOROCARBONS**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290
Trends in middle-atmosphere ozone
p 1575 N93-18500

**CHONDRITES**
Fragmentation and densities of meteoroids
p 1700 N93-19118
Near infrared reflectance spectra: Applications to problems in asteroid-meteorite relationships
p 1698 N93-19210

**CHROMATOGRAPHY**
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399

**CHROMIUM**
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Magnetic multilayer interface anisotropy
[DE93-004951] p 1676 N93-19634
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635
Magnetic structures of nanometer scale Dy, Cr, and Ni
[DE93-002984] p 1677 N93-19755
OPAL opacities
[DE93-002891] p 1733 N93-19828

**CHROMIUM ALLOYS**
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532

**CHRONOLOGY**
The Mars water cycle at other epochs: Recent history of the polar caps and layered terrain
p 1741 N93-19811
Possible recent and ancient glacial ice flow in the south polar region of Mars p 1742 N93-19812

**CIRCADIAN RHYTHMS**
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
The effect of combat on aircrew subjective readiness and LSO grades during Operation Desert Shield/Storm
[AD-A258156] p 1602 N93-18294

**CIRCUIT RELIABILITY**
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236

**CIRCUITS**
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391

**CIRCULAR CYLINDERS**
Optimum design of isotropic monocoque and ring-stiffened circular cylindrical shells subject to external hydrostatic pressure
[AD-A257864] p 1555 N93-18327
Computation of re-entry flows with two-temperature model p 1412 N93-19295

**CIRCULAR ORBITS**
Debris about asteroids: Where and how much?
p 1703 N93-19136

**CIRCULAR TUBES**
Wall strains produced by waves in water filled latex tubes. Part 1: Tethered tubes
[AERO-REPT-9206-PT-1] p 1526 N93-18133

**CIRCULATION**
Penetrative and recirculating flows in enclosures with openings p 1533 N93-19040

**CIRCULATION CONTROL AIRFOILS**
An experimental study of a turbulent boundary layer in the trailing edge region of a circulation-control airfoil
[NASA-CR-191262] p 1405 N93-17934

**CIRRUS CLOUDS**
Evaluation of the vertical distribution of the ice content in cirrus clouds from combined measurements of lidar and infrared radiometers
[ETN-93-92740] p 1587 N93-18631

**CITIES**
Comparative analysis of the indices of vegetation in urban areas obtained from the TM-Landsat and HRV-Spot data: City of Taubate
[INPE-5418-TDI/482] p 1575 N93-19831
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856

**CIVIL AVIATION**
MM-122: High speed civil transport
[NASA-CR-192011] p 1435 N93-17974
Phoenix: Preliminary design of a high speed civil transport
[NASA-CR-192024] p 1435 N93-17976
The airline quality report, 1992
[NIAR-92-11] p 1418 N93-18036
Proposal and preliminary design for a high speed civil transport aircraft. Swift: A high speed civil transport for the year 2000
[NASA-CR-192023] p 1436 N93-18049
TBD(exp 3)
[NASA-CR-192075] p 1436 N93-18054
High speed civil transport
[NASA-CR-192041] p 1438 N93-18161
The international forum on airline quality teaching guide
[NIAR-92-13] p 1680 N93-19376
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident?
p 1423 N93-19664
Aviation safety: Problems persist in FAA's inspection program. Report to the Chairman, Subcommittee on Aviation, Committee on Public Works and Transportation, House of Representatives
[GAO/RCED-92-14] p 1431 N93-19841
Criminal acts against civil aviation
[AD-A258760] p 1432 N93-19867

**CLAMPS**
Baseline experiments on Coulomb damping due to rotational slip
[AD-A258840] p 1560 N93-19440
**CLASSIFICATIONS**
An approach to automated terrain classification from digital elevation model
[AD-A258210] p 1452 N93-17986
A classification and bibliography of software prototyping
[AD-A258466] p 1619 N93-18268
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia
[AD-A257847] p 1566 N93-18346
A comparison between families obtained from different proper elements p 1721 N93-19270
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469
Automating sky object classification in astronomical survey images p 1690 N93-19728
**CLASSIFIERS**
Automating sky object classification in astronomical survey images p 1690 N93-19728
**CLASSIFYING**
General method of pattern classification using the two-domain theory
[NASA-CASE-MSC-21737-1] p 1619 N93-18282
**CLATHRATES**
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498
**CLAYS**
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822
**CLEANING**
Evaluation of ultrasonic cavitation of metallic and non-metallic surfaces p 1652 N93-19400
Particle collection efficiency of a cyclonic combustor
[DE93-003198] p 1484 N93-19620
**CLEAVAGE**
Determination of cleavage planes and fracture characterization of Ni-based single crystal superalloys
[NASA-CR-191932] p 1674 N93-18593
**CLIMATE**
US Navey regional climatic study of the Greenland-Iceland-United Kingdom gap and associated waters
[AD-A257909] p 1586 N93-18342
Diagnostic studies of climate variability
[DE93-002837] p 1586 N93-18403
Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, part 1
[NASA-CR-191225] p 1740 N93-19801
Martian volatiles determined using the Mars observer gamma ray spectrometer p 1741 N93-19807
The polar layered deposits on Mars: Inference from thermal inertia modeling and geologic studies p 1741 N93-19810
The interannual variability of polar cap recessions as a measure of Martian climate and weather: Using Earth-based data to augment the time line for the Mars observer mapping mission p 1742 N93-19814
Wind transport near the poles of Mars: Timescales of changes in deposition and erosion p 1743 N93-19819
**CLIMATE CHANGE**
Global Change Research Program: A component of the US Global Change Research Program. 1993 research opportunities
[NSF-92-77] p 1572 N93-18319
Natural and anthropogenic climate change
[DE93-003150] p 1573 N93-18393
Diagnostic studies of climate variability
[DE93-002837] p 1586 N93-18403
Global change research: Summaries of research in FY 1992
[DE93-002859] p 1573 N93-18405
Reports to the nation on our changing planet. Fall 1992, no. 2: Our ozone shield
[NASA-CR-190953] p 1573 N93-18438
Climate model calculations of the effects of volcanoes on global climate
[NASA-CR-191999] p 1573 N93-18600
The US global change research program: Early achievements and future directions p 1573 N93-18864
Orbital, Rotational, and Climatic Interactions
[NASA-CP-3185] p 1579 N93-18962
Geodynamic contributions to global climatic change p 1575 N93-18963
Modeling orbital changes on tectonic time scales p 1581 N93-18971
Plio-Pleistocene time evolution of the 100-ky cycle in marine paleoclimate records p 1581 N93-18972
A first-order global model of Late Cenozoic climatic change: Orbital forcing as a pacemaker of the ice ages p 1581 N93-18973
The orbital record in stratigraphy p 1582 N93-18974
Detecting change as it occurs
[NASA-CR-191939] p 1574 N93-19484
Thermohaline circulations and global climate change
[DE93-004601] p 1574 N93-19505
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751
Orbital, rotational, and climatic interactions: Lessons from Earth and Mars p 1740 N93-19803
Global change information support: A north-south coalition
[NASA-TM-108983] p 1575 N93-19940
**CLIMATOLOGY**
US Navey regional climatic study of the Greenland-Iceland-United Kingdom gap and associated waters
[AD-A257909] p 1586 N93-18342
Natural and anthropogenic climate change
[DE93-003150] p 1573 N93-18393
Diagnostic studies of climate variability
[DE93-002837] p 1586 N93-18403
Global change research: Summaries of research in FY 1992
[DE93-002859] p 1573 N93-18405
Sea ice - atmosphere interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-192129] p 1566 N93-18571
Effects of clouds on the Earth radiation budget; Seasonal and inter-annual patterns
[NASA-CR-191619] p 1574 N93-18870
Slope effects on shortwave radiation components and net radiation
[NASA-CR-192199] p 1504 N93-18881
Adverse weather test site selection study
[AD-A259012] p 1440 N93-18895
Thermohaline circulations and global climate change
[DE93-004601] p 1574 N93-19505
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
**CLOCKS**
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
**CLOSE PACKED LATTICES**
Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems
[DE93-002558] p 1489 N93-19486
**CLOSED CYCLES**
Helium compressors for closed-cycle, 4.5-Kelvin refrigerators p 1500 N93-18918
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473
**CLOSED ECOLOGICAL SYSTEMS**
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
Characterization of the water soluble component of inedible residue from candidate CELSS crops
[NASA-TM-107557] p 1605 N93-18111
Conceptual design of a thermal control system for an inflatable lunar habitat module
[NASA-CR-192014] p 1606 N93-18113
Space life support engineering program
[NASA-CR-192188] p 1607 N93-19039
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399
The dynamics of hydroponic crops for simulation studies of the CELSS initial reference configurations
[NASA-CR-192101] p 1570 N93-19943
**CLOUD COVER**
RAWS 1992 progress report
[NASA-CR-191382] p 1587 N93-18849
Analysis of whole-sky imager data to determine the validity of PCFLOS models
[AD-A259042] p 1587 N93-19020
**CLOUD PHYSICS**
Low cloud investigations for project FIRE: Island studies of cloud properties, surface radiation, and boundary layer dynamics. A simulation of the reflectivity over a stratocumulus cloud deck by the Monte Carlo method
[NASA-CR-192083] p 1585 N93-18001
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886
**CLOUDS (METEOROLOGY)**
ARM Fourier transform spectrometer data analysis tools
[DE93-004648] p 1586 N93-18454
Effects of clouds on the Earth radiation budget; Seasonal and inter-annual patterns
[NASA-CR-191619] p 1574 N93-18870
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region
[INPE-5330-PRE/1728] p 1568 N93-19821
**CLUMPS**
Using conceptual clustering to learn about function, structure, and behavior in design
[INRIA-RR-1401] p 1633 N93-18573
**CLUSTER ANALYSIS**
Fuzzy Set Methods for Object Recognition in Space Applications
[NASA-CR-191975] p 1618 N93-18224
Possibilistic clustering for shape recognition p 1618 N93-18228
The use of the wavelet cluster analysis for asteroid family determination p 1701 N93-19126
**CLUSTERS**
Studies of metal-semiconductor clusters p 1678 N93-18493
Nanostructured materials
[DE93-002990] p 1656 N93-19499
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems
[AD-A258693] p 1678 N93-19862
**CLUTTER**
Performance evaluation of a radar by computer
[AD-A257543] p 1500 N93-17960
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184
Ground clutter measurements using the NASA airborne doppler radar: Description of clutter at the Denver and Philadelphia airports p 1421 N93-19608
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
Comparison of simulated and actual wind shear radar data products p 1421 N93-19610
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
**CMOS**
Electrically modifiable nonvolatile SONOS synapses for electronic neural networks
[AD-A258318] p 1596 N93-18252
**COAL DERIVED GASES**
Integration of carbonate fuel cells with advanced coal gasification systems
[DE93-003485] p 1572 N93-19622
**COAL GASIFICATION**
Simulated coal-gas-fueled molten carbonate fuel cell development program
[DE93-000205] p 1570 N93-18527
Integration of carbonate fuel cells with advanced coal gasification systems
[DE93-003485] p 1572 N93-19622
**COAL LIQUEFACTION**
Preconversion catalytic deoxygenation of phenolic functional groups
[DE93-002941] p 1484 N93-19517
**COASTAL WATER**
Analysis of AVHRR, CZCS and historical in situ data off the Oregon Coast
[NASA-CR-192120] p 1586 N93-18360
Feasibility of airborne laserbathymetry with respect to turbidity in Dutch coastal waters
[BCRS-91-19] p 1589 N93-18432
**COASTS**
Predicting the movement of Carolina coastal fronts
[AD-A258280] p 1585 N93-18012
**COATING**
Thermal coating development for impulse drying
[DE93-000710] p 1491 N93-17909
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051
Antenna pattern control using impedence surfaces
[NASA-CR-192182] p 1516 N93-19934
**COATINGS**
Fiber coating by sputtering for high temperature composites
[AD-A258119] p 1476 N93-17897
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299
**COAXIAL CABLES**
A method for modeling discontinuities in a microwave coaxial transmission line p 1513 N93-19423
**COAXIAL PLASMA ACCELERATORS**
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640

**COBALT**
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490

**COBALT ALLOYS**
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069

**COBALT OXIDES**
Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on Ni(0.5)Co(0.5)O
[DE93-000509] p 1487 N93-18528

**COCKPIT SIMULATORS**
CVA, cockpit design and development tool
p 1611 N93-19780

**COCKPITS**
Using constraint satisfaction networks to study aircrew selection for advanced cockpits
[AD-A258151] p 1606 N93-18293
Advanced cockpit-mission and image management
p 1607 N93-19760
Aircrew acceptance of automation in the cockpit
p 1608 N93-19761
Developing virtual cockpits p 1608 N93-19764
Panoramic cockpit displays p 1608 N93-19765
Multimodal dialog system for future cockpits
p 1610 N93-19773
Management of avionics data in the cockpit
p 1611 N93-19777
The integration of advanced cockpit and systems design p 1611 N93-19779
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential
p 1611 N93-19782
Equipment, more or less ready to be used in helicopters p 1612 N93-19785

**CODERS**
Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633

**CODES**
Cascaded convolutional codes p 1458 N93-19429

**CODING**
Improving security in the Fiber Distributed Data Interface (FDDI) protocol
[AD-A257546] p 1501 N93-17963
Code vector density in topographic mappings
[AD-A258222] p 1492 N93-18122
The effect of combat on aircrew subjective readiness and LSO grades during Operation Desert Shield/Storm
[AD-A258156] p 1602 N93-18294
More box codes p 1505 N93-18906
Cascaded convolutional codes p 1458 N93-19429
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 1429 N93-19697
Prediction of success from training
p 1430 N93-19702

**COEFFICIENTS**
The direct measurement of damping coefficients using an inverse eigenvalue method
[AD-A258214] p 1555 N93-18204

**COFFEE**
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792

**COGNITION**
Diagnosing knowledge states in algebra using the rule space model
[AD-A257757] p 1645 N93-18246
Cognitive factors in the air events of the Air Force during the last decade p 1426 N93-19682

**COGNITIVE PSYCHOLOGY**
Comparing performance on implicit memory tests
[AD-A258168] p 1602 N93-17921
Diagnosing knowledge states in algebra using the rule space model
[AD-A257757] p 1645 N93-18246
Cognitive engineering models in space systems
[NASA-CR-192001] p 1606 N93-18517
Accidents and errors: A review of recent UK Army Air Corps accidents p 1429 N93-19701
Discovery of pathways in science
p 1689 N93-19718

**COHERENT RADAR**
A bandwidth extrapolation technique for improved range resolution of coherent radar data, revision 1
[AD-A258462] p 1502 N93-18262
HF radar observations of temporal variations in the high latitude convection p 1730 N93-19571
STARE: A new coherent radar in Scandinavia
p 1517 N93-19572
The BICORE project p 1517 N93-19587

**COHERENT RADIATION**
Decoherence of multimode thermal squeezed coherent states
[DE93-002627] p 1679 N93-19489

**COHERENT SCATTERING**
The COSCAT experiment: EISCAT observations of coherent scatter at small aspect angles
p 1517 N93-19573

**COHESION**
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions
[DE93-002626] p 1675 N93-19488

**COLD PLASMAS**
Studies of metal-semiconductor clusters
p 1678 N93-18493

**COLD ROLLING**
Development of an electrochemical method for field testing of protective coatings
[AD-A258754] p 1496 N93-19866

**COLLAPSE**
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354

**COLLIMATION**
Self-collimated unstable resonator semiconductor laser
[NASA-CASE-NPO-18386-1-CU] p 1540 N93-18277

**COLLISION AVOIDANCE**
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682
An optimal control strategy for collision avoidance of mobile robots in non-stationary environments
[NASA-CR-191868] p 1641 N93-19345
Aviation safety: Users differ in views of collision avoidance system and cite problems. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/RCED-92-113] p 1434 N93-19843
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 1434 N93-19924

**COLLISIONAL PLASMAS**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244

**COLLISIONLESS PLASMAS**
A low velocity approximation for the relativistic Vlasov-Maxwell system
[AD-A258300] p 1665 N93-18100
Electrostatic potential in a collisionless plasma flow along open magnetic field lines
[NIFS-155] p 1666 N93-18421

**COLLISIONS**
A methodology for selective removal of orbital debris
[NASA-CR-192052] p 1459 N93-18154
Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138
Modeling of asteroidal dust production rates
p 1705 N93-19150
Injecting asteroid fragments into resonances
p 1705 N93-19152
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud p 1706 N93-19159
Did Earth-approaching asteroids 3551, 3908, or 4055 produce meteorites? p 1707 N93-19164

**COLLOCATION**
An experimental determination of the effects of blending collocated and non-collocated sensor measurements to control a flexible structure
[AD-A258823] p 1559 N93-18998

**COLOR**
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822

**COLOR CENTERS**
Characterization of radiation damage in solids
p 1659 N93-18478

**COLOR VISION**
Validity of clinical color vision tests for air traffic control specialists
[AD-A258219] p 1597 N93-18301

**COLORIMETRY**
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822

**COMA**
A preliminary model of the coma of 2060 Chiron
p 1702 N93-19132
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142
Spatial and temporal variations in the column density distribution of comet Halley's CN coma
p 1717 N93-19238

**COMBAT**
The evolving defense communications system
[AD-A258335] p 1502 N93-18206
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
The effect of combat on aircrew subjective readiness and LSO grades during Operation Desert Shield/Storm
[AD-A258156] p 1602 N93-18294
Air accidents in the French Air Force
p 1425 N93-19676
Helicopter night vision goggle testing in the United Kingdom p 1444 N93-19917

**COMBINED CYCLE POWER GENERATION**
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726

**COMBUSTIBLE FLOW**
Oscillatory internal flow fields studies --- flow oscillations in solid propellant rocket engines
[AD-A258005] p 1524 N93-17815
Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317

**COMBUSTION**
Evaporation and burning of a spherical fuel droplet in a uniform convective flowfield
[DE93-002223] p 1482 N93-17910
International Workshop on Mathematical Methods in Combustion
[AD-A258478] p 1482 N93-18312
Time-dependent computational studies of premixed flames in microgravity
[NASA-CR-191051] p 1498 N93-18387
Flow visualization and combustion diagnostic
p 1485 N93-18480

**COMBUSTION CHAMBERS**
Turbine engine combustor design at SNECMA
[DS-2129] p 1448 N93-17851
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
Contribution to the study of airbreathing burner combustion instabilities
[ONERA-NT-1992-2] p 1482 N93-18189
Performance and heat transfer characteristics of a carbon monoxide/oxygen rocket engine
[NASA-TM-105897] p 1474 N93-18878
Particle collection efficiency of a cyclonic combustor
[DE93-003198] p 1484 N93-19620

**COMBUSTION CHEMISTRY**
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994

**COMBUSTION PHYSICS**
Microgravity ignition experiment
[NASA-CR-192057] p 1498 N93-18053
International Workshop on Mathematical Methods in Combustion
[AD-A258478] p 1482 N93-18312
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459

**COMBUSTION PRODUCTS**
Fouling and slagging in combustion plant
[ESDU-92012] p 1498 N93-18000
Particle collection efficiency of a cyclonic combustor
[DE93-003198] p 1484 N93-19620

**COMBUSTION STABILITY**
Contribution to the study of airbreathing burner combustion instabilities
[ONERA-NT-1992-2] p 1482 N93-18189
International Workshop on Mathematical Methods in Combustion
[AD-A258478] p 1482 N93-18312

**COMET NUCLEI**
Comet nucleus and asteroid sample return missions
[NASA-CR-192055] p 1699 N93-18171
Comets: Role and importance to exobiology
p 1592 N93-18556
CRAF Mission: An opportunity for exobiology
p 1592 N93-18558

Low cost missions to explore the diversity of near Earth objects p 1453 N93-19124
Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131
Spectroscopic observations of comet Austin (1989c) p 1697 N93-19169
H2O(+) structures in the inner plasma tail of comet Austin p 1708 N93-19174
First images of a possible CO(+)-tail of comet P/Schwassmann-Wachmann 1 observed against the dust coma background p 1708 N93-19175
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers p 1710 N93-19189
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191
The solar wind structure that caused a large-scale disturbance of the plasma tail of comet Austin p 1710 N93-19192
Rotational behavior of comet nuclei under gravitational perturbations p 1714 N93-19216
Twentieth century light curves and the nucleus of comet P/Tempel 2 p 1698 N93-19231
Sublimation rates of carbon monoxide and carbon dioxide from comets at large heliocentric distances p 1717 N93-19240
Cartography of asteroids and comet nuclei from low resolution data p 1718 N93-19249
The nature of comet nuclei p 1718 N93-19250
Forced precession of the cometary nucleus with randomly placed active regions p 1719 N93-19251
Determination of orbits of comets: P/Kearns-Kwee, P/Gunn, including nongravitational effects in the comets' motion p 1454 N93-19254
Rotation of split cometary nuclei p 1719 N93-19258
The comet rendezvous asteroid flyby mission p 1720 N93-19260
CoMA: A high resolution Time-Of-Flight Secondary Ion Mass Spectrometer (TOF-SIMS) for in situ analysis of cometary matter p 1721 N93-19272

**COMET RENDEZVOUS ASTEROID FLYBY MISSION**
CRAF Mission: An opportunity for exobiology p 1592 N93-18558
IUE observations of periodic comets Tempel-2, Kopff, and Tempel-1 p 1697 N93-19153
Production rates for comet P/Temple 2 from long slit CCD spectroscopy p 1705 N93-19156
The comet rendezvous asteroid flyby mission p 1720 N93-19260
CoMA: A high resolution Time-Of-Flight Secondary Ion Mass Spectrometer (TOF-SIMS) for in situ analysis of cometary matter p 1721 N93-19272

**COMET TAILS**
Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131
Initial overview of disconnection events in Halley's Comet 1986 p 1702 N93-19134
Interplanetary magnetic field changes and condensations in comet Halley's plasma tail p 1704 N93-19147
H2O(+) structures in the inner plasma tail of comet Austin p 1708 N93-19174
First images of a possible CO(+)-tail of comet P/Schwassmann-Wachmann 1 observed against the dust coma background p 1708 N93-19175
Doppler velocities in the ion tail of comet Levy 1990c p 1708 N93-19176
Disturbances of both cometary and Earth's magnetospheres excited by single solar flares p 1710 N93-19190
The solar wind structure that caused a large-scale disturbance of the plasma tail of comet Austin p 1710 N93-19192
The disconnection event of 16.0 March 1986 in comet Halley p 1715 N93-19227
Mosaic CCD method: A new technique for observing dynamics of cometary magnetospheres p 1698 N93-19236

**COMETARY ATMOSPHERES**
Asteroids, Comets, Meteors 1991 [NASA-CR-191879] p 1700 N93-19113
Ion produced cometary organic crust p 1701 N93-19122
A preliminary model of the coma of 2060 Chiron p 1702 N93-19132
CCD imaging of the inner coma jets of comet P/Halley p 1702 N93-19133
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
Plasma-beam instabilities in cometary ionospheres p 1704 N93-19141
Radio spectroscopy of comets: Recent results and future prospects p 1697 N93-19144
IUE observations of periodic comets Tempel-2, Kopff, and Tempel-1 p 1697 N93-19153
Water and dust production rates in comet P/Halley derived from ultraviolet and optical observations p 1705 N93-19154
Lightcurve of comet Austin(1989c1) and its dust mantle development p 1707 N93-19167
Spectroscopic observations of comet Austin (1989c) p 1697 N93-19169
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170
Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173
First images of a possible CO(+)-tail of comet P/Schwassmann-Wachmann 1 observed against the dust coma background p 1708 N93-19175
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers p 1710 N93-19189
Numerical simulations of cometary dust p 1711 N93-19198
Evolution of near UV Halley's spectrum in the inner coma p 1716 N93-19235
The role of organic polymers in the structure of cometary dust p 1719 N93-19256
A new activity index for comets p 1699 N93-19261
Velocity distributions of H and OH produced through solar photodissociation of H2O p 1720 N93-19266
The contribution of electron collisions to rotational excitations of cometary water p 1721 N93-19268

**COMETARY MAGNETOSPHERES**
Observations of OH in comet Levy with the Nancay radio telescope p 1697 N93-19129
Disturbances of both cometary and Earth's magnetospheres excited by single solar flares p 1710 N93-19190
Mosaic CCD method: A new technique for observing dynamics of cometary magnetospheres p 1698 N93-19236

**COMETS**
Comets: Role and importance to exobiology p 1592 N93-18556
Asteroids, Comets, Meteors 1991 [NASA-CR-191879] p 1700 N93-19113
About distribution and origin of the peculiar group of sporadic meteors p 1700 N93-19115
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120
Ion produced cometary organic crust p 1701 N93-19122
Stochasticity of comet P/Slaughter-Burnham p 1702 N93-19128
Observations of OH in comet Levy with the Nancay radio telescope p 1697 N93-19129
Comet P/Tempel: Some highlights and conclusions from the 1988 apparition p 1702 N93-19130
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
The first identification of C2 emission bands in comet Scorichenko-George (1989e1) spectrum p 1703 N93-19139
Influence of solar activity upon light curves of comets P/Halley (1986 3) and P/Churyumov-Gerasimenko (1982 8) p 1703 N93-19140
Plasma-beam instabilities in cometary ionospheres p 1704 N93-19141
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
Radio spectroscopy of comets: Recent results and future prospects p 1697 N93-19144
The gas production rate of periodic comet d'Arrest p 1705 N93-19155
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud p 1706 N93-19159
Lightcurve of comet Austin(1989c1) and its dust mantle development p 1707 N93-19167
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173
Doppler velocities in the ion tail of comet Levy 1990c p 1708 N93-19176
Evolution of the Quadrantid meteor stream p 1708 N93-19177
The correlation between water production rates and visual magnitudes in comets p 1709 N93-19181
Particle emission from artificial cometary materials p 1710 N93-19188
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers p 1710 N93-19189
Disturbances of both cometary and Earth's magnetospheres excited by single solar flares p 1710 N93-19190
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191
Evaluating some computer exhancement algorithms that improve the visibility of cometary morphology p 1628 N93-19194
Polarimetric observations of comet Levy 1990c and of other comets: Some clues to the evolution of cometary dust p 1711 N93-19196
The state of knowledge concerning the Kuiper belt p 1711 N93-19197
Numerical simulations of cometary dust p 1711 N93-19198
Dynamical timescales in the Jupiter family p 1712 N93-19201
Activity in distant comets p 1712 N93-19202
Cometary orbital evolution in the outer planetary region p 1712 N93-19204
The eleven observations of comets between 687 AD and 1114 AD recorded in the Anglo Saxon Chronicle p 1698 N93-19205
Comet nongravitational forces and meteoritic impacts p 1712 N93-19207
CCD-photometry of comets at large heliocentric distances p 1698 N93-19213
Long-term orbital evolution of short-period comets found in Project Cosmo-DICE p 1454 N93-19215
15 years of comet photometry: A comparative analysis of 80 comets p 1698 N93-19217
The importance of guiding on the motion of a comet in astrometric observations p 1698 N93-19219
Observations of comet Levy 1990c in the (OI) 6300-A line with an imaging Fabry-Perot p 1698 N93-19224
Laboratory studies on cometary crust formation: The importance of sintering p 1715 N93-19228
Long slit spectroscopy of NH2 in comets Halley, Wilson, and Nishikawa-Takamizawa-Tago p 1698 N93-19230
Carbon petrology in cometary dust p 1716 N93-19232
Chemical and physical effects in the bulk of cometary analogs p 1716 N93-19234
Submillimeter molecular line observations of cometary Levy (1990c) p 1698 N93-19237
The vicinity of Jupiter: A region to look for comets p 1719 N93-19253
High resolution images of P/Tempel 1 and P/Tempel 2 constructed from IRAS survey data p 1699 N93-19257
A new activity index for comets p 1699 N93-19261
Formation of the Leonid meteor stream and storm p 1721 N93-19267

**COMMAND AND CONTROL**
The evolving defense communications system [AD-A258335] p 1502 N93-18206
Automatic information processing and high performance skills [AD-A258473] p 1602 N93-18273
Modeling the dynamics of mental workload and human performance in complex systems [AD-A258553] p 1603 N93-19956

**COMMERCE**
National aero-space plane: Restructuring future research and development efforts [AD-A258799] p 1441 N93-18981
Aircraft performance in practice p 1403 N93-19004
Industrial aerospace activities p 1404 N93-19007

**COMMERCIAL AIRCRAFT**
MM-122: High speed civil transport [NASA-CR-192011] p 1435 N93-17974
Phoenix: Preliminary design of a high speed civil transport [NASA-CR-192024] p 1435 N93-17976
Tesseract: Supersonic business transport [NASA-CR-192072] p 1435 N93-17977
The airline quality report, 1992 [NIAR-92-11] p 1418 N93-18036
TBD(exp 3) [NASA-CR-192075] p 1436 N93-18054
The Edge supersonic transport [NASA-CR-192074] p 1436 N93-18055
A second-generation high speed civil transport: Stingray [NASA-CR-192022] p 1437 N93-18059
Applying commercial style acquisition practices to the procurement of commercially available aircraft [AD-A258143] p 1683 N93-18087
Scheduling of an aircraft fleet p 1635 N93-18665
IOPS advisor: Research in progress on knowledge-intensive methods for irregular operations airline scheduling p 1638 N93-18686
Aviation safety: Problems persist in FAA's inspection program. Report to the Chairman, Subcommittee on Aviation, Committee on Public Works and Transportation, House of Representatives [GAO/RCED-92-14] p 1431 N93-19841

**COMMUNICATION EQUIPMENT**
The evolving defense communications system
[AD-A258335] p 1502 N93-18206
High-altitude electromagnetic pulse survivability assessment of the Harris RF-3200 transceiver
[AD-A258347] p 1502 N93-18207
**COMMUNICATION NETWORKS**
Data communication network at the ASRM facility
[NASA-CR-192085] p 1500 N93-17930
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962
PACSIM: Using simulation in designing a communications satellite
[AD-A257857] p 1460 N93-18306
An investigation of error characteristics and coding performance
[NASA-CR-191899] p 1620 N93-18373
On-board B-ISDN fast packet switching architectures. Phase 1: Study
[NASA-CR-189144] p 1457 N93-18703
Network problem threshold p 1516 N93-19397
Design and evaluation of FDDI fiber optics networkfor Ethernets, VAX's and Ingraph work stations
p 1664 N93-19408
**COMMUNICATION SATELLITES**
Spacecraft design project: Low Earth orbit communications satellite
[NASA-CR-192038] p 1458 N93-17969
PACSIM: Using simulation in designing a communications satellite
[AD-A257857] p 1460 N93-18306
Olympus: The communications satellite and its uses. An introduction
[ESA-F-29] p 1461 N93-18369
On-board B-ISDN fast packet switching architectures. Phase 1: Study
[NASA-CR-189144] p 1457 N93-18703
SATCOM general purpose modem DSCS 3 SCT beacon telemetry display
[AD-A258849] p 1458 N93-19441
**COMPARISON**
Comparison properties of stochastic decision free Petri nets
[INRIA-RR-1433] p 1649 N93-18646
D-region incoherent scatter spectra: Discrepancies between observations and current theory
p 1728 N93-19559
**COMPATIBILITY**
Demonstration of a joint US-Russian very long baseline interferometry tracking capability p 1458 N93-18911
Helicopter night vision goggle testing in the United Kingdom p 1444 N93-19917
**COMPENSATORS**
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
An explicit solution to the optimal LQG problem for flexible structures with collocated rate sensors
p 1467 N93-18932
**COMPETITION**
Strategic factors in the development of the National Technology Transfer Network
[NASA-TM-108594] p 1694 N93-18169
**COMPILERS**
Architecture/environment evaluation
[AD-A257849] p 1613 N93-18348
Numerical Wind Tunnel: Requirements and the outline
p 1411 N93-19288
A model for determining task set schedulability in the presence of system effects
[AD-A258915] p 1626 N93-19338
**COMPLEX COMPOUNDS**
The voltammetric determination of trace metal concentrations and organic complexation in seawater
[AD-A257565] p 1588 N93-17984
**COMPLEX NUMBERS**
An orthogonal estimation algorithm for complex number systems
[RR-405] p 1621 N93-18568
Extended Lyapunov exponents for second order systems
[AD-A258838] p 1647 N93-19066
**COMPLEX SYSTEMS**
Mechanism of diamond film growth
p 1678 N93-18479
Computational reacting gas dynamics
[NASA-CR-192089] p 1535 N93-19859
**COMPLEXITY**
Randomization yields simple O(n log* n) algorithms for difficult Omega(n) problems
[INRIA-RR-1412] p 1621 N93-18455
**COMPONENT RELIABILITY**
A conceptual framework for system fault tolerance
[AD-A258467] p 1619 N93-18269
Assessment of helicopter component statistical reliability computations
[AD-A258931] p 1441 N93-19447
**COMPOSITE MATERIALS**
Fiber coating by sputtering for high temperature composites
[AD-A258119] p 1476 N93-17897
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Optimum design of experiments in composite reliability
[AD-A257574] p 1477 N93-18178
Method of processing composites on a latex base (Description of an invention for an author's certificate)
[AD-A258455] p 1478 N93-18423
Advanced electromagnetic methods for aerospace vehicles
[NASA-CR-192180] p 1503 N93-18580
Numerical control fabrication technique for dynamic composite models
[NASA-CASE-LAR-14004-1] p 1640 N93-19024
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493
**COMPOSITE STRUCTURES**
Performance oriented packaging testing for liquid propellant, XM1846
[AD-A258430] p 1496 N93-17865
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
The non-linear dynamics of composite cylindrical shells
[AD-A259026] p 1558 N93-18953
Formulation of a structural model for flutter analysis of low aspect ratio composite aircraft wings
p 1450 N93-19019
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain
[AD-A258908] p 1559 N93-19353
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
**COMPRESSIBLE FLOW**
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
Ejectors and jet pumps: Computer program for design and performance for compressible gas flow
[ESDU-92042] p 1544 N93-17956
Validation of central and upwind 3D compressible flow solvers p 1529 N93-18564
On the numerical approximation of the k-epsilon turbulence model for two dimensional compressible flows
[INRIA-RR-1526] p 1530 N93-18622
The stability of a trailing-line vortex in compressible flow
[NASA-CR-189738] p 1408 N93-18771
A kinetic theory treatment of heat transfer in plane Poiseuille flow with uniform pressure
[NASA-TM-103993] p 1532 N93-18884
A numerical simulations of inner flow of scramjet
p 1415 N93-19318
**COMPRESSION LOADS**
Effect of bow-type initial imperfection on reliability of minimum-weight, stiffened structural panels
[NASA-TP-3263] p 1556 N93-18615
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846
**COMPRESSION TESTS**
High strain-rate compression testing of a ceramic matrix composite
[AD-A258802] p 1495 N93-19439
**COMPRESSION WAVES**
Reflecting model: P-S arrival
[REPT-92-029] p 1576 N93-18188
**COMPRESSIVE STRENGTH**
Sandwiched structural panel having a bi-directional core structure
[NASA-CASE-MFS-28796-1] p 1479 N93-19022
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
**COMPRESSOR BLADES**
Integrated Blade Inspection System (IBIS) upgrade study
[AD-A258912] p 1449 N93-19356
**COMPRESSORS**
Experimental and numerical examinations of the influence of inlet distortion perturbations on the working behavior of turbofan compressors
[ETN-93-92733] p 1449 N93-18628
Helium compressors for closed-cycle, 4.5-Kelvin refrigerators p 1500 N93-18918
Cooled spool piston compressor
[NASA-CASE-MSC-22020-1] p 1550 N93-19331
**COMPTON EFFECT**
Theoretical aspects of electroweak and other interactions in medium energy physics
[DE93-003714] p 1657 N93-19507
**COMPUTATION**
Parallel contraction of binary dags
[REPT-92-36] p 1616 N93-17848
Towards a meta simplifier
[INRIA-RR-1402] p 1621 N93-18574
Flow models of distributed computations: Three equivalent semantics for CCS
[INRIA-RR-1484] p 1622 N93-18613
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning
[NASA-TM-108124] p 1634 N93-18659
Stimulated photorefractive optical neural networks
[AD-A258825] p 1663 N93-19333
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 1444 N93-19916
Analytica: An experiment in combining theorem proving and symbolic computation
[AD-A258656] p 1628 N93-19958
**COMPUTATIONAL CHEMISTRY**
Assessment of nonequilibrium radiation computation methods for hypersonic flows
[NASA-TM-103994] p 1534 N93-19348
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
[NASA-TM-103937] p 1417 N93-19379
**COMPUTATIONAL FLUID DYNAMICS**
A testbed for flow visualization research
[REPT-92-32] p 1616 N93-17846
Aerodynamic design and analysis of fans using 3D computational codes
[DS-2140] p 1404 N93-17880
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
CFD-based approximation concepts for aerodynamic design optimization with application to a 2-D scramjet vehicle
[AD-A258084] p 1435 N93-17893
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
H-P adaptive methods for finite element analysis of aerothermal loads in high-speed flows
[NASA-CR-189739] p 1525 N93-18093
Contribution to the solution of moment equations at two points by the spectral integral methods
[ECL-92-19] p 1525 N93-18096
Modelling of interfacial and thermocline waves
[AERO-REPT-9209] p 1525 N93-18103
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Computational study of real gas effects in high speed high temperature flow
[AERO-REPT-9102] p 1526 N93-18129
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
The unified method of aeroelasticity
p 1450 N93-18143
Contribution to the study of vortex flow in an incompressible fluid
[ONERA-NT-1992-4] p 1527 N93-18191
Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
Direct simulation of external separated flow with the 3-D Navier-Stokes equations
[ONERA-NT-1992-6] p 1527 N93-18326
Identification of nonlinear wave forces. Part 2: Frequency-domain analysis
[RR-442-PT-2] p 1528 N93-18440

Identification of nonlinear wave forces. Part 1: Time domain-analysis
[RR-441-PT-1] p 1528 N93-18510
Analysis of film cooling in rocket nozzles
[NASA-CR-192003] p 1473 N93-18518
Computational Fluid Dynamics, volume 1
[VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
Solution of the time-dependent incompressible Navier-Stokes equations by finite elements p 1528 N93-18542
Finite element modeling of fluids p 1529 N93-18543
Computational Fluid Dynamics, volume 2
[VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Parabolized Navier-Stokes methods for hypersonic flows p 1529 N93-18565
Algorithm development with applications to aerodynamics and aeroelasticity p 1529 N93-18566
Simulation of unsteady rotational flow over propfan configuration
[NASA-CR-192234] p 1407 N93-18585
Hypersonic rarefied wake characterization
[NASA-TP-3327] p 1529 N93-18604
On the numerical approximation of the k-epsilon turbulence model for two dimensional compressible flows
[INRIA-RR-1526] p 1530 N93-18622
Exact-gradient shape optimization of a 2D Euler flow
[INRIA-RR-1540] p 1530 N93-18623
Numerical investigation of swirl-airfoil interactions in transonic area
[MPIS-8/1991] p 1407 N93-18627
Axial Flow Compressors, volume 1
[VKI-LS-1992-02-VOL-1] p 1530 N93-18721
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures
[NASA-CR-189742] p 1532 N93-18769
Numerical investigation of performance degradation of wings and rotors due to icing
[NASA-CR-192233] p 1440 N93-18783
Penetrative and recirculating flows in enclosures with openings p 1533 N93-19040
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101
Scattering of acoustical waves by a spinning atmospheric turbule
[AD-A258783] p 1652 N93-19111
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
LES turbulence modeling using DNS data base p 1409 N93-19274
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
Numerical computations using multi-domain technique p 1409 N93-19277
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279
Rarefied gas numerical wind tunnel. Part 7: OREX p 1410 N93-19280
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Lifting-surface-method p 1410 N93-19281
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282
Development of a boundary element method program for numerical analysis of supersonic unsteady flow p 1410 N93-19283
Numerical calculations of separating flows around oscillating airfoil p 1410 N93-19284
Numerical simulation of unsteady large scale separated flow around oscillating airfoil p 1410 N93-19285
Calculations of aerodynamic forces on a wing with thrust using BEM p 1410 N93-19286
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287
Numerical Wind Tunnel: Requirements and the outline p 1411 N93-19288
Numerical Wind Tunnel hardware p 1411 N93-19289
The operating system for Numerical Wind Tunnel p 1411 N93-19290
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291
Generation of longitudinal vortices in supersonic flow p 1411 N93-19292
Code development for hypersonic real-gas flow simulations toward the design of space vehicles p 1411 N93-19293
The role of computational fluid dynamics in aeronautical engineering. 9: Analysis of hypersonic equilibrium air flow p 1412 N93-19294
Computation of re-entry flows with two-temperature model p 1412 N93-19295
Numerical calculation of hypersonic non-equilibrium flow around OREX p 1412 N93-19296
Numerical simulation of hypersonic flow around H-2 Orbiting Plane (HOPE), part 3 p 1412 N93-19297
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298
Numerical simulation of flow for a scramjet nozzle p 1412 N93-19299
A numerical simulation of flows around a deformable gas bubble p 1413 N93-19300
Transonic flow calculation around NACA-0012 p 1413 N93-19301
Similarity in laminar pipe flows with secondary flows p 1413 N93-19302
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Numerical treatment of laminar flow in curved rectangular channels with inlet and outlet straight region p 1413 N93-19304
Numerical analysis of flow in a heated horizontal square duct p 1413 N93-19305
Turbulence model calculations of the effects of body forces on turbulent flows in a pipe p 1413 N93-19306
Comparative study of various difference schemes for some laminar channel flows p 1413 N93-19307
Numerical simulations of supersonic flow by a fourth-order compact MUSCL TVD scheme p 1414 N93-19308
Analytical and numerical study on steady Mach reflection p 1414 N93-19309
Numerical simulation of the flow through non-uniform airfoil cascade p 1414 N93-19310
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
Numerical simulation of flows in a supersonic air intake p 1415 N93-19314
A numerical investigation for supersonic inlet p 1415 N93-19315
A numerical investigation of 3D transverse injection into the supersonic flow behind rearward facing step p 1415 N93-19316
Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317
A numerical simulations of inner flow of scramjet p 1415 N93-19318
Three-dimensional measurement of turbulent shear flows using digital image processing p 1415 N93-19319
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321
On the roles of wind tunnel testing and computational fluid dynamics in the aircraft development p 1416 N93-19322
Wind tunnel tests and CFD in Fuji Heavy Industries p 1416 N93-19323
Wind tunnel test and CFD in Kawasaki Heavy Industries, Gifu p 1416 N93-19324
Wind tunnel testing and CFD simulation in Mitsubishi Heavy Industries p 1416 N93-19325
Role of wind tunnel tests and CFD analysis for the development of aero-engines in IHI p 1417 N93-19326
Application of the program profile for the design of low-speed, low-observable configuration airfoils
[AD-A258842] p 1417 N93-19364
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
[NASA-TM-103937] p 1417 N93-19379
Computational fluid dynamics research p 1536 N93-19455
Computational techniques for flows with finite-rate condensation
[NASA-CR-192093] p 1535 N93-19858
Computational reacting gas dynamics
[NASA-CR-192089] p 1535 N93-19859

**COMPUTATIONAL GEOMETRY**

Randomization yields simple O(n log* n) algorithms for difficult Omega(n) problems
[INRIA-RR-1412] p 1621 N93-18455
Output sensitive construction of the 3D Delaunay triangulation of constrained sets of points
[INRIA-RR-1415] p 1646 N93-18456

**COMPUTATIONAL GRIDS**

Galerkin coarse grid approximation for the incompressible Navier-Stokes equations in general coordinates
[REPT-92-35] p 1524 N93-17847
An efficient algorithm for the computation of Galerkin coarse grid approximation for the incompressible Navier-Stokes equations
[REPT-92-40] p 1616 N93-17872
CFD-based approximation concepts for aerodynamic design optimization with application to a 2-D scramjet vehicle
[AD-A258084] p 1435 N93-17893
H-P adaptive methods for finite element analysis of aerothermal loads in high-speed flows
[NASA-CR-189739] p 1525 N93-18093
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
A Blottner type numerical model for nonequilibrium viscous hypersonic flows in upwind finite elements
[INRIA-RR-1476] p 1407 N93-18648
Numerical analysis of surface cracks p 1556 N93-18750
Analysis of structures under fire conditions p 1557 N93-18754
Finite element analysis of stiffened plate vibrations p 1557 N93-18757
VGRIDSG: An unstructured surface grid generation program
[NASA-CR-191426] p 1624 N93-18874
Optimization of three dimensional meshes
[ETN-92-92554] p 1647 N93-19008
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275
Numerical calculations of separating flows around oscillating airfoil p 1410 N93-19284
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Numerical simulation of the flow through non-uniform airfoil cascade p 1414 N93-19310
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
Numerical simulation of flows in a supersonic air intake p 1415 N93-19314

**COMPUTER AIDED DESIGN**

The design and implementation of a user interface for the computer-aided prototyping system
[AD-A258017] p 1614 N93-17818
Ejectors and jet pumps: Computer program for design and performance for compressible gas flow
[ESDU-92042] p 1544 N93-17956
The product and services design and development software aided tool RELIASEP
[ETN-93-93015] p 1617 N93-18076
A high fidelity simulation of optical detection systems, volume 2
[AD-A258498] p 1661 N93-18089
Nonlinear circuits and components p 1523 N93-18463
ORCCAD: Towards an open robot controller computer aided design system
[INRIA-RR-1396] p 1621 N93-18519
Finite difference time domain modeling of spiral antennas
[NASA-CR-192237] p 1503 N93-18586
Realization of real time graphics in vehicles with high dynamic motion
[ETN-93-92739] p 1622 N93-18630
A generic template extractor (GENTEX) in C for VLSI design verification
[AD-A259078] p 1521 N93-18959
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960
SETI low-frequency feed design study for DSS 24 p 1514 N93-19433
Computer codes for RF cavity design
[DE93-004002] p 1515 N93-19509
An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847
Survey of antenna design computer models
[AD-A258765] p 1516 N93-19869

**COMPUTER AIDED MANUFACTURING**

Modeling process redesign
[AD-A257561] p 1617 N93-17983
Planning for the semiconductor manufacturer of the future p 1636 N93-18672
Uncertainty management by relaxation of conflicting constraints in production process scheduling p 1636 N93-18673

**COMPUTER AIDED MAPPING**
Incorporation of orbital imagery into a cartographic data base
[INPE-5300-PRE/1705] p 1688 N93-19644
**COMPUTER AIDED TOMOGRAPHY**
Slit scan radiographic system for intermediate size rocket motors
[NASA-CR-191798] p 1471 N93-18058
**COMPUTER ASSISTED INSTRUCTION**
Teaching, learning, and planetary exploration
[NASA-CR-192000] p 1734 N93-18569
**COMPUTER GRAPHICS**
A testbed for flow visualization research
[REPT-92-32] p 1616 N93-17846
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
Composite video and graphics display for camera viewing systems in robotics and teleoperation
[NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284
Monopole elements with disk ground planes on flat earth: Atlas of directivity, radiation efficiency, radiation resistance, and input impedance
[AD-A257911] p 1503 N93-18366
NPSNET: Aural cues for virtual world immersion
[AD-A257835] p 1503 N93-18417
Realization of real time graphics in vehicles with high dynamic motion
[ETN-93-92739] p 1622 N93-18630
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
A user interface to a true 3-D display device
[AD-A258995] p 1614 N93-18891
The effects of iconic presentation on individuals
[AD-A258785] p 1603 N93-18949
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958
Plotting the magnitude and direction of waveguide surface currents in three dimensions
[AD-A258872] p 1509 N93-19077
Interactive object-oriented display technologies: A study of two CD-ROM-based DMA products
[AD-A258896] p 1625 N93-19081
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120
Methods for viewing radar cross section data in three dimensions
[AD-A258905] p 1626 N93-19352
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels p 1490 N93-19391
Determination and representation of electric charge distributions associated with adverse weather conditions p 1588 N93-19403
HModel: An X tool for global model search
[DE93-002826] p 1627 N93-19512
HippoDraw
[DE93-004005] p 1627 N93-19633
Analysis of relational concepts for the implementation of systems for three-dimensional visualization of meteorological data
[INPE-5435-TAE/016] p 1588 N93-19638
An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847
NASA access mechanism: Graphical user interface information retrieval system
[NASA-TM-108981] p 1693 N93-19939
**COMPUTER INFORMATION SECURITY**
Improving security in the Fiber Distributed Data Interface (FDDI) protocol
[AD-A257546] p 1501 N93-17963
A model for security and distribution of management information systems
[ETN-93-93029] p 1685 N93-18107
**COMPUTER NETWORKS**
A static view of localities
[INRIA-RR-1483] p 1622 N93-18650
Numerical Wind Tunnel hardware p 1411 N93-19289
Stimulated photorefractive optical neural networks
[AD-A258825] p 1663 N93-19333
Design and evaluation of FDDI fiber optics networkfor Ethernets, VAX's and Ingraph work stations p 1664 N93-19408
TRADOC Library and Information Network (TRALINET). Union list of periodicals (TULIP)
[AD-A258935] p 1686 N93-19451
Network management, status, and directions
[DE93-004003] p 1630 N93-19510
**COMPUTER PROGRAMMING**
Development of a standard set of software indicators for aeronautical systems center
[AD-A258424] p 1616 N93-17863
Unit analysis and testing
[AD-A258435] p 1616 N93-17867
Re-engineering software systems in the Department of Defense using integrated computer aided software engineering tools
[AD-A257500] p 1617 N93-17905
Software Engineering Process Groups: Results of the 1992 SEPG Workshop event evaluation and a first report on SEPG status
[AD-A258259] p 1617 N93-18011
Range scheduling automation for the Air Force satellite control network: A case study in computer system development
[AD-A258142] p 1454 N93-18084
High-level parallel programming
[AD-A257977] p 1629 N93-18185
Software process development and enactment: Concepts and definitions
[AD-A258465] p 1619 N93-18243
Software measurement for DoD systems: Recommendations for initial core measures
[AD-A258305] p 1619 N93-18250
A classification and bibliography of software prototyping
[AD-A258466] p 1619 N93-18268
Software size measurement: A framework for counting source statements
[AD-A258304] p 1620 N93-18303
Automated documentation generator for advanced protein crystal growth
[NASA-CR-192452] p 1673 N93-18425
Towards a meta simplifier
[INRIA-RR-1402] p 1621 N93-18574
Temporal planning for transportation planning and scheduling p 1634 N93-18661
Iterative refinement scheduling p 1635 N93-18669
Integrated modeling of advanced optical systems p 1463 N93-18832
Formal development of Ada programs using Z and Anna: A case study
[AD-A235698] p 1623 N93-18847
System for simultaneously loading program to master computer memory devices and corresponding slave computer memory devices
[NASA-CASE-MSC-21387-1] p 1623 N93-18855
Recommended approach to software development, revision 3
[NASA-TM-108630] p 1624 N93-18861
A model for merging software prototypes
[AD-A258781] p 1624 N93-18948
A generic template extractor (GENTEX) in C for VLSI design verification
[AD-A259078] p 1521 N93-18959
Creating and manipulating a domain-specific formal object base to support a domain-oriented application composition system
[AD-A259018] p 1624 N93-19016
X-AAARF: An X window based version of the AFIT Algorithm Animation Research Facility
[AD-A258832] p 1625 N93-19065
Software measurement guidebook, version 02.00.02
[AD-A258961] p 1625 N93-19083
Process engineering with the evolutionary spiral process model, version 01.00.01
[AD-A258966] p 1625 N93-19085
Process definition and modeling guidebook, version 01.00.02
[AD-A258967] p 1625 N93-19086
Real-time fault tolerant computer systems
[AD-A258891] p 1625 N93-19334
Creating and manipulating formalized software architectures to support a domain-oriented application composition system
[AD-A258900] p 1626 N93-19335
A model for determining task set schedulability in the presence of system effects
[AD-A258915] p 1626 N93-19338
Examining a layered approach to function and design representation for reusable software components
[AD-A258920] p 1626 N93-19343
Formalization and transformation of informal analysis models into executive REFINE (tm) specifications
[AD-A258901] p 1627 N93-19442
**COMPUTER PROGRAMS**
An efficient algorithm for the computation of Galerkin coarse grid approximation for the incompressible Navier-Stokes equations
[REPT-92-40] p 1616 N93-17872
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891
The application of function points to predict source lines of code for software development
[AD-A258447] p 1616 N93-17892
Stress analysis of single lap bonded joints
[ESDU-92041] p 1553 N93-17952
Ejectors and jet pumps: Computer program for design and performance for compressible gas flow
[ESDU-92042] p 1544 N93-17956
Performance evaluation of a radar by computer
[AD-A257543] p 1500 N93-17960
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978
Computer program for wind speeds and turbulence properties: Flat or hilly sites in terrain with roughness changes
[ESDU-92032] p 1585 N93-18043
Response of structures to atmospheric turbulence: Computer programs A9236 and B9236
[ESDU-92036] p 1554 N93-18045
Plume: Instructions for use and description of a missile plume visibility program
[AD-A258201] p 1473 N93-18201
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model
[AD-A258197] p 1502 N93-18249
Applied Computational Electromagnetics Society Journal, volume 7, number 2, winter 1992
[AD-A258483] p 1502 N93-18263
Analysis of a software maintenance system: A case study
[AD-A258469] p 1619 N93-18271
An algorithm for the solution of a traveling salesman problem to minimize the average time to demand satisfaction
[AD-A258301] p 1645 N93-18302
Optimum design of isotropic monocoque and ring-stiffened circular cylindrical shells subject to external hydrostatic pressure
[AD-A257864] p 1555 N93-18327
Advanced communications technology satellite high burst rate link evaluation terminal experiment control and monitor software user's guide, version 1.0
[NASA-CR-189160] p 1620 N93-18382
Decomposability and scalability in space-based observatory scheduling p 1634 N93-18663
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 4: Advanced fan section aerodynamic analysis computer program user's manual
[NASA-CR-187127] p 1449 N93-18702
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716
GUISDAP p 1579 N93-18746
Applications of theory of experiments to IS measurements p 1516 N93-18748
Improved methods for reusable aeroclassified orbital transfer vehicle optimization
[DLR-FB-91-41] p 1454 N93-18785
Integrated modeling of advanced optical systems p 1463 N93-18832
VGRIDSG: An unstructured surface grid generation program
[NASA-CR-191426] p 1624 N93-18874
Solving nonlinear composite material problems using the Automated Structural Optimization System (ASTROS)
[AD-A258811] p 1479 N93-18988
A clearinghouse for software reuse: Lessons learned from RAPID/DSRS initiatives
[AD-A258782] p 1625 N93-19062
Software measurement guidebook, version 02.00.02
[AD-A258961] p 1625 N93-19083
Bias correction factors for near-Earth asteroids p 1701 N93-19127
Real-time fault tolerant computer systems
[AD-A258891] p 1625 N93-19334
Examining a layered approach to function and design representation for reusable software components
[AD-A258920] p 1626 N93-19343
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels p 1490 N93-19391
Determination and representation of electric charge distributions associated with adverse weather conditions p 1588 N93-19403
A fundamental study of contribution transport theory and channel theory applications
[DE93-004315] p 1656 N93-19501
Computer codes for RF cavity design
[DE93-004002] p 1515 N93-19509

Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529
The G2-system, a second generation experimental philosophy for EISCAT p 1517 N93-19577
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 1423 N93-19661
The CQL3D Fokker-Planck code [DE93-002962] p 1668 N93-19754
Software programmers manual for the generic avionics data bus tool kit to the Ada technology insertion program [AD-A259379] p 1628 N93-19855
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 1445 N93-19923
The flight test and data analysis program for the development of a Boeing/De Havilland Dash 8 simulator model p 1446 N93-19930

**COMPUTER STORAGE DEVICES**
Stimulated photorefractive optical neural networks [AD-A258825] p 1663 N93-19333

**COMPUTER SYSTEMS DESIGN**
The design and implementation of a user interface for the computer-aided prototyping system [AD-A258017] p 1614 N93-17818
Proceedings of the 2nd International Workshop on Cellular Neural Networks and their Applications [AD-A258245] p 1631 N93-17821
NARSIM and EFMS: Tools for research on integrated ATM [NLR-TP-89336-U] p 1432 N93-17954
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope [AD-A257554] p 1695 N93-17978
A conceptual framework for system fault tolerance [AD-A258467] p 1619 N93-18269
Advanced cockpit-mission and image management p 1607 N93-19760

**COMPUTER SYSTEMS PERFORMANCE**
A conceptual framework for system fault tolerance [AD-A258467] p 1619 N93-18269
Real-time fault tolerant computer systems [AD-A258891] p 1625 N93-19334
A model for determining task set schedulability in the presence of system effects [AD-A258915] p 1626 N93-19338

**COMPUTER SYSTEMS PROGRAMS**
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment [AD-A257960] p 1460 N93-18240
Software measurement for DoD systems: Recommendations for initial core measures [AD-A258305] p 1619 N93-18250
A model for merging software prototypes [AD-A258781] p 1624 N93-18948
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291

**COMPUTER TECHNIQUES**
Performance evaluation of a radar by computer [AD-A257543] p 1500 N93-17960
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope [AD-A257554] p 1695 N93-17978
A computer-based visual analog scale [AD-A258152] p 1597 N93-18280
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel [AD-A258988] p 1403 N93-18887
A model for merging software prototypes [AD-A258781] p 1624 N93-18948
Optical Haar wavelet transforms using computer generated holography [AD-A259079] p 1538 N93-18960
DARPA initiative in concurrent engineering (DICE). Phase 4: Electronics pilot project [AD-A258927] p 1522 N93-19446
Medical evaluation of spatial disorientation mishaps p 1430 N93-19703
Discovery of pathways in science p 1689 N93-19718
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 1608 N93-19763

**COMPUTER VISION**
The cognitive, perceptual, and neural bases of skilled performance [AD-A258236] p 1601 N93-17820
Positioning a camera from a photograph and a scene model [TELECOM-PARIS-92-D-002] p 1537 N93-17948
A fuzzy logic based controller for the automated alignment of a laser-beam-smoothing spatial filter [NASA-TM-105994] p 1540 N93-18091
An information theoretic approach to distributed inference and learning [AD-A257935] p 1685 N93-18099
Fuzzy Set Methods for Object Recognition in Space Applications [NASA-CR-191975] p 1618 N93-18224
Automatic rule generation for high-level vision p 1618 N93-18225
Possibility expectation and its decision making algorithm p 1618 N93-18226
Membership generation using multilayer neural network p 1618 N93-18227
Possibilistic clustering for shape recognition p 1618 N93-18228
Near real-time stereo vision system [NASA-CASE-NPO-18593-1-CU] p 1662 N93-18276
A parallel stereo algorithm that produces dense depth maps and preserves image features [INRIA-RR-1369] p 1620 N93-18433
Formulation and error analysis for a generalized image point correspondence algorithm [NASA-CR-192005] p 1621 N93-18570
Estimation of displacements from two 3D frames obtained from stereo [INRIA-RR-1440] p 1537 N93-18595
Three-dimensional motion computation and object segmentation in a long sequence of stereo frames [INRIA-RR-1438] p 1651 N93-18634
A parallel implementation of a multisensor feature-based range-estimation method [NASA-TM-103999] p 1432 N93-18883
Unified approach for computer vision problems: Mathematical morphology [INPE-5391-TAE/012] p 1641 N93-19640

**COMPUTERIZED SIMULATION**
Structural simulation coupling for transient analysis [AD-A258192] p 1643 N93-17861
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment [AD-A258177] p 1524 N93-17908
A review of models of the human temperature regulation system [AD-A258023] p 1595 N93-17918
A plan for developing a hierarchal three-dimensional landscape signature model [AD-A257550] p 1564 N93-17965
The effects of mixed layer dynamics on ice growth in the central Arctic [AD-A257553] p 1575 N93-17968
Automation of closed environments in space for human comfort and safety [NASA-CR-192045] p 1604 N93-17971
A high fidelity simulation of optical detection systems, volume 2 [AD-A258496] p 1661 N93-18089
Characterization of alloy 718 microstructures [DS-1935] p 1486 N93-18147
Computer modelling of cyclic deformation of high-temperature materials [AD-A258404] p 1477 N93-18222
Reconfiguration schemes for fault-tolerant processor arrays [AD-A257833] p 1520 N93-18365
Artificial neural networks application simulator p 1642 N93-18502
Wrapping mathematical tools p 1648 N93-18504
Robust control with structured perturbations [NASA-CR-192195] p 1633 N93-18579
Numerical simulation and stability analysis of the absolutely and convectively unstable wake [ESA-TT-1119] p 1529 N93-18581
Robust control of systems with real parameter uncertainty and unmodelled dynamics [NASA-CR-192008] p 1633 N93-18582
Motion simulation of underwater vehicles [VTT-PUBS-97] p 1623 N93-18698
Mathematical modelling of materials p 1557 N93-18753
Modelling of dynamic soil-structure-ice interaction p 1558 N93-18759
Shock and impact dynamics p 1558 N93-18760
Robust stability of second-order systems [NASA-CR-192246] p 1647 N93-18871
Development of computational methods for heavy lift launch vehicles [NASA-CR-192298] p 1456 N93-18872
Upper ocean mixing: The use of algal pigments as biological tracers for turbulent diffusion [AD-A258803] p 1590 N93-18982
Parallel simulation of structural VHDL circuits on Intel Hypercubes [AD-A258999] p 1521 N93-19012
Space life support engineering program [NASA-CR-192188] p 1607 N93-19039
A model of Global Positioning System (GPS) Master Control Station (MCS) operations [AD-A258846] p 1433 N93-19067
A synthetic environment for satellite modeling and satellite orbital motion [AD-A258847] p 1470 N93-19068
Bias correction factors for near-Earth asteroids p 1701 N93-19127
Particle emission from artificial cometary materials p 1710 N93-19188
Numerical simulations of cometary dust p 1711 N93-19198
An optimal control strategy for collision avoidance of mobile robots in non-stationary environments [NASA-CR-191868] p 1641 N93-19345
A two-dimensional particle simulation of parallel plate Radio-Frequency (RF) glow discharges [AD-A258856] p 1510 N93-19349
Moment method analysis of linearly tapered slot antennas: Low loss components for switched beam radiometers [NASA-CR-192094] p 1515 N93-19483
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
A numerical field experiment approach for determining probabilities of microburst intensity p 1419 N93-19599
Reducing bunch disruption in transition crossing by modification of the RF waveform [DE93-002509] p 1515 N93-19625
Occupant kinematics simulation of the Kegworth air accident p 1423 N93-19662
Computer aided methods for simulating occupant response to impact using OASYS DYNA3D p 1424 N93-19666
Improving manikin biofidelity p 1424 N93-19668
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 1430 N93-19706
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods p 1691 N93-19730
The evaluation and reporting of discovery systems p 1691 N93-19734
Flight above a virtual world p 1609 N93-19766
Survey of antenna design computer models [AD-A258765] p 1516 N93-19869
Design of RF conditioner cavities [DE93-002576] p 1543 N93-19895
Method for developing the RAFALE flight control system p 1444 N93-19912

**COMPUTERS**
System for simultaneously loading program to master computer memory devices and corresponding slave computer memory devices [NASA-CASE-MSC-21387-1] p 1623 N93-18855

**CONCATENATED CODES**
Binary weight distributions of some Reed-Solomon codes p 1514 N93-19430

**CONCENTRATORS**
Design and implementation of a fiber optic link for a token ring local area network [AD-A257868] p 1662 N93-18335
The status of photovoltaic concentrator development [DE93-002298] p 1571 N93-19474

**CONCURRENT PROCESSING**
Flow models of distributed computations: Event structures and nets [INRIA-RR-1482] p 1646 N93-18612
Observing localities [INRIA-RR-1485] p 1647 N93-18614
A hardware implementation of pure ESTEREL [INRIA-RR-1479] p 1622 N93-18649

**CONDENSATES**
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221 p 1738 N93-18807

**CONDENSATION**
Forced convection boiling and condensation on microgravity: A critical appraisal of the literature [ETN-93-93362] p 1498 N93-17811
Computational techniques for flows with finite-rate condensation [NASA-CR-192093] p 1535 N93-19858

**CONDENSED MATTER PHYSICS**
Theoretical investigations of ultrafast phenomena in condensed matter [AD-A258496] p 1661 N93-18088

**CONDENSERS**
Synchrotron radiation sources and condensers for projection x ray lithography
[DE93-002964] p 1664 N93-19511
**CONDUCTING POLYMERS**
Impedance and voltammetric studies of electrogenerated polyaniline conducting films
[AD-A258328] p 1493 N93-18256
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
**CONDUCTION BANDS**
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957
**CONDUCTIVE HEAT TRANSFER**
Forced precession of the cometary nucleus with randomly placed active regions p 1719 N93-19251
**CONES (VOLCANOES)**
Geology of the Apollo 17 site p 1738 N93-18803
**CONFERENCES**
Proceedings of the 2nd International Workshop on Cellular Neural Networks and their Applications
[AD-A258245] p 1631 N93-17821
Software Engineering Process Groups: Results of the 1992 SEPG Workshop event evaluation and a first report on SEPG status
[AD-A258259] p 1617 N93-18011
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
The Fourth Conference on Organized Thin Films
[AD-A258315] p 1672 N93-18310
Overview: Exobiology in solar system exploration
p 1591 N93-18546
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning
[NASA-TM-108124] p 1634 N93-18659
Ultrastructure processing of advanced materials
[AD-A258805] p 1479 N93-18984
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Calendar of selected aeronautical and space meetings, July 1991 onwards
[AGARD-CAL-91/2] p 1683 N93-19639
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 1607 N93-19757
Airborne Remote Sensing
[VTT-SYMPOSIUM-127] p 1569 N93-19871
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition: Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical
[AD-A258663] p 1664 N93-19947
**CONFIGURATION INTERACTION**
Electronic structure of substitutionally disordered alloys: Direct configurational averaging
[DE93-002548] p 1489 N93-19480
**CONFIGURATION MANAGEMENT**
Analysis of a software maintenance system: A case study
[AD-A258469] p 1619 N93-18271
Implementation of a configuration and maintenance management system for local area networks
[AD-A257837] p 1686 N93-18344
**CONFINEMENT**
Regimes of improved confinement and stability in D3-D obtained through current profile modifications
[DE93-002674] p 1667 N93-19618
Self-regulated shear flow turbulence in confined plasmas: Basic concepts and potential applications to the L yields H transition
[DE93-002361] p 1668 N93-19743
Roles of electric field on toroidal magnetic confinement
[NIFS-200] p 1669 N93-19884
Physics of transport phenomena in magnetic confinement plasmas
[NIFS-202] p 1670 N93-19942
**CONFORMAL MAPPING**
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913
**CONGRESSIONAL REPORTS**
Report to Congress on the strategic defense initiative, 1992
[AD-A258449] p 1650 N93-17992
Report to Congress: Long-term availability of adequate airport system capacity
[AD-A258209] p 1432 N93-18202
Information technology: Comments on Navy facility consolidation plan
[AD-A258964] p 1687 N93-19084
Expendable launch vehicles technology: A report to the US Senate and the US House of Representatives
[NASA-TM-108141] p 1456 N93-19375
Aviation safety: Problems persist in FAA's inspection program. Report to the Chairman, Subcommittee on Aviation, Committee on Public Works and Transportation, House of Representatives
[GAO/RCED-92-14] p 1431 N93-19841
Earth observing system: Information on NASA's selection of data centers. Report to the Chairman, Committee on Science, Space, and Technology, House of Representatives
[GAO/IMTEC-91-67] p 1569 N93-19842
Aviation safety: Users differ in views of collision avoidance system and cite problems. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/RCED-92-113] p 1434 N93-19843
University research: Controlling inappropriate access to federally funded research results. Report to the Chairman, Human Resources and Intergovernmental Relations Subcommittee, Committee on Government Operations, House of Representatives
[GAO/RCED-92-104] p 1684 N93-19844
National Aero-Space Plane: Restructuring future research and development efforts. Report to Congressional requesters
[GAO-NSIAD-93-71] p 1442 N93-19845
**CONICAL FLOW**
Development of a boundary element method program for numerical analysis of supersonic unsteady flow
p 1410 N93-19283
**CONIFERS**
A microwave scattering model for layered vegetation
p 1565 N93-18074
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
**CONJUGATE GRADIENT METHOD**
Preconditioned conjugate gradient techniques for the solution of time-dependent differential equations
[REPT-92-19] p 1643 N93-17844
**CONNECTORS**
Investigation of the bandwidth of multimode optical fibers used with 1550-nm LED and laser sources
p 1664 N93-19409
**CONSERVATION EQUATIONS**
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems
[NASA-TM-103912] p 1532 N93-19009
**CONSISTENCY**
Study and implementation of a set of primitives for constraint satisfaction in finite domains
[INRIA-RR-1389] p 1646 N93-18436
**CONSOLIDATION**
Information technology: Comments on Navy facility consolidation plan
[AD-A258964] p 1687 N93-19084
**CONSTITUTIVE EQUATIONS**
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473
**CONSTRAINTS**
Study and implementation of a set of primitives for constraint satisfaction in finite domains
[INRIA-RR-1389] p 1646 N93-18436
Output sensitive construction of the 3D Delaunay triangulation of constrained sets of points
[INRIA-RR-1415] p 1646 N93-18456
Scheduling of an aircraft fleet p 1635 N93-18665
Global planning of several plants
p 1635 N93-18667
Experiments with a decision-theoretic scheduler
p 1636 N93-18674
Rescheduling with iterative repair
p 1637 N93-18679
An extended abstract: A heuristic repair method for constraint-satisfaction and scheduling problems
p 1638 N93-18687
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas
p 1638 N93-18688
A hybrid job-shop scheduling system
p 1639 N93-18690
Predit: A temporal predictive framework for scheduling systems p 1639 N93-18691
Constraint monitoring in TOSCA p 1639 N93-18693
SOCAP: Lessons learned in applying SIPE-2 to the military operations crisis action planning domain
p 1639 N93-18694
**CONSUMERS**
Consumer interest in the air safety data of the airline quality rating. Testimony to the US House of Representatives, Committee on Government Operations, Government Activities and Transportation Subcommittee
[NIAR-92-4] p 1432 N93-19941
**CONTAMINANTS**
Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows
[DE93-002794] p 1535 N93-19615
Proposed Lower Limits of Detection (LLD), Decision Limits (LC), and error terms for identified analytes from the inorganic, isotopic, bioassay, and organic groups
[DE93-002942] p 1484 N93-19752
**CONTAMINATION**
Biodegradation of Jet Fuel-4 (JP-4) in sequencing batch reactors
[AD-A258020] p 1496 N93-17917
Fouling and slagging in combustion plant
[ESDU-92012] p 1498 N93-18000
Application of molten salts in pyrochemical processing of reactive metals
[DE92-018618] p 1489 N93-19437
**CONTINGENCY**
Real-time contingency handling in MAESTRO
p 1638 N93-18683
**CONTINUITY EQUATION**
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems
[NASA-TM-103912] p 1532 N93-19009
**CONTINUOUS WAVE LASERS**
Optically pumped continuous wave CF4 laser
[ISBN-90-9004442-6] p 1541 N93-18429
**CONTINUUM FLOW**
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278
**CONTINUUM MECHANICS**
Circular dislocation loops and their application to the micromechanics of fibrous composites
p 1480 N93-19043
**CONTINUUM MODELING**
Drag reduction by polymer additives
[AD-A258867] p 1534 N93-19076
A piecewise continuous Timoshenko beam model for the dynamic analysis of tapered beam-like structures
p 1561 N93-19459
**CONTINUUMS**
BBXRT and Ginga observations of the Seyfert 1 galaxy MRK 335 p 1561 N93-18710
First images of a possible CO(+)-tail of comet P/Schwassmann-Wachmann 1 observed against the dust coma background p 1708 N93-19175
**CONTROL**
Method and apparatus for detection and control of prelasing in a Q-switched laser
[NASA-CASE-LAR-14790-1] p 1542 N93-19373
**CONTROL EQUIPMENT**
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
Actively controlled shaft seals for aerospace applications
[NASA-CR-191901] p 1547 N93-18371
**CONTROL MOMENT GYROSCOPES**
SSF loads and controllability during assembly
p 1465 N93-18838
Controls-structures-interaction dynamics during RCS control of the Orbiter/SRMS/SSF configuration
p 1468 N93-18934
**CONTROL SIMULATION**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
**CONTROL STABILITY**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Discrete-time Markovian jump linear systems
[REPT-92-37] p 1631 N93-17870
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
**CONTROL SURFACES**
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395

Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053

**CONTROL SYSTEMS DESIGN**

Robust multivariable feedback design for uncertain linear systems
[AD-A258257] p 1648 N93-17902

Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971

MM-122: High speed civil transport
[NASA-CR-192011] p 1435 N93-17974

Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978

Preliminary design of a radiator shading device for a lunar outpost
[NASA-CR-192016] p 1605 N93-18019

Design requirements for force reflecting master controllers p 1605 N93-18035

Mechanical Engineering Design Project report: Enabler control systems
[NASA-CR-192058] p 1546 N93-18062

A fuzzy logic based controller for the automated alignment of a laser-beam-smoothing spatial filter
[NASA-TM-105994] p 1540 N93-18091

Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234

Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240

Theoretical constraints in the design of multivariable control systems
[NASA-CR-191900] p 1632 N93-18372

Model reference adaptive control of robots
[NASA-CR-191871] p 1632 N93-18377

Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395

Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396

A proposal of an architecture for the coordination level of intelligent machines
[NASA-CR-191990] p 1613 N93-18516

ORCCAD: Towards an open robot controller computer aided design system
[INRIA-RR-1396] p 1621 N93-18519

Robust control of systems with real parameter uncertainty and unmodelled dynamics
[NASA-CR-192008] p 1633 N93-18582

Development of simplified external control techniques for broad area semiconductor lasers
[NASA-CR-192223] p 1541 N93-18584

Controlled motion in an elastic world. Research project: Manipulation strategies for massive space payloads
[NASA-CR-191895] p 1549 N93-18778

The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 1
[NASA-CP-3177-PT-1] p 1461 N93-18818

Physical insight into the simultaneous optimization of structure and control p 1461 N93-18821

Smart patch piezoceramic actuator issues p 1462 N93-18822

A numerical approach to controller design for the ACES facility p 1462 N93-18823

Micro-precision control/structure interaction technology for large optical space systems p 1462 N93-18826

System identification and structural control on the JPL Phase B testbed p 1463 N93-18828

Integrated design of the CSI evolutionary structure: A verification of the design methodology p 1463 N93-18830

A Darwinian approach to control-structure design p 1465 N93-18840

Optical pathlength control on the JPL Phase B interferometer testbed p 1465 N93-18842

Results of the Advanced Space Structures Technology Research Experiments (ASTREX) hardware and control development p 1466 N93-18844

Design optimization of the JPL Phase B testbed p 1466 N93-18845

Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846

Spacecraft dynamics characterization and control system failure detection
[NASA-CR-192190] p 1466 N93-18852

Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853

Active stabilization to prevent surge in centrifugal compression systems
[NASA-CR-191625] p 1549 N93-18862

Robust stability of second-order systems
[NASA-CR-192246] p 1647 N93-18871

The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 2
[NASA-CP-3177-PT-2] p 1466 N93-18928

Optimization for efficient structure-control systems p 1467 N93-18930

C-SIDE: The control-structure interaction demonstration experiment p 1467 N93-18931

An explicit solution to the optimal LQG problem for flexible structures with collocated rate sensors p 1467 N93-18932

A synopsis of test results and knowledge gained from the Phase-0 CSI evolutionary model p 1467 N93-18933

Model reduction in integrated controls-structures design p 1468 N93-18935

The Middeck Active Control Experiment (MACE) p 1457 N93-18936

Precision slew/settle technologies for flexible spacecraft p 1468 N93-18938

Average-cost based robust structural control p 1469 N93-18939

Modal characterization of the ASCIE segmented optics testbed: New algorithms and experimental results p 1469 N93-18940

Active suspension design for a Large Space Structure ground test facility p 1469 N93-18941

Modeling, system identification, and control of ASTREX p 1469 N93-18942

Analysis, design, and testing of a low cost, direct force command linear proof mass actuator for structural control p 1469 N93-18943

An experimental determination of the effects of blending collocated and non-collocated sensor measurements to control a flexible structure
[AD-A258823] p 1559 N93-18998

Robust control of smart structures p 1550 N93-19057

Strategies for optimal control design of normal acceleration command following on the F-16
[AD-A258975] p 1450 N93-19095

Automated control of aircraft in formation flight
[AD-A259020] p 1450 N93-19102

Longitudinal-control design approach for high-angle-of-attack aircraft
[NASA-TP-3302] p 1451 N93-19108

Improvements to LQGI/LTR methodology for plants with lightly damped or low frequency poles
[AD-A258841] p 1648 N93-19112

Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339

Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351

Inertial-space disturbance rejection for robotic manipulators
[NASA-CR-191867] p 1641 N93-19361

Optimal control of the Starfire Beam Director
[AD-A258839] p 1455 N93-19363

Parameter and configuration study of the DSS-13 antenna drives p 1514 N93-19432

Feed-forward control upgrade of the deep space network antennas p 1514 N93-19434

Controls and guidance research p 1451 N93-19454

Full design of fuzzy controllers using genetic algorithms p 1629 N93-19461

Nonlinear robust controller design for multi-robot systems with unknown payloads p 1552 N93-19462

Robust motion tracking control of robotic arms based on the generalized energy accumulation principle p 1552 N93-19463

CYRANO-3: An experiment in representational invention p 1629 N93-19733

An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847

**CONTROL THEORY**

Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938

Vehicle guidance and control along circular trajectories
[AD-A257570] p 1450 N93-18177

Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633

The Mini-Mast CSI testbed: Lessons learned p 1461 N93-18819

Precision slew/settle technologies for flexible spacecraft p 1468 N93-18938

Improvements to LQGI/LTR methodology for plants with lightly damped or low frequency poles
[AD-A258841] p 1648 N93-19112

An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847

Method for developing the RAFALE flight control system p 1444 N93-19912

**CONTROL VALVES**

Valve lock
[NASA-CASE-MFS-29764-1] p 1550 N93-19049

**CONTROLLABILITY**

On automated analysis of flight test data p 1444 N93-19913

**CONTROLLED FUSION**

Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245

Critical issues and experimental examination on sawtooth and disruption physics
[NIFS-157] p 1670 N93-19951

**CONTROLLERS**

Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938

Analogue to digital transformation
[ESDU-92044] p 1517 N93-17959

Design requirements for force reflecting master controllers p 1605 N93-18035

A fuzzy logic based controller for the automated alignment of a laser-beam-smoothing spatial filter
[NASA-TM-105994] p 1540 N93-18091

Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240

Model reference adaptive control of robots
[NASA-CR-191871] p 1632 N93-18377

A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649

Real-time contingency handling in MAESTRO p 1638 N93-18683

A numerical approach to controller design for the ACES facility p 1462 N93-18823

System identification and structural control on the JPL Phase B testbed p 1463 N93-18828

SSF loads and controllability during assembly p 1465 N93-18838

Results of the Advanced Space Structures Technology Research Experiments (ASTREX) hardware and control development p 1466 N93-18844

Design optimization of the JPL Phase B testbed p 1466 N93-18845

Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853

Robust stability of second-order systems
[NASA-CR-192246] p 1647 N93-18871

CSI related dynamics and control issues in space robotics p 1467 N93-18929

Optimization for efficient structure-control systems p 1467 N93-18930

An explicit solution to the optimal LQG problem for flexible structures with collocated rate sensors p 1467 N93-18932

A synopsis of test results and knowledge gained from the Phase-0 CSI evolutionary model p 1467 N93-18933

Controls-structures-interaction dynamics during RCS control of the Orbiter/SRMS/SSF configuration p 1468 N93-18934

The Middeck Active Control Experiment (MACE) p 1457 N93-18936

Average-cost based robust structural control p 1469 N93-18939

Modeling, system identification, and control of ASTREX p 1469 N93-18942

An experimental determination of the effects of blending collocated and non-collocated sensor measurements to control a flexible structure
[AD-A258823] p 1559 N93-18998

Adaptive control of robotic manipulators p 1640 N93-19031

Impedance control design for robot tasks involving free and contact motion p 1640 N93-19045

Strategies for optimal control design of normal acceleration command following on the F-16
[AD-A258975] p 1450 N93-19095

Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339

Efficient visual grasping alignment for cylinders
[NASA-CR-191863] p 1663 N93-19346

Inertial-space disturbance rejection for robotic manipulators
[NASA-CR-191867] p 1641 N93-19361

Optimal control of the Starfire Beam Director
[AD-A258839] p 1455 N93-19363

Full design of fuzzy controllers using genetic algorithms p 1629 N93-19461
Nonlinear robust controller design for multi-robot systems with unknown payloads p 1552 N93-19462

**CONVECTION**
Modelling studies in support of open-ocean convection field programs
[AD-A258324] p 1589 N93-18255
A comparison of airborne and ground-based radar observations with rain gages during the CaPE experiment p 1563 N93-18720
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524
HF radar observations of temporal variations in the high latitude convection p 1730 N93-19571

**CONVECTION CURRENTS**
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524

**CONVECTIVE FLOW**
Evaporation and burning of a spherical fuel droplet in a uniform convective flowfield
[DE93-002223] p 1482 N93-17910
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
Penetrative and recirculating flows in enclosures with openings p 1533 N93-19040

**CONVENTIONS**
The 1992 Science Olympiad National Tournament
[NASA-CR-191379] p 1679 N93-18385

**CONVERGENCE**
A simplified proof of Toyama's theorem
[CWI-CS-R9156] p 1642 N93-17839
Methods and convergence analysis in large scale nonlinear optimization
[AD-A258182] p 1616 N93-17898
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244
Bracketing to speed convergence illustrated on the Von Newmann algorithm for finding a feasible solution to a linear program with a convexity constraint
[DE93-002660] p 1621 N93-18450

**CONVERSION**
Metric transition
[NASA-TM-108599] p 1499 N93-18354
Metrication report to the Congress. 1991 activities and 1992 plans
[NASA-TM-108603] p 1499 N93-18357

**CONVEXITY**
Bracketing to speed convergence illustrated on the Von Newmann algorithm for finding a feasible solution to a linear program with a convexity constraint
[DE93-002660] p 1621 N93-18450

**COOLING SYSTEMS**
Turbine engine combustor design at SNECMA
[DS-2129] p 1448 N93-17851
Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106

**COORDINATES**
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems
[NASA-TM-103912] p 1532 N93-19009

**COPPER**
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
Vacuum deposition of copper on Type 304L stainless steel
[DE93-002704] p 1489 N93-19614

**COPPER ALLOYS**
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity
[AD-A257859] p 1487 N93-18308
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706

**CORDIERITE**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899

**CORN**
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data
[INPE-5327-PRE/1725] p 1567 N93-19646

**CORNERS**
On corner and vertex detection
[INRIA-RR-1439] p 1646 N93-18594

**CORRELATION**
A parallel stereo algorithm that produces dense depth maps and preserves image features
[INRIA-RR-1369] p 1620 N93-18433
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions
[DE93-002626] p 1675 N93-19488
Real and spurious anticorrelations between V(parallel) and V(perpendiculars) in EISCAT data p 1517 N93-19578
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 1428 N93-19693
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792

**CORRELATION COEFFICIENTS**
Extracting knowledge from data: SYS8688 approach p 1688 N93-19715

**CORRELATION DETECTION**
Multiple symbol partially coherent detection of MPSK p 1514 N93-19431

**CORRELATORS**
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184

**CORROSION**
Fouling and slagging in combustion plant
[ESDU-92012] p 1498 N93-18000
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655

**CORROSION PREVENTION**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299
Evaluation of EMP/EMI requirements versus corrosion prevention methods
[AD-A257820] p 1503 N93-18352
Development of an electrochemical method for field testing of protective coatings
[AD-A258754] p 1496 N93-19866

**CORROSION RESISTANCE**
Corrosion resistance of metal matrix composites
[AD-A258370] p 1478 N93-18266
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels p 1490 N93-19391

**CORROSION TESTS**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299
Evaluation of EMP/EMI requirements versus corrosion prevention methods
[AD-A257820] p 1503 N93-18352

**COSMIC BACKGROUND EXPLORER SATELLITE**
COBE Differential Microwave Radiometer (DMR) data processing techniques p 1562 N93-18715
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716

**COSMIC DUST**
Cosmic dust p 1592 N93-18554
Comets: Role and importance to exobiology p 1592 N93-18556
Model calculations of dust radiation from galactic and extragalactic sources by considering polycyclic aromatic hydrocarbons
[ETN-93-92729] p 1699 N93-18626
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120
Comet P/Tempel: Some highlights and conclusions from the 1988 apparition p 1702 N93-19130
A preliminary model of the coma of 2060 Chiron p 1702 N93-19132
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142
IUE observations of periodic comets Tempel-2, Kopff, and Tempel-1 p 1697 N93-19153
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers p 1710 N93-19189
The geocentric particulate distribution: Cometary, asteroidal, or space debris? p 1713 N93-19209

**COSMIC RAY SHOWERS**
Deeply penetrating events in the extremely high-energy cosmic ray flux p 1746 N93-19384

**COSMIC RAYS**
Cosmic-ray NM-64 neutron monitor data-19 from Rome, Italy
[NOTA-INTERNA-989] p 1745 N93-17878
Cosmic ray decreases and magnetic clouds p 1564 N93-18071
The solar wind structures associated with cosmic ray decreases and particle acceleration in 1978-1982 p 1565 N93-18072
Experimental particle physics
[DE93-003884] p 1655 N93-18538
Modification of primordial ices by cosmic rays as simulated by cyclotron irradiation p 1709 N93-19183
A cosmic ray propagation model p 1746 N93-19383
Deeply penetrating events in the extremely high-energy cosmic ray flux p 1746 N93-19384

**COSMOCHEMISTRY**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113

**COSMOLOGY**
High energy physics
[DE93-002411] p 1659 N93-17911
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
About distribution and origin of the peculiar group of sporadic meteors p 1700 N93-19115
The origin and evolution of the zodiacal dust cloud p 1704 N93-19148

**COST ANALYSIS**
An analysis of contract cost overruns and their impacts
[AD-A258422] p 1683 N93-17862
The application of function points to predict source lines of code for software development
[AD-A258447] p 1616 N93-17892
Systems design analysis applied to launch vehicle configuration
[NASA-TP-3326] p 1455 N93-18141
Resource availability at Taurus-Littrow p 1736 N93-18792
PDES Application Protocol Suite for Composite (PAS-C) scoping and benefits criteria. Volume 1: Executive summary and overview
[AD-A258833] p 1687 N93-19074
Corporate information management and business process improvement under the unit cost program: An analysis of a system for the Air Force Institute of Technology
[AD-A258984] p 1687 N93-19098
A model for the cost of doing a cost estimate p 1515 N93-19436
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632

**COST EFFECTIVENESS**
High speed civil transport
[NASA-CR-192041] p 1438 N93-18161
Tech transfer outreach
[DE93-001553] p 1694 N93-18533
Materials development program, ceramic technology project addendum to program plan: Cost effective ceramics for heat engines
[DE93-003663] p 1494 N93-18537
A Research Agenda for Scientific and Technical Information
[AGARD-AR-316] p 1692 N93-19796

**COST ESTIMATES**
An analysis of contract cost overruns and their impacts
[AD-A258422] p 1683 N93-17862
The application of function points to predict source lines of code for software development
[AD-A258447] p 1616 N93-17892
A model for the cost of doing a cost estimate p 1515 N93-19436
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632

**COST REDUCTION**
Hot film wall shear instrumentation for compressible boundary layer transition research
[NASA-CR-191360] p 1404 N93-17855
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A258485] p 1540 N93-18101
The comet rendezvous asteroid flyby mission p 1720 N93-19260
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 1608 N93-19763
**COSTS**
An analysis of contract cost overruns and their impacts
[AD-A258422] p 1683 N93-17862
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891
Selection and costing of heat exchangers
[ESDU-92013] p 1524 N93-18040
The US Navy Healthy Back Program: Effect on back knowledge among recruits
[AD-A258368] p 1596 N93-18210
JEFF: Air transport system design simulation
[NASA-CR-192069] p 1439 N93-18350
Average-cost based robust structural control p 1469 N93-18939
National aero-space plane: Restructuring future research and development efforts
[AD-A258799] p 1441 N93-18981
Hurricane risk assessment to rollback or ride out a cost versus loss decision making approach p 1588 N93-19411
A model for the cost of doing a cost estimate p 1515 N93-19436
Prediction of success from training p 1430 N93-19702
**COULOMB COLLISIONS**
Multi-fluid modeling of interpenetrating plasmas
[DE93-002893] p 1668 N93-19829
**COUNTDOWN**
Time management situation assessment (TMSA) p 1639 N93-18692
**COUNTING**
Software size measurement: A framework for counting source statements
[AD-A258304] p 1620 N93-18303
**COUPLED MODES**
Structural simulation coupling for transient analysis
[AD-A258192] p 1643 N93-17861
**COUPLINGS**
Boom and chassis articulation joints
[NASA-CR-192059] p 1546 N93-18052
Development and verification of methods for predicting flow rates through leaks in valves and couplings
[NASA-CR-192270] p 1533 N93-19013
**COVARIANCE**
A two-body covariant equation for interacting nucleons
[NOTA-INTERNA-986] p 1653 N93-17877
Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario p 1454 N93-18899
**COWLINGS**
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089
**CRACK GEOMETRY**
High speed thin plate fatigue crack monitor
[NASA-CASE-LAR-14816-1-SB] p 1559 N93-19329
**CRACK INITIATION**
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444
**CRACK PROPAGATION**
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090
Fatigue of turboengine discs
[DS-2136] p 1448 N93-18149
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655
Some remarks upon fracture mechanics
[VTT-PUBS-100] p 1556 N93-18700
Fatigue crack growth and coalescense in a notch region
[ISBN-0-315-68910-2] p 1559 N93-19042
Mechanical behavior of titanium aluminide under engine operating conditions
[AD-A258884] p 1550 N93-19079
High speed thin plate fatigue crack monitor
[NASA-CASE-LAR-14816-1-SB] p 1559 N93-19329
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357
**CRACK TIPS**
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357
**CRACKING (FRACTURING)**
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655
**CRACKS**
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090
**CRASH INJURIES**
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 1428 N93-19691
**CRASH LANDING**
A literature survey of airborne vehicles impacting with water and soil: Head injury criteria and severity index development of computer program KRASH
[DOT/FAA/CT-90/24] p 1421 N93-19647
Occupant kinematics simulation of the Kegworth air accident p 1423 N93-19662
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident? p 1423 N93-19664
Occupant simulation as an aspect of flight safety research p 1423 N93-19665
**CRASHES**
Can injury scoring techniques provide additional information for crash investigators? p 1423 N93-19663
The design and use of automotive crash test dummies p 1424 N93-19669
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990 p 1427 N93-19687
Crash experience of the US Army Black Hawk helicopter p 1427 N93-19688
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 1428 N93-19691
Toxicological investigations of flight accidetns: Findings and methods p 1428 N93-19695
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 1429 N93-19697
**CRASHWORTHINESS**
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 1423 N93-19661
Computer aided methods for simulating occupant response to impact using OASYS DYNA3D p 1424 N93-19666
Design/development of an enhanced biodynamic manikin p 1424 N93-19667
An improved anthropometric test device p 1424 N93-19670
Crash experience of the US Army Black Hawk helicopter p 1427 N93-19688
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 1427 N93-19690
**CREEP PROPERTIES**
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514
**CREW WORKSTATIONS**
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 1607 N93-19759
**CRIME**
Criminal acts against civil aviation
[AD-A258760] p 1432 N93-19867
**CRITERIA**
Alternative optimization strategies for large-scale production-allocation problems
[REPT-92-13] p 1615 N93-17833
Category scaling within a given context as a common basis for the AHP, SMART and ELECTRE
[REPT-92-22] p 1683 N93-17916
Completable scheduling: An integrated approach to planning and scheduling p 1638 N93-18685
**CRITICAL FLOW**
Numerical simulation of flows in a supersonic air intake p 1415 N93-19314
**CRITICAL LOADING**
A performance model for thick composite cylinders subjected to external hydrostatic pressure
[DE93-002425] p 1560 N93-19476
**CROP GROWTH**
The dynamics of hydroponic crops for simulation studies of the CELSS initial reference configurations
[NASA-CR-192101] p 1570 N93-19943
**CROSS FLOW**
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340
**CROSS SECTIONS**
Measurement of the cross-section ratio sigma(sub n)/sigma(sub p) in inelastic muon-nucleon scattering at very low x and Q(sup 2)
[DE93-002916] p 1658 N93-19749
**CROSSINGS**
The effect of secular resonances in the asteroid region between 2.1 and 2.4 AU p 1706 N93-19161
Did Earth-approaching asteroids 3551, 3908, or 4055 produce meteorites? p 1707 N93-19164
Palomar Planet-Crossing Asteroid Survey (PCAS): Recent discovery rate p 1707 N93-19168
Reducing bunch disruption in transition crossing by modification of the RF waveform
[DE93-002509] p 1515 N93-19625
**CROSSLINKING**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
Crosslinked polyimides prepared from N-(3-ethynylphenyl)maleimide
[NASA-CASE-LAR-14774-1] p 1495 N93-19388
**CRUISING FLIGHT**
Analytical solutions to constrained hypersonic flight trajectories
[NASA-CR-191987] p 1407 N93-18602
**CRUSTS**
Ion produced cometary organic crust p 1701 N93-19122
Laboratory studies on cometary crust formation: The importance of sintering p 1715 N93-19228
**CRYOGENIC COOLING**
A helium-3/helium-4 dilution cryocooler for operation in zero gravity
[NASA-CR-183632] p 1499 N93-18397
**CRYOGENIC EQUIPMENT**
Vulcain: A cryogenic engine for Ariane 5
[ETN-93-93022] p 1472 N93-18082
A helium-3/helium-4 dilution cryocooler for operation in zero gravity
[NASA-CR-183632] p 1499 N93-18397
Helium compressors for closed-cycle, 4.5-Kelvin refrigerators p 1500 N93-18918
**CRYOGENIC FLUID STORAGE**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030
**CRYOGENIC ROCKET PROPELLANTS**
Passive recirculation in the National Launch System's fuel feedlines
[NASA-TM-108391] p 1471 N93-17941
**CRYOGENIC TEMPERATURE**
Development of magnetostrictive active members for control of space structures
[NASA-CR-190846] p 1460 N93-18322
**CRYOGENICS**
Three-terminal superconducting device research
[AD-A257907] p 1520 N93-18341
**CRYSTAL DEFECTS**
Advanced electronic structures
[AD-A258401] p 1519 N93-18261
**CRYSTAL DISLOCATIONS**
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192
**CRYSTAL GROWTH**
Growth and characterization of single crystals
[NOTA-INTERNA-984] p 1670 N93-17935

A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
Theory of artifact diamond
[AD-A258474] p 1672 N93-18311
Research and development on advanced silicon carbide thin film growth techniques and fabrication of high power and microwave frequency silicon carbide-based device structures
[AD-A257913] p 1672 N93-18367
Growth and properties of co-evaporated superconducting YBaCuO thin films
[ETN-92-92798] p 1673 N93-18441
Mechanism of diamond film growth p 1678 N93-18479

**CRYSTAL LATTICES**
Effects of surface structure and of embedded-atom pair functionals on adatom diffusion on FCC metallic surfaces
[AD-A258793] p 1674 N93-18980

**CRYSTAL OPTICS**
Tunable infrared and visible solid-state laser p 1543 N93-18473
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957

**CRYSTAL STRUCTURE**
The crystal and molecular structure of triethanol-ammonium nitrate
[AD-A258428] p 1670 N93-17864
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532
Determination of cleavage planes and fracture characterization of Ni-based single crystal superalloys
[NASA-CR-191932] p 1674 N93-18593
X ray diffraction study of shock-modified tetragonal phases of SnO2 and MnO2
[DE93-002488] p 1535 N93-19479
X ray crystal structure of InCl3(dot)2THF, a neural five-coordinate BIS-Adduct of an In3 trihalide
[AD-A258551] p 1678 N93-19954

**CRYSTALLINITY**
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
Picosecond studies of space optical materials p 1664 N93-18475
Mare volcanism in the Taurus-Littrow region p 1736 N93-18790
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN
[AD-A258804] p 1675 N93-18983

**CRYSTALLIZATION**
Crystalline-amorphous contrast formation in thermally crystallized SiC
[MBB-Z-0373-91-PUB] p 1671 N93-18118
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers
[DE93-002324] p 1674 N93-18521

**CRYSTALLOGRAPHY**
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514
Discovery of spatial concepts in crystallographic databases p 1690 N93-19727

**CRYSTALS**
The crystal and molecular structure of triethanol-ammonium nitrate
[AD-A258428] p 1670 N93-17864
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
X ray diffraction study of shock-modified tetragonal phases of SnO2 and MnO2
[DE93-002488] p 1535 N93-19479
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions
[DE93-002626] p 1675 N93-19488
Microphotography of shocks in crystals
[DE93-002888] p 1677 N93-19827

**CUES**
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333

**CULTURE TECHNIQUES**
High density cell culture system
[NASA-CASE-MSC-22060-1] p 1593 N93-19037

**CURING**
Reversion studies of natural and guayule rubbers
[AD-A257501] p 1491 N93-17906
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051

**CURRENT DENSITY**
High performance YBCO films
[AD-A258481] p 1672 N93-18313
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328
Regimes of improved confinement and stability in D3-D obtained through current profile modifications
[DE93-002674] p 1667 N93-19618

**CURVATURE**
Shortest paths of bounded curvature in the plane
[INRIA-RR-1503] p 1642 N93-17835
On corner and vertex detection
[INRIA-RR-1439] p 1646 N93-18594

**CURVE FITTING**
Reconstruction of linear and nonlinear continuous time models from discrete time sampled-data systems
[RR-406] p 1646 N93-18458
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886

**CURVES (GEOMETRY)**
Shortest paths of bounded curvature in the plane
[INRIA-RR-1503] p 1642 N93-17835

**CUSPS (LANDFORMS)**
Shortest paths of bounded curvature in the plane
[INRIA-RR-1503] p 1642 N93-17835

**CYANOGEN**
P/Halley: Spatial distribution and scale lengths for C2, CN, NH2, and H2O p 1706 N93-19157

**CYCLIC LOADS**
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090
Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336

**CYCLONES**
Tropical cyclone motion and recurvature in TCM-90
[AD-A258258] p 1585 N93-18010
Definition of mean environmental steering flow for TCM-90 tropical cyclones
[AD-A257886] p 1586 N93-18338

**CYCLOTRON RADIATION**
Modification of primordial ices by cosmic rays as simulated by cyclotron irradiation p 1709 N93-19183
The CQL3D Fokker-Planck code
[DE93-002962] p 1668 N93-19754

**CYLINDRICAL BODIES**
A wind tunnel study of magnus effects on a differentially rotating missile
[AD-A258812] p 1408 N93-18989
The role of computational fluid dynamics in aeronautical engineering. 9: Analysis of hypersonic equilibrium air flow p 1412 N93-19294
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357
Experimental study of the selective properties of coaxial resonators
[INPE-5375-PRE/1748] p 1522 N93-19740

**CYLINDRICAL SHELLS**
Optimum design of isotropic monocoque and ring-stiffened circular cylindrical shells subject to external hydrostatic pressure
[AD-A257864] p 1555 N93-18327
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774
The non-linear dynamics of composite cylindrical shells
[AD-A259026] p 1558 N93-18953
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354

**CYTOLOGY**
X ray examination of Type 310S stainless steel during its oxidation in air at 900 C
[DE93-003031] p 1490 N93-19631

## D

**D REGION**
Polar cap absorption events observed during the EISCAT operation in 1981-1989 p 1727 N93-19556
EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989 p 1728 N93-19557
D-region incoherent scatter spectra: Discrepancies between observations and current theory p 1728 N93-19559
Interpretation of incoherent scatter spectral width changes in the D-region during an auroral precipitation event p 1728 N93-19560

**DAMAGE**
Space shuttle solid rocket booster main parachute damage reduction team report
[NASA-TM-4437] p 1455 N93-18067
Control of in-service damage: Application to aircraft engines
[DS-2027] p 1448 N93-18151
Damage mechanics of cross-ply laminates resulting from transverse concentrated loads
[AD-A259271] p 1481 N93-19839

**DAMAGE ASSESSMENT**
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
Damage tolerance assessment of boron/epoxy repairs to fuselage lap joints
[AD-A258383] p 1439 N93-18257
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
High temperature component analysis with expert systems p 1557 N93-18751
Hurricane risk assessment to rollback or ride out a cost versus loss decision making approach p 1588 N93-19411
A literature survey of airborne vehicles impacting with water and soil: Head injury criteria and severity index development of computer program KRASH
[DOT/FAA/CT-90/24] p 1421 N93-19647
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671

**DAMPING**
Optimum design of high speed prop rotors including the coupling of performance, aeroelastic stability and structures p 1438 N93-18066
An application of the Observer/Kalman Filter Identification (OKID) technique to Hubble flight data p 1462 N93-18825
CSI Flight Computer System and experimental test results p 1465 N93-18841
Rotation of split cometary nuclei p 1719 N93-19258

**DARK MATTER**
Experimental particle physics
[DE93-003884] p 1655 N93-18538
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555

**DATA ACQUISITION**
Cosmic-ray NM-64 neutron monitor data-19 from Rome, Italy
[NOTA-INTERNA-989] p 1745 N93-17878
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716
CSI Flight Computer System and experimental test results p 1465 N93-18841
The Telecommunications and Data Acquisition
[NASA-CR-191998] p 1504 N93-18897
Description of a data acquisition system for the measurements of EMP transient fields
[AD-A259013] p 1510 N93-19099
Flow rate logging seepage meter
[NASA-CASE-LAR-14835-1] p 1538 N93-19328
The Telecommunications and Data Acquisition Report
[NASA-CR-191228] p 1511 N93-19413
Cascaded convolutional codes p 1458 N93-19429
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization
[AD-A258549] p 1587 N93-19481
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
Evaluation of the current status of the multisensor approach to monitoring vegetation of Brazil
[INPE-5328-PRE/1724] p 1567 N93-19641

A method for estimating the phytomass of a tropical forest region through the use of orbital data
[INPE-5320-PRE/1717] p 1567 N93-19645
An improved anthropometric test device
p 1424 N93-19670
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671
Multiple study inventory method for tropical forest
[INPE-5319-PRE/1716] p 1568 N93-19790

**DATA BASE MANAGEMENT SYSTEMS**
Using an object-oriented database management system to enhance the reusability of class definitions
[AD-A257559] p 1685 N93-17981
A model for security and distribution of management information systems
[ETN-93-93029] p 1685 N93-18107
Design and implementation of a graphical user interface for a multimedia database management system
[AD-A257577] p 1686 N93-18179
Integration of deductive and object oriented data bases: Theoretical and implementation aspects
[REPT-92-039] p 1618 N93-18199
Data management plan for the Oak Ridge Environmental Information System, Version 1.1
[DE92-041219] p 1687 N93-18526
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587
Discovery of regularities in databases
p 1688 N93-19714

**DATA BASES**
A concept study for a national software engineering database
[AD-A258254] p 1614 N93-17823
Positioning a camera from a photograph and a scene model
[TELECOM-PARIS-92-D-002] p 1537 N93-17948
Increase of operational reliability by feedback experience/return in the technical and industrial field
[ETN-93-93014] p 1685 N93-18075
An information theoretic approach to distributed inference and learning
[AD-A257935] p 1685 N93-18099
TUNS/TCIS information model/process model
[NASA-CR-191654] p 1617 N93-18112
Design and implementation of a graphical user interface for a multimedia database management system
[AD-A257577] p 1686 N93-18179
G-LOG: A graph based query language
[REPT-92-013] p 1618 N93-18198
MOCAL: A Monte Carlo albedo code
[DE93-002049] p 1654 N93-18388
The integration of specification aspects in database design
[ISBN-90-9004461-2] p 1687 N93-18445
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587
Chemical Release and Radiation Effects Satellite (CRRES) program archiving and Puerto Rican sounding rocket campaign
[NASA-CR-184503] p 1579 N93-18773
Software Engineering Laboratory (SEL) database organization and user's guide, revision 2
[NASA-TM-108631] p 1624 N93-18860
Creating and manipulating a domain-specific formal object base to support a domain-oriented application composition system
[AD-A259018] p 1624 N93-19016
Evaluation of regional seismic discriminants using the intelligent seismic event identification system
[AD-A258936] p 1583 N93-19071
PDES Application Protocol Suite for Composite (PAS-C) scoping and benefits criteria. Volume 1: Executive summary and overview
[AD-A258833] p 1687 N93-19074
Incorporation of orbital imagery into a cartographic data base
[INPE-5300-PRE/1705] p 1688 N93-19644
The human factor problem in the Canadian Forces aviation p 1422 N93-19657
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 1429 N93-19697
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 1429 N93-19698
Medical evaluation of spatial disorientation mishaps
p 1430 N93-19703
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Patterns for knowledge discovery in databases
p 1688 N93-19712
Probabilistic data dependencies p 1688 N93-19713
Discovery of regularities in databases
p 1688 N93-19714
Discovery of spatial concepts in crystallographic databases p 1690 N93-19727
Flight above a virtual world p 1609 N93-19766
Condensation phase of the Martian south polar cap
p 1740 N93-19804
Methods for analysis of networks within a geographical information system
[INPE-5299-PRE/1704] p 1693 N93-19835
Earth observing system: Information on NASA's selection of data centers. Report to the Chairman, Committee on Science, Space, and Technology, House of Representatives
[GAO/IMTEC-91-67] p 1569 N93-19842

**DATA COLLECTION PLATFORMS**
Evaluation of the current status of the multisensor approach to monitoring vegetation of Brazil
[INPE-5328-PRE/1724] p 1567 N93-19641

**DATA COMPRESSION**
One and two dimensional discrete wavelet transforms
[AD-A257981] p 1502 N93-18241
Advanced vector quantization techniques
p 1648 N93-18505
Wavelet image analysis p 1628 N93-18506
Locally adaptive vector quantization: Data compression with feature preservation p 1513 N93-19425
Data compression by wavelet transforms
p 1513 N93-19426
Maximal codeword lengths in Huffman codes
p 1513 N93-19427
Comparisons of theoretical limits for source coding with practical compression algorithms p 1513 N93-19428

**DATA CONVERTERS**
The first level energy trigger of the L3 experiment/description of the hardware
[NOTA-INTERNA-987] p 1659 N93-17937

**DATA FLOW ANALYSIS**
Flow models of distributed computations: Event structures and nets
[INRIA-RR-1482] p 1646 N93-18612
Flow models of distributed computations: Three equivalent semantics for CCS
[INRIA-RR-1484] p 1622 N93-18613
A comparison of multiprocessor scheduling methods for iterative data flow architectures
[NASA-CR-189730] p 1521 N93-19107

**DATA INTEGRATION**
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891

**DATA LINKS**
Design and implementation of a fiber optic link for a token ring local area network
[AD-A257868] p 1662 N93-18335
Advanced communications technology satellite high burst rate link evaluation terminal experiment control and monitor software user's guide, version 1.0
[NASA-CR-189160] p 1620 N93-18382
Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854
A model to compare performance of space and ground network support of low-Earth orbiters
p 1508 N93-18925
Fault-tolerant fiber optic backplane
[NASA-CASE-LAR-14785-1] p 1663 N93-19052

**DATA MANAGEMENT**
Data modelization for manufacturing planning and scheduling: Aggregation and disaggregation mechanisms
[LAAS-92263] p 1682 N93-17813
Data management: Implementation and lessons learned from Department of the Army data management program
[AD-A257858] p 1686 N93-18307
Data management plan for the Oak Ridge Environmental Information System, Version 1.1
[DE92-041219] p 1687 N93-18526
Human performance assessment methods
[AGARD-AG-308-ADD] p 1603 N93-18868
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
En route air traffic controllers use of flight progress strips: A graph-theoretic analysis
[AD-A259062] p 1433 N93-18927
Data management: Implementation and lessons learned from the Department of the Army data management program
[AD-A258796] p 1687 N93-19063
Metadata in archives: The Atmospheric Radiation Measurement (ARM) Archive experience
[DE93-003011] p 1574 N93-19628
Advanced cockpit-mission and image management
p 1607 N93-19760
Management of avionics data in the cockpit
p 1611 N93-19777

**DATA PROCESSING**
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139
Automatic information processing and high performance skills
[AD-A258473] p 1602 N93-18273
The obstacles encountered in the development of SMMS: A case study
[AD-A257880] p 1686 N93-18337
COBE Differential Microwave Radiometer (DMR) data processing techniques p 1562 N93-18715
GUISDAP p 1579 N93-18746
Applications of theory of experiments to IS measurements p 1516 N93-18748
Information technology: Comments on Navy facility consolidation plan
[AD-A258964] p 1687 N93-19084
Analysis of kriging applied to resolution enhancement of digital satellite imagery
[AD-A258914] p 1626 N93-19337
Methods for viewing radar cross section data in three dimensions
[AD-A258905] p 1626 N93-19352
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
Metadata in archives: The Atmospheric Radiation Measurement (ARM) Archive experience
[DE93-003011] p 1574 N93-19628
Charged particle track reconstruction using artificial neural networks
[DE93-003014] p 1658 N93-19630
HippoDraw
[DE93-004005] p 1627 N93-19633
A method for estimating the phytomass of a tropical forest region through the use of orbital data
[INPE-5320-PRE/1717] p 1567 N93-19645
Probabilistic data dependencies p 1688 N93-19713
Extracting knowledge from data: SYS8688 approach
p 1688 N93-19715
Large-scale induction of ripple-down-rules: Some preliminary considerations p 1689 N93-19716
Machine discovery approach to dynamic systems in the real laboratory p 1689 N93-19719
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
Model-based reasoning applied to cockpit warning systems p 1611 N93-19778
On automated analysis of flight test data
p 1444 N93-19913

**DATA PROCESSING EQUIPMENT**
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
NASA experimental airborne doppler radar and real time processor for wind shear detection
p 1420 N93-19607

**DATA REDUCTION**
Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894
A Southern Hemisphere radar meteor orbit survey
p 1701 N93-19121
Spectroscopic observations of comet Austin (1989c)
p 1697 N93-19169
Forward-scatter radiant mapping
p 1697 N93-19178
A method for investigating human factor aspects of military aircraft accidents p 1422 N93-19656
Probabilistic data dependencies p 1688 N93-19713
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
Evaluation of the geometric quality of cartographic documents through the use of scanning imagery devices
[INPE-5298-PRE/1703] p 1692 N93-19738
On automated analysis of flight test data
p 1444 N93-19913
System identification for X-31A project support: Lessons learned so far p 1444 N93-19914

**DATA RETRIEVAL**
Metadata in archives: The Atmospheric Radiation Measurement (ARM) Archive experience
[DE93-003011] p 1574 N93-19628

**DATA SAMPLING**
Identification of nonlinear wave forces. Part 2: Frequency-domain analysis
[RR-442-PT-2] p 1528 N93-18440
Identification of nonlinear wave forces. Part 1: Time domain-analysis
[RR-441-PT-1] p 1528 N93-18510
What makes a family reliable? p 1720 N93-19264

**DATA SMOOTHING**
Beyond the frequency limits of time-linearized methods
[NLR-TP-91216-U] p 1405 N93-17929
**DATA STORAGE**
Nanorecording p 1539 N93-18467
Applications of theory of experiments to IS measurements p 1516 N93-18748
Locally adaptive vector quantization: Data compression with feature preservation p 1513 N93-19425
**DATA STRUCTURES**
The dynamic semantics of Kernel ELLA
[AD-A258221] p 1617 N93-18024
Theory of algorithm structure and design
[AD-A257948] p 1617 N93-18081
TUNS/TCIS information model/process model
[NASA-CR-191654] p 1617 N93-18112
Design and implementation of a graphical user interface for a multimedia database management system
[AD-A257577] p 1686 N93-18179
The integration of specification aspects in database design
[ISBN-90-9004461-2] p 1687 N93-18445
Flow models of distributed computations: Event structures and nets
[INRIA-RR-1482] p 1646 N93-18612
A generic template extractor (GENTEX) in C for VLSI design verification
[AD-A259078] p 1521 N93-18959
X-AAARF: An X window based version of the AFIT Algorithm Animation Research Facility
[AD-A258832] p 1625 N93-19065
**DATA SYSTEMS**
Integration of deductive and object oriented data bases: Theoretical and implementation aspects
[REPT-92-039] p 1618 N93-18199
Numerical experiments on consistent horizontal and vertical resolution for atmospheric models and observing systems p 1563 N93-18718
Diabatic dynamic initialization p 1563 N93-18719
Software Engineering Laboratory (SEL) database organization and user's guide, revision 2
[NASA-TM-108631] p 1624 N93-18860
Dark-cycle monitoring of biological subjects on Space Station Freedom
[NASA-TM-103976] p 1500 N93-19103
Analysis of relational concepts for the implementation of systems for three-dimensional visualization of meteorological data
[INPE-5435-TAE/016] p 1588 N93-19638
**DATA TRANSFER (COMPUTERS)**
Implementation of inheritance by means of relations
[INRIA-RR-1417] p 1621 N93-18513
**DATA TRANSMISSION**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962
Improving security in the Fiber Distributed Data Interface (FDDI) protocol
[AD-A257546] p 1501 N93-17963
Design and implementation of a fiber optic link for a token ring local area network
[AD-A257868] p 1662 N93-18335
Advanced vector quantization techniques p 1648 N93-18505
Implementation of inheritance by means of relations
[INRIA-RR-1417] p 1621 N93-18513
SNR degradation in square-wave subcarrier downconversion p 1507 N93-18914
The use of subcarriers in future DSN missions p 1507 N93-18915
A method of optimal radio frequency assignment for deep space missions p 1508 N93-18922
**DAYTIME**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler
[AD-A258189] p 1584 N93-17858
Carrier landing parameters from survey 45, fleet and training command aircraft landing aboard USS ENTERPRISE CVN-65, main text and appendix A
[AD-A258873] p 1433 N93-19078
**DEBONDING (MATERIALS)**
Interface fracture in composite materials p 1560 N93-19381
**DEBRIS**
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050
**DECAY RATES**
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746
**DECIDUOUS TREES**
A microwave scattering model for layered vegetation p 1565 N93-18074
**DECISION MAKING**
Data modelization for manufacturing planning and scheduling: Aggregation and disaggregation mechanisms
[LAAS-92263] p 1682 N93-17813
Category scaling within a given context as a common basis for the AHP, SMART and ELECTRE
[REPT-92-22] p 1683 N93-17916
Possibility expectation and its decision making algorithm p 1618 N93-18226
PACSIM: Using simulation in designing a communications satellite
[AD-A257857] p 1460 N93-18306
Development and enhancement of a mode of performance and decision making under stress in a real life setting
[AD-A257796] p 1598 N93-18363
CABINS: Case-based interactive scheduler p 1635 N93-18670
Experiments with a decision-theoretic scheduler p 1636 N93-18674
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682
Completable scheduling: An integrated approach to planning and scheduling p 1638 N93-18685
JIGSAW: Preference-directed, co-operative scheduling p 1639 N93-18689
Time management situation assessment (TMSA) p 1639 N93-18692
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
Aids to Navigation Service Force Mix 2000 Project. Volume 1: Development and application of an Aids to Navigation Service Force Mix decision support system
[AD-A259065] p 1433 N93-19344
A safety-based decision making architecture for autonomous systems
[NASA-CR-191864] p 1641 N93-19362
Hurricane risk assessment to rollback or ride out a cost versus loss decision making approach p 1588 N93-19411
Underlying causes of accidents: Casual networks p 1422 N93-19658
Information access: A research agenda p 1692 N93-19798
Modeling the dynamics of mental workload and human performance in complex systems
[AD-A258553] p 1603 N93-19956
**DECISION THEORY**
Category scaling within a given context as a common basis for the AHP, SMART and ELECTRE
[REPT-92-22] p 1683 N93-17916
Decision paths in complex tasks
[NASA-CR-192121] p 1603 N93-18359
Optimality of a threshold policy on the M/M/1 queue with repeated vacations
[INRIA-RR-1419] p 1632 N93-18515
Experiments with a decision-theoretic scheduler p 1636 N93-18674
Large-scale induction of ripple-down-rules: Some preliminary considerations p 1689 N93-19716
Automating sky object classification in astronomical survey images p 1690 N93-19728
Goal-directed learning: A decision-theoretic model for deciding what to learn next p 1629 N93-19732
**DECODING**
Improving security in the Fiber Distributed Data Interface (FDDI) protocol
[AD-A257546] p 1501 N93-17963
Self-dual (48,24;12) codes p 1505 N93-18905
More box codes p 1505 N93-18906
Acquisition of direct sequence spread spectrum signals using digital signal processing techniques
[AD-A258974] p 1510 N93-19094
Binary weight distributions of some Reed-Solomon codes p 1514 N93-19430
**DECOMPOSITION**
One and two dimensional discrete wavelet transforms
[AD-A257981] p 1502 N93-18241
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290
Decomposability and scalability in space-based observatory scheduling p 1634 N93-18663
Theory and implementation of wavelet analyses in rational resolution decompositions
[AD-A259040] p 1509 N93-19000
Unified approach for computer vision problems: Mathematical morphology
[INPE-5391-TAE/012] p 1641 N93-19640
**DECOMPRESSION SICKNESS**
Statistically based decompression tables 8: Linear-exponential kinetics
[AD-A257613] p 1595 N93-17926
The Proceedings of the Hypobaric Decompression Sickness Workshop
[AD-A257612] p 1597 N93-18362
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428
**DECOUPLING**
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191900] p 1632 N93-18372
**DEEP SPACE**
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
Systems analysis for ground-based optical navigation p 1434 N93-18900
Design and application of electromechanical actuators for deep space missions
[NASA-CR-192227] p 1551 N93-19946
**DEEP SPACE NETWORK**
The Telecommunications and Data Acquisition
[NASA-CR-191998] p 1504 N93-18897
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
Fault detection using a two-model test for changes in the parameters of an autoregressive time series p 1505 N93-18907
Correlated flux densities from VLBI observations with the DSN p 1506 N93-18909
The effects of correlated noise in intra-complex DSN arrays for S-band Galileo telemetry reception p 1458 N93-18910
Demonstration of a joint US-Russian very long baseline interferometry tracking capability p 1458 N93-18911
Adaptive low-bandwidth tracking of Galileo and Pioneer 10 carriers p 1506 N93-18912
The use of subcarriers in future DSN missions p 1507 N93-18915
Helium compressors for closed-cycle, 4.5-Kelvin refrigerators p 1500 N93-18918
Correction of high-frequency noise-temperature inaccuracies p 1507 N93-18920
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites p 1507 N93-18921
A method of optimal radio frequency assignment for deep space missions p 1508 N93-18922
A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923
A model to compare performance of space and ground network support of low-Earth orbiters p 1508 N93-18925
The Telecommunications and Data Acquisition Report
[NASA-CR-191228] p 1511 N93-19413
Precise tracking of the Magellan and Pioneer Venusorbiters by same-beam interferometry. Part 1: Dataaccuracy analysis p 1454 N93-19414
The goldstone real-time connected element interferometer p 1512 N93-19417
Evaluation of the table Mountain Ronchi telescope for angular tracking p 1512 N93-19421
Deep-space navigation applications of improved ground-based optical astrometry p 1513 N93-19422
DSS-13 beam waveguide antenna frequency stability p 1513 N93-19424
A model for the cost of doing a cost estimate p 1515 N93-19436
**DEEP WATER**
Conditioning instabilities of the Greenland Sea
[AD-A257547] p 1589 N93-18279
Thermohaline circulations and global climate change
[DE93-004601] p 1574 N93-19505
**DEFECTS**
Segregation of defects in wrought alloy 718: Management of industrial safeguards
[DS-2038] p 1486 N93-18150
Circular dislocation loops and their application to the micromechanics of fibrous composites p 1480 N93-19043
Characterization and defect analysis of high temperature aluminum-based metal matrix composites p 1480 N93-19060
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films
[DE93-002325] p 1677 N93-19742
**DEFENSE COMMUNICATIONS SYSTEM (DCS)**
The evolving defense communications system
[AD-A258335] p 1502 N93-18206
**DEFENSE PROGRAM**
An analysis of contract cost overruns and their impacts
[AD-A258422] p 1683 N93-17862
Stealth in the storm: Sorting the facts from the fiction
[AD-A258440] p 1434 N93-17889

Re-engineering software systems in the Department of Defense using integrated computer aided software engineering tools
[AD-A257500] p 1617 N93-17905
Report to Congress on the strategic defense initiative, 1992
[AD-A258449] p 1650 N93-17992
An evolving joint space campaign concept and the Army's role
[AD-A258112] p 1453 N93-18022
Applying commercial style acquisition practices to the procurement of commercially available aircraft
[AD-A258143] p 1683 N93-18087
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
Software measurement for DoD systems: Recommendations for initial core measures
[AD-A258305] p 1619 N93-18250
Data management: Implementation and lessons learned from Department of the Army data management program
[AD-A257858] p 1686 N93-18307
SOCAP: Lessons learned in applying SIPE-2 to the military operations crisis action planning domain
p 1639 N93-18694
A clearinghouse for software reuse: Lessons learned from RAPID/DSRS initiatives
[AD-A258782] p 1625 N93-19062
Information technology: Comments on Navy facility consolidation plan
[AD-A258964] p 1687 N93-19084
Test and evaluation challenges in the nineties
p 1442 N93-19902
The image digitizing system
[AD-A258665] p 1628 N93-19948

**DEFINITION**
From asteroid clusters to families: A proposal for a new nomenclature p 1705 N93-19151

**DEFLECTION**
Response of structures to atmospheric turbulence: Computer programs A9236 and B9236
[ESDU-92036] p 1554 N93-18045
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279

**DEFORESTATION**
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region
[INPE-5330-PRE/1728] p 1568 N93-19821

**DEFORMATION**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635
Critical issues and experimental examination on sawtooth and disruption physics
[NIFS-157] p 1670 N93-19951

**DEGENERATION**
An interior point approach to postoptimal and parametric analysis in linear programming
[REPT-92-21] p 1615 N93-17834

**DEGRADATION**
Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver
p 1506 N93-18913
SNR degradation in square-wave subcarrier downconversion p 1507 N93-18914

**DEGREES OF FREEDOM**
A relativistic coupled-channel wave-equation with N and Delta degrees of freedom
[NOTA-INTERNA-993] p 1653 N93-17944

**DEHYDROGENATION**
Solid state, surface and catalytic studies of oxides
[DE93-004640] p 1483 N93-18424
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485

**DEIMOS**
Phobos and Deimos are sources of meteoroids
p 1700 N93-19116
Deimos: A reddish, D-type asteroid spectrum
p 1706 N93-19163

**DELAMINATING**
Damage mechanics of cross-ply laminates resulting from transverse concentrated loads
[AD-A259271] p 1481 N93-19839

**DELAY**
The goldstone real-time connected element interferometer p 1512 N93-19417

**DELAY LINES**
Variable wide band fiber optic delay line
[AD-D015539] p 1662 N93-18318

**DELTA WINGS**
Application of an Euler-equation method to a sharp-edged delta wing configuration with vortex flow
[NLR-TP-91] p 1404 N93-17809
Advanced hypersonic aircraft design
[NASA-CR-192046] p 1436 N93-18037
Algorithm development with applications to aerodynamics and aeroelasticity p 1529 N93-18566

**DEMOGRAPHY**
Use of teledetection in physiographic compartmentation to obtain multiple use geotechnic zoning in coastal regions
[INPE-5322-PRE/1720] p 1583 N93-19795
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856

**DENSITY DISTRIBUTION**
Modelling of interfacial and thermocline waves
[AERO-REPT-9210] p 1525 N93-18104
Thermocline waves from a moving body and comparison of open-boundary conditions
[AERO-REPT-9208] p 1527 N93-18135
Determination of meteor flux distribution over the celestial sphere p 1700 N93-19117
Bias correction factors for near-Earth asteroids
p 1701 N93-19127
Spatial and temporal variations in the column density distribution of comet Halley's CN coma
p 1717 N93-19238
Analytical and numerical study on steady Mach reflection p 1414 N93-19309
The EISCAT UHF radar as a meteor radar: Meteor radial velocities determined from a Barker coded power profile
p 1517 N93-19579

**DENSITY MEASUREMENT**
A study of the structure of gaseous detonation waves using Rayleigh scattering p 1483 N93-19028

**DEOXYGENATION**
Preconversion catalytic deoxygenation of phenolic functional groups
[DE93-002941] p 1484 N93-19517

**DEPENDENT VARIABLES**
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems
[NASA-TM-103912] p 1532 N93-19009

**DEPLETION**
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635

**DEPLOYMENT**
Space shuttle solid rocket booster main parachute damage reduction team report
[NASA-TM-4437] p 1455 N93-18067

**DEPOSITION**
Fouling and slagging in combustion plant
[ESDU-92012] p 1498 N93-18000
Progress report on conductive paints, 3 August - 30 September 1992
[DE93-001353] p 1494 N93-18530
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN
[AD-A258804] p 1675 N93-18983
Ion beam-based characterization of multicomponent oxide thin films and thin film layered structures
[DE93-003004] p 1676 N93-19627

**DEPOSITS**
Fouling and slagging in combustion plant
[ESDU-92012] p 1498 N93-18000
Do large impact basins in the Southern Hemisphere of Mars control the distribution of polar structures and deposits? p 1741 N93-19808
Wind transport near the poles of Mars: Timescales of changes in deposition and erosion p 1743 N93-19819

**DESIGN ANALYSIS**
Spacecraft design project: Low Earth orbit communications satellite
[NASA-CR-192038] p 1458 N93-17969
Design of the advanced regional aircraft, the DART-75
[NASA-CR-192044] p 1435 N93-17972
MM-122: High speed civil transport
[NASA-CR-192011] p 1435 N93-17974
Activities of the Boom and Chassis Group
[NASA-CR-192028] p 1544 N93-17975
Preliminary design of a radiator shading device for a lunar outpost
[NASA-CR-192016] p 1605 N93-18019
Helmet-mounted area-of-interest display
[AD-A258275] p 1605 N93-18029
Design requirements for force reflecting master controllers p 1605 N93-18035
TBD(exp 3)
[NASA-CR-192075] p 1436 N93-18054
A high fidelity simulation of optical detection systems, volume 2
[AD-A258498] p 1661 N93-18089
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
Systems design analysis applied to launch vehicle configuration
[NASA-TP-3326] p 1455 N93-18141
Optimum design of experiments in composite reliability
[AD-A257574] p 1477 N93-18178
RPH preliminary design, trend analysis and initial analysis of the NPS hummingbird
[AD-A257854] p 1439 N93-18304
The S.T.o.R.M. (tm): Air transport system design simulation
[NASA-CR-192070] p 1439 N93-18349
The F-92 RELIANT: Air transport system design simulation
[NASA-CR-192050] p 1440 N93-18386
Basic research on design analysis methods for rotorcraft vibrations
[NASA-CR-191917] p 1556 N93-18576
Axial Flow Compressors, volume 1
[VKI-LS-1992-02-VOL-1] p 1530 N93-18721
Endwall flows and blading design for axial flow compressors p 1531 N93-18730
Performance of controlled diffusion blades
p 1532 N93-18735
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 1
[NASA-CP-3177-PT-1] p 1461 N93-18818
Integrated design of the CSI evolutionary structure: A verification of the design methodology
p 1463 N93-18830
Control/structure interaction during Space Station Freedom-Orbiter berthing p 1463 N93-18831
A comparison of refined models for flexible subassemblies p 1464 N93-18833
Design, analysis, and testing of high frequency passively damped struts p 1464 N93-18835
A Darwinian approach to control-structure design
p 1465 N93-18840
Design optimization of the JPL Phase B testbed
p 1466 N93-18845
Active stabilization to prevent surge in centrifugal compression systems
[NASA-CR-191625] p 1549 N93-18862
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 2
[NASA-CP-3177-PT-2] p 1466 N93-18928
C-SIDE: The control-structure interaction demonstration experiment p 1467 N93-18931
An explicit solution to the optimal LQG problem for flexible structures with collocated rate sensors
p 1467 N93-18932
Model reduction in integrated controls-structures design p 1468 N93-18935
Analysis, design, and testing of a low cost, direct force command linear proof mass actuator for structural control p 1469 N93-18943
A generic template extractor (GENTEX) in C for VLSI design verification
[AD-A259078] p 1521 N93-18959
Development of an engine/airframe performance matching scheme for jet engine retrofit
[AD-A258822] p 1449 N93-18997
Design and evaluation of FDDI fiber optics networkfor Ethernets, VAX's and Ingraph work stations
p 1664 N93-19408
Synchrotron radiation sources and condensers for projection x ray lithography
[DE93-002964] p 1664 N93-19511
Crash experience of the US Army Black Hawk helicopter p 1427 N93-19688

**DETECTION**
Plume: Instructions for use and description of a missile plume visibility program
[AD-A258201] p 1473 N93-18201
On corner and vertex detection
[INRIA-RR-1439] p 1646 N93-18594

Detecting change as it occurs
[NASA-CR-191939] p 1574 N93-19484
Discrete optical fiber strain sensor
[NASA-CASE-LAR-14810-1-SB] p 1538 N93-19492
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601
Proposed Lower Limits of Detection (LLD), Decision Limits (LC), and error terms for identified analytes from the inorganic, isotopic, bioassay, and organic groups
[DE93-002942] p 1484 N93-19752
Advanced concepts in distortion-invariant phase-only filter design
[AD-A258691] p 1523 N93-19861

**DETONABLE GAS MIXTURES**
A study of the structure of gaseous detonation waves using Rayleigh scattering p 1483 N93-19028

**DETONATION**
Performance of blasting caps
[NASA-CASE-LAR-13832-1] p 1497 N93-18274
International Workshop on Mathematical Methods in Combustion
[AD-A258478] p 1482 N93-18312
Understanding curved detonation waves
[DE93-000799] p 1528 N93-18529

**DETONATION WAVES**
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
Understanding curved detonation waves
[DE93-000799] p 1528 N93-18529
A study of the structure of gaseous detonation waves using Rayleigh scattering p 1483 N93-19028

**DETONATORS**
Performance of blasting caps
[NASA-CASE-LAR-13832-1] p 1497 N93-18274

**DIAGNOSIS**
A study of illness related lost time in transport aircraft crewmembers
[AD-A258193] p 1602 N93-18298
Propulsion diagnostics p 1475 N93-18482
Scaling and applied field studies of MPD thrusters with laser diagnostics p 1667 N93-18643
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887
Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018
Automatically calibrating admittances in KATE's autonomous launch operations model p 1456 N93-19401
Laser beam diagnostics for kilowatt power pulsed YAG laser
[DE93-002928] p 1542 N93-19515

**DIAMAGNETISM**
Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245

**DIAMOND FILMS**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser
[AD-A257551] p 1491 N93-17966
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967
Theory of artifact diamond
[AD-A258474] p 1672 N93-18311
Pseudomorphic stabilization of diamond on non-diamond substrates, part 1. Diamond grown on single crystal beryllium oxide, Part 2. Anomalous band gap behavior and phase stability of c-BN/Diamond alloys
[AD-A257845] p 1493 N93-18345
Mechanism of diamond film growth p 1678 N93-18479
Friction and wear of plasma-deposited diamond films
[NASA-TM-105926] p 1495 N93-19035
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848

**DIAMONDS**
Heteroepitaxial diamond growth
[AD-A257510] p 1671 N93-18079
Method of preparing a diamond-abrasive mixture
[AD-A258228] p 1492 N93-18123
Theory of artifact diamond
[AD-A258474] p 1672 N93-18311
Mechanism of diamond film growth p 1678 N93-18479
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848

**DIATOMIC MOLECULES**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140

**DICHROISM**
Study of narrow-band dichroic plates with circular, rectangular, or Pyleguide apertures p 1504 N93-18901

**DICTIONARIES**
Software process development and enactment: Concepts and definitions
[AD-A258465] p 1619 N93-18243

**DIELECTRIC PROPERTIES**
High performance YBCO films
[AD-A258481] p 1672 N93-18313
Solid-state dynamics and quantum transport in novel semiconductor nanostructures
[AD-A258482] p 1672 N93-18314

**DIELECTRICS**
Contribution to the modelling of the electromagnetic properties of random dielectric-conductor mixtures
[ONERA-NT-1992-3] p 1501 N93-18190
Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493

**DIESEL ENGINES**
Evaluation of high-temperature lubricants for low-heat rejection diesel engines
[AD-A257893] p 1494 N93-18418

**DIETS**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209

**DIFFERENCE EQUATIONS**
A q-analogue of the Wronskian and a second solution of the Hahn-Exton q-Bessel difference equation
[REPT-92-18] p 1643 N93-17843

**DIFFERENTIAL CALCULUS**
Phase portraits of non degenerate quadratic systems with finite multiplicity one
[REPT-92-42] p 1643 N93-17874

**DIFFERENTIAL EQUATIONS**
A bibliography of the qualitative theory of quadratic systems of differential equations in the plane
[REPT-92-17] p 1642 N93-17842
A q-analogue of the Wronskian and a second solution of the Hahn-Exton q-Bessel difference equation
[REPT-92-18] p 1643 N93-17843
Preconditioned conjugate gradient techniques for the solution of time-dependent differential equations
[REPT-92-19] p 1643 N93-17844
Phase portraits of non degenerate quadratic systems with finite multiplicity one
[REPT-92-42] p 1643 N93-17874
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
Polynomial approximation of Poincare maps for Hamiltonian system p 1651 N93-19160

**DIFFRACTION**
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics
[AD-A258938] p 1652 N93-19082

**DIFFRACTION PATTERNS**
Liquid tellurides: Structure and properties
[DE93-002909] p 1677 N93-19830

**DIFFUSION**
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003
Effect of the geomagnetic field on the diffusion of meteor trains p 1709 N93-19179

**DIFFUSION COEFFICIENT**
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
Effect of the geomagnetic field on the diffusion of meteor trains p 1709 N93-19179

**DIFFUSION THEORY**
Light diffusion in stochastically perturbed media
[REPT-92-41] p 1661 N93-17873
Effects of surface structure and of embedded-atom pair functionals on adatom diffusion on FCC metallic surfaces
[AD-A258793] p 1674 N93-18980

**DIGITAL DATA**
An approach to automated terrain classification from digital elevation model
[AD-A258210] p 1452 N93-17986
Interactive object-oriented display technologies: A study of two CD-ROM-based DMA products
[AD-A258896] p 1625 N93-19081
Updating topographic maps using orbital images in a microcomputer environment
[INPE-5409-PRE/1756] p 1567 N93-19739
The image digitizing system
[AD-A258665] p 1628 N93-19948

**DIGITAL ELECTRONICS**
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236

**DIGITAL FILTERS**
Application of multirate digital filter banks to wideband all-digital phase-locked loops design p 1505 N93-18908
SNR degradation in square-wave subcarrier downconversion p 1507 N93-18914

**DIGITAL SIMULATION**
Aerodynamic design and analysis of fans using 3D computational codes
[DS-2140] p 1404 N93-17880
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
LES turbulence modeling using DNS data base p 1409 N93-19274
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
Numerical computations using multi-domain technique p 1409 N93-19277
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279
Rarefied gas numerical wind tunnel. Part 7: OREX p 1410 N93-19280
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Lifting-surface-method p 1410 N93-19281
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282
Development of a boundary element method program for numerical analysis of supersonic unsteady flow p 1410 N93-19283
Numerical calculations of separating flows around oscillating airfoil p 1410 N93-19284
Numerical simulation of unsteady large scale separated flow around oscillating airfoil p 1410 N93-19285
Calculations of aerodynamic forces on a wing with thrust using BEM p 1410 N93-19286
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287
Numerical Wind Tunnel: Requirements and the outline p 1411 N93-19288
Numerical Wind Tunnel hardware p 1411 N93-19289
The operating system for Numerical Wind Tunnel p 1411 N93-19290
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291
Generation of longitudinal vortices in supersonic flow p 1411 N93-19292
Code development for hypersonic real-gas flow simulations toward the design of space vehicles p 1411 N93-19293
The role of computational fluid dynamics in aeronautical engineering. 9: Analysis of hypersonic equilibrium air flow p 1412 N93-19294
Computation of re-entry flows with two-temperature model p 1412 N93-19295
Numerical calculation of hypersonic non-equilibrium flow around OREX p 1412 N93-19296
Numerical simulation of hypersonic flow around H-2 Orbiting Plane (HOPE), part 3 p 1412 N93-19297
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298
Numerical simulation of flow for a scramjet nozzle p 1412 N93-19299
A numerical simulation of flows around a deformable gas bubble p 1413 N93-19300
Transonic flow calculation around NACA-0012 p 1413 N93-19301
Similarity in laminar pipe flows with secondary flows p 1413 N93-19302
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Numerical treatment of laminar flow in curved rectangular channels with inlet and outlet straight region p 1413 N93-19304
Turbulence model calculations of the effects of body forces on turbulent flows in a pipe p 1413 N93-19306

Comparative study of various difference schemes for some laminar channel flows p 1413 N93-19307
Numerical simulations of supersonic flow by a fourth-order compact MUSCL TVD scheme p 1414 N93-19308
Analytical and numerical study on steady Mach reflection p 1414 N93-19309
Numerical simulation of the flow through non-uniform airfoil cascade p 1414 N93-19310
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
Numerical simulation of flows in a supersonic air intake p 1415 N93-19314
A numerical investigation for supersonic inlet p 1415 N93-19315
A numerical investigation of 3D transverse injection into the supersonic flow behind rearward facing step p 1415 N93-19316
Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317
A numerical simulations of inner flow of scramjet p 1415 N93-19318
Three-dimensional measurement of turbulent shear flows using digital image processing p 1415 N93-19319
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321
Wind tunnel tests and CFD in Fuji Heavy Industries p 1416 N93-19323
Wind tunnel test and CFD in Kawasaki Heavy Industries, Gifu p 1416 N93-19324
Wind tunnel testing and CFD simulation in Mitsubishi Heavy Industries p 1416 N93-19325
Role of wind tunnel tests and CFD analysis for the development of aero-engines in IHI p 1417 N93-19326

**DIGITAL SYSTEMS**
Analogue to digital transformation [ESDU-92044] p 1517 N93-17959
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems [AD-A257790] p 1519 N93-18236
A hardware implementation of pure ESTEREL [INRIA-RR-1479] p 1622 N93-18649
Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver p 1506 N93-18913

**DIGITAL TECHNIQUES**
Image matching strategies for the co-registration of CAESAR sea-images: An hierarchical area-based approach, part 2 [BCRS-90-40B-PT-2] p 1564 N93-17951
Acquisition of direct sequence spread spectrum signals using digital signal processing techniques [AD-A258974] p 1510 N93-19094
Fast Fourier transform: A solution for digital signal processing in incoherent scatter experiments? p 1516 N93-19541
Updating topographic maps using orbital images in a microcomputer environment [INPE-5409-PRE/1756] p 1567 N93-19739
Algorithims and methods for processing Synthetic Aperture Radar (SAR) images [INPE-5301-PRE/1706] p 1515 N93-19787
Image quality measurement techniques [INPE-5362/NTC/302] p 1664 N93-19794

**DILUTION**
A helium-3/helium-4 dilution cryocooler for operation in zero gravity [NASA-CR-183632] p 1499 N93-18397

**DIMENSIONAL MEASUREMENT**
Method for non-destructive estimation of waveguide directional coupler dimensions [NASA-CASE-NPO-18454-1-CU] p 1519 N93-18285

**DIMENSIONAL STABILITY**
Micro-precision control/structure interaction technology for large optical space systems p 1462 N93-18826

**DIMERS**
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon [DE93-002550] p 1482 N93-18411

**DIODES**
Current density limitations in a fast-pulsed high-voltage diode [AD-A257866] p 1520 N93-18328
Advanced helium magnetometer for space applications [NASA-CR-190880] p 1537 N93-18399
Tube diode [INPE-5438-NTC/304] p 1551 N93-19832

**DIOPHANTINE EQUATION**
Sub-groups of Z(sup n), standard basis, and linear diophantine systems [INRIA-RR-1510] p 1615 N93-17836

**DIRAC EQUATION**
The use of the wavelet cluster analysis for asteroid family determination p 1701 N93-19126

**DIRECT BROADCAST SATELLITES**
Olympus: The communications satellite and its uses. An introduction [ESA-F-29] p 1461 N93-18369

**DIRECT CURRENT**
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices [NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278

**DIRECTIONAL ANTENNAS**
Feed-forward control upgrade of the deep space network antennas p 1514 N93-19434

**DIRECTIONAL COUPLERS**
Method for non-destructive estimation of waveguide directional coupler dimensions [NASA-CASE-NPO-18454-1-CU] p 1519 N93-18285

**DIRECTIONAL SOLIDIFICATION (CRYSTALS)**
Microstructural development during directional solidification of peritectic alloys [NASA-CR-192090] p 1488 N93-18603

**DIRECTIVITY**
Monopole elements with disk ground planes on flat earth: Atlas of directivity, radiation efficiency, radiation resistance, and input impedance [AD-A257911] p 1503 N93-18366

**DIRECTORIES**
EHR directory of awards, FY 1990 [NSF-92-75] p 1746 N93-17854

**DISCONTINUITY**
Calibration of the ARID robot p 1552 N93-19394

**DISCRETE FUNCTIONS**
Discrete time system piecewise linear filtering with small observation noise [INRIA-RR-1451] p 1633 N93-18611
Comparison properties of stochastic decision free Petri nets [INRIA-RR-1433] p 1649 N93-18646

**DISEASES**
The Proceedings of the Hypobaric Decompression Sickness Workshop [AD-A257612] p 1597 N93-18362

**DISORIENTATION**
Epidemiology of United States Air Force spatial disorientation accidents: 1990-1991 p 1425 N93-19679
Disorientation and flight safety: A survey of UK Army aircrew p 1426 N93-19680
Royal Naval helicopter ditching experience p 1426 N93-19684
Medical evaluation of spatial disorientation mishaps p 1430 N93-19703

**DISPERSING**
Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows [DE93-002794] p 1535 N93-19615

**DISPLACEMENT**
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain [AD-A258908] p 1559 N93-19353
ARID relative calibration experimental data and analysis p 1552 N93-19395

**DISPLAY DEVICES**
Helmet-mounted area-of-interest display [AD-A258275] p 1605 N93-18029
Holographic enhanced remote sensing system [NASA-CR-190867] p 1565 N93-18230
Composite video and graphics display for camera viewing systems in robotics and teleoperation [NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284
Realization of real time graphics in vehicles with high dynamic motion [ETN-93-92739] p 1622 N93-18630
Graphic representation in managerial decision making: The effect of scale break on the dependent axis [AD-A258989] p 1683 N93-18888
A user interface to a true 3-D display device [AD-A258995] p 1614 N93-18891
The effects of iconic presentation on individuals [AD-A258785] p 1603 N93-18949
Interactive object-oriented display technologies: A study of two CD-ROM-based DMA products [AD-A258896] p 1625 N93-19081
Effect of contrast on human speed perception [NASA-TM-103898] p 1607 N93-19104
SATCOM general purpose modem DSCS 3 SCT beacon telemetry display [AD-A258849] p 1458 N93-19441
HModel: An X tool for global model search [DE93-002826] p 1627 N93-19512
Engineering the visibility of small features on electronic flight displays p 1607 N93-19758
Multimodal dialog system for future cockpits p 1610 N93-19773
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential p 1611 N93-19782
Liquid crystal displays replacing the CRT and CLE of future cockpits p 1447 N93-19783

**DISSIPATION**
Determination of the dissipative loss of a two-port network from noise temperature measurements p 1505 N93-18904

**DISTORTION**
Comparisons of theoretical limits for source coding with practical compression algorithms p 1513 N93-19428

**DISTRIBUTED PROCESSING**
Identification and control of non-linear time-varying dynamical systems using artificial neural networks [AD-A257595] p 1450 N93-18193
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
Flow models of distributed computations: Event structures and nets [INRIA-RR-1482] p 1646 N93-18612
Flow models of distributed computations: Three equivalent semantics for CCS [INRIA-RR-1484] p 1622 N93-18613
Observing localities [INRIA-RR-1485] p 1647 N93-18614
A static view of localities [INRIA-RR-1483] p 1622 N93-18650
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures [NASA-CR-189742] p 1532 N93-18769
The operating system for Numerical Wind Tunnel p 1411 N93-19290

**DISTRIBUTION FUNCTIONS**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm) [AD-A257651] p 1665 N93-18244
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 3: The measurement problems with a radar p 1727 N93-19554

**DITCHING (LANDING)**
Royal Naval helicopter ditching experience p 1426 N93-19684
Canadian Forces helicopter ditchings: 1952-1990 p 1426 N93-19685
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 1426 N93-19686

**DIURNAL VARIATIONS**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler [AD-A258189] p 1584 N93-17858
Measurements of F-region drift velocities at the dusk sector mid-latitude trough [AD-A257766] p 1575 N93-17907
Diurnal variation of overdense meteor echo duration and ozone p 1718 N93-19243
Gravity waves and sporadic E layers as measured by EISCAT and AIS p 1724 N93-19530
EISCAT measurements in the E and F regions during the 12-16 February 1990 LTCS campaign p 1726 N93-19546
Ion composition in the auroral F region: Comparison of EISCAT data and ionospheric model predictions p 1726 N93-19547
Altitude variations in amplitude and phase of tidal oscillations at high latitude p 1729 N93-19566

**DIVERGENCE**
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves [AD-A257969] p 1586 N93-18194

**DIVERTERS**
Bias-sustained shield plasma [DE93-001908] p 1666 N93-18511
Advanced divertor program results from D3-D [DE93-002675] p 1668 N93-19619

**DIVING (UNDERWATER)**
Statistically based decompression tables 6: Linear-exponential kinetics [AD-A257613] p 1595 N93-17926

**DOCUMENTATION**
Automated documentation generator for advanced protein crystal growth [NASA-CR-192452] p 1673 N93-18425

**DOCUMENTS**
Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494
Theoretical studies on the chromosphere, corona, and solar wind
[NASA-CR-192116] p 1745 N93-19932
**DOMAIN WALL**
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618
**DOMAINS**
Lambda-calculi for (strict) parallel functions
[INRIA-RR-1387] p 1646 N93-18435
Wrapping mathematical tools p 1648 N93-18504
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
Learning to integrate reactivity and deliberation in uncertain planning and scheduling problems p 1638 N93-18684
Completable scheduling: An integrated approach to planning and scheduling p 1638 N93-18685
Creating and manipulating a domain-specific formal object base to support a domain-oriented application composition system
[AD-A259018] p 1624 N93-19016
**DOPED CRYSTALS**
High resistivity GaAs epilayers by oxygen doping
[AD-A257931] p 1670 N93-18005
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991
Second Workshop Role of Point Defects/Defect Complexes in Silicon Device Fabrication
[DE92-016424] p 1675 N93-19467
**DOPPLER EFFECT**
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
**DOPPLER NAVIGATION**
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario p 1454 N93-18899
**DOPPLER RADAR**
The Terminal Doppler Weather Radar (TDWR) Moving Target Simulator (MTS) at Orlando, Florida
[AD-A258885] p 1509 N93-19080
The effect of tropospheric fluctuations on the accuracy of water vapor radiometry p 1511 N93-19416
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Program overview: 1991 flight test objectives p 1418 N93-19591
Air/ground wind shear information integration: Flight test results p 1418 N93-19594
Doppler radar results p 1419 N93-19595
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601
Airborne doppler radar research at Rockwell International p 1420 N93-19602
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606
NASA experimental airborne doppler radar and real time processor for wind shear detection p 1420 N93-19607
Ground clutter measurements using the NASA airborne doppler radar: Description of clutter at the Denver and Philadelphia airports p 1421 N93-19608
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
Algorithms and methods for processing Synthetic Aperture Radar (SAR) images
[INPE-5301-PRE/1706] p 1515 N93-19787
**DOWN-CONVERTERS**
SNR degradation in square-wave subcarrier downconversion p 1507 N93-18914
**DOWNLINKING**
An investigation of error characteristics and coding performance
[NASA-CR-191899] p 1620 N93-18373
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna p 1505 N93-18902
A model to compare performance of space and ground network support of low-Earth orbiters p 1508 N93-18925
**DRAG**
Modelling of interfacial and thermocline waves
[AERO-REPT-9209] p 1525 N93-18103
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
**DRAG MEASUREMENT**
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899
**DRAG REDUCTION**
Stall departure resistance enhancer
[NASA-CASE-LAR-14221-1] p 1447 N93-19023
Drag reduction by polymer additives
[AD-A258867] p 1534 N93-19076
**DRAINAGE**
Numerical simulations of drainage flows on Mars p 1742 N93-19816
**DRIFT RATE**
Measurements of F-region drift velocities at the dusk sector mid-latitude trough
[AD-A257766] p 1575 N93-17907
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552
**DROP TOWERS**
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894
**DROPS (LIQUIDS)**
Evaporation and burning of a spherical fuel droplet in a uniform convective flowfield
[DE93-002223] p 1482 N93-17910
High-energy laser-particle interaction p 1543 N93-18469
**DRUGS**
Effects of terfenadine and diphenhydramine on brain activity and performance in a UH-60 flight simulator
[AD-A258012] p 1594 N93-17817
**DRYING**
Thermal coating development for impulse drying
[DE93-000710] p 1491 N93-17909
**DUAL SPIN SPACECRAFT**
An approximate solution for the linearized spinup dynamics of a dual-spin spacecraft
[AD-A258903] p 1470 N93-19350
**DUCTED FLOW**
Numerical treatment of laminar flow in curved rectangular channels with inlet and outlet straight region p 1413 N93-19304
Numerical analysis of flow in a heated horizontal square duct p 1413 N93-19305
Comparative study of various difference schemes for some laminar channel flows p 1413 N93-19307
Numerical simulation of the flow through non-uniform airfoil cascade p 1414 N93-19310
**DUCTILITY**
Ductility and fracture in L1(sub 2) intermetallic alloys
[DE93-001644] p 1487 N93-18534
Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806
**DUCTS**
A computational study of a supersonic mixer-ejector exhaust system
[AD-A258456] p 1471 N93-17993
Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
**DUMMIES**
Design/development of an enhanced biodynamic manikin p 1424 N93-19667
Improving manikin biofidelity p 1424 N93-19668
The design and use of automotive crash test dummies p 1424 N93-19669
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671
**DURABILITY**
An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762
**DUST**
Water and dust production rates in comet P/Halley derived from ultraviolet and optical observations p 1705 N93-19154
Numerical simulations of cometary dust p 1711 N93-19198
Note on the scattering of electromagnetic waves from charged dust particles in a plasma p 1725 N93-19539
Theory of radar scattering from dusty plasmas p 1516 N93-19540
The polar layered deposits on Mars: Inference from thermal inertia modeling and geologic studies p 1741 N93-19810
**DUST COLLECTORS**
CoMA: A high resolution Time-Of-Flight Secondary Ion Mass Spectrometer (TOF-SIMS) for in situ analysis of cometary matter p 1721 N93-19272
**DUST STORMS**
Dust transport into Martian polar latitudes p 1742 N93-19815
**DYNAMIC CHARACTERISTICS**
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Picosecond molecular-beam studies of chemical reactivity p 1659 N93-18483
Static and dynamic characteristics of a piezoceramic strut p 1462 N93-18827
The non-linear dynamics of composite cylindrical shells
[AD-A259026] p 1558 N93-18953
Lumped mass modelling for the dynamic analysis of aircraft structures p 1447 N93-19460
**DYNAMIC CONTROL**
Planning for the semiconductor manufacturer of the future p 1636 N93-18672
Model reduction for the dynamics and control of large structural systems via neutral network processing direct numerical optimization p 1461 N93-18820
A comparison of refined models for flexible subassemblies p 1464 N93-18833
Robot welding process control development task
[NASA-CR-192434] p 1549 N93-18851
Dynamic pattern matcher using incomplete data
[NASA-CASE-MSC-21415-1-SB] p 1624 N93-18858
CSI related dynamics and control issues in space robotics p 1467 N93-18929
Controls-structures-interaction dynamics during RCS control of the Orbiter/SRMS/SSF configuration p 1468 N93-18934
Average-cost based robust structural control p 1469 N93-18939
Impedance control design for robot tasks involving free and contact motion p 1640 N93-19045
Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339
Dynamic characterization, monitoring and control of rotating flexible beam-mass structures via piezo-embedded techniques p 1561 N93-19458
Robust motion tracking control of robotic arms based on the generalized energy accumulation principle p 1552 N93-19463
Damping characterization in large structures
[NASA-CR-192140] p 1560 N93-19944
**DYNAMIC LOADS**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
**DYNAMIC MODELS**
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
Design of high speed proprotors using multiobjective optimization techniques p 1437 N93-18065
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191900] p 1632 N93-18372
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
A structure detection algorithm for nonlinear dynamic rational models
[RR-439] p 1649 N93-18508
Modelling of dynamic soil-structure-ice interaction p 1558 N93-18759
Shock and impact dynamics p 1558 N93-18760
Controlled motion in an elastic world. Research project: Manipulation strategies for massive space payloads
[NASA-CR-191895] p 1549 N93-18778
Modeling, system identification, and control of ASTREX p 1469 N93-18942
Plio-Pleistocene time evolution of the 100-ky cycle in marine paleoclimate records p 1581 N93-18972
Numerical control fabrication technique for dynamic composite models
[NASA-CASE-LAR-14004-1] p 1640 N93-19024
**DYNAMIC PROGRAMMING**
A system of dynamic modal logic
[LP-92-08] p 1615 N93-17831

Optimality of a threshold policy on the M/M/1 queue with repeated vacations
[INRIA-RR-1419] p 1632 N93-18515
Task-level robot programming combining object-oriented design and synchronous approach: A tentative study
[INRIA-RR-1441] p 1622 N93-18610
A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649
The ESTEREL language
[INRIA-RR-1487] p 1623 N93-18651

**DYNAMIC RANGE**
PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115

**DYNAMIC RESPONSE**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
Response of structures to atmospheric turbulence: Computer programs A9236 and B9236
[ESDU-92036] p 1554 N93-18045
Dynamics of rotating multi-component turbomachinery systems
[NASA-TM-105997] p 1555 N93-18426
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705
Mathematical modelling of materials
p 1557 N93-18753
Dynamics in condition monitoring, a case study
p 1558 N93-18758
Spacecraft dynamics characterization and control system failure detection
[NASA-CR-192190] p 1466 N93-18852
Improving manikin biofidelity p 1424 N93-19668
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672

**DYNAMIC STABILITY**
Active stabilization to prevent surge in centrifugal compression systems
[NASA-CR-191625] p 1549 N93-18862
Aircraft landing gear shimmy p 1441 N93-19029
Debris about asteroids: Where and how much?
p 1703 N93-19136

**DYNAMIC STRUCTURAL ANALYSIS**
Structural simulation coupling for transient analysis
[AD-A258192] p 1643 N93-17861
Response of structures to atmospheric turbulence: Computer programs A9236 and B9236
[ESDU-92036] p 1554 N93-18045
RPH preliminary design, trend analysis and initial analysis of the NPS hummingbird
[AD-A257854] p 1439 N93-18304
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Dynamics of rotating multi-component turbomachinery systems
[NASA-TM-105997] p 1555 N93-18426
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
Coupling between plate vibration and acoustic radiation
[NASA-CR-189741] p 1651 N93-18770
A comparison of viscoelastic damping models
p 1464 N93-18836
Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853
Structural dynamic testing of composite propfan blades for a cruise missile wind tunnel model
[NASA-TM-105272] p 1558 N93-18875
Model reduction in integrated controls-structures design p 1468 N93-18935
Structures research p 1447 N93-19453
A piecewise continuous Timoshenko beam model for the dynamic analysis of tapered beam-like structures
p 1561 N93-19459
Lumped mass modelling for the dynamic analysis of aircraft structures p 1447 N93-19460
Damping characterization in large structures
[NASA-CR-192140] p 1560 N93-19944

**DYNAMIC TESTS**
The development and testing of the Lens Antenna Deployment Demonstration (LADD) test article
p 1463 N93-18829
Dynamic test results for the CASES ground experiment p 1455 N93-18843
Structural dynamic testing of composite propfan blades for a cruise missile wind tunnel model
[NASA-TM-105272] p 1558 N93-18875
CSI flight experiment projects of the Naval Research Laboratory p 1470 N93-18944
Occupant simulation as an aspect of flight safety research p 1423 N93-19665
US Army helicopter inertia reel locking failures
p 1427 N93-19689
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 1446 N93-19928

**DYNAMICAL SYSTEMS**
Lagrangian chaos: Transport, mixing, and diffusion in fluids
[NOTA-INTERNA-988] p 1651 N93-17939
Identification and control of non-linear time-varying dynamical systems using artificial neural networks
[AD-A257595] p 1450 N93-18193
Chaotic dynamics of atoms p 1659 N93-18491
Comparison properties of stochastic decision free Petri nets
[INRIA-RR-1433] p 1649 N93-18646
Adaptive planning for applications with dynamic objectives p 1635 N93-18666
A first-order global model of Late Cenozoic climatic change: Orbital forcing as a pacemaker of the ice ages
p 1581 N93-18973
Long-term evolution of 1991 DA: A dynamically evolved extinct Halley-type comet p 1707 N93-19166
Approximation of attractors and applications
[DE93-002420] p 1535 N93-19475
Machine discovery approach to dynamic systems in the real laboratory p 1689 N93-19719
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723
Toward an optimal strategy for sampling chaotic time series using the Smale-Williams dynamical system
[AD-A258550] p 1650 N93-19953

**DYSPROSIUM**
Magnetic structures of nanometer scale Dy, Cr, and Ni
[DE93-002984] p 1677 N93-19755

## E

**E REGION**
Determination of E region effective recombination coefficient using impulsive precipitation events
p 1723 N93-19526
Nocturnal high latitude E-region in winter during extremely quiet conditions p 1723 N93-19527
EISCAT measurements in the E and F regions during the 12-16 February 1990 LTCS campaign
p 1726 N93-19546
Dynamics of the auroral ionosphere deduced from EISCAT CP1 observations p 1729 N93-19564
The neutral wind in the E-region from CP-1 data
p 1729 N93-19565
Altitude variations in amplitude and phase of tidal oscillations at high latitude p 1729 N93-19566
Observations of Pc5 Alfven wave effects in the quiet time auroral ionosphere: Indications of energetic particle acceleration p 1733 N93-19588

**EARTH ATMOSPHERE**
Low level measurements of atmospheric DMS, H2S, and SO2 for GTE/CITE-3
[NASA-CR-191635] p 1573 N93-18863
Fragmentation and densities of meteoroids
p 1700 N93-19118
Atmospheric measurements taken from an aeroplane
p 1569 N93-19676

**EARTH CRUST**
Applications of marine gravimetry to mid-oceanic spreading centers and volcanos p 1590 N93-19382

**EARTH ENVIRONMENT**
Global Change Research Program: A component of the US Global Change Research Program. 1993 research opportunities
[NSF-92-77] p 1572 N93-18319
The US global change research program: Early achievements and future directions
p 1573 N93-18864

**EARTH IONOSPHERE**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
Report on the 7th Finnish EISCAT Workshop in 1991
p 1578 N93-18737
EISCAT related satellites in near future
p 1578 N93-18738
Freja satellite program and its connection to EISCAT
p 1578 N93-18739
EISCAT Svalbard radar p 1516 N93-18744
EISCAT educational programs p 1579 N93-18745
The flow of plasma in the solar terrestrial environment
[NASA-CR-192106] p 1744 N93-18780
Modeling the global positioning system signal propagation through the ionosphere
p 1434 N93-19420
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518

**EARTH MAGNETOSPHERE**
A theory for whistler wave amplification and wave particle interactions in the magnetosphere
[AD-A257782] p 1576 N93-18212
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
Auroral energization and geomagnetic disturbances
p 1584 N93-18499
Evaluating auroral processes within a magnotospheric model
[NASA-CR-192122] p 1577 N93-18606
Disturbances of both cometary and Earth's magnetospheres excited by single solar flares
p 1710 N93-19190
Magnetohydrodynamic wave-associated plasma density fluctuations in the Earth's foreshock region
p 1667 N93-19385
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518

**EARTH MANTLE**
Evolution of attached and detached slabs and their associated mantle dynamics
[NASA-CR-191920] p 1576 N93-18320

**EARTH MOTION**
Orbital, Rotational, and Climatic Interactions
[NASA-CP-3185] p 1579 N93-18962

**EARTH OBSERVATIONS (FROM SPACE)**
Comparative analysis of the indices of vegetation in urban areas obtained from the TM-Landsat and HRV-Spot data: City of Taubate
[INPE-5418-TDI/482] p 1575 N93-19831
Analysis of LANDSAT/TM and SPOT/XS data through vegetation indices, phase 2
[INPE-5450-RPQ/663] p 1569 N93-19857

**EARTH OBSERVING SYSTEM (EOS)**
Earth observing system: Information on NASA's selection of data centers. Report to the Chairman, Committee on Science, Space, and Technology, House of Representatives
[GAO/IMTEC-91-67] p 1569 N93-19842

**EARTH ORBITAL ENVIRONMENTS**
A methodology for selective removal of orbital debris
[NASA-CR-192052] p 1459 N93-18154
An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329
Four space application material coatings on the long-duration exposure flight (LDEF)
[NASA-TM-104574] p 1493 N93-18370
Solar-terrestrial physics and astrophysics
p 1733 N93-18501
A model to compare performance of space and ground network support of low-Earth orbiters
p 1508 N93-18925
The geocentric particulate distribution: Cometary, asteroidal, or space debris? p 1713 N93-19209

**EARTH ORBITAL RENDEZVOUS**
Project Columbiad: Mission to the Moon. Book 2, volume 3: Stage configuration designs; volume 4: Program plan
[NASA-CR-192037] p 1733 N93-17999

**EARTH ORBITS**
SHARC: Space Habitat, Assembly and Repair Center
[NASA-CR-192031] p 1606 N93-18153
A methodology for selective removal of orbital debris
[NASA-CR-192052] p 1459 N93-18154
Launch system development in the Pacific Rim
[NASA-TM-108595] p 1455 N93-18170
Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894
Orbital, Rotational, and Climatic Interactions
[NASA-CP-3185] p 1579 N93-18962
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899

**EARTH RADIATION BUDGET**
Effects of clouds on the Earth radiation budget; Seasonal and inter-annual patterns
[NASA-CR-191619] p 1574 N93-18870

**EARTH RADIATION BUDGET EXPERIMENT**
Effects of clouds on the Earth radiation budget; Seasonal and inter-annual patterns
[NASA-CR-191619] p 1574 N93-18870

**EARTH RESOURCES INFORMATION SYSTEM**
A method for estimating the phytomass of a tropical forest region through the use of orbital data
[INPE-5320-PRE/1717] p 1567 N93-19645

**EARTH ROTATION**
Orbital, Rotational, and Climatic Interactions
[NASA-CP-3185] p 1579 N93-18962
Numerical investigation of the Earth's rotation during a complete precession cycle p 1580 N93-18965
Variations of the Milankovitch frequencies in time p 1580 N93-18966

**EARTH SCIENCES**
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108590] p 1564 N93-18070
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108588] p 1561 N93-18709
The US global change research program: Early achievements and future directions p 1573 N93-18864

**EARTH SURFACE**
Modeling energy and mass fluxes from prairie canopies
[NASA-CR-191801] p 1566 N93-18232
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815
Slope effects on shortwave radiation components and net radiation
[NASA-CR-192199] p 1504 N93-18881

**EARTH TIDES**
Studies of regional and global tectonics and the rotation of the earth using very-long-baseline interferometry
[NASA-CR-191902] p 1577 N93-18591

**EARTH-MOON SYSTEM**
Variations of the Milankovitch frequencies in time p 1580 N93-18966

**EARTHQUAKE DAMAGE**
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites p 1507 N93-18921

**ECCENTRIC ORBITS**
The orbital evolution of real asteroids near the 4:1 mean-motion resonance with Jupiter p 1704 N93-19146

**ECCENTRICITY**
Evidence of orbital forcing in 510 to 530 million year old shallow marine cycles, Utah and western Canada p 1582 N93-18975
The cyclic carbonates of the Latemar Massif: Evidence for the orbital forcing of a carbonate platform during the Middle Triassic p 1582 N93-18976
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010
Long-term evolution of 1991 DA: A dynamically evolved extinct Halley-type comet p 1707 N93-19166
Asteroid-type orbit evolution near the 5:2 resonance p 1708 N93-19171

**ECHOES**
Determination of D-region plasma velocity vector from scanning GEN-11 data p 1728 N93-19562
Enhanced ion-acoustic lines in EISCAT's common programmes p 1517 N93-19580

**ECONOMIC ANALYSIS**
Technology absorption and technological learning: A study of the dynamics of the process and intervening factors
[INPE-5392-TAE/013] p 1695 N93-19741
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856

**ECONOMIC DEVELOPMENT**
Industrial aerospace activities p 1404 N93-19007

**ECONOMIC IMPACT**
An integrated mission planning approach for the Space Exploration initiative
[DE93-001512] p 1473 N93-18588

**ECONOMICS**
Strategic factors in the development of the National Technology Transfer Network
[NASA-TM-108594] p 1694 N93-18169
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632

**ECOSYSTEMS**
Toward model-based discovery: A case study in ecosystem prediction p 1689 N93-19721
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737

**EDDY CURRENTS**
Continuous measurement by eddy current methods of age hardening in an aluminum alloy
[AD-A257569] p 1486 N93-18176
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619

**EDGE DETECTION**
Wavelet image analysis p 1628 N93-18506

**EDUCATION**
EHR directory of awards, FY 1990
[NSF-92-75] p 1746 N93-17854
Greenhouse Earth: A Traveling Exhibition
[DE93-002419] p 1572 N93-17912
The efficacy of biographical inventory data in predicting early attrition in naval aviation officer candidate training
[AD-A258025] p 1601 N93-17919
Activities report of the Institute of Space Physics
[ETN-93-93360] p 1665 N93-17947
Reliability, Maintainability, and Supportability (RMS) education in engineering schools
[AD-A258260] p 1552 N93-18026
Research and development project summaries
[AD-A257518] p 1747 N93-18175
The US Navy Healthy Back Program: Effect on back knowledge among recruits
[AD-A258368] p 1596 N93-18210
Diagnosing knowledge states in algebra using the rule space model
[AD-A257757] p 1645 N93-18246
Space education: Deriving benefits from industrial consortia
[NASA-TM-108593] p 1679 N93-18358
Decade of achievement: Educational leadership in mathematics, science and engineering
[NSF-92-94] p 1679 N93-18383
Highlights of engineering research centers technology transfer
[NSF-92-6] p 1694 N93-18457
Teaching, learning, and planetary exploration
[NASA-CR-192000] p 1734 N93-18569
EISCAT educational programs p 1579 N93-18745
The international forum on airline quality teaching guide
[NIAR-92-13] p 1680 N93-19376
Training evaluation final report p 1682 N93-19405
The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University
[NASA-CR-191362] p 1680 N93-19452
Aerospace engineering educational program p 1681 N93-19457
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471
Lessons learned from an historical look at flight testing p 1442 N93-19904
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 1443 N93-19907

**EIGENVALUES**
The direct measurement of damping coefficients using an inverse eigenvalue method
[AD-A258214] p 1555 N93-18204
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774
Suppression of mode-beating in a saturated hole-coupled FEL oscillator
[DE93-002554] p 1542 N93-19745

**EINSTEIN EQUATIONS**
Lie-isotropic energy-dependence of the neutral K(sub S) lifetime
[PREPRINT-874] p 1652 N93-17824

**EISCAT RADAR SYSTEM (EUROPE)**
Report on the 7th Finnish EISCAT Workshop
[REPT-121-(1992)] p 1577 N93-18736
Report on the 7th Finnish EISCAT Workshop in 1991 p 1578 N93-18737
EISCAT related satellites in near future p 1578 N93-18738
Freja satellite program and its connection to EISCAT p 1578 N93-18739
Ground station operation in the EISCAT campaign focused on the aurora borealis in November 1991 p 1578 N93-18741
EISCAT observations of spectral components of atmospheric gravity waves in the F region p 1578 N93-18743
EISCAT Svalbard radar p 1516 N93-18744
EISCAT educational programs p 1579 N93-18745
GUISDAP p 1579 N93-18746
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Precipitation associated electric field enhancements p 1722 N93-19520
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522
Structure and dynamics of field-aligned currents inferred from EISCAT data p 1722 N93-19523
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525
Determination of E region effective recombination coefficient using impulsive precipitation events p 1723 N93-19526
An incoherent scatter experiment for the measurement of particle collisions p 1723 N93-19528
Gravity waves and sporadic E layers as measured by EISCAT and AIS p 1724 N93-19530
Introduction to ionospheric heating at Tromsoe (Norway). Part 1: Experimental overview p 1724 N93-19531
Ionospheric currents: Can the incoherent scatter plasma line spectrum provide routine current measurements? p 1724 N93-19533
The possibilities of observing plasma and gyro lines with the EISCAT polar cap radar p 1724 N93-19534
Photoelectron enhanced plasma-line intensities at angles with the geomagnetic field as measured by EISCAT p 1724 N93-19536
Tristatic observations of natural plasma lines with the EISCAT UHF radar p 1725 N93-19537
Solar wind velocity measurements with the EISCAT UHF antenna array p 1725 N93-19542
Main ionospheric trough: Preliminary results from the 1990 Finnish-French EISCAT campaign p 1726 N93-19545
EISCAT measurements in the E and F regions during the 12-16 February 1990 LTCS campaign p 1726 N93-19546
Ion composition in the auroral F region: Comparison of EISCAT data and ionospheric model predictions p 1726 N93-19547
High altitude measurements with the EISCAT VHF radar and the development of Common Programme Seven p 1727 N93-19551
Polar cap absorption events observed during the EISCAT operation in 1981-1989 p 1727 N93-19556
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558
D-region incoherent scatter spectra: Discrepancies between observations and current theory p 1728 N93-19559
Possible cause and consequence of laminated Polar Mesosphere Summer Echoes p 1728 N93-19561
EISCAT-MICADO coordinated measurements of meridional neutral winds and temperatures in the F region p 1584 N93-19563
Dynamics of the auroral ionosphere deduced from EISCAT CP1 observations p 1729 N93-19564
The neutral wind in the E-region from CP-1 data p 1729 N93-19565
Altitude variations in amplitude and phase of tidal oscillations at high latitude p 1729 N93-19566
The ionospheric response to atmospheric gravity waves in the EISCAT region p 1729 N93-19567
Nonlinear interactions associated with TID's in the quiet polar F-region from EISCAT observations p 1584 N93-19568
Vertical structure of AGW associated ionospheric fluctuations observed with EISCAT p 1729 N93-19569
The COSCAT experiment: EISCAT observations of coherent scatter at small aspect angles p 1517 N93-19573
The EISCAT Svalbard (Arctic) radar p 1517 N93-19574
The G2-system, a second generation experimental philosophy for EISCAT p 1517 N93-19577
Real and spurious anticorrelations between V(parallel) and V(perpendiculars) in EISCAT data p 1517 N93-19578
The EISCAT UHF radar as a meteor radar: Meteor radial velocities determined from a Barker coded power profile p 1517 N93-19579
Enhanced ion-acoustic lines in EISCAT's common programmes p 1517 N93-19580
EISCAT radar observations of enhanced incoherent scatter spectra: Their relation to red aurora and field-aligned currents p 1517 N93-19581
Turbulence scattering layers in the middle-mesosphere observed by the EISCAT 224 MHz radar p 1732 N93-19582

NO(+)-enhancement in the height range between 180 and 300 km during ion heating events
p 1732 N93-19583
Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar
p 1732 N93-19586
Observations of Pc5 Alfven wave effects in the quiet time auroral ionosphere: Indications of energetic particle acceleration p 1733 N93-19588

**EJECTA**
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802

**EJECTION**
An epidemiological study in SAF's pilots ejections
p 1429 N93-19699

**EJECTION SEATS**
Improving manikin biofidelity p 1424 N93-19668
An epidemiological study in SAF's pilots ejections
p 1429 N93-19699

**EJECTORS**
Ejectors and jet pumps: Computer program for design and performance for compressible gas flow
[ESDU-92042] p 1544 N93-17956
A computational study of a supersonic mixer-ejector exhaust system
[AD-A258456] p 1471 N93-17993

**ELASTIC BODIES**
Elastic dynamics of a complete wind turbine structure: Theoretical development
[DE93-002478] p 1555 N93-18524

**ELASTIC PLATES**
Geometrically nonlinear analysis of laminated elastic structures
[NASA-CR-191055] p 1476 N93-17924
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090

**ELASTIC PROPERTIES**
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Methods for improving damping. Part 3: Damping material data
[ESDU-92001] p 1554 N93-17997
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
A performance model for thick composite cylinders subjected to external hydrostatic pressure
[DE93-002425] p 1560 N93-19476

**ELASTIC SCATTERING**
Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502

**ELASTIC SHELLS**
Geometrically nonlinear analysis of laminated elastic structures
[NASA-CR-191055] p 1476 N93-17924

**ELASTIC WAVES**
Drag reduction by polymer additives
[AD-A258867] p 1534 N93-19076

**ELECTRIC BATTERIES**
DOE battery program for weapon applications
[DE93-002476] p 1522 N93-19637
Electric and hybrid vehicle technology: TOPTEC
[DE93-002810] p 1551 N93-19837

**ELECTRIC CHARGE**
Determination and representation of electric charge distributions associated with adverse weather conditions
p 1588 N93-19403

**ELECTRIC CONDUCTORS**
Contribution to the modelling of the electromagnetic properties of random dielectric-conductor mixtures
[ONERA-NT-1992-3] p 1501 N93-18190
Progress report on conductive paints, 3 August - 30 September 1992
[DE93-001353] p 1494 N93-18530

**ELECTRIC CONNECTORS**
Novel interconnect deposition technology
p 1523 N93-18465

**ELECTRIC CORONA**
Advanced electromagnetic methods for aerospace vehicles
[NASA-CR-192180] p 1503 N93-18580

**ELECTRIC CURRENT**
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623

**ELECTRIC FIELDS**
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Precipitation associated electric field enhancements
p 1722 N93-19520
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Structure and dynamics of field-aligned currents inferred from EISCAT data p 1722 N93-19523
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced?
p 1723 N93-19525
Plasma flow bursts in the auroral zone
p 1726 N93-19550
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 3: The measurement problems with a radar
p 1727 N93-19554
Electric fields and currents in the cusp region as a result of diffusion effects on the magnetopause
p 1730 N93-19575
Observations of Pc5 Alfven wave effects in the quiet time auroral ionosphere: Indications of energetic particle acceleration p 1733 N93-19588
Advanced divertor program results from D3-D
[DE93-002675] p 1668 N93-19619
Multi-fluid modeling of interpenetrating plasmas
[DE93-002893] p 1668 N93-19829
Health effects of low-frequency electric and magnetic fields
[DE93-005675] p 1599 N93-19838
Roles of electric field on toroidal magnetic confinement
[NIFS-200] p 1669 N93-19884

**ELECTRIC MOMENTS**
Nuclear structure from radioactive decay
[DE93-002795] p 1654 N93-18392

**ELECTRIC MOTOR VEHICLES**
Electric and hybrid vehicle technology: TOPTEC
[DE93-002810] p 1551 N93-19837

**ELECTRIC POTENTIAL**
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957

**ELECTRIC POWER PLANTS**
Analysis of electromagnetic interference from power system processing and transmission components for Space Station Freedom
[NASA-CR-192281] p 1470 N93-19890

**ELECTRIC PULSES**
Optimization of flow-injection analysis for on-line in-process control
[ETN-92-92826] p 1499 N93-18444

**ELECTRIC WIRE**
Wire assembly for electrically conductive circuits
[AD-D015535] p 1519 N93-18317
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391

**ELECTRICAL ENGINEERING**
Interagency Advanced Power Group semi-annual compilation of briefs, September 1992
[DE93-000703] p 1571 N93-19613

**ELECTRICAL IMPEDANCE**
Antenna pattern control using impedence surfaces
[NASA-CR-192182] p 1516 N93-19934

**ELECTRICAL INSULATION**
Wire assembly for electrically conductive circuits
[AD-D015535] p 1519 N93-18317
NASA requirements and applications environments for electrical power wiring
[NASA-CR-191064] p 1475 N93-19652

**ELECTRICAL MEASUREMENT**
The voltammetric determination of trace metal concentrations and organic complexation in seawater
[AD-A257565] p 1588 N93-17984
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235

**ELECTRICAL PROPERTIES**
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Optical and electronic properties of lattice-matched and strained semiconductor superlattices
[ETN-92-92828] p 1673 N93-18446
Nanotechnology p 1678 N93-18489
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854

**ELECTRICAL RESISTIVITY**
The pre-onset, transitional, and foot regions in resistance versus temperature behavior in high-T2 cuprates: Inferences regarding maximum T2
[AD-A258175] p 1670 N93-17923
High resistivity GaAs epilayers by oxygen doping
[AD-A257931] p 1670 N93-18005
Continuous measurement by eddy current methods of age hardening in an aluminum alloy
[AD-A257569] p 1486 N93-18176
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D015534] p 1519 N93-18316
Wire assembly for electrically conductive circuits
[AD-D015535] p 1519 N93-18317
Four space application material coatings on the long-duration exposure flight (LDEF)
[NASA-TM-104574] p 1493 N93-18370
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films
[DE93-002325] p 1677 N93-19742

**ELECTRO-OPTICS**
OptoElectronic Materials Center: A collaborative program including University of New Mexico, Stanford University, and California Institute of Technology
[AD-A258113] p 1540 N93-17894
Development of neural modules based on Si/PLZT technology for opto-electronic implementations of neural networks
[AD-A257937] p 1518 N93-18120
New techniques in optical communications and signal processing
[AD-A257894] p 1503 N93-18419
Analysis of whole-sky imager data to determine the validity of PCFLOS models
[AD-A259042] p 1587 N93-19020
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition. Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical
[AD-A258663] p 1664 N93-19947

**ELECTROACOUSTIC TRANSDUCERS**
Sensing the gas metal arc welding process
[DE93-001957] p 1548 N93-18658

**ELECTROCHEMISTRY**
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Impedance and voltammetric studies of electrogenerated polyaniline conducting films
[AD-A258328] p 1493 N93-18256
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001682] p 1488 N93-18589
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels
p 1490 N93-19391
DOE battery program for weapon applications
[DE93-002476] p 1522 N93-19637
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
Development of an electrochemical method for field testing of protective coatings
[AD-A258754] p 1496 N93-19866

**ELECTRODE MATERIALS**
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048

**ELECTRODES**
Simulated coal-gas-fueled molten carbonate fuel cell development program
[DE93-000205] p 1570 N93-18527
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels
p 1490 N93-19391
Mesh effect in a parallel plate analyzer
[NIFS-203] p 1669 N93-19931

**ELECTRODYNAMICS**
A postulational formulation of magnetohydrodynamics p 1667 N93-19030
Electric fields and currents in the cusp region as a result of diffusion effects on the magnetopause p 1730 N93-19575

**ELECTROENCEPHALOGRAPHY**
Effects of terfenadine and diphenhydramine on brain activity and performance in a UH-60 flight simulator [AD-A258012] p 1594 N93-17817
A toposcopic investigation of brain electrical activity induced by motion sickness [AD-A259024] p 1599 N93-18952
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 1431 N93-19708

**ELECTROLUMINESCENCE**
Infrared-induced photoconductivity and electroluminescence in forward-biased a-Si:H pin-diodes [MBB-Z-0376-91-PUB] p 1671 N93-18092

**ELECTROLYSIS**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis [AD-A257984] p 1482 N93-18290

**ELECTROLYTES**
Poly(ethylene oxide)-based Zn(2) halide electrolytes [AD-A258331] p 1492 N93-18157
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes [AD-A258332] p 1492 N93-18158
The effect of catalyst preparation on catalytic activity [DE93-003890] p 1483 N93-18539

**ELECTROMAGNETIC ABSORPTION**
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model [AD-A258197] p 1502 N93-18249
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991 [INPE-5349-PRP/162] p 1668 N93-19793

**ELECTROMAGNETIC COUPLING**
Nonlinear acoustic-electromagnetic coupling in materials p 1482 N93-18486

**ELECTROMAGNETIC FIELDS**
Nonlinear acoustic-electromagnetic coupling in materials p 1482 N93-18486
Evaluating auroral processes within a magnotospheric model [NASA-CR-192122] p 1577 N93-18606
Description of a data acquisition system for the measurements of EMP transient fields [AD-A259013] p 1510 N93-19099
A kinetic simulation of low-frequency electromagnetic phenomena in inhomogeneous plasmas of three-dimensions [NIFS-199] p 1669 N93-19883

**ELECTROMAGNETIC INTERACTIONS**
High-energy laser-particle interaction p 1543 N93-18469
Theoretical studies in medium-energy nuclear and hadronic physics [DE93-004373] p 1657 N93-19503
Theoretical aspects of electroweak and other interactions in medium energy physics [DE93-003714] p 1657 N93-19507

**ELECTROMAGNETIC INTERFERENCE**
Evaluation of EMP/EMI requirements versus corrosion prevention methods [AD-A257820] p 1503 N93-18352
Analysis of electromagnetic interference from power system processing and transmission components for Space Station Freedom [NASA-CR-192281] p 1470 N93-19890

**ELECTROMAGNETIC MEASUREMENT**
The first level energy trigger of the L3 experiment/description of the hardware [NOTA-INTERNA-987] p 1659 N93-17937
Campaigns to study the aurora borealis focused on myriametric waves in 1991 p 1578 N93-18740

**ELECTROMAGNETIC PROPERTIES**
Contribution to the modelling of the electromagnetic properties of random dielectric-conductor mixtures [ONERA-NT-1992-3] p 1501 N93-18190
Plotting the magnitude and direction of waveguide surface currents in three dimensions [AD-A258872] p 1509 N93-19077

**ELECTROMAGNETIC PULSES**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz [AD-A258136] p 1595 N93-17985
High-altitude electromagnetic pulse survivability assessment of the Harris RF-3200 transceiver [AD-A258347] p 1502 N93-18207
Evaluation of EMP/EMI requirements versus corrosion prevention methods [AD-A257820] p 1503 N93-18352
HPM damage thresholds of GaAs FETs and HEMTs [AD-A257897] p 1520 N93-18420
Description of a data acquisition system for the measurements of EMP transient fields [AD-A259013] p 1510 N93-19099

**ELECTROMAGNETIC RADIATION**
Spectral features (200 nm - 10 micrometers) of atmospheric molecules: A bibliography (1979-1990) [NOTA-INTERNA-982] p 1575 N93-17957
Solar-terrestrial physics and astrophysics p 1733 N93-18501
Study of narrow-band dichroic plates with circular, rectangular, or Pyleguide apertures p 1504 N93-18901
Meteor fireball sounds identified p 1709 N93-19184
International Monitor for Auroral Geomagnetic Effects (IMAGE): A new magnetometer network in Scandinavia p 1732 N93-19585
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991 [INPE-5349-PRP/162] p 1668 N93-19793
Antenna pattern control using impedence surfaces [NASA-CR-192182] p 1516 N93-19934

**ELECTROMAGNETIC SCATTERING**
Moment method analysis of linearly tapered slot antennas: Low loss components for switched beam radiometers [NASA-CR-192094] p 1515 N93-19483
Note on the scattering of electromagnetic waves from charged dust particles in a plasma p 1725 N93-19539

**ELECTROMAGNETIC SHIELDING**
Wire assembly for electrically conductive circuits [AD-D015535] p 1519 N93-18317
Process for applying a superconductive powder to a wide variety of substrates [NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051

**ELECTROMAGNETIC WAVE FILTERS**
Advanced atomic filters p 1664 N93-18468
Note on the scattering of electromagnetic waves from charged dust particles in a plasma p 1725 N93-19539
Theory of radar scattering from dusty plasmas p 1516 N93-19540

**ELECTROMAGNETISM**
Applied Computational Electromagnetics Society Journal, volume 7, number 2, winter 1992 [AD-A258483] p 1502 N93-18263
Advanced electromagnetic methods for aerospace vehicles [NASA-CR-192180] p 1503 N93-18580

**ELECTROMAGNETS**
Device for applying powder coatings [AD-A258229] p 1492 N93-18218

**ELECTROMECHANICAL DEVICES**
Design and application of electromechanical actuators for deep space missions [NASA-CR-192227] p 1551 N93-19946

**ELECTRON ACCELERATION**
An inverse free electron laser accelerator experiment [DE93-003495] p 1542 N93-19506

**ELECTRON ACCELERATORS**
Theoretical aspects of electroweak and other interactions in medium energy physics [DE93-003714] p 1657 N93-19507

**ELECTRON BEAMS**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm) [AD-A257651] p 1665 N93-18244
Photoemission from Ag, Cu, and CsI [DE93-001964] p 1541 N93-18512
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy? [DE93-001975] p 1656 N93-18621
Electron beam probing of blow-down hypersonic flows [ONERA-NT-1992-7] p 1408 N93-18701
Use of the CEBAF accelerator for IR and UV free electron lasers [CEBAF-PR-92-023] p 1660 N93-18768
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms [DE93-003142] p 1675 N93-19490
Multiple layer dielectrics, hot film sensors, and methods of producing same [NASA-CASE-LAR-14591-1] p 1539 N93-19493
An inverse free electron laser accelerator experiment [DE93-003495] p 1542 N93-19506
Physically transparent formulation of a free-electron laser in the linear gain regime [DE93-002577] p 1542 N93-19626
The multi-cavity free-electron laser [DE93-002569] p 1543 N93-19747
Design of RF conditioner cavities [DE93-002576] p 1543 N93-19895

**ELECTRON DENSITY (CONCENTRATION)**
Ionospheric processes p 1584 N93-18498
Tristatic observations of natural plasma lines with the EISCAT UHF radar p 1725 N93-19537
Note on the scattering of electromagnetic waves from charged dust particles in a plasma p 1725 N93-19539

**ELECTRON DENSITY PROFILES**
EISCAT observations of spectral components of atmospheric gravity waves in the F region p 1578 N93-18743
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Determination of E region effective recombination coefficient using impulsive precipitation events p 1723 N93-19526
Nocturnal high latitude E-region in winter during extremely quiet conditions p 1723 N93-19527
Ionospheric currents: Can the incoherent scatter plasma line spectrum provide routine current measurements? p 1724 N93-19533

**ELECTRON DIFFRACTION**
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys [DE93-001507] p 1487 N93-18532

**ELECTRON DISTRIBUTION**
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding [DE93-002366] p 1654 N93-18398

**ELECTRON ENERGY**
Ionospheric processes p 1584 N93-18498
The contribution of electron collisions to rotational excitations of cometary water p 1721 N93-19268
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence p 1726 N93-19548
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams [DE93-002555] p 1658 N93-19746

**ELECTRON IMPACT**
Spin effects in electron-atom collisions p 1659 N93-18494
Cation production and reactions induced by electron impact on tetraethoxysilane [AD-A258830] p 1675 N93-19064

**ELECTRON IRRADIATION**
Ion produced cometary organic crust p 1701 N93-19122

**ELECTRON MICROSCOPES**
Nanorecording p 1539 N93-18467
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490

**ELECTRON MICROSCOPY**
Interface microstructure analysis of ceramic and metal-matrix composites: Sample preparation methods and analytical techniques [DS-2154] p 1477 N93-18148
Immersion objective lenses in electron optics [ETN-92-92799] p 1662 N93-18442

**ELECTRON MOBILITY**
Phenomenological modelling of Polywell (tm) SCIF multi-cusp inertial-electrostatic confinement systems [AD-A257944] p 1665 N93-18020
Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems [AD-A257689] p 1665 N93-18245

**ELECTRON PARAMAGNETIC RESONANCE**
Characterization of radiation damage in solids p 1659 N93-18478

**ELECTRON PLASMA**
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge [AD-A258680] p 1543 N93-19950

**ELECTRON PRECIPITATION**
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Precipitation associated electric field enhancements p 1722 N93-19520
Determination of E region effective recombination coefficient using impulsive precipitation events p 1723 N93-19526
Enhancement of the gyro lines by suprathermal particles p 1724 N93-19535
Interpretation of incoherent scatter spectral width changes in the D-region during an auroral precipitation event p 1728 N93-19560

**ELECTRON RECOMBINATION**
Determination of E region effective recombination coefficient using impulsive precipitation events p 1723 N93-19526

**ELECTRON SCATTERING**
Spin effects in electron-atom collisions
p 1659 N93-18494
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
Experiments on the nuclear interactions of pions and electrons
[DE93-001800] p 1655 N93-18590
The contribution of electron collisions to rotational excitations of cometary water p 1721 N93-19268

**ELECTRON SOURCES**
A Ti:Sapphire laser for the new polarized electron source
[DE93-004016] p 1541 N93-18448

**ELECTRON STATES**
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon
[DE93-002550] p 1482 N93-18411
Spin effects in electron-atom collisions
p 1659 N93-18494
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems
[AD-A258693] p 1678 N93-19862
Solvation effects on reactive intermediates: The benzyl radical and its clusters with Ar, N2, CH4, C2H6, and C3H88
[AD-A258764] p 1658 N93-19868

**ELECTRON TRANSFER**
Theoretical investigations of ultrafast phenomena in condensed matter
[AD-A258496] p 1661 N93-18088
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001682] p 1488 N93-18589
Classical and quantum dynamics of the impulsively driven hydrogen atom
[DE93-002430] p 1656 N93-19477
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854

**ELECTRON TRANSITIONS**
Novel short-wavelength lasers p 1543 N93-18472
Solvation effects on reactive intermediates: The benzyl radical and its clusters with Ar, N2, CH4, C2H6, and C3H88
[AD-A258764] p 1658 N93-19868

**ELECTRON TUNNELING**
Nanorecording p 1539 N93-18467
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490

**ELECTRONIC CONTROL**
Actively controlled shaft seals for aerospace applications
[NASA-CR-191901] p 1547 N93-18371

**ELECTRONIC COUNTERMEASURES**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181

**ELECTRONIC EQUIPMENT**
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236

**ELECTRONIC EQUIPMENT TESTS**
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762

**ELECTRONIC WARFARE**
Advanced Communication ESM System (ACES) design considerations
[AD-A259014] p 1510 N93-19100

**ELECTRONICS**
Research programs at the Research Laboratory of Electronics p 1522 N93-19482

**ELECTRONS**
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
Experiments on the nuclear interactions of pions and electrons
[DE93-001800] p 1655 N93-18590
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490

**ELECTROPHORESIS**
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751

**ELECTROPHOTOMETERS**
The unusual lightcurve of 1990 TR
p 1720 N93-19265

**ELECTROPHYSICS**
Optical and electronic properties of lattice-matched and strained semiconductor superlattices
[ETN-92-92828] p 1673 N93-18446

**ELECTROPLATING**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299
Vacuum deposition of copper on Type 304L stainless steel
[DE93-002704] p 1489 N93-19614

**ELECTROSTATIC PROBES**
Propulsion diagnostics p 1475 N93-18482
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619
Solar extreme ultraviolet sensor and advanced langmuir probe
[NASA-CR-191972] p 1744 N93-18880
Mesh effect in a parallel plate analyzer
[NIFS-203] p 1669 N93-19931

**ELECTROSTATICS**
Phenomenological modelling of Polywell (tm) SCIF multi-cusp inertial-electrostatic confinement systems
[AD-A257944] p 1665 N93-18020
Applied Computational Electromagnetics Society Journal, volume 7, number 2, winter 1992
[AD-A258483] p 1502 N93-18263
Electrostatic potential in a collisionless plasma flow along open magnetic field lines
[NIFS-155] p 1666 N93-18421

**ELECTROWINNING**
Application of molten salts in pyrochemical processing of reactive metals
[DE92-018618] p 1489 N93-19437

**ELEMENTARY EXCITATIONS**
Optical and magnetic signatures of localized excitations in polyaniline
[DE93-001954] p 1674 N93-18620

**ELEMENTARY PARTICLES**
Theoretical studies in medium-energy nuclear and hadronic physics
[DE93-004373] p 1657 N93-19503
Incremental generation and exploration of hidden structure p 1690 N93-19726

**ELEVATION**
An approach to automated terrain classification from digital elevation model
[AD-A258210] p 1452 N93-17986

**ELEVATION ANGLE**
Particle emission from artificial cometary materials
p 1710 N93-19188

**ELLIPTICAL CYLINDERS**
Analytical surface singularity distributions for flow about elliptical cylinders
[AERO-REPT-9202] p 1526 N93-18132

**ELLIPTICAL ORBITS**
Debris about asteroids: Where and how much?
p 1703 N93-19136

**EMBEDDED COMPUTER SYSTEMS**
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Fault-tolerant fiber optic backplane
[NASA-CASE-LAR-14785-1] p 1663 N93-19052

**EMBEDDING**
On the theory of turbulent dynamics
[AD-A258695] p 1650 N93-19864

**EMERGENCIES**
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 1428 N93-19692
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents
p 1428 N93-19693

**EMERGENCY LIFE SUSTAINING SYSTEMS**
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991
p 1426 N93-19686

**EMISSION SPECTRA**
High-energy laser-particle interaction
p 1543 N93-18469
Radiation properties of high-temperature flames
p 1485 N93-18477
Propulsion diagnostics p 1475 N93-18482
Solar-terrestrial physics and astrophysics
p 1733 N93-18501
Emission spectra of selected SSME elements and materials
[NASA-RP-1286] p 1656 N93-18763
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
The first identification of C2 emission bands in comet Scorichenko-George (1989e1) spectrum
p 1703 N93-19139
Production rates for comet P/Temple 2 from long slit CCD spectroscopy p 1705 N93-19156
A strong 3.4 micron emission feature in comet Austin 1989c1 p 1706 N93-19162
Deimos: A reddish, D-type asteroid spectrum
p 1706 N93-19163
Spectroscopic observations of comet Austin (1989c)
p 1697 N93-19169
Evolution of near UV Halley's spectrum in the inner coma p 1716 N93-19235
Submillimeter molecular line observations of cometary Levy (1990c) p 1698 N93-19237

**EMITTERS**
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048

**EMOTIONAL FACTORS**
Effectiveness of birthdate biorhythm theory on flight accidents p 1431 N93-19710

**ENCAPSULATING**
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system
p 1496 N93-19402

**ENCOUNTERS**
Cassini: Mission to Saturn and Titan
p 1592 N93-18559
The vicinity of Jupiter: A region to look for comets
p 1719 N93-19253

**END EFFECTORS**
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
Retractable tool bit having latch type catch mechanism
[NASA-CASE-GSC-13359-1] p 1547 N93-18286
Split rail gripper assembly and tool driver therefor
[NASA-CASE-GSC-13370-2] p 1547 N93-18288
Capacifiector-based virtual force control and centering
[NASA-CR-191805] p 1520 N93-18764
Inertial-space disturbance rejection for robotic manipulators
[NASA-CR-191867] p 1641 N93-19361

**END-TO-END DATA SYSTEMS**
Integrated modeling of advanced optical systems
p 1463 N93-18832

**ENDOCRINE SYSTEMS**
A review of models of the human temperature regulation system
[AD-A258023] p 1595 N93-17918

**ENDOCRINOLOGY**
A review of models of the human temperature regulation system
[AD-A258023] p 1595 N93-17918

**ENDURANCE**
A computer-based visual analog scale
[AD-A258152] p 1597 N93-18280

**ENERGETIC PARTICLES**
The solar wind structures associated with cosmic ray decreases and particle acceleration in 1978-1982
p 1565 N93-18072
Visible Airglow Experiment data analysis
[NASA-CR-192119] p 1577 N93-18361
Deeply penetrating events in the extremely high-energy cosmic ray flux p 1746 N93-19384
Observations of Pc5 Alfven wave effects in the quiet time auroral ionosphere: Indications of energetic particle acceleration p 1733 N93-19588

**ENERGY ABSORPTION**
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973

**ENERGY BANDS**
The broad-band x ray spectral variability of Mkn 841
p 1561 N93-18711

**ENERGY BUDGETS**
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers
p 1710 N93-19189

Variational iterative method for the calculation of heat flux and mean energy balance
[INPE-5236-RPQ/648] p 1583 N93-19824

**ENERGY CONSERVATION**

The effect of different collision operators on the standard data analysis model p 1670 N93-19584

**ENERGY CONVERSION EFFICIENCY**

Research on polycrystalline thin-film CuGaInSe2 solar cells
[DE92-016439] p 1571 N93-18656
Fabrication of photovoltaic laser energy converterby MBE
[NASA-CR-4484] p 1571 N93-18866

**ENERGY DISSIPATION**

Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
Baseline experiments on Coulomb damping due to rotational slip
[AD-A258840] p 1560 N93-19440

**ENERGY DISTRIBUTION**

Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173
A suggestion for specification of the neutron energy scale in measurements, analyses and, evaluations of differential reaction cross-section data
[DE93-002931] p 1658 N93-19750

**ENERGY LEVELS**

The first level energy trigger of the L3 experiment/description of the hardware
[NOTA-INTERNA-987] p 1659 N93-17937
Nuclear structure from radioactive decay
[DE93-002795] p 1654 N93-18392
Characterization of radiation damage in solids p 1659 N93-18478
Recent progress on astrophysical opacity
[DE93-002892] p 1722 N93-19513

**ENERGY METHODS**

Energy method for analysis of measured airspeed change in landing airborne manoeuvre
[ESDU-92020] p 1436 N93-18042
Stratified plate model for composite plate analysis
[AD-A259001] p 1481 N93-19359

**ENERGY OF FORMATION**

Electronic structure of substitutionally disordered alloys: Direct configurational averaging
[DE93-002548] p 1489 N93-19480

**ENERGY POLICY**

Global change research: Summaries of research in FY 1992
[DE93-002859] p 1573 N93-18405

**ENERGY SOURCES**

Space and surface power for the space exploration initiative: Results from project outreach
[NASA-CR-191254] p 1474 N93-18848

**ENERGY SPECTRA**

Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413
Positron annihilation studies of the electronic structure and fermiology of the high-T(sub c) superconductors
[DE93-002982] p 1676 N93-19497
Nonlinear interactions associated with TID's in the quiet polar F-region from EISCAT observations p 1584 N93-19568

**ENERGY STORAGE**

Energy storage in supercritical solvents p 1498 N93-18492

**ENERGY TECHNOLOGY**

Investigation of pion-nucleus interactions
[DE93-004375] p 1657 N93-19504
Integration of carbonate fuel cells with advanced coal gasification systems
[DE93-003485] p 1572 N93-19622

**ENERGY TRANSFER**

Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence p 1726 N93-19548

**ENGINE AIRFRAME INTEGRATION**

Development of an engine/airframe performance matching scheme for jet engine retrofit
[AD-A258822] p 1449 N93-18997
Propelling force and resistance p 1403 N93-19003
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380

**ENGINE DESIGN**

SNECMA M88 engine development status
[ASME-90-GT-118] p 1448 N93-17849
Improving military transport aircraft through highly integrated engine-wing design
[DS-1607] p 1434 N93-17850
Turbine engine combustor design at SNECMA
[DS-2129] p 1448 N93-17851
The technological evolution of high thrust turbine engines
[DS-1881] p 1448 N93-17882
Design of the advanced regional aircraft, the DART-75
[NASA-CR-192044] p 1435 N93-17972
Advanced tactical fighter engine design: Front fan
[ETN-93-92998] p 1448 N93-18127
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
Development of an engine/airframe performance matching scheme for jet engine retrofit
[AD-A258822] p 1449 N93-18997
What is the progress in propulsion? p 1404 N93-19006
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089
Role of wind tunnel tests and CFD analysis for the development of aero-engines in IHI p 1417 N93-19326

**ENGINE FAILURE**

System for Anomaly and Failure Detection (SAFD) system development
[NASA-CR-184475] p 1552 N93-17856
Rocket engine monitoring system: Application to the Vulcain engine
[ETN-93-93016] p 1472 N93-18078
Technology test bed engine real-time failure control
[NASA-CR-192414] p 1474 N93-18879

**ENGINE INLETS**

The effect of aircraft inlets on the behaviour of aero engine axial flow compressors p 1530 N93-18722
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298

**ENGINE MONITORING INSTRUMENTS**

Rocket engine monitoring system: Application to the Vulcain engine
[ETN-93-93016] p 1472 N93-18078

**ENGINE PARTS**

Residual contact stresses in cryotechnical environments
[ETN-93-93020] p 1555 N93-18080
Control of in-service damage: Application to aircraft engines
[DS-2027] p 1448 N93-18151
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
Materials development program, ceramic technology project addendum to program plan: Cost effective ceramics for heat engines
[DE93-003663] p 1494 N93-18537
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578

**ENGINE TESTS**

SNECMA M88 engine development status
[ASME-90-GT-118] p 1448 N93-17849
Identification and interpretation of patterns in rocket engine data
[NASA-CR-192100] p 1473 N93-18401
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
The MPD thruster program at JPL p 1666 N93-18638
Scaling and applied field studies of MPD thrusters with laser diagnostics p 1667 N93-18643
Recent advances in MPD thruster research at Princeton p 1667 N93-18645
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762
Emission spectra of selected SSME elements and materials
[NASA-RP-1286] p 1656 N93-18763

**ENGINEERING**

Reliability, Maintainability, and Supportability (RMS) education in engineering schools
[AD-A258260] p 1552 N93-18026
Decade of achievement: Educational leadership in mathematics, science and engineering
[NSF-92-94] p 1679 N93-18383
Highlights of engineering research centers technology transfer
[NSF-92-6] p 1694 N93-18457

**ENGINEERS**

Dr. Alexander H. Flax: Technologist of aeronautics
[AD-A258441] p 1747 N93-17890
NASA/DoD Aerospace Knowledge Diffusion Research Project: A comparison of the technical communications practices of Russian and US aerospace engineers and scientists
[NASA-TM-107714] p 1686 N93-18160
A study of illness related lost time in transport aircraft crewmembers
[AD-A258193] p 1602 N93-18298
Process definition and modeling guidebook, version 01.00.02
[AD-A258967] p 1625 N93-19086

**ENGLISH LANGUAGE**

Improving the quality of machine translations by providing stylistic guidelines to authors and editors
[AD-A258786] p 1687 N93-18977

**ENTHALPY**

Increase of stagnation pressure and enthalpy in shock tunnels p 1417 N93-18086

**ENTROPY**

Planning, scheduling, and control for automatic telescopes p 1637 N93-18677

**ENTROPY (STATISTICS)**

Self-growing neural network architecture using crisp and fuzzy entropy
[NASA-TM-105677] p 1553 N93-18422

**ENVIRONMENT EFFECTS**

Natural and anthropogenic climate change
[DE93-003150] p 1573 N93-18393
Transportation alternatives 92: Alternative fueled vehicles, volume 2
[DE93-001500] p 1548 N93-18531
Climate model calculations of the effects of volcanoes on global climate
[NASA-CR-191999] p 1573 N93-18600

**ENVIRONMENT MANAGEMENT**

Bibliographic study of georadar principles, applications, advantages, and inconvenience
[CR-35/91] p 1509 N93-18993

**ENVIRONMENT MODELS**

A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
An intelligent real-time system architecture implemented in Ada
[AD-A259002] p 1640 N93-18893
Water quality modeling using geographic information system (GIS) data p 1575 N93-19396
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
Multiple study inventory method for tropical forest
[INPE-5319-PRE/1716] p 1568 N93-19790

**ENVIRONMENT POLLUTION**

AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587

**ENVIRONMENT PROTECTION**

Global Change Research Program: A component of the US Global Change Research Program. 1993 research opportunities
[NSF-92-77] p 1572 N93-18319
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587

**ENVIRONMENTAL CONTROL**

Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971

**ENVIRONMENTAL MONITORING**

Microwave remote sensing for forest monitoring purposes
[BCRS-91-15] p 1566 N93-18431
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region
[INPE-5330-PRE/1728] p 1568 N93-19821

**ENVIRONMENTAL TESTS**

An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329

**EPHEMERIDES**

A candidate for the parent body of the Taurid complex and its search ephemeris p 1721 N93-19271

**EPIDEMIOLOGY**

Epidemiology of United States Air Force spatial disorientation accidents: 1990-1991 p 1425 N93-19679

Health effects of low-frequency electric and magnetic fields
[DE93-005675] p 1599 N93-19838

**EPITAXY**
Heteroepitaxial diamond growth
[AD-A257510] p 1671 N93-18079
Pseudomorphic stabilization of diamond on non-diamond substrates, part 1. Diamond grown on single crystal beryllium oxide, Part 2. Anomalous band gap behavior and phase stability of c-BN/Diamond alloys
[AD-A257845] p 1493 N93-18345
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films
[DE93-002325] p 1677 N93-19742
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848

**EPOXY MATRIX COMPOSITES**
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
A performance model for thick composite cylinders subjected to external hydrostatic pressure
[DE93-002425] p 1560 N93-19476

**EPOXY RESINS**
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493

**EQUATIONS OF MOTION**
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187
Elastic dynamics of a complete wind turbine structure: Theoretical development
[DE93-002478] p 1555 N93-18524
On the information contained in the motion field of lines and the cooperation between motion and stereo
[INRIA-RR-1453] p 1537 N93-18647
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
Flexible rotorcraft system dynamics with time-variant contact conditions p 1441 N93-19034
An approximate solution for the linearized spinup dynamics of a dual-spin spacecraft
[AD-A258903] p 1470 N93-19350

**EQUATORIAL REGIONS**
Modeling orbital changes on tectonic time scales p 1581 N93-18971

**EQUIVALENCE**
Flow models of distributed computations: Three equivalent semantics for CCS
[INRIA-RR-1484] p 1622 N93-18613
Observing localities
[INRIA-RR-1485] p 1647 N93-18614

**ERBIUM**
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991

**ERGOMETERS**
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970

**EROSION**
Structural performance of candidate ablatives for uptake section of vertical launching system
[AD-A258218] p 1455 N93-18300
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851

**ERROR ANALYSIS**
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860
An examination of the performance of a natural truncation point and acceptance rule for a curtailed Wald sequential sampling plan with Bernoulli parameters
[AD-A257579] p 1649 N93-18180
An investigation of error characteristics and coding performance
[NASA-CR-191899] p 1620 N93-18373
Formulation and error analysis for a generalized image point correspondence algorithm
[NASA-CR-192005] p 1621 N93-18570
Tools of modeling, identification, and signal processing for fault diagnosis in continuous-time systems
[LAAS-92153] p 1649 N93-18625
P-adaptivity applied to plate in bending problems p 1557 N93-18756
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario p 1454 N93-18899
Minimizing noise-temperature measurement errors p 1507 N93-18919
Optimization of three dimensional meshes
[ETN-92-92554] p 1647 N93-19008
Asteroid orbital error analysis: Theory and application p 1454 N93-19214
Spacecraft-spacecraft very long baseline interferometry. Part 1: Error modeling and observable accuracy p 1512 N93-19418
Use of the VLBI delay observable for orbit determination of Earth-orbiting VLBI satellites p 1454 N93-19419
Modeling the global positioning system signal propagation through the ionosphere p 1434 N93-19420
Multiple symbol partially coherent detection of MPSK p 1514 N93-19431
Measurement uncertainty analysis techniques applied to PV performance measurements
[DE93-000019] p 1553 N93-19438
Modeling human response errors in synthetic flight simulator domain p 1612 N93-19464
The human factor problem in the Canadian Forces aviation p 1422 N93-19657
Design and application of electromechanical actuators for deep space missions
[NASA-CR-192227] p 1551 N93-19946

**ERROR CORRECTING CODES**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181
Self-dual (48,24;12) codes p 1505 N93-18905
Bias correction factors for near-Earth asteroids p 1701 N93-19127

**ERROR DETECTION CODES**
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236

**ERROR SIGNALS**
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna p 1505 N93-18902

**ERRORS**
Identification of toroidal field errors in a modified betatron accelerator
[AD-A257983] p 1660 N93-18289
COBE Differential Microwave Radiometer (DMR) data processing techniques p 1562 N93-18715
Minimizing noise-temperature measurement errors p 1507 N93-18919
Effect of contrast on human speed perception
[NASA-TM-103898] p 1607 N93-19104
Network problem threshold p 1516 N93-19397
Real and spurious anticorrelations between V(parallel) and V(perpendiculars) in EISCAT data p 1517 N93-19578
Accidents and errors: A review of recent UK Army Air Corps accidents p 1429 N93-19701
Proposed Lower Limits of Detection (LLD), Decision Limits (LC), and error terms for identified analytes from the inorganic, isotopic, bioassay, and organic groups
[DE93-002942] p 1484 N93-19752

**ERS-1 (ESA SATELLITE)**
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430

**ESA SATELLITES**
Olympus: The communications satellite and its uses. An introduction
[ESA-F-29] p 1461 N93-18369

**ESCAPE SYSTEMS**
An epidemiological study in SAF's pilots ejections p 1429 N93-19699

**ESCARPMENTS**
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801

**ESTIMATING**
Application of the total least squares technique to frequency estimation
[AD-A257562] p 1644 N93-17936
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221
Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633
An analysis of I/O efficient order-statistic-based techniques for noise power estimation in the HRMS sky survey's operational system p 1508 N93-18926
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
Prediction of success from training p 1430 N93-19702

**ESTIMATORS**
An orthogonal estimation algorithm for complex number systems
[RR-405] p 1621 N93-18568

**ETCHING**
Nanorecording p 1539 N93-18467

**EUCLIDEAN GEOMETRY**
Output sensitive construction of the 3D Delaunay triangulation of constrained sets of points
[INRIA-RR-1415] p 1646 N93-18456

**EULER EQUATIONS OF MOTION**
Application of an Euler-equation method to a sharp-edged delta wing configuration with vortex flow
[NLR-TP-91] p 1404 N93-17809
Analysis of a multistep Jacobi multigrid method for solving the Euler equations
[INRIA-RR-1506] p 1644 N93-17879
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
Lagrangian chaos: Transport, mixing, and diffusion in fluids
[NOTA-INTERNA-988] p 1651 N93-17939
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
Computational Fluid Dynamics, volume 2
[VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Validation of central and upwind 3D compressible flow solvers p 1529 N93-18564
Exact-gradient shape optimization of a 2D Euler flow
[INRIA-RR-1540] p 1530 N93-18623
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures
[NASA-CR-189742] p 1532 N93-18769
Coupling between plate vibration and acoustic radiation
[NASA-CR-189741] p 1651 N93-18770

**EULER-LAGRANGE EQUATION**
A dynamic analysis of piezoelectric strained elements
[AD-A259011] p 1651 N93-19014
On the Lagrangian of the linearized MHD equations
[NIFS-154] p 1670 N93-19933

**EUROPA**
Europa: Prospects for an ocean and exobiological implications p 1591 N93-18552

**EUROPEAN AIRBUS**
Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus p 1446 N93-19926

**EVALUATION**
Alternative optimization strategies for large-scale production-allocation problems
[REPT-92-13] p 1615 N93-17833
Unit analysis and testing
[AD-A258435] p 1616 N93-17867
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407
Design and evaluation of FDDI fiber optics networkfor Ethernets, VAX's and Ingraph work stations p 1664 N93-19408
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600

**EVAPORATION**
Evaporation and burning of a spherical fuel droplet in a uniform convective flowfield
[DE93-002223] p 1482 N93-17910
Growth and properties of co-evaporated superconducting YBaCuO thin films
[ETN-92-92798] p 1673 N93-18441

**EVENTS**
Flow models of distributed computations: Event structures and nets
[INRIA-RR-1482] p 1646 N93-18612

**EVOKED RESPONSE (PSYCHOPHYSIOLOGY)**
Spatio-temporal masking: Hyperacuity and local adaptation
[AD-A257934] p 1595 N93-18006
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 1430 N93-19706

**EVOLUTION (DEVELOPMENT)**
Modeling of asteroidal dust production rates p 1705 N93-19150
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191

**EXCAVATION**
Resource availability at Taurus-Littrow p 1736 N93-18792

**EXCIMER LASERS**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser
[AD-A257551] p 1491 N93-17966

**EXCITATION**
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001682] p 1488 N93-18589
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706
Meteor fireball sounds identified p 1709 N93-19184
The contribution of electron collisions to rotational excitations of cometary water p 1721 N93-19268
In-flight structural mode excitation system for flutter testing p 1444 N93-19915
**EXCITONS**
The pre-onset, transitional, and foot regions in resistance versus temperature behavior in high-T2 cuprates: Inferences regarding maximum T2
[AD-A258175] p 1670 N93-17923
**EXERCISE PHYSIOLOGY**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209
**EXHAUST GASES**
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets
[NASA-TM-105999] p 1471 N93-17995
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
Emission spectra of selected SSME elements and materials
[NASA-RP-1286] p 1656 N93-18763
Advanced divertor program results from D3-D
[DE93-002675] p 1668 N93-19619
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851
**EXHAUST SYSTEMS**
A computational study of a supersonic mixer-ejector exhaust system
[AD-A258456] p 1471 N93-17993
**EXISTENCE THEOREMS**
On the time dependent hydrodynamic model for semiconductors
[ETN-93-93027] p 1518 N93-18098
**EXOBIOLOGY**
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 370)
[NASA-SP-7011(370)] p 1596 N93-18108
Exobiology in Solar System Exploration
[NASA-SP-512] p 1590 N93-18545
Overview: Exobiology in solar system exploration p 1591 N93-18546
The solar system: Importance of research to the biological sciences p 1591 N93-18547
Europa: Prospects for an ocean and exobiological implications p 1591 N93-18552
Titan p 1592 N93-18553
Cosmic dust p 1592 N93-18554
Comets: Role and importance to exobiology p 1592 N93-18556
CRAF Mission: An opportunity for exobiology p 1592 N93-18558
Cassini: Mission to Saturn and Titan p 1592 N93-18559
Exobiology: The NASA program p 1593 N93-18561
Investigation of wheat coleoptile response to phototropic stimulations
[NASA-CR-192157] p 1593 N93-18608
**EXPEDITIONS**
FLARE: The Far Side Lunar Research Expedition. A design of a far side lunar observatory
[NASA-CR-192029] p 1695 N93-18163
**EXPERIMENT DESIGN**
Measurement uncertainty analysis techniques applied to PV performance measurements
[DE93-000019] p 1553 N93-19438
A general experiment definition system and its applications p 1517 N93-19576
The G2-system, a second generation experimental philosophy for EISCAT p 1517 N93-19577
**EXPERT SYSTEMS**
Methodologies of automatic control including fuzzy logic
[LAAS-92257] p 1631 N93-17814
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
Artificial intelligence for geologic mapping with imaging spectrometers
[NASA-CR-192086] p 1564 N93-17979
Automated documentation generator for advanced protein crystal growth
[NASA-CR-192452] p 1673 N93-18425
Study and implementation of a set of primitives for constraint satisfaction in finite domains
[INRIA-RR-1389] p 1646 N93-18436
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning
[NASA-TM-108124] p 1634 N93-18659
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660
Scheduling lessons learned from the Autonomous Power System p 1636 N93-18671
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
High temperature component analysis with expert systems p 1557 N93-18751
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887
An intelligent real-time system architecture implemented in Ada
[AD-A259002] p 1640 N93-18893
Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018
Automatically calibrating admittances in KATE's autonomous launch operations model p 1456 N93-19401
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Patterns for knowledge discovery in databases p 1688 N93-19712
Extracting knowledge from data: SYS8688 approach p 1688 N93-19715
Large-scale induction of ripple-down-rules: Some preliminary considerations p 1689 N93-19716
Self-questioning and experimentation in an exploratory discovery system p 1689 N93-19717
Machine discovery approach to dynamic systems in the real laboratory p 1689 N93-19719
Elements of scientific research: Modeling discoveries in oxide superconductivity p 1679 N93-19720
Toward model-based discovery: A case study in ecosystem prediction p 1689 N93-19721
Discovery of physical principles from design experiences p 1690 N93-19722
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723
Machine discovery by model driven analogy p 1629 N93-19724
Informal qualitative models in scientific discovery p 1690 N93-19725
Incremental generation and exploration of hidden structure p 1690 N93-19726
Discovery of spatial concepts in crystallographic databases p 1690 N93-19727
The evaluation and reporting of discovery systems p 1691 N93-19734
Evaluating machine discovery systems p 1692 N93-19735
A knowledge-based system for satellite imagery segmentation
[INPE-5296-PRE/1701] p 1568 N93-19834
**EXPLOSIVES**
Flash radiographic studies of hypervelocity projectile interactions with explosives
[AD-A258387] p 1497 N93-18260
**EXPONENTIAL FUNCTIONS**
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886
Extended Lyapunov exponents for second order systems
[AD-A258838] p 1647 N93-19066
**EXPONENTS**
Extended Lyapunov exponents for second order systems
[AD-A258838] p 1647 N93-19066
**EXPOSURE**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission
[NASA-TM-4422] p 1746 N93-18014
**EXTINCTION**
Long-term evolution of 1991 DA: A dynamically evolved extinct Halley-type comet p 1707 N93-19166
**EXTRACTION**
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399
**EXTRAGALACTIC RADIO SOURCES**
Correlated flux densities from VLBI observations with the DSN p 1506 N93-18909
**EXTRAPOLATION**
A bandwidth extrapolation technique for improved range resolution of coherent radar data, revision 1
[AD-A258462] p 1502 N93-18262
**EXTRATERRESTRIAL ENVIRONMENTS**
Europa: Prospects for an ocean and exobiological implications p 1591 N93-18552
**EXTRATERRESTRIAL LIFE**
Venus: A search for clues to early biological possibilities p 1591 N93-18549
Mars: A reassessment of its interest to biology p 1591 N93-18550
Europa: Prospects for an ocean and exobiological implications p 1591 N93-18552
**EXTRATERRESTRIAL RADIATION**
Space radiation health program plan
[NASA-TM-108036] p 1598 N93-18375
Shielding from space radiations
[NASA-CR-191966] p 1655 N93-18567
**EXTRATERRESTRIAL RESOURCES**
Asteroid exploration and utilization: The Hawking explorer
[NASA-CR-192027] p 1699 N93-18164
**EXTRAVEHICULAR ACTIVITY**
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428
**EXTREME ULTRAVIOLET EXPLORER SATELLITE**
Extreme Ultraviolet Explorer. Long look at the next window
[NASA-TM-108618] p 1700 N93-18992
**EXTREME ULTRAVIOLET RADIATION**
Solar extreme ultraviolet sensor and advanced langmuir probe
[NASA-CR-191972] p 1744 N93-18880
Extreme Ultraviolet Explorer. Long look at the next window
[NASA-TM-108618] p 1700 N93-18992
**EXTREMELY HIGH FREQUENCIES**
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
Atmospheric refraction correction for Ka-band blind pointing on the DSS-13 beam waveguide antenna p 1505 N93-18903
**EYE MOVEMENTS**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816
Role of orientation reference selection in motion sickness
[NASA-CR-191912] p 1598 N93-18596
**EYE PROTECTION**
Multi-function visor p 1609 N93-19770

## F

**F REGION**
Measurements of F-region drift velocities at the dusk sector mid-latitude trough
[AD-A257766] p 1575 N93-17907
Report on the 7th Finnish EISCAT Workshop
[REPT-121-(1992)] p 1577 N93-18736
EISCAT observations of spectral components of atmospheric gravity waves in the F region p 1578 N93-18743
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525
EISCAT measurements in the E and F regions during the 12-16 February 1990 LTCS campaign p 1726 N93-19546
Ion composition in the auroral F region: Comparison of EISCAT data and ionospheric model predictions p 1726 N93-19547
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553
EISCAT-MICADO coordinated measurements of meridional neutral winds and temperatures in the F region p 1584 N93-19563
The ionospheric response to atmospheric gravity waves in the EISCAT region p 1729 N93-19567
INDI p 1730 N93-19570
NO(+)-enhancement in the height range between 180 and 300 km during ion heating events p 1732 N93-19583

Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar p 1732 N93-19586

**F 2 REGION**
Real and spurious anticorrelations between V(parallel) and V(perpendiculars) in EISCAT data p 1517 N93-19578

**F-117A AIRCRAFT**
Stealth in the storm: Sorting the facts from the fiction [AD-A258440] p 1434 N93-17889

**F-15 AIRCRAFT**
Add-on damping treatment for the F-15 upper-outer wing skin [AD-A258470] p 1438 N93-18248

**F-16 AIRCRAFT**
Flight director information and pilot performance in instrument approaches [AD-A258186] p 1601 N93-17857
Strategies for optimal control design of normal acceleration command following on the F-16 [AD-A258975] p 1450 N93-19095
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 1425 N93-19673
F-16 accidents: The Norwegian experience p 1425 N93-19674
Category A F-16 accidents in the Belgian Air Force p 1425 N93-19675
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 1425 N93-19677

**F-18 AIRCRAFT**
Identification and control of non-linear time-varying dynamical systems using artificial neural networks [AD-A257595] p 1450 N93-18193
Longitudinal-control design approach for high-angle-of-attack aircraft [NASA-TP-3302] p 1451 N93-19108
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers [NASA-TM-104265] p 1447 N93-19110

**F-4 AIRCRAFT**
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 1425 N93-19673

**FABRICATION**
Processing and fabrication of high temperature oxide superconductors [AD-A258281] p 1671 N93-18125
Field-emitter arrays for RF vacuum microelectronics [AD-A258211] p 1518 N93-18203
Add-on damping treatment for the F-15 upper-outer wing skin [AD-A258470] p 1438 N93-18248
Electrically modifiable nonvolatile SONOS synapses for electronic neural networks [AD-A258318] p 1596 N93-18252
Carbon and graphite matrices in carbon-carbon composites: An overview of their formation, structure, and properties [AD-A258386] p 1478 N93-18259
Three-terminal superconducting device research [AD-A257907] p 1520 N93-18341
Research and development on advanced silicon carbide thin film growth techniques and fabrication of high power and microwave frequency silicon carbide-based device structures [AD-A257913] p 1672 N93-18367
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers [DE93-002561] p 1520 N93-18391
Device applications of layered structures p 1523 N93-18461
Simulated coal-gas-fueled molten carbonate fuel cell development program [DE93-000205] p 1570 N93-18527
Development of phosphate-based ceramic membranes [DE93-003285] p 1494 N93-18572
Planning for the semiconductor manufacturer of the future p 1636 N93-18672
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681
Advanced Turbine Technology Applications Project (ATTAP) [NASA-CR-189228] p 1694 N93-18762
Integrated design of the CSI evolutionary structure: A verification of the design methodology p 1463 N93-18830
Integrated modeling of advanced optical systems p 1463 N93-18832
Design, analysis, and testing of high frequency passively damped struts p 1464 N93-18835
Fabrication of photovoltaic laser energy converterby MBE [NASA-CR-4484] p 1571 N93-18866
High temperature chemistry of fibers and composites [AD-A258788] p 1479 N93-18978
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN [AD-A258804] p 1675 N93-18983
Numerical control fabrication technique for dynamic composite models [NASA-CASE-LAR-14004-1] p 1640 N93-19024
Method and apparatus for three dimensional braiding [NASA-CASE-LAR-14047-1] p 1500 N93-19038
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407
Second Workshop Role of Point Defects/Defect Complexes in Silicon Device Fabrication [DE92-016424] p 1675 N93-19467
Multiple layer dielectrics, hot film sensors, and methods of producing same [NASA-CASE-LAR-14591-1] p 1539 N93-19493
Ion beam-based characterization of multicomponent oxide thin films and thin film layered structures [DE93-003004] p 1676 N93-19627
Superconducting tunnel junction x-ray detectors with niobium absorbers and aluminum quasiparticle traps [DE93-002885] p 1677 N93-19826
Tube diode [INPE-5438-NTC/304] p 1551 N93-19832

**FABRY-PEROT INTERFEROMETERS**
Aeronomy of auroral and airglow emissions p 1584 N93-18496
Observations of comet Levy 1990c in the (OI) 6300-A line with an imaging Fabry-Perot p 1698 N93-19224
INDI p 1730 N93-19570

**FACE CENTERED CUBIC LATTICES**
A first-principles study of the phase stability of fcc-based Ti-Al alloys [DE93-002549] p 1487 N93-18390
Electronic structure of substitutionally disordered alloys: Direct configurational averaging [DE93-002548] p 1489 N93-19480
Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems [DE93-002558] p 1489 N93-19486

**FACILITIES**
Data communication network at the ASRM facility [NASA-CR-192085] p 1500 N93-17930

**FACTORIZATION**
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287

**FAIL-SAFE SYSTEMS**
Defect tolerance of hybrid pressure vessels: The total reliability versus total failure as an interpretation criterion [ILR-MITT-272(1992)] p 1552 N93-18097

**FAILURE**
Network problem threshold p 1516 N93-19397
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems [DE93-001403] p 1679 N93-19470
US Army helicopter inertia reel locking failures p 1427 N93-19689

**FAILURE ANALYSIS**
The product and services design and development software aided tool RELIASEP [ETN-93-93015] p 1617 N93-18076
Second generation integrated composite analyzer (ICAN) computer code [NASA-TP-3290] p 1477 N93-18139
Computer modelling of cyclic deformation of high-temperature materials [AD-A258404] p 1477 N93-18222
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems [AD-A257790] p 1519 N93-18236
Application of a neural network as a potential aid in predicting NTF pump failure [NASA-TM-107667] p 1620 N93-18332
Structural Analysis 1992 [VTT-SYMP-128] p 1556 N93-18749
Numerical analysis of surface cracks p 1556 N93-18750
High temperature component analysis with expert systems p 1557 N93-18751
Technology test bed engine real-time failure control [NASA-CR-192414] p 1474 N93-18879
Fault detection using a two-model test for changes in the parameters of an autoregressive time series p 1505 N93-18907
Impact response of laminated plates subjected to transverse loading [NIAR-92-5] p 1560 N93-19360
Availability analysis of the traveling-wave maser amplifiers in the deep space network. Part 1: The 70-meter antennas p 1514 N93-19435
Damage mechanics of cross-ply laminates resulting from transverse concentrated loads [AD-A259271] p 1481 N93-19839

**FAILURE MODES**
Dynamic test results for the CASES ground experiment p 1455 N93-18843
Detection of spoofing, jamming, or failure of a Global Positioning System (GPS) [AD-A259023] p 1433 N93-18951
Real-time diagnostics for a reusable rocket engine [NASA-TM-105792] p 1640 N93-19018

**FALSE ALARMS**
An analysis of I/O efficient order-statistic-based techniques for noise power estimation in the HRMS sky survey's operational system p 1508 N93-18926

**FAN BLADES**
Aerodynamic design and analysis of fans using 3D computational codes [DS-2140] p 1404 N93-17880

**FAR FIELDS**
Coupling between plate vibration and acoustic radiation [NASA-CR-189741] p 1651 N93-18770

**FAR INFRARED RADIATION**
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array [DE93-002564] p 1538 N93-19487

**FAR ULTRAVIOLET RADIATION**
Method and apparatus for producing a thermal atomic oxygen beam [NASA-CASE-LEW-15614-1] p 1656 N93-19026

**FARM CROPS**
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data [INPE-5327-PRE/1725] p 1567 N93-19646

**FAST FOURIER TRANSFORMATIONS**
Design and development of a high-speed Winograd fast Fourier transform processor board [AD-A258919] p 1522 N93-19342
Digital signal processing using lapped transforms with variable parameter windows and orthonormal bases [AD-A258853] p 1511 N93-19368
Fast Fourier transform: A solution for digital signal processing in incoherent scatter experiments? p 1516 N93-19541

**FAST NEUTRONS**
Neutrons scattering studies in the actinide region [DE93-003655] p 1654 N93-18413

**FAST NUCLEAR REACTORS**
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing [DE93-002917] p 1489 N93-19514

**FASTENERS**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies [AD-A258217] p 1486 N93-18299

**FATIGUE (BIOLOGY)**
Effects of dextromethamphetamine on subjective fatigue [AD-A258252] p 1594 N93-17822

**FATIGUE (MATERIALS)**
Methods for improving damping. Part 3: Damping material data [ESDU-92001] p 1554 N93-17997
Fatigue of turboengine discs [DS-2136] p 1448 N93-18149
Segregation of defects in wrought alloy 718: Management of industrial safeguards [DS-2038] p 1486 N93-18150
Add-on damping treatment for the F-15 upper-outer wing skin [AD-A258470] p 1438 N93-18248
Structural Analysis 1992 [VTT-SYMP-128] p 1556 N93-18749
Mechanical behavior of titanium aluminide under engine operating conditions [AD-A258884] p 1550 N93-19079
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 1443 N93-19907

**FATIGUE LIFE**
Fatigue of turboengine discs [DS-2136] p 1448 N93-18149
Study of statistical variations of load spectra and material properties on aircraft fatigue life [AD-A257961] p 1440 N93-18451
Creep fatigue life prediction for engine hot section materials (isotropic) [NASA-CR-189221] p 1448 N93-18578
Calculation of the fatigue life of a surface-hardened shaft by the finite-element method [VTT-PUBS-92] p 1548 N93-18695

Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444
Assessment of helicopter component statistical reliability computations
[AD-A258931] p 1441 N93-19447
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846

**FATIGUE TESTS**
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578
Fatigue crack growth and coalescense in a notch region
[ISBN-0-315-68910-2] p 1559 N93-19042
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 1446 N93-19928

**FAULT TOLERANCE**
A conceptual framework for system fault tolerance
[AD-A258467] p 1619 N93-18269
Reconfiguration schemes for fault-tolerant processor arrays
[AD-A257833] p 1520 N93-18365
Fault-tolerant fiber optic backplane
[NASA-CASE-LAR-14785-1] p 1663 N93-19052
Real-time fault tolerant computer systems
[AD-A258891] p 1625 N93-19334

**FEASIBILITY**
Feasible interpretability
[ML-91-11] p 1643 N93-17868

**FEASIBILITY ANALYSIS**
Project Columbiad: Mission to the Moon. Book 1: Executive Summary. Volume 1: Mission trade studies and requirements. Volume 2: Subsystem trade studies and selection
[NASA-CR-192019] p 1734 N93-18233
Fiberoptic characteristics for extreme operating environments
[NASA-CR-189189] p 1475 N93-19649
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952

**FEEDBACK**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816
Mechanical Engineering Design Project report: Enabler control systems
[NASA-CR-192058] p 1546 N93-18062
Adaptive planning for applications with dynamic objectives p 1635 N93-18666

**FEEDBACK CONTROL**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Robust multivariable feedback design for uncertain linear systems
[AD-A258257] p 1648 N93-17902
Mechanical Engineering Design Project report: Enabler control systems
[NASA-CR-192058] p 1546 N93-18062
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191900] p 1632 N93-18372
A proposal of an architecture for the coordination level of intelligent machines
[NASA-CR-191990] p 1613 N93-18516
Static and dynamic characteristics of a piezoceramic strut p 1462 N93-18827
System identification and structural control on the JPL Phase B testbed p 1463 N93-18828
Structural control sensors for the CASES GTF p 1464 N93-18837
An experimental determination of the effects of blending collocated and non-collocated sensor measurements to control a flexible structure
[AD-A258823] p 1559 N93-18998
Impedance control design for robot tasks involving free and contact motion p 1640 N93-19045
Teleprogramming: Remote site robot task execution p 1641 N93-19046
Longitudinal-control design approach for high-angle-of-attack aircraft
[NASA-TP-3302] p 1451 N93-19108
Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351
Image stabilization performance optimization using an optical reference gyroscope
[AD-A258863] p 1538 N93-19371
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380
An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847

**FEEDFORWARD CONTROL**
Identification and control of non-linear time-varying dynamical systems using artificial neural networks
[AD-A257595] p 1450 N93-18193
Inverse kinematics problem in robotics using neural networks
[NASA-TM-105869] p 1558 N93-18876
Feed-forward control upgrade of the deep space network antennas p 1514 N93-19434

**FELDSPARS**
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621
Refining the granulite suite p 1736 N93-18789
Using Apollo 17 high-Ti mare basalts as windows to the lunar mantle p 1738 N93-18805

**FEMALES**
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 1430 N93-19704

**FERMI SURFACES**
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
Positron annihilation studies of the electronic structure and fermiology of the high-T(sub c) superconductors
[DE93-002982] p 1676 N93-19497
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498

**FERRITES**
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182

**FERRITIC STAINLESS STEELS**
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514

**FERROELECTRICITY**
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957

**FERROMAGNETIC MATERIALS**
Advanced electronic structures
[AD-A258401] p 1519 N93-18261
Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on Ni(0.5)Co(0.5)O
[DE93-000509] p 1487 N93-18528

**FERROMAGNETIC RESONANCE**
Magnetic multilayer interface anisotropy
[DE93-004951] p 1676 N93-19634

**FERTILIZERS**
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054

**FIBER COMPOSITES**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Thermal cycling behavior of unidirectional and cross-plied P100 Gr/6061 aluminum composites
[AD-A257506] p 1477 N93-18077
Defect tolerance of hybrid pressure vessels: The total reliability versus total failure as an interpretation criterion
[ILR-MITT-272(1992)] p 1552 N93-18097
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139
Micromechanics-based analysis of fiber-reinforced laminated composites
[AD-A257816] p 1478 N93-18364
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
Fibre reinforced plastic structures p 1557 N93-18752
Micromechanics of crenulated fibers in carbon/carbon composites
[NASA-CR-192170] p 1478 N93-18767
Compatibility of potential reinforcing ceramics with Ni and Fe aluminides
[NASA-CR-192232] p 1494 N93-18784
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
Method and apparatus for three dimensional braiding
[NASA-CASE-LAR-14047-1] p 1500 N93-19038
Circular dislocation loops and their application to the micromechanics of fibrous composites p 1480 N93-19043
Characterization and defect analysis of high temperature aluminum-based metal matrix composites p 1480 N93-19060
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
Open and filled hole static tensile strength characterization of metal matrix composite SCS-9/Beta21s
[AD-A258829] p 1480 N93-19091
Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336
Interface fracture in composite materials p 1560 N93-19381
Damage mechanics of cross-ply laminates resulting from transverse concentrated loads
[AD-A259271] p 1481 N93-19839
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851

**FIBER OPTICS**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962
Improving security in the Fiber Distributed Data Interface (FDDI) protocol
[AD-A257546] p 1501 N93-17963
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
Variable wide band fiber optic delay line
[AD-D015539] p 1662 N93-18318
Design and implementation of a fiber optic link for a token ring local area network
[AD-A257868] p 1662 N93-18335
Fault-tolerant fiber optic backplane
[NASA-CASE-LAR-14785-1] p 1663 N93-19052
Phase conjugation in optical fiber via stimulated Brillouin scattering with feedback from a barium titanate crystal
[AD-A258824] p 1675 N93-19088
Optical fiber strain sensor with improved linearity
[NASA-CASE-LAR-14857-1-SB] p 1663 N93-19374
Design and evaluation of FDDI fiber optics networkfor Ethernets, VAX's and Ingraph work stations p 1664 N93-19408
Investigation of the bandwidth of multimode optical fibers used with 1550-nm LED and laser sources p 1664 N93-19409
DSS-13 beam waveguide antenna frequency stability p 1513 N93-19424
Laser beam diagnostics for kilowatt power pulsed YAG laser
[DE93-002928] p 1542 N93-19515
Fiberoptic characteristics for extreme operating environments
[NASA-CR-189189] p 1475 N93-19649

**FIBER ORIENTATION**
Thermal cycling behavior of unidirectional and cross-plied P100 Gr/6061 aluminum composites
[AD-A257506] p 1477 N93-18077

**FIBER VOLUME FRACTION**
Micromechanics of crenulated fibers in carbon/carbon composites
[NASA-CR-192170] p 1478 N93-18767
**FIBERS**
Asphalt mixtures modified with tall oil pitches and cellulose fibres
[VTT-PUBS-99] p 1494 N93-18699
**FICKS EQUATION**
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003
**FIELD ALIGNED CURRENTS**
Simulation of ionosphere-magnetosphere mesoscale coupling: Letting ionospheric conductivities depend on upward field-aligned currents p 1578 N93-18742
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522
Structure and dynamics of field-aligned currents inferred from EISCAT data p 1722 N93-19523
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525
**FIELD EFFECT TRANSISTORS**
HF MOSFET power amplifiers
[AD-A258384] p 1519 N93-18258
Three-terminal superconducting device research
[AD-A257907] p 1520 N93-18341
Research and development on advanced silicon carbide thin film growth techniques and fabrication of high power and microwave frequency silicon carbide-based device structures
[AD-A257913] p 1672 N93-18367
HPM damage thresholds of GaAs FETs and HEMTs
[AD-A257897] p 1520 N93-18420
VLSI microelectronics research p 1523 N93-18462
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191957] p 1523 N93-19893
**FIELD EMISSION**
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328
**FIELD OF VIEW**
Increasing the corrected field of view of an adaptive optical telescope
[AD-A258816] p 1663 N93-18995
**FIELD THEORY (PHYSICS)**
Structural simulation coupling for transient analysis
[AD-A258192] p 1643 N93-17861
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522
Structure and dynamics of field-aligned currents inferred from EISCAT data p 1722 N93-19523
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525
**FIGHTER AIRCRAFT**
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395
Methods for viewing radar cross section data in three dimensions
[AD-A258905] p 1626 N93-19352
Air accidents in the French Air Force p 1425 N93-19676
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 1425 N93-19677
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 1607 N93-19759
Flight above a virtual world p 1609 N93-19766
Management of avionics data in the cockpit p 1611 N93-19777
The integration of advanced cockpit and systems design p 1611 N93-19779
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 1443 N93-19906
In-flight structural mode excitation system for flutter testing p 1444 N93-19915
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 1434 N93-19924
**FIGURE OF MERIT**
Design of high speed proprotors using multiobjective optimization techniques p 1437 N93-18065
Optimum design of high speed prop rotors including the coupling of performance, aeroelastic stability and structures p 1438 N93-18066
**FILM COOLING**
Analysis of film cooling in rocket nozzles
[NASA-CR-192003] p 1473 N93-18518
Shock tube study of the effects of large density differences and blowing ratio on heat transfer to a film-cooled flat plate
[AD-A258813] p 1532 N93-18990
**FILTERS**
Texture enhancement of Synthetic Aperture Radar (SAR) images with speckle noise reduction filters
[INPE-5297-PRE/1702] p 1515 N93-19833
**FINANCIAL MANAGEMENT**
The obstacles encountered in the development of SMMS: A case study
[AD-A257880] p 1686 N93-18337
**FINE STRUCTURE**
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746
**FINISHES**
Evaluation of test methods to determine the impact resistance of exterior insulation and finish systems (EIFS)
[AD-A258433] p 1490 N93-17866
**FINITE DIFFERENCE THEORY**
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
Modelling of interfacial and thermocline waves
[AERO-REPT-9209] p 1525 N93-18103
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
Finite difference time domain modeling of spiral antennas
[NASA-CR-192237] p 1503 N93-18586
Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633
Penetrative and recirculating flows in enclosures with openings p 1533 N93-19040
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282
Numerical treatment of laminar flow in curved rectangular channels with inlet and outlet straight region p 1413 N93-19304
Comparative study of various difference schemes for some laminar channel flows p 1413 N93-19307
**FINITE ELEMENT METHOD**
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920
Geometrically nonlinear analysis of laminated elastic structures
[NASA-CR-191055] p 1476 N93-17924
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090
H-P adaptive methods for finite element analysis of aerothermal loads in high-speed flows
[NASA-CR-189739] p 1525 N93-18093
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
Micromechanics-based analysis of fiber-reinforced laminated composites
[AD-A257816] p 1478 N93-18364
Computational Fluid Dynamics, volume 1
[VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Solution of the time-dependent incompressible Navier-Stokes equations by finite elements p 1528 N93-18542
Finite element modeling of fluids p 1529 N93-18543
Basic research on design analysis methods for rotorcraft vibrations
[NASA-CR-191917] p 1556 N93-18576
A Blottner type numerical model for nonequilibrium viscous hypersonic flows in upwind finite elements
[INRIA-RR-1476] p 1407 N93-18648
Calculation of the fatigue life of a surface-hardened shaft by the finite-element method
[VTT-PUBS-92] p 1548 N93-18695
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
Numerical analysis of surface cracks p 1556 N93-18750
Fibre reinforced plastic structures p 1557 N93-18752
Analysis of structures under fire conditions p 1557 N93-18754
QA system for structural analysis p 1557 N93-18755
P-adaptivity applied to plate in bending problems p 1557 N93-18756
Finite element analysis of stiffened plate vibrations p 1557 N93-18757
Dynamics in condition monitoring, a case study p 1558 N93-18758
A comparison of refined models for flexible subassemblies p 1464 N93-18833
A comparison of viscoelastic damping models p 1464 N93-18836
Development of an hp-version finite element method for computational optimal control
[NASA-CR-192220] p 1639 N93-18882
An explicit solution to the optimal LQG problem for flexible structures with collocated rate sensors p 1467 N93-18932
CSI flight experiment projects of the Naval Research Laboratory p 1470 N93-18944
The non-linear dynamics of composite cylindrical shells
[AD-A259026] p 1558 N93-18953
Solving nonlinear composite material problems using the Automated Structural Optimization System (ASTROS)
[AD-A258811] p 1479 N93-18988
Flexible rotorcraft system dynamics with time-variant contact conditions p 1441 N93-19034
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287
Structures research p 1447 N93-19453
Dynamic characterization, monitoring and control of rotating flexible beam-mass structures via piezo-embedded techniques p 1561 N93-19458
A piecewise continuous Timoshenko beam model for the dynamic analysis of tapered beam-like structures p 1561 N93-19459
**FINITE VOLUME METHOD**
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
High speed laminar flow over cavities
[AERO-REPT-9110] p 1526 N93-18130
Validation of central and upwind 3D compressible flow solvers p 1529 N93-18564
**FINLAND**
Report on the 7th Finnish EISCAT Workshop in 1991 p 1578 N93-18737
EISCAT Svalbard radar p 1516 N93-18744
**FIR FILTERS**
Fast Fourier transform: A solution for digital signal processing in incoherent scatter experiments? p 1516 N93-19541
**FIRE PREVENTION**
Flame-front kinetics p 1485 N93-18481
**FIREBALLS**
Gross-fragmentation of meteoroids and bulk density of Geminids from photographic fireball records p 1703 N93-19137
**FIRES**
Penetrative and recirculating flows in enclosures with openings p 1533 N93-19040
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 1428 N93-19693
Fires on board aircraft: Toxicological risk in flight p 1428 N93-19694
**FIXED WINGS**
The S.T.o.R.M. (tm): Air transport system design simulation
[NASA-CR-192070] p 1439 N93-18349

**FLAME PROPAGATION**
Contribution to the study of airbreathing burner combustion instabilities
[ONERA-NT-1992-2] p 1482 N93-18189
Flame-front kinetics p 1485 N93-18481

**FLAMES**
Radiation properties of high-temperature flames p 1485 N93-18477
Flame-front kinetics p 1485 N93-18481
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894

**FLAMMABILITY**
Analysis of structures under fire conditions p 1557 N93-18754

**FLAMMABLE GASES**
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447
A study of the structure of gaseous detonation waves using Rayleigh scattering p 1483 N93-19028

**FLANGES**
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774

**FLAT PLATES**
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
Shock tube study of the effects of large density differences and blowing ratio on heat transfer to a film-cooled flat plate
[AD-A258813] p 1532 N93-18990
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282

**FLEXIBILITY**
Completable scheduling: An integrated approach to planning and scheduling p 1638 N93-18685
Process engineering with the evolutionary spiral process model, version 01.00.01
[AD-A258966] p 1625 N93-19085

**FLEXIBLE BODIES**
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 1
[NASA-CP-3177-PT-1] p 1461 N93-18818
The Mini-Mast CSI testbed: Lessons learned p 1461 N93-18819
Micro-precision control/structure interaction technology for large optical space systems p 1462 N93-18826
System identification and structural control on the JPL Phase B testbed p 1463 N93-18828
Control/structure interaction during Space Station Freedom-Orbiter berthing p 1463 N93-18831
A comparison of refined models for flexible subassemblies p 1464 N93-18833
The JPL Phase B interferometer testbed p 1464 N93-18834
Design, analysis, and testing of high frequency passively damped struts p 1464 N93-18835
Structural control sensors for the CASES GTF p 1464 N93-18837
Optical pathlength control on the JPL Phase B interferometer testbed p 1465 N93-18842
Dynamic test results for the CASES ground experiment p 1455 N93-18843
Results of the Advanced Space Structures Technology Research Experiments (ASTREX) hardware and control development p 1466 N93-18844
Design optimization of the JPL Phase B testbed p 1466 N93-18845
Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 2
[NASA-CP-3177-PT-2] p 1466 N93-18928
CSI related dynamics and control issues in space robotics p 1467 N93-18929
The Middeck Active Control Experiment (MACE) p 1457 N93-18936
CSI/MMC studies for improving jitter performance for large multi-payload platforms p 1468 N93-18937
An experimental determination of the effects of blending collocated and non-collocated sensor measurements to control a flexible structure
[AD-A258823] p 1559 N93-18998
Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339
Dynamic characterization, monitoring and control of rotating flexible beam-mass structures via piezo-embedded techniques p 1561 N93-19458
A piecewise continuous Timoshenko beam model for the dynamic analysis of tapered beam-like structures p 1561 N93-19459

**FLEXIBLE SPACECRAFT**
Structural simulation coupling for transient analysis
[AD-A258192] p 1643 N93-17861
Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Physical insight into the simultaneous optimization of structure and control p 1461 N93-18821
Model reduction results for flexible space structures p 1462 N93-18824
Integrated design of the CSI evolutionary structure: A verification of the design methodology p 1463 N93-18830
Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853
The Middeck Active Control Experiment (MACE) p 1457 N93-18936
Precision slew/settle technologies for flexible spacecraft p 1468 N93-18938

**FLICKER**
The x ray variability of NGC6814: Power spectra p 1562 N93-18712

**FLIGHT CHARACTERISTICS**
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395
Identification of system dynamics of a high incidence research model
[RR-407] p 1440 N93-18507
Helicopters in action p 1403 N93-19005
Flight simulator for hypersonic vehicle and a study of NASP handling qualities p 1452 N93-19456
A simulation study on take-off and landing dynamics of the aircraft of a fly-by-wire control system
[AD-A259286] p 1442 N93-19849
Lessons learned from an historical look at flight testing p 1442 N93-19904

**FLIGHT CONTROL**
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191900] p 1632 N93-18372
Manual flying of curved precision approaches to landing with electromechanical instrumentation. A piloted simulation study
[NASA-TP-3255] p 1447 N93-18408
CSI Flight Computer System and experimental test results p 1465 N93-18841
Strategies for optimal control design of normal acceleration command following on the F-16
[AD-A258975] p 1450 N93-19095
Automated control of aircraft in formation flight
[AD-A259020] p 1450 N93-19102
Longitudinal-control design approach for high-angle-of-attack aircraft
[NASA-TP-3302] p 1451 N93-19108
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation p 1443 N93-19909
X-31A high angle of attack and initial post stall flight testing p 1443 N93-19911
Method for developing the RAFALE flight control system p 1444 N93-19912
In-flight structural mode excitation system for flutter testing p 1444 N93-19915
Fly-by voice, a technology demonstration p 1444 N93-19918

**FLIGHT CREWS**
Effects of dextromethamphetamine on subjective fatigue
[AD-A258252] p 1594 N93-17822
The detection of lateral motion by US Navy jet pilots
[AD-A258115] p 1595 N93-17896
An analysis of a sustained flight operation training mission in Navy attack aircraft
[AD-A258199] p 1602 N93-18205
A computer-based visual analog scale
[AD-A258152] p 1597 N93-18280
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
Using constraint satisfaction networks to study aircrew selection for advanced cockpits
[AD-A258151] p 1606 N93-18293
The effect of combat on aircrew subjective readiness and LSO grades during Operation Desert Shield/Storm
[AD-A258156] p 1602 N93-18294
A study of illness related lost time in transport aircraft crewmembers
[AD-A258193] p 1602 N93-18298
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887
Medical evaluation of spatial disorientation mishaps p 1430 N93-19703
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 1607 N93-19757
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 1607 N93-19759

**FLIGHT ENVELOPES**
Natural laminar flow test in-flight visualization p 1417 N93-19921

**FLIGHT HAZARDS**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
Adverse weather test site selection study
[AD-A259012] p 1440 N93-18895
Debris about asteroids: Where and how much? p 1703 N93-19136
Air/ground wind shear information integration: Flight test results p 1418 N93-19594
Wind shear hazard determination p 1419 N93-19597
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
Ground clutter measurements using the NASA airborne doppler radar: Description of clutter at the Denver and Philadelphia airports p 1421 N93-19608

**FLIGHT INSTRUMENTS**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential p 1611 N93-19782

**FLIGHT MANAGEMENT SYSTEMS**
NARSIM and EFMS: Tools for research on integrated ATM
[NLR-TP-89336-U] p 1432 N93-17954

**FLIGHT MECHANICS**
Recommended approach to software development, revision 3
[NASA-TM-108630] p 1624 N93-18861
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380
Flight Testing
[AGARD-CP-519] p 1442 N93-19901
Test and evaluation challenges in the nineties p 1442 N93-19902

**FLIGHT OPERATIONS**
An analysis of a sustained flight operation training mission in Navy attack aircraft
[AD-A258199] p 1602 N93-18205
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 1426 N93-19683
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 1428 N93-19692

**FLIGHT PATHS**
En route air traffic controllers use of flight progress strips: A graph-theoretic analysis
[AD-A259062] p 1433 N93-18927

**FLIGHT PLANS**
National Airspace System flight planning operational concept NAS-SR-131
[DOT/FAA/SE-92/4] p 1418 N93-18031

**FLIGHT SAFETY**
Report to Congress: Long-term availability of adequate airport system capacity
[AD-A258209] p 1432 N93-18202
An investigation of a prototype OASYS effectiveness in maneuvering flight
[AD-A257901] p 1439 N93-18339
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601
How do we investigate the human factor in aircraft accidents? p 1422 N93-19655
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 1423 N93-19661

Can injury scoring techniques provide additional information for crash investigators?
p 1423 N93-19663
Occupant simulation as an aspect of flight safety research p 1423 N93-19665
Disorientation and flight safety: A survey of UK Army aircrew p 1426 N93-19680
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 1429 N93-19697
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 1429 N93-19698
Towards an integrated approach to proactive monitoring and accident prevention p 1429 N93-19700
Prediction of success from training
p 1430 N93-19702
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 1431 N93-19707
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 1431 N93-19709
Aviation safety: Problems persist in FAA's inspection program. Report to the Chairman, Subcommittee on Aviation, Committee on Public Works and Transportation, House of Representatives
[GAO/RCED-92-14] p 1431 N93-19841
Aviation safety: Users differ in views of collision avoidance system and cite problems. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/RCED-92-113] p 1434 N93-19843

**FLIGHT SIMULATION**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
Flight simulation evaluation of the flyability of curved MLS approaches with wide-body aircraft
[NLR-TP-90238-U] p 1452 N93-17875
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191900] p 1632 N93-18372
Flight simulator for hypersonic vehicle and a study of NASP handling qualities p 1452 N93-19456
Modeling human response errors in synthetic flight simulator domain p 1612 N93-19464
Modeling the performance of the human (pilot) interaction in a synthetic flight domain: Information theoretic approach p 1612 N93-19465
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case
p 1426 N93-19681
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 1430 N93-19706
A simulation study on take-off and landing dynamics of the aircraft of a fly-by-wire control system
[AD-A259286] p 1442 N93-19849
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation
p 1443 N93-19909
Method for developing the RAFALE flight control system p 1444 N93-19912
On-line aircraft state and parameter estimation
p 1446 N93-19929
The flight test and data analysis program for the development of a Boeing/De Havilland Dash 8 simulator model p 1446 N93-19930

**FLIGHT SIMULATORS**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333
Flight simulator for hypersonic vehicle and a study of NASP handling qualities p 1452 N93-19456
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41
p 1426 N93-19683

**FLIGHT TEST INSTRUMENTS**
Flight Testing
[AGARD-CP-519] p 1442 N93-19901

**FLIGHT TESTS**
Manual flying of curved precision approaches to landing with electromechanical instrumentation. A piloted simulation study
[NASA-TP-3255] p 1447 N93-18408
Operational and research aspects of a radio-controlled model flight test program
[NASA-TM-104266] p 1440 N93-18616
Adverse weather test site selection study
[AD-A259012] p 1440 N93-18895
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 2
[NASA-CP-3177-PT-2] p 1466 N93-18928
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Program overview: 1991 flight test objectives
p 1418 N93-19591
Flight test operations p 1418 N93-19592
Air/ground wind shear information integration: Flight test results p 1418 N93-19594
Flight test of an infrared wind shear detector
p 1419 N93-19596
Airborne doppler radar research at Rockwell International p 1420 N93-19602
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
Flight above a virtual world p 1609 N93-19766
A simulation study on take-off and landing dynamics of the aircraft of a fly-by-wire control system
[AD-A259286] p 1442 N93-19849
Propfan noise propagation
[NASA-CR-192221] p 1652 N93-19888
Flight Testing
[AGARD-CP-519] p 1442 N93-19901
Test and evaluation challenges in the nineties
p 1442 N93-19902
Flight tests of the transport aircraft viewed from the industrial standpoint p 1442 N93-19903
Lessons learned from an historical look at flight testing p 1442 N93-19904
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview
p 1443 N93-19906
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 1443 N93-19907
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation
p 1443 N93-19909
AM-X high angle of attack flight test experience (single and two seat versions) p 1443 N93-19910
X-31A high angle of attack and initial post stall flight testing p 1443 N93-19911
Method for developing the RAFALE flight control system p 1444 N93-19912
On automated analysis of flight test data
p 1444 N93-19913
System identification for X-31A project support: Lessons learned so far p 1444 N93-19914
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 1444 N93-19916
Flight testing of GPS and GPS-aided systems
p 1445 N93-19919
High precision navigation for flight testing (AERONAV)
p 1434 N93-19920
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 1417 N93-19922
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 1445 N93-19923
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 1434 N93-19924
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 1446 N93-19925
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 1446 N93-19927
The flight test and data analysis program for the development of a Boeing/De Havilland Dash 8 simulator model p 1446 N93-19930

**FLIGHT TRAINING**
The efficacy of biographical inventory data in predicting early attrition in naval aviation officer candidate training
[AD-A258025] p 1601 N93-17919
An analysis of a sustained flight operation training mission in Navy attack aircraft
[AD-A258199] p 1602 N93-18205
The unique contribution of selected personality tests to the prediction of success in naval pilot training
[AD-A258144] p 1602 N93-18291
Prediction of success from training
p 1430 N93-19702
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)?
p 1430 N93-19704

**FLOQUET THEOREM**
Canonical floquet perturbation theory
[AD-A258970] p 1721 N93-19358

**FLOW CHARACTERISTICS**
Drop/gas interactions in dense sprays
[AD-A257848] p 1527 N93-18347
Natural laminar flow test in-flight visualization
p 1417 N93-19921

**FLOW COEFFICIENTS**
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732

**FLOW DISTORTION**
Experimental and numerical examinations of the influence of inlet distortion perturbations on the working behavior of turbofan compressors
[ETN-93-92733] p 1449 N93-18628
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726

**FLOW DISTRIBUTION**
Oscillatory internal flow fields studies --- flow oscillations in solid propellant rocket engines
[AD-A258005] p 1524 N93-17815
Evaporation and burning of a spherical fuel droplet in a uniform convective flowfield
[DE93-002223] p 1482 N93-17910
Aerodynamic aspects of offshore structures
[NLR-TP-91188-U] p 1405 N93-17928
Analytical surface singularity distributions for flow about elliptical cylinders
[AERO-REPT-9202] p 1526 N93-18132
An experimental investigation of interacting wing-tip vortex pairs
[AD-A258471] p 1406 N93-18272
A wall interference assessment/correction system
[NASA-CR-191889] p 1406 N93-18384
Simulation of unsteady rotational flow over propfan configuration
[NASA-CR-192234] p 1407 N93-18585
Axial Flow Compressors, volume 1
[VKI-LS-1992-02-VOL-1] p 1530 N93-18721
An investigation of the near and induced flow fields of an axially symmetric jet, issuing normal to a plane surface, into a quiescent medium p 1533 N93-19041
A numerical simulations of inner flow of scramjet
p 1415 N93-19318
Computational techniques for flows with finite-rate condensation
[NASA-CR-192093] p 1535 N93-19858
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 1417 N93-19922

**FLOW GEOMETRY**
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726

**FLOW MEASUREMENT**
Hot film wall shear instrumentation for compressible boundary layer transition research
[NASA-CR-191360] p 1404 N93-17855
An experimental study of a turbulent boundary layer in the trailing edge region of a circulation-control airfoil
[NASA-CR-191262] p 1405 N93-17934
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets
[NASA-TM-105999] p 1471 N93-17995
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234
Reflection type skin friction meter
[NASA-CASE-LAR-14520-1-SB] p 1406 N93-18275
Electron beam probing of blow-down hypersonic flows
[ONERA-NT-1992-7] p 1408 N93-18701
Estimation of the direct acoustic radiation from turbulent spots. Using boundary layer velocity measurements
[AD-A258981] p 1534 N93-19097
Flow rate logging seepage meter
[NASA-CASE-LAR-14835-1] p 1538 N93-19328

**FLOW STABILITY**
Oscillatory internal flow fields studies --- flow oscillations in solid propellant rocket engines
[AD-A258005] p 1524 N93-17815
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
The stability of a trailing-line vortex in compressible flow
[NASA-CR-189738] p 1408 N93-18771
Stability of nonequilibrium shear flows
p 1534 N93-19056

**FLOW THEORY**
A wind tunnel study of magnus effects on a differentially rotating missile
[AD-A258812] p 1408 N93-18989
**FLOW VELOCITY**
Application of laser Doppler velocimeter to chemical vapor laser system
[NASA-TM-4409] p 1540 N93-18068
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234
Development and verification of methods for predicting flow rates through leaks in valves and couplings
[NASA-CR-192270] p 1533 N93-19013
Estimation of the direct acoustic radiation from turbulent spots. Using boundary layer velocity measurements
[AD-A258981] p 1534 N93-19097
Flow rate logging seepage meter
[NASA-CASE-LAR-14835-1] p 1538 N93-19328
High altitude measurements with the EISCAT VHF radar and the development of Common Programme Seven
p 1727 N93-19551
HF radar observations of temporal variations in the high latitude convection p 1730 N93-19571
Real and spurious anticorrelations between V(parallel) and V(perpendiculars) in EISCAT data
p 1517 N93-19578
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894
**FLOW VISUALIZATION**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow
[AD-A258019] p 1404 N93-17819
Thermocline waves from a moving body and comparison of open-boundary conditions
[AERO-REPT-9208] p 1527 N93-18135
An experimental investigation of interacting wing-tip vortex pairs
[AD-A258471] p 1406 N93-18272
Flow visualization and combustion diagnostic
p 1485 N93-18480
Influence of the physical modelling of viscous terms on hypersonic flow computations
[INRIA-RR-1493] p 1408 N93-18652
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
Wind tunnel tests and CFD in Fuji Heavy Industries
p 1416 N93-19323
Wind tunnel testing and CFD simulation in Mitsubishi Heavy Industries p 1416 N93-19325
Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows
[DE93-002794] p 1535 N93-19615
Natural laminar flow test in-flight visualization
p 1417 N93-19921
**FLOWMETERS**
Flow rate logging seepage meter
[NASA-CASE-LAR-14835-1] p 1538 N93-19328
**FLUENCE**
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm
[NASA-CR-192156] p 1541 N93-18772
**FLUID DYNAMICS**
Experimental analysis of the aeroacoustics of cascaded airfoils
[AD-A257945] p 1526 N93-18121
Experimental and numerical examinations of the influence of inlet distortion perturbations on the working behavior of turbofan compressors
[ETN-93-92733] p 1449 N93-18628
A kinetic theory treatment of heat transfer in plane Poiseuille flow with uniform pressure
[NASA-TM-103993] p 1532 N93-18884
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985
Perturbation problems in fluid dynamics
[AD-A258934] p 1535 N93-19450
**FLUID FLOW**
Finite element modeling of fluids
p 1529 N93-18543
Multi-fluid modeling of interpenetrating plasmas
[DE93-002893] p 1668 N93-19829
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896
**FLUID INJECTION**
Optimization of flow-injection analysis for on-line in-process control
[ETN-92-92826] p 1499 N93-18444
**FLUID MECHANICS**
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment
[AD-A258177] p 1524 N93-17908
**FLUID PRESSURE**
Identification of nonlinear wave forces. Part 2: Frequency-domain analysis
[RR-442-PT-2] p 1528 N93-18440
Identification of nonlinear wave forces. Part 1: Time domain-analysis
[RR-441-PT-1] p 1528 N93-18510
**FLUORESCENCE**
The broad-band x ray spectral variability of Mkn 841
p 1561 N93-18711
**FLUORINATION**
The development of new, low-cost perfluoroalkylether fluids with excellent low and high-temperature properties
[NASA-CR-190865] p 1492 N93-18229
**FLUTTER**
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
The unified method of aeroelasticity
p 1450 N93-18143
In-flight structural mode excitation system for flutter testing p 1444 N93-19915
**FLUTTER ANALYSIS**
Beyond the frequency limits of time-linearized methods
[NLR-TP-91216-U] p 1405 N93-17929
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
The unified method of aeroelasticity
p 1450 N93-18143
Simulation of unsteady rotational flow over propfan configuration
[NASA-CR-192234] p 1407 N93-18585
Formulation of a structural model for flutter analysis of low aspect ratio composite aircraft wings
p 1450 N93-19019
**FLUX (RATE)**
MOCAL: A Monte Carlo albedo code
[DE93-002049] p 1654 N93-18388
Neutrino masses and solar neutrinos
[DE93-002416] p 1655 N93-18522
**FLUX DENSITY**
Sea ice - atmosphere interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-192129] p 1566 N93-18571
A kinetic theory treatment of heat transfer in plane Poiseuille flow with uniform pressure
[NASA-TM-103993] p 1532 N93-18884
Correlated flux densities from VLBI observations with the DSN p 1506 N93-18909
Determination of meteor flux distribution over the celestial sphere p 1700 N93-19117
EISCAT-MICADO coordinated measurements of meridional neutral winds and temperatures in the F region p 1584 N93-19563
The EISCAT UHF radar as a meteor radar: Meteor radial velocities determined from a Barker coded power profile
p 1517 N93-19579
**FLUX VECTOR SPLITTING**
Validation of central and upwind 3D compressible flow solvers p 1529 N93-18564
**FLY BY WIRE CONTROL**
A simulation study on take-off and landing dynamics of the aircraft of a fly-by-wire control system
[AD-A259286] p 1442 N93-19849
**FLYBY MISSIONS**
Cassini: Mission to Saturn and Titan
p 1592 N93-18559
Low cost missions to explore the diversity of near Earth objects p 1453 N93-19124
**FOCAL PLANE DEVICES**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238
**FOCUSING**
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952
**FOKKER AIRCRAFT**
Professor Wittenberg: His speciality and versatility
[ISBN-90-6275-670-0] p 1403 N93-19002
Aircraft performance in practice p 1403 N93-19004
**FOKKER-PLANCK EQUATION**
The CQL3D Fokker-Planck code
[DE93-002962] p 1668 N93-19754
**FOLDING**
Teaching polymers to fold
[DE93-002670] p 1494 N93-18437
**FORBUSH DECREASES**
Cosmic ray decreases and magnetic clouds
p 1564 N93-18071
The solar wind structures associated with cosmic ray decreases and particle acceleration in 1978-1982
p 1565 N93-18072
**FORCE DISTRIBUTION**
Experimental investigations of radial loads induced by partial cavitation with the LH2 Vulcain inducer
[ETN-93-93023] p 1525 N93-18094
**FORCE-FREE MAGNETIC FIELDS**
Determination of coronal magnetic fields from vector magnetograms
[NASA-CR-191386] p 1744 N93-18869
**FORCED CONVECTION**
Forced convection boiling and condensation on microgravity: A critical appraisal of the literature
[ETN-93-93362] p 1498 N93-17811
**FORCED VIBRATION**
CSI flight experiment projects of the Naval Research Laboratory p 1470 N93-18944
**FOREBODIES**
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110
**FOREST FIRES**
The Tapanui region of New Zealand: Site of a Tunguska around 800 years ago? p 1718 N93-19246
**FOREST MANAGEMENT**
A method for estimating the phytomass of a tropical forest region through the use of orbital data
[INPE-5320-PRE/1717] p 1567 N93-19645
**FORESTS**
Microwave remote sensing for forest monitoring purposes
[BCRS-91-15] p 1566 N93-18431
**FORMALDEHYDE**
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
**FORMALISM**
Modal frame classes revisited
[ML-91-12] p 1643 N93-17869
Formal development of Ada programs using Z and Anna: A case study
[AD-A235698] p 1623 N93-18847
**FORMAT**
Stimulus presentation formats and measurement techniques for the quantification of target detection performance
[AD-A258933] p 1603 N93-19449
**FORTRAN**
Automatic analysis and transformation of FORTRAN programs using a typed functional language
[INRIA-RR-1518] p 1615 N93-17838
**FORWARD SCATTERING**
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics
[AD-A258938] p 1652 N93-19082
Forward-scatter radiant mapping
p 1697 N93-19178
**FOULING**
Fouling and slagging in combustion plant
[ESDU-92012] p 1498 N93-18000
**FOURIER ANALYSIS**
Definition of mean environmental steering flow for TCM-90 tropical cyclones
[AD-A257886] p 1586 N93-18338
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716
**FOURIER TRANSFORMATION**
One and two dimensional discrete wavelet transforms
[AD-A257981] p 1502 N93-18241
Develop, apply and evaluate wavelet technology
[AD-A258484] p 1645 N93-18315
Wavelet image analysis p 1628 N93-18506
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490
**FRACTALS**
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469

Toward an optimal strategy for sampling chaotic time series using the Smale-Williams dynamical system
[AD-A258550] p 1650 N93-19953

**FRACTOGRAPHY**
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444

**FRACTURE MECHANICS**
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090
Some remarks upon fracture mechanics
[VTT-PUBS-100] p 1556 N93-18700
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
Mathematical modelling of materials
p 1557 N93-18753
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444

**FRACTURE STRENGTH**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007
Ductility and fracture in L1(sub 2) intermetallic alloys
[DE93-001644] p 1487 N93-18534
Characterization and defect analysis of high temperature aluminum-based metal matrix composites
p 1480 N93-19060
Mechanical behavior of titanium aluminide under engine operating conditions
[AD-A258884] p 1550 N93-19079
Interface fracture in composite materials
p 1560 N93-19381

**FRACTURING**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007
Determination of cleavage planes and fracture characterization of Ni-based single crystal superalloys
[NASA-CR-191932] p 1674 N93-18593
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357
Interface fracture in composite materials
p 1560 N93-19381
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident?
p 1423 N93-19664

**FRAGMENTATION**
Fragmentation and densities of meteoroids
p 1700 N93-19118
Gross-fragmentation of meteoroids and bulk density of Geminids from photographic fireball records
p 1703 N93-19137
Velocity distribution of fragments of catastrophic impacts p 1719 N93-19252

**FRAGMENTS**
Injecting asteroid fragments into resonances
p 1705 N93-19152

**FRAUNHOFER LINES**
Advanced atomic filters p 1664 N93-18468

**FREE CONVECTION**
Conditioning instabilities of the Greenland Sea
[AD-A257547] p 1589 N93-18279

**FREE ELECTRON LASERS**
Use of the CEBAF accelerator for IR and UV free electron lasers
[CEBAF-PR-92-023] p 1660 N93-18768
An inverse free electron laser accelerator experiment
[DE93-003495] p 1542 N93-19506
Physically transparent formulation of a free-electron laser in the linear gain regime
[DE93-002577] p 1542 N93-19626
Suppression of mode-beating in a saturated hole-coupled FEL oscillator
[DE93-002554] p 1542 N93-19745
The multi-cavity free-electron laser
[DE93-002569] p 1543 N93-19747
Design of RF conditioner cavities
[DE93-002576] p 1543 N93-19895

**FREE ENERGY**
Electronic structure of substitutionally disordered alloys: Direct configurational averaging
[DE93-002548] p 1489 N93-19480

**FREE FALL**
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671

**FREE FLIGHT**
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395

**FREE FLOW**
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340

**FREE JETS**
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment
[AD-A258177] p 1524 N93-17908

**FREEZE DRYING**
Processing and fabrication of high temperature oxide superconductors
[AD-A258281] p 1671 N93-18125

**FREON**
Evaluation of ultrasonic cavitation of metallic and non-metallic surfaces p 1652 N93-19400

**FREQUENCIES**
Application of the total least squares technique to frequency estimation
[AD-A257562] p 1644 N93-17936
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
Acousto-optic frequency excision
p 1523 N93-18460
An analysis of the structure of gamma ray burst time histories
[NASA-CR-191997] p 1746 N93-18583

**FREQUENCY ASSIGNMENT**
A method of optimal radio frequency assignment for deep space missions p 1508 N93-18922

**FREQUENCY DISTRIBUTION**
Fixed and data adaptive kernels in Cohen's class of time-frequency distributions
[AD-A257979] p 1649 N93-18195
Detecting change as it occurs
[NASA-CR-191939] p 1574 N93-19484

**FREQUENCY HOPPING**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181

**FREQUENCY MODULATION**
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048

**FREQUENCY RESPONSE**
Hot film wall shear instrumentation for compressible boundary layer transition research
[NASA-CR-191360] p 1404 N93-17855

**FREQUENCY SHIFT**
Determining the effects of microwave power variations on the output frequency of a high-performance cesium frequency standard
[AD-A258342] p 1518 N93-17989

**FREQUENCY SHIFT KEYING**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181

**FREQUENCY STABILITY**
Determining the effects of microwave power variations on the output frequency of a high-performance cesium frequency standard
[AD-A258342] p 1518 N93-17989
DSS-13 beam waveguide antenna frequency stability
p 1513 N93-19424

**FREQUENCY STANDARDS**
Determining the effects of microwave power variations on the output frequency of a high-performance cesium frequency standard
[AD-A258342] p 1518 N93-17989

**FREQUENCY SYNCHRONIZATION**
Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver
p 1506 N93-18913

**FRICTION**
Baseline experiments on Coulomb damping due to rotational slip
[AD-A258840] p 1560 N93-19440

**FRICTION FACTOR**
Turbulence model calculations of the effects of body forces on turbulent flows in a pipe p 1413 N93-19306

**FRICTION MEASUREMENT**
Reflection type skin friction meter
[NASA-CASE-LAR-14520-1-SB] p 1406 N93-18275

**FRONTAL WAVES**
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194

**FRONTS (METEOROLOGY)**
Predicting the movement of Carolina coastal fronts
[AD-A258280] p 1585 N93-18012

**FROST**
Condensation phase of the Martian south polar cap
p 1740 N93-19804

**FUEL CELLS**
Simulated coal-gas-fueled molten carbonate fuel cell development program
[DE93-000205] p 1570 N93-18527
Integration of carbonate fuel cells with advanced coal gasification systems
[DE93-003485] p 1572 N93-19622

**FUEL CONSUMPTION**
Development of an engine/airframe performance matching scheme for jet engine retrofit
[AD-A258822] p 1449 N93-18997

**FUEL FLOW**
Passive recirculation in the National Launch System's fuel feedlines
[NASA-TM-108391] p 1471 N93-17941

**FUEL INJECTION**
Turbine engine combustor design at SNECMA
[DS-2129] p 1448 N93-17851
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling
[DE93-004563] p 1456 N93-19496

**FUEL PUMPS**
Residual contact stresses in cryotechnical environments
[ETN-93-93020] p 1555 N93-18080

**FUEL SYSTEMS**
Passive recirculation in the National Launch System's fuel feedlines
[NASA-TM-108391] p 1471 N93-17941

**FUEL TANKS**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030

**FUMES**
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447

**FUNCTION SPACE**
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913

**FUNCTIONAL DESIGN SPECIFICATIONS**
US Army helicopter inertia reel locking failures
p 1427 N93-19689

**FUNCTIONS (MATHEMATICS)**
Lambda-calculi for (strict) parallel functions
[INRIA-RR-1387] p 1646 N93-18435

**FURNACES**
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**FUSELAGES**
Damage tolerance assessment of boron/epoxy repairs to fuselage lap joints
[AD-A258383] p 1439 N93-18257

**FUSION REACTORS**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling
[DE93-004563] p 1456 N93-19496

**FUSION WELDING**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030
Principles of weld solidification and microstructures
[DE93-003012] p 1490 N93-19629

**FUZZY SETS**
Fuzzy Set Methods for Object Recognition in Space Applications
[NASA-CR-191975] p 1618 N93-18224
Automatic rule generation for high-level vision
p 1618 N93-18225
Possibility expectation and its decision making algorithm p 1618 N93-18226
Membership generation using multilayer neural network p 1618 N93-18227
Possibilistic clustering for shape recognition
p 1618 N93-18228

**FUZZY SYSTEMS**
Methodologies of automatic control including fuzzy logic
[LAAS-92257] p 1631 N93-17814
A fuzzy logic based controller for the automated alignment of a laser-beam-smoothing spatial filter
[NASA-TM-105994] p 1540 N93-18091
Fuzzy Set Methods for Object Recognition in Space Applications
[NASA-CR-191975] p 1618 N93-18224

Possibility expectation and its decision making algorithm p 1618 N93-18226
Fuzzy logic: Artificial neural networks integration for transient identification
[DE93-002232] p 1632 N93-18389
Self-growing neural network architecture using crisp and fuzzy entropy
[NASA-TM-105677] p 1553 N93-18422
Full design of fuzzy controllers using genetic algorithms p 1629 N93-19461
Adaptive autonomous target cuer p 1612 N93-19784

## G

**GALACTIC COSMIC RAYS**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission
[NASA-TM-4422] p 1746 N93-18014
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events
[NASA-TP-3300] p 1746 N93-19109
**GALERKIN METHOD**
Galerkin coarse grid approximation for the incompressible Navier-Stokes equations in general coordinates
[REPT-92-35] p 1524 N93-17847
An efficient algorithm for the computation of Galerkin coarse grid approximation for the incompressible Navier-Stokes equations
[REPT-92-40] p 1616 N93-17872
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
**GALILEO PROJECT**
Cassini: Mission to Saturn and Titan p 1592 N93-18559
**GALILEO SPACECRAFT**
Correlated flux densities from VLBI observations with the DSN p 1506 N93-18909
The effects of correlated noise in intra-complex DSN arrays for S-band Galileo telemetry reception p 1458 N93-18910
Adaptive low-bandwidth tracking of Galileo and Pioneer 10 carriers p 1506 N93-18912
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924
Minor satellites and the Gaspra encounter p 1719 N93-19255
Application of high-precision two-way ranging to Galileo Earth-1 encounter navigation p 1454 N93-19415
Cascaded convolutional codes p 1458 N93-19429
**GALLIUM ANTIMONIDES**
Superlattices for infrared detectors
[AD-A257511] p 1671 N93-18172
**GALLIUM ARSENIDE LASERS**
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A258485] p 1540 N93-18101
Design and characterization of optically pumped vertical cavity surface emitting lasers
[AD-A258815] p 1541 N93-18994
**GALLIUM ARSENIDES**
High resistivity GaAs epilayers by oxygen doping
[AD-A257931] p 1670 N93-18005
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238
HPM damage thresholds of GaAs FETs and HEMTs
[AD-A257897] p 1520 N93-18420
Acousto-optic frequency excision p 1523 N93-18460
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991
**GALLIUM PHOSPHIDES**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238
**GAMMA RAY BURSTS**
An analysis of the structure of gamma ray burst time histories
[NASA-CR-191997] p 1746 N93-18583
**GAMMA RAY SPECTROMETERS**
Experimental evaluation of software-driven digital gain-drift compensation in scintillator gamma ray spectroscopy
[DE93-002623] p 1657 N93-19616
Martian volatiles determined using the Mars observer gamma ray spectrometer p 1741 N93-19807
**GAMMA RAYS**
An analysis of the structure of gamma ray burst time histories
[NASA-CR-191997] p 1746 N93-18583
**GARMENTS**
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955
**GAS ANALYSIS**
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447
Low level measurements of atmospheric DMS, H2S, and SO2 for GTE/CITE-3
[NASA-CR-191635] p 1573 N93-18863
**GAS DENSITY**
Infrared studies of star-forming regions p 1696 N93-18497
**GAS DETECTORS**
A hodoscope made of resistive plate chambers to identify muons in a fixed target beauty hadroproduction experiment
[NOTA-INTERNA-994] p 1536 N93-17810
Measurement of the hit distribution in resistive plate chambers equipped with a digital read out of the charge induced on strips
[NOTA-INTERNA-990] p 1659 N93-17940
Instruction manual for UTEP weld gas hydrogen detector
[NASA-CR-184477] p 1537 N93-18034
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392
**GAS DYNAMICS**
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215
Understanding curved detonation waves
[DE93-000799] p 1528 N93-18529
Computational reacting gas dynamics
[NASA-CR-192089] p 1535 N93-19859
**GAS EVOLUTION**
A preliminary model of the coma of 2060 Chiron p 1702 N93-19132
**GAS FLOW**
Ejectors and jet pumps: Computer program for design and performance for compressible gas flow
[ESDU-92042] p 1544 N93-17956
Application of laser Doppler velocimeter to chemical vapor laser system
[NASA-TM-4409] p 1540 N93-18068
Computational study of real gas effects in high speed high temperature flow
[AERO-REPT-9102] p 1526 N93-18129
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215
Rarefied gas numerical wind tunnel. Part 7: OREX p 1410 N93-19280
2D velocity and temperature measurements in high speed flows based on spectrally resolved Rayleigh scattering
[NASA-TM-105784] p 1539 N93-19651
**GAS GIANT PLANETS**
Giant planets: Clues on current and past organic chemistry in the outer solar system p 1591 N93-18551
**GAS IONIZATION**
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511
**GAS JETS**
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142
**GAS LASERS**
Optically pumped continuous wave CF4 laser
[ISBN-90-9004442-6] p 1541 N93-18429
**GAS PRESSURE**
Energy storage in supercritical solvents p 1498 N93-18492
**GAS STREAMS**
High temperature sorbents for oxygen
[NASA-CASE-NPO-18409-1-CU] p 1483 N93-19025
Particle collection efficiency of a cyclonic combustor
[DE93-003198] p 1484 N93-19620
**GAS TEMPERATURE**
2D velocity and temperature measurements in high speed flows based on spectrally resolved Rayleigh scattering
[NASA-TM-105784] p 1539 N93-19651
**GAS TRANSPORT**
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215
**GAS TURBINE ENGINES**
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762
Active stabilization to prevent surge in centrifugal compression systems
[NASA-CR-191625] p 1549 N93-18862
**GAS TURBINES**
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991
Shock tube study of the effects of large density differences and blowing ratio on heat transfer to a film-cooled flat plate
[AD-A258813] p 1532 N93-18990
**GAS-LIQUID INTERACTIONS**
Drop/gas interactions in dense sprays
[AD-A257848] p 1527 N93-18347
A general approximation solution for the mass transfer in laminar multicomponent boundary layers along a streaming plate plane
[ETN-93-92738] p 1530 N93-18629
Computational techniques for flows with finite-rate condensation
[NASA-CR-192093] p 1535 N93-19858
**GAS-SOLID INTERACTIONS**
Infrared sensor technology and applications p 1664 N93-18474
**GASEOUS DIFFUSION**
A general approximation solution for the mass transfer in laminar multicomponent boundary layers along a streaming plate plane
[ETN-93-92738] p 1530 N93-18629
**GATES (CIRCUITS)**
Parallel simulation of structural VHDL circuits on Intel Hypercubes
[AD-A258999] p 1521 N93-19012
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048
**GAUGE INVARIANCE**
Aharonov-Casher effect and geometrical phases
[PREPRINT-783] p 1644 N93-18186
Yang phase for non-Hermitian systems and biunitary transformations
[PREPRINT-782] p 1645 N93-18197
**GAUGE THEORY**
Heavy quarks in lattice QCD
[PREPRINT-786] p 1654 N93-18324
**GAUSS-MARKOV THEOREM**
Comparisons of theoretical limits for source coding with practical compression algorithms p 1513 N93-19428
**GEARS**
Dynamics in condition monitoring, a case study p 1558 N93-18758
Flexible rotorcraft system dynamics with time-variant contact conditions p 1441 N93-19034
**GELATION**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899
**GELS**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899
**GEMINID METEOROIDS**
Observation of meteors by MST radar p 1697 N93-19180
Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529
The EISCAT UHF radar as a meteor radar: Meteor radial velocities determined from a Barker coded power profile p 1517 N93-19579
**GENERAL AVIATION AIRCRAFT**
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 1430 N93-19706
**GENETIC ALGORITHMS**
Teaching polymers to fold
[DE93-002670] p 1494 N93-18437
A Darwinian approach to control-structure design p 1465 N93-18840
Generalization and parallelization of messy genetic algorithms and communication in parallel genetic algorithms
[AD-A258994] p 1630 N93-18890
Full design of fuzzy controllers using genetic algorithms p 1629 N93-19461
**GEOCHEMISTRY**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
The Apollo 17 region: A compositional overview p 1736 N93-18796

Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
The Apollo 17 regolith p 1737 N93-18799
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
The Apollo 17 samples: The Massifs and landslide p 1738 N93-18809
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts p 1739 N93-18812

**GEOCHRONOLOGY**
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada) [NASA-CR-192091] p 1564 N93-17927
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded? p 1739 N93-18813
Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138

**GEODESY**
Studies of regional and global tectonics and the rotation of the earth using very-long-baseline interferometry [NASA-CR-191902] p 1577 N93-18591

**GEODETIC SATELLITES**
Geophysical parameters from the analysis of laser ranging to Starlette [NASA-CR-192406] p 1541 N93-18605

**GEODYNAMICS**
Evolution of attached and detached slabs and their associated mantle dynamics [NASA-CR-191920] p 1576 N93-18320
Geodynamic contributions to global climatic change p 1575 N93-18963

**GEOGRAPHIC INFORMATION SYSTEMS**
Water quality modeling using geographic information system (GIS) data p 1575 N93-19396
Evaluation of the geometric quality of cartographic documents through the use of scanning imagery devices [INPE-5298-PRE/1703] p 1692 N93-19738
Updating topographic maps using orbital images in a microcomputer environment [INPE-5409-PRE/1756] p 1567 N93-19739
Methods for analysis of networks within a geographical information system [INPE-5299-PRE/1704] p 1693 N93-19835

**GEOLOGICAL FAULTS**
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites p 1507 N93-18921

**GEOLOGICAL SURVEYS**
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
The Geological Research Center's aerial geological measuring system p 1569 N93-19875

**GEOLOGY**
Bibliographic study of georadar principles, applications, advantages, and inconvenience [CR-35/91] p 1509 N93-18993
Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, part 1 [NASA-CR-191225] p 1740 N93-19801
Numerical simulations of drainage flows on Mars p 1742 N93-19816

**GEOMAGNETISM**
Magnetic results 1987-89: Lerwick, Eskadalemuir, and Hartland observatories (United Kingdom) [GEOMAGNETIC-BULL-19] p 1576 N93-18137
Magnetic results 1990: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom) [GEOMAGNETIC-BULL-20] p 1576 N93-18138
Auroral energization and geomagnetic disturbances p 1584 N93-18499
Magnetic susceptibility variations in Loess sequences and their relationship to astronomical forcing p 1580 N93-18967
Ice ages and geomagnetic reversals p 1580 N93-18968
Effect of the geomagnetic field on the diffusion of meteor trains p 1709 N93-19179
Photoelectron enhanced plasma-line intensities at angles with the geomagnetic field as measured by EISCAT p 1724 N93-19536
International Monitor for Auroral Geomagnetic Effects (IMAGE): A new magnetometer network in Scandinavia p 1732 N93-19585

**GEOMETRIC RECTIFICATION (IMAGERY)**
Incorporation of orbital imagery into a cartographic data base [INPE-5300-PRE/1705] p 1688 N93-19644

**GEOMORPHOLOGY**
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites p 1507 N93-18921
Antarctic lakes (above and beneath the ice sheet): Analogues for Mars p 1743 N93-19817

**GEOPHYSICAL SATELLITES**
Report on the 7th Finnish EISCAT Workshop [REPT-121-(1992)] p 1577 N93-18736
EISCAT related satellites in near future p 1578 N93-18738
Freja satellite program and its connection to EISCAT p 1578 N93-18739

**GEOPHYSICS**
Geophysical parameters from the analysis of laser ranging to Starlette [NASA-CR-192406] p 1541 N93-18605
Introduction to ionospheric heating at Tromsoe (Norway). Part 1: Experimental overview p 1724 N93-19531
The Geological Research Center's aerial geological measuring system p 1569 N93-19875

**GEOPOTENTIAL**
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization [AD-A258549] p 1587 N93-19481

**GEOPOTENTIAL HEIGHT**
Definition of mean environmental steering flow for TCM-90 tropical cyclones [AD-A257886] p 1586 N93-18338

**GEOSTROPHIC WIND**
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization [AD-A258549] p 1587 N93-19481

**GERIATRICS**
Dual-task training strategies and aging [AD-A258261] p 1602 N93-18027

**GERMANIUM COMPOUNDS**
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2 [AD-A258996] p 1674 N93-18892

**GET AWAY SPECIALS (STS)**
Microgravity ignition experiment [NASA-CR-192057] p 1498 N93-18053
Optical/thermal analysis methodology for a space-qualifiable RTP furnace [NASA-CR-192254] p 1539 N93-19889

**GINGA SATELLITE**
BBXRT and Ginga observations of the Seyfert 1 galaxy MRK 335 p 1561 N93-18710

**GLACIERS**
Possible recent and ancient glacial ice flow in the south polar region of Mars p 1742 N93-19812

**GLACIOLOGY**
Ice ages and geomagnetic reversals p 1580 N93-18968
Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, part 1 [NASA-CR-191225] p 1740 N93-19801
Glaciation in Elysium p 1740 N93-19802

**GLASS**
Sonogels in the preparation of advanced glass and ceramic materials [AD-A258184] p 1491 N93-17899
Short range order in amorphous polycondensates [DE93-001650] p 1494 N93-18708
Mare volcanism in the Taurus-Littrow region p 1736 N93-18790
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221 p 1738 N93-18807

**GLASS FIBER REINFORCED PLASTICS**
A performance model for thick composite cylinders subjected to external hydrostatic pressure [DE93-002425] p 1560 N93-19476

**GLASS FIBERS**
High temperature chemistry of fibers and composites [AD-A258788] p 1479 N93-18978

**GLOBAL AIR POLLUTION**
Trends in middle-atmosphere ozone p 1575 N93-18500

**GLOBAL POSITIONING SYSTEM**
Chaotic dynamics of atoms p 1659 N93-18491
GPS Interferometry [NASA-CR-192301] p 1432 N93-18873
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
Detection of spoofing, jamming, or failure of a Global Positioning System (GPS) [AD-A259023] p 1433 N93-18951
A model of Global Positioning System (GPS) Master Control Station (MCS) operations [AD-A258846] p 1433 N93-19067
Acquisition of direct sequence spread spectrum signals using digital signal processing techniques [AD-A258974] p 1510 N93-19094
Modeling the global positioning system signal propagation through the ionosphere p 1434 N93-19420
Flight testing of GPS and GPS-aided systems p 1445 N93-19919

**GLOBAL WARMING**
Greenhouse Earth: A Traveling Exhibition [DE93-002419] p 1572 N93-17912
NATO Advanced Research Workshop on Non-Thermal Plasma Techniques for Pollution Control [AD-A258477] p 1665 N93-18323
Global change research: Summaries of research in FY 1992 [DE93-002859] p 1573 N93-18405
Thermohaline circulations and global climate change [DE93-004601] p 1574 N93-19505
Toward model-based discovery: A case study in ecosystem prediction p 1689 N93-19721

**GLOW DISCHARGES**
A two-dimensional particle simulation of parallel plate Radio-Frequency (RF) glow discharges [AD-A258856] p 1510 N93-19349
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge [AD-A258680] p 1543 N93-19950

**GLUONS**
Quark/gluon jet separation in the photoproduction region with a neural network algorithm [NOTA-INTERNA-992] p 1653 N93-17943

**GLYCOGENS**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs) [AD-A258364] p 1596 N93-18209

**GOGGLES**
Helicopter night vision goggle testing in the United Kingdom p 1444 N93-19917

**GOLD**
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems [AD-A258693] p 1678 N93-19862

**GOODNESS OF FIT**
The application of function points to predict source lines of code for software development [AD-A258447] p 1616 N93-17892

**GOVERNMENT PROCUREMENT**
Public space launch acquisition: A comparative case study [AD-A258141] p 1455 N93-18083
Applying commercial style acquisition practices to the procurement of commercially available aircraft [AD-A258143] p 1683 N93-18087

**GOVERNMENTS**
Federal funds for research and development: Fiscal years 1990, 1991, and 1992, volume 40 [NSF-92-322-VOL-40] p 1694 N93-17853

**GRADIENTS**
Exact-gradient shape optimization of a 2D Euler flow [INRIA-RR-1540] p 1530 N93-18623
Polynomial approximation of Poincare maps for Hamiltonian system p 1651 N93-19160

**GRAIN BOUNDARIES**
Ductility and fracture in L1(sub 2) intermetallic alloys [DE93-001644] p 1487 N93-18534
Deformation induced microstructural and microchemical changes during thermomechanical treatment [DE93-005060] p 1490 N93-19635
Magnetic structures of nanometer scale Dy, Cr, and Ni [DE93-002984] p 1677 N93-19755

**GRAIN SIZE**
Characterization of alloy 718 microstructures [DS-1935] p 1486 N93-18147
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity [AD-A257859] p 1487 N93-18308
The Apollo 17 regolith p 1737 N93-18799
Nondestructive evaluation of grain size distributions using multifractal analysis of backscattered ultrasonic signals [AD-A259035] p 1553 N93-18956
High resolution images of P/Tempel 1 and P/Tempel 2 constructed from IRAS survey data p 1699 N93-19257
Nanostructured materials [DE93-002990] p 1656 N93-19499

**GRAMMARS**
The Lambek calculus enriched with additional connectives
[LP-91-04] p 1642 N93-17826
Categorical grammar and natural reasoning
[LP-91-08] p 1642 N93-17828
A note on interrogatives and adverbs of quantification
[LP-92-07] p 1615 N93-17830
Grammatica: An open software laboratory for artificial intelligence
[REPT-92-031] p 1632 N93-18331

**GRANTS**
Federal funds for research and development: Fiscal years 1990, 1991, and 1992, volume 40
[NSF-92-322-VOL-40] p 1694 N93-17853
EHR directory of awards, FY 1990
[NSF-92-75] p 1746 N93-17854

**GRAPH THEORY**
Parallel contraction of binary dags
[REPT-92-36] p 1616 N93-17848
Testing superperfection of k-trees
[RUU-CS-92-09] p 1645 N93-18196
Location and distribution of local optima
[AD-A257791] p 1645 N93-18237
En route air traffic controllers use of flight progress strips: A graph-theoretic analysis
[AD-A259062] p 1433 N93-18927

**GRAPHITE**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser
[AD-A257551] p 1491 N93-17966
Nanorecording p 1539 N93-18467
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498

**GRAPHITE-EPOXY COMPOSITES**
Design of a pressurized lunar rover
[NASA-CR-192033] p 1545 N93-18016
Structural dynamic testing of composite propfan blades for a cruise missile wind tunnel model
[NASA-TM-105272] p 1558 N93-18875
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
A performance model for thick composite cylinders subjected to external hydrostatic pressure
[DE93-002425] p 1560 N93-19476

**GRAPHOEPITAXY**
Protein crystal growth in low gravity
[NASA-CR-191770] p 1498 N93-17886

**GRAPHS (CHARTS)**
A modal theory of arrows: Arrows logics 1
[ML-92-04] p 1644 N93-17915
Testing superperfection of k-trees
[RUU-CS-92-09] p 1645 N93-18196

**GRATINGS (SPECTRA)**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238

**GRAVIMETRY**
Applications of marine gravimetry to mid-oceanic spreading centers and volcanos p 1590 N93-19382
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789

**GRAVITATION**
A preliminary model of the coma of 2060 Chiron
p 1702 N93-19132
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894

**GRAVITATION THEORY**
A preliminary model of the coma of 2060 Chiron
p 1702 N93-19132

**GRAVITATIONAL EFFECTS**
Microstructural development during directional solidification of peritectic alloys
[NASA-CR-192090] p 1488 N93-18603
Evolution of the Quadrantid meteor stream
p 1708 N93-19177
Rotational behavior of comet nuclei under gravitational perturbations p 1714 N93-19216
A proposal to determine properties of the gravitropic response of plants in the absence of a complicating g-force (GTHRES)
[NASA-CR-192219] p 1593 N93-19377
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894

**GRAVITATIONAL FIELDS**
Rewet performance of a rectangular grooved heat pipe wick after gravitationally induced dryout
[AD-A258852] p 1534 N93-19367
Mars observer radio science (MORS) observations in polar regions p 1743 N93-19818

**GRAVITROPISM**
A proposal to determine properties of the gravitropic response of plants in the absence of a complicating g-force (GTHRES)
[NASA-CR-192219] p 1593 N93-19377

**GRAVITY WAVES**
A dynamical theory for hurricane spiral bands
[AD-A258190] p 1584 N93-17859
Development and calibration of two and four wire water surface wave height measurement systems
[AD-A257900] p 1589 N93-18394
Atmospheric dynamics and coupling
p 1584 N93-18495
Aeronomy of auroral and airglow emissions
p 1584 N93-18496
Report on the 7th Finnish EISCAT Workshop
[REPT-121-(1992)] p 1577 N93-18736
EISCAT observations of spectral components of atmospheric gravity waves in the F region
p 1578 N93-18743
Gravity waves and sporadic E layers as measured by EISCAT and AIS p 1724 N93-19530
The ionospheric response to atmospheric gravity waves in the EISCAT region p 1729 N93-19567
Vertical structure of AGW associated ionospheric fluctuations observed with EISCAT
p 1729 N93-19569
Overall results from the European sector of the worldwide atmospheric gravity-wave study: 1985-1990
p 1733 N93-19589

**GREAT BASIN (US)**
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada)
[NASA-CR-192091] p 1564 N93-17927

**GREEN'S FUNCTIONS**
A harmonic half-space fundamental solution
[SER-R-271] p 1644 N93-17946
Shielding from space radiations
[NASA-CR-191966] p 1655 N93-18567

**GREENHOUSE EFFECT**
Greenhouse Earth: A Traveling Exhibition
[DE93-002419] p 1572 N93-17912
Global change research: Summaries of research in FY 1992
[DE93-002859] p 1573 N93-18405

**GRID GENERATION (MATHEMATICS)**
Computational Fluid Dynamics, volume 1
[VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
Numerical analysis of surface cracks
p 1556 N93-18750
VGRIDSG: An unstructured surface grid generation program
[NASA-CR-191426] p 1624 N93-18874
A numerical simulation of flows around a deformable gas bubble p 1413 N93-19300

**GRIFFITH CRACK**
Some remarks upon fracture mechanics
[VTT-PUBS-100] p 1556 N93-18700

**GRINDING**
Method of preparing a diamond-abrasive mixture
[AD-A258228] p 1492 N93-18123

**GROUND CREWS**
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887

**GROUND EFFECT (COMMUNICATIONS)**
Ground clutter measurements using the NASA airborne doppler radar: Description of clutter at the Denver and Philadelphia airports p 1421 N93-19608
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
Comparison of simulated and actual wind shear radar data products p 1421 N93-19610
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612

**GROUND SPEED**
Aircraft turns into and down wind
[AERO-REPT-9201] p 1438 N93-18131

**GROUND STATIONS**
Advanced communications technology satellite high burst rate link evaluation terminal experiment control and monitor software user's guide, version 1.0
[NASA-CR-189160] p 1620 N93-18382
Report on the 7th Finnish EISCAT Workshop
[REPT-121-(1992)] p 1577 N93-18736
Ground station operation in the EISCAT campaign focused on the aurora borealis in November 1991
p 1578 N93-18741
A model to compare performance of space and ground network support of low-Earth orbiters
p 1508 N93-18925

**GROUND SUPPORT EQUIPMENT**
Ground station operation in the EISCAT campaign focused on the aurora borealis in November 1991
p 1578 N93-18741

**GROUND SUPPORT SYSTEMS**
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600

**GROUND TESTS**
Identification and interpretation of patterns in rocket engine data
[NASA-CR-192100] p 1473 N93-18401
Propulsion diagnostics p 1475 N93-18482
Dynamic test results for the CASES ground experiment p 1455 N93-18843
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 2
[NASA-CP-3177-PT-2] p 1466 N93-18928
Active suspension design for a Large Space Structure ground test facility p 1469 N93-18941
Flight Testing
[AGARD-CP-519] p 1442 N93-19901
High precision navigation for flight testing (AERONAV)
p 1434 N93-19920

**GROUND TRUTH**
A comparison of airborne and ground-based radar observations with rain gages during the CaPE experiment p 1563 N93-18720

**GROUND WATER**
Flow rate logging seepage meter
[NASA-CASE-LAR-14835-1] p 1538 N93-19328
Water quality modeling using geographic information system (GIS) data p 1575 N93-19396

**GROUND WIND**
US Navey regional climatic study of the Greenland-Iceland-United Kingdom gap and associated waters
[AD-A257909] p 1586 N93-18342

**GROUP THEORY**
Sub-groups of Z(sup n), standard basis, and linear diophantine systems
[INRIA-RR-1510] p 1615 N93-17836

**GUAYULE**
Reversion studies of natural and guayule rubbers
[AD-A257501] p 1491 N93-17906

**GUIDANCE (MOTION)**
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860

**GUIDE VANES**
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991

**GUN PROPELLANTS**
The crystal and molecular structure of triethanol-ammonium nitrate
[AD-A258428] p 1670 N93-17864
Performance oriented packaging testing for liquid propellant, XM1846
[AD-A258430] p 1496 N93-17865

**GUNN DIODES**
Submillimeter sources for radiometry using high power Indium Phosphide Gunn diode oscillators
[NASA-CR-190885] p 1518 N93-18057

**GYROMAGNETISM**
Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245

**GYROSCOPES**
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245

## H

**H ALPHA LINE**
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135

**H-INFINITY CONTROL**
Robust multivariable feedback design for uncertain linear systems
[AD-A258257] p 1648 N93-17902
Strategies for optimal control design of normal acceleration command following on the F-16
[AD-A258975] p 1450 N93-19095

**HABITABILITY**
The US global change research program: Early achievements and future directions
p 1573 N93-18864

**HABITATS**
Topography-induced variation in benthic boundary layer particle dynamics and fauna
[AD-A258230] p 1589 N93-18124

FLARE: The Far Side Lunar Research Expedition. A design of a far side lunar observatory
[NASA-CR-192029] p 1695 N93-18163

**HADRONS**
A hodoscope made of resistive plate chambers to identify muons in a fixed target beauty hadroproduction experiment
[NOTA-INTERNA-994] p 1536 N93-17810
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502

**HALF SPACES**
A harmonic half-space fundamental solution
[SER-R-271] p 1644 N93-17946

**HALIDES**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157

**HALL EFFECT**
The pre-onset, transitional, and foot regions in resistance versus temperature behavior in high-T2 cuprates: Inferences regarding maximum T2
[AD-A258175] p 1670 N93-17923
Three-terminal superconducting device research
[AD-A257907] p 1520 N93-18341
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991

**HALLEY'S COMET**
Comets: Role and importance to exobiology
p 1592 N93-18556
CRAF Mission: An opportunity for exobiology
p 1592 N93-18558
CCD imaging of the inner coma jets of comet P/Halley
p 1702 N93-19133
Initial overview of disconnection events in Halley's Comet 1986 p 1702 N93-19134
Influence of solar activity upon light curves of comets P/Halley (1986 3) and P/Churyumov-Gerasimenko (1982 8) p 1703 N93-19140
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142
Interplanetary magnetic field changes and condensations in comet Halley's plasma tail
p 1704 N93-19147
Water and dust production rates in comet P/Halley derived from ultraviolet and optical observations
p 1705 N93-19154
P/Halley: Spatial distribution and scale lengths for C2, CN, NH2, and H2O p 1706 N93-19157
Long-term evolution of 1991 DA: A dynamically evolved extinct Halley-type comet p 1707 N93-19166
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170
On LAM's and SAM's for Halley's rotation
p 1714 N93-19221
The disconnection event of 16.0 March 1986 in comet Halley p 1715 N93-19227
Long slit spectroscopy of NH2 in comets Halley, Wilson, and Nishikawa-Takamizawa-Tago p 1698 N93-19230
Evolution of near UV Halley's spectrum in the inner coma p 1716 N93-19235
Spatial and temporal variations in the column density distribution of comet Halley's CN coma
p 1717 N93-19238
The role of organic polymers in the structure of cometary dust p 1719 N93-19256
The contribution of electron collisions to rotational excitations of cometary water p 1721 N93-19268

**HAMILTONIAN FUNCTIONS**
Lie-admissible perturbation methods for open quantum systems
[PREPRINT-845] p 1651 N93-17840
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187
Yang phase for non-Hermitian systems and biunitary transformations
[PREPRINT-782] p 1645 N93-18197
Optical and magnetic signatures of localized excitations in polyaniline
[DE93-001954] p 1674 N93-18620
Polynomial approximation of Poincare maps for Hamiltonian system p 1651 N93-19160
The effect of secular resonances in the asteroid region between 2.1 and 2.4 AU p 1706 N93-19161
Canonical floquet perturbation theory
[AD-A258970] p 1721 N93-19358
Decoherence of multimode thermal squeezed coherent states
[DE93-002627] p 1679 N93-19489

**HANDBOOKS**
Process definition and modeling guidebook, version 01.00.02
[AD-A258967] p 1625 N93-19086

**HARDNESS TESTS**
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system
p 1496 N93-19402

**HARDWARE**
Robot welding process control development task
[NASA-CR-192434] p 1549 N93-18851

**HARMONIC ANALYSIS**
A harmonic half-space fundamental solution
[SER-R-271] p 1644 N93-17946

**HARMONIC GENERATIONS**
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon
[DE93-002550] p 1482 N93-18411

**HARMONIC OSCILLATORS**
Decoherence of multimode thermal squeezed coherent states
[DE93-002627] p 1679 N93-19489

**HARMONICS**
Coupling between plate vibration and acoustic radiation
[NASA-CR-189741] p 1651 N93-18770
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation
[AD-A259372] p 1522 N93-19853

**HASTELLOY (TRADEMARK)**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996

**HAZARDS**
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410

**HEAD (ANATOMY)**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz
[AD-A258136] p 1595 N93-17985
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters
p 1428 N93-19691

**HEAD-UP DISPLAYS**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
Panoramic cockpit displays p 1608 N93-19765

**HEALTH**
The US Navy Healthy Back Program: Effect on back knowledge among recruits
[AD-A258368] p 1596 N93-18210
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system
p 1496 N93-19402
Health effects of low-frequency electric and magnetic fields
[DE93-005675] p 1599 N93-19838

**HEALTH PHYSICS**
Space radiation health program plan
[NASA-TM-108036] p 1598 N93-18375

**HEARING**
An automated version of the dichotic listening test: Hardware, software, and procedural details
[AD-A258114] p 1594 N93-17895
NPSNET: Aural cues for virtual world immersion
[AD-A257835] p 1503 N93-18417
Meteor fireball sounds identified p 1709 N93-19184

**HEART FUNCTION**
Publications of the Space Physiology and Countermeasures Program, Cardiopulmonary Discipline: 1980-1990
[NASA-CR-4475] p 1598 N93-18376
Cardiopulmonary discipline science plan
[NASA-TM-108040] p 1599 N93-19648

**HEART RATE**
Development and enhancement of a mode of performance and decision making under stress in a real life setting
[AD-A257796] p 1598 N93-18363

**HEAT ENGINES**
Materials development program, ceramic technology project addendum to program plan: Cost effective ceramics for heat engines
[DE93-003663] p 1494 N93-18537

**HEAT EXCHANGERS**
Selection and costing of heat exchangers
[ESDU-92013] p 1524 N93-18040

**HEAT FLUX**
A kinetic theory treatment of heat transfer in plane Poiseuille flow with uniform pressure
[NASA-TM-103993] p 1532 N93-18884
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Numerical analysis of flow in a heated horizontal square duct p 1413 N93-19305
Variational iterative method for the calculation of heat flux and mean energy balance
[INPE-5236-RPQ/648] p 1583 N93-19824

**HEAT OF COMBUSTION**
Performance and heat transfer characteristics of a carbon monoxide/oxygen rocket engine
[NASA-TM-105897] p 1474 N93-18878

**HEAT OF FORMATION**
A first-principles study of the phase stability of fcc-based Ti-Al alloys
[DE93-002549] p 1487 N93-18390

**HEAT OF FUSION**
Rewet performance of a rectangular grooved heat pipe wick after gravitationally induced dryout
[AD-A258852] p 1534 N93-19367

**HEAT PIPES**
Rewet performance of a rectangular grooved heat pipe wick after gravitationally induced dryout
[AD-A258852] p 1534 N93-19367

**HEAT PUMPS**
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407

**HEAT RADIATORS**
Preliminary design of a radiator shading device for a lunar outpost
[NASA-CR-192016] p 1605 N93-18019

**HEAT RESISTANT ALLOYS**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069
Determination of cleavage planes and fracture characterization of Ni-based single crystal superalloys
[NASA-CR-191932] p 1674 N93-18593
Microstructural development during directional solidification of peritectic alloys
[NASA-CR-192090] p 1488 N93-18603
High-temperature, bellows hybrid seal
[NASA-CASE-LEW-15570-1] p 1549 N93-19027

**HEAT TOLERANCE**
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955

**HEAT TRANSFER**
Forced convection boiling and condensation on microgravity: A critical appraisal of the literature
[ETN-93-93362] p 1498 N93-17811
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991
Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
Diabatic dynamic initialization p 1563 N93-18719
Performance and heat transfer characteristics of a carbon monoxide/oxygen rocket engine
[NASA-TM-105897] p 1474 N93-18878
A kinetic theory treatment of heat transfer in plane Poiseuille flow with uniform pressure
[NASA-TM-103993] p 1532 N93-18884
Shock tube study of the effects of large density differences and blowing ratio on heat transfer to a film-cooled flat plate
[AD-A258813] p 1532 N93-18990
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Numerical analysis of flow in a heated horizontal square duct p 1413 N93-19305

**HEAT TRANSFER COEFFICIENTS**
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106

**HEAT TREATMENT**
Continuous measurement by eddy current methods of age hardening in an aluminum alloy
[AD-A257569] p 1486 N93-18176
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182
Mechanical behavior of titanium aluminide under engine operating conditions
[AD-A258884] p 1550 N93-19079

**HEAVY ELEMENTS**
Molecular orbital studies of the bonding in heavy element organometallics
[DE93-005291] p 1658 N93-19756

**HEAVY IONS**
Shielding from space radiations
[NASA-CR-191966] p 1655 N93-18567
Strangeness signals in heavy ion collisions
[DE93-002935] p 1657 N93-19516
Heavy ion backscattering spectrometry for high sensitivity
[DE93-002489] p 1484 N93-19624
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films
[DE93-002325] p 1677 N93-19742

**HEAVY LIFT LAUNCH VEHICLES**
Development of computational methods for heavy lift launch vehicles
[NASA-CR-192298] p 1456 N93-18872
Analysis of Titan 4 launch responsiveness
[AD-A259021] p 1456 N93-18950
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410

**HEAVY NUCLEI**
A cosmic ray propagation model
p 1746 N93-19383

**HELICOPTER CONTROL**
An investigation of a prototype OASYS effectiveness in maneuvering flight
[AD-A257901] p 1439 N93-18339
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation
p 1443 N93-19909

**HELICOPTER DESIGN**
RPH preliminary design, trend analysis and initial analysis of the NPS hummingbird
[AD-A257854] p 1439 N93-18304
The S.T.o.R.M. (tm): Air transport system design simulation
[NASA-CR-192070] p 1439 N93-18349
Helicopters in action p 1403 N93-19005

**HELICOPTER ENGINES**
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380

**HELICOPTER PERFORMANCE**
Helicopters in action p 1403 N93-19005

**HELICOPTER PROPELLER DRIVE**
Flexible rotorcraft system dynamics with time-variant contact conditions p 1441 N93-19034

**HELICOPTERS**
Open airscrew VTOL concepts
[NASA-CR-177603] p 1403 N93-17883
The S.T.o.R.M. (tm): Air transport system design simulation
[NASA-CR-192070] p 1439 N93-18349
Basic research on design analysis methods for rotorcraft vibrations
[NASA-CR-191917] p 1556 N93-18576
Numerical investigation of swirl-airfoil interactions in transonic area
[MPIS-8/1991] p 1407 N93-18627
Professor Wittenberg: His speciality and versatility
[ISBN-90-6275-670-0] p 1403 N93-19002
Helicopters in action p 1403 N93-19005
Wind tunnel test and CFD in Kawasaki Heavy Industries, Gifu p 1416 N93-19324
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380
Assessment of helicopter component statistical reliability computations
[AD-A258931] p 1441 N93-19447
Royal Naval helicopter ditching experience
p 1426 N93-19684
Canadian Forces helicopter ditchings: 1952-1990
p 1426 N93-19685
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991
p 1426 N93-19686
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990
p 1427 N93-19687
US Army helicopter inertia reel locking failures
p 1427 N93-19689
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 1428 N93-19692
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 1610 N93-19772
CVA, cockpit design and development tool
p 1611 N93-19780
Equipment, more or less ready to be used in helicopters p 1612 N93-19785
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation
p 1443 N93-19909
Helicopter night vision goggle testing in the United Kingdom p 1444 N93-19917
Fly-by voice, a technology demonstration
p 1444 N93-19918
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 1446 N93-19928

**HELIUM**
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
Helium compressors for closed-cycle, 4.5-Kelvin refrigerators p 1500 N93-18918
Hydrogen leak detection in the Space Shuttle
p 1457 N93-19392
Overview of helium-like structure measurements: A focus on the N = 2 triplet states
[DE93-002913] p 1658 N93-19748

**HELIUM ISOTOPES**
A helium-3/helium-4 dilution cryocooler for operation in zero gravity
[NASA-CR-183632] p 1499 N93-18397
Experiments on the nuclear interactions of pions and electrons
[DE93-001800] p 1655 N93-18590

**HELMET MOUNTED DISPLAYS**
Helmet-mounted area-of-interest display
[AD-A258275] p 1605 N93-18029
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333
Developing virtual cockpits p 1608 N93-19764
Panoramic cockpit displays p 1608 N93-19765
A new concept for helmet mounted vision
p 1609 N93-19767
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 1434 N93-19768
The MOD (UK) integrated helmet technical demonstrator programme p 1609 N93-19769

**HELMETS**
The MOD (UK) integrated helmet technical demonstrator programme p 1609 N93-19769
Multi-function visor p 1609 N93-19770

**HEMOGLOBIN**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**HEMORRHAGES**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**HETEROCYCLIC COMPOUNDS**
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283

**HETERODYNING**
Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854

**HETEROGENEITY**
Wrapping mathematical tools p 1648 N93-18504

**HETEROJUNCTIONS**
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions
[DE93-002626] p 1675 N93-19488
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957

**HEURISTIC METHODS**
Membership generation using multilayer neural network p 1618 N93-18227
The rudes and the shrewds: An experimental comparison of several evolutionary heuristics applied to the QAP problem
[REPT-91-042] p 1620 N93-18325
Effectiveness of heuristics and simulated annealing for the scheduling of concurrent tasks: An empirical comparison
[INRIA-RR-1379] p 1630 N93-18434
Temporal planning for transportation planning and scheduling p 1634 N93-18661
Scheduling of an aircraft fleet p 1635 N93-18665
Adaptive planning for applications with dynamic objectives p 1635 N93-18666
Iterative refinement scheduling p 1635 N93-18669
Experiments with a decision-theoretic scheduler
p 1636 N93-18674
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
An extended abstract: A heuristic repair method for constraint-satisfaction and scheduling problems
p 1638 N93-18687
Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Discovery of pathways in science
p 1689 N93-19718
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723
The evaluation and reporting of discovery systems
p 1691 N93-19734
Evaluating machine discovery systems
p 1692 N93-19735

**HIERARCHIES**
Category scaling within a given context as a common basis for the AHP, SMART and ELECTRE
[REPT-92-22] p 1683 N93-17916
JIGSAW: Preference-directed, co-operative scheduling
p 1639 N93-18689
Discovery of pathways in science
p 1689 N93-19718
Discovery of spatial concepts in crystallographic databases p 1690 N93-19727

**HIGH ALTITUDE**
High-altitude electromagnetic pulse survivability assessment of the Harris RF-3200 transceiver
[AD-A258347] p 1502 N93-18207
High altitude measurements with the EISCAT VHF radar and the development of Common Programme Seven
p 1727 N93-19551

**HIGH ELECTRON MOBILITY TRANSISTORS**
HPM damage thresholds of GaAs FETs and HEMTs
[AD-A257897] p 1520 N93-18420

**HIGH ENERGY ELECTRONS**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244
An experimental test of the LPM effect: Bremsstrahlung suppression at high energies
[DE93-004019] p 1660 N93-19495

**HIGH ENERGY FUELS**
What is the progress in propulsion?
p 1404 N93-19006

**HIGH ENERGY INTERACTIONS**
High energy physics
[DE93-002411] p 1659 N93-17911
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471
Theoretical studies in medium-energy nuclear and hadronic physics
[DE93-004373] p 1657 N93-19503
Strangeness signals in heavy ion collisions
[DE93-002935] p 1657 N93-19516
Software for parallel processing applications
[DE93-002510] p 1627 N93-19744

**HIGH FREQUENCIES**
High-altitude electromagnetic pulse survivability assessment of the Harris RF-3200 transceiver
[AD-A258347] p 1502 N93-18207
Design, analysis, and testing of high frequency passively damped struts p 1464 N93-18835
A comparison of viscoelastic damping models
p 1464 N93-18836

**HIGH LEVEL LANGUAGES**
High-level parallel programming
[AD-A257977] p 1629 N93-18185

**HIGH POWER LASERS**
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A258485] p 1540 N93-18101
Self-collimated unstable resonator semiconductor laser
[NASA-CASE-NPO-18386-1-CU] p 1540 N93-18277
Laser beam diagnostics for kilowatt power pulsed YAG laser
[DE93-002928] p 1542 N93-19515

**HIGH PRESSURE**
Piezoelectric response of precisely poled PVDF to shock compression greater than 10 GPa
[DE93-002469] p 1539 N93-19636

**HIGH RESOLUTION**
SAR-related stress variability in the Marine Atmospheric Boundry Layer (MABL) (high resolution ARI)
[AD-A258317] p 1585 N93-17987
Immersion objective lenses in electron optics
[ETN-92-92799] p 1662 N93-18442
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135

Analysis of kriging applied to resolution enhancement of digital satellite imagery
[AD-A258914] p 1626 N93-19337
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746
Superconducting tunnel junction x-ray detectors with niobium absorbers and aluminum quasiparticle traps
[DE93-002885] p 1677 N93-19826

**HIGH SPEED**
High speed laminar flow over cavities
[AERO-REPT-9110] p 1526 N93-18130
Design and development of a high-speed Winograd fast Fourier transform processor board
[AD-A258919] p 1522 N93-19342
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling
[DE93-004563] p 1456 N93-19496
Microphotography of shocks in crystals
[DE93-002888] p 1677 N93-19827

**HIGH SPEED PHOTOGRAPHY**
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050

**HIGH STRENGTH ALLOYS**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007

**HIGH TEMPERATURE**
Radiation properties of high-temperature flames
p 1485 N93-18477
Mechanism of diamond film growth
p 1678 N93-18479
High temperature component analysis with expert systems p 1557 N93-18751
High temperature chemistry of fibers and composites
[AD-A258788] p 1479 N93-18978
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444

**HIGH TEMPERATURE ENVIRONMENTS**
High temperature sorbents for oxygen
[NASA-CASE-NPO-18409-1-CU] p 1483 N93-19025

**HIGH TEMPERATURE GASES**
Computational study of real gas effects in high speed high temperature flow
[AERO-REPT-9102] p 1526 N93-18129
Spectroscopic wear detector
[NASA-CASE-LEW-15200-1] p 1474 N93-18856

**HIGH TEMPERATURE LUBRICANTS**
The development of new, low-cost perfluoroalkylether fluids with excellent low and high-temperature properties
[NASA-CR-190865] p 1492 N93-18229
Evaluation of high-temperature lubricants for low-heat rejection diesel engines
[AD-A257893] p 1494 N93-18418

**HIGH TEMPERATURE SUPERCONDUCTORS**
Spacecraft design project: High temperature superconducting infrared imaging satellite
[NASA-CR-192036] p 1458 N93-17887
The pre-onset, transitional, and foot regions in resistance versus temperature behavior in high-T2 cuprates: Inferences regarding maximum T2
[AD-A258175] p 1670 N93-17923
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
High-temperature superconducting electronics
p 1523 N93-18464
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619
Study of magnetic bearings with high temperature superconductors, phase 3
[NASA-CR-192229] p 1551 N93-19378
Ion beam-based characterization of multicomponent oxide thin films and thin film layered structures
[DE93-003004] p 1676 N93-19627
Elements of scientific research: Modeling discoveries in oxide superconductivity p 1679 N93-19720

**HIGH TEMPERATURE TESTS**
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514

**HIGH THRUST**
Conceptual design of a high thrust Vulcain-derived low-cost rocket engine
[ETN-93-93018] p 1472 N93-18144

**HIGH VOLTAGES**
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328

**HIGHLANDS**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503
p 1735 N93-18788
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
The ancient lunar crust, Apollo 17 region
p 1736 N93-18795
The Apollo 17 region: A compositional overview
p 1736 N93-18796
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
The Apollo 17 samples: The Massifs and landslide
p 1738 N93-18809
Impact melt breccias at the Apollo 17 landing site
p 1739 N93-18810
Last chance at Taurus-Littrow p 1740 N93-18817

**HIGHWAYS**
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682

**HILBERT SPACE**
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221

**HISTOGRAMS**
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609

**HISTOLOGY**
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges
p 1429 N93-19696
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 1429 N93-19697

**HISTORIES**
Aviation medicine research: A historical review
[AD-A258198] p 1596 N93-18217
Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494

**HODOSCOPES**
A hodoscope made of resistive plate chambers to identify muons in a fixed target beauty hadroproduction experiment
[NOTA-INTERNA-994] p 1536 N93-17810

**HOLDERS**
Split rail gripper assembly and tool driver therefor
[NASA-CASE-GSC-13370-2] p 1547 N93-18288

**HOLDING**
Efficient visual grasping alignment for cylinders
[NASA-CR-191863] p 1663 N93-19346

**HOLE DISTRIBUTION (MECHANICS)**
Predicting viscosities of aqueous salt mixtures
[DE93-002421] p 1483 N93-18523

**HOLES (ELECTRON DEFICIENCIES)**
Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245

**HOLES (MECHANICS)**
Open and filled hole static tensile strength characterization of metal matrix composite SCS-9/Beta21s
[AD-A258829] p 1480 N93-19091

**HOLOGRAPHIC INTERFEROMETRY**
Study of optical techniques for the Ames unitary wind tunnel: Digital image processing, part 6
[NASA-CR-192164] p 1452 N93-18766
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960

**HOLOGRAPHY**
Development of neural modules based on Si/PLZT technology for opto-electronic implementations of neural networks
[AD-A257937] p 1518 N93-18120
Holographic enhanced remote sensing system
[NASA-CR-190867] p 1565 N93-18230
Stimulated Brillouin scattering phase conjugation
p 1664 N93-18471
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960
A new concept for helmet mounted vision
p 1609 N93-19767

**HOMODYNE RECEPTION**
Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854

**HONEYCOMB STRUCTURES**
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380

**HORN ANTENNAS**
Antenna pattern control using impedence surfaces
[NASA-CR-192182] p 1516 N93-19934

**HOT ELECTRONS**
Solid-state dynamics and quantum transport in novel semiconductor nanostructures
[AD-A258482] p 1672 N93-18314

**HOT PRESSING**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632

**HOT-FILM ANEMOMETERS**
Hot film wall shear instrumentation for compressible boundary layer transition research
[NASA-CR-191360] p 1404 N93-17855

**HOVERING**
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380

**HTPB PROPELLANTS**
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840

**HUBBLE SPACE TELESCOPE**
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660
Decomposability and scalability in space-based observatory scheduling p 1634 N93-18663
An extended abstract: A heuristic repair method for constraint-satisfaction and scheduling problems
p 1638 N93-18687
An application of the Observer/Kalman Filter Identification (OKID) technique to Hubble flight data
p 1462 N93-18825

**HULLS (STRUCTURES)**
Predicting multi-wall structural response to hypervelocity impact using the hull code
[NASA-CR-4486] p 1461 N93-18406

**HUMAN BEHAVIOR**
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)?
p 1430 N93-19704
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 1431 N93-19709

**HUMAN BODY**
A review of models of the human temperature regulation system
[AD-A258023] p 1595 N93-17918
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident?
p 1423 N93-19664
Design/development of an enhanced biodynamic manikin p 1424 N93-19667
Improving manikin biofidelity p 1424 N93-19668
The design and use of automotive crash test dummies
p 1424 N93-19669
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672

**HUMAN FACTORS ENGINEERING**
Enabler operator station --- lunar surface vehicle
[NASA-CR-192067] p 1546 N93-18050
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5
[NASA-CR-192042] p 1606 N93-18156
Research and development project summaries
[AD-A257518] p 1747 N93-18175
Cognitive engineering models in space systems
[NASA-CR-192001] p 1606 N93-18517
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888

Effect of contrast on human speed perception
[NASA-TM-103898] p 1607 N93-19104
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 1422 N93-19653
Human factors in aircraft accident investigation p 1422 N93-19654
How do we investigate the human factor in aircraft accidents? p 1422 N93-19655
A method for investigating human factor aspects of military aircraft accidents p 1422 N93-19656
The human factor problem in the Canadian Forces aviation p 1422 N93-19657
Underlying causes of accidents: Casual networks p 1422 N93-19658
Aid in investigation by figure animation p 1422 N93-19659
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 1423 N93-19660
Occupant simulation as an aspect of flight safety research p 1423 N93-19665
Computer aided methods for simulating occupant response to impact using OASYS DYNA3D p 1424 N93-19666
Design/development of an enhanced biodynamic manikin p 1424 N93-19667
Improving manikin biofidelity p 1424 N93-19668
The design and use of automotive crash test dummies p 1424 N93-19669
An improved anthropometric test device p 1424 N93-19670
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 1425 N93-19673
F-16 accidents: The Norwegian experience p 1425 N93-19674
Category A F-16 accidents in the Belgian Air Force p 1425 N93-19675
Air accidents in the French Air Force p 1425 N93-19676
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 1425 N93-19677
Underlying causes of human error in US Army rotary wind accidents p 1425 N93-19678
Epidemiology of United States Air Force spatial disorientation accidents: 1990-1991 p 1425 N93-19679
Disorientation and flight safety: A survey of UK Army aircrew p 1426 N93-19680
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case p 1426 N93-19681
Cognitive factors in the air events of the Air Force during the last decade p 1426 N93-19682
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 1426 N93-19683
Accidents and errors: A review of recent UK Army Air Corps accidents p 1429 N93-19701
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 1431 N93-19709
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 1607 N93-19757
Engineering the visibility of small features on electronic flight displays p 1607 N93-19758
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 1607 N93-19759
Advanced cockpit-mission and image management p 1607 N93-19760
Aircrew acceptance of automation in the cockpit p 1608 N93-19761
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762
Developing virtual cockpits p 1608 N93-19764
Panoramic cockpit displays p 1608 N93-19765
A new concept for helmet mounted vision p 1609 N93-19767
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 1434 N93-19768
The MOD (UK) integrated helmet technical demonstrator programme p 1609 N93-19769
Multi-function visor p 1609 N93-19770
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 1610 N93-19772
Multimodal dialog system for future cockpits p 1610 N93-19773
Principles for integrating voice I/O in a complex interface p 1610 N93-19774
A systems approach to the advanced aircraft man-machine interface p 1610 N93-19776
Management of avionics data in the cockpit p 1611 N93-19777
Model-based reasoning applied to cockpit warning systems p 1611 N93-19778
The integration of advanced cockpit and systems design p 1611 N93-19779
CVA, cockpit design and development tool p 1611 N93-19780
Man-machine interface with simulated automatic target recognition systems p 1611 N93-19781
Liquid crystal displays replacing the CRT and CLE of future cockpits p 1447 N93-19783
Equipment, more or less ready to be used in helicopters p 1612 N93-19785
Lessons learned from an historical look at flight testing p 1442 N93-19904

**HUMAN PERFORMANCE**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816
The detection of lateral motion by US Navy jet pilots
[AD-A258115] p 1595 N93-17896
Comparing performance on implicit memory tests
[AD-A258168] p 1602 N93-17921
Spatio-temporal masking: Hyperacuity and local adaptation
[AD-A257934] p 1595 N93-18006
Dual-task training strategies and aging
[AD-A258261] p 1602 N93-18027
Design requirements for force reflecting master controllers p 1605 N93-18035
Cognitive engineering models in space systems
[NASA-CR-192001] p 1606 N93-18517
Human performance assessment methods
[AGARD-AG-308-ADD] p 1603 N93-18868
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
The effects of iconic presentation on individuals
[AD-A258785] p 1603 N93-18949
Effect of contrast on human speed perception
[NASA-TM-103898] p 1607 N93-19104
Training evaluation final report p 1682 N93-19405
Stimulus presentation formats and measurement techniques for the quantification of target detection performance
[AD-A258933] p 1603 N93-19449
Underlying causes of human error in US Army rotary wind accidents p 1425 N93-19678
Cognitive factors in the air events of the Air Force during the last decade p 1426 N93-19682
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 1426 N93-19683
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 1426 N93-19686
Accidents and errors: A review of recent UK Army Air Corps accidents p 1429 N93-19701
The influence of individual sensivity to stress on the behavior (attitude and performance) of avoidance of an accident p 1430 N93-19705
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 1607 N93-19759
Modeling the dynamics of mental workload and human performance in complex systems
[AD-A258553] p 1603 N93-19956

**HUMAN REACTIONS**
Modeling human response errors in synthetic flight simulator domain p 1612 N93-19464
Occupant simulation as an aspect of flight safety research p 1423 N93-19665
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 1607 N93-19759

**HUMAN RESOURCES**
EHR directory of awards, FY 1990
[NSF-92-75] p 1746 N93-17854

**HURRICANES**
A dynamical theory for hurricane spiral bands
[AD-A258190] p 1584 N93-17859
Hurricane risk assessment to rollback or ride out a cost versus loss decision making approach p 1588 N93-19411

**HYDRAULIC EQUIPMENT**
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Reducing the net torque and flow ripple effects of multiple hydraulic piston motor drives p 1507 N93-18917
Power analysis in flexible automation
[AD-A259080] p 1549 N93-18961

**HYDRAULIC FLUIDS**
The development of new, low-cost perfluoroalkylether fluids with excellent low and high-temperature properties
[NASA-CR-190865] p 1492 N93-18229

**HYDRAULIC TEST TUNNELS**
Wind tunnel tests and CFD in Fuji Heavy Industries p 1416 N93-19323

**HYDROCARBON FUELS**
Fouling and slagging in combustion plant
[ESDU-92012] p 1498 N93-18000

**HYDROCARBONS**
Model calculations of dust radiation from galactic and extragalactic sources by considering polycyclic aromatic hydrocarbons
[ETN-93-92729] p 1699 N93-18626
Ion produced cometary organic crust p 1701 N93-19122
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485

**HYDROCLIMATOLOGY**
Urban climatology in Africa. Special issue of the African urban quarterly, volume 5, numbers 1 and 2, February and May, 1990
[WCASP-19] p 1587 N93-18592

**HYDROCYANIC ACID**
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143

**HYDRODYNAMIC EQUATIONS**
On the time dependent hydrodynamic model for semiconductors
[ETN-93-93027] p 1518 N93-18098

**HYDRODYNAMICS**
Lagrangian chaos: Transport, mixing, and diffusion in fluids
[NOTA-INTERNA-988] p 1651 N93-17939
Vehicle guidance and control along circular trajectories
[AD-A257570] p 1450 N93-18177
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
Predicting multi-wall structural response to hypervelocity impact using the hull code
[NASA-CR-4486] p 1461 N93-18406
Melting, vaporization, and energy partitioning for impacts on asteroidal and planetary objects p 1718 N93-19244

**HYDROGEN**
Instruction manual for UTEP weld gas hydrogen detector
[NASA-CR-184477] p 1537 N93-18034
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces
[DE93-004647] p 1483 N93-18453
Determination of cleavage planes and fracture characterization of Ni-based single crystal superalloys
[NASA-CR-191932] p 1674 N93-18593
Lunar resources: Oxygen from rocks and soil p 1735 N93-18787
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
Velocity distributions of H and OH produced through solar photodissociation of H2O p 1720 N93-19266
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems
[AD-A258693] p 1678 N93-19862

**HYDROGEN ATOMS**
Mechanism of diamond film growth p 1678 N93-18479
Classical and quantum dynamics of the impulsively driven hydrogen atom
[DE93-002430] p 1656 N93-19477

**HYDROGEN BONDS**
The crystal and molecular structure of triethanol-ammonium nitrate
[AD-A258428] p 1670 N93-17864

**HYDROGEN FUELS**
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085

**HYDROGEN OXYGEN ENGINES**
Passive recirculation in the National Launch System's fuel feedlines
[NASA-TM-108391] p 1471 N93-17941
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets
[NASA-TM-105999] p 1471 N93-17995

Vulcain: A cryogenic engine for Ariane 5
[ETN-93-93022] p 1472 N93-18082
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
Flame-front kinetics p 1485 N93-18481
Emission spectra of selected SSME elements and materials
[NASA-RP-1286] p 1656 N93-18763

**HYDROGEN PRODUCTION**
Lunar resources: Oxygen from rocks and soil p 1735 N93-18787
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135

**HYDROGEN SULFIDE**
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143

**HYDROGENATION**
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485
Preconversion catalytic deoxygenation of phenolic functional groups
[DE93-002941] p 1484 N93-19517

**HYDROGENOLYSIS**
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485

**HYDROLOGICAL CYCLE**
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
Water on Mars: Inventory, distribution, and possible sources of polar ice p 1740 N93-19805
The Mars water cycle at other epochs: Recent history of the polar caps and layered terrain p 1741 N93-19811

**HYDROLOGY**
Urban climatology in Africa. Special issue of the African urban quarterly, volume 5, numbers 1 and 2, February and May, 1990
[WCASP-19] p 1587 N93-18592
Flow rate logging seepage meter
[NASA-CASE-LAR-14835-1] p 1538 N93-19328

**HYDROLOGY MODELS**
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095

**HYDROLYSIS**
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990

**HYDROPONICS**
Characterization of the water soluble component of inedible residue from candidate CELSS crops
[NASA-TM-107557] p 1605 N93-18111
The dynamics of hydroponic crops for simulation studies of the CELSS initial reference configurations
[NASA-CR-192101] p 1570 N93-19943

**HYDROSTATIC PRESSURE**
Optimum design of isotropic monocoque and ring-stiffened circular cylindrical shells subject to external hydrostatic pressure
[AD-A257864] p 1555 N93-18327
A performance model for thick composite cylinders subjected to external hydrostatic pressure
[DE93-002425] p 1560 N93-19476

**HYDROTHERMAL STRESS ANALYSIS**
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139

**HYDROXIDES**
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490
Structural transformation of nickel hydroxide films during anodic oxidation
[DE93-001863] p 1488 N93-18535

**HYDROXYL EMISSION**
Aeronomy of auroral and airglow emissions p 1584 N93-18496
Observations of OH in comet Levy with the Nancay radio telescope p 1697 N93-19129
The correlation between water production rates and visual magnitudes in comets p 1709 N93-19181

**HYDROXYL RADICALS**
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures
[NASA-CR-191916] p 1577 N93-18599
Observations of OH in comet Levy with the Nancay radio telescope p 1697 N93-19129
Velocity distributions of H and OH produced through solar photodissociation of H2O p 1720 N93-19266

**HYPERBARIC CHAMBERS**
The Proceedings of the Hypobaric Decompression Sickness Workshop
[AD-A257612] p 1597 N93-18362

**HYPERBOLIC FUNCTIONS**
Analysis of a multistep Jacobi multigrid method for solving the Euler equations
[INRIA-RR-1506] p 1644 N93-17879

**HYPERCUBE MULTIPROCESSORS**
Parallel simulation of structural VHDL circuits on Intel Hypercubes
[AD-A258999] p 1521 N93-19012

**HYPERSONIC AIRCRAFT**
A manned hypersonic reconnaissance vehicle which does not require airborne fueling p 1434 N93-17888
Advanced hypersonic aircraft design
[NASA-CR-192046] p 1436 N93-18037
Operational and research aspects of a radio-controlled model flight test program
[NASA-TM-104266] p 1440 N93-18616

**HYPERSONIC FLIGHT**
Analytical solutions to constrained hypersonic flight trajectories
[NASA-CR-191987] p 1407 N93-18602
Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317

**HYPERSONIC FLOW**
H-P adaptive methods for finite element analysis of aerothermal loads in high-speed flows
[NASA-CR-189739] p 1525 N93-18093
Computational study of real gas effects in high speed high temperature flow
[AERO-REPT-9102] p 1526 N93-18129
Hypersonic flows as related to the national aerospace plane
[NASA-CR-191980] p 1406 N93-18378
Computational Fluid Dynamics, volume 2
[VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Hypersonic rarefied wake characterization
[NASA-TP-3327] p 1529 N93-18604
A Blottner type numerical model for nonequilibrium viscous hypersonic flows in upwind finite elements
[INRIA-RR-1476] p 1407 N93-18648
Influence of the physical modelling of viscous terms on hypersonic flow computations
[INRIA-RR-1493] p 1408 N93-18652
Electron beam probing of blow-down hypersonic flows
[ONERA-NT-1992-7] p 1408 N93-18701
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275
Numerical computations using multi-domain technique p 1409 N93-19277
Code development for hypersonic real-gas flow simulations toward the design of space vehicles p 1411 N93-19293
The role of computational fluid dynamics in aeronautical engineering. 9: Analysis of hypersonic equilibrium air flow p 1412 N93-19294
Numerical calculation of hypersonic non-equilibrium flow around OREX p 1412 N93-19296
Numerical simulation of hypersonic flow around H-2 Orbiting Plane (HOPE), part 3 p 1412 N93-19297
Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317
Assessment of nonequilibrium radiation computation methods for hypersonic flows
[NASA-TM-103994] p 1534 N93-19348
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
[NASA-TM-103937] p 1417 N93-19379

**HYPERSONIC HEAT TRANSFER**
Assessment of nonequilibrium radiation computation methods for hypersonic flows
[NASA-TM-103994] p 1534 N93-19348

**HYPERSONIC SPEED**
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101

**HYPERSONIC VEHICLES**
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275
Code development for hypersonic real-gas flow simulations toward the design of space vehicles p 1411 N93-19293
The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University
[NASA-CR-191362] p 1680 N93-19452
Structures research p 1447 N93-19453
Controls and guidance research p 1451 N93-19454
Flight simulator for hypersonic vehicle and a study of NASP handling qualities p 1452 N93-19456
Lumped mass modelling for the dynamic analysis of aircraft structures p 1447 N93-19460

**HYPERSONIC WIND TUNNELS**
Photoluminescent thermography in hypersonic blowdown wind tunnel: Feasibility study with pinpoint measurement
[ONERA-NT-1992-8] p 1407 N93-18617

**HYPERTENSION**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**HYPERVELOCITY FLOW**
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
[NASA-TM-103937] p 1417 N93-19379

**HYPERVELOCITY IMPACT**
Predicting multi-wall structural response to hypervelocity impact using the hull code
[NASA-CR-4486] p 1461 N93-18406
Hypervelocity impact effects on solar cells
[NASA-CR-192444] p 1571 N93-18601
The Apollo 17 regolith p 1737 N93-18799
Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221 p 1738 N93-18807
Optimization techniques applied to passive measures for in-orbit spacecraft survivability
[NASA-CR-184486] p 1466 N93-18859
Simulated families: A test for different methods of family identification p 1701 N93-19125

**HYPERVELOCITY PROJECTILES**
Flash radiographic studies of hypervelocity projectile interactions with explosives
[AD-A258387] p 1497 N93-18260

**HYSTERESIS**
The aerodynamic characteristics of the Gottingen 797 and Wortmann FX63-137 aerofoil sections at very low Reynolds numbers
[ETN-93-92999] p 1406 N93-18128
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619
Numerical simulation of unsteady large scale separated flow around oscillating airfoil p 1410 N93-19285
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846

## I

**ICE**
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
Modification of primordial ices by cosmic rays as simulated by cyclotron irradiation p 1709 N93-19183
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers p 1710 N93-19189
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191
Laboratory studies on cometary crust formation: The importance of sintering p 1715 N93-19228
Glaciation in Elysium p 1740 N93-19802
Water on Mars: Inventory, distribution, and possible sources of polar ice p 1740 N93-19805
Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806
The polar layered deposits on Mars: Inference from thermal inertia modeling and geologic studies p 1741 N93-19810
The Mars water cycle at other epochs: Recent history of the polar caps and layered terrain p 1741 N93-19811
Is CO2 ice permanent? p 1742 N93-19813
The interannual variability of polar cap recessions as a measure of Martian climate and weather: Using Earth-based data to augment the time line for the Mars observer mapping mission p 1742 N93-19814
Antarctic lakes (above and beneath the ice sheet): Analogues for Mars p 1743 N93-19817

**ICE CLOUDS**
An experimental study of growth and phase change of polar stratospheric cloud particles
[NASA-CR-192369] p 1588 N93-19887
**ICE ENVIRONMENTS**
Ice ages and geomagnetic reversals
p 1580 N93-18968
Plio-Pleistocene time evolution of the 100-ky cycle in marine paleoclimate records p 1581 N93-18972
**ICE FORMATION**
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050
**ICE MAPPING**
Evaluation of the vertical distribution of the ice content in cirrus clouds from combined measurements of lidar and infrared radiometers
[ETN-93-92740] p 1587 N93-18631
**IDENTIFYING**
RAFALE: Progress of the program
p 1442 N93-19905
**IGNEOUS ROCKS**
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
**IGNITION**
Microgravity ignition experiment
[NASA-CR-192057] p 1498 N93-18053
Test method for self-ignition of materials
[VTT-PUBS-96] p 1483 N93-18697
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192285] p 1497 N93-19412
**IGNITION TEMPERATURE**
Test method for self-ignition of materials
[VTT-PUBS-96] p 1483 N93-18697
**ILLUSIONS**
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case
p 1426 N93-19681
**ILMENITE**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
neoKREEP: A new lunar component at Apollo 17
p 1737 N93-18797
**IMAGE ANALYSIS**
Positioning a camera from a photograph and a scene model
[TELECOM-PARIS-92-D-002] p 1537 N93-17948
Artificial intelligence for geologic mapping with imaging spectrometers
[NASA-CR-192086] p 1564 N93-17979
Characterization of alloy 718 microstructures
[DS-1935] p 1486 N93-18147
Fuzzy Set Methods for Object Recognition in Space Applications
[NASA-CR-191975] p 1618 N93-18224
Automatic rule generation for high-level vision
p 1618 N93-18225
Possibility expectation and its decision making algorithm p 1618 N93-18226
Membership generation using multilayer neural network p 1618 N93-18227
Possibilistic clustering for shape recognition
p 1618 N93-18228
General method of pattern classification using the two-domain theory
[NASA-CASE-MSC-21737-1] p 1619 N93-18282
Photoelectric analysis of the solar granulation in IR
[AD-A257811] p 1744 N93-18334
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
Wavelet image analysis p 1628 N93-18506
On corner and vertex detection
[INRIA-RR-1439] p 1646 N93-18594
Three-dimensional motion computation and object segmentation in a long sequence of stereo frames
[INRIA-RR-1438] p 1651 N93-18634
Inversion methods for interpretation of asteroid lightcurves p 1698 N93-19182
Spectral and spatial pattern recognition in digital imagery
[AD-A258910] p 1627 N93-19355
Recognition of partially occluded threat objects using the annealed Hopefield network p 1612 N93-19466
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469
A system for segmentation and classification of satellite images
[INPE-5291-PRE/1696] p 1567 N93-19788
Glaciation in Elysium p 1740 N93-19802
Airborne Remote Sensing
[VTT-SYMPOSIUM-127] p 1569 N93-19871
Experience of the Finnish National Scientific Research Center (VTT) in the interpretation of AVIRIS spectrometric image p 1570 N93-19879
**IMAGE CORRELATORS**
A system for segmentation and classification of satellite images
[INPE-5291-PRE/1696] p 1567 N93-19788
**IMAGE ENHANCEMENT**
CCD imaging of the inner coma jets of comet P/Halley
p 1702 N93-19133
Evaluating some computer exhancement algorithms that improve the visibility of cometary morphology
p 1628 N93-19194
Texture enhancement of Synthetic Aperture Radar (SAR) images with speckle noise reduction filters
[INPE-5297-PRE/1702] p 1515 N93-19833
**IMAGE INTENSIFIERS**
Helicopter night vision goggle testing in the United Kingdom p 1444 N93-19917
**IMAGE MOTION COMPENSATION**
Image stabilization performance optimization using an optical reference gyroscope
[AD-A258863] p 1538 N93-19371
**IMAGE PROCESSING**
Image matching strategies for the co-registration of CAESAR sea-images: An hierarchical area-based approach, part 2
[BCRS-90-40B-PT-2] p 1564 N93-17951
Information system for co-registration of CAESAR sea-images based on two dimensional image matching techniques (SCORE). Part 3: Design and detailed design document
[BCRS-90-40C-PT-3] p 1564 N93-17953
Interactive satellite navigation for the Naval environmental operational nowcasting system
[AD-A257920] p 1459 N93-18004
Holographic enhanced remote sensing system
[NASA-CR-190867] p 1565 N93-18230
Navigation of AVHRR/NOAA images: Operational procedure for SUN workstation
[INPE-5354-RPQ/654] p 1686 N93-18231
Near real-time stereo vision system
[NASA-CASE-NPO-18593-1-CU] p 1662 N93-18276
General method of pattern classification using the two-domain theory
[NASA-CASE-MSC-21737-1] p 1619 N93-18282
Composite video and graphics display for camera viewing systems in robotics and teleoperation
[NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284
Computational and neural network models for the analysis of visual texture
[AD-A258166] p 1632 N93-18296
Advanced vector quantization techniques
p 1648 N93-18505
Wavelet image analysis p 1628 N93-18506
Formulation and error analysis for a generalized image point correspondence algorithm
[NASA-CR-192005] p 1621 N93-18570
Realization of real time graphics in vehicles with high dynamic motion
[ETN-93-92739] p 1622 N93-18630
Three-dimensional motion computation and object segmentation in a long sequence of stereo frames
[INRIA-RR-1438] p 1651 N93-18634
On the information contained in the motion field of lines and the cooperation between motion and stereo
[INRIA-RR-1453] p 1537 N93-18647
Study of optical techniques for the Ames unitary wind tunnel: Digital image processing, part 6
[NASA-CR-192164] p 1452 N93-18766
The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report
[DE92-041215] p 1624 N93-18867
A user interface to a true 3-D display device
[AD-A258995] p 1614 N93-18891
Effect of contrast on human speed perception
[NASA-TM-103898] p 1607 N93-19104
Evaluating some computer exhancement algorithms that improve the visibility of cometary morphology
p 1628 N93-19194
Three-dimensional measurement of turbulent shear flows using digital image processing
p 1415 N93-19319
Spectral and spatial pattern recognition in digital imagery
[AD-A258910] p 1627 N93-19355
Digital signal processing using lapped transforms with variable parameter windows and orthonormal bases
[AD-A258853] p 1511 N93-19368
Retinal modeling: Segmenting motion from spatio-temporal inputs using neural networks
[AD-A258854] p 1599 N93-19369
Locally adaptive vector quantization: Data compression with feature preservation p 1513 N93-19425
Data compression by wavelet transforms
p 1513 N93-19426
Unified approach for computer vision problems: Mathematical morphology
[INPE-5391-TAE/012] p 1641 N93-19640
Incorporation of orbital imagery into a cartographic data base
[INPE-5300-PRE/1705] p 1688 N93-19644
Automating sky object classification in astronomical survey images p 1690 N93-19728
Advanced cockpit-mission and image management
p 1607 N93-19760
Adaptive autonomous target cuer
p 1612 N93-19784
Algorithims and methods for processing Synthetic Aperture Radar (SAR) images
[INPE-5301-PRE/1706] p 1515 N93-19787
Image quality measurement techniques
[INPE-5362/NTC/302] p 1664 N93-19794
Airborne imaging spectrometer development tasks
p 1539 N93-19880
**IMAGE RECONSTRUCTION**
The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report
[DE92-041215] p 1624 N93-18867
Data compression by wavelet transforms
p 1513 N93-19426
**IMAGE RESOLUTION**
Wavelet-based multiresolution analyses of signals
[AD-A257496] p 1500 N93-17904
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
Advanced vector quantization techniques
p 1648 N93-18505
Theory and implementation of wavelet analyses in rational resolution decompositions
[AD-A259040] p 1509 N93-19000
Analysis of whole-sky imager data to determine the validity of PCFLOS models
[AD-A259042] p 1587 N93-19020
Image quality measurement techniques
[INPE-5362/NTC/302] p 1664 N93-19794
**IMAGING RADAR**
Locating an imaging radar in Canada for identifying spaceborne objects
[AD-A258969] p 1510 N93-19087
**IMAGING SPECTROMETERS**
Artificial intelligence for geologic mapping with imaging spectrometers
[NASA-CR-192086] p 1564 N93-17979
Gravity waves and sporadic E layers as measured by EISCAT and AIS p 1724 N93-19530
Airborne Remote Sensing
[VTT-SYMPOSIUM-127] p 1569 N93-19871
Business development considerations for the imaging spectrometer project p 1569 N93-19873
Present and future imaging spectrometers in telemapping p 1570 N93-19877
The use of imaging spectrometers
p 1570 N93-19878
Experience of the Finnish National Scientific Research Center (VTT) in the interpretation of AVIRIS spectrometric image p 1570 N93-19879
Airborne imaging spectrometer development tasks
p 1539 N93-19880
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898
**IMAGING TECHNIQUES**
Helmet-mounted area-of-interest display
[AD-A258275] p 1605 N93-18029
Photoelectric analysis of the solar granulation in IR
[AD-A257811] p 1744 N93-18334
Study of optical techniques for the Ames unitary wind tunnel, part 7
[NASA-CR-192165] p 1452 N93-18520
Study of optical techniques for the Ames unitary wind tunnel: Digital image processing, part 6
[NASA-CR-192164] p 1452 N93-18766
The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report
[DE92-041215] p 1624 N93-18867
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924
The effect of an adaptive optical system's spatio-temporal response on imaging performance
[AD-A258848] p 1663 N93-19069
Dark-cycle monitoring of biological subjects on Space Station Freedom
[NASA-TM-103976] p 1500 N93-19103
Comet P/Tempel: Some highlights and conclusions from the 1988 apparition p 1702 N93-19130

Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131
CCD imaging of the inner coma jets of comet P/Halley p 1702 N93-19133
Palomar Planet-Crossing Asteroid Survey (PCAS): Recent discovery rate p 1707 N93-19168
Inversion methods for interpretation of asteroid lightcurves p 1698 N93-19182
Wake in faint television meteors p 1716 N93-19233
Mosaic CCD method: A new technique for observing dynamics of cometary magnetospheres p 1698 N93-19236
1991 DA: An asteroid in a bizarre orbit p 1718 N93-19247
A CCD search for distant satellites of asteroids 3 Juno and 146 Lucina p 1699 N93-19248
Cartography of asteroids and comet nuclei from low resolution data p 1718 N93-19249
Analysis of kriging applied to resolution enhancement of digital satellite imagery [AD-A258914] p 1626 N93-19337
Image stabilization performance optimization using an optical reference gyroscope [AD-A258863] p 1538 N93-19371
A hyperspectral image analysis workbench for environmental science applications [DE93-000603] p 1574 N93-19469
2D velocity and temperature measurements in high speed flows based on spectrally resolved Rayleigh scattering [NASA-TM-105784] p 1539 N93-19651
A new concept for helmet mounted vision p 1609 N93-19767

**IMMUNE SYSTEMS**
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723

**IMMUNOLOGY**
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723

**IMPACT**
Melting, vaporization, and energy partitioning for impacts on asteroidal and planetary objects p 1718 N93-19244
The Tapanui region of New Zealand: Site of a Tunguska around 800 years ago? p 1718 N93-19246
Gaspra and Ida in families p 1720 N93-19263

**IMPACT ACCELERATION**
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672

**IMPACT DAMAGE**
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
Impact response of laminated plates subjected to transverse loading [NIAR-92-5] p 1560 N93-19360

**IMPACT LOADS**
Evaluation of test methods to determine the impact resistance of exterior insulation and finish systems (EIFS) [AD-A258433] p 1490 N93-17866
Shock and impact dynamics p 1558 N93-18760
Piezoelectric response of precisely poled PVDF to shock compression greater than 10 GPa [DE93-002469] p 1539 N93-19636

**IMPACT MELTS**
The ancient lunar crust, Apollo 17 region p 1736 N93-18795
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
Impact melt breccias at the Apollo 17 landing site p 1739 N93-18810
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded? p 1739 N93-18813
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815

**IMPACT RESISTANCE**
Evaluation of test methods to determine the impact resistance of exterior insulation and finish systems (EIFS) [AD-A258433] p 1490 N93-17866

**IMPACT TESTS**
Evaluation of test methods to determine the impact resistance of exterior insulation and finish systems (EIFS) [AD-A258433] p 1490 N93-17866
Predicting multi-wall structural response to hypervelocity impact using the hull code [NASA-CR-4486] p 1461 N93-18406
Velocity distribution of fragments of catastrophic impacts p 1719 N93-19252
Design/development of an enhanced biodynamic manikin p 1424 N93-19667
Improving manikin biofidelity p 1424 N93-19668
The design and use of automotive crash test dummies p 1424 N93-19669
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672

**IMPEDANCE**
Impedance and voltammetric studies of electrogenerated polyaniline conducting films [AD-A258328] p 1493 N93-18256

**IMPLOSIONS**
A performance model for thick composite cylinders subjected to external hydrostatic pressure [DE93-002425] p 1560 N93-19476

**IMPROVEMENT**
STARE: A new coherent radar in Scandinavia p 1517 N93-19572

**IMPURITIES**
Heavy ion backscattering spectrometry for high sensitivity [DE93-002489] p 1484 N93-19624

**IN SITU MEASUREMENT**
Modeling energy and mass fluxes from prairie canopies [NASA-CR-191801] p 1566 N93-18232
In-suit Doppler technology assessment [NASA-CR-185692] p 1537 N93-18428
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures [NASA-CR-191916] p 1577 N93-18599
NASA wind shear flight test in situ results p 1418 N93-19593

**IN-FLIGHT MONITORING**
Rocket engine monitoring system: Application to the Vulcain engine [ETN-93-93016] p 1472 N93-18078
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
Model-based reasoning applied to cockpit warning systems p 1611 N93-19778
High precision navigation for flight testing (AERONAV) p 1434 N93-19920
Design and application of electromechanical actuators for deep space missions [NASA-CR-192227] p 1551 N93-19946

**INCIDENT RADIATION**
Geodynamic contributions to global climatic change p 1575 N93-18963

**INCLINATION**
On the distribution of minor planet inclinations p 1454 N93-19242
1991 DA: An asteroid in a bizarre orbit p 1718 N93-19247
A new activity index for comets p 1699 N93-19261

**INCOHERENT SCATTER RADAR**
Introduction to ionospheric heating at Tromsoe (Norway). Part 2: Current scientific problems p 1724 N93-19532
Next generation incoherent scatter radars p 1516 N93-19538
Theory of radar scattering from dusty plasmas p 1516 N93-19540
Fast Fourier transform: A solution for digital signal processing in incoherent scatter experiments? p 1516 N93-19541
Proposal for a coordination between EISCAT and INTERBALL p 1726 N93-19544

**INCOHERENT SCATTERING**
GUISDAP p 1579 N93-18746
On optimization of radar measurements p 1516 N93-18747
Applications of theory of experiments to IS measurements p 1516 N93-18748
An incoherent scatter experiment for the measurement of particle collisions p 1723 N93-19528
Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529
Enhancement of the gyro lines by suprathermal particles p 1724 N93-19535
D-region incoherent scatter spectra: Discrepancies between observations and current theory p 1728 N93-19559
Interpretation of incoherent scatter spectral width changes in the D-region during an auroral precipitation event p 1728 N93-19560
A general experiment definition system and its applications p 1517 N93-19576
EISCAT radar observations of enhanced incoherent scatter spectra: Their relation to red aurora and field-aligned currents p 1517 N93-19581
Turbulence scattering layers in the middle-mesosphere observed by the EISCAT 224 MHz radar p 1732 N93-19582
The effect of different collision operators on the standard data analysis model p 1670 N93-19584

**INCOMPRESSIBILITY**
Optimization of three dimensional meshes [ETN-92-92554] p 1647 N93-19008

**INCOMPRESSIBLE BOUNDARY LAYER**
Computational Fluid Dynamics, volume 1 [VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Solution of the time-dependent incompressible Navier-Stokes equations by finite elements p 1528 N93-18542

**INCOMPRESSIBLE FLOW**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow [AD-A258019] p 1404 N93-17819
Galerkin coarse grid approximation for the incompressible Navier-Stokes equations in general coordinates [REPT-92-35] p 1524 N93-17847
Direct simulation of external separated flow with the 3-D Navier-Stokes equations [ONERA-NT-1992-6] p 1527 N93-18326
Numerical simulation and stability analysis of the absolutely and convectively unstable wake [ESA-TT-1119] p 1529 N93-18581
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems [NASA-TM-103912] p 1532 N93-19009

**INCOMPRESSIBLE FLUIDS**
Analytical surface singularity distributions for flow about elliptical cylinders [AERO-REPT-9202] p 1526 N93-18132
Contribution to the study of vortex flow in an incompressible fluid [ONERA-NT-1992-4] p 1527 N93-18191

**INDEXES (DOCUMENTATION)**
Air University Library index to military periodicals, volume 43, number 3, July - September 1992 [AD-A258452] p 1685 N93-18013
Aeronautical engineering: A continuing bibliography with indexes (supplement 285) [NASA-SP-7037(285)] p 1403 N93-18109

**INDIUM**
X ray crystal structure of InCl3(dot)2THF, a neural five-coordinate BIS-Adduct of an In3 trihalide [AD-A258551] p 1678 N93-19954

**INDIUM ANTIMONIDES**
Superlattices for infrared detectors [AD-A257511] p 1671 N93-18172

**INDIUM ARSENIDES**
Superlattices for infrared detectors [AD-A257511] p 1671 N93-18172

**INDIUM GALLIUM ARSENIDES**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems [AD-A257799] p 1671 N93-18238
Design and characterization of optically pumped vertical cavity surface emitting lasers [AD-A258815] p 1541 N93-18994

**INDIUM PHOSPHIDES**
Submillimeter sources for radiometry using high power Indium Phosphide Gunn diode oscillators [NASA-CR-190885] p 1518 N93-18057
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems [AD-A257799] p 1671 N93-18238
Indium phosphide photovoltaic technology p 1572 N93-18476

**INDUCTION**
Large-scale induction of ripple-down-rules: Some preliminary considerations p 1689 N93-19716
Discovery of pathways in science p 1689 N93-19718

**INDUCTION (MATHEMATICS)**
Using conceptual clustering to learn about function, structure, and behavior in design [INRIA-RR-1401] p 1633 N93-18573

**INDUCTION MOTORS**
Three-phase inverter for small high speed motors [NASA-CR-191331] p 1523 N93-19860

**INDUSTRIAL MANAGEMENT**
The airline quality report, 1992 [NIAR-92-11] p 1418 N93-18036

**INDUSTRIAL PLANTS**
Data communication network at the ASRM facility [NASA-CR-192085] p 1500 N93-17930
The MICRO-BOSS scheduling system: Current status and future efforts p 1635 N93-18668
CABINS: Case-based interactive scheduler p 1635 N93-18670
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681

Constraint monitoring in TOSCA p 1639 N93-18693

**INDUSTRIES**

Alternative optimization strategies for large-scale production-allocation problems
[REPT-92-13] p 1615 N93-17833

A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962

A technical review of cellular radio and analysis of a possible protocol
[AD-A257560] p 1501 N93-17982

Metrication report to the Congress
[NASA-TM-108602] p 1499 N93-18356

Highlights of engineering research centers technology transfer
[NSF-92-6] p 1694 N93-18457

Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 1428 N93-19692

**INELASTIC SCATTERING**

Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413

Infrared sensor technology and applications
p 1664 N93-18474

Measurement of the cross-section ratio sigma(sub n)/sigma(sub p) in inelastic muon-nucleon scattering at very low x and Q(sup 2)
[DE93-002916] p 1658 N93-19749

**INELASTIC STRESS**

Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473

**INEQUALITIES**

Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221

**INERTIA**

US Army helicopter inertia reel locking failures
p 1427 N93-19689

**INERTIAL NAVIGATION**

Flight testing of GPS and GPS-aided systems
p 1445 N93-19919

**INERTIAL REFERENCE SYSTEMS**

Inertial-space disturbance rejection for robotic manipulators
[NASA-CR-191867] p 1641 N93-19361

**INFERENCE**

Quantifiers into the world of types
[LP-92-09] p 1642 N93-17832

An information theoretic approach to distributed inference and learning
[AD-A257935] p 1685 N93-18099

Extended abstract: Managing disjunction for practical temporal reasoning p 1634 N93-18664

Experiments with a decision-theoretic scheduler
p 1636 N93-18674

Machine discovery by model driven analogy
p 1629 N93-19724

**INFLATABLE STRUCTURES**

Conceptual design of a thermal control system for an inflatable lunar habitat module
[NASA-CR-192014] p 1606 N93-18113

**INFORMATION DISSEMINATION**

NASA/DoD Aerospace Knowledge Diffusion Research Project: A comparison of the technical communications practices of Russian and US aerospace engineers and scientists
[NASA-TM-107714] p 1686 N93-18160

Meeting the challenge of responding to stakeholder information needs: A program model
[DE93-002047] p 1683 N93-18409

Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494

Modernization of the NASA scientific and technical information program
[NASA-TM-108984] p 1693 N93-19936

NASA scientific and technical program: User survey
[NASA-TM-108979] p 1693 N93-19937

Total quality management: It works for aerospace information services
[NASA-TM-108980] p 1684 N93-19938

Global change information support: A north-south coalition
[NASA-TM-108983] p 1575 N93-19940

**INFORMATION FLOW**

A model for security and distribution of management information systems
[ETN-93-93029] p 1685 N93-18107

Formalization and transformation of informal analysis models into executive REFINE (tm) specifications
[AD-A258901] p 1627 N93-19442

Management of avionics data in the cockpit
p 1611 N93-19777

**INFORMATION MANAGEMENT**

NASA/DoD Aerospace Knowledge Diffusion Research Project: A comparison of the technical communications practices of Russian and US aerospace engineers and scientists
[NASA-TM-107714] p 1686 N93-18160

Data management: Implementation and lessons learned from Department of the Army data management program
[AD-A257858] p 1686 N93-18307

Meeting the challenge of responding to stakeholder information needs: A program model
[DE93-002047] p 1683 N93-18409

Corporate information management and business process improvement under the unit cost program: An analysis of a system for the Air Force Institute of Technology
[AD-A258984] p 1687 N93-19098

Information access: A research agenda
p 1692 N93-19798

The organization and transfer of information
p 1692 N93-19799

The AGARD tip research agenda for Scientific and Technical Information (STI) p 1692 N93-19800

University research: Controlling inappropriate access to federally funded research results. Report to the Chairman, Human Resources and Intergovernmental Relations Subcommittee, Committee on Government Operations, House of Representatives
[GAO/RCED-92-104] p 1684 N93-19844

Global change information support: A north-south coalition
[NASA-TM-108983] p 1575 N93-19940

**INFORMATION RETRIEVAL**

Using an object-oriented database management system to enhance the reusability of class definitions
[AD-A257559] p 1685 N93-17981

Design and implementation of a graphical user interface for a multimedia database management system
[AD-A257577] p 1686 N93-18179

Automated documentation generator for advanced protein crystal growth
[NASA-CR-192452] p 1673 N93-18425

Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447

Dynamic pattern matcher using incomplete data
[NASA-CASE-MSC-21415-1-SB] p 1624 N93-18858

DROLS workbook
[AD-A259033] p 1687 N93-19017

HModel: An X tool for global model search
[DE93-002826] p 1627 N93-19512

Discovery of regularities in databases
p 1688 N93-19714

A Research Agenda for Scientific and Technical Information
[AGARD-AR-316] p 1692 N93-19796

Establishing a research agenda for Scientific and Technical Information (STI): Focus on the user
p 1692 N93-19797

Information access: A research agenda
p 1692 N93-19798

The AGARD tip research agenda for Scientific and Technical Information (STI) p 1692 N93-19800

An operational system for subject switching between controlled vocabularies
[NASA-CR-192333] p 1693 N93-19935

Modernization of the NASA scientific and technical information program
[NASA-TM-108984] p 1693 N93-19936

NASA access mechanism: Graphical user interface information retrieval system
[NASA-TM-108981] p 1693 N93-19939

**INFORMATION SYSTEMS**

Data modelization for manufacturing planning and scheduling: Aggregation and disaggregation mechanisms
[LAAS-92263] p 1682 N93-17813

A concept study for a national software engineering database
[AD-A258254] p 1614 N93-17823

Repository-based software engineering program
[NASA-CR-191653] p 1616 N93-17885

Data communication network at the ASRM facility
[NASA-CR-192085] p 1500 N93-17930

Information system for co-registration of CAESAR sea-images based on two dimensional image matching techniques (SCORE). Part 3: Design and detailed design document
[BCRS-90-40C-PT-3] p 1564 N93-17953

Development of a prototype Air Force Institute of Technology (AFIT) Research Management System (ARMS)
[AD-A258267] p 1685 N93-18028

TUNS/TCIS information model/process model
[NASA-CR-191654] p 1617 N93-18112

Paradigm shift: Can TQM save DOD's procurement process?
[AD-A258319] p 1552 N93-18253

Data management: Implementation and lessons learned from Department of the Army data management program
[AD-A257858] p 1686 N93-18307

Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447

AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587

Dynamic pattern matcher using incomplete data
[NASA-CASE-MSC-21415-1-SB] p 1624 N93-18858

A clearinghouse for software reuse: Lessons learned from RAPID/DSRS initiatives
[AD-A258782] p 1625 N93-19062

Information technology: Comments on Navy facility consolidation plan
[AD-A258964] p 1687 N93-19084

Aids to Navigation Service Force Mix 2000 Project. Volume 1: Development and application of an Aids to Navigation Service Force Mix decision support system
[AD-A259065] p 1433 N93-19344

Aids to Navigation Service Force Mix 2000 Project: Overview
[AD-A259064] p 1433 N93-19386

TRADOC Library and Information Network (TRALINET). Union list of periodicals (TULIP)
[AD-A258935] p 1688 N93-19451

TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 1608 N93-19763

Man-machine interface with simulated automatic target recognition systems p 1611 N93-19781

A Research Agenda for Scientific and Technical Information
[AGARD-AR-316] p 1692 N93-19796

Establishing a research agenda for Scientific and Technical Information (STI): Focus on the user
p 1692 N93-19797

Information access: A research agenda
p 1692 N93-19798

The organization and transfer of information
p 1692 N93-19799

Earth observing system: Information on NASA's selection of data centers. Report to the Chairman, Committee on Science, Space, and Technology, House of Representatives
[GAO/IMTEC-91-67] p 1569 N93-19842

NASA scientific and technical information program multimedia initiative
[NASA-TM-108982] p 1693 N93-19900

Modernization of the NASA scientific and technical information program
[NASA-TM-108984] p 1693 N93-19936

NASA scientific and technical program: User survey
[NASA-TM-108979] p 1693 N93-19937

Total quality management: It works for aerospace information services
[NASA-TM-108980] p 1684 N93-19938

NASA access mechanism: Graphical user interface information retrieval system
[NASA-TM-108981] p 1693 N93-19939

Global change information support: A north-south coalition
[NASA-TM-108983] p 1575 N93-19940

**INFORMATION THEORY**

An information theoretic approach to distributed inference and learning
[AD-A257935] p 1685 N93-18099

Optimum design of experiments in composite reliability
[AD-A257574] p 1477 N93-18178

Extended abstract: Managing disjunction for practical temporal reasoning p 1634 N93-18664

Dynamic pattern matcher using incomplete data
[NASA-CASE-MSC-21415-1-SB] p 1624 N93-18858

Modeling the performance of the human (pilot) interaction in a synthetic flight domain: Information theoretic approach p 1612 N93-19465

Metadata in archives: The Atmospheric Radiation Measurement (ARM) Archive experience
[DE93-003011] p 1574 N93-19628

**INFORMATION TRANSFER**

Increase of operational reliability by feedback experience/return in the technical and industrial field
[ETN-93-93014] p 1685 N93-18075

**INFRARED ASTRONOMY**

The origin and evolution of the zodiacal dust cloud
p 1704 N93-19148

**INFRARED ASTRONOMY SATELLITE**

Infrared studies of star-forming regions
p 1696 N93-18497

Spectroscopy of D-type asteroids
p 1697 N93-19158

The nature of comet nuclei p 1718 N93-19250

High resolution images of P/Tempel 1 and P/Tempel 2 constructed from IRAS survey data
p 1699 N93-19257

**INFRARED DETECTORS**
Superlattices for infrared detectors
[AD-A257511] p 1671 N93-18172
Track-before-declare methods in IR image sequences
[AD-A257517] p 1661 N93-18174
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238
Advanced electronic structures
[AD-A258401] p 1519 N93-18261
Infrared photoluminescence spectroscopy
p 1485 N93-18466
Infrared sensor technology and applications
p 1664 N93-18474
Infrared studies of star-forming regions
p 1696 N93-18497
Dark-cycle monitoring of biological subjects on Space Station Freedom
[NASA-TM-103976] p 1500 N93-19103
Long wavelength infrared detector
[NASA-CASE-NPO-17543-2-CU] p 1538 N93-19387
Flight test operations p 1418 N93-19592
Flight test of an infrared wind shear detector
p 1419 N93-19596
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
Accurate measurement of signals close to the noise floor on a spectrum analyzer
[AD-A258666] p 1516 N93-19949

**INFRARED IMAGERY**
Spacecraft design project: High temperature superconducting infrared imaging satellite
[NASA-CR-192036] p 1458 N93-17887
Track-before-declare methods in IR image sequences
[AD-A257517] p 1661 N93-18174
High resolution images of P/Tempel 1 and P/Tempel 2 constructed from IRAS survey data
p 1699 N93-19257
Retinal modeling: Segmenting motion from spatio-temporal inputs using neural networks
[AD-A258854] p 1599 N93-19369
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487

**INFRARED LASERS**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
Tunable infrared and visible solid-state laser
p 1543 N93-18473
Laser phase front measurements using a phase conjugate Twyman-Green interferometer
[AD-A258821] p 1542 N93-18996

**INFRARED RADIATION**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
Infrared-induced photoconductivity and electroluminescence in forward-biased a-Si:H pin-diodes
[MBB-Z-0376-91-PUB] p 1671 N93-18092
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
The multi-cavity free-electron laser
[DE93-002569] p 1543 N93-19747

**INFRARED RADIOMETERS**
Evaluation of the vertical distribution of the ice content in cirrus clouds from combined measurements of lidar and infrared radiometers
[ETN-93-92740] p 1587 N93-18631

**INFRARED SIGNATURES**
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
Terrain background signature research
[AD-A257917] p 1565 N93-18213

**INFRARED SPECTRA**
Photoelectric analysis of the solar granulation in IR
[AD-A257811] p 1744 N93-18334
ARM Fourier transform spectrometer data analysis tools
[DE93-004648] p 1586 N93-18454
Infrared studies of star-forming regions
p 1696 N93-18497
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
Near infrared reflectance spectra: Applications to problems in asteroid-meteorite relationships
p 1698 N93-19210

**INFRARED SPECTROMETERS**
ARM Fourier transform spectrometer data analysis tools
[DE93-004648] p 1586 N93-18454
Infrared photoluminescence spectroscopy
p 1485 N93-18466

**INFRARED SPECTROSCOPY**
Reversion studies of natural and guayule rubbers
[AD-A257501] p 1491 N93-17906
Infrared photoluminescence spectroscopy
p 1485 N93-18466
Radiation properties of high-temperature flames
p 1485 N93-18477
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484

**INFRARED TRACKING**
Track-before-declare methods in IR image sequences
[AD-A257517] p 1661 N93-18174

**INJECTION LOCKING**
Development of simplified external control techniques for broad area semiconductor lasers
[NASA-CR-192223] p 1541 N93-18584

**INJECTORS**
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884

**INJURIES**
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 1423 N93-19661
Occupant kinematics simulation of the Kegworth air accident p 1423 N93-19662
Can injury scoring techniques provide additional information for crash investigators?
p 1423 N93-19663
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident?
p 1423 N93-19664
The design and use of automotive crash test dummies
p 1424 N93-19669
An improved anthropometric test device
p 1424 N93-19670
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 1427 N93-19690
An epidemiological study in SAF's pilots ejections
p 1429 N93-19699

**INLET FLOW**
Experimental and numerical examinations of the influence of inlet distortion perturbations on the working behavior of turbofan compressors
[ETN-93-92733] p 1449 N93-18628
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726

**INORGANIC CHEMISTRY**
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985

**INORGANIC COMPOUNDS**
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems
[DE93-001403] p 1679 N93-19470

**INSERTION LOSS**
Determination of the dissipative loss of a two-port network from noise temperature measurements
p 1505 N93-18904

**INSERTS**
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967

**INSOLATION**
Precessional quantities for the Earth over 10 Myr
p 1579 N93-18964
Modeling orbital changes on tectonic time scales
p 1581 N93-18971
Chemical and physical effects in the bulk of cometary analogs p 1716 N93-19234

**INSPECTION**
High temperature component analysis with expert systems p 1557 N93-18751
Integrated Blade Inspection System (IBIS) upgrade study
[AD-A258912] p 1449 N93-19356
Redundant drive current imbalance problem of the Automatic Radiator Inspection Device (ARID)
p 1552 N93-19398
Recognition of partially occluded threat objects using the annealed Hopefield network p 1612 N93-19466
Cooperation of mobile robots for accident scene inspection
[DE93-002487] p 1551 N93-19478
Measurement process error determination and control
[DE93-002948] p 1553 N93-19753
Aviation safety: Problems persist in FAA's inspection program. Report to the Chairman, Subcommittee on Aviation, Committee on Public Works and Transportation, House of Representatives
[GAO/RCED-92-14] p 1431 N93-19841

**INSTALLING**
Fires on board aircraft: Toxicological risk in flight
p 1428 N93-19694
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 1446 N93-19927

**INSTITUTIONS**
Activities report of the Institute of Space Physics
[ETN-93-93360] p 1665 N93-17947

**INSTRUMENT APPROACH**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857

**INSTRUMENT ERRORS**
Evaluation of the table Mountain Ronchi telescope for angular tracking p 1512 N93-19421

**INSTRUMENT LANDING SYSTEMS**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857

**INSULATION**
Evaluation of test methods to determine the impact resistance of exterior insulation and finish systems (EIFS)
[AD-A258433] p 1490 N93-17866

**INSULATORS**
Feasibility of silicon nitride films by vapor deposition at low temperature: Comparison of dichlorsilane-ammonia and disilane gaseous systems
[LAAS-92249] p 1490 N93-17812
Amorphous magnetic insulators for microwave device applications
[AD-A259029] p 1508 N93-18954

**INTEGRAL EQUATIONS**
Possibility expectation and its decision making algorithm p 1618 N93-18226
Some remarks upon fracture mechanics
[VTT-PUBS-100] p 1556 N93-18700

**INTEGRATED CIRCUITS**
Development of neural modules based on Si/PLZT technology for opto-electronic implementations of neural networks
[AD-A257937] p 1518 N93-18120
Theoretical analysis of microwave and millimeter wave integrated circuits based on magnetic films
[AD-A257512] p 1518 N93-18173
Wire assembly for electrically conductive circuits
[AD-D015535] p 1519 N93-18317
Novel interconnect deposition technology
p 1523 N93-18465
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681
Parallel simulation of structural VHDL circuits on Intel Hypercubes
[AD-A258999] p 1521 N93-19012

**INTEGRATED OPTICS**
Development of simplified external control techniques for broad area semiconductor lasers
[NASA-CR-192223] p 1541 N93-18584

**INTERACTIONAL AERODYNAMICS**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow
[AD-A258019] p 1404 N93-17819
Pitching moment of low aspect ratio wing-body combinations up to high angles of attack at supersonic speeds
[ESDU-92043] p 1435 N93-17958

**INTERCALATION**
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498

**INTERCONTINENTAL BALLISTIC MISSILES**
Report to Congress on the strategic defense initiative, 1992
[AD-A258449] p 1650 N93-17992

**INTERFEROMETERS**
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
The JPL Phase B interferometer testbed
p 1464 N93-18834
Laser phase front measurements using a phase conjugate Twyman-Green interferometer
[AD-A258821] p 1542 N93-18996
Forward-scatter radiant mapping
p 1697 N93-19178

Response of a Nb/Al2O3/Nb tunnel junction to picosecond electrical pulses
[DE93-002625] p 1676 N93-19617

**INTERFEROMETRY**
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
GPS Interferometry
[NASA-CR-192301] p 1432 N93-18873
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
Precise tracking of the Magellan and Pioneer Venusorbiters by same-beam interferometry. Part 1: Dataaccuracy analysis p 1454 N93-19414

**INTERLAYERS**
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920

**INTERMETALLICS**
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192
Corrosion resistance of metal matrix composites
[AD-A258370] p 1478 N93-18266
Ductility and fracture in L1(sub 2) intermetallic alloys
[DE93-001644] p 1487 N93-18534
Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems
[DE93-002558] p 1489 N93-19486

**INTERNAL COMBUSTION ENGINES**
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
Materials development program, ceramic technology project addendum to program plan: Cost effective ceramics for heat engines
[DE93-003663] p 1494 N93-18537

**INTERNAL PRESSURE**
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774

**INTERNAL WAVES**
Modelling of interfacial and thermocline waves
[AERO-REPT-9210] p 1525 N93-18104
Modelling of interfacial and thermocline waves
[AERO-REPT-9211] p 1525 N93-18105
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Thermocline waves from a moving body and comparison of open-boundary conditions
[AERO-REPT-9208] p 1527 N93-18135

**INTERNATIONAL COOPERATION**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962

**INTERNATIONAL RELATIONS**
Strategic factors in the development of the National Technology Transfer Network
[NASA-TM-108594] p 1694 N93-18169

**INTERNATIONAL SYSTEM OF UNITS**
Metrication report to the Congress
[NASA-TM-108600] p 1499 N93-18281
Metrication report to the Congress
[NASA-TM-108602] p 1499 N93-18356
Metrication report to the Congress. 1991 activities and 1992 plans
[NASA-TM-108603] p 1499 N93-18357

**INTERPLANETARY DUST**
Cosmic dust p 1592 N93-18554
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
A Southern Hemisphere radar meteor orbit survey p 1701 N93-19121
Modeling of asteroidal dust production rates p 1705 N93-19150
Collisional and dynamic evolution of dust from the asteroid belt p 1707 N93-19165
Lightcurve of comet Austin(1989c1) and its dust mantle development p 1707 N93-19167
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
H2O(+) structures in the inner plasma tail of comet Austin p 1708 N93-19174
First images of a possible CO(+)-tail of comet P/Schwassmann-Wachmann 1 observed against the dust coma background p 1708 N93-19175
Particle emission from artificial cometary materials p 1710 N93-19188
Polarimetric observations of comet Levy 1990c and of other comets: Some clues to the evolution of cometary dust p 1711 N93-19196
Carbon petrology in cometary dust p 1716 N93-19232
The role of organic polymers in the structure of cometary dust p 1719 N93-19256

**INTERPLANETARY GAS**
A preliminary model of the coma of 2060 Chiron p 1702 N93-19132

**INTERPLANETARY MAGNETIC FIELDS**
Initial overview of disconnection events in Halley's Comet 1986 p 1702 N93-19134
Interplanetary magnetic field changes and condensations in comet Halley's plasma tail p 1704 N93-19147

**INTERPLANETARY NAVIGATION**
The Telecommunications and Data Acquisition
[NASA-CR-191998] p 1504 N93-18897
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario p 1454 N93-18899
Application of high-precision two-way ranging to Galileo Earth-1 encounter navigation p 1454 N93-19415
The goldstone real-time connected element interferometer p 1512 N93-19417
Spacecraft-spacecraft very long baseline interferometry. Part 1: Error modeling and observable accuracy p 1512 N93-19418
Deep-space navigation applications of improved ground-based optical astrometry p 1513 N93-19422

**INTERPLANETARY SPACECRAFT**
Project Ares: A systems engineering and operations architecture for the exploration of Mars
[AD-A258082] p 1734 N93-18021
Conceptual design of a Mars transportation system
[NASA-CR-192039] p 1545 N93-18047
Systems analysis for ground-based optical navigation p 1434 N93-18900
Deep-space navigation applications of improved ground-based optical astrometry p 1513 N93-19422

**INTERPOLATION**
A parallel stereo algorithm that produces dense depth maps and preserves image features
[INRIA-RR-1369] p 1620 N93-18433
Robust control of systems with real parameter uncertainty and unmodelled dynamics
[NASA-CR-192008] p 1633 N93-18582

**INTERPRETATION**
Feasible interpretability
[ML-91-11] p 1643 N93-17868

**INTERPROCESSOR COMMUNICATION**
Flow models of distributed computations: Three equivalent semantics for CCS
[INRIA-RR-1484] p 1622 N93-18613
Observing localities
[INRIA-RR-1485] p 1647 N93-18614
A static view of localities
[INRIA-RR-1483] p 1622 N93-18650

**INTERROGATION**
A note on interrogatives and adverbs of quantification
[LP-92-07] p 1615 N93-17830

**INTERSTELLAR CHEMISTRY**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
Spectroscopic observations of comet Austin (1989c) p 1697 N93-19169

**INTERSTELLAR EXTINCTION**
Model calculations of dust radiation from galactic and extragalactic sources by considering polycyclic aromatic hydrocarbons
[ETN-93-92729] p 1699 N93-18626

**INTERSTELLAR MATTER**
Cosmic dust p 1592 N93-18554
Model calculations of dust radiation from galactic and extragalactic sources by considering polycyclic aromatic hydrocarbons
[ETN-93-92729] p 1699 N93-18626

**INTERSTELLAR RADIATION**
A cosmic ray propagation model p 1746 N93-19383

**INTERSTELLAR SPACE**
Comets: Role and importance to exobiology p 1592 N93-18556

**INTERTROPICAL CONVERGENT ZONES**
A dynamical theory for hurricane spiral bands
[AD-A258190] p 1584 N93-17859

**INTOXICATION**
Fires on board aircraft: Toxicological risk in flight p 1428 N93-19694

**INVENTORIES**
The efficacy of biographical inventory data in predicting early attrition in naval aviation officer candidate training
[AD-A258025] p 1601 N93-17919
The MICRO-BOSS scheduling system: Current status and future efforts p 1635 N93-18668
Multiple study inventory method for tropical forest
[INPE-5319-PRE/1716] p 1568 N93-19790

**INVENTORY CONTROLS**
The obstacles encountered in the development of SMMS: A case study
[AD-A257880] p 1686 N93-18337

**INVENTORY MANAGEMENT**
The obstacles encountered in the development of SMMS: A case study
[AD-A257880] p 1686 N93-18337

**INVERSE KINEMATICS**
Inverse kinematics problem in robotics using neural networks
[NASA-TM-105869] p 1558 N93-18876
Kinematic analysis of the ARID manipulator p 1552 N93-19393

**INVERSE SCATTERING**
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187

**INVERSIONS**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler
[AD-A258189] p 1584 N93-17858
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Inverse problems for orthogonal matrices, Toda flows, and signal processing
[AD-A258810] p 1647 N93-18987
Inversion methods for interpretation of asteroid lightcurves p 1698 N93-19182
Alternative formulations of the Laplace Transform Boundary Element (LTBE) numerical method for the solution of diffusion-type equations
[DE92-041172] p 1648 N93-19468

**INVERTERS**
Three-phase inverter for small high speed motors
[NASA-CR-191331] p 1523 N93-19860

**INVISCID FLOW**
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
Increase of stagnation pressure and enthalpy in shock tunnels p 1417 N93-18086
The stability of a trailing-line vortex in compressible flow
[NASA-CR-189738] p 1408 N93-18771
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Lifting-surface-method p 1410 N93-19281
Numerical simulations of supersonic flow by a fourth-order compact MUSCL TVD scheme p 1414 N93-19308
Analytical and numerical study on steady Mach reflection p 1414 N93-19309
Computational techniques for flows with finite-rate condensation
[NASA-CR-192093] p 1535 N93-19858

**IO**
Dynamics of planetary atmospheres
[NASA-CR-192117] p 1735 N93-18782

**IODIDES**
Application of laser Doppler velocimeter to chemical vapor laser system
[NASA-TM-4409] p 1540 N93-18068

**IODINE**
Regenerable biocide delivery unit
[NASA-CASE-MSC-21763-1-SB] p 1590 N93-18351
Collisional detachment of anions using Fourier transform mass spectrometry
[AD-A258972] p 1656 N93-19092

**IODINE ISOTOPES**
Non-conventional measurement techniques for the determination of some long-lived radionuclides produced ion nuclear fuel: Literature survey
[VTT-TIED-1357] p 1660 N93-18654

**IODINE LASERS**
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234

**ION ACCELERATORS**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244
Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245

**ION ACOUSTIC WAVES**
Enhanced ion-acoustic lines in EISCAT's common programmes p 1517 N93-19580
EISCAT radar observations of enhanced incoherent scatter spectra: Their relation to red aurora and field-aligned currents p 1517 N93-19581

Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar
p 1732 N93-19586

**ION BEAMS**
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493
Ion beam-based characterization of multicomponent oxide thin films and thin film layered structures
[DE93-003004] p 1676 N93-19627

**ION DENSITY (CONCENTRATION)**
Nocturnal high latitude E-region in winter during extremely quiet conditions p 1723 N93-19527
Ionospheric currents: Can the incoherent scatter plasma line spectrum provide routine current measurements?
p 1724 N93-19533

**ION DISTRIBUTION**
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 3: The measurement problems with a radar
p 1727 N93-19554

**ION EXCHANGE RESINS**
Regenerable biocide delivery unit
[NASA-CASE-MSC-21763-1-SB] p 1590 N93-18351

**ION EXTRACTION**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140

**ION IMPLANTATION**
Heteroepitaxial diamond growth
[AD-A257510] p 1671 N93-18079
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991

**ION IRRADIATION**
Crystalline-amorphous contrast formation in thermally crystallized SiC
[MBB-Z-0373-91-PUB] p 1671 N93-18118
Ion produced cometary organic crust
p 1701 N93-19122
Chemical and physical effects in the bulk of cometary analogs p 1716 N93-19234
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957

**ION MICROSCOPES**
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621

**ION MOTION**
Phenomenological modelling of Polywell (tm) SCIF multi-cusp inertial-electrostatic confinement systems
[AD-A257944] p 1665 N93-18020
A two-dimensional particle simulation of parallel plate Radio-Frequency (RF) glow discharges
[AD-A258856] p 1510 N93-19349

**ION SOURCES**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140

**ION TEMPERATURE**
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence
p 1726 N93-19548
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 3: The measurement problems with a radar
p 1727 N93-19554
A new approach to plasmasphere refilling: Anomalous plasma effects
[NASA-CR-192128] p 1670 N93-19945

**IONIC COLLISIONS**
Collisional detachment of anions using Fourier transform mass spectrometry
[AD-A258972] p 1656 N93-19092
Strangeness signals in heavy ion collisions
[DE93-002935] p 1657 N93-19516
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553

**IONIC MOBILITY**
Shielding from space radiations
[NASA-CR-191966] p 1655 N93-18567

**IONIC REACTIONS**
Collisional detachment of anions using Fourier transform mass spectrometry
[AD-A258972] p 1656 N93-19092

**IONIZATION**
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
Cation production and reactions induced by electron impact on tetraethoxysilane
[AD-A258830] p 1675 N93-19064

**IONIZATION CROSS SECTIONS**
Cation production and reactions induced by electron impact on tetraethoxysilane
[AD-A258830] p 1675 N93-19064

**IONIZING RADIATION**
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Target fragmentation in radiobiology
[NASA-TM-4408] p 1598 N93-18381

**IONOSONDES**
Gravity waves and sporadic E layers as measured by EISCAT and AIS p 1724 N93-19530

**IONOSPHERES**
Ionospheric processes p 1584 N93-18498
Plasma-beam instabilities in cometary ionospheres
p 1704 N93-19141

**IONOSPHERIC COMPOSITION**
Ion composition in the auroral F region: Comparison of EISCAT data and ionospheric model predictions
p 1726 N93-19547
High altitude measurements with the EISCAT VHF radar and the development of Common Programme Seven
p 1727 N93-19551
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 3: The measurement problems with a radar
p 1727 N93-19554
NO(+)-enhancement in the height range between 180 and 300 km during ion heating events
p 1732 N93-19583

**IONOSPHERIC CONDUCTIVITY**
Simulation of ionosphere-magnetosphere mesoscale coupling: Letting ionospheric conductivities depend on upward field-aligned currents p 1578 N93-18742

**IONOSPHERIC CURRENTS**
The flow of plasma in the solar terrestrial environment
[NASA-CR-192106] p 1744 N93-18780
Ionospheric currents: Can the incoherent scatter plasma line spectrum provide routine current measurements?
p 1724 N93-19533

**IONOSPHERIC DISTURBANCES**
PACE and EISCAT radar observations of short-lived flow bursts on the nightside p 1726 N93-19549
Dynamics of the auroral ionosphere deduced from EISCAT CP1 observations p 1729 N93-19564
The ionospheric response to atmospheric gravity waves in the EISCAT region p 1729 N93-19567
Nonlinear interactions associated with TID's in the quiet polar F-region from EISCAT observations
p 1584 N93-19568
Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar
p 1732 N93-19586

**IONOSPHERIC DRIFT**
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552

**IONOSPHERIC ELECTRON DENSITY**
Atmospheric dynamics and coupling
p 1584 N93-18495
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence
p 1726 N93-19548
Polar cap absorption events observed during the EISCAT operation in 1981-1989 p 1727 N93-19556
EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989
p 1728 N93-19557
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558
The ionospheric response to atmospheric gravity waves in the EISCAT region p 1729 N93-19567

**IONOSPHERIC HEATING**
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Introduction to ionospheric heating at Tromsoe (Norway). Part 1: Experimental overview
p 1724 N93-19531
Introduction to ionospheric heating at Tromsoe (Norway). Part 2: Current scientific problems
p 1724 N93-19532
NO(+)-enhancement in the height range between 180 and 300 km during ion heating events
p 1732 N93-19583

**IONOSPHERIC ION DENSITY**
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced?
p 1723 N93-19525

**IONOSPHERIC SOUNDING**
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Introduction to ionospheric heating at Tromsoe (Norway). Part 2: Current scientific problems
p 1724 N93-19532
Ionospheric currents: Can the incoherent scatter plasma line spectrum provide routine current measurements?
p 1724 N93-19533

**IONOSPHERIC STORMS**
Plasma flow bursts in the auroral zone
p 1726 N93-19550

**IONOSPHERIC TEMPERATURE**
Main ionospheric trough: Preliminary results from the 1990 Finnish-French EISCAT campaign
p 1726 N93-19545
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence
p 1726 N93-19548
EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989
p 1728 N93-19557
D-region incoherent scatter spectra: Discrepancies between observations and current theory
p 1728 N93-19559
EISCAT-MICADO coordinated measurements of meridional neutral winds and temperatures in the F region p 1584 N93-19563
Dynamics of the auroral ionosphere deduced from EISCAT CP1 observations p 1729 N93-19564

**IONOSPHERICS**
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524
The possibilities of observing plasma and gyro lines with the EISCAT polar cap radar p 1724 N93-19534
STARE: A new coherent radar in Scandinavia
p 1517 N93-19572
The EISCAT Svalbard (Arctic) radar
p 1517 N93-19574

**IONS**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
Overview of helium-like structure measurements: A focus on the N = 2 triplet states
[DE93-002913] p 1658 N93-19748

**IRON**
Recent progress on astrophysical opacity
[DE93-002892] p 1722 N93-19513
OPAL opacities
[DE93-002891] p 1733 N93-19828
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854

**IRON OXIDES**
The Apollo 17 regolith p 1737 N93-18799

**IRRADIANCE**
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009

**IRRADIATION**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899
Indium phosphide photovoltaic technology
p 1572 N93-18476
Characterization of radiation damage in solids
p 1659 N93-18478
Modification of primordial ices by cosmic rays as simulated by cyclotron irradiation p 1709 N93-19183
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films
[DE93-002325] p 1677 N93-19742

**ISING MODEL**
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618
**ISOPHOTES**
Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131
**ISOTOPE EFFECT**
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746
**ISOTOPES**
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812
Proposed Lower Limits of Detection (LLD), Decision Limits (LC), and error terms for identified analytes from the inorganic, isotopic, bioassay, and organic groups
[DE93-002942] p 1484 N93-19752
**ISOTROPIC TURBULENCE**
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence
p 1726 N93-19548
**ISOTROPY**
Optimum design of isotropic monocoque and ring-stiffened circular cylindrical shells subject to external hydrostatic pressure
[AD-A257864] p 1555 N93-18327
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578
**ITALY**
The great asteroid nomenclature controversy of 1801
p 1704 N93-19145
**ITERATION**
Bracketing to speed convergence illustrated on the Von Newmann algorithm for finding a feasible solution to a linear program with a convexity constraint
[DE93-002660] p 1621 N93-18450
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
A model for merging software prototypes
[AD-A258781] p 1624 N93-18948
**ITERATIVE SOLUTION**
Preconditioned conjugate gradient techniques for the solution of time-dependent differential equations
[REPT-92-19] p 1643 N93-17844
Analysis of a multistep Jacobi multigrid method for solving the Euler equations
[INRIA-RR-1506] p 1644 N93-17879
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Bracketing to speed convergence illustrated on the Von Newmann algorithm for finding a feasible solution to a linear program with a convexity constraint
[DE93-002660] p 1621 N93-18450
Iterative refinement scheduling p 1635 N93-18669
Rescheduling with iterative repair
p 1637 N93-18679
A discrete ordinate response matrix method for massively parallel computers
[DE93-003463] p 1631 N93-19621
Variational iterative method for the calculation of heat flux and mean energy balance
[INPE-5236-RPQ/648] p 1583 N93-19824
**IUE**
IUE observations of periodic comets Tempel-2, Kopff, and Tempel-1 p 1697 N93-19153

## J

**JACOBI MATRIX METHOD**
Analysis of a multistep Jacobi multigrid method for solving the Euler equations
[INRIA-RR-1506] p 1644 N93-17879
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
**JAMMING**
Performance evaluation of a radar by computer
[AD-A257543] p 1500 N93-17960
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181
**JET ENGINE FUELS**
A condensed phase test cell assembly for the System for Thermal Diagnostic Studies (STDS)
[AD-A258463] p 1497 N93-18242
**JET ENGINES**
Development of an engine/airframe performance matching scheme for jet engine retrofit
[AD-A258822] p 1449 N93-18997
Numerical simulation of the flow through non-uniform airfoil cascade p 1414 N93-19310
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311
Integrated Blade Inspection System (IBIS) upgrade study
[AD-A258912] p 1449 N93-19356
**JET FLOW**
An investigation of the near and induced flow fields of an axially symmetric jet, issuing normal to a plane surface, into a quiescent medium p 1533 N93-19041
CCD imaging of the inner coma jets of comet P/Halley
p 1702 N93-19133
**JET IMPINGEMENT**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
**JET LAG**
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
**JET MIXING FLOW**
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
**JET PUMPS**
Ejectors and jet pumps: Computer program for design and performance for compressible gas flow
[ESDU-92042] p 1544 N93-17956
**JOINTS (JUNCTIONS)**
Slit scan radiographic system for intermediate size rocket motors
[NASA-CR-191798] p 1471 N93-18058
Kinematic analysis of the ARID manipulator
p 1552 N93-19393
Redundant drive current imbalance problem of the Automatic Radiator Inspection Device (ARID)
p 1552 N93-19398
**JOSEPHSON JUNCTIONS**
Superconducting tunnel junction x-ray detectors with niobium absorbers and aluminum quasiparticle traps
[DE93-002885] p 1677 N93-19826
**JOURNAL BEARINGS**
A new journal bearing tester: The VTT water tribotester
[VTT-TIED-1345] p 1548 N93-18632
**JP-4 JET FUEL**
Biodegradation of Jet Fuel-4 (JP-4) in sequencing batch reactors
[AD-A258020] p 1496 N93-17917
**JUDGMENTS**
Decision paths in complex tasks
[NASA-CR-192121] p 1603 N93-18359
**JUNCTION TRANSISTORS**
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191957] p 1523 N93-19893
**JUPITER (PLANET)**
The effects of correlated noise in intra-complex DSN arrays for S-band Galileo telemetry reception
p 1458 N93-18910
Asteroid-type orbit evolution near the 5:2 resonance
p 1708 N93-19171
Evolution of the Quadrantid meteor stream
p 1708 N93-19177
Canonical floquet perturbation theory
[AD-A258970] p 1721 N93-19358
**JUPITER ATMOSPHERE**
Dynamics of planetary atmospheres
[NASA-CR-192117] p 1735 N93-18782
The vicinity of Jupiter: A region to look for comets
p 1719 N93-19253

## K

**K-EPSILON TURBULENCE MODEL**
Analysis of film cooling in rocket nozzles
[NASA-CR-192003] p 1473 N93-18518
On the numerical approximation of the k-epsilon turbulence model for two dimensional compressible flows
[INRIA-RR-1526] p 1530 N93-18622
**KALMAN FILTERS**
Estimation of displacements from two 3D frames obtained from stereo
[INRIA-RR-1440] p 1537 N93-18595
Discrete time system piecewise linear filtering with small observation noise
[INRIA-RR-1451] p 1633 N93-18611
An application of the Observer/Kalman Filter Identification (OKID) technique to Hubble flight data
p 1462 N93-18825
Detection of spoofing, jamming, or failure of a Global Positioning System (GPS)
[AD-A259023] p 1433 N93-18951
**KAONS**
Lie-isotropic energy-dependence of the neutral K(sub S) lifetime
[PREPRINT-874] p 1652 N93-17824
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502
**KARMAN VORTEX STREET**
Rotating stall cell and Von Karman vortex street: A meteorological theory p 1531 N93-18734
**KERNEL FUNCTIONS**
Fixed and data adaptive kernels in Cohen's class of time-frequency distributions
[AD-A257979] p 1649 N93-18195
Unified approach for computer vision problems: Mathematical morphology
[INPE-5391-TAE/012] p 1641 N93-19640
**KINEMATICS**
The kinematics of presupposition
[LP-92-05] p 1613 N93-17829
Motion planning for rigid body robots
[AD-A257557] p 1544 N93-17980
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
Nonlinear magnetohydrodynamics
[DE93-003241] p 1665 N93-18407
Estimation of displacements from two 3D frames obtained from stereo
[INRIA-RR-1440] p 1537 N93-18595
Three-dimensional motion computation and object segmentation in a long sequence of stereo frames
[INRIA-RR-1438] p 1651 N93-18634
On the information contained in the motion field of lines and the cooperation between motion and stereo
[INRIA-RR-1453] p 1537 N93-18647
Controlled motion in an elastic world. Research project: Manipulation strategies for massive space payloads
[NASA-CR-191895] p 1549 N93-18778
Computational kinematics of multi-arm manipulators
p 1549 N93-19033
Calibration of the ARID robot p 1552 N93-19394
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 1445 N93-19923
**KINETIC ENERGY**
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140
**KINETIC THEORY**
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215
A kinetic theory treatment of heat transfer in plane Poiseuille flow with uniform pressure
[NASA-TM-103993] p 1532 N93-18884
**KINETICS**
Statistically based decompression tables 8: Linear-exponential kinetics
[AD-A257613] p 1595 N93-17926
Occupant kinematics simulation of the Kegworth air accident p 1423 N93-19662
**KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)**
Using conceptual clustering to learn about function, structure, and behavior in design
[INRIA-RR-1401] p 1633 N93-18573
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Patterns for knowledge discovery in databases
p 1688 N93-19712
Extracting knowledge from data: SYS8688 approach
p 1688 N93-19715
Large-scale induction of ripple-down-rules: Some preliminary considerations p 1689 N93-19716
Machine discovery approach to dynamic systems in the real laboratory p 1689 N93-19719
Discovery of physical principles from design experiences p 1690 N93-19722
Incremental generation and exploration of hidden structure p 1690 N93-19726

Discovery of spatial concepts in crystallographic databases p 1690 N93-19727
Knowledge acquisition from examples with mixed attributes p 1691 N93-19729
A knowledge-based system for satellite imagery segmentation
[INPE-5296-PRE/1701] p 1568 N93-19834

**KNOWLEDGE REPRESENTATION**
The kinematics of presupposition
[LP-92-05] p 1613 N93-17829
Implementation of inheritance by means of relations
[INRIA-RR-1417] p 1621 N93-18513
Using conceptual clustering to learn about function, structure, and behavior in design
[INRIA-RR-1401] p 1633 N93-18573
An imperative language for task-level programming: Definition in temporal logics
[INRIA-RR-1406] p 1622 N93-18575
Uncertainty management by relaxation of conflicting constraints in production process scheduling
p 1636 N93-18673
A hybrid job-shop scheduling system
p 1639 N93-18690
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Large-scale induction of ripple-down-rules: Some preliminary considerations p 1689 N93-19716
Elements of scientific research: Modeling discoveries in oxide superconductivity p 1679 N93-19720
Toward model-based discovery: A case study in ecosystem prediction p 1689 N93-19721
Informal qualitative models in scientific discovery
p 1690 N93-19725
Knowledge acquisition from examples with mixed attributes p 1691 N93-19729
CYRANO-3: An experiment in representational invention p 1629 N93-19733
The evaluation and reporting of discovery systems
p 1691 N93-19734
Evaluating machine discovery systems
p 1692 N93-19735
Evaluation of discovery systems p 1692 N93-19736

**KNUDSEN FLOW**
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215

**KOLMOGOROFF THEORY**
Radar cross section models for limited aspect angle windows
[AD-A258918] p 1510 N93-19341

**KREEP**
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503
p 1735 N93-18788
neoKREEP: A new lunar component at Apollo 17
p 1737 N93-18797

**KRIGING**
Analysis of kriging applied to resolution enhancement of digital satellite imagery
[AD-A258914] p 1626 N93-19337

**KRYPTON**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140

## L

**LAKES**
Antarctic lakes (above and beneath the ice sheet): Analogues for Mars p 1743 N93-19817

**LAMINAR FLOW**
High speed laminar flow over cavities
[AERO-REPT-9110] p 1526 N93-18130
A kinetic theory treatment of heat transfer in plane Poiseuille flow with uniform pressure
[NASA-TM-103993] p 1532 N93-18884
Modeling the transition region
[NASA-CR-4492] p 1408 N93-19015
Similarity in laminar pipe flows with secondary flows
p 1413 N93-19302
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Numerical treatment of laminar flow in curved rectangular channels with inlet and outlet straight region
p 1413 N93-19304
Numerical analysis of flow in a heated horizontal square duct p 1413 N93-19305
Comparative study of various difference schemes for some laminar channel flows p 1413 N93-19307
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894
Natural laminar flow test in-flight visualization
p 1417 N93-19921

**LAMINAR FLOW AIRFOILS**
Natural laminar flow test in-flight visualization
p 1417 N93-19921

**LAMINATES**
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920
Geometrically nonlinear analysis of laminated elastic structures
[NASA-CR-191055] p 1476 N93-17924
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139
Micromechanics-based analysis of fiber-reinforced laminated composites
[AD-A257816] p 1478 N93-18364
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
Solving nonlinear composite material problems using the Automated Structural Optimization System (ASTROS)
[AD-A258811] p 1479 N93-18988
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
Open and filled hole static tensile strength characterization of metal matrix composite SCS-9/Beta21s
[AD-A258829] p 1480 N93-19091
Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain
[AD-A258908] p 1559 N93-19353
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
Stratified plate model for composite plate analysis
[AD-A259001] p 1481 N93-19359
Impact response of laminated plates subjected to transverse loading
[NIAR-92-5] p 1560 N93-19360
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443
Damage mechanics of cross-ply laminates resulting from transverse concentrated loads
[AD-A259271] p 1481 N93-19839

**LAND USE**
Evaluation of the current status of the multisensor approach to monitoring vegetation of Brazil
[INPE-5328-PRE/1724] p 1567 N93-19641
Use of teledetection in physiographic compartmentation to obtain multiple use geotechnic zoning in coastal regions
[INPE-5322-PRE/1720] p 1583 N93-19795
Comparative analysis of the indices of vegetation in urban areas obtained from the TM-Landsat and HRV-Spot data: City of Taubate
[INPE-5418-TDI/482] p 1575 N93-19831
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856

**LANDAU DAMPING**
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896

**LANDFORMS**
An approach to automated terrain classification from digital elevation model
[AD-A258210] p 1452 N93-17986

**LANDING GEAR**
Aircraft landing gear shimmy p 1441 N93-19029

**LANDING INSTRUMENTS**
Manual flying of curved precision approaches to landing with electromechanical instrumentation. A piloted simulation study
[NASA-TP-3255] p 1447 N93-18408

**LANDING LOADS**
Carrier landing parameters from survey 45, fleet and training command aircraft landing aboard USS ENTERPRISE CVN-65, main text and appendix A
[AD-A258873] p 1433 N93-19078

**LANDING SIMULATION**
Manual flying of curved precision approaches to landing with electromechanical instrumentation. A piloted simulation study
[NASA-TP-3255] p 1447 N93-18408

**LANDING SPEED**
Energy method for analysis of measured airspeed change in landing airborne manoeuvre
[ESDU-92020] p 1436 N93-18042

**LANDSAT SATELLITES**
Linear mixing model applied to coarse resolution satellite data p 1565 N93-18073
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia
[AD-A257847] p 1566 N93-18346
Evaluation of the current status of the multisensor approach to monitoring vegetation of Brazil
[INPE-5328-PRE/1724] p 1567 N93-19641
Analysis of LANDSAT/TM and SPOT/XS data through vegetation indices, phase 2
[INPE-5450-RPQ/663] p 1569 N93-19857

**LANDSLIDES**
The Apollo 17 samples: The Massifs and landslide
p 1738 N93-18809

**LANGUAGE PROGRAMMING**
A simplified proof of Toyama's theorem
[CWI-CS-R9156] p 1642 N93-17839

**LANGUAGES**
Categorical grammar and natural reasoning
[LP-91-08] p 1642 N93-17828
A system of dynamic modal logic
[LP-92-08] p 1615 N93-17831

**LANTHANUM COMPOUNDS**
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399

**LAP JOINTS**
Stress analysis of single lap bonded joints
[ESDU-92041] p 1553 N93-17952
Damage tolerance assessment of boron/epoxy repairs to fuselage lap joints
[AD-A258383] p 1439 N93-18257

**LAPLACE EQUATION**
Alternative formulations of the Laplace Transform Boundary Element (LTBE) numerical method for the solution of diffusion-type equations
[DE92-041172] p 1648 N93-19468

**LAPLACE TRANSFORMATION**
Alternative formulations of the Laplace Transform Boundary Element (LTBE) numerical method for the solution of diffusion-type equations
[DE92-041172] p 1648 N93-19468

**LARGE SPACE STRUCTURES**
Structural simulation coupling for transient analysis
[AD-A258192] p 1643 N93-17861
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 1
[NASA-CP-3177-PT-1] p 1461 N93-18818
The Mini-Mast CSI testbed: Lessons learned
p 1461 N93-18819
Model reduction for the dynamics and control of large structural systems via neutral network processing direct numerical optimization p 1461 N93-18820
Physical insight into the simultaneous optimization of structure and control p 1461 N93-18821
Model reduction results for flexible space structures
p 1462 N93-18824
Micro-precision control/structure interaction technology for large optical space systems p 1462 N93-18826
System identification and structural control on the JPL Phase B testbed p 1463 N93-18828
The development and testing of the Lens Antenna Deployment Demonstration (LADD) test article
p 1463 N93-18829
Integrated design of the CSI evolutionary structure: A verification of the design methodology
p 1463 N93-18830
A comparison of refined models for flexible subassemblies p 1464 N93-18833
The JPL Phase B interferometer testbed
p 1464 N93-18834
A comparison of viscoelastic damping models
p 1464 N93-18836
Structural control sensors for the CASES GTF
p 1464 N93-18837
Dynamic test results for the CASES ground experiment p 1455 N93-18843

Results of the Advanced Space Structures Technology Research Experiments (ASTREX) hardware and control development p 1466 N93-18844
Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846
Spacecraft dynamics characterization and control system failure detection
[NASA-CR-192190] p 1466 N93-18852
Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853
Robust stability of second-order systems
[NASA-CR-192246] p 1647 N93-18871
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 2
[NASA-CP-3177-PT-2] p 1466 N93-18928
CSI related dynamics and control issues in space robotics p 1467 N93-18929
C-SIDE: The control-structure interaction demonstration experiment p 1467 N93-18931
A synopsis of test results and knowledge gained from the Phase-0 CSI evolutionary model p 1467 N93-18933
Controls-structures-interaction dynamics during RCS control of the Orbiter/SRMS/SSF configuration p 1468 N93-18934
Model reduction in integrated controls-structures design p 1468 N93-18935
The Middeck Active Control Experiment (MACE) p 1457 N93-18936
CSI/MMC studies for improving jitter performance for large multi-payload platforms p 1468 N93-18937
Precision slew/settle technologies for flexible spacecraft p 1468 N93-18938
Average-cost based robust structural control p 1469 N93-18939
Modal characterization of the ASCIE segmented optics testbed: New algorithms and experimental results p 1469 N93-18940
Active suspension design for a Large Space Structure ground test facility p 1469 N93-18941
Analysis, design, and testing of a low cost, direct force command linear proof mass actuator for structural control p 1469 N93-18943
Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339
A piecewise continuous Timoshenko beam model for the dynamic analysis of tapered beam-like structures p 1561 N93-19459

**LASER ABLATION**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser
[AD-A257551] p 1491 N93-17966
High-temperature superconducting electronics p 1523 N93-18464

**LASER APPLICATIONS**
Feasibility of airborne laserbathymetry with respect to turbidity in Dutch coastal waters
[BCRS-91-19] p 1589 N93-18432
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459
Advanced atomic filters p 1664 N93-18468
High-energy laser-particle interaction p 1543 N93-18469
Stimulated Brillouin scattering phase conjugation p 1664 N93-18471
Nanotechnology p 1678 N93-18489
Scaling and applied field studies of MPD thrusters with laser diagnostics p 1667 N93-18643
Laser phase front measurements using a phase conjugate Twyman-Green interferometer
[AD-A258821] p 1542 N93-18996

**LASER BEAMS**
A fuzzy logic based controller for the automated alignment of a laser-beam-smoothing spatial filter
[NASA-TM-105994] p 1540 N93-18091
Laser beam diagnostics for kilowatt power pulsed YAG laser
[DE93-002928] p 1542 N93-19515

**LASER CAVITIES**
Design and characterization of optically pumped vertical cavity surface emitting lasers
[AD-A258815] p 1541 N93-18994

**LASER DAMAGE**
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm
[NASA-CR-192156] p 1541 N93-18772

**LASER DOPPLER VELOCIMETERS**
An experimental study of a turbulent boundary layer in the trailing edge region of a circulation-control airfoil
[NASA-CR-191262] p 1405 N93-17934
Application of laser Doppler velocimeter to chemical vapor laser system
[NASA-TM-4409] p 1540 N93-18068
Drop/gas interactions in dense sprays
[AD-A257848] p 1527 N93-18347
Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus p 1446 N93-19926

**LASER INDUCED FLUORESCENCE**
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures
[NASA-CR-191916] p 1577 N93-18599

**LASER INTERFEROMETRY**
Study of optical techniques for the Ames unitary wind tunnel: Digital image processing, part 6
[NASA-CR-192164] p 1452 N93-18766

**LASER MATERIALS**
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
A Ti:Sapphire laser for the new polarized electron source
[DE93-004016] p 1541 N93-18448
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Novel short-wavelength lasers p 1543 N93-18472
Characterization of radiation damage in solids p 1659 N93-18478
Laser beam diagnostics for kilowatt power pulsed YAG laser
[DE93-002928] p 1542 N93-19515

**LASER OUTPUTS**
Self-collimated unstable resonator semiconductor laser
[NASA-CASE-NPO-18386-1-CU] p 1540 N93-18277
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
A Ti:Sapphire laser for the new polarized electron source
[DE93-004016] p 1541 N93-18448
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Novel short-wavelength lasers p 1543 N93-18472
Chaotic dynamics of atoms p 1659 N93-18491
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952

**LASER PUMPING**
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399

**LASER RANGE FINDERS**
Geophysical parameters from the analysis of laser ranging to Starlette
[NASA-CR-192406] p 1541 N93-18605

**LASER STABILITY**
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399

**LASERS**
Chaotic dynamics of atoms p 1659 N93-18491

**LASING**
Novel short-wavelength lasers p 1543 N93-18472
Method and apparatus for detection and control of prelasing in a Q-switched laser
[NASA-CASE-LAR-14790-1] p 1542 N93-19373
Design of RF conditioner cavities
[DE93-002576] p 1543 N93-19895
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge
[AD-A258680] p 1543 N93-19950

**LATCHES**
Retractable tool bit having latch type catch mechanism
[NASA-CASE-GSC-13359-1] p 1547 N93-18286

**LATEX**
Wall strains produced by waves in water filled latex tubes. Part 1: Tethered tubes
[AERO-REPT-9206-PT-1] p 1526 N93-18133
Method of processing composites on a latex base (Description of an invention for an author's certificate)
[AD-A258455] p 1478 N93-18423

**LATTICE PARAMETERS**
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
Magnetic structures of nanometer scale Dy, Cr, and Ni
[DE93-002984] p 1677 N93-19755

**LATTICES**
Heavy quarks in lattice QCD
[PREPRINT-786] p 1654 N93-18324

**LATTICES (MATHEMATICS)**
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187

**LAUNCH VEHICLE CONFIGURATIONS**
Systems design analysis applied to launch vehicle configuration
[NASA-TP-3326] p 1455 N93-18141
Atlas mission planner's guide
[AD-A258845] p 1470 N93-19366

**LAUNCH VEHICLES**
Project Columbiad: Mission to the Moon. Book 2, volume 3: Stage configuration designs; volume 4: Program plan
[NASA-CR-192037] p 1733 N93-17999
Public space launch acquisition: A comparative case study
[AD-A258141] p 1455 N93-18083
Systems design analysis applied to launch vehicle configuration
[NASA-TP-3326] p 1455 N93-18141
Launch system development in the Pacific Rim
[NASA-TM-108595] p 1455 N93-18170
Expendable launch vehicles technology: A report to the US Senate and the US House of Representatives
[NASA-TM-108141] p 1456 N93-19375

**LAUNCHING**
Launch system development in the Pacific Rim
[NASA-TM-108595] p 1455 N93-18170
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system p 1496 N93-19402
Investigation of the bandwidth of multimode optical fibers used with 1550-nm LED and laser sources p 1664 N93-19409
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671

**LAUNCHING PADS**
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050

**LAY-UP**
Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443

**LEACHING**
Characterization of the water soluble component of inedible residue from candidate CELSS crops
[NASA-TM-107557] p 1605 N93-18111
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399

**LEAD ZIRCONATE TITANATES**
Development of neural modules based on Si/PLZT technology for opto-electronic implementations of neural networks
[AD-A257937] p 1518 N93-18120

**LEAF AREA INDEX**
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737

**LEAKAGE**
Brush seal bristle flexure and hard-rub characteristics
[NASA-TM-105864] p 1547 N93-18321
Development and verification of methods for predicting flow rates through leaks in valves and couplings
[NASA-CR-192270] p 1533 N93-19013
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392

**LEARNING**
Dual-task training strategies and aging
[AD-A258261] p 1602 N93-18027

**LEAST SQUARES METHOD**
Application of the total least squares technique to frequency estimation
[AD-A257562] p 1644 N93-17936
Near real-time stereo vision system
[NASA-CASE-NPO-18593-1-CU] p 1662 N93-18276
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309
On recursive least-squares filtering algorithms and implementations
[NASA-CR-191396] p 1623 N93-18775
Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894
The neutral wind in the E-region from CP-1 data p 1729 N93-19565

**LECTURES**
Aviation medicine research: A historical review
[AD-A258198] p 1596 N93-18217
**LEGENDRE FUNCTIONS**
Vector approximation problems in geometric vector optimization
[REPT-92-39] p 1643 N93-17871
**LENGTH**
Equivalent lengths of struts (for use in buckling calculations)
[ESDU-92038] p 1554 N93-18046
**LENNARD-JONES POTENTIAL**
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279
**LENS ANTENNAS**
The development and testing of the Lens Antenna Deployment Demonstration (LADD) test article
p 1463 N93-18829
**LENSES**
Immersion objective lenses in electron optics
[ETN-92-92799] p 1662 N93-18442
**LEONID METEOROIDS**
Formation of the Leonid meteor stream and storm
p 1721 N93-19267
**LIAPUNOV FUNCTIONS**
Extended Lyapunov exponents for second order systems
[AD-A258838] p 1647 N93-19066
**LIBRARIES**
Air University Library index to military periodicals, volume 43, number 3, July - September 1992
[AD-A258452] p 1685 N93-18013
Examining a layered approach to function and design representation for reusable software components
[AD-A258920] p 1626 N93-19343
TRADOC Library and Information Network (TRALINET). Union list of periodicals (TULIP)
[AD-A258935] p 1688 N93-19451
HippoDraw
[DE93-004005] p 1627 N93-19633
Establishing a research agenda for Scientific and Technical Information (STI): Focus on the user
p 1692 N93-19797
**LIBRATIONAL MOTION**
On the dynamical structure of the Trojan group of asteroids p 1721 N93-19269
**LIE GROUPS**
Lie-isotropic energy-dependence of the neutral K(sub S) lifetime
[PREPRINT-874] p 1652 N93-17824
Lie-admissible perturbation methods for open quantum systems
[PREPRINT-845] p 1651 N93-17840
**LIFE (DURABILITY)**
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146
Control of in-service damage: Application to aircraft engines
[DS-2027] p 1448 N93-18151
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
Recommended approach to software development, revision 3
[NASA-TM-108630] p 1624 N93-18861
**LIFE CYCLE COSTS**
PDES Application Protocol Suite for Composite (PAS-C) scoping and benefits criteria. Volume 1: Executive summary and overview
[AD-A258833] p 1687 N93-19074
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 1608 N93-19763
**LIFE SCIENCES**
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 370)
[NASA-SP-7011(370)] p 1596 N93-18108
The US global change research program: Early achievements and future directions
p 1573 N93-18864
**LIFE SUPPORT SYSTEMS**
Pressurized lunar rover
[NASA-CR-192034] p 1544 N93-18015
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 1427 N93-19690
**LIFEBOATS**
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 1424 N93-19671
**LIFT**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow
[AD-A258019] p 1404 N93-17819
The aerodynamic characteristics of the Gottingen 797 and Wortmann FX63-137 aerofoil sections at very low Reynolds numbers
[ETN-93-92999] p 1406 N93-18128
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
**LIFT AUGMENTATION**
Lift enhancement using a close-coupled oscillating canard
[AD-A257877] p 1406 N93-18336
**LIFT DEVICES**
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Lifting-surface-method
p 1410 N93-19281
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method
p 1410 N93-19282
**LIFT DRAG RATIO**
The aerodynamic characteristics of the Gottingen 797 and Wortmann FX63-137 aerofoil sections at very low Reynolds numbers
[ETN-93-92999] p 1406 N93-18128
**LIFT FANS**
Calculations of aerodynamic forces on a wing with thrust using BEM p 1410 N93-19286
**LIFTING BODIES**
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155
**LIGANDS**
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
**LIGHT (VISIBLE RADIATION)**
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
**LIGHT AMPLIFIERS**
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition: Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical
[AD-A258663] p 1664 N93-19947
**LIGHT BEAMS**
Stimulated Brillouin scattering phase conjugation
p 1664 N93-18471
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952
**LIGHT CURVE**
The x ray variability of NGC6814: Power spectra
p 1562 N93-18712
The x ray variability of AGN and the anomalous behavior of NGC6814 p 1562 N93-18713
Light curve and fan-shaped coma of comet P/Tempel 2 in 1988-1989 p 1700 N93-19114
Fragmentation and densities of meteoroids
p 1700 N93-19118
Asteroids with unusual lightcurves: 14 Irene and 51 Nemausa p 1701 N93-19123
Influence of solar activity upon light curves of comets P/Halley (1986 3) and P/Churyumov-Gerasimenko (1982 8) p 1703 N93-19140
A photometric survey of outer belt asteroids
p 1697 N93-19149
The gas production rate of periodic comet d'Arrest
p 1705 N93-19155
Lightcurve of comet Austin(1989c1) and its dust mantle development p 1707 N93-19167
Inversion methods for interpretation of asteroid lightcurves p 1698 N93-19182
Spin vector and shape of 532 Herculina
p 1711 N93-19193
Ground-based observations of 951 Gaspra: CCD lightcurves and spectrophotometry with the Galileo filters
p 1698 N93-19212
The shape of asteroid 1917 Cuyo
p 1714 N93-19218
Twentieth century light curves and the nucleus of comet P/Tempel 2 p 1698 N93-19231
The unusual lightcurve of 1990 TR
p 1720 N93-19265
**LIGHT MODULATION**
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
**LIGHT SCATTERING**
Light diffusion in stochastically perturbed media
[REPT-92-41] p 1661 N93-17873
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets
[NASA-TM-105999] p 1471 N93-17995
Exact calculation of light scattering from a particle on a mirror
[AD-A258464] p 1662 N93-18247
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics
[AD-A258938] p 1652 N93-19082
**LIGHT SOURCES**
OptoElectronic Materials Center: A collaborative program including University of New Mexico, Stanford University, and California Institute of Technology
[AD-A258113] p 1540 N93-17894
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D015534] p 1519 N93-18316
Tunable infrared and visible solid-state laser
p 1543 N93-18473
**LIGHT VALVES**
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential
p 1611 N93-19782
**LIGHTNING**
A theory for whistler wave amplification and wave particle interactions in the magnetosphere
[AD-A257782] p 1576 N93-18212
Determination and representation of electric charge distributions associated with adverse weather conditions
p 1588 N93-19403
**LIKELIHOOD RATIO**
Derivatives of likelihood ratios and smoothed perturbation analysis for the routing problem
[INRIA-RR-1495] p 1647 N93-18653
**LIMITS**
Comparisons of theoretical limits for source coding with practical compression algorithms p 1513 N93-19428
**LIMITS (MATHEMATICS)**
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215
**LINE OF SIGHT**
Analysis of whole-sky imager data to determine the validity of PCFLOS models
[AD-A259042] p 1587 N93-19020
**LINE SHAPE**
Submillimeter molecular line observations of cometary Levy (1990c) p 1698 N93-19237
**LINE SPECTRA**
Optically pumped continuous wave CF4 laser
[ISBN-90-9004442-6] p 1541 N93-18429
Fluctuations at the blue edge of saturated wind lines in IUE spectra of O-type stars
[NASA-CR-191887] p 1696 N93-18776
Observations of OH in comet Levy with the Nancay radio telescope p 1697 N93-19129
The correlation between water production rates and visual magnitudes in comets p 1709 N93-19181
Submillimeter molecular line observations of cometary Levy (1990c) p 1698 N93-19237
Enhancement of the gyro lines by suprathermal particles p 1724 N93-19535
Enhanced ion-acoustic lines in EISCAT's common programmes p 1517 N93-19580
**LINEAR ACCELERATORS**
Use of the CEBAF accelerator for IR and UV free electron lasers
[CEBAF-PR-92-023] p 1660 N93-18768
**LINEAR ENERGY TRANSFER (LET)**
Target fragmentation in radiobiology
[NASA-TM-4408] p 1598 N93-18381
**LINEAR EQUATIONS**
An examination of the performance of a natural truncation point and acceptance rule for a curtailed Wald sequential sampling plan with Bernoulli parameters
[AD-A257579] p 1649 N93-18180
Diagnosing knowledge states in algebra using the rule space model
[AD-A257757] p 1645 N93-18246
**LINEAR PROGRAMMING**
An interior point approach to postoptimal and parametric analysis in linear programming
[REPT-92-21] p 1615 N93-17834
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221

Bracketing to speed convergence illustrated on the Von Newmann algorithm for finding a feasible solution to a linear program with a convexity constraint
[DE93-002660] p 1621 N93-18450
Spectral and spatial pattern recognition in digital imagery
[AD-A258910] p 1627 N93-19355

**LINEAR QUADRATIC GAUSSIAN CONTROL**
An explicit solution to the optimal LQG problem for flexible structures with collocated rate sensors
p 1467 N93-18932
An experimental determination of the effects of blending collocated and non-collocated sensor measurements to control a flexible structure
[AD-A258823] p 1559 N93-18998
Strategies for optimal control design of normal acceleration command following on the F-16
[AD-A258975] p 1450 N93-19095
Improvements to LQGI/LTR methodology for plants with lightly damped or low frequency poles
[AD-A258841] p 1648 N93-19112

**LINEAR QUADRATIC REGULATOR**
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380

**LINEAR SYSTEMS**
Sub-groups of Z(sup n), standard basis, and linear diophantine systems
[INRIA-RR-1510] p 1615 N93-17836
Discrete-time Markovian jump linear systems
[REPT-92-37] p 1631 N93-17870
Robust multivariable feedback design for uncertain linear systems
[AD-A258257] p 1648 N93-17902
Reconstruction of linear and nonlinear continuous time models from discrete time sampled-data systems
[RR-406] p 1646 N93-18458
Robust control with structured perturbations
[NASA-CR-192195] p 1633 N93-18579

**LINEAR TRANSFORMATIONS**
An intrinsic construction of the algebra of quaternions
[REPT-92-31] p 1643 N93-17845

**LINES (GEOMETRY)**
On the information contained in the motion field of lines and the cooperation between motion and stereo
[INRIA-RR-1453] p 1537 N93-18647

**LINGUISTICS**
The kinematics of presupposition
[LP-92-05] p 1613 N93-17829
Quantifiers into the world of types
[LP-92-09] p 1642 N93-17832
An update semantics for dynamic predicate logic
[LP-92-04] p 1615 N93-17841

**LIQUEFIED GASES**
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon
[DE93-002550] p 1482 N93-18411

**LIQUID ALLOYS**
Liquid tellurides: Structure and properties
[DE93-002909] p 1677 N93-19830

**LIQUID ATOMIZATION**
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192285] p 1497 N93-19412

**LIQUID CRYSTALS**
Mesophase formation by specific interactions in low molecular and polymer systems
[ETN-93-93311] p 1491 N93-17949
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential
p 1611 N93-19782
Liquid crystal displays replacing the CRT and CLE of future cockpits p 1447 N93-19783

**LIQUID HYDROGEN**
Passive recirculation in the National Launch System's fuel feedlines
[NASA-TM-108391] p 1471 N93-17941
Residual contact stresses in cryotechnical environments
[ETN-93-93020] p 1555 N93-18080

**LIQUID PHASES**
A condensed phase test cell assembly for the System for Thermal Diagnostic Studies (STDS)
[AD-A258463] p 1497 N93-18242

**LIQUID PROPELLANT ROCKET ENGINES**
Rocket engine monitoring system: Application to the Vulcain engine
[ETN-93-93016] p 1472 N93-18078
Conceptual design of a high thrust Vulcain-derived low-cost rocket engine
[ETN-93-93018] p 1472 N93-18144
The Vulcain MK2 engine for Ariane 5 performance improvement
[ETN-93-93019] p 1472 N93-18145
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146
Fiberoptic characteristics for extreme operating environments
[NASA-CR-189189] p 1475 N93-19649

**LIQUID ROCKET PROPELLANTS**
Project Minerva: A low cost manned Mars mission based on indigenous propellant production
[NASA-CR-192020] p 1734 N93-18048

**LISP (PROGRAMMING LANGUAGE)**
Automatically calibrating admittances in KATE's autonomous launch operations model
p 1456 N93-19401

**LITHIUM PERCHLORATES**
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158

**LITHOGRAPHY**
Synchrotron radiation sources and condensers for projection x ray lithography
[DE93-002964] p 1664 N93-19511

**LITHOLOGY**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503
p 1735 N93-18788
Refining the granulite suite p 1736 N93-18789
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
The Apollo 17 samples: The Massifs and landslide
p 1738 N93-18809
Impact melt breccias at the Apollo 17 landing site
p 1739 N93-18810
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded?
p 1739 N93-18813
Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816

**LOAD DISTRIBUTION (FORCES)**
Design requirements for force reflecting master controllers p 1605 N93-18035
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705

**LOAD TESTS**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996

**LOADS (FORCES)**
A harmonic half-space fundamental solution
[SER-R-271] p 1644 N93-17946
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846

**LOCAL AREA NETWORKS**
Data communication network at the ASRM facility
[NASA-CR-192085] p 1500 N93-17930
Improving security in the Fiber Distributed Data Interface (FDDI) protocol
[AD-A257546] p 1501 N93-17963
Design and implementation of a fiber optic link for a token ring local area network
[AD-A257868] p 1662 N93-18335
Implementation of a configuration and maintenance management system for local area networks
[AD-A257837] p 1686 N93-18344

**LOCKING**
US Army helicopter inertia reel locking failures
p 1427 N93-19689

**LOCKS**
Valve lock
[NASA-CASE-MFS-29764-1] p 1550 N93-19049

**LOGARITHMS**
Randomization yields simple O(n log* n) algorithms for difficult Omega(n) problems
[INRIA-RR-1412] p 1621 N93-18455

**LOGIC CIRCUITS**
A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649
Parallel simulation of structural VHDL circuits on Intel Hypercubes
[AD-A258999] p 1521 N93-19012

**LOGIC DESIGN**
Parallel simulation of structural VHDL circuits on Intel Hypercubes
[AD-A258999] p 1521 N93-19012

**LOGIC PROGRAMMING**
Integration of deductive and object oriented data bases: Theoretical and implementation aspects
[REPT-92-039] p 1618 N93-18199
Global planning of several plants
p 1635 N93-18667

**LOGISTICS**
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891
O-Plan2: The open planning architecture
p 1637 N93-18678

**LOGISTICS MANAGEMENT**
The obstacles encountered in the development of SMMS: A case study
[AD-A257880] p 1686 N93-18337
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 1608 N93-19763

**LONG DURATION EXPOSURE FACILITY**
An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329
Four space application material coatings on the long-duration exposure flight (LDEF)
[NASA-TM-104574] p 1493 N93-18370
The geocentric particulate distribution: Cometary, asteroidal, or space debris? p 1713 N93-19209

**LONG WAVE RADIATION**
Meteor fireball sounds identified p 1709 N93-19184

**LONGITUDINAL CONTROL**
Longitudinal-control design approach for high-angle-of-attack aircraft
[NASA-TP-3302] p 1451 N93-19108

**LORAN C**
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309

**LORENTZ FORCE**
A theory for whistler wave amplification and wave particle interactions in the magnetosphere
[AD-A257782] p 1576 N93-18212

**LOSSES**
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732
Determination of the dissipative loss of a two-port network from noise temperature measurements
p 1505 N93-18904

**LOUVERS**
Experimental analysis of the aeroacoustics of cascaded airfoils
[AD-A257945] p 1526 N93-18121

**LOW ALTITUDE**
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 1434 N93-19924

**LOW ASPECT RATIO**
Pitching moment of low aspect ratio wing-body combinations up to high angles of attack at supersonic speeds
[ESDU-92043] p 1435 N93-17958

**LOW ASPECT RATIO WINGS**
Formulation of a structural model for flutter analysis of low aspect ratio composite aircraft wings
p 1450 N93-19019

**LOW COST**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030
Conceptual design of a high thrust Vulcain-derived low-cost rocket engine
[ETN-93-93018] p 1472 N93-18144
Analysis, design, and testing of a low cost, direct force command linear proof mass actuator for structural control p 1469 N93-18943
Evaluation of ultrasonic cavitation of metallic and non-metallic surfaces p 1652 N93-19400

**LOW DENSITY FLOW**
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
[NASA-TM-103937] p 1417 N93-19379

**LOW FREQUENCIES**
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
Health effects of low-frequency electric and magnetic fields
[DE93-005675] p 1599 N93-19838

**LOW MOLECULAR WEIGHTS**
Mesophase formation by specific interactions in low molecular and polymer systems
[ETN-93-93311] p 1491 N93-17949

The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158

**LOW NOISE**
Minimizing noise-temperature measurement errors
p 1507 N93-18919

**LOW PASS FILTERS**
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
Definition of mean environmental steering flow for TCM-90 tropical cyclones
[AD-A257886] p 1586 N93-18338
Diabatic dynamic initialization p 1563 N93-18719

**LOW REYNOLDS NUMBER**
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994

**LOW SPEED WIND TUNNELS**
Wind tunnel tests and CFD in Fuji Heavy Industries
p 1416 N93-19323

**LOW TEMPERATURE**
Feasibility of silicon nitride films by vapor deposition at low temperature: Comparison of dichlorsilane-ammonia and disilane gaseous systems
[LAAS-92249] p 1490 N93-17812
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484
Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806

**LOWER IONOSPHERE**
Atmospheric dynamics and coupling
p 1584 N93-18495

**LUBRICATING OILS**
Evaluation of high-temperature lubricants for low-heat rejection diesel engines
[AD-A257893] p 1494 N93-18418

**LUBRICATION**
Evaluation of high-temperature lubricants for low-heat rejection diesel engines
[AD-A257893] p 1494 N93-18418
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488
A new journal bearing tester: The VTT water tribotester
[VTT-TIED-1345] p 1548 N93-18632

**LUMINOUS INTENSITY**
Optical fiber strain sensor with improved linearity
[NASA-CASE-LAR-14857-1-SB] p 1663 N93-19374

**LUMPED PARAMETER SYSTEMS**
Lumped mass modelling for the dynamic analysis of aircraft structures p 1447 N93-19460

**LUNAR BASES**
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192030] p 1605 N93-18018
Preliminary design of a radiator shading device for a lunar outpost
[NASA-CR-192016] p 1605 N93-18019
Conceptual design of a thermal control system for an inflatable lunar habitat module
[NASA-CR-192014] p 1606 N93-18113
Project Columbiad: Mission to the Moon. Book 1: Executive Summary. Volume 1: Mission trade studies and requirements. Volume 2: Subsystem trade studies and selection
[NASA-CR-192019] p 1734 N93-18233
Resource availability at Taurus-Littrow
p 1736 N93-18792

**LUNAR COMPOSITION**
The Moon: Biogenic elements p 1591 N93-18548

**LUNAR CONSTRUCTION EQUIPMENT**
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192030] p 1605 N93-18018

**LUNAR CRATERS**
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
The Apollo 17 regolith p 1737 N93-18799
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
Geology of the Apollo 17 site p 1738 N93-18803
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded?
p 1739 N93-18813
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815

**LUNAR CRUST**
The ancient lunar crust, Apollo 17 region
p 1736 N93-18795
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
Isotopic ages and characteristics of ancient (pre-Serenitatis) crustal rocks at Apollo 17
p 1738 N93-18808
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded?
p 1739 N93-18813
Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816

**LUNAR EVOLUTION**
Apollo 17: One giant step toward understanding the tectonic evolution of the Moon p 1739 N93-18811

**LUNAR EXCAVATION EQUIPMENT**
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192030] p 1605 N93-18018

**LUNAR EXPLORATION**
Project Columbiad: Mission to the Moon. Book 2, volume 3: Stage configuration designs; volume 4: Program plan
[NASA-CR-192037] p 1733 N93-17999
Nuclear safety for the space exploration initiative
[NASA-CR-189180] p 1659 N93-18032
Extended mission/lunar rover, executive summary
[NASA-CR-192017] p 1547 N93-18162
The design of a common lunar lander
[NASA-CR-192026] p 1459 N93-18165
Project Columbiad: Mission to the Moon. Book 1: Executive Summary. Volume 1: Mission trade studies and requirements. Volume 2: Subsystem trade studies and selection
[NASA-CR-192019] p 1734 N93-18233
The Moon: Biogenic elements p 1591 N93-18548
Future scientific exploration of Taurus-Littrow
p 1739 N93-18814
Last chance at Taurus-Littrow p 1740 N93-18817

**LUNAR GEOLOGY**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503
p 1735 N93-18788
Refining the granulite suite p 1736 N93-18789
Mare volcanism in the Taurus-Littrow region
p 1736 N93-18790
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
Resource availability at Taurus-Littrow
p 1736 N93-18792
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
The Apollo 17 region: A compositional overview
p 1736 N93-18796
neoKREEP: A new lunar component at Apollo 17
p 1737 N93-18797
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
The Apollo 17 regolith p 1737 N93-18799
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
Geology of the Apollo 17 site p 1738 N93-18803
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
Using Apollo 17 high-Ti mare basalts as windows to the lunar mantle p 1738 N93-18805
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
Isotopic ages and characteristics of ancient (pre-Serenitatis) crustal rocks at Apollo 17
p 1738 N93-18808
The Apollo 17 samples: The Massifs and landslide
p 1738 N93-18809
Impact melt breccias at the Apollo 17 landing site
p 1739 N93-18810
Apollo 17: One giant step toward understanding the tectonic evolution of the Moon p 1739 N93-18811
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded?
p 1739 N93-18813
Future scientific exploration of Taurus-Littrow
p 1739 N93-18814
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815
Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816
Last chance at Taurus-Littrow p 1740 N93-18817

**LUNAR LANDING**
LOLA: The lunar operations landing assembly
[NASA-CR-192043] p 1734 N93-18038
The design of a common lunar lander
[NASA-CR-192026] p 1459 N93-18165
Project Columbiad: Mission to the Moon. Book 1: Executive Summary. Volume 1: Mission trade studies and requirements. Volume 2: Subsystem trade studies and selection
[NASA-CR-192019] p 1734 N93-18233

**LUNAR LANDING MODULES**
LOLA: The lunar operations landing assembly
[NASA-CR-192043] p 1734 N93-18038
The design of a common lunar lander
[NASA-CR-192026] p 1459 N93-18165

**LUNAR LANDING SITES**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
Last chance at Taurus-Littrow p 1740 N93-18817

**LUNAR LAUNCH**
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860

**LUNAR MANTLE**
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
Using Apollo 17 high-Ti mare basalts as windows to the lunar mantle p 1738 N93-18805
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812

**LUNAR MARIA**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
Mare volcanism in the Taurus-Littrow region
p 1736 N93-18790
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
The ancient lunar crust, Apollo 17 region
p 1736 N93-18795
The Apollo 17 region: A compositional overview
p 1736 N93-18796
neoKREEP: A new lunar component at Apollo 17
p 1737 N93-18797
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
Using Apollo 17 high-Ti mare basalts as windows to the lunar mantle p 1738 N93-18805
The Apollo 17 samples: The Massifs and landslide
p 1738 N93-18809
Apollo 17: One giant step toward understanding the tectonic evolution of the Moon p 1739 N93-18811
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812

**LUNAR MODULE**
Conceptual design of a thermal control system for an inflatable lunar habitat module
[NASA-CR-192014] p 1606 N93-18113

**LUNAR OBSERVATORIES**
FLARE: The Far Side Lunar Research Expedition. A design of a far side lunar observatory
[NASA-CR-192029] p 1695 N93-18163

**LUNAR RESOURCES**
Lunar resources: Oxygen from rocks and soil
p 1735 N93-18787
Resource availability at Taurus-Littrow
p 1736 N93-18792

**LUNAR ROCKS**
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192030] p 1605 N93-18018
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
Lunar resources: Oxygen from rocks and soil
p 1735 N93-18787
Refining the granulite suite p 1736 N93-18789
Mare volcanism in the Taurus-Littrow region
p 1736 N93-18790

Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
Resource availability at Taurus-Littrow p 1736 N93-18792
The ancient lunar crust, Apollo 17 region p 1736 N93-18795
The Apollo 17 region: A compositional overview p 1736 N93-18796
neoKREEP: A new lunar component at Apollo 17 p 1737 N93-18797
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
The Apollo 17 regolith p 1737 N93-18799
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
Geology of the Apollo 17 site p 1738 N93-18803
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
Using Apollo 17 high-Ti mare basalts as windows to the lunar mantle p 1738 N93-18805
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
Isotopic ages and characteristics of ancient (pre-Serenitatis) crustal rocks at Apollo 17 p 1738 N93-18808
The Apollo 17 samples: The Massifs and landslide p 1738 N93-18809
Impact melt breccias at the Apollo 17 landing site p 1739 N93-18810
Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded? p 1739 N93-18813
Future scientific exploration of Taurus-Littrow p 1739 N93-18814
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815
Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816
Last chance at Taurus-Littrow p 1740 N93-18817

**LUNAR ROVING VEHICLES**
Activities of the Boom and Chassis Group [NASA-CR-192028] p 1544 N93-17975
Pressurized lunar rover [NASA-CR-192034] p 1544 N93-18015
Design of a pressurized lunar rover [NASA-CR-192033] p 1545 N93-18016
Extended mission/lunar rover, executive summary [NASA-CR-192017] p 1547 N93-18162
Future scientific exploration of Taurus-Littrow p 1739 N93-18814

**LUNAR SHELTERS**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission [NASA-TM-4422] p 1746 N93-18014

**LUNAR SOIL**
Workshop on Geology of the Apollo 17 Landing Site [NASA-CR-191637] p 1735 N93-18786
Lunar resources: Oxygen from rocks and soil p 1735 N93-18787
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503 p 1735 N93-18788
Resource availability at Taurus-Littrow p 1736 N93-18792
The Apollo 17 region: A compositional overview p 1736 N93-18796
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
The Apollo 17 regolith p 1737 N93-18799
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
Using Apollo 17 high-Ti mare basalts as windows to the lunar mantle p 1738 N93-18805
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221 p 1738 N93-18807
Isotopic ages and characteristics of ancient (pre-Serenitatis) crustal rocks at Apollo 17 p 1738 N93-18808

**LUNAR SPACECRAFT**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission [NASA-TM-4422] p 1746 N93-18014
Lunar scout: A Project Artemis proposal [NASA-CR-192076] p 1460 N93-18167

**LUNAR SURFACE**
Planetary surface exploration: MESUR/autonomous lunar rover [NASA-CR-192073] p 1546 N93-18102
Extended mission/lunar rover, executive summary [NASA-CR-192017] p 1547 N93-18162
FLARE: The Far Side Lunar Research Expedition. A design of a far side lunar observatory [NASA-CR-192029] p 1695 N93-18163
The Moon: Biogenic elements p 1591 N93-18548

**LUNAR SURFACE VEHICLES**
The Enabler: A reevaluation of design concepts and construction of a scaled model [NASA-CR-192061] p 1545 N93-18039
Enabler operator station --- lunar surface vehicle [NASA-CR-192067] p 1546 N93-18050
Mechanical Design Engineering Enabler Project wheel and wheel drives [NASA-CR-192060] p 1546 N93-18051
Boom and chassis articulation joints [NASA-CR-192059] p 1546 N93-18052

**LUNAR TOPOGRAPHY**
Apollo 17: One giant step toward understanding the tectonic evolution of the Moon p 1739 N93-18811

**LYMAN BETA RADIATION**
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135

## M

Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525
The CQL3D Fokker-Planck code
[DE93-002962] p 1668 N93-19754

**MAGNETIC INDUCTION**
Nonlinear acoustic-electromagnetic coupling in materials p 1482 N93-18486

**MAGNETIC MATERIALS**
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706
Amorphous magnetic insulators for microwave device applications
[AD-A259029] p 1508 N93-18954
Magnetic multilayer interface anisotropy
[DE93-004951] p 1676 N93-19634

**MAGNETIC MEASUREMENT**
Magnetic results 1987-89: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-19] p 1576 N93-18137
Magnetic results 1990: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-20] p 1576 N93-18138

**MAGNETIC MOMENTS**
Aharonov-Casher effect and geometrical phases
[PREPRINT-783] p 1644 N93-18186
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854

**MAGNETIC MONOPOLES**
Experimental particle physics
[DE93-003884] p 1655 N93-18538

**MAGNETIC PERMEABILITY**
Magnetic susceptibility variations in Loess sequences and their relationship to astronomical forcing p 1580 N93-18967

**MAGNETIC PROPERTIES**
Optical and magnetic signatures of localized excitations in polyaniline
[DE93-001954] p 1674 N93-18620
Amorphous magnetic insulators for microwave device applications
[AD-A259029] p 1508 N93-18954
Magnetic structures of nanometer scale Dy, Cr, and Ni
[DE93-002984] p 1677 N93-19755
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854

**MAGNETIC PUMPING**
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407

**MAGNETIC SIGNATURES**
Magnetic results 1987-89: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-19] p 1576 N93-18137
Magnetic results 1990: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-20] p 1576 N93-18138
Optical and magnetic signatures of localized excitations in polyaniline
[DE93-001954] p 1674 N93-18620

**MAGNETIC STORMS**
The solar wind structures associated with cosmic ray decreases and particle acceleration in 1978-1982 p 1565 N93-18072
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214

**MAGNETIC VARIATIONS**
Nocturnal high latitude E-region in winter during extremely quiet conditions p 1723 N93-19527

**MAGNETICALLY TRAPPED PARTICLES**
A kinetic simulation of low-frequency electromagnetic phenomena in inhomogeneous plasmas of three-dimensions
[NIFS-199] p 1669 N93-19883

**MAGNETIZATION**
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706
Magnetic multilayer interface anisotropy
[DE93-004951] p 1676 N93-19634
Magnetic structures of nanometer scale Dy, Cr, and Ni
[DE93-002984] p 1677 N93-19755

**MAGNETO-OPTICS**
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490

**MAGNETOCARDIOGRAPHY**
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391

**MAGNETOHYDRODYNAMIC FLOW**
Electrostatic potential in a collisionless plasma flow along open magnetic field lines
[NIFS-155] p 1666 N93-18421
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
Magnetoplasmadynamic thruster flows: Problems and progress p 1666 N93-18642
Poloidal flow generation by resistive pressure-gradient-driven turbulence
[DE93-001638] p 1667 N93-18707
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
PACE and EISCAT radar observations of short-lived flow bursts on the nightside p 1726 N93-19549
Plasma flow bursts in the auroral zone p 1726 N93-19550

**MAGNETOHYDRODYNAMIC STABILITY**
Identification of toroidal field errors in a modified betatron accelerator
[AD-A257983] p 1660 N93-18289
A study of physical mechanisms for filament eruption and coronal mass ejection via numerical simulation
[NASA-CR-192118] p 1744 N93-18577
Plasma-beam instabilities in cometary ionospheres p 1704 N93-19141
Introduction to ionospheric heating at Tromsoe (Norway). Part 2: Current scientific problems p 1724 N93-19532
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 3: The measurement problems with a radar p 1727 N93-19554
Regimes of improved confinement and stability in D3-D obtained through current profile modifications
[DE93-002674] p 1667 N93-19618
Self-regulated shear flow turbulence in confined plasmas: Basic concepts and potential applications to the L yields H transition
[DE93-002361] p 1668 N93-19743
A kinetic simulation of low-frequency electromagnetic phenomena in inhomogeneous plasmas of three-dimensions
[NIFS-199] p 1669 N93-19883
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge
[AD-A258680] p 1543 N93-19950
Critical issues and experimental examination on sawtooth and disruption physics
[NIFS-157] p 1670 N93-19951

**MAGNETOHYDRODYNAMIC TURBULENCE**
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525

**MAGNETOHYDRODYNAMIC WAVES**
Plasma-beam instabilities in cometary ionospheres p 1704 N93-19141
Magnetohydrodynamic wave-associated plasma density fluctuations in the Earth's foreshock region p 1667 N93-19385
Observations of Pc5 Alfven wave effects in the quiet time auroral ionosphere: Indications of energetic particle acceleration p 1733 N93-19588
Stability of TAE modes in DIII-D
[DE93-002677] p 1669 N93-19897

**MAGNETOHYDRODYNAMICS**
Nonlinear magnetohydrodynamics
[DE93-003241] p 1665 N93-18407
A postulational formulation of magnetohydrodynamics p 1667 N93-19030
Interplanetary magnetic field changes and condensations in comet Halley's plasma tail p 1704 N93-19147
Inexpensive capillary discharge x ray laser driver, phase 1
[AD-A259032] p 1542 N93-19372
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522
Interagency Advanced Power Group semi-annual compilation of briefs, September 1992
[DE93-000703] p 1571 N93-19613
Stability of TAE modes in DIII-D
[DE93-002677] p 1669 N93-19897
On the Lagrangian of the linearized MHD equations
[NIFS-154] p 1670 N93-19933

**MAGNETOMETERS**
Magnetic results 1987-89: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-19] p 1576 N93-18137
Magnetic results 1990: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-20] p 1576 N93-18138
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
International Monitor for Auroral Geomagnetic Effects (IMAGE): A new magnetometer network in Scandinavia p 1732 N93-19585

**MAGNETOPAUSE**
Electric fields and currents in the cusp region as a result of diffusion effects on the magnetopause p 1730 N93-19575

**MAGNETOPLASMADYNAMICS**
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
The MPD thruster program at JPL p 1666 N93-18638
MPD thruster technology p 1666 N93-18639
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640
Review of recent work on MPD thrusters at MIT p 1666 N93-18641
Magnetoplasmadynamic thruster flows: Problems and progress p 1666 N93-18642
Scaling and applied field studies of MPD thrusters with laser diagnostics p 1667 N93-18643
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644
Recent advances in MPD thruster research at Princeton p 1667 N93-18645

**MAGNETOSPHERE-IONOSPHERE COUPLING**
Report on the 7th Finnish EISCAT Workshop
[REPT-121-(1992)] p 1577 N93-18736
Simulation of ionosphere-magnetosphere mesoscale coupling: Letting ionospheric conductivities depend on upward field-aligned currents p 1578 N93-18742
The flow of plasma in the solar terrestrial environment
[NASA-CR-192106] p 1744 N93-18780
A new approach to plasmasphere refilling: Anomalous plasma effects
[NASA-CR-192128] p 1670 N93-19945

**MAGNETOSPHERIC ELECTRON DENSITY**
Main ionospheric trough: Preliminary results from the 1990 Finnish-French EISCAT campaign p 1726 N93-19545

**MAGNETOSPHERIC ION DENSITY**
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions
p 1722 N93-19522
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524
**MAGNETOSTATICS**
Applied Computational Electromagnetics Society Journal, volume 7, number 2, winter 1992
[AD-A258483] p 1502 N93-18263
**MAGNETOSTRICTION**
Development of magnetostrictive active members for control of space structures
[NASA-CR-190846] p 1460 N93-18322
Nonlinear acoustic-electromagnetic coupling in materials p 1482 N93-18486
**MAGNETRON SPUTTERING**
Fiber coating by sputtering for high temperature composites
[AD-A258119] p 1476 N93-17897
**MAGNITUDE**
The correlation between water production rates and visual magnitudes in comets p 1709 N93-19181
A new activity index for comets p 1699 N93-19261
**MAGNONS**
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706
**MAGNUS EFFECT**
A wind tunnel study of magnus effects on a differentially rotating missile
[AD-A258812] p 1408 N93-18989
**MAINTAINABILITY**
Reliability, Maintainability, and Supportability (RMS) education in engineering schools
[AD-A258260] p 1552 N93-18026
**MAINTENANCE**
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
[AD-A258444] p 1684 N93-17891
Analysis of a software maintenance system: A case study
[AD-A258469] p 1619 N93-18271
Implementation of a configuration and maintenance management system for local area networks
[AD-A257837] p 1686 N93-18344
Automatically calibrating admittances in KATE's autonomous launch operations model
p 1456 N93-19401
Issues in requirements elicitation
[AD-A258932] p 1627 N93-19448
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 1608 N93-19763
Electric and hybrid vehicle technology: TOPTEC
[DE93-002810] p 1551 N93-19837
Case-based reasoning for real-time problem solving
[AD-A258697] p 1641 N93-19865
**MAMMALS**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
**MAN ENVIRONMENT INTERACTIONS**
Natural and anthropogenic climate change
[DE93-003150] p 1573 N93-18393
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
**MAN MACHINE SYSTEMS**
NARSIM and EFMS: Tools for research on integrated ATM
[NLR-TP-89336-U] p 1432 N93-17954
Using constraint satisfaction networks to study aircrew selection for advanced cockpits
[AD-A258151] p 1606 N93-18293
Cognitive engineering models in space systems
[NASA-CR-192001] p 1606 N93-18517
Flight simulator for hypersonic vehicle and a study of NASP handling qualities p 1452 N93-19456
Modeling the performance of the human (pilot) interaction in a synthetic flight domain: Information theoretic approach p 1612 N93-19465
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 1607 N93-19757
Engineering the visibility of small features on electronic flight displays p 1607 N93-19758
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts?
p 1607 N93-19759
Advanced cockpit-mission and image management
p 1607 N93-19760
Aircrew acceptance of automation in the cockpit
p 1608 N93-19761
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762
Developing virtual cockpits p 1608 N93-19764
Panoramic cockpit displays p 1608 N93-19765
A new concept for helmet mounted vision
p 1609 N93-19767
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 1434 N93-19768
The MOD (UK) integrated helmet technical demonstrator programme p 1609 N93-19769
Multi-function visor p 1609 N93-19770
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 1610 N93-19772
Multimodal dialog system for future cockpits
p 1610 N93-19773
A systems approach to the advanced aircraft man-machine interface p 1610 N93-19776
Management of avionics data in the cockpit
p 1611 N93-19777
Model-based reasoning applied to cockpit warning systems p 1611 N93-19778
The integration of advanced cockpit and systems design p 1611 N93-19779
CVA, cockpit design and development tool
p 1611 N93-19780
Man-machine interface with simulated automatic target recognition systems p 1611 N93-19781
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential
p 1611 N93-19782
Liquid crystal displays replacing the CRT and CLE of future cockpits p 1447 N93-19783
Equipment, more or less ready to be used in helicopters p 1612 N93-19785
**MAN-COMPUTER INTERFACE**
The design and implementation of a user interface for the computer-aided prototyping system
[AD-A258017] p 1614 N93-17818
NARSIM and EFMS: Tools for research on integrated ATM
[NLR-TP-89336-U] p 1432 N93-17954
Design and implementation of a graphical user interface for a multimedia database management system
[AD-A257577] p 1686 N93-18179
Cognitive engineering models in space systems
[NASA-CR-192001] p 1606 N93-18517
A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
A user interface to a true 3-D display device
[AD-A258995] p 1614 N93-18891
The effects of iconic presentation on individuals
[AD-A258785] p 1603 N93-18949
HippoDraw
[DE93-004005] p 1627 N93-19633
Principles for integrating voice I/O in a complex interface p 1610 N93-19774
A systems approach to the advanced aircraft man-machine interface p 1610 N93-19776
NASA access mechanism: Graphical user interface information retrieval system
[NASA-TM-108981] p 1693 N93-19939
**MANAGEMENT**
The status of the Senior Executive Service, 1991
[SES-92-07] p 1683 N93-18439
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present
p 1425 N93-19673
**MANAGEMENT INFORMATION SYSTEMS**
A model for security and distribution of management information systems
[ETN-93-93029] p 1685 N93-18107
Data management: Implementation and lessons learned from Department of the Army data management program
[AD-A257858] p 1686 N93-18307
The obstacles encountered in the development of SMMS: A case study
[AD-A257880] p 1686 N93-18337
Corporate information management and business process improvement under the unit cost program: An analysis of a system for the Air Force Institute of Technology
[AD-A258984] p 1687 N93-19098
Network management, status, and directions
[DE93-004003] p 1630 N93-19510
Towards an integrated approach to proactive monitoring and accident prevention p 1429 N93-19700
The AGARD tip research agenda for Scientific and Technical Information (STI) p 1692 N93-19800
**MANAGEMENT METHODS**
Development of a standard set of software indicators for aeronautical systems center
[AD-A258424] p 1616 N93-17863
Data management: Implementation and lessons learned from the Department of the Army data management program
[AD-A258796] p 1687 N93-19063
Software measurement guidebook, version 02.00.02
[AD-A258961] p 1625 N93-19083
The MOD (UK) integrated helmet technical demonstrator programme p 1609 N93-19769
**MANAGEMENT PLANNING**
An analysis of contract cost overruns and their impacts
[AD-A258422] p 1683 N93-17862
Report to Congress: Long-term availability of adequate airport system capacity
[AD-A258209] p 1432 N93-18202
Paradigm shift: Can TQM save DOD's procurement process?
[AD-A258319] p 1552 N93-18253
Metrication report to the Congress
[NASA-TM-108600] p 1499 N93-18281
The obstacles encountered in the development of SMMS: A case study
[AD-A257880] p 1686 N93-18337
Data management plan for the Oak Ridge Environmental Information System, Version 1.1
[DE92-041219] p 1687 N93-18526
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning
[NASA-TM-108124] p 1634 N93-18659
Extended abstract: Managing disjunction for practical temporal reasoning p 1634 N93-18664
Global planning of several plants
p 1635 N93-18667
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
O-Plan2: The open planning architecture
p 1637 N93-18678
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
A clearinghouse for software reuse: Lessons learned from RAPID/DSRS initiatives
[AD-A258782] p 1625 N93-19062
Data management: Implementation and lessons learned from the Department of the Army data management program
[AD-A258796] p 1687 N93-19063
Software measurement guidebook, version 02.00.02
[AD-A258961] p 1625 N93-19083
Process engineering with the evolutionary spiral process model, version 01.00.01
[AD-A258966] p 1625 N93-19085
Discussions on the organizational outline and suggested institutional guidelines for the INPE
[INPE-5406-RPQ/660] p 1684 N93-19642
Program manager: Journal of the Defense Systems Management College, volume 21, number 6, November-December 1992
[AD-A258766] p 1553 N93-19870
**MANAGEMENT SYSTEMS**
Data modelization for manufacturing planning and scheduling: Aggregation and disaggregation mechanisms
[LAAS-92263] p 1682 N93-17813
Development of a prototype Air Force Institute of Technology (AFIT) Research Management System (ARMS)
[AD-A258267] p 1685 N93-18028
Time management situation assessment (TMSA)
p 1639 N93-18692
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
Needs assessment final report p 1682 N93-19406
**MANEUVERABILITY**
Motion simulation of underwater vehicles
[VTT-PUBS-97] p 1623 N93-18698
**MANEUVERS**
An investigation of a prototype OASYS effectiveness in maneuvering flight
[AD-A257901] p 1439 N93-18339
**MANGANESE ALLOYS**
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706
**MANGANESE OXIDES**
X ray diffraction study of shock-modified tetragonal phases of SnO2 and MnO2
[DE93-002488] p 1535 N93-19479
**MANIPULATORS**
Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938

Control/structure interaction during Space Station Freedom-Orbiter berthing p 1463 N93-18831
Evaluation of inertial devices for the control of large, flexible, space-based telerobotic arms p 1465 N93-18839
Adaptive control of robotic manipulators p 1640 N93-19031
Computational kinematics of multi-arm manipulators p 1549 N93-19033
Voice control of a dual-arm telerobot p 1549 N93-19044
Impedance control design for robot tasks involving free and contact motion p 1640 N93-19045
Teleprogramming: Remote site robot task execution p 1641 N93-19046
Inertial-space disturbance rejection for robotic manipulators [NASA-CR-191867] p 1641 N93-19361
Kinematic analysis of the ARID manipulator p 1552 N93-19393
Calibration of the ARID robot p 1552 N93-19394
ARID relative calibration experimental data and analysis p 1552 N93-19395
Nonlinear robust controller design for multi-robot systems with unknown payloads p 1552 N93-19462
Robust motion tracking control of robotic arms based on the generalized energy accumulation principle p 1552 N93-19463

**MANNED MARS MISSIONS**
Project Ares: A systems engineering and operations architecture for the exploration of Mars [AD-A258082] p 1734 N93-18021
Nuclear safety for the space exploration initiative [NASA-CR-189180] p 1659 N93-18032
LOLA: The lunar operations landing assembly [NASA-CR-192043] p 1734 N93-18038
Project Minerva: A low cost manned Mars mission based on indigenous propellant production [NASA-CR-192020] p 1734 N93-18048
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5 [NASA-CR-192042] p 1606 N93-18156
Space life support engineering program [NASA-CR-192188] p 1607 N93-19039

**MANNED SPACECRAFT**
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos [NASA-CR-192056] p 1459 N93-18116

**MANUAL CONTROL**
Manual flying of curved precision approaches to landing with electromechanical instrumentation. A piloted simulation study [NASA-TP-3255] p 1447 N93-18408

**MANUALS**
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system [NASA-CR-191898] p 1457 N93-18447

**MANUFACTURING**
Data modelization for manufacturing planning and scheduling: Aggregation and disaggregation mechanisms [LAAS-92263] p 1682 N93-17813
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements [AD-A257548] p 1476 N93-17964
Innovative techniques for the production of low cost 2D laser diode arrays [AD-A258485] p 1540 N93-18101
Method of preparing a diamond-abrasive mixture [AD-A258228] p 1492 N93-18123
Conceptual design of a high thrust Vulcain-derived low-cost rocket engine [ETN-93-93018] p 1472 N93-18144
Segregation of defects in wrought alloy 718: Management of industrial safeguards [DS-2038] p 1486 N93-18150
Method of processing composites on a latex base (Description of an invention for an author's certificate) [AD-A258455] p 1478 N93-18423
Simulated coal-gas-fueled molten carbonate fuel cell development program [DE93-000205] p 1570 N93-18527
Method and apparatus for three dimensional braiding [NASA-CASE-LAR-14047-1] p 1500 N93-19038
Measurement process error determination and control [DE93-002948] p 1553 N93-19753
NASA's Advanced solid rocket motor [NASA-CR-191950] p 1475 N93-19825
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 1443 N93-19906

**MANY BODY PROBLEM**
Structural simulation coupling for transient analysis [AD-A258192] p 1643 N93-17861

**MAPPING**
Code vector density in topographic mappings [AD-A258222] p 1492 N93-18122
Mapping of sea bottom topography with spaceborne SAR [BCRS-91-14] p 1589 N93-18430
Airborne Remote Sensing [VTT-SYMPOSIUM-127] p 1569 N93-19871
What is the aerial telemapping system? p 1569 N93-19872
Microwave instruments p 1569 N93-19874
Present and future imaging spectrometers in telemapping p 1570 N93-19877

**MAPS**
A parallel stereo algorithm that produces dense depth maps and preserves image features [INRIA-RR-1369] p 1620 N93-18433
Interactive object-oriented display technologies: A study of two CD-ROM-based DMA products [AD-A258896] p 1625 N93-19081
Evaluation of the geometric quality of cartographic documents through the use of scanning imagery devices [INPE-5298-PRE/1703] p 1692 N93-19738

**MARINE BIOLOGY**
The voltammetric determination of trace metal concentrations and organic complexation in seawater [AD-A257565] p 1588 N93-17984
Topography-induced variation in benthic boundary layer particle dynamics and fauna [AD-A258230] p 1589 N93-18124
Aquatic plant control research program. Biological control of Pistia stratiotes L. (waterlettuce) using Neohydronomus affinis hustache (coleoptera: curculionidae) [AD-A257463] p 1574 N93-18945
Upper ocean mixing: The use of algal pigments as biological tracers for turbulent diffusion [AD-A258803] p 1590 N93-18982

**MARINE ENVIRONMENTS**
Annual, orbital, and enigmatic variations in tropical oceanography recorded by the Equatorial Atlantic amplifier p 1581 N93-18970
Evidence of orbital forcing in 510 to 530 million year old shallow marine cycles, Utah and western Canada p 1582 N93-18975
Upper ocean mixing: The use of algal pigments as biological tracers for turbulent diffusion [AD-A258803] p 1590 N93-18982

**MARINE METEOROLOGY**
Predicting the movement of Carolina coastal fronts [AD-A258280] p 1585 N93-18012

**MARKET RESEARCH**
A study of current world telecommunications and a projection of the future [AD-A257545] p 1501 N93-17962

**MARKOV CHAINS**
Discrete-time Markovian jump linear systems [REPT-92-37] p 1631 N93-17870

**MARKOV PROCESSES**
A segmental hidden Markov model for speech pattern processing [AD-A258220] p 1501 N93-18023
On the optimality of LEPT and micron rules for parallel processors and dependent arrival processes [TW-92-01] p 1630 N93-18443
Optimality of a threshold policy on the M/M/1 queue with repeated vacations [INRIA-RR-1419] p 1632 N93-18515

**MARS (PLANET)**
Project Ares: A systems engineering and operations architecture for the exploration of Mars [AD-A258082] p 1734 N93-18021
Conceptual design of a Mars transportation system [NASA-CR-192039] p 1545 N93-18047
Design of a compliant wheel for a miniature rover to be used on Mars [NASA-CR-192012] p 1546 N93-18114
The SIMPSONS project: An integrated Mars transportation system [NASA-CR-192035] p 1547 N93-18152
Mars: A reassessment of its interest to biology p 1591 N93-18550
Mars Observer: Mission toward a basic understanding of Mars p 1592 N93-18557
Near term NEP missions and systems p 1661 N93-18637

**MARS ATMOSPHERE**
Mars Observer: Mission toward a basic understanding of Mars p 1592 N93-18557
Dynamics of planetary atmospheres [NASA-CR-192117] p 1735 N93-18782
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry [NASA-CR-177601] p 1533 N93-19011
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events [NASA-TP-3300] p 1746 N93-19109
Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, part 1 [NASA-CR-191225] p 1740 N93-19801
Orbital, rotational, and climatic interactions: Lessons from Earth and Mars p 1740 N93-19803
Martian volatiles determined using the Mars observer gamma ray spectrometer p 1741 N93-19807
Evolution of the Martian atmosphere: The role of the polar caps p 1741 N93-19809
Is CO2 ice permanent? p 1742 N93-19813
Dust transport into Martian polar latitudes p 1742 N93-19815
Mars observer radio science (MORS) observations in polar regions p 1743 N93-19818
Modeling interannual variability in the Martian seasonal CO2 cycle p 1743 N93-19820

**MARS ENVIRONMENT**
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5 [NASA-CR-192042] p 1606 N93-18156
Mars: A reassessment of its interest to biology p 1591 N93-18550
The polar layered deposits on Mars: Inference from thermal inertia modeling and geologic studies p 1741 N93-19810
The interannual variability of polar cap recessions as a measure of Martian climate and weather: Using Earth-based data to augment the time line for the Mars observer mapping mission p 1742 N93-19814
Numerical simulations of drainage flows on Mars p 1742 N93-19816

**MARS LANDING**
Project Minerva: A low cost manned Mars mission based on indigenous propellant production [NASA-CR-192020] p 1734 N93-18048
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5 [NASA-CR-192042] p 1606 N93-18156

**MARS OBSERVER**
Mars Observer: Mission toward a basic understanding of Mars p 1592 N93-18557
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario p 1454 N93-18899
Correlated flux densities from VLBI observations with the DSN p 1506 N93-18909
Martian volatiles determined using the Mars observer gamma ray spectrometer p 1741 N93-19807
The interannual variability of polar cap recessions as a measure of Martian climate and weather: Using Earth-based data to augment the time line for the Mars observer mapping mission p 1742 N93-19814
Mars observer radio science (MORS) observations in polar regions p 1743 N93-19818

**MARS SAMPLE RETURN MISSIONS**
MRSR: Rationale for a Mars Rover/Sample Return mission p 1593 N93-18560

**MARS SURFACE**
Planetary surface exploration: MESUR/autonomous lunar rover [NASA-CR-192073] p 1546 N93-18102
Design of a compliant wheel for a miniature rover to be used on Mars [NASA-CR-192012] p 1546 N93-18114
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5 [NASA-CR-192042] p 1606 N93-18156
Mars Observer: Mission toward a basic understanding of Mars p 1592 N93-18557
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events [NASA-TP-3300] p 1746 N93-19109
Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, part 1 [NASA-CR-191225] p 1740 N93-19801
Glaciation in Elysium p 1740 N93-19802
Condensation phase of the Martian south polar cap p 1740 N93-19804
Water on Mars: Inventory, distribution, and possible sources of polar ice p 1740 N93-19805
Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806
Do large impact basins in the Southern Hemisphere of Mars control the distribution of polar structures and deposits? p 1741 N93-19808
The polar layered deposits on Mars: Inference from thermal inertia modeling and geologic studies p 1741 N93-19810
The Mars water cycle at other epochs: Recent history of the polar caps and layered terrain p 1741 N93-19811
Possible recent and ancient glacial ice flow in the south polar region of Mars p 1742 N93-19812

Dust transport into Martian polar latitudes p 1742 N93-19815
Antarctic lakes (above and beneath the ice sheet): Analogues for Mars p 1743 N93-19817
Mars observer radio science (MORS) observations in polar regions p 1743 N93-19818
Modeling interannual variability in the Martian seasonal CO2 cycle p 1743 N93-19820

**MARS VOLCANOES**
Glaciation in Elysium p 1740 N93-19802
Water on Mars: Inventory, distribution, and possible sources of polar ice p 1740 N93-19805
Do large impact basins in the Southern Hemisphere of Mars control the distribution of polar structures and deposits? p 1741 N93-19808

**MASERS**
Chaotic dynamics of atoms p 1659 N93-18491
Minimizing noise-temperature measurement errors p 1507 N93-18919
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge
[AD-A258680] p 1543 N93-19950

**MASKING**
Spatio-temporal masking: Hyperacuity and local adaptation
[AD-A257934] p 1595 N93-18006

**MASS BALANCE**
Doppler velocities in the ion tail of comet Levy 1990c p 1708 N93-19176

**MASS DISTRIBUTION**
Burst of the 1969 Leonids and 1982 Lyrids p 1714 N93-19222

**MASS FLOW**
Application of laser Doppler velocimeter to chemical vapor laser system
[NASA-TM-4409] p 1540 N93-18068
A numerical investigation for supersonic inlet p 1415 N93-19315

**MASS RATIOS**
Evidence for a massive stellar black hole in x ray Nova Muscae p 1562 N93-18714
The nature of comet nuclei p 1718 N93-19250

**MASS SPECTRA**
Solvation effects on reactive intermediates: The benzyl radical and its clusters with Ar, N2, CH4, C2H6, and C3H88
[AD-A258764] p 1658 N93-19868

**MASS SPECTROMETERS**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840

**MASS SPECTROSCOPY**
Infrared sensor technology and applications p 1664 N93-18474
Non-conventional measurement techniques for the determination of some long-lived radionuclides produced ion nuclear fuel: Literature survey
[VTT-TIED-1357] p 1660 N93-18654
Cation production and reactions induced by electron impact on tetraethoxysilane
[AD-A258830] p 1675 N93-19064
Collisional detachment of anions using Fourier transform mass spectrometry
[AD-A258972] p 1656 N93-19092

**MASS TRANSFER**
A general approximation solution for the mass transfer in laminar multicomponent boundary layers along a streaming plate plane
[ETN-93-92738] p 1530 N93-18629

**MASSIFS**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503 p 1735 N93-18788
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
The Apollo 17 samples: The Massifs and landslide p 1738 N93-18809
Impact melt breccias at the Apollo 17 landing site p 1739 N93-18810

**MASSIVELY PARALLEL PROCESSORS**
Computer and mathematical modelling of massively parallel architectures for self-organizing neural pattern recognition machines
[AD-A258167] p 1630 N93-18297
Stimulated photorefractive optical neural networks
[AD-A258825] p 1663 N93-19333
A discrete ordinate response matrix method for massively parallel computers
[DE93-003463] p 1631 N93-19621

**MATCHED FILTERS**
Advanced concepts in distortion-invariant phase-only filter design
[AD-A258691] p 1523 N93-19861

**MATCHING**
Image matching strategies for the co-registration of CAESAR sea-images: An hierarchical area-based approach, part 2
[BCRS-90-40B-PT-2] p 1564 N93-17951
Information system for co-registration of CAESAR sea-images based on two dimensional image matching techniques (SCORE). Part 3: Design and detailed design document
[BCRS-90-40C-PT-3] p 1564 N93-17953

**MATERIALS HANDLING**
Performance oriented packaging testing for liquid propellant, XM1846
[AD-A258430] p 1496 N93-17865
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**MATERIALS RECOVERY**
Application of molten salts in pyrochemical processing of reactive metals
[DE92-018618] p 1489 N93-19437

**MATERIALS SCIENCE**
Ultrastructure processing of advanced materials
[AD-A258805] p 1479 N93-18984

**MATERIALS TESTS**
An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329

**MATHEMATICAL LOGIC**
Methodologies of automatic control including fuzzy logic
[LAAS-92257] p 1631 N93-17814
Shavrukov's theorem on the subalgebras of diagonalizable algebras for theories containing I(delta(sub 0)) + exp
[ML-92-05] p 1642 N93-17825
The Lambek calculus enriched with additional connectives
[LP-91-04] p 1642 N93-17826
Categorical grammar and natural reasoning
[LP-91-08] p 1642 N93-17828
The kinematics of presupposition
[LP-92-05] p 1613 N93-17829
A note on interrogatives and adverbs of quantification
[LP-92-07] p 1615 N93-17830
A system of dynamic modal logic
[LP-92-08] p 1615 N93-17831
Quantifiers into the world of types
[LP-92-09] p 1642 N93-17832
An update semantics for dynamic predicate logic
[LP-92-04] p 1615 N93-17841
Feasible interpretability
[ML-91-11] p 1643 N93-17868
Modal frame classes revisited
[ML-91-12] p 1643 N93-17869
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913
On the structure of Kripke models of Heyting arithmetic
[ML-92-03] p 1644 N93-17914
A modal theory of arrows: Arrows logics 1
[ML-92-04] p 1644 N93-17915
An imperative language for task-level programming: Definition in temporal logics
[INRIA-RR-1406] p 1622 N93-18575

**MATHEMATICAL MODELS**
Alternative optimization strategies for large-scale production-allocation problems
[REPT-92-13] p 1615 N93-17833
Structural simulation coupling for transient analysis
[AD-A258192] p 1643 N93-17861
A two-body covariant equation for interacting nucleons
[NOTA-INTERNA-986] p 1653 N93-17877
Analysis of a multistep Jacobi multigrid method for solving the Euler equations
[INRIA-RR-1506] p 1644 N93-17879
Coupling losses in multiple beam antennas
[AD-A257494] p 1500 N93-17903
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment
[AD-A258177] p 1524 N93-17908
Evaporation and burning of a spherical fuel droplet in a uniform convective flowfield
[DE93-002223] p 1482 N93-17910
On the structure of Kripke models of Heyting arithmetic
[ML-92-03] p 1644 N93-17914
Prediction of rigid silica based insulation conductivity
[NASA-TP-3276] p 1524 N93-17925
Solid state and the standard model
[NOTA-INTERNA-980] p 1653 N93-17932
A relativistic study of nuclear interactions
[NOTA-INTERNA-981] p 1653 N93-17955
Pitching moment of low aspect ratio wing-body combinations up to high angles of attack at supersonic speeds
[ESDU-92043] p 1435 N93-17958
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
Modeling process redesign
[AD-A257561] p 1617 N93-17983
A microwave scattering model for layered vegetation p 1565 N93-18074
Analytical surface singularity distributions for flow about elliptical cylinders
[AERO-REPT-9202] p 1526 N93-18132
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
The unified method of aeroelasticity p 1450 N93-18143
Reflecting model: P-S arrival
[REPT-92-029] p 1576 N93-18188
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200
Terrain background signature research
[AD-A257917] p 1565 N93-18213
Computational and neural network models for the analysis of visual texture
[AD-A258166] p 1632 N93-18296
Computer and mathematical modelling of massively parallel architectures for self-organizing neural pattern recognition machines
[AD-A258167] p 1630 N93-18297
International Workshop on Mathematical Methods in Combustion
[AD-A258478] p 1482 N93-18312
Evolution of attached and detached slabs and their associated mantle dynamics
[NASA-CR-191920] p 1576 N93-18320
Decision paths in complex tasks
[NASA-CR-192121] p 1603 N93-18359
Time-dependent computational studies of premixed flames in microgravity
[NASA-CR-191051] p 1498 N93-18387
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Predicting multi-wall structural response to hypervelocity impact using the hull code
[NASA-CR-4486] p 1461 N93-18406
Identification of system dynamics of a high incidence research model
[RR-407] p 1440 N93-18507
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511
Elastic dynamics of a complete wind turbine structure: Theoretical development
[DE93-002478] p 1555 N93-18524
Finite element modeling of fluids p 1529 N93-18543
Titan p 1592 N93-18553
Basic research on design analysis methods for rotorcraft vibrations
[NASA-CR-191917] p 1556 N93-18576
Robust control with structured perturbations
[NASA-CR-192195] p 1633 N93-18579
Finite difference time domain modeling of spiral antennas
[NASA-CR-192237] p 1503 N93-18586
On corner and vertex detection
[INRIA-RR-1439] p 1646 N93-18594
Evaluating auroral processes within a magnotospheric model
[NASA-CR-192122] p 1577 N93-18606
Effect of bow-type initial imperfection on reliability of minimum-weight, stiffened structural panels
[NASA-TP-3263] p 1556 N93-18615
A Blottner type numerical model for nonequilibrium viscous hypersonic flows in upwind finite elements
[INRIA-RR-1476] p 1407 N93-18648
Influence of the physical modelling of viscous terms on hypersonic flow computations
[INRIA-RR-1493] p 1408 N93-18652
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726
Axial Flow Compressors, volume 2
[VKI-LS-1992-02-VOL-2] p 1531 N93-18731
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732

Simulation of ionosphere-magnetosphere mesoscale coupling: Letting ionospheric conductivities depend on upward field-aligned currents p 1578 N93-18742
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
Mathematical modelling of materials
p 1557 N93-18753
Model reduction for the dynamics and control of large structural systems via neutral network processing direct numerical optimization p 1461 N93-18820
Physical insight into the simultaneous optimization of structure and control p 1461 N93-18821
Determination of coronal magnetic fields from vector magnetograms
[NASA-CR-191386] p 1744 N93-18869
Development of computational methods for heavy lift launch vehicles
[NASA-CR-192298] p 1456 N93-18872
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Reducing the net torque and flow ripple effects of multiple hydraulic piston motor drives
p 1507 N93-18917
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924
Modeling expert opinion: Likelihoods under incomplete probabilistic specification
[AD-A258775] p 1649 N93-18946
Model determination using predictive distributions with implementation via sampling-based methods
[AD-A258777] p 1650 N93-18947
The non-linear dynamics of composite cylindrical shells
[AD-A259026] p 1558 N93-18953
Geodynamic contributions to global climatic change
p 1575 N93-18963
Precessional quantities for the Earth over 10 Myr
p 1579 N93-18964
Modeling orbital changes on tectonic time scales
p 1581 N93-18971
Inverse problems for orthogonal matrices, Toda flows, and signal processing
[AD-A258810] p 1647 N93-18987
Formulation of a structural model for flutter analysis of low aspect ratio composite aircraft wings
p 1450 N93-19019
Analysis of whole-sky imager data to determine the validity of PCFLOS models
[AD-A259042] p 1587 N93-19020
Aircraft landing gear shimmy p 1441 N93-19029
Circular dislocation loops and their application to the micromechanics of fibrous composites
p 1480 N93-19043
The use of the wavelet cluster analysis for asteroid family determination p 1701 N93-19126
Bias correction factors for near-Earth asteroids
p 1701 N93-19127
Comet P/Tempel: Some highlights and conclusions from the 1988 apparition p 1702 N93-19130
A preliminary model of the coma of 2060 Chiron
p 1702 N93-19132
Initial overview of disconnection events in Halley's Comet 1986 p 1702 N93-19134
The origin and evolution of the zodiacal dust cloud
p 1704 N93-19148
Modeling of asteroidal dust production rates
p 1705 N93-19150
Sublimation rates of carbon monoxide and carbon dioxide from comets at large heliocentric distances
p 1717 N93-19240
Melting, vaporization, and energy partitioning for impacts on asteroidal and planetary objects
p 1718 N93-19244
Forced precession of the cometary nucleus with randomly placed active regions p 1719 N93-19251
Rotation of split cometary nuclei p 1719 N93-19258
Formation of the Leonid meteor stream and storm
p 1721 N93-19267
Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339
Radar cross section models for limited aspect angle windows
[AD-A258918] p 1510 N93-19341
Stratified plate model for composite plate analysis
[AD-A259001] p 1481 N93-19359
Retinal modeling: Segmenting motion from spatio-temporal inputs using neural networks
[AD-A258854] p 1599 N93-19369
Inexpensive capillary discharge x ray laser driver, phase 1
[AD-A259032] p 1542 N93-19372
Evaluation of the table Mountain Ronchi telescope for angular tracking p 1512 N93-19421
A method for modeling discontinuities in a microwave coaxial transmission line p 1513 N93-19423
A model for the cost of doing a cost estimate
p 1515 N93-19436
Formalization and transformation of informal analysis models into executive REFINE (tm) specifications
[AD-A258901] p 1627 N93-19442
Numerical and physical modelling of bubbly flow phenomena
[DE93-003145] p 1535 N93-19500
Fast algorithms for transport models
[DE93-003881] p 1657 N93-19508
Computer codes for RF cavity design
[DE93-004002] p 1515 N93-19509
HModel: An X tool for global model search
[DE93-002826] p 1627 N93-19512
The ionospheric response to atmospheric gravity waves in the EISCAT region p 1729 N93-19567
Electric fields and currents in the cusp region as a result of diffusion effects on the magnetopause
p 1730 N93-19575
Particle collection efficiency of a cyclonic combustor
[DE93-003198] p 1484 N93-19620
Physically transparent formulation of a free-electron laser in the linear gain regime
[DE93-002577] p 1542 N93-19626
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635
Unified approach for computer vision problems: Mathematical morphology
[INPE-5391-TAE/012] p 1641 N93-19640
A literature survey of airborne vehicles impacting with water and soil: Head injury criteria and severity index development of computer program KRASH
[DOT/FAA/CT-90/24] p 1421 N93-19647
Occupant simulation as an aspect of flight safety research p 1423 N93-19665
Medical evaluation of spatial disorientation mishaps
p 1430 N93-19703
Machine discovery approach to dynamic systems in the real laboratory p 1689 N93-19719
Elements of scientific research: Modeling discoveries in oxide superconductivity p 1679 N93-19720
Toward model-based discovery: A case study in ecosystem prediction p 1689 N93-19721
Discovery of physical principles from design experiences p 1690 N93-19722
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723
Machine discovery by model driven analogy
p 1629 N93-19724
Informal qualitative models in scientific discovery
p 1690 N93-19725
ARC.2: Linear regression in ABACUS
p 1629 N93-19731
Evaluation of discovery systems p 1692 N93-19736
Algorithims and methods for processing Synthetic Aperture Radar (SAR) images
[INPE-5301-PRE/1706] p 1515 N93-19787
Numerical simulations of drainage flows on Mars
p 1742 N93-19816
Multi-fluid modeling of interpenetrating plasmas
[DE93-002893] p 1668 N93-19829
Geometry of energy minimizing surfaces
[AD-A258694] p 1678 N93-19863
Survey of antenna design computer models
[AD-A258765] p 1516 N93-19869
A kinetic simulation of low-frequency electromagnetic phenomena in inhomogeneous plasmas of three-dimensions
[NIFS-199] p 1669 N93-19883
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896
On-line aircraft state and parameter estimation
p 1446 N93-19929
Physics of transport phenomena in magnetic confinement plasmas
[NIFS-202] p 1670 N93-19942
A new approach to plasmasphere refilling: Anomalous plasma effects
[NASA-CR-192128] p 1670 N93-19945

**MATHEMATICS**

Decade of achievement: Educational leadership in mathematics, science and engineering
[NSF-92-94] p 1679 N93-18383
The 1992 Science Olympiad National Tournament
[NASA-CR-191379] p 1679 N93-18385

**MATRICES (MATHEMATICS)**

Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894
More box codes p 1505 N93-18906
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
Kinematic analysis of the ARID manipulator
p 1552 N93-19393
Data compression by wavelet transforms
p 1513 N93-19426
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 1446 N93-19928

**MATRIX MATERIALS**

Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357

**MATRIX METHODS**

Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
Structures research p 1447 N93-19453
A piecewise continuous Timoshenko beam model for the dynamic analysis of tapered beam-like structures
p 1561 N93-19459
A discrete ordinate response matrix method for massively parallel computers
[DE93-003463] p 1631 N93-19621

**MATRIX THEORY**

On the theory of turbulent dynamics
[AD-A258695] p 1650 N93-19864

**MATTER (PHYSICS)**

Theoretical studies in medium-energy nuclear and hadronic physics
[DE93-004373] p 1657 N93-19503

**MAXIMUM LIKELIHOOD ESTIMATES**

Statistically based decompression tables 8: Linear-exponential kinetics
[AD-A257613] p 1595 N93-17926
Derivatives of likelihood ratios and smoothed perturbation analysis for the routing problem
[INRIA-RR-1495] p 1647 N93-18653
Modeling expert opinion: Likelihoods under incomplete probabilistic specification
[AD-A258775] p 1649 N93-18946
The flight test and data analysis program for the development of a Boeing/De Havilland Dash 8 simulator model p 1446 N93-19930

**MAXWELL EQUATION**

On the time dependent hydrodynamic model for semiconductors
[ETN-93-93027] p 1518 N93-18098
A low velocity approximation for the relativistic Vlasov-Maxwell system
[AD-A258300] p 1665 N93-18100

**MEASUREMENT**

Comparisons of theoretical limits for source coding with practical compression algorithms p 1513 N93-19428

**MEASURING INSTRUMENTS**

Reflection type skin friction meter
[NASA-CASE-LAR-14520-1-SB] p 1406 N93-18275
Ground station operation in the EISCAT campaign focused on the aurora borealis in November 1991
p 1578 N93-18741
Low level measurements of atmospheric DMS, H2S, and SO2 for GTE/CITE-3
[NASA-CR-191635] p 1573 N93-18863
Program overview: 1991 flight test objectives
p 1418 N93-19591
Measurement process error determination and control
[DE93-002948] p 1553 N93-19753

**MECHANICAL DEVICES**

Minimum size of disc cams with radial translating roller followers
[ESDU-92005] p 1544 N93-17998
Integral fill yarn insertion and beatup method using inflatable membrane
[NASA-CASE-LAR-14046-1] p 1500 N93-18857

**MECHANICAL DRIVES**

Mechanical Design Engineering Enabler Project wheel and wheel drives
[NASA-CR-192060] p 1546 N93-18051
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Reducing the net torque and flow ripple effects of multiple hydraulic piston motor drives
p 1507 N93-18917
Parameter and configuration study of the DSS-13 antenna drives p 1514 N93-19432

**MECHANICAL ENGINEERING**

Blending profiles of disc cams with radial translating roller followers. Part 1: To reduce segment angle, reduce reference circle radius or increase follower lift
[ESDU-92014] p 1545 N93-18041

Mechanical Engineering Design Project report: Enabler control systems
[NASA-CR-192058] p 1546 N93-18062
Interagency Advanced Power Group semi-annual compilation of briefs, September 1992
[DE93-000703] p 1571 N93-19613

**MECHANICAL PROPERTIES**
Reversion studies of natural and guayule rubbers
[AD-A257501] p 1491 N93-17906
Polycrystalline tetragonal zirconia in the system CeO2-ZrO2 (Ce-TZP)
[INPE-5285-TAE/007] p 1676 N93-19643

**MEDICAL ELECTRONICS**
In-suit Doppler technology assessment
[NASA-CR-185692] p 1537 N93-18428

**MEDICAL SCIENCE**
Aviation medicine research: A historical review
[AD-A258198] p 1596 N93-18217

**MEDICAL SERVICES**
A paradigm shift in Air Force medicine
[AD-A258334] p 1596 N93-18159
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 1428 N93-19692
Study of the spectrum cf power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 1431 N93-19707

**MELT SPINNING**
Microstructural control of complex alloys p 1490 N93-18485

**MELTING POINTS**
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484
X ray crystal structure of InCl3(dot)2THF, a neural five-coordinate BIS-Adduct of an In3 trihalide
[AD-A258551] p 1678 N93-19954

**MELTS (CRYSTAL GROWTH)**
Growth and characterization of single crystals
[NOTA-INTERNA-984] p 1670 N93-17935

**MEMBRANES**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572

**MEMORY**
Comparing performance on implicit memory tests
[AD-A258168] p 1602 N93-17921

**MEMORY (COMPUTERS)**
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures
[NASA-CR-189742] p 1532 N93-18769
System for simultaneously loading program to master computer memory devices and corresponding slave computer memory devices
[NASA-CASE-MSC-21387-1] p 1623 N93-18855
Case-based reasoning for real-time problem solving
[AD-A258697] p 1641 N93-19865

**MENTAL PERFORMANCE**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816
An analysis of a sustained flight operation training mission in Navy attack aircraft
[AD-A258199] p 1602 N93-18205
Diagnosing knowledge states in algebra using the rule space model
[AD-A257757] p 1645 N93-18246
The effects of iconic presentation on individuals
[AD-A258785] p 1603 N93-18949
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 1431 N93-19707
Modeling the dynamics of mental workload and human performance in complex systems
[AD-A258553] p 1603 N93-19956

**MERGING ROUTINES**
A model for merging software prototypes
[AD-A258781] p 1624 N93-18948

**MERIDIONAL FLOW**
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A
[AD-A258299] p 1576 N93-18126
EISCAT-MICADO coordinated measurements of meridional neutral winds and temperatures in the F region p 1584 N93-19563

**MESH**
Mesh effect in a parallel plate analyzer
[NIFS-203] p 1669 N93-19931

**MESON-NUCLEON INTERACTIONS**
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502

**MESONS**
High energy physics
[DE93-002411] p 1659 N93-17911
Pion discovery
[NOTA-INTERNA-983] p 1653 N93-17933
Medium energy meson research
[DE93-004133] p 1655 N93-18449
Investigation of pion-nucleus interactions
[DE93-004375] p 1657 N93-19504

**MESOSCALE PHENOMENA**
Radar based case study of a Northeast Colorado winter storm
[AD-A258256] p 1585 N93-17901
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194
Simulation of ionosphere-magnetosphere mesoscale coupling: Letting ionospheric conductivities depend on upward field-aligned currents p 1578 N93-18742
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization
[AD-A258549] p 1587 N93-19481
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898

**MESOSPHERE**
Observation of meteors by MST radar p 1697 N93-19180
Research of the polar middle and lower atmosphere with an MST radar on Spitsbergen (Svalbard, Arctic) p 1584 N93-19555
Possible cause and consequence of laminated Polar Mesosphere Summer Echoes p 1728 N93-19561
Determination of D-region plasma velocity vector from scanning GEN-11 data p 1728 N93-19562
Turbulence scattering layers in the middle-mesosphere observed by the EISCAT 224 MHz radar p 1732 N93-19582
Atmospheric tides in the middle atmosphere
[INPE-5436-PUD/053] p 1583 N93-19791

**MESSAGES**
Barrier synchronization of distributed-memory architectures p 1631 N93-18503

**METAL COATINGS**
Vacuum deposition of copper on Type 304L stainless steel
[DE93-002704] p 1489 N93-19614

**METAL COMBUSTION**
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192285] p 1497 N93-19412

**METAL FATIGUE**
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655
Fatigue crack growth and coalescense in a notch region
[ISBN-0-315-68910-2] p 1559 N93-19042
High speed thin plate fatigue crack monitor
[NASA-CASE-LAR-14816-1-SB] p 1559 N93-19329

**METAL FILMS**
Novel interconnect deposition technology p 1523 N93-18465
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
Structural transformation of nickel hydroxide films during anodic oxidation
[DE93-001863] p 1488 N93-18535
X ray characterization of Au/Ni multilayer thin films
[NIAR-92-7] p 1678 N93-19881

**METAL FLUORIDES**
The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412

**METAL FOILS**
Performance of blasting caps
[NASA-CASE-LAR-13832-1] p 1497 N93-18274

**METAL FUELS**
Energy storage in supercritical solvents p 1498 N93-18492

**METAL IONS**
Solid state, surface and catalytic studies of oxides
[DE93-004640] p 1483 N93-18424
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170

**METAL MATRIX COMPOSITES**
Interface microstructure analysis of ceramic and metal-matrix composites: Sample preparation methods and analytical techniques
[DS-2154] p 1477 N93-18148
Corrosion resistance of metal matrix composites
[AD-A258370] p 1478 N93-18266
Compatibility of potential reinforcing ceramics with Ni and Fe aluminides
[NASA-CR-192232] p 1494 N93-18784
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
Characterization and defect analysis of high temperature aluminum-based metal matrix composites p 1480 N93-19060
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
Open and filled hole static tensile strength characterization of metal matrix composite SCS-9/Beta21s
[AD-A258829] p 1480 N93-19091
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444

**METAL OXIDE SEMICONDUCTORS**
HF MOSFET power amplifiers
[AD-A258384] p 1519 N93-18258
VLSI microelectronics research p 1523 N93-18462
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191957] p 1523 N93-19893

**METAL OXIDES**
The effect of catalyst preparation on catalytic activity
[DE93-003890] p 1483 N93-18539
X ray examination of Type 310S stainless steel during its oxidation in air at 900 C
[DE93-003031] p 1490 N93-19631

**METAL PLATES**
Study of narrow-band dichroic plates with circular, rectangular, or Pyleguide apertures p 1504 N93-18901
Development and verification of methods for predicting flow rates through leaks in valves and couplings
[NASA-CR-192270] p 1533 N93-19013
High speed thin plate fatigue crack monitor
[NASA-CASE-LAR-14816-1-SB] p 1559 N93-19329

**METAL PROPELLANTS**
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192285] p 1497 N93-19412

**METAL SURFACES**
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces
[DE93-004647] p 1483 N93-18453
Studies of metal-semiconductor clusters p 1678 N93-18493
Effects of surface structure and of embedded-atom pair functionals on adatom diffusion on FCC metallic surfaces
[AD-A258793] p 1674 N93-18980
Evaluation of ultrasonic cavitation of metallic and non-metallic surfaces p 1652 N93-19400

**METAL VAPORS**
AMTEC vapor-vapor series connected cells
[NASA-CASE-NPO-18667-1-CU] p 1522 N93-19330

**METAL-METAL BONDING**
Molecular orbital studies of the bonding in heavy element organometallics
[DE93-005291] p 1658 N93-19756

**METALLOGRAPHY**
Large strain compression of two tungsten alloys at various strain rates
[AD-A258789] p 1488 N93-18979

**METALORGANIC CHEMICAL VAPOR DEPOSITION**
High resistivity GaAs epilayers by oxygen doping
[AD-A257931] p 1670 N93-18005
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484

**METALS**
The voltammetric determination of trace metal concentrations and organic complexation in seawater
[AD-A257565] p 1588 N93-17984
Atomic and electronic structure of metals and alloys: Clean surfaces and chemisorbed molecules
[DE93-004371] p 1487 N93-18452

**METEOR TRAILS**
Determination of meteor flux distribution over the celestial sphere p 1700 N93-19117
Effect of the geomagnetic field on the diffusion of meteor trains p 1709 N93-19179
Observation of meteors by MST radar p 1697 N93-19180

**METEORITE COLLISIONS**
Hypervelocity impact effects on solar cells
[NASA-CR-192444] p 1571 N93-18601
The Apollo 17 regolith p 1737 N93-18799

Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221
p 1738 N93-18807
Simulated families: A test for different methods of family identification p 1701 N93-19125
Comet nongravitational forces and meteoritic impacts
p 1712 N93-19207

**METEORITE CRATERS**
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815

**METEORITES**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Injecting asteroid fragments into resonances
p 1705 N93-19152
Did Earth-approaching asteroids 3551, 3908, or 4055 produce meteorites? p 1707 N93-19164

**METEORITIC COMPOSITION**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
The orbital evolution of real asteroids near the 4:1 mean-motion resonance with Jupiter
p 1704 N93-19146

**METEORITIC DAMAGE**
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
Phobos and Deimos are sources of meteoroids
p 1700 N93-19116

**METEOROID CONCENTRATION**
Phobos and Deimos are sources of meteoroids
p 1700 N93-19116
Determination of meteor flux distribution over the celestial sphere p 1700 N93-19117
Fragmentation and densities of meteoroids
p 1700 N93-19118
Burst of the 1969 Leonids and 1982 Lyrids
p 1714 N93-19222

**METEOROID HAZARDS**
Hypervelocity impact effects on solar cells
[NASA-CR-192444] p 1571 N93-18601

**METEOROID SHOWERS**
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
Determination of meteor flux distribution over the celestial sphere p 1700 N93-19117
P/Machholz 1986 8 and quadrantid meteoroid stream. Orbital evolution and relationship p 1700 N93-19119
Evolution of the Quadrantid meteor stream
p 1708 N93-19177
Forward-scatter radiant mapping
p 1697 N93-19178
Observation of meteors by MST radar
p 1697 N93-19180
Activity of the Lyrid meteor stream
p 1712 N93-19200
Burst of the 1969 Leonids and 1982 Lyrids
p 1714 N93-19222
Visual data of minor meteor showers limits of the method p 1715 N93-19229
Diurnal variation of overdense meteor echo duration and ozone p 1718 N93-19243
Meteor radiant mapping with MU radar
p 1699 N93-19259
Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529

**METEOROIDS**
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
About distribution and origin of the peculiar group of sporadic meteors p 1700 N93-19115
Fragmentation and densities of meteoroids
p 1700 N93-19118
P/Machholz 1986 8 and quadrantid meteoroid stream. Orbital evolution and relationship p 1700 N93-19119
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120
A Southern Hemisphere radar meteor orbit survey
p 1701 N93-19121
Gross-fragmentation of meteoroids and bulk density of Geminids from photographic fireball records
p 1703 N93-19137
Modeling of asteroidal dust production rates
p 1705 N93-19150
Forward-scatter radiant mapping
p 1697 N93-19178
Effect of the geomagnetic field on the diffusion of meteor trains p 1709 N93-19179
Observation of meteors by MST radar
p 1697 N93-19180
Meteor fireball sounds identified p 1709 N93-19184
Activity of the Lyrid meteor stream
p 1712 N93-19200
The spatial distribution of large cometary meteoroids in the inner solar system p 1712 N93-19208
On associations of Apollo asteroids with meteor streams p 1715 N93-19223
Wake in faint television meteors p 1716 N93-19233

**METEOROLOGICAL PARAMETERS**
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
ARM Fourier transform spectrometer data analysis tools
[DE93-004648] p 1586 N93-18454
Effects of clouds on the Earth radiation budget; Seasonal and inter-annual patterns
[NASA-CR-191619] p 1574 N93-18870
Atmospheric refraction correction for Ka-band blind pointing on the DSS-13 beam waveguide antenna
p 1505 N93-18903
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization
[AD-A258549] p 1587 N93-19481
A numerical field experiment approach for determining probabilities of microburst intensity
p 1419 N93-19599
Analysis of relational concepts for the implementation of systems for three-dimensional visualization of meteorological data
[INPE-5435-TAE/016] p 1588 N93-19638

**METEOROLOGICAL RADAR**
Radar based case study of a Northeast Colorado winter storm
[AD-A258256] p 1585 N93-17901
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194
Validity of clinical color vision tests for air traffic control specialists
[AD-A258219] p 1597 N93-18301
Research relative to weather radar measurement techniques
[NASA-CR-191911] p 1504 N93-18598
RAWS 1992 progress report
[NASA-CR-191382] p 1587 N93-18849
The Terminal Doppler Weather Radar (TDWR) Moving Target Simulator (MTS) at Orlando, Florida
[AD-A258885] p 1509 N93-19080
Observation of meteors by MST radar
p 1697 N93-19180
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Program overview: 1991 flight test objectives
p 1418 N93-19591
Air/ground wind shear information integration: Flight test results p 1418 N93-19594
Doppler radar results p 1419 N93-19595
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601
Airborne doppler radar research at Rockwell International p 1420 N93-19602
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
Comparison of simulated and actual wind shear radar data products p 1421 N93-19610
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898

**METEOROLOGY**
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985
User's reference guide for Noise Assessment Prediction System (NAPS)
[AD-A258865] p 1652 N93-19075
The effect of tropospheric fluctuations on the accuracy of water vapor radiometry p 1511 N93-19416
Analysis of relational concepts for the implementation of systems for three-dimensional visualization of meteorological data
[INPE-5435-TAE/016] p 1588 N93-19638
Numerical simulations of drainage flows on Mars
p 1742 N93-19816

**METHANE**
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967

**METHOD OF MOMENTS**
Monopole elements with disk ground planes on flat earth: Atlas of directivity, radiation efficiency, radiation resistance, and input impedance
[AD-A257911] p 1503 N93-18366
Moment method analysis of linearly tapered slot antennas: Low loss components for switched beam radiometers
[NASA-CR-192094] p 1515 N93-19483
Antenna pattern control using impedence surfaces
[NASA-CR-192182] p 1516 N93-19934

**METHYL ALCOHOL**
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143

**METHYL COMPOUNDS**
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces
[DE93-004647] p 1483 N93-18453

**METRIC SPACE**
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913

**METRICATION**
Metrication report to the Congress
[NASA-TM-108600] p 1499 N93-18281
Metric transition
[NASA-TM-108599] p 1499 N93-18354
Metrication report to the Congress
[NASA-TM-108601] p 1499 N93-18355
Metrication report to the Congress
[NASA-TM-108602] p 1499 N93-18356
Metrication report to the Congress. 1991 activities and 1992 plans
[NASA-TM-108603] p 1499 N93-18357

**MICROANALYSIS**
Carbon and graphite matrices in carbon-carbon composites: An overview of their formation, structure, and properties
[AD-A258386] p 1478 N93-18259
Corrosion resistance of metal matrix composites
[AD-A258370] p 1478 N93-18266
Nanotechnology p 1678 N93-18489
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840

**MICROBURSTS (METEOROLOGY)**
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
NASA wind shear flight test in situ results
p 1418 N93-19593
Air/ground wind shear information integration: Flight test results p 1418 N93-19594
Flight test of an infrared wind shear detector
p 1419 N93-19596
A numerical field experiment approach for determining probabilities of microburst intensity
p 1419 N93-19599
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606
Comparison of simulated and actual wind shear radar data products p 1421 N93-19610
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612

**MICROCOMPUTERS**
Updating topographic maps using orbital images in a microcomputer environment
[INPE-5409-PRE/1756] p 1567 N93-19739
Use of the microcomputer to solve large p-median problems
[INPE-5336-PRE/1735] p 1628 N93-19786

**MICROELECTRONICS**
Field-emitter arrays for RF vacuum microelectronics
[AD-A258211] p 1518 N93-18203

Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236
Solid-state dynamics and quantum transport in novel semiconductor nanostructures
[AD-A258482] p 1672 N93-18314
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459
VLSI microelectronics research p 1523 N93-18462

**MICROGRAVITY APPLICATIONS**
Forced convection boiling and condensation on microgravity: A critical appraisal of the literature
[ETN-93-93362] p 1498 N93-17811
Protein crystal growth in low gravity
[NASA-CR-191770] p 1498 N93-17886
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**MICROMECHANICS**
Fiber coating by sputtering for high temperature composites
[AD-A258119] p 1476 N93-17897
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
Micromechanics-based analysis of fiber-reinforced laminated composites
[AD-A257816] p 1478 N93-18364
Micromechanics of crenulated fibers in carbon/carbon composites
[NASA-CR-192170] p 1478 N93-18767
Circular dislocation loops and their application to the micromechanics of fibrous composites
p 1480 N93-19043
A micromechanical fastening system and its applications p 1550 N93-19059
Interface fracture in composite materials
p 1560 N93-19381

**MICROMETEORITES**
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud p 1706 N93-19159

**MICROMETEOROIDS**
The geocentric particulate distribution: Cometary, asteroidal, or space debris? p 1713 N93-19209

**MICROORGANISMS**
Regenerable biocide delivery unit
[NASA-CASE-MSC-21763-1-SB] p 1590 N93-18351

**MICROPHOTOGRAPHS**
Microphotography of shocks in crystals
[DE93-002888] p 1677 N93-19827

**MICROPOROSITY**
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572

**MICROPROCESSORS**
An automated version of the dichotic listening test: Hardware, software, and procedural details
[AD-A258114] p 1594 N93-17895
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978
Mechanical Engineering Design Project report: Enabler control systems
[NASA-CR-192058] p 1546 N93-18062
Architecture/environment evaluation
[AD-A257849] p 1613 N93-18348
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 1430 N93-19706

**MICROSCOPY**
Crystalline-amorphous contrast formation in thermally crystallized SiC
[MBB-Z-0373-91-PUB] p 1671 N93-18118

**MICROSTRUCTURE**
The beta-CEZ, a new high performance titanium alloy for aerospace engines
[DS-2022] p 1485 N93-17852
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007
Characterization of alloy 718 microstructures
[DS-1935] p 1486 N93-18147
Interface microstructure analysis of ceramic and metal-matrix composites: Sample preparation methods and analytical techniques
[DS-2154] p 1477 N93-18148
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343
Microstructural control of complex alloys
p 1490 N93-18485
Structural transformation of nickel hydroxide films during anodic oxidation
[DE93-001863] p 1488 N93-18535
Determination of cleavage planes and fracture characterization of Ni-based single crystal superalloys
[NASA-CR-191932] p 1674 N93-18593
Microstructural development during directional solidification of peritectic alloys
[NASA-CR-192090] p 1488 N93-18603
Large strain compression of two tungsten alloys at various strain rates
[AD-A258789] p 1488 N93-18979
A geometrical description of microstructure with application to Al powder metallurgy processing
p 1489 N93-19061
Mechanical behavior of titanium aluminide under engine operating conditions
[AD-A258884] p 1550 N93-19079
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels
p 1490 N93-19391
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444
Numerical and physical modelling of bubbly flow phenomena
[DE93-003145] p 1535 N93-19500
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514
Principles of weld solidification and microstructures
[DE93-003012] p 1490 N93-19629
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635
Magnetic structures of nanometer scale Dy, Cr, and Ni
[DE93-002984] p 1677 N93-19755

**MICROWAVE ABSORPTION**
Contribution to the modelling of the electromagnetic properties of random dielectric-conductor mixtures
[ONERA-NT-1992-3] p 1501 N93-18190

**MICROWAVE AMPLIFIERS**
Minimizing noise-temperature measurement errors
p 1507 N93-18919
A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923

**MICROWAVE ANTENNAS**
A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923
A method for modeling discontinuities in a microwave coaxial transmission line p 1513 N93-19423

**MICROWAVE CIRCUITS**
Theoretical analysis of microwave and millimeter wave integrated circuits based on magnetic films
[AD-A257512] p 1518 N93-18173
Nonlinear circuits and components
p 1523 N93-18463

**MICROWAVE EQUIPMENT**
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704
Amorphous magnetic insulators for microwave device applications
[AD-A259029] p 1508 N93-18954
Airborne Remote Sensing
[VTT-SYMPOSIUM-127] p 1569 N93-19871
Microwave instruments p 1569 N93-19874

**MICROWAVE FREQUENCIES**
DSS-13 beam waveguide antenna frequency stability
p 1513 N93-19424

**MICROWAVE IMAGERY**
Microwave remote sensing for forest monitoring purposes
[BCRS-91-15] p 1566 N93-18431
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192305] p 1582 N93-19036
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192098] p 1583 N93-19886

**MICROWAVE LANDING SYSTEMS**
Flight simulation evaluation of the flyability of curved MLS approaches with wide-body aircraft
[NLR-TP-90238-U] p 1452 N93-17875
Manual flying of curved precision approaches to landing with electromechanical instrumentation. A piloted simulation study
[NASA-TP-3255] p 1447 N93-18408

**MICROWAVE OSCILLATORS**
Submillimeter sources for radiometry using high power Indium Phosphide Gunn diode oscillators
[NASA-CR-190885] p 1518 N93-18057
An experimental investigation of a tandem relativistic backward wave oscillator-travelling wave tube amplifier system for generating high-power microwaves
p 1521 N93-19058

**MICROWAVE RADIOMETERS**
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704
COBE Differential Microwave Radiometer (DMR) data processing techniques p 1562 N93-18715
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192305] p 1582 N93-19036

**MICROWAVE RESONANCE**
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623

**MICROWAVE SCATTERING**
A microwave scattering model for layered vegetation
p 1565 N93-18074

**MICROWAVE SIGNATURES**
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525

**MICROWAVE SPECTRA**
Accurate measurement of signals close to the noise floor on a spectrum analyzer
[AD-A258666] p 1516 N93-19949

**MICROWAVE SPECTROMETERS**
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704

**MICROWAVE TRANSMISSION**
A method for modeling discontinuities in a microwave coaxial transmission line p 1513 N93-19423

**MICROWAVES**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz
[AD-A258136] p 1595 N93-17985
Determining the effects of microwave power variations on the output frequency of a high-performance cesium frequency standard
[AD-A258342] p 1518 N93-17989
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model
[AD-A258197] p 1502 N93-18249
HPM damage thresholds of GaAs FETs and HEMTs
[AD-A257897] p 1520 N93-18420
COBE Differential Microwave Radiometer (DMR) data processing techniques p 1562 N93-18715
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales
p 1563 N93-18717

**MID-OCEAN RIDGES**
Applications of marine gravimetry to mid-oceanic spreading centers and volcanos p 1590 N93-19382

**MIDDLE ATMOSPHERE**
Trends in middle-atmosphere ozone
p 1575 N93-18500
Atmospheric tides in the middle atmosphere
[INPE-5436-PUD/053] p 1583 N93-19791

**MIE SCATTERING**
Exact calculation of light scattering from a particle on a mirror
[AD-A258464] p 1662 N93-18247
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142

**MILITARY AIR FACILITIES**
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587

**MILITARY AIRCRAFT**
Improving military transport aircraft through highly integrated engine-wing design
[DS-1607] p 1434 N93-17850
An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel
[AD-A258988] p 1403 N93-18887

**MILITARY AVIATION**
The efficacy of biographical inventory data in predicting early attrition in naval aviation officer candidate training
[AD-A258025] p 1601 N93-17919
Aviation medicine research: A historical review
[AD-A258198] p 1596 N93-18217
RAFALE: Progress of the program
p 1442 N93-19905

**MILITARY HELICOPTERS**
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters
p 1428 N93-19691

**MILITARY OPERATIONS**
An evolving joint space campaign concept and the Army's role
[AD-A258112] p 1453 N93-18022
The evolving defense communications system
[AD-A258335] p 1502 N93-18206
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Space is a different place
[AD-A258336] p 1453 N93-18219
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
The effect of combat on aircrew subjective readiness and LSO grades during Operation Desert Shield/Storm
[AD-A258156] p 1602 N93-18294
A study of illness related lost time in transport aircraft crewmembers
[AD-A258193] p 1602 N93-18298
SOCAP: Lessons learned in applying SIPE-2 to the military operations crisis action planning domain
p 1639 N93-18694
Validation of two temperature pill telemetry systems in humans during moderate and strenuous exercise
[AD-A259068] p 1599 N93-19072

**MILITARY SPACECRAFT**
Exploration of the utility of military man in space in the year 2025
[AD-A258378] p 1453 N93-18267

**MILITARY TECHNOLOGY**
Stealth in the storm: Sorting the facts from the fiction
[AD-A258440] p 1434 N93-17889
Air University Library index to military periodicals, volume 43, number 3, July - September 1992
[AD-A258452] p 1685 N93-18013
Research and development project summaries
[AD-A257518] p 1747 N93-18175
The evolving defense communications system
[AD-A258335] p 1502 N93-18206
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
A systems approach to the advanced aircraft man-machine interface p 1610 N93-19776

**MILLIMETER WAVES**
Submillimeter sources for radiometry using high power Indium Phosphide Gunn diode oscillators
[NASA-CR-190885] p 1518 N93-18057
Theoretical analysis of microwave and millimeter wave integrated circuits based on magnetic films
[AD-A257512] p 1518 N93-18173
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales
p 1563 N93-18717
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192305] p 1582 N93-19036
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation
[AD-A259372] p 1522 N93-19853
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192098] p 1583 N93-19886
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge
[AD-A258680] p 1543 N93-19950

**MIMD (COMPUTERS)**
Numerical Wind Tunnel hardware
p 1411 N93-19289

**MIMO (CONTROL SYSTEMS)**
Identification and control of non-linear time-varying dynamical systems using artificial neural networks
[AD-A257595] p 1450 N93-18193
The Mini-Mast CSI testbed: Lessons learned
p 1461 N93-18819

**MINERAL DEPOSITS**
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789

**MINERALOGY**
The Apollo 17 region: A compositional overview
p 1736 N93-18796

**MINERALS**
Artificial intelligence for geologic mapping with imaging spectrometers
[NASA-CR-192086] p 1564 N93-17979
Resource availability at Taurus-Littrow
p 1736 N93-18792
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804
Lithologies contributing to the clast population in Apollo 17 LKFM basaltic impact melts p 1738 N93-18806
Magnetic susceptibility variations in Loess sequences and their relationship to astronomical forcing
p 1580 N93-18967
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054

**MINIATURIZATION**
Nanotechnology p 1678 N93-18489
Microphotography of shocks in crystals
[DE93-002888] p 1677 N93-19827

**MINIMAX TECHNIQUE**
Real-time scheduling using minimum search
p 1637 N93-18676

**MIRRORS**
Exact calculation of light scattering from a particle on a mirror
[AD-A258464] p 1662 N93-18247
Self-collimated unstable resonator semiconductor laser
[NASA-CASE-NPO-18386-1-CU] p 1540 N93-18277
Stimulated Brillouin scattering phase conjugation
p 1664 N93-18471
CSI/MMC studies for improving jitter performance for large multi-payload platforms p 1468 N93-18937

**MISSILE LAUNCHERS**
Structural performance of candidate ablatives for uptake section of vertical launching system
[AD-A258218] p 1455 N93-18300
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851

**MISSILES**
A wind tunnel study of magnus effects on a differentially rotating missile
[AD-A258812] p 1408 N93-18989
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851

**MISSION PLANNING**
Project Columbiad: Mission to the Moon. Book 2, volume 3: Stage configuration designs; volume 4: Program plan
[NASA-CR-192037] p 1733 N93-17999
Project Columbiad: Mission to the Moon. Book 1: Executive Summary. Volume 1: Mission trade studies and requirements. Volume 2: Subsystem trade studies and selection
[NASA-CR-192019] p 1734 N93-18233
Space station evolution: Planning for the future
[NASA-TM-108596] p 1460 N93-18353
An integrated mission planning approach for the Space Exploration initiative
[DE93-001512] p 1473 N93-18588
Near term NEP missions and systems
p 1661 N93-18637
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning
[NASA-TM-108124] p 1634 N93-18659
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660
Temporal planning for transportation planning and scheduling p 1634 N93-18661
Decomposability and scalability in space-based observatory scheduling p 1634 N93-18663
Iterative refinement scheduling p 1635 N93-18669
Future scientific exploration of Taurus-Littrow
p 1739 N93-18814
Space and surface power for the space exploration initiative: Results from project outreach
[NASA-CR-191254] p 1474 N93-18848
The future of the US space launch capability
p 1456 N93-18865
Analysis of Titan 4 launch responsiveness
[AD-A259021] p 1456 N93-18950
Low cost missions to explore the diversity of near Earth objects p 1453 N93-19124
The comet rendezvous asteroid flyby mission
p 1720 N93-19260
Atlas mission planner's guide
[AD-A258845] p 1470 N93-19366
Proposal for a coordination between EISCAT and INTERBALL p 1726 N93-19544
A systems approach to the advanced aircraft man-machine interface p 1610 N93-19776

**MIXED OXIDES**
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490

**MIXERS**
A computational study of a supersonic mixer-ejector exhaust system
[AD-A258456] p 1471 N93-17993
Vortical and turbulent structure of planar and lobed mixer free-shear layers p 1533 N93-19055

**MIXING LAYERS (FLUIDS)**
Coherent structures in a simulated turbulent mixing layer
[NASA-TM-103980] p 1532 N93-18885
Vortical and turbulent structure of planar and lobed mixer free-shear layers p 1533 N93-19055

**MIXING LENGTH FLOW THEORY**
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994

**MIXTURES**
Contribution to the modelling of the electromagnetic properties of random dielectric-conductor mixtures
[ONERA-NT-1992-3] p 1501 N93-18190

**MOBILE COMMUNICATION SYSTEMS**
Spacecraft design project: Low Earth orbit communications satellite
[NASA-CR-192038] p 1458 N93-17969
A technical review of cellular radio and analysis of a possible protocol
[AD-A257560] p 1501 N93-17982
Mobile satellite services: A survey of business needs
[AD-A259031] p 1470 N93-18955

**MODEL REFERENCE ADAPTIVE CONTROL**
Model reference adaptive control of robots
[NASA-CR-191871] p 1632 N93-18377

**MODELS**
Tools of modeling, identification, and signal processing for fault diagnosis in continuous-time systems
[LAAS-92153] p 1649 N93-18625
Model-based reasoning applied to cockpit warning systems p 1611 N93-19778

**MODEMS**
SATCOM general purpose modem DSCS 3 SCT beacon telemetry display
[AD-A258849] p 1458 N93-19441

**MODULATION**
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532
Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529

**MODULATION TRANSFER FUNCTION**
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136

**MODULES**
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-000011] p 1571 N93-18657
System for simultaneously loading program to master computer memory devices and corresponding slave computer memory devices
[NASA-CASE-MSC-21387-1] p 1623 N93-18855

**MOISTURE**
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003

**MOISTURE CONTENT**
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia
[AD-A257847] p 1566 N93-18346

**MOJAVE DESERT (CA)**
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites
p 1507 N93-18921

**MOLECULAR BEAM EPITAXY**
Innovative techniques for the production of low cost 2D laser diode arrays
[AD-A258485] p 1540 N93-18101
Superlattices for infrared detectors
[AD-A257511] p 1671 N93-18172
Research and development on advanced silicon carbide thin film growth techniques and fabrication of high power and microwave frequency silicon carbide-based device structures
[AD-A257913] p 1672 N93-18367

Acousto-optic frequency excision
p 1523 N93-18460
Device applications of layered structures
p 1523 N93-18461
Fabrication of photovoltaic laser energy converterby MBE
[NASA-CR-4484] p 1571 N93-18866
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN
[AD-A258804] p 1675 N93-18983
Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs
[AD-A258814] p 1675 N93-18991

**MOLECULAR BEAMS**
Infrared sensor technology and applications
p 1664 N93-18474
Picosecond molecular-beam studies of chemical reactivity p 1659 N93-18483
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746

**MOLECULAR BIOLOGY**
The solar system: Importance of research to the biological sciences p 1591 N93-18547

**MOLECULAR CLOUDS**
The origin and evolution of the zodiacal dust cloud
p 1704 N93-19148

**MOLECULAR COLLISIONS**
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279

**MOLECULAR ELECTRONICS**
The Fourth Conference on Organized Thin Films
[AD-A258315] p 1672 N93-18310

**MOLECULAR GASES**
Spectral features (200 nm - 10 micrometers) of atmospheric molecules: A bibliography (1979-1990)
[NOTA-INTERNA-982] p 1575 N93-17957
Radio spectroscopy of comets: Recent results and future prospects p 1697 N93-19144
Modification of primordial ices by cosmic rays as simulated by cyclotron irradiation p 1709 N93-19183

**MOLECULAR INTERACTIONS**
Mesophase formation by specific interactions in low molecular and polymer systems
[ETN-93-93311] p 1491 N93-17949

**MOLECULAR IONS**
The first identification of C2 emission bands in comet Scorichenko-George (1989e1) spectrum
p 1703 N93-19139

**MOLECULAR ORBITALS**
Molecular orbital studies of the bonding in heavy element organometallics
[DE93-005291] p 1658 N93-19756

**MOLECULAR PHYSICS**
Research programs at the Research Laboratory of Electronics p 1522 N93-19482

**MOLECULAR RELAXATION**
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192

**MOLECULAR SPECTRA**
The first identification of C2 emission bands in comet Scorichenko-George (1989e1) spectrum
p 1703 N93-19139
Long slit spectroscopy of NH2 in comets Halley, Wilson, and Nishikawa-Takamizawa-Tago p 1698 N93-19230

**MOLECULAR STRUCTURE**
The crystal and molecular structure of triethanol-ammonium nitrate
[AD-A258428] p 1670 N93-17864
The Fourth Conference on Organized Thin Films
[AD-A258315] p 1672 N93-18310
Teaching polymers to fold
[DE93-002670] p 1494 N93-18437
Picosecond molecular-beam studies of chemical reactivity p 1659 N93-18483
Molecular-scale hybrid polymer ceramics
p 1496 N93-18487
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490
Short range order in amorphous poiycondensates
[DE93-001650] p 1494 N93-18708
Discovery of spatial concepts in crystallographic databases p 1690 N93-19727

**MOLECULES**
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
The Moon: Biogenic elements p 1591 N93-18548

**MOLTEN SALT ELECTROLYTES**
Predicting viscosities of aqueous salt mixtures
[DE93-002421] p 1483 N93-18523

**MOLTEN SALTS**
Application of molten salts in pyrochemical processing of reactive metals
[DE92-018618] p 1489 N93-19437

**MOLYBDENUM DISULFIDES**
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488

**MOMENTUM**
The effect of different collision operators on the standard data analysis model p 1670 N93-19584

**MOMENTUM THEORY**
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems
[NASA-TM-103912] p 1532 N93-19009

**MOMENTUM TRANSFER**
Classical and quantum dynamics of the impulsively driven hydrogen atom
[DE93-002430] p 1656 N93-19477
An experimental test of the LPM effect: Bremsstrahlung suppression at high energies
[DE93-004019] p 1660 N93-19495

**MONITORS**
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374

**MONKEYS**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz
[AD-A258136] p 1595 N93-17985

**MONOCHROMATORS**
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514

**MONOCULAR VISION**
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333

**MONOMERS**
Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon
[DE93-002550] p 1482 N93-18411
Molecular-scale hybrid polymer ceramics
p 1496 N93-18487
High temperature polymer from maleimide-acetylene terminated monomers
[NASA-CASE-LAR-14475-1] p 1495 N93-19327

**MONOPOLES**
Monopole elements with disk ground planes on flat earth: Atlas of directivity, radiation efficiency, radiation resistance, and input impedance
[AD-A257911] p 1503 N93-18366
Nuclear structure from radioactive decay
[DE93-002795] p 1654 N93-18392

**MONOTONE FUNCTIONS**
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221
Comparison properties of stochastic decision free Petri nets
[INRIA-RR-1433] p 1649 N93-18646

**MONSOONS**
Late quaternary time series of Arabian Sea productivity: Global and regional signals p 1580 N93-18969

**MONTE CARLO METHOD**
Measurement of the hit distribution in resistive plate chambers equipped with a digital read out of the charge induced on strips
[NOTA-INTERNA-990] p 1659 N93-17940
Identification of high Pt jet events produced by a resolved photon at HERA and reconstruction of the initial state parton kinematics
[NOTA-INTERNA-991] p 1653 N93-17942
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
Low cloud investigations for project FIRE: Island studies of cloud properties, surface radiation, and boundary layer dynamics. A simulation of the reflectivity over a stratocumulus cloud deck by the Monte Carlo method
[NASA-CR-192083] p 1585 N93-18001
MOCAL: A Monte Carlo albedo code
[DE93-002049] p 1654 N93-18388
Effectiveness of heuristics and simulated annealing for the scheduling of concurrent tasks: An empirical comparison
[INRIA-RR-1379] p 1630 N93-18434
Hypersonic rarefied wake characterization
[NASA-TP-3327] p 1529 N93-18604
Optimization techniques applied to passive measures for in-orbit spacecraft survivability
[NASA-CR-184486] p 1466 N93-18859
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions
[DE93-002626] p 1675 N93-19488
A fundamental study of contribution transport theory and channel theory applications
[DE93-004315] p 1656 N93-19501

**MOON**
The Moon: Biogenic elements p 1591 N93-18548

**MORALE**
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 1423 N93-19660

**MORPHOLOGY**
Characterization of alloy 718 microstructures
[DS-1935] p 1486 N93-18147
A comparison study of the ionospheric convection with magnetospheric particle morphology and field aligned currents p 1723 N93-19524
Unified approach for computer vision problems: Mathematical morphology
[INPE-5391-TAE/012] p 1641 N93-19640

**MOTION PERCEPTION**
The detection of lateral motion by US Navy jet pilots
[AD-A258115] p 1595 N93-17896
Role of orientation reference selection in motion sickness
[NASA-CR-191912] p 1598 N93-18596
Effect of contrast on human speed perception
[NASA-TM-103898] p 1607 N93-19104
Retinal modeling: Segmenting motion from spatio-temporal inputs using neural networks
[AD-A258854] p 1599 N93-19369

**MOTION SICKNESS**
Role of orientation reference selection in motion sickness
[NASA-CR-191912] p 1598 N93-18596
A toposcopic investigation of brain electrical activity induced by motion sickness
[AD-A259024] p 1599 N93-18952

**MOTION SIMULATION**
Motion simulation of underwater vehicles
[VTT-PUBS-97] p 1623 N93-18698

**MOTION STABILITY**
On the dynamical structure of the Trojan group of asteroids p 1721 N93-19269

**MOTIVATION**
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 1423 N93-19660

**MOTORS**
Redundant drive current imbalance problem of the Automatic Radiator Inspection Device (ARID)
p 1552 N93-19398

**MULTIBEAM ANTENNAS**
Coupling losses in multiple beam antennas
[AD-A257494] p 1500 N93-17903

**MULTIGRID METHODS**
Galerkin coarse grid approximation for the incompressible Navier-Stokes equations in general coordinates
[REPT-92-35] p 1524 N93-17847
An efficient algorithm for the computation of Galerkin coarse grid approximation for the incompressible Navier-Stokes equations
[REPT-92-40] p 1616 N93-17872
Analysis of a multistep Jacobi multigrid method for solving the Euler equations
[INRIA-RR-1506] p 1644 N93-17879
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures
[NASA-CR-189742] p 1532 N93-18769

**MULTIMEDIA**
Design and implementation of a graphical user interface for a multimedia database management system
[AD-A257577] p 1686 N93-18179
NASA scientific and technical information program multimedia initiative
[NASA-TM-108982] p 1693 N93-19900

**MULTIPATH TRANSMISSION**
GPS Interferometry
[NASA-CR-192301] p 1432 N93-18873

**MULTIPHASE FLOW**
Drop/gas interactions in dense sprays
[AD-A257848] p 1527 N93-18347

**MULTIPLEXING**
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
Software users manual for the generic avionics data bus tool kit of the Ada technology insertion program
[AD-A259364] p 1628 N93-19852
Software programmers manual for the generic avionics data bus tool kit to the Ada technology insertion program
[AD-A259379] p 1628 N93-19855

**MULTIPROCESSING (COMPUTERS)**
Development of a protocol usage guideline for conservative parallel simulations
[AD-A258851] p 1630 N93-19070
A comparison of multiprocessor scheduling methods for iterative data flow architectures
[NASA-CR-189730] p 1521 N93-19107
**MULTISPECTRAL BAND SCANNERS**
Evaluation of the current status of the multisensor approach to monitoring vegetation of Brazil
[INPE-5328-PRE/1724] p 1567 N93-19641
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data
[INPE-5327-PRE/1725] p 1567 N93-19646
**MULTISPECTRAL PHOTOGRAPHY**
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898
**MULTISPECTRAL RADAR**
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 1446 N93-19925
**MULTIVARIABLE CONTROL**
Theoretical constraints in the design of multivariable control systems
[NASA-CR-191900] p 1632 N93-18372
**MULTIVARIATE STATISTICAL ANALYSIS**
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization
[AD-A258549] p 1587 N93-19481
G-load effects and efficient acoustic parameters for robust speaker recognition p 1610 N93-19775
**MUONS**
A hodoscope made of resistive plate chambers to identify muons in a fixed target beauty hadroproduction experiment
[NOTA-INTERNA-994] p 1536 N93-17810
Pion discovery
[NOTA-INTERNA-983] p 1653 N93-17933
Measurement of the hit distribution in resistive plate chambers equipped with a digital read out of the charge induced on strips
[NOTA-INTERNA-990] p 1659 N93-17940
Measurement of the cross-section ratio sigma(sub n)/sigma(sub p) in inelastic muon-nucleon scattering at very low x and Q(sup 2)
[DE93-002916] p 1658 N93-19749
**MUSCLES**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209
**MUSCULOSKELETAL SYSTEM**
Musculoskeletal discipline science plan
[NASA-TM-108039] p 1600 N93-19892
**MUSEUMS**
Greenhouse Earth: A Traveling Exhibition
[DE93-002419] p 1572 N93-17912

## N

**NAMING**
The great asteroid nomenclature controversy of 1801 p 1704 N93-19145
From asteroid clusters to families: A proposal for a new nomenclature p 1705 N93-19151
**NAP-OF-THE-EARTH NAVIGATION**
Concepts for pilot interaction with an automated NOE obstacle-avoidance system
[NASA-TM-103960] p 1451 N93-19105
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 1434 N93-19924
**NARCOTICS**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
**NARROWBAND**
Study of narrow-band dichroic plates with circular, rectangular, or Pyleguide apertures p 1504 N93-18901
**NASA PROGRAMS**
Preliminary design of a radiator shading device for a lunar outpost
[NASA-CR-192016] p 1605 N93-18019
The 1992 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-191266] p 1679 N93-18033
Public space launch acquisition: A comparative case study
[AD-A258141] p 1455 N93-18083
NASA patent abstracts bibliography: A continuing bibliography. Section 1: Abstracts (supplement 42)
[NASA-SP-7039(42)-SECT-1] p 1685 N93-18110
Metrication report to the Congress
[NASA-TM-108602] p 1499 N93-18356
Space radiation health program plan
[NASA-TM-108036] p 1598 N93-18375
NASA patent abstracts bibliography: A continuing bibliography. Section 2: Indexes (supplement 42)
[NASA-SP-7039(42)-SECT-2] p 1686 N93-18410
NASA scientific and technical information program multimedia initiative
[NASA-TM-108982] p 1693 N93-19900
Modernization of the NASA scientific and technical information program
[NASA-TM-108984] p 1693 N93-19936
NASA scientific and technical program: User survey
[NASA-TM-108979] p 1693 N93-19937
Total quality management: It works for aerospace information services
[NASA-TM-108980] p 1684 N93-19938
NASA access mechanism: Graphical user interface information retrieval system
[NASA-TM-108981] p 1693 N93-19939
**NASA SPACE PROGRAMS**
MRSR: Rationale for a Mars Rover/Sample Return mission p 1593 N93-18560
Exobiology: The NASA program p 1593 N93-18561
Future NASA solar system exploration activities: A framework for international cooperation p 1453 N93-18562
Transportation and platforms perspective p 1453 N93-18636
Near term NEP missions and systems p 1661 N93-18637
Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853
Improving NASA's technology for space science
[NASA-CR-192331] p 1695 N93-19389
Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494
**NATIONAL AEROSPACE PLANE PROGRAM**
Exploration of the utility of military man in space in the year 2025
[AD-A258378] p 1453 N93-18267
Hypersonic flows as related to the national aerospace plane
[NASA-CR-191980] p 1406 N93-18378
National aero-space plane: Restructuring future research and development efforts
[AD-A258799] p 1441 N93-18981
National Aero-Space Plane: Restructuring future research and development efforts. Report to Congressional requesters
[GAO-NSIAD-93-71] p 1442 N93-19845
The National Aero-Space Plane program: A revolutionary concept p 1443 N93-19908
**NATIONAL AIRSPACE SYSTEM**
National Airspace System flight planning operational concept NAS-SR-131
[DOT/FAA/SE-92/4] p 1418 N93-18031
**NATIONAL LAUNCH VEHICLE PROGRAM**
Passive recirculation in the National Launch System's fuel feedlines
[NASA-TM-108391] p 1471 N93-17941
The future of the US space launch capability p 1456 N93-18865
**NATURAL LANGUAGE (COMPUTERS)**
Improving the quality of machine translations by providing stylistic guidelines to authors and editors
[AD-A258786] p 1687 N93-18977
**NATURAL SATELLITES**
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
A CCD search for distant satellites of asteroids 3 Juno and 146 Lucina p 1699 N93-19248
Minor satellites and the Gaspra encounter p 1719 N93-19255
**NAVIER-STOKES EQUATION**
Galerkin coarse grid approximation for the incompressible Navier-Stokes equations in general coordinates
[REPT-92-35] p 1524 N93-17847
Turbine engine combustor design at SNECMA
[DS-2129] p 1448 N93-17851
An efficient algorithm for the computation of Galerkin coarse grid approximation for the incompressible Navier-Stokes equations
[REPT-92-40] p 1616 N93-17872
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
H-P adaptive methods for finite element analysis of aerothermal loads in high-speed flows
[NASA-CR-189739] p 1525 N93-18093
High speed laminar flow over cavities
[AERO-REPT-9110] p 1526 N93-18130
Direct simulation of external separated flow with the 3-D Navier-Stokes equations
[ONERA-NT-1992-6] p 1527 N93-18326
Computational Fluid Dynamics, volume 1
[VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
Solution of the time-dependent incompressible Navier-Stokes equations by finite elements p 1528 N93-18542
Computational Fluid Dynamics, volume 2
[VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Parabolized Navier-Stokes methods for hypersonic flows p 1529 N93-18565
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
On the numerical approximation of the k-epsilon turbulence model for two dimensional compressible flows
[INRIA-RR-1526] p 1530 N93-18622
A Blottner type numerical model for nonequilibrium viscous hypersonic flows in upwind finite elements
[INRIA-RR-1476] p 1407 N93-18648
Endwall flows and blading design for axial flow compressors p 1531 N93-18730
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems
[NASA-TM-103912] p 1532 N93-19009
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278
Numerical calculation of hypersonic non-equilibrium flow around OREX p 1412 N93-19296
Similarity in laminar pipe flows with secondary flows p 1413 N93-19302
Wind tunnel test and CFD in Kawasaki Heavy Industries, Gifu p 1416 N93-19324
Wind tunnel testing and CFD simulation in Mitsubishi Heavy Industries p 1416 N93-19325
**NAVIGATION**
Aids to Navigation Service Force Mix 2000 Project. Volume 1: Development and application of an Aids to Navigation Service Force Mix decision support system
[AD-A259065] p 1433 N93-19344
Evaluation of the geometric quality of cartographic documents through the use of scanning imagery devices
[INPE-5298-PRE/1703] p 1692 N93-19738
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 1434 N93-19768
High precision navigation for flight testing (AERONAV) p 1434 N93-19920
**NAVIGATION AIDS**
Interactive satellite navigation for the Naval environmental operational nowcasting system
[AD-A257920] p 1459 N93-18004
Interactive object-oriented display technologies: A study of two CD-ROM-based DMA products
[AD-A258896] p 1625 N93-19081
Aids to Navigation Service Force Mix 2000 Project. Volume 1: Development and application of an Aids to Navigation Service Force Mix decision support system
[AD-A259065] p 1433 N93-19344
Aids to Navigation Service Force Mix 2000 Project: Overview
[AD-A259064] p 1433 N93-19386
**NAVIGATION INSTRUMENTS**
Flight testing of GPS and GPS-aided systems p 1445 N93-19919
**NAVIGATION SATELLITES**
Chaotic dynamics of atoms p 1659 N93-18491
High precision navigation for flight testing (AERONAV) p 1434 N93-19920
**NAVSTAR SATELLITES**
A model of Global Positioning System (GPS) Master Control Station (MCS) operations
[AD-A258846] p 1433 N93-19067
**NAVY**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209
The US Navy Healthy Back Program: Effect on back knowledge among recruits
[AD-A258368] p 1596 N93-18210
The effect of combat on aircrew subjective readiness and LSO grades during Operation Desert Shield/Storm
[AD-A258156] p 1602 N93-18294

Information technology: Comments on Navy facility consolidation plan
[AD-A258964] p 1687 N93-19084

**NEAR INFRARED RADIATION**
Tunable infrared and visible solid-state laser
p 1543 N93-18473
Model calculations of dust radiation from galactic and extragalactic sources by considering polycyclic aromatic hydrocarbons
[ETN-93-92729] p 1699 N93-18626
Near infrared reflectance spectra: Applications to problems in asteroid-meteorite relationships
p 1698 N93-19210

**NEAR WAKES**
Hypersonic rarefied wake characterization
[NASA-TP-3327] p 1529 N93-18604

**NECK (ANATOMY)**
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 1424 N93-19672

**NEGATIVE IONS**
Collisional detachment of anions using Fourier transform mass spectrometry
[AD-A258972] p 1656 N93-19092

**NEODYMIUM LASERS**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Laser beam diagnostics for kilowatt power pulsed YAG laser
[DE93-002928] p 1542 N93-19515

**NEPTUNIUM ISOTOPES**
Non-conventional measurement techniques for the determination of some long-lived radionuclides produced ion nuclear fuel: Literature survey
[VTT-TIED-1357] p 1660 N93-18654

**NERVOUS SYSTEM**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
Neuroscience discipline science plan
[NASA-TM-108041] p 1600 N93-19882

**NETHERLANDS**
Industrial aerospace activities p 1404 N93-19007
Flight testing of GPS and GPS-aided systems
p 1445 N93-19919

**NETWORK ANALYSIS**
Implementation of a configuration and maintenance management system for local area networks
[AD-A257837] p 1686 N93-18344
Determination of the dissipative loss of a two-port network from noise temperature measurements
p 1505 N93-18904
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469

**NETWORKS**
Methods for analysis of networks within a geographical information system
[INPE-5299-PRE/1704] p 1693 N93-19835

**NEURAL NETS**
The cognitive, perceptual, and neural bases of skilled performance
[AD-A258236] p 1601 N93-17820
Proceedings of the 2nd International Workshop on Cellular Neural Networks and their Applications
[AD-A258245] p 1631 N93-17821
Quark/gluon jet separation in the photoproduction region with a neural network algorithm
[NOTA-INTERNA-992] p 1653 N93-17943
An information theoretic approach to distributed inference and learning
[AD-A257935] p 1685 N93-18099
Development of neural modules based on Si/PLZT technology for opto-electronic implementations of neural networks
[AD-A257937] p 1518 N93-18120
Identification and control of non-linear time-varying dynamical systems using artificial neural networks
[AD-A257595] p 1450 N93-18193
Membership generation using multilayer neural network p 1618 N93-18227
Electrically modifiable nonvolatile SONOS synapses for electronic neural networks
[AD-A258318] p 1596 N93-18252
Computational and neural network models for the analysis of visual texture
[AD-A258166] p 1632 N93-18296
Computer and mathematical modelling of massively parallel architectures for self-organizing neural pattern recognition machines
[AD-A258167] p 1630 N93-18297
Application of a neural network as a potential aid in predicting NTF pump failure
[NASA-TM-107667] p 1620 N93-18332
Fuzzy logic: Artificial neural networks integration for transient identification
[DE93-002232] p 1632 N93-18389
Identification and interpretation of patterns in rocket engine data
[NASA-CR-192100] p 1473 N93-18401
New techniques in optical communications and signal processing
[AD-A257894] p 1503 N93-18419
Self-growing neural network architecture using crisp and fuzzy entropy
[NASA-TM-105677] p 1553 N93-18422
Artificial neural networks application simulator
p 1642 N93-18502
An extended abstract: A heuristic repair method for constraint-satisfaction and scheduling problems
p 1638 N93-18687
A hybrid job-shop scheduling system
p 1639 N93-18690
Model reduction for the dynamics and control of large structural systems via neutral network processing direct numerical optimization p 1461 N93-18820
Inverse kinematics problem in robotics using neural networks
[NASA-TM-105869] p 1558 N93-18876
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958
Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018
Evaluation of regional seismic discriminants using the intelligent seismic event identification system
[AD-A258936] p 1583 N93-19071
Stimulated photorefractive optical neural networks
[AD-A258825] p 1663 N93-19333
Recognition of partially occluded threat objects using the annealed Hopefield network p 1612 N93-19466
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469
Charged particle track reconstruction using artificial neural networks
[DE93-003014] p 1658 N93-19630
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899

**NEUROLOGY**
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985

**NEURONS**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264

**NEUROPHYSIOLOGY**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
Automated data analysis and discovery in neurophysiological simulation experiments using a combination of numerical and symbolic methods
p 1691 N93-19730
Neuroscience discipline science plan
[NASA-TM-108041] p 1600 N93-19882

**NEUTRAL ATOMS**
Stability of TAE modes in DIII-D
[DE93-002677] p 1669 N93-19897

**NEUTRAL BEAMS**
Stability of TAE modes in DIII-D
[DE93-002677] p 1669 N93-19897

**NEUTRAL PARTICLES**
Aharonov-Casher effect and geometrical phases
[PREPRINT-783] p 1644 N93-18186
Fast algorithms for transport models
[DE93-003881] p 1657 N93-19508
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 1: The lower part of the F region p 1727 N93-19552

**NEUTRAL SHEETS**
Dynamics of the auroral ionosphere deduced from EISCAT CP1 observations p 1729 N93-19564

**NEUTRINOS**
High energy physics
[DE93-002411] p 1659 N93-17911
Experimental particle physics
[DE93-003884] p 1655 N93-18538

**NEUTRON ACTIVATION ANALYSIS**
Non-conventional measurement techniques for the determination of some long-lived radionuclides produced ion nuclear fuel: Literature survey
[VTT-TIED-1357] p 1660 N93-18654
Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816

**NEUTRON COUNTERS**
Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514

**NEUTRON CROSS SECTIONS**
A suggestion for specification of the neutron energy scale in measurements, analyses and, evaluations of differential reaction cross-section data
[DE93-002931] p 1658 N93-19750

**NEUTRON DIFFRACTION**
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514

**NEUTRON DISTRIBUTION**
A suggestion for specification of the neutron energy scale in measurements, analyses and, evaluations of differential reaction cross-section data
[DE93-002931] p 1658 N93-19750

**NEUTRON PHYSICS**
Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413

**NEUTRON SCATTERING**
Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706
Short range order in amorphous polycondensates
[DE93-001650] p 1494 N93-18708

**NEUTRON SOURCES**
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514

**NEUTRON SPECTRA**
Neutrons scattering studies in the actinide region
[DE93-003655] p 1654 N93-18413
A suggestion for specification of the neutron energy scale in measurements, analyses and, evaluations of differential reaction cross-section data
[DE93-002931] p 1658 N93-19750

**NEUTRONS**
Cosmic-ray NM-64 neutron monitor data-19 from Rome, Italy
[NOTA-INTERNA-989] p 1745 N93-17878
MOCAL: A Monte Carlo albedo code
[DE93-002049] p 1654 N93-18388
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514
A suggestion for specification of the neutron energy scale in measurements, analyses and, evaluations of differential reaction cross-section data
[DE93-002931] p 1658 N93-19750

**NEVADA**
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada)
[NASA-CR-192091] p 1564 N93-17927

**NICKEL**
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces
[DE93-004647] p 1483 N93-18453
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490
Effects of surface structure and of embedded-atom pair functionals on adatom diffusion on FCC metallic surfaces
[AD-A258793] p 1674 N93-18980
Magnetic structures of nanometer scale Dy, Cr, and Ni
[DE93-002984] p 1677 N93-19755
OPAL opacities
[DE93-002891] p 1733 N93-19828

**NICKEL ALLOYS**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069
Characterization of alloy 718 microstructures
[DS-1935] p 1486 N93-18147
Segregation of defects in wrought alloy 718: Management of industrial safeguards
[DS-2038] p 1486 N93-18150

Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192

**NICKEL COATINGS**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299

**NICKEL COMPOUNDS**
Structural transformation of nickel hydroxide films during anodic oxidation
[DE93-001863] p 1488 N93-18535

**NICKEL OXIDES**
Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on Ni(0.5)Co(0.5)O
[DE93-000509] p 1487 N93-18528

**NIGHT**
Carrier landing parameters from survey 45, fleet and training command aircraft landing aboard USS ENTERPRISE CVN-65, main text and appendix A
[AD-A258873] p 1433 N93-19078
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990
p 1427 N93-19687

**NIGHT SKY**
Report on the 7th Finnish EISCAT Workshop
[REPT-121-(1992)] p 1577 N93-18736
Campaigns to study the aurora borealis focused on myriametric waves in 1991 p 1578 N93-18740

**NIGHT VISION**
A new concept for helmet mounted vision
p 1609 N93-19767
Helicopter night vision goggle testing in the United Kingdom p 1444 N93-19917

**NIOBIUM**
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488
Superconducting tunnel junction x-ray detectors with niobium absorbers and aluminum quasiparticle traps
[DE93-002885] p 1677 N93-19826

**NITINOL ALLOYS**
Robust control of smart structures
p 1550 N93-19057

**NITRATES**
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854

**NITRIC ACID**
An experimental study of growth and phase change of polar stratospheric cloud particles
[NASA-CR-192369] p 1588 N93-19887

**NITROGEN**
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN
[AD-A258804] p 1675 N93-18983

**NITROGEN DIOXIDE**
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures
[NASA-CR-191916] p 1577 N93-18599

**NITROGEN OXIDES**
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures
[NASA-CR-191916] p 1577 N93-18599

**NOISE (SOUND)**
Experimental analysis of the aeroacoustics of cascaded airfoils
[AD-A257945] p 1526 N93-18121
Classification of complex sounds
[AD-A258405] p 1596 N93-18223

**NOISE INTENSITY**
Experimental analysis of the aeroacoustics of cascaded airfoils
[AD-A257945] p 1526 N93-18121
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
User's reference guide for Noise Assessment Prediction System (NAPS)
[AD-A258865] p 1652 N93-19075

**NOISE MEASUREMENT**
Propfan noise propagation
[NASA-CR-192221] p 1652 N93-19888

**NOISE PREDICTION**
User's reference guide for Noise Assessment Prediction System (NAPS)
[AD-A258865] p 1652 N93-19075

**NOISE PROPAGATION**
Propfan noise propagation
[NASA-CR-192221] p 1652 N93-19888

**NOISE REDUCTION**
Aircraft trajectory tracking and prediction
[AD-A259039] p 1441 N93-18999
Texture enhancement of Synthetic Aperture Radar (SAR) images with speckle noise reduction filters
[INPE-5297-PRE/1702] p 1515 N93-19833

**NOISE SPECTRA**
Classification of complex sounds
[AD-A258405] p 1596 N93-18223
Accurate measurement of signals close to the noise floor on a spectrum analyzer
[AD-A258666] p 1516 N93-19949

**NOISE TEMPERATURE**
Determination of the dissipative loss of a two-port network from noise temperature measurements
p 1505 N93-18904
Minimizing noise-temperature measurement errors
p 1507 N93-18919
Correction of high-frequency noise-temperature inaccuracies p 1507 N93-18920

**NOISE TOLERANCE**
Fuzzy logic: Artificial neural networks integration for transient identification
[DE93-002232] p 1632 N93-18389

**NOMENCLATURES**
The great asteroid nomenclature controversy of 1801
p 1704 N93-19145
From asteroid clusters to families: A proposal for a new nomenclature p 1705 N93-19151

**NONDESTRUCTIVE TESTS**
Control of in-service damage: Application to aircraft engines
[DS-2027] p 1448 N93-18151
Method for non-destructive estimation of waveguide directional coupler dimensions
[NASA-CASE-NPO-18454-1-CU] p 1519 N93-18285
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D015534] p 1519 N93-18316
Picosecond studies of space optical materials
p 1664 N93-18475
High temperature component analysis with expert systems p 1557 N93-18751
Spectroscopic wear detector
[NASA-CASE-LEW-15200-1] p 1474 N93-18856
Nondestructive evaluation of grain size distributions using multifractal analysis of backscattered ultrasonic signals
[AD-A259035] p 1553 N93-18956
Some recent results on stresses in thin films and precipitates
[AD-A258807] p 1559 N93-18986
High speed thin plate fatigue crack monitor
[NASA-CASE-LAR-14816-1-SB] p 1559 N93-19329
Integrated Blade Inspection System (IBIS) upgrade study
[AD-A258912] p 1449 N93-19356

**NONEQUILIBRIUM FLOW**
A Blottner type numerical model for nonequilibrium viscous hypersonic flows in upwind finite elements
[INRIA-RR-1476] p 1407 N93-18648
Influence of the physical modelling of viscous terms on hypersonic flow computations
[INRIA-RR-1493] p 1408 N93-18652
Stability of nonequilibrium shear flows
p 1534 N93-19056
Numerical calculation of hypersonic non-equilibrium flow around OREX p 1412 N93-19296

**NONEQUILIBRIUM RADIATION**
Assessment of nonequilibrium radiation computation methods for hypersonic flows
[NASA-TM-103994] p 1534 N93-19348

**NONEQUILIBRIUM THERMODYNAMICS**
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems
[DE93-001403] p 1679 N93-19470

**NONINTRUSIVE MEASUREMENT**
A study of the structure of gaseous detonation waves using Rayleigh scattering p 1483 N93-19028

**NONLINEAR EQUATIONS**
A low velocity approximation for the relativistic Vlasov-Maxwell system
[AD-A258300] p 1665 N93-18100
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
Approximation of attractors and applications
[DE93-002420] p 1535 N93-19475

**NONLINEAR OPTICS**
Theoretical investigations of ultrafast phenomena in condensed matter
[AD-A258496] p 1661 N93-18088
The Fourth Conference on Organized Thin Films
[AD-A258315] p 1672 N93-18310
Tunable infrared and visible solid-state laser
p 1543 N93-18473
Phase conjugation in optical fiber via stimulated Brillouin scattering with feedback from a barium titanate crystal
[AD-A258824] p 1675 N93-19088
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition: Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical
[AD-A258663] p 1664 N93-19947

**NONLINEAR PROGRAMMING**
Methods and convergence analysis in large scale nonlinear optimization
[AD-A258182] p 1616 N93-17898
An algorithm for the solution of a traveling salesman problem to minimize the average time to demand satisfaction
[AD-A258301] p 1645 N93-18302
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
O-Plan2: The open planning architecture
p 1637 N93-18678
Model reduction in integrated controls-structures design p 1468 N93-18935

**NONLINEAR SYSTEMS**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Geometrically nonlinear analysis of laminated elastic structures
[NASA-CR-191055] p 1476 N93-17924
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221
Computer and mathematical modelling of massively parallel architectures for self-organizing neural pattern recognition machines
[AD-A258167] p 1630 N93-18297
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309
Identification of nonlinear wave forces. Part 2: Frequency-domain analysis
[RR-442-PT-2] p 1528 N93-18440
Reconstruction of linear and nonlinear continuous time models from discrete time sampled-data systems
[RR-406] p 1646 N93-18458
A structure detection algorithm for nonlinear dynamic rational models
[RR-439] p 1649 N93-18508
Identification of nonlinear wave forces. Part 1: Time domain-analysis
[RR-441-PT-1] p 1528 N93-18510
Discrete time system piecewise linear filtering with small observation noise
[INRIA-RR-1451] p 1633 N93-18611
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892
Nonlinear robust controller design for multi-robot systems with unknown payloads p 1552 N93-19462
New methods for nonlinear tracking and nonlinear chaotic signal processing
[AD-A259331] p 1516 N93-19850
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation
[AD-A259372] p 1522 N93-19853

**NONLINEARITY**
Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938
Identification and control of non-linear time-varying dynamical systems using artificial neural networks
[AD-A257595] p 1450 N93-18193
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221
Nonlinear magnetohydrodynamics
[DE93-003241] p 1665 N93-18407
Nonlinear circuits and components
p 1523 N93-18463
High-energy laser-particle interaction
p 1543 N93-18469
Nonlinear acoustic-electromagnetic coupling in materials p 1482 N93-18486
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
Diabatic dynamic initialization p 1563 N93-18719
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774
Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853

A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886
Solving nonlinear composite material problems using the Automated Structural Optimization System (ASTROS)
[AD-A258811] p 1479 N93-18988
Asteroid proper elements and secular resonances
p 1710 N93-19186
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain
[AD-A258908] p 1559 N93-19353
Suppression of mode-beating in a saturated hole-coupled FEL oscillator
[DE93-002554] p 1542 N93-19745
New methods for nonlinear tracking and nonlinear chaotic signal processing
[AD-A259331] p 1516 N93-19850

**NONNEWTONIAN FLUIDS**
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment
[AD-A258177] p 1524 N93-17908

**NONUNIFORM MAGNETIC FIELDS**
Electrostatic potential in a collisionless plasma flow along open magnetic field lines
[NIFS-155] p 1666 N93-18421

**NORMAL SHOCK WAVES**
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279

**NORTH ATLANTIC TREATY ORGANIZATION (NATO)**
NATO Advanced Research Workshop on Non-Thermal Plasma Techniques for Pollution Control
[AD-A258477] p 1665 N93-18323

**NORTH CAROLINA**
Predicting the movement of Carolina coastal fronts
[AD-A258280] p 1585 N93-18012

**NORTHERN SKY**
Report on the 7th Finnish EISCAT Workshop
[REPT-121-(1992)] p 1577 N93-18736
Campaigns to study the aurora borealis focused on myriametric waves in 1991 p 1578 N93-18740
Ground station operation in the EISCAT campaign focused on the aurora borealis in November 1991
p 1578 N93-18741

**NOTCH TESTS**
Fatigue crack growth and coalescense in a notch region
[ISBN-0-315-68910-2] p 1559 N93-19042
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444

**NOTCHES**
Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336

**NOWCASTING**
Interactive satellite navigation for the Naval environmental operational nowcasting system
[AD-A257920] p 1459 N93-18004

**NOZZLE DESIGN**
Ejectors and jet pumps: Computer program for design and performance for compressible gas flow
[ESDU-92042] p 1544 N93-17956
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089

**NOZZLE FLOW**
Novel short-wavelength lasers p 1543 N93-18472
Exact-gradient shape optimization of a 2D Euler flow
[INRIA-RR-1540] p 1530 N93-18623
Numerical simulation of flow for a scramjet nozzle
p 1412 N93-19299

**NOZZLE WALLS**
Analysis of film cooling in rocket nozzles
[NASA-CR-192003] p 1473 N93-18518

**NRX REACTORS**
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106

**NUCLEAR BINDING ENERGY**
Solvation effects on reactive intermediates: The benzyl radical and its clusters with Ar, N2, CH4, C2H6, and C3H8
[AD-A258764] p 1658 N93-19868

**NUCLEAR ELECTRIC PROPULSION**
Activities of the Boom and Chassis Group
[NASA-CR-192028] p 1544 N93-17975
Near term NEP missions and systems
p 1661 N93-18637

**NUCLEAR ENGINE FOR ROCKET VEHICLES**
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106
A fundamental study of contribution transport theory and channel theory applications
[DE93-004315] p 1656 N93-19501

**NUCLEAR FUELS**
Non-conventional measurement techniques for the determination of some long-lived radionuclides produced ion nuclear fuel: Literature survey
[VTT-TIED-1357] p 1660 N93-18654
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106

**NUCLEAR FUSION**
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling
[DE93-004563] p 1456 N93-19496

**NUCLEAR INTERACTIONS**
Relativistic two body equations and nuclear interactions
[NOTA-INTERNA-985] p 1653 N93-17876
A two-body covariant equation for interacting nucleons
[NOTA-INTERNA-986] p 1653 N93-17877
A relativistic study of nuclear interactions
[NOTA-INTERNA-981] p 1653 N93-17955
Experiments on the nuclear interactions of pions and electrons
[DE93-001800] p 1655 N93-18590

**NUCLEAR PHYSICS**
Activities report of the Kernfysisch Versneller Institute
[ETN-93-93340] p 1653 N93-17931
Experiments on the nuclear interactions of pions and electrons
[DE93-001800] p 1655 N93-18590

**NUCLEAR POWER PLANTS**
Probabilistic methods in nuclear power plant component ageing analysis
[VTT-PUBS-94] p 1660 N93-18696

**NUCLEAR REACTIONS**
Target fragmentation in radiobiology
[NASA-TM-4408] p 1598 N93-18381
Nuclear structure studies
[DE93-002791] p 1654 N93-18402
Investigation of pion-nucleus interactions
[DE93-004375] p 1657 N93-19504
A suggestion for specification of the neutron energy scale in measurements, analyses and, evaluations of differential reaction cross-section data
[DE93-002931] p 1658 N93-19750

**NUCLEAR REACTORS**
Activities of the Boom and Chassis Group
[NASA-CR-192028] p 1544 N93-17975
Meeting the challenge of responding to stakeholder information needs: A program model
[DE93-002047] p 1683 N93-18409
Variational nodal transport methods for hexagonal and three-dimensional geometries
[DE93-002131] p 1648 N93-19472

**NUCLEAR STRUCTURE**
Nuclear structure from radioactive decay
[DE93-002795] p 1654 N93-18392
Nuclear structure studies
[DE93-002791] p 1654 N93-18402

**NUCLEATE BOILING**
Forced convection boiling and condensation on microgravity: A critical appraisal of the literature
[ETN-93-93362] p 1498 N93-17811

**NUCLEATION**
Protein crystal growth in low gravity
[NASA-CR-191770] p 1498 N93-17886
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity
[AD-A257859] p 1487 N93-18308
Theory of artifact diamond
[AD-A258474] p 1672 N93-18311
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848

**NUCLEON-NUCLEON INTERACTIONS**
A relativistic study of nuclear interactions
[NOTA-INTERNA-981] p 1653 N93-17955
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502

**NUCLEONS**
A two-body covariant equation for interacting nucleons
[NOTA-INTERNA-986] p 1653 N93-17877
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502
Measurement of the cross-section ratio sigma(sub n)/sigma(sub p) in inelastic muon-nucleon scattering at very low x and Q(sup 2)
[DE93-002916] p 1658 N93-19749

**NUCLIDES**
Nuclear structure studies
[DE93-002791] p 1654 N93-18402

**NUMERICAL ANALYSIS**
Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
Develop, apply and evaluate wavelet technology
[AD-A258484] p 1645 N93-18315
Understanding curved detonation waves
[DE93-000799] p 1528 N93-18529
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732
A numerical approach to controller design for the ACES facility p 1462 N93-18823
Coherent structures in a simulated turbulent mixing layer
[NASA-TM-103980] p 1532 N93-18885
Numerical analysis of flow in a heated horizontal square duct p 1413 N93-19305
On the roles of wind tunnel testing and computational fluid dynamics in the aircraft development
p 1416 N93-19322
Perturbation problems in fluid dynamics
[AD-A258934] p 1535 N93-19450
Wind shear hazard determination
p 1419 N93-19597

**NUMERICAL CONTROL**
Analogue to digital transformation
[ESDU-92044] p 1517 N93-17959
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Sensing the gas metal arc welding process
[DE93-001957] p 1548 N93-18658
System for simultaneously loading program to master computer memory devices and corresponding slave computer memory devices
[NASA-CASE-MSC-21387-1] p 1623 N93-18855
Numerical control fabrication technique for dynamic composite models
[NASA-CASE-LAR-14004-1] p 1640 N93-19024

**NUMERICAL FLOW VISUALIZATION**
A testbed for flow visualization research
[REPT-92-32] p 1616 N93-17846
Modelling of interfacial and thermocline waves
[AERO-REPT-9209] p 1525 N93-18103
Modelling of interfacial and thermocline waves
[AERO-REPT-9210] p 1525 N93-18104
Modelling of interfacial and thermocline waves
[AERO-REPT-9211] p 1525 N93-18105
Direct simulation of external separated flow with the 3-D Navier-Stokes equations
[ONERA-NT-1992-6] p 1527 N93-18326

**NUMERICAL INTEGRATION**
A harmonic half-space fundamental solution
[SER-R-271] p 1644 N93-17946
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
Numerical investigation of the Earth's rotation during a complete precession cycle p 1580 N93-18965
Asteroid-type orbit evolution near the 5:2 resonance
p 1708 N93-19171

**NUMERICAL STABILITY**
On recursive least-squares filtering algorithms and implementations
[NASA-CR-191396] p 1623 N93-18775

**NUTRIENTS**
Characterization of the water soluble component of inedible residue from candidate CELSS crops
[NASA-TM-107557] p 1605 N93-18111
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054

## O

**O RING SEALS**
Actively controlled shaft seals for aerospace applications
[NASA-CR-191901] p 1547 N93-18371

**O STARS**
Fluctuations at the blue edge of saturated wind lines in IUE spectra of O-type stars
[NASA-CR-191887] p 1696 N93-18776

**OATS**
A proposal to determine properties of the gravitropic response of plants in the absence of a complicating g-force (GTHRES)
[NASA-CR-192219] p 1593 N93-19377

**OBJECT PROGRAMS**
Task-level robot programming combining object-oriented design and synchronous approach: A tentative study
[INRIA-RR-1441] p 1622 N93-18610
**OBJECT-ORIENTED PROGRAMMING**
Using an object-oriented database management system to enhance the reusability of class definitions
[AD-A257559] p 1685 N93-17981
G-LOG: A graph based query language
[REPT-92-013] p 1618 N93-18198
Artificial neural networks application simulator
p 1642 N93-18502
Implementation of inheritance by means of relations
[INRIA-RR-1417] p 1621 N93-18513
Task-level robot programming combining object-oriented design and synchronous approach: A tentative study
[INRIA-RR-1441] p 1622 N93-18610
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660
An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847
**OBLIQUE WINGS**
RTJ-303: Variable geometry, oblique wing supersonic aircraft
[NASA-CR-192054] p 1438 N93-18166
**OBSERVATORIES**
Magnetic results 1987-89: Lerwick, Eskadalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-19] p 1576 N93-18137
Magnetic results 1990: Lerwick, Eskdalemuir, and Hartland observatories (United Kingdom)
[GEOMAGNETIC-BULL-20] p 1576 N93-18138
**OBSTACLE AVOIDANCE**
An investigation of a prototype OASYS effectiveness in maneuvering flight
[AD-A257901] p 1439 N93-18339
A parallel implementation of a multisensor feature-based range-estimation method
[NASA-TM-103999] p 1432 N93-18883
Concepts for pilot interaction with an automated NOE obstacle-avoidance system
[NASA-TM-103960] p 1451 N93-19105
**OCCLUSION**
Recognition of partially occluded threat objects using the annealed Hopefield network p 1612 N93-19466
**OCCULTATION**
A CCD search for distant satellites of asteroids 3 Juno and 146 Lucina p 1699 N93-19248
**OCCUPATION**
Disorientation and flight safety: A survey of UK Army aircrew p 1426 N93-19680
**OCCUPATIONAL DISEASES**
The Proceedings of the Hypobaric Decompression Sickness Workshop
[AD-A257612] p 1597 N93-18362
**OCEAN BOTTOM**
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
Topography-induced variation in benthic boundary layer particle dynamics and fauna
[AD-A258230] p 1589 N93-18124
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430
Applications of marine gravimetry to mid-oceanic spreading centers and volcanos p 1590 N93-19382
**OCEAN CURRENTS**
Modelling studies in support of open-ocean convection field programs
[AD-A258324] p 1589 N93-18255
Conditioning instabilities of the Greenland Sea
[AD-A257547] p 1589 N93-18279
Analysis of AVHRR, CZCS and historical in situ data off the Oregon Coast
[NASA-CR-192120] p 1586 N93-18360
**OCEAN DYNAMICS**
Conditioning instabilities of the Greenland Sea
[AD-A257547] p 1589 N93-18279
**OCEAN MODELS**
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Modelling studies in support of open-ocean convection field programs
[AD-A258324] p 1589 N93-18255
**OCEAN SURFACE**
SAR-related stress variability in the Marine Atmospheric Boundry Layer (MABL) (high resolution ARI)
[AD-A258317] p 1585 N93-17987
**OCEAN TEMPERATURE**
Annual, orbital, and enigmatic variations in tropical oceanography recorded by the Equatorial Atlantic amplifier p 1581 N93-18970
**OCEANOGRAPHIC PARAMETERS**
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
Geophysical parameters from the analysis of laser ranging to Starlette
[NASA-CR-192406] p 1541 N93-18605
**OCEANOGRAPHY**
Multi-discipline Arctic oceanography and acoustics program: The Geodesic Underice Tramway System (GUTS)
[AD-A258323] p 1589 N93-18254
US Navey regional climatic study of the Greenland-Iceland-United Kingdom gap and associated waters
[AD-A257909] p 1586 N93-18342
Annual, orbital, and enigmatic variations in tropical oceanography recorded by the Equatorial Atlantic amplifier p 1581 N93-18970
The orbital record in stratigraphy
p 1582 N93-18974
Upper ocean mixing: The use of algal pigments as biological tracers for turbulent diffusion
[AD-A258803] p 1590 N93-18982
**OCEANS**
Europa: Prospects for an ocean and exobiological implications p 1591 N93-18552
Upper ocean mixing: The use of algal pigments as biological tracers for turbulent diffusion
[AD-A258803] p 1590 N93-18982
**OCULAR CIRCULATION**
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 1431 N93-19708
**OFFSHORE PLATFORMS**
Aerodynamic aspects of offshore structures
[NLR-TP-91188-U] p 1405 N93-17928
Modelling of dynamic soil-structure-ice interaction
p 1558 N93-18759
Helicopters in action p 1403 N93-19005
**OHMIC DISSIPATION**
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328
Overall results from the European sector of the worldwide atmospheric gravity-wave study: 1985-1990
p 1733 N93-19589
**OIL FIELDS**
Helicopters in action p 1403 N93-19005
**OLIGOMERS**
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
**OLIVINE**
Refining the granulite suite p 1736 N93-18789
**ON-LINE SYSTEMS**
An intelligent real-time system architecture implemented in Ada
[AD-A259002] p 1640 N93-18893
Fault detection using a two-model test for changes in the parameters of an autoregressive time series
p 1505 N93-18907
Modal characterization of the ASCIE segmented optics testbed: New algorithms and experimental results
p 1469 N93-18940
DROLS workbook
[AD-A259033] p 1687 N93-19017
On-line aircraft state and parameter estimation
p 1446 N93-19929
NASA access mechanism: Graphical user interface information retrieval system
[NASA-TM-108981] p 1693 N93-19939
**ONBOARD DATA PROCESSING**
Realization of real time graphics in vehicles with high dynamic motion
[ETN-93-92739] p 1622 N93-18630
NASA experimental airborne doppler radar and real time processor for wind shear detection
p 1420 N93-19607
**ONBOARD EQUIPMENT**
Deep-space navigation applications of improved ground-based optical astrometry p 1513 N93-19422
**OPACITY**
Recent progress on astrophysical opacity
[DE93-002892] p 1722 N93-19513
OPAL opacities
[DE93-002891] p 1733 N93-19828
**OPERATING SYSTEMS (COMPUTERS)**
A computer architecture for intelligent machines
[NASA-CR-191861] p 1614 N93-19347
**OPERATING TEMPERATURE**
Correction of high-frequency noise-temperature inaccuracies p 1507 N93-18920
**OPERATIONAL HAZARDS**
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447
**OPERATIONS RESEARCH**
An examination of the performance of a natural truncation point and acceptance rule for a curtailed Wald sequential sampling plan with Bernoulli parameters
[AD-A257579] p 1649 N93-18180
Temporal planning for transportation planning and scheduling p 1634 N93-18661
Uncertainty management by relaxation of conflicting constraints in production process scheduling
p 1636 N93-18673
IOPS advisor: Research in progress on knowledge-intensive methods for irregular operations airline scheduling p 1638 N93-18686
**OPERATOR PERFORMANCE**
An automated version of the dichotic listening test: Hardware, software, and procedural details
[AD-A258114] p 1594 N93-17895
**OPTICAL COMMUNICATION**
New techniques in optical communications and signal processing
[AD-A257894] p 1503 N93-18419
Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924
**OPTICAL COMPUTERS**
Stimulated photorefractive optical neural networks
[AD-A258825] p 1663 N93-19333
**OPTICAL CORRECTION PROCEDURE**
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978
**OPTICAL CORRELATORS**
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960
**OPTICAL DATA PROCESSING**
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
A new concept for helmet mounted vision
p 1609 N93-19767
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition: Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical
[AD-A258663] p 1664 N93-19947
**OPTICAL DATA STORAGE MATERIALS**
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
**OPTICAL EQUIPMENT**
A high fidelity simulation of optical detection systems, volume 2
[AD-A258498] p 1661 N93-18089
Immersion objective lenses in electron optics
[ETN-92-92799] p 1662 N93-18442
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459
**OPTICAL FIBERS**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
Development of simplified external control techniques for broad area semiconductor lasers
[NASA-CR-192223] p 1541 N93-18584
Phase conjugation in optical fiber via stimulated Brillouin scattering with feedback from a barium titanate crystal
[AD-A258824] p 1675 N93-19088
Optical fiber strain sensor with improved linearity
[NASA-CASE-LAR-14857-1-SB] p 1663 N93-19374
Investigation of the bandwidth of multimode optical fibers used with 1550-nm LED and laser sources
p 1664 N93-19409
Discrete optical fiber strain sensor
[NASA-CASE-LAR-14810-1-SB] p 1538 N93-19492

**OPTICAL FILTERS**
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200
**OPTICAL GYROSCOPES**
Image stabilization performance optimization using an optical reference gyroscope
[AD-A258863] p 1538 N93-19371
**OPTICAL MATERIALS**
Picosecond studies of space optical materials
p 1664 N93-18475
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
**OPTICAL MEASUREMENT**
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234
Reflection type skin friction meter
[NASA-CASE-LAR-14520-1-SB] p 1406 N93-18275
Tunable infrared and visible solid-state laser
p 1543 N93-18473
Locating an imaging radar in Canada for identifying spaceborne objects
[AD-A258969] p 1510 N93-19087
A case study of two auroral arcs using optical and radar measurements p 1722 N93-19519
**OPTICAL MEASURING INSTRUMENTS**
OptoElectronic Materials Center: A collaborative program including University of New Mexico, Stanford University, and California Institute of Technology
[AD-A258113] p 1540 N93-17894
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
Flow visualization and combustion diagnostic
p 1485 N93-18480
Study of optical techniques for the Ames unitary wind tunnel: Digital image processing, part 6
[NASA-CR-192164] p 1452 N93-18766
**OPTICAL PATHS**
Optical pathlength control on the JPL Phase B interferometer testbed p 1465 N93-18842
**OPTICAL PROPERTIES**
Light diffusion in stochastically perturbed media
[REPT-92-41] p 1661 N93-17873
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Optical and electronic properties of lattice-matched and strained semiconductor superlattices
[ETN-92-92828] p 1673 N93-18446
Tunable infrared and visible solid-state laser
p 1543 N93-18473
Nanotechnology p 1678 N93-18489
Optical and magnetic signatures of localized excitations in polyaniline
[DE93-001954] p 1674 N93-18620
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886
Processability of polythiophene thin films by ultraviolet photo bleaching
[AD-A259043] p 1495 N93-19021
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889
**OPTICAL PUMPING**
Optically pumped continuous wave CF4 laser
[ISBN-90-9004442-6] p 1541 N93-18429
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623
**OPTICAL RADAR**
Evaluation of the vertical distribution of the ice content in cirrus clouds from combined measurements of lidar and infrared radiometers
[ETN-93-92740] p 1587 N93-18631
Flight test operations p 1418 N93-19592
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
**OPTICAL REFLECTION**
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Exact calculation of light scattering from a particle on a mirror
[AD-A258464] p 1662 N93-18247
Reflection type skin friction meter
[NASA-CASE-LAR-14520-1-SB] p 1406 N93-18275
**OPTICAL RESONATORS**
The multi-cavity free-electron laser
[DE93-002569] p 1543 N93-19747
**OPTICAL SCANNERS**
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514
**OPTICAL SWITCHING**
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices
[NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278
Processability of polythiophene thin films by ultraviolet photo bleaching
[AD-A259043] p 1495 N93-19021
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition: Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical
[AD-A258663] p 1664 N93-19947
**OPTICAL TRACKING**
Optimal control of the Starfire Beam Director
[AD-A258839] p 1455 N93-19363
Evaluation of the table Mountain Ronchi telescope for angular tracking p 1512 N93-19421
Deep-space navigation applications of improved ground-based optical astrometry p 1513 N93-19422
**OPTICS**
Study of optical techniques for the Ames unitary wind tunnel, part 7
[NASA-CR-192165] p 1452 N93-18520
Integrated modeling of advanced optical systems
p 1463 N93-18832
**OPTIMAL CONTROL**
Methodologies of automatic control including fuzzy logic
[LAAS-92257] p 1631 N93-17814
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860
Discrete-time Markovian jump linear systems
[REPT-92-37] p 1631 N93-17870
Methods and convergence analysis in large scale nonlinear optimization
[AD-A258182] p 1616 N93-17898
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309
Robust control with structured perturbations
[NASA-CR-192195] p 1633 N93-18579
Development of an hp-version finite element method for computational optimal control
[NASA-CR-192220] p 1639 N93-18882
A method of optimal radio frequency assignment for deep space missions p 1508 N93-18922
Strategies for optimal control design of normal acceleration command following on the F-16
[AD-A258975] p 1450 N93-19095
An optimal control strategy for collision avoidance of mobile robots in non-stationary environments
[NASA-CR-191868] p 1641 N93-19345
Optimal control of the Starfire Beam Director
[AD-A258839] p 1455 N93-19363
Modeling human response errors in synthetic flight simulator domain p 1612 N93-19464
**OPTIMIZATION**
Alternative optimization strategies for large-scale production-allocation problems
[REPT-92-13] p 1615 N93-17833
An interior point approach to postoptimal and parametric analysis in linear programming
[REPT-92-21] p 1615 N93-17834
Shortest paths of bounded curvature in the plane
[INRIA-RR-1503] p 1642 N93-17835
Vector approximation problems in geometric vector optimization
[REPT-92-39] p 1643 N93-17871
Aerodynamic design and analysis of fans using 3D computational codes
[DS-2140] p 1404 N93-17880
CFD-based approximation concepts for aerodynamic design optimization with application to a 2-D scramjet vehicle
[AD-A258084] p 1435 N93-17893
Optimum Design of High Speed Prop-Rotors
[NASA-CR-190915] p 1437 N93-18064
Design of high speed proprotors using multiobjective optimization techniques p 1437 N93-18065
Optimum design of high speed prop rotors including the coupling of performance, aeroelastic stability and structures p 1438 N93-18066
Optimum design of experiments in composite reliability
[AD-A257574] p 1477 N93-18178
The rudes and the shrewds: An experimental comparison of several evolutionary heuristics applied to the QAP problem
[REPT-91-042] p 1620 N93-18325
Effectiveness of heuristics and simulated annealing for the scheduling of concurrent tasks: An empirical comparison
[INRIA-RR-1379] p 1630 N93-18434
On the optimality of LEPT and micron rules for parallel processors and dependent arrival processes
[TW-92-01] p 1630 N93-18443
Optimization of flow-injection analysis for on-line in-process control
[ETN-92-92826] p 1499 N93-18444
Optimality of a threshold policy on the M/M/1 queue with repeated vacations
[INRIA-RR-1419] p 1632 N93-18515
On optimal polling policies
[INRIA-RR-1541] p 1633 N93-18624
A simulated annealing approach to schedule optimization for the SES facility p 1634 N93-18662
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
Real-time scheduling using minimum search
p 1637 N93-18676
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas
p 1638 N93-18688
On optimization of radar measurements
p 1516 N93-18747
Physical insight into the simultaneous optimization of structure and control p 1461 N93-18821
Design optimization of the JPL Phase B testbed
p 1466 N93-18845
Optimization techniques applied to passive measures for in-orbit spacecraft survivability
[NASA-CR-184486] p 1466 N93-18859
Generalization and parallelization of messy genetic algorithms and communication in parallel genetic algorithms
[AD-A258994] p 1630 N93-18890
Solving nonlinear composite material problems using the Automated Structural Optimization System (ASTROS)
[AD-A258811] p 1479 N93-18988
Optimization of three dimensional meshes
[ETN-92-92554] p 1647 N93-19008
HModel: An X tool for global model search
[DE93-002826] p 1627 N93-19512
Use of the microcomputer to solve large p-median problems
[INPE-5336-PRE/1735] p 1628 N93-19786
Toward an optimal strategy for sampling chaotic time series using the Smale-Williams dynamical system
[AD-A258550] p 1650 N93-19953
**OPTOELECTRONIC DEVICES**
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices
[NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D015534] p 1519 N93-18316
Device applications of layered structures
p 1523 N93-18461
**ORBIT CALCULATION**
Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario
p 1454 N93-18899
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010
The gas production rate of periodic comet d'Arrest
p 1705 N93-19155
Asteroid-type orbit evolution near the 5:2 resonance
p 1708 N93-19171
The recovery of asteroids after two observations
p 1698 N93-19206
Asteroid orbital error analysis: Theory and application
p 1454 N93-19214
Long-term orbital evolution of short-period comets found in Project Cosmo-DICE p 1454 N93-19215
Application of high-precision two-way ranging to Galileo Earth-1 encounter navigation p 1454 N93-19415
Use of the VLBI delay observable for orbit determination of Earth-orbiting VLBI satellites p 1454 N93-19419
**ORBIT PERTURBATION**
The gas production rate of periodic comet d'Arrest
p 1705 N93-19155
Evolution of the Quadrantid meteor stream
p 1708 N93-19177
On the asteroidal jet-stream Flora A
p 1710 N93-19185
Asteroid proper elements and secular resonances
p 1710 N93-19186
Comet nongravitational forces and meteoritic impacts
p 1712 N93-19207
The mass of (1) Ceres from perturbations on (348) May
p 1720 N93-19262
Formation of the Leonid meteor stream and storm
p 1721 N93-19267
Canonical floquet perturbation theory
[AD-A258970] p 1721 N93-19358

**ORBIT TRANSFER VEHICLES**
Improved methods for reusable aeroclassified orbital transfer vehicle optimization
[DLR-FB-91-41] p 1454 N93-18785
**ORBITAL ASSEMBLY**
SHARC: Space Habitat, Assembly and Repair Center
[NASA-CR-192031] p 1606 N93-18153
**ORBITAL ELEMENTS**
Interactive satellite navigation for the Naval environmental operational nowcasting system
[AD-A257920] p 1459 N93-18004
Precessional quantities for the Earth over 10 Myr
p 1579 N93-18964
Numerical investigation of the Earth's rotation during a complete precession cycle p 1580 N93-18965
Variations of the Milankovitch frequencies in time
p 1580 N93-18966
The orbital record in stratigraphy
p 1582 N93-18974
Evidence of orbital forcing in 510 to 530 million year old shallow marine cycles, Utah and western Canada
p 1582 N93-18975
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010
P/Machholz 1986 8 and quadrantid meteoroid stream. Orbital evolution and relationship p 1700 N93-19119
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120
A Southern Hemisphere radar meteor orbit survey
p 1701 N93-19121
Simulated families: A test for different methods of family identification p 1701 N93-19125
Bias correction factors for near-Earth asteroids
p 1701 N93-19127
Asteroid-type orbit evolution near the 5:2 resonance
p 1708 N93-19171
On the asteroidal jet-stream Flora A
p 1710 N93-19185
Asteroid proper elements and secular resonances
p 1710 N93-19186
A computer search for asteroid families
p 1711 N93-19199
Asteroid orbital error analysis: Theory and application
p 1454 N93-19214
The vicinity of Jupiter: A region to look for comets
p 1719 N93-19253
Determination of orbits of comets: P/Kearns-Kwee, P/Gunn, including nongravitational effects in the comets' motion p 1454 N93-19254
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899
**ORBITAL MANEUVERS**
A synthetic environment for satellite modeling and satellite orbital motion
[AD-A258847] p 1470 N93-19068
**ORBITAL MECHANICS**
Project Minerva: A low cost manned Mars mission based on indigenous propellant production
[NASA-CR-192020] p 1734 N93-18048
Orbital, Rotational, and Climatic Interactions
[NASA-CP-3185] p 1579 N93-18962
Asteroids, Comets, Meteors 1991
[NASA-CR-191879] p 1700 N93-19113
Stochasticity of comet P/Slaughter-Burnham
p 1702 N93-19128
Debris about asteroids: Where and how much?
p 1703 N93-19136
The orbital evolution of real asteroids near the 4:1 mean-motion resonance with Jupiter
p 1704 N93-19146
Cometary orbital evolution in the outer planetary region p 1712 N93-19204
Determination of orbits of comets: P/Kearns-Kwee, P/Gunn, including nongravitational effects in the comets' motion p 1454 N93-19254
**ORBITAL POSITION ESTIMATION**
The recovery of asteroids after two observations
p 1698 N93-19206
Spacecraft-spacecraft very long baseline interferometry. Part 1: Error modeling and observable accuracy
p 1512 N93-19418
Use of the VLBI delay observable for orbit determination of Earth-orbiting VLBI satellites p 1454 N93-19419
**ORBITAL RESONANCES (CELESTIAL MECHANICS)**
Stochasticity of comet P/Slaughter-Burnham
p 1702 N93-19128
The orbital evolution of real asteroids near the 4:1 mean-motion resonance with Jupiter
p 1704 N93-19146
Injecting asteroid fragments into resonances
p 1705 N93-19152
**ORBITRONS**
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge
[AD-A258680] p 1543 N93-19950
**ORDER-DISORDER TRANSFORMATIONS**
Electronic structure of substitutionally disordered alloys: Direct configurational averaging
[DE93-002548] p 1489 N93-19480
**ORDNANCE**
Flash radiographic studies of hypervelocity projectile interactions with explosives
[AD-A258387] p 1497 N93-18260
**ORGANIC CHEMISTRY**
Giant planets: Clues on current and past organic chemistry in the outer solar system
p 1591 N93-18551
**ORGANIC COMPOUNDS**
The voltammetric determination of trace metal concentrations and organic complexation in seawater
[AD-A257565] p 1588 N93-17984
The Moon: Biogenic elements p 1591 N93-18548
Comets: Role and importance to exobiology
p 1592 N93-18556
The role of organic polymers in the structure of cometary dust p 1719 N93-19256
**ORGANIC MATERIALS**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290
Molecular-scale hybrid polymer ceramics
p 1496 N93-18487
Organic material: Asteroids, meteorites, and planetary satellites p 1592 N93-18555
Comets: Role and importance to exobiology
p 1592 N93-18556
A strong 3.4 micron emission feature in comet Austin 1989c1 p 1706 N93-19162
Modification of primordial ices by cosmic rays as simulated by cyclotron irradiation p 1709 N93-19183
**ORGANIC SUPERCONDUCTORS**
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498
**ORGANISMS**
The solar system: Importance of research to the biological sciences p 1591 N93-18547
**ORGANIZATIONS**
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459
Process definition and modeling guidebook, version 01.00.02
[AD-A258967] p 1625 N93-19086
Technology absorption and technological learning: A study of the dynamics of the process and intervening factors
[INPE-5392-TAE/013] p 1695 N93-19741
**ORGANOMETALLIC COMPOUNDS**
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
Preceramic polymers: Past, present and future
[AD-A258327] p 1493 N93-18265
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484
Molecular orbital studies of the bonding in heavy element organometallics
[DE93-005291] p 1658 N93-19756
**ORTHOGONAL FUNCTIONS**
An orthogonal estimation algorithm for complex number systems
[RR-405] p 1621 N93-18568
**ORTHOGONALITY**
Inverse problems for orthogonal matrices, Toda flows, and signal processing
[AD-A258810] p 1647 N93-18987
**OSCILLATING CYLINDERS**
Waves from an oscillating disturbance in a thermocline and in a linear shear flow
[AERO-REPT-9207] p 1527 N93-18134
**OSCILLATING FLOW**
Oscillatory internal flow fields studies --- flow oscillations in solid propellant rocket engines
[AD-A258005] p 1524 N93-17815
**OSCILLATIONS**
High speed laminar flow over cavities
[AERO-REPT-9110] p 1526 N93-18130
Waves from an oscillating disturbance in a thermocline and in a linear shear flow
[AERO-REPT-9207] p 1527 N93-18134
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328
SSF loads and controllability during assembly
p 1465 N93-18838
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
Aircraft landing gear shimmy p 1441 N93-19029
**OSCILLATORS**
Suppression of mode-beating in a saturated hole-coupled FEL oscillator
[DE93-002554] p 1542 N93-19745
**OUTGASSING**
The gas production rate of periodic comet d'Arrest
p 1705 N93-19155
Lightcurve of comet Austin(1989c1) and its dust mantle development p 1707 N93-19167
Submillimeter molecular line observations of cometary Levy (1990c) p 1698 N93-19237
Sublimation rates of carbon monoxide and carbon dioxide from comets at large heliocentric distances
p 1717 N93-19240
**OXIDATION**
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069
The development of new, low-cost perfluoroalkylether fluids with excellent low and high-temperature properties
[NASA-CR-190865] p 1492 N93-18229
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
Solid state, surface and catalytic studies of oxides
[DE93-004640] p 1483 N93-18424
Structural transformation of nickel hydroxide films during anodic oxidation
[DE93-001863] p 1488 N93-18535
X ray examination of Type 310S stainless steel during its oxidation in air at 900 C
[DE93-003031] p 1490 N93-19631
**OXIDATION RESISTANCE**
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069
Oxidation resistant overlay coatings for low expansion substrates
[NASA-CASE-LEW-15154-1] p 1495 N93-19332
**OXIDATION-REDUCTION REACTIONS**
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Chemical interactions in multimetal/zeolite catalysts
[DE93-005133] p 1484 N93-19491
**OXIDE FILMS**
Thin film processing of photorefractive BaTiO3
[NASA-CR-192194] p 1673 N93-18427
Ion beam-based characterization of multicomponent oxide thin films and thin film layered structures
[DE93-003004] p 1676 N93-19627
**OXIDES**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632
Elements of scientific research: Modeling discoveries in oxide superconductivity p 1679 N93-19720
**OXYGEN**
High resistivity GaAs epilayers by oxygen doping
[AD-A257931] p 1670 N93-18005
High temperature sorbents for oxygen
[NASA-CASE-NPO-18409-1-CU] p 1483 N93-19025
**OXYGEN ATOMS**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140
Method and apparatus for producing a thermal atomic oxygen beam
[NASA-CASE-LEW-15614-1] p 1656 N93-19026
**OXYGEN IONS**
Discrimination of ionic species from broad-beam ion sources
[NASA-CR-4483] p 1654 N93-18140
Space plasma physics research
[NASA-CR-192158] p 1665 N93-18404
**OXYGEN ISOTOPES**
Magnetic susceptibility variations in Loess sequences and their relationship to astronomical forcing
p 1580 N93-18967
**OXYGEN PRODUCTION**
Lunar resources: Oxygen from rocks and soil
p 1735 N93-18787
**OXYGEN SPECTRA**
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A
[AD-A258299] p 1576 N93-18126
Observations of comet Levy 1990c in the (OI) 6300-A line with an imaging Fabry-Perot p 1698 N93-19224

**OZONE**
Reports to the nation on our changing planet. Fall 1992, no. 2: Our ozone shield
[NASA-CR-190953] p 1573 N93-18438
**OZONE DEPLETION**
Reports to the nation on our changing planet. Fall 1992, no. 2: Our ozone shield
[NASA-CR-190953] p 1573 N93-18438
Trends in middle-atmosphere ozone p 1575 N93-18500
**OZONOSPHERE**
Spectral features (200 nm - 10 micrometers) of atmospheric molecules: A bibliography (1979-1990)
[NOTA-INTERNA-982] p 1575 N93-17957
Research of the polar middle and lower atmosphere with an MST radar on Spitsbergen (Svalbard, Arctic) p 1584 N93-19555

# P

**P WAVES**
Reflecting model: P-S arrival
[REPT-92-029] p 1576 N93-18188
**P-I-N JUNCTIONS**
Infrared-induced photoconductivity and electroluminescence in forward-biased a-Si:H pin-diodes
[MBB-Z-0376-91-PUB] p 1671 N93-18092
**P-N JUNCTIONS**
Fabrication of photovoltaic laser energy converterby MBE
[NASA-CR-4484] p 1571 N93-18866
**PACKAGING**
Performance oriented packaging testing for liquid propellant, XM1846
[AD-A258430] p 1496 N93-17865
**PACKET SWITCHING**
On-board B-ISDN fast packet switching architectures. Phase 1: Study
[NASA-CR-189144] p 1457 N93-18703
**PAINTS**
Progress report on conductive paints, 3 August - 30 September 1992
[DE93-001353] p 1494 N93-18530
**PALEOCLIMATOLOGY**
Geodynamic contributions to global climatic change p 1575 N93-18963
Precessional quantities for the Earth over 10 Myr p 1579 N93-18964
Variations of the Milankovitch frequencies in time p 1580 N93-18966
Ice ages and geomagnetic reversals p 1580 N93-18968
Plio-Pleistocene time evolution of the 100-ky cycle in marine paleoclimate records p 1581 N93-18972
**PALEOMAGNETISM**
Magnetic susceptibility variations in Loess sequences and their relationship to astronomical forcing p 1580 N93-18967
**PALLADIUM**
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490
**PALLADIUM ALLOYS**
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532
**PANELS**
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920
Sandwiched structural panel having a bi-directional core structure
[NASA-CASE-MFS-28796-1] p 1479 N93-19022
Liquid crystal displays replacing the CRT and CLE of future cockpits p 1447 N93-19783
**PANORAMIC CAMERAS**
Geology of the Apollo 17 site p 1738 N93-18803
**PARABOLIC DIFFERENTIAL EQUATIONS**
Parabolized Navier-Stokes methods for hypersonic flows p 1529 N93-18565
**PARABOLIC REFLECTORS**
PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115
**PARACHUTES**
Space shuttle solid rocket booster main parachute damage reduction team report
[NASA-TM-4437] p 1455 N93-18067
**PARALLEL COMPUTERS**
Architecture/environment evaluation
[AD-A257849] p 1613 N93-18348
Computational Fluid Dynamics, volume 1
[VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287
Numerical Wind Tunnel: Requirements and the outline p 1411 N93-19288
The operating system for Numerical Wind Tunnel p 1411 N93-19290
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291
**PARALLEL PLATES**
Mesh effect in a parallel plate analyzer
[NIFS-203] p 1669 N93-19931
**PARALLEL PROCESSING (COMPUTERS)**
Parallel contraction of binary dags
[REPT-92-36] p 1616 N93-17848
A model for security and distribution of management information systems
[ETN-93-93029] p 1685 N93-18107
High-level parallel programming
[AD-A257977] p 1629 N93-18185
Identification and control of non-linear time-varying dynamical systems using artificial neural networks
[AD-A257595] p 1450 N93-18193
Computer and mathematical modelling of massively parallel architectures for self-organizing neural pattern recognition machines
[AD-A258167] p 1630 N93-18297
Architecture/environment evaluation
[AD-A257849] p 1613 N93-18348
Effectiveness of heuristics and simulated annealing for the scheduling of concurrent tasks: An empirical comparison
[INRIA-RR-1379] p 1630 N93-18434
On the optimality of LEPT and micron rules for parallel processors and dependent arrival processes
[TW-92-01] p 1630 N93-18443
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
Generalization and parallelization of messy genetic algorithms and communication in parallel genetic algorithms
[AD-A258994] p 1630 N93-18890
X-AAARF: An X window based version of the AFIT Algorithm Animation Research Facility
[AD-A258832] p 1625 N93-19065
Development of a protocol usage guideline for conservative parallel simulations
[AD-A258851] p 1630 N93-19070
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287
The operating system for Numerical Wind Tunnel p 1411 N93-19290
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291
Stimulated photorefractive optical neural networks
[AD-A258825] p 1663 N93-19333
Variational nodal transport methods for hexagonal and three-dimensional geometries
[DE93-002131] p 1648 N93-19472
A discrete ordinate response matrix method for massively parallel computers
[DE93-003463] p 1631 N93-19621
Software for parallel processing applications
[DE93-002510] p 1627 N93-19744
**PARALLEL PROGRAMMING**
High-level parallel programming
[AD-A257977] p 1629 N93-18185
A parallel stereo algorithm that produces dense depth maps and preserves image features
[INRIA-RR-1369] p 1620 N93-18433
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
An imperative language for task-level programming: Definition in temporal logics
[INRIA-RR-1406] p 1622 N93-18575
The ESTEREL language
[INRIA-RR-1487] p 1623 N93-18651
**PARALLELOGRAMS**
Polynomial approximation of Poincare maps for Hamiltonian system p 1651 N93-19160
**PARAMAGNETISM**
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854
**PARAMETER IDENTIFICATION**
Identification of nonlinear wave forces. Part 2: Frequency-domain analysis
[RR-442-PT-2] p 1528 N93-18440
A structure detection algorithm for nonlinear dynamic rational models
[RR-439] p 1649 N93-18508
Identification of nonlinear wave forces. Part 1: Time domain-analysis
[RR-441-PT-1] p 1528 N93-18510
Tools of modeling, identification, and signal processing for fault diagnosis in continuous-time systems
[LAAS-92153] p 1649 N93-18625
**PARAMETERIZATION**
An interior point approach to postoptimal and parametric analysis in linear programming
[REPT-92-21] p 1615 N93-17834
**PARTIAL DIFFERENTIAL EQUATIONS**
Galerkin coarse grid approximation for the incompressible Navier-Stokes equations in general coordinates
[REPT-92-35] p 1524 N93-17847
A low velocity approximation for the relativistic Vlasov-Maxwell system
[AD-A258300] p 1665 N93-18100
Develop, apply and evaluate wavelet technology
[AD-A258484] p 1645 N93-18315
Particle approximation for first order stochastic partial differential equations
[INRIA-RR-1502] p 1646 N93-18597
Alternative formulations of the Laplace Transform Boundary Element (LTBE) numerical method for the solution of diffusion-type equations
[DE92-041172] p 1648 N93-19468
**PARTICLE ACCELERATION**
Pion discovery
[NOTA-INTERNA-983] p 1653 N93-17933
The solar wind structures associated with cosmic ray decreases and particle acceleration in 1978-1982 p 1565 N93-18072
Observations of Pc5 Alfven wave effects in the quiet time auroral ionosphere: Indications of energetic particle acceleration p 1733 N93-19588
**PARTICLE ACCELERATORS**
The first level energy trigger of the L3 experiment/description of the hardware
[NOTA-INTERNA-987] p 1659 N93-17937
Measurement of the hit distribution in resistive plate chambers equipped with a digital read out of the charge induced on strips
[NOTA-INTERNA-990] p 1659 N93-17940
**PARTICLE BEAMS**
Measurement of the hit distribution in resistive plate chambers equipped with a digital read out of the charge induced on strips
[NOTA-INTERNA-990] p 1659 N93-17940
**PARTICLE COLLISIONS**
Classical and quantum dynamics of the impulsively driven hydrogen atom
[DE93-002430] p 1656 N93-19477
An incoherent scatter experiment for the measurement of particle collisions p 1723 N93-19528
Non Maxwellian ion distributions in the auroral ionosphere in the presence of large electric fields. Part 2: The upper part of the F region p 1727 N93-19553
The effect of different collision operators on the standard data analysis model p 1670 N93-19584
**PARTICLE EMISSION**
Particle emission from artificial cometary materials p 1710 N93-19188
**PARTICLE INTERACTIONS**
A two-body covariant equation for interacting nucleons
[NOTA-INTERNA-986] p 1653 N93-17877
Identification of high Pt jet events produced by a resolved photon at HERA and reconstruction of the initial state parton kinematics
[NOTA-INTERNA-991] p 1653 N93-17942
Quark/gluon jet separation in the photoproduction region with a neural network algorithm
[NOTA-INTERNA-992] p 1653 N93-17943
A theory for whistler wave amplification and wave particle interactions in the magnetosphere
[AD-A257782] p 1576 N93-18212
Neutrino masses and solar neutrinos
[DE93-002416] p 1655 N93-18522
Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138
An experimental test of the LPM effect: Bremsstrahlung suppression at high energies
[DE93-004019] p 1660 N93-19495
Theoretical studies in medium-energy nuclear and hadronic physics
[DE93-004373] p 1657 N93-19503
**PARTICLE MASS**
Solid state and the standard model
[NOTA-INTERNA-980] p 1653 N93-17932
Pion discovery
[NOTA-INTERNA-983] p 1653 N93-17933
**PARTICLE MOTION**
Phenomenological modelling of Polywell (tm) SCIF multi-cusp inertial-electrostatic confinement systems
[AD-A257944] p 1665 N93-18020
Modelling of interfacial and thermocline waves
[AERO-REPT-9210] p 1525 N93-18104

Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245
A two-dimensional particle simulation of parallel plate Radio-Frequency (RF) glow discharges
[AD-A258856] p 1510 N93-19349

**PARTICLE PRECIPITATION**
Structure and dynamics of field-aligned currents inferred from EISCAT data p 1722 N93-19523
Research of the polar middle and lower atmosphere with an MST radar on Spitsbergen (Svalbard, Arctic) p 1584 N93-19555
EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989 p 1728 N93-19557
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558

**PARTICLE PRODUCTION**
A hodoscope made of resistive plate chambers to identify muons in a fixed target beauty hadroproduction experiment
[NOTA-INTERNA-994] p 1536 N93-17810
Strangeness signals in heavy ion collisions
[DE93-002935] p 1657 N93-19516

**PARTICLE SIZE DISTRIBUTION**
High-energy laser-particle interaction p 1543 N93-18469
Collisional and dynamic evolution of dust from the asteroid belt p 1707 N93-19165

**PARTICLE SPIN**
A relativistic coupled-channel wave-equation with N and Delta degrees of freedom
[NOTA-INTERNA-993] p 1653 N93-17944
Aharonov-Casher effect and geometrical phases
[PREPRINT-783] p 1644 N93-18186

**PARTICLE THEORY**
Pion discovery
[NOTA-INTERNA-983] p 1653 N93-17933
Heavy quarks in lattice QCD
[PREPRINT-786] p 1654 N93-18324
Experimental particle physics
[DE93-003884] p 1655 N93-18538
Natural selection and particle physics: A thrust for artificial intelligence research
[INPE-5335-PRE/1734] p 1641 N93-19823

**PARTICLE TRACKS**
Charged particle track reconstruction using artificial neural networks
[DE93-003014] p 1658 N93-19630

**PARTICLE TRAJECTORIES**
Particle emission from artificial cometary materials p 1710 N93-19188

**PARTICLES**
Exact calculation of light scattering from a particle on a mirror
[AD-A258464] p 1662 N93-18247
Nanotechnology p 1678 N93-18489

**PARTICULATE REINFORCED COMPOSITES**
Characterization and defect analysis of high temperature aluminum-based metal matrix composites p 1480 N93-19060

**PARTICULATES**
The geocentric particulate distribution: Cometary, asteroidal, or space debris? p 1713 N93-19209
Particle collection efficiency of a cyclonic combustor
[DE93-003198] p 1484 N93-19620
Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806

**PARTITIONS (MATHEMATICS)**
The semantics of plural noun phrases
[LP-91-07] p 1614 N93-17827
An interior point approach to postoptimal and parametric analysis in linear programming
[REPT-92-21] p 1615 N93-17834

**PARTONS**
Identification of high Pt jet events produced by a resolved photon at HERA and reconstruction of the initial state parton kinematics
[NOTA-INTERNA-991] p 1653 N93-17942

**PASSENGER AIRCRAFT**
Design of the advanced regional aircraft, the DART-75
[NASA-CR-192044] p 1435 N93-17972
MM-122: High speed civil transport
[NASA-CR-192011] p 1435 N93-17974
Phoenix: Preliminary design of a high speed civil transport
[NASA-CR-192024] p 1435 N93-17976
Tesseract: Supersonic business transport
[NASA-CR-192072] p 1435 N93-17977
Eagle RTS: A design for a regional transport aircraft
[NASA-CR-192032] p 1435 N93-18017
A second-generation high speed civil transport: Stingray
[NASA-CR-192022] p 1437 N93-18059
The Trojan --- supersonic transport
[NASA-CR-192013] p 1437 N93-18060
Preliminary design of a high speed civil transport: The Opus 0-001
[NASA-CR-192018] p 1437 N93-18061
RTJ-303: Variable geometry, oblique wing supersonic aircraft
[NASA-CR-192054] p 1438 N93-18166

**PASSIVITY**
Theory of artifact diamond
[AD-A258474] p 1672 N93-18311

**PATENT POLICY**
NASA patent abstracts bibliography: A continuing bibliography. Section 1: Abstracts (supplement 42)
[NASA-SP-7039(42)-SECT-1] p 1685 N93-18110
NASA patent abstracts bibliography: A continuing bibliography. Section 2: Indexes (supplement 42)
[NASA-SP-7039(42)-SECT-2] p 1686 N93-18410

**PATHOLOGY**
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 1429 N93-19696
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 1429 N93-19698

**PATHS**
Shortest paths of bounded curvature in the plane
[INRIA-RR-1503] p 1642 N93-17835

**PATIENTS**
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
Development and enhancement of a mode of performance and decision making under stress in a real life setting
[AD-A257796] p 1598 N93-18363

**PATTERN RECOGNITION**
An information theoretic approach to distributed inference and learning
[AD-A257935] p 1685 N93-18099
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184
Fuzzy Set Methods for Object Recognition in Space Applications
[NASA-CR-191975] p 1618 N93-18224
Automatic rule generation for high-level vision p 1618 N93-18225
Possibility expectation and its decision making algorithm p 1618 N93-18226
Membership generation using multilayer neural network p 1618 N93-18227
Possibilistic clustering for shape recognition p 1618 N93-18228
One and two dimensional discrete wavelet transforms
[AD-A257981] p 1502 N93-18241
General method of pattern classification using the two-domain theory
[NASA-CASE-MSC-21737-1] p 1619 N93-18282
Computer and mathematical modelling of massively parallel architectures for self-organizing neural pattern recognition machines
[AD-A258167] p 1630 N93-18297
A parallel stereo algorithm that produces dense depth maps and preserves image features
[INRIA-RR-1369] p 1620 N93-18433
Artificial neural networks application simulator p 1642 N93-18502
Estimation of displacements from two 3D frames obtained from stereo
[INRIA-RR-1440] p 1537 N93-18595
Three-dimensional motion computation and object segmentation in a long sequence of stereo frames
[INRIA-RR-1438] p 1651 N93-18634
A toposcopic investigation of brain electrical activity induced by motion sickness
[AD-A259024] p 1599 N93-18952
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960
Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018
Evaluation of regional seismic discriminants using the intelligent seismic event identification system
[AD-A258936] p 1583 N93-19071
Spectral and spatial pattern recognition in digital imagery
[AD-A258910] p 1627 N93-19355
Recognition of partially occluded threat objects using the annealed Hopefield network p 1612 N93-19466
Advances in speech processing p 1517 N93-19771
G-load effects and efficient acoustic parameters for robust speaker recognition p 1610 N93-19775
Advanced concepts in distortion-invariant phase-only filter design
[AD-A258691] p 1523 N93-19861

**PATTERN REGISTRATION**
Image matching strategies for the co-registration of CAESAR sea-images: An hierarchical area-based approach, part 2
[BCRS-90-40B-PT-2] p 1564 N93-17951
Information system for co-registration of CAESAR sea-images based on two dimensional image matching techniques (SCORE). Part 3: Design and detailed design document
[BCRS-90-40C-PT-3] p 1564 N93-17953

**PATTERNS**
Patterns for knowledge discovery in databases p 1688 N93-19712

**PAVEMENTS**
Asphalt mixtures modified with tall oil pitches and cellulose fibres
[VTT-PUBS-99] p 1494 N93-18699

**PAYLOADS**
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410
Nonlinear robust controller design for multi-robot systems with unknown payloads p 1552 N93-19462

**PELAGIC ZONE**
The orbital record in stratigraphy p 1582 N93-18974

**PERFORMANCE PREDICTION**
The Vulcain MK2 engine for Ariane 5 performance improvement
[ETN-93-93019] p 1472 N93-18145
Optical pathlength control on the JPL Phase B interferometer testbed p 1465 N93-18842
Availability analysis of the traveling-wave maser amplifiers in the deep space network. Part 1: The 70-meter antennas p 1514 N93-19435
A performance model for thick composite cylinders subjected to external hydrostatic pressure
[DE93-002425] p 1560 N93-19476

**PERFORMANCE TESTS**
Performance oriented packaging testing for liquid propellant, XM1846
[AD-A258430] p 1496 N93-17865
Unit analysis and testing
[AD-A258435] p 1616 N93-17867
Performance evaluation of a radar by computer
[AD-A257543] p 1500 N93-17960
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146
HF MOSFET power amplifiers
[AD-A258384] p 1519 N93-18258
Structural performance of candidate ablatives for uptake section of vertical launching system
[AD-A258218] p 1455 N93-18300
Validity of clinical color vision tests for air traffic control specialists
[AD-A258219] p 1597 N93-18301
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
Actively controlled shaft seals for aerospace applications
[NASA-CR-191901] p 1547 N93-18371
Evaluation of high-temperature lubricants for low-heat rejection diesel engines
[AD-A257893] p 1494 N93-18418
Simulated coal-gas-fueled molten carbonate fuel cell development program
[DE93-000205] p 1570 N93-18527
Structural control sensors for the CASES GTF p 1464 N93-18837
Analysis, design, and testing of a low cost, direct force command linear proof mass actuator for structural control p 1469 N93-18943
Role of wind tunnel tests and CFD analysis for the development of aero-engines in IHI p 1417 N93-19326
The 1991 LLWAS anemometer test program
[AD-A258844] p 1538 N93-19365
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407
Measurement uncertainty analysis techniques applied to PV performance measurements
[DE93-000019] p 1553 N93-19438
Stimulus presentation formats and measurement techniques for the quantification of target detection performance
[AD-A258933] p 1603 N93-19449
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600
In-flight structural mode excitation system for flutter testing p 1444 N93-19915

Testing of an automatic, low altitude, all terrain ground collision avoidance system p 1434 N93-19924

**PERIHELIONS**

Annual, orbital, and enigmatic variations in tropical oceanography recorded by the Equatorial Atlantic amplifier p 1581 N93-18970

Long-term evolution of 1991 DA: A dynamically evolved extinct Halley-type comet p 1707 N93-19166

**PERIODIC FUNCTIONS**

Canonical floquet perturbation theory
[AD-A258970] p 1721 N93-19358

**PERIODIC VARIATIONS**

Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler
[AD-A258189] p 1584 N93-17858

HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532

The x ray variability of NGC6814: Power spectra p 1562 N93-18712

The x ray variability of AGN and the anomalous behavior of NGC6814 p 1562 N93-18713

The cyclic carbonates of the Latemar Massif: Evidence for the orbital forcing of a carbonate platform during the Middle Triassic p 1582 N93-18976

EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989 p 1728 N93-19557

HF radar observations of temporal variations in the high latitude convection p 1730 N93-19571

**PERIODICALS**

Air University Library index to military periodicals, volume 43, number 3, July - September 1992
[AD-A258452] p 1685 N93-18013

TRADOC Library and Information Network (TRALINET). Union list of periodicals (TULIP)
[AD-A258935] p 1688 N93-19451

**PERMALLOYS (TRADEMARK)**

Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on Ni(0.5)Co(0.5)O
[DE93-000509] p 1487 N93-18528

**PERMITTIVITY**

High performance YBCO films
[AD-A258481] p 1672 N93-18313

**PEROXIDES**

In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures
[NASA-CR-191916] p 1577 N93-18599

**PERSONAL COMPUTERS**

Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888

**PERSONALITY**

Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 1431 N93-19709

**PERSONALITY TESTS**

The unique contribution of selected personality tests to the prediction of success in naval pilot training
[AD-A258144] p 1602 N93-18291

**PERSONNEL**

The efficacy of biographical inventory data in predicting early attrition in naval aviation officer candidate training
[AD-A258025] p 1601 N93-17919

Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209

The US Navy Healthy Back Program: Effect on back knowledge among recruits
[AD-A258368] p 1596 N93-18210

The status of the Senior Executive Service, 1991
[SES-92-07] p 1683 N93-18439

Validation of two temperature pill telemetry systems in humans during moderate and strenuous exercise
[AD-A259068] p 1599 N93-19072

**PERSONNEL MANAGEMENT**

Needs assessment final report p 1682 N93-19406

**PERSONNEL SELECTION**

The unique contribution of selected personality tests to the prediction of success in naval pilot training
[AD-A258144] p 1602 N93-18291

Using constraint satisfaction networks to study aircrew selection for advanced cockpits
[AD-A258151] p 1606 N93-18293

**PERTURBATION**

Robust control with structured perturbations
[NASA-CR-192195] p 1633 N93-18579

IOPS advisor: Research in progress on knowledge-intensive methods for irregular operations airline scheduling p 1638 N93-18686

Perturbation problems in fluid dynamics
[AD-A258934] p 1535 N93-19450

**PERTURBATION THEORY**

Lie-admissible perturbation methods for open quantum systems
[PREPRINT-845] p 1651 N93-17840

Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509

Derivatives of likelihood ratios and smoothed perturbation analysis for the routing problem
[INRIA-RR-1495] p 1647 N93-18653

The origin and evolution of the zodiacal dust cloud p 1704 N93-19148

The effect of secular resonances in the asteroid region between 2.1 and 2.4 AU p 1706 N93-19161

Canonical floquet perturbation theory
[AD-A258970] p 1721 N93-19358

**PETRI NETS**

A proposal of an architecture for the coordination level of intelligent machines
[NASA-CR-191990] p 1613 N93-18516

Flow models of distributed computations: Event structures and nets
[INRIA-RR-1482] p 1646 N93-18612

Flow models of distributed computations: Three equivalent semantics for CCS
[INRIA-RR-1484] p 1622 N93-18613

Comparison properties of stochastic decision free Petri nets
[INRIA-RR-1433] p 1649 N93-18646

**PETROGRAPHY**

Refining the granulite suite p 1736 N93-18789

The Apollo 17 mare basalts: Serenely sampling Taurus-Littrow p 1738 N93-18804

The Apollo 17 samples: The Massifs and landslide p 1738 N93-18809

Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded? p 1739 N93-18813

**PETROLOGY**

Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786

Isotopic ages and characteristics of ancient (pre-Serenitatis) crustal rocks at Apollo 17 p 1738 N93-18808

Impact melt breccias at the Apollo 17 landing site p 1739 N93-18810

Basaltic impact melts in the Apollo collections: How many impacts and which events are recorded? p 1739 N93-18813

The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815

Troctolitic anorthosite from 77115: A magnesian member of the alkalic suite p 1740 N93-18816

Carbon petrology in cometary dust p 1716 N93-19232

**PHARMACOLOGY**

Global planning of several plants p 1635 N93-18667

**PHASE COHERENCE**

The x ray variability of NGC6814: Power spectra p 1562 N93-18712

The x ray variability of AGN and the anomalous behavior of NGC6814 p 1562 N93-18713

**PHASE CONJUGATION**

Stimulated Brillouin scattering phase conjugation p 1664 N93-18471

Laser phase front measurements using a phase conjugate Twyman-Green interferometer
[AD-A258821] p 1542 N93-18996

Phase conjugation in optical fiber via stimulated Brillouin scattering with feedback from a barium titanate crystal
[AD-A258824] p 1675 N93-19088

**PHASE DETECTORS**

Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver p 1506 N93-18913

The effect of an adaptive optical system's spatio-temporal response on imaging performance
[AD-A258848] p 1663 N93-19069

**PHASE DIAGRAMS**

Mesophase formation by specific interactions in low molecular and polymer systems
[ETN-93-93311] p 1491 N93-17949

Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems
[DE93-001403] p 1679 N93-19470

**PHASE LOCKED SYSTEMS**

Application of multirate digital filter banks to wideband all-digital phase-locked loops design p 1505 N93-18908

Adaptive low-bandwidth tracking of Galileo and Pioneer 10 carriers p 1506 N93-18912

Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver p 1506 N93-18913

**PHASE MODULATION**

Telemetering and telecommunications research
[NASA-CR-191903] p 1457 N93-18777

Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854

**PHASE SHIFT**

Aharonov-Casher effect and geometrical phases
[PREPRINT-783] p 1644 N93-18186

Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522

**PHASE SHIFT KEYING**

The use of subcarriers in future DSN missions p 1507 N93-18915

**PHASE STABILITY (MATERIALS)**

A first-principles study of the phase stability of fcc-based Ti-Al alloys
[DE93-002549] p 1487 N93-18390

Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems
[DE93-002558] p 1489 N93-19486

**PHASE TRANSFORMATIONS**

A first-principles study of the phase stability of fcc-based Ti-Al alloys
[DE93-002549] p 1487 N93-18390

Structural transformation of nickel hydroxide films during anodic oxidation
[DE93-001863] p 1488 N93-18535

A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618

Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems
[DE93-002558] p 1489 N93-19486

**PHASE VELOCITY**

Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964

The COSCAT experiment: EISCAT observations of coherent scatter at small aspect angles p 1517 N93-19573

**PHASED ARRAYS**

PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115

Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194

A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923

**PHENOMENOLOGY**

Drop/gas interactions in dense sprays
[AD-A257848] p 1527 N93-18347

Drag reduction by polymer additives
[AD-A258867] p 1534 N93-19076

**PHILOSOPHY**

The kinematics of presupposition
[LP-92-05] p 1613 N93-17829

**PHOBOS**

Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116

Phobos and Deimos are sources of meteoroids p 1700 N93-19116

**PHONONS**

Solid-state dynamics and quantum transport in novel semiconductor nanostructures
[AD-A258482] p 1672 N93-18314

**PHOSPHATES**

Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572

**PHOSPHIDES**

Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892

**PHOSPHORS**

Field-emitter arrays for RF vacuum microelectronics
[AD-A258211] p 1518 N93-18203

**PHOTOCATHODES**

Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512

**PHOTOCHEMICAL REACTIONS**

Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001682] p 1488 N93-18589

Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173

**PHOTOCONDUCTIVITY**
Infrared-induced photoconductivity and electroluminescence in forward-biased a-Si:H pin-diodes
[MBB-Z-0376-91-PUB] p 1671 N93-18092
**PHOTODETACHMENT**
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
**PHOTODISSOCIATION**
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173
Long slit spectroscopy of NH2 in comets Halley, Wilson, and Nishikawa-Takamizawa-Tago p 1698 N93-19230
Evolution of near UV Halley's spectrum in the inner coma p 1716 N93-19235
Velocity distributions of H and OH produced through solar photodissociation of H2O p 1720 N93-19266
**PHOTOELECTRIC EMISSION**
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623
**PHOTOELECTRON SPECTROSCOPY**
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848
**PHOTOELECTRONS**
Photoelectron enhanced plasma-line intensities at angles with the geomagnetic field as measured by EISCAT p 1724 N93-19536
Tristatic observations of natural plasma lines with the EISCAT UHF radar p 1725 N93-19537
**PHOTOEXCITATION**
Velocity distributions of H and OH produced through solar photodissociation of H2O p 1720 N93-19266
**PHOTOGEOLOGY**
Airborne Remote Sensing
[VTT-SYMPOSIUM-127] p 1569 N93-19871
**PHOTOGRAPHIC RECORDING**
Light curve and fan-shaped coma of comet P/Tempel 2 in 1988-1989 p 1700 N93-19114
Fragmentation and densities of meteoroids p 1700 N93-19118
A new method for astrometric observations of asteroids p 1698 N93-19220
**PHOTOGRAPHS**
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050
Carrier landing parameters from survey 45, fleet and training command aircraft landing aboard USS ENTERPRISE CVN-65, main text and appendix A
[AD-A258873] p 1433 N93-19078
Gross-fragmentation of meteoroids and bulk density of Geminids from photographic fireball records p 1703 N93-19137
Microphotography of shocks in crystals
[DE93-002888] p 1677 N93-19827
**PHOTOGRAPHY**
Geology of the Apollo 17 site p 1738 N93-18803
**PHOTOINTERPRETATION**
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430
Experience of the Finnish National Scientific Research Center (VTT) in the interpretation of AVIRIS spectrometric image p 1570 N93-19879
**PHOTOLITHOGRAPHY**
Acousto-optic frequency excision p 1523 N93-18460
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681
**PHOTOLUMINESCENCE**
Infrared photoluminescence spectroscopy p 1485 N93-18466
Photoluminescent thermography in hypersonic blowdown wind tunnel: Feasibility study with pinpoint measurement
[ONERA-NT-1992-8] p 1407 N93-18617
**PHOTOLYSIS**
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173
**PHOTOMAPPING**
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898
**PHOTOMETERS**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238
Acousto-optic frequency excision p 1523 N93-18460
Device applications of layered structures p 1523 N93-18461
**PHOTOMETRY**
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108588] p 1561 N93-18709
Evidence for a massive stellar black hole in x ray Nova Muscae p 1562 N93-18714
High resolution images of P/Tempel 1 and P/Tempel 2 constructed from IRAS survey data p 1699 N93-19257
**PHOTON ABSORPTIOMETRY**
Response of a Nb/Al2O3/Nb tunnel junction to picosecond electrical pulses
[DE93-002625] p 1676 N93-19617
**PHOTONICS**
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition: Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical
[AD-A258663] p 1664 N93-19947
**PHOTONS**
Identification of high Pt jet events produced by a resolved photon at HERA and reconstruction of the initial state parton kinematics
[NOTA-INTERNA-991] p 1653 N93-17942
**PHOTONUCLEAR REACTIONS**
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
**PHOTOPRODUCTION**
High energy physics
[DE93-002411] p 1659 N93-17911
Identification of high Pt jet events produced by a resolved photon at HERA and reconstruction of the initial state parton kinematics
[NOTA-INTERNA-991] p 1653 N93-17942
Quark/gluon jet separation in the photoproduction region with a neural network algorithm
[NOTA-INTERNA-992] p 1653 N93-17943
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502
Theoretical aspects of electroweak and other interactions in medium energy physics
[DE93-003714] p 1657 N93-19507
**PHOTOSENSITIVITY**
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001682] p 1488 N93-18589
**PHOTOSPHERE**
Large-scale velocity fields and small-scale magnetic fields during the maximum of solar cycle 22
[AD-A258172] p 1744 N93-17922
A study of physical mechanisms for filament eruption and coronal mass ejection via numerical simulation
[NASA-CR-192118] p 1744 N93-18577
**PHOTOSYNTHESIS**
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751
**PHOTOTROPISM**
Investigation of wheat coleoptile response to phototropic stimulations
[NASA-CR-192157] p 1593 N93-18608
**PHYSICAL CHEMISTRY**
Chemical and physical effects in the bulk of cometary analogs p 1716 N93-19234
**PHYSICAL EXERCISE**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209
**PHYSICAL FITNESS**
Muscle glycogen, fiber type, aerobic fitness, and anaerobic capacity of West Coast US Navy Sea-Air-Land personnel (SEALs)
[AD-A258364] p 1596 N93-18209
**PHYSICAL OPTICS**
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics
[AD-A258938] p 1652 N93-19082
**PHYSICAL PROPERTIES**
Bias correction factors for near-Earth asteroids p 1701 N93-19127
A comparison between families obtained from different proper elements p 1721 N93-19270
**PHYSIOCHEMISTRY**
Fires on board aircraft: Toxicological risk in flight p 1428 N93-19694
**PHYSIOLOGICAL EFFECTS**
Cardiopulmonary discipline science plan
[NASA-TM-108040] p 1599 N93-19648
Health effects of low-frequency electric and magnetic fields
[DE93-005675] p 1599 N93-19838
Neuroscience discipline science plan
[NASA-TM-108041] p 1600 N93-19882
Regulatory physiology discipline science plan
[NASA-TM-108038] p 1594 N93-19891
Musculoskeletal discipline science plan
[NASA-TM-108039] p 1600 N93-19892
**PHYSIOLOGICAL FACTORS**
Cognitive factors in the air events of the Air Force during the last decade p 1426 N93-19682
**PHYSIOLOGICAL RESPONSES**
The Proceedings of the Hypobaric Decompression Sickness Workshop
[AD-A257612] p 1597 N93-18362
**PHYSIOLOGY**
A review of models of the human temperature regulation system
[AD-A258023] p 1595 N93-17918
Abstracts of papers presented at the annual meeting of the Society of General Physiologists
[AD-A257718] p 1596 N93-18211
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
Development and enhancement of a mode of performance and decision making under stress in a real life setting
[AD-A257796] p 1598 N93-18363
Upper ocean mixing: The use of algal pigments as biological tracers for turbulent diffusion
[AD-A258803] p 1590 N93-18982
A method for investigating human factor aspects of military aircraft accidents p 1422 N93-19656
Toxicological investigations of flight accidetns: Findings and methods p 1428 N93-19695
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 1429 N93-19698
The influence of individual sensivity to stress on the behavior (attitude and performance) of avoidance of an accident p 1430 N93-19705
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 1431 N93-19708
**PHYTOPLANKTON**
Analysis of AVHRR, CZCS and historical in situ data off the Oregon Coast
[NASA-CR-192120] p 1586 N93-18360
Upper ocean mixing: The use of algal pigments as biological tracers for turbulent diffusion
[AD-A258803] p 1590 N93-18982
**PICOSECOND PULSES**
Response of a Nb/Al2O3/Nb tunnel junction to picosecond electrical pulses
[DE93-002625] p 1676 N93-19617
The multi-cavity free-electron laser
[DE93-002569] p 1543 N93-19747
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation
[AD-A259372] p 1522 N93-19853
**PIEZOELECTRIC CERAMICS**
Smart patch piezoceramic actuator issues p 1462 N93-18822
Static and dynamic characteristics of a piezoceramic strut p 1462 N93-18827
**PIEZOELECTRIC CRYSTALS**
A dynamic analysis of piezoelectric strained elements
[AD-A259011] p 1651 N93-19014
**PIEZOELECTRICITY**
Nonlinear acoustic-electromagnetic coupling in materials p 1482 N93-18486
Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846
CSI flight experiment projects of the Naval Research Laboratory p 1470 N93-18944
A dynamic analysis of piezoelectric strained elements
[AD-A259011] p 1651 N93-19014

Piezoelectric response of precisely poled PVDF to shock compression greater than 10 GPa
[DE93-002469] p 1539 N93-19636

**PILOT ERROR**
Modeling human response errors in synthetic flight simulator domain p 1612 N93-19464
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 1426 N93-19683

**PILOT PERFORMANCE**
Effects of terfenadine and diphenhydramine on brain activity and performance in a UH-60 flight simulator
[AD-A258012] p 1594 N93-17817
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
An analysis of a sustained flight operation training mission in Navy attack aircraft
[AD-A258199] p 1602 N93-18205
Automatic information processing and high performance skills
[AD-A258473] p 1602 N93-18273
Modeling the performance of the human (pilot) interaction in a synthetic flight domain: Information theoretic approach p 1612 N93-19465

**PILOT SELECTION**
Using constraint satisfaction networks to study aircrew selection for advanced cockpits
[AD-A258151] p 1606 N93-18293

**PILOT TRAINING**
Automatic information processing and high performance skills
[AD-A258473] p 1602 N93-18273
The unique contribution of selected personality tests to the prediction of success in naval pilot training
[AD-A258144] p 1602 N93-18291
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 1425 N93-19677
Underlying causes of human error in US Army rotary wind accidents p 1425 N93-19678
Prediction of success from training p 1430 N93-19702
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 1430 N93-19704
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 1430 N93-19706

**PILOTS (PERSONNEL)**
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 1431 N93-19707

**PIONEER VENUS SPACECRAFT**
Precise tracking of the Magellan and Pioneer Venusorbiters by same-beam interferometry. Part 1: Dataaccuracy analysis p 1454 N93-19414

**PIONEER 10 SPACE PROBE**
Adaptive low-bandwidth tracking of Galileo and Pioneer 10 carriers p 1506 N93-18912

**PIONS**
Pion discovery
[NOTA-INTERNA-983] p 1653 N93-17933
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
Experiments on the nuclear interactions of pions and electrons
[DE93-001800] p 1655 N93-18590
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502
Investigation of pion-nucleus interactions
[DE93-004375] p 1657 N93-19504

**PIPE FLOW**
Development and verification of methods for predicting flow rates through leaks in valves and couplings
[NASA-CR-192270] p 1533 N93-19013
Similarity in laminar pipe flows with secondary flows p 1413 N93-19302
Turbulence model calculations of the effects of body forces on turbulent flows in a pipe p 1413 N93-19306

**PISTONS**
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Reducing the net torque and flow ripple effects of multiple hydraulic piston motor drives p 1507 N93-18917
Cooled spool piston compressor
[NASA-CASE-MSC-22020-1] p 1550 N93-19331

**PITCH (MATERIAL)**
Asphalt mixtures modified with tall oil pitches and cellulose fibres
[VTT-PUBS-99] p 1494 N93-18699

**PITCHING MOMENTS**
Pitching moment of low aspect ratio wing-body combinations up to high angles of attack at supersonic speeds
[ESDU-92043] p 1435 N93-17958
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896

**PIXELS**
Linear mixing model applied to coarse resolution satellite data p 1565 N93-18073
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487
The image digitizing system
[AD-A258665] p 1628 N93-19948

**PLANAR STRUCTURES**
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238

**PLANET EPHEMERIDES**
Integrated software package STAMP for minor planets p 1628 N93-19187

**PLANETARY ATMOSPHERES**
Dynamics of planetary atmospheres
[NASA-CR-192117] p 1735 N93-18782
Solar extreme ultraviolet sensor and advanced langmuir probe
[NASA-CR-191972] p 1744 N93-18880

**PLANETARY COMPOSITION**
Mars: A reassessment of its interest to biology p 1591 N93-18550
Giant planets: Clues on current and past organic chemistry in the outer solar system p 1591 N93-18551
Cosmic dust p 1592 N93-18554

**PLANETARY CORES**
Orbital, rotational, and climatic interactions: Lessons from Earth and Mars p 1740 N93-19803

**PLANETARY CRUSTS**
Do large impact basins in the Southern Hemisphere of Mars control the distribution of polar structures and deposits? p 1741 N93-19808

**PLANETARY ENVIRONMENTS**
Giant planets: Clues on current and past organic chemistry in the outer solar system p 1591 N93-18551
Environmental interactions and the SP-100 power system
[NASA-TM-105866] p 1474 N93-18877

**PLANETARY EVOLUTION**
Mars: A reassessment of its interest to biology p 1591 N93-18550
Giant planets: Clues on current and past organic chemistry in the outer solar system p 1591 N93-18551
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138
3-D orbital evolution model of outer asteroid belt p 1718 N93-19245
Minor satellites and the Gaspra encounter p 1719 N93-19255
Rotation of split cometary nuclei p 1719 N93-19258
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789
Glaciation in Elysium p 1740 N93-19802
Evolution of the Martian atmosphere: The role of the polar caps p 1741 N93-19809
The polar layered deposits on Mars: Inference from thermal inertia modeling and geologic studies p 1741 N93-19810
The Mars water cycle at other epochs: Recent history of the polar caps and layered terrain p 1741 N93-19811
Possible recent and ancient glacial ice flow in the south polar region of Mars p 1742 N93-19812
Numerical simulations of drainage flows on Mars p 1742 N93-19816

**PLANETARY GEOLOGY**
The Sudbury-Serenitatis analogy and 'so-called' pristine nonmare rocks p 1739 N93-18815
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789

**PLANETARY GRAVITATION**
Rotational behavior of comet nuclei under gravitational perturbations p 1714 N93-19216

**PLANETARY MAGNETIC FIELDS**
Magnetic field waves at Uranus
[NASA-CR-192113] p 1735 N93-18779

**PLANETARY MAGNETOSPHERES**
Magnetic field waves at Uranus
[NASA-CR-192113] p 1735 N93-18779

**PLANETARY MANTLES**
Orbital, rotational, and climatic interactions: Lessons from Earth and Mars p 1740 N93-19803

**PLANETARY MAPPING**
Cartography of asteroids and comet nuclei from low resolution data p 1718 N93-19249

**PLANETARY MASS**
The mass of (1) Ceres from perturbations on (348) May p 1720 N93-19262

**PLANETARY NEBULAE**
Solar-terrestrial physics and astrophysics p 1733 N93-18501
Cosmic dust p 1592 N93-18554

**PLANETARY ORBITS**
On the distribution of minor planet inclinations p 1454 N93-19242
3-D orbital evolution model of outer asteroid belt p 1718 N93-19245
1991 DA: An asteroid in a bizarre orbit p 1718 N93-19247
Determination of orbits of comets: P/Kearns-Kwee, P/Gunn, including nongravitational effects in the comets' motion p 1454 N93-19254
Formation of the Leonid meteor stream and storm p 1721 N93-19267
A candidate for the parent body of the Taurid complex and its search ephemeris p 1721 N93-19271
Orbital, rotational, and climatic interactions: Lessons from Earth and Mars p 1740 N93-19803

**PLANETARY ROTATION**
Modelling studies in support of open-ocean convection field programs
[AD-A258324] p 1589 N93-18255
Orbital, rotational, and climatic interactions: Lessons from Earth and Mars p 1740 N93-19803

**PLANETARY SYSTEMS**
The solar system: Importance of research to the biological sciences p 1591 N93-18547

**PLANETS**
Melting, vaporization, and energy partitioning for impacts on asteroidal and planetary objects p 1718 N93-19244

**PLANKTON**
The voltammetric determination of trace metal concentrations and organic complexation in seawater
[AD-A257565] p 1588 N93-17984

**PLANNING**
Planning, scheduling, and control for automatic telescopes p 1637 N93-18677
Rescheduling with iterative repair p 1637 N93-18679
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682
Learning to integrate reactivity and deliberation in uncertain planning and scheduling problems p 1638 N93-18684
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas p 1638 N93-18688
JIGSAW: Preference-directed, co-operative scheduling p 1639 N93-18689
SOCAP: Lessons learned in applying SIPE-2 to the military operations crisis action planning domain p 1639 N93-18694
Case-based reasoning for real-time problem solving
[AD-A258697] p 1641 N93-19865

**PLANTS (BOTANY)**
Investigation of wheat coleoptile response to phototropic stimulations
[NASA-CR-192157] p 1593 N93-18608

**PLASMA ACCELERATION**
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640

**PLASMA ARC WELDING**
Instruction manual for UTEP weld gas hydrogen detector
[NASA-CR-184477] p 1537 N93-18034

**PLASMA COMPOSITION**
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511

**PLASMA CONTROL**
Phenomenological modelling of Polywell (tm) SCIF multi-cusp inertial-electrostatic confinement systems
[AD-A257944] p 1665 N93-18020
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244

Effective gyro hole loss radius and diamagnetic limit in Polywell (tm) systems
[AD-A257689] p 1665 N93-18245
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511
Regimes of improved confinement and stability in D3-D obtained through current profile modifications
[DE93-002674] p 1667 N93-19618
Advanced divertor program results from D3-D
[DE93-002675] p 1668 N93-19619
Self-regulated shear flow turbulence in confined plasmas: Basic concepts and potential applications to the L yields H transition
[DE93-002361] p 1668 N93-19743
Roles of electric field on toroidal magnetic confinement
[NIFS-200] p 1669 N93-19884
Hamiltonian for the toroidal helical magnetic field lines in the vacuum
[NIFS-201] p 1669 N93-19885
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896
Physics of transport phenomena in magnetic confinement plasmas
[NIFS-202] p 1670 N93-19942

**PLASMA CURRENTS**
Ionospheric currents: Can the incoherent scatter plasma line spectrum provide routine current measurements?
p 1724 N93-19533

**PLASMA DENSITY**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244
Magnetohydrodynamic wave-associated plasma density fluctuations in the Earth's foreshock region
p 1667 N93-19385

**PLASMA DRIFT**
Measurements of F-region drift velocities at the dusk sector mid-latitude trough
[AD-A257766] p 1575 N93-17907
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521

**PLASMA DYNAMICS**
A DE-1/whistler study of the thermal plasma structure and dynamics in the dusk bulge sector of the magnetosphere
[NASA-CR-192088] p 1579 N93-18850
A postulational formulation of magnetohydrodynamics
p 1667 N93-19030
On the Lagrangian of the linearized MHD equations
[NIFS-154] p 1670 N93-19933

**PLASMA ELECTRODES**
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
Recent advances in MPD thruster research at Princeton p 1667 N93-18645

**PLASMA ENGINES**
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
The MPD thruster program at JPL
p 1666 N93-18638
MPD thruster technology p 1666 N93-18639
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640
Review of recent work on MPD thrusters at MIT
p 1666 N93-18641
Magnetoplasmadynamic thruster flows: Problems and progress p 1666 N93-18642
Scaling and applied field studies of MPD thrusters with laser diagnostics p 1667 N93-18643
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644
Recent advances in MPD thruster research at Princeton p 1667 N93-18645

**PLASMA FLUX MEASUREMENT**
INDI p 1730 N93-19570

**PLASMA FOCUS**
Collisional relaxation of non-Maxwellian plasma distribution in a Polywell (tm)
[AD-A257651] p 1665 N93-18244

**PLASMA FREQUENCIES**
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge
[AD-A258680] p 1543 N93-19950

**PLASMA HEATING**
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence
p 1726 N93-19548
The CQL3D Fokker-Planck code
[DE93-002962] p 1668 N93-19754

**PLASMA INTERACTIONS**
Cosmic ray decreases and magnetic clouds
p 1564 N93-18071
Auroral energization and geomagnetic disturbances
p 1584 N93-18499
Environmental interactions and the SP-100 power system
[NASA-TM-105866] p 1474 N93-18877
Plasma-beam instabilities in cometary ionospheres
p 1704 N93-19141
INDI p 1730 N93-19570
The effect of different collision operators on the standard data analysis model p 1670 N93-19584
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991
[INPE-5349-PRP/162] p 1668 N93-19793

**PLASMA LAYERS**
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511

**PLASMA PHYSICS**
A low velocity approximation for the relativistic Vlasov-Maxwell system
[AD-A258300] p 1665 N93-18100
Space plasma physics research
[NASA-CR-192158] p 1665 N93-18404
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985
Introduction to ionospheric heating at Tromsoe (Norway). Part 1: Experimental overview
p 1724 N93-19531
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991
[INPE-5349-PRP/162] p 1668 N93-19793
A kinetic simulation of low-frequency electromagnetic phenomena in inhomogeneous plasmas of three-dimensions
[NIFS-199] p 1669 N93-19883
Roles of electric field on toroidal magnetic confinement
[NIFS-200] p 1669 N93-19884
Physics of transport phenomena in magnetic confinement plasmas
[NIFS-202] p 1670 N93-19942

**PLASMA POTENTIALS**
Electrostatic potential in a collisionless plasma flow along open magnetic field lines
[NIFS-155] p 1666 N93-18421
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions
p 1722 N93-19522

**PLASMA PROBES**
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644

**PLASMA PROPULSION**
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
The MPD thruster program at JPL
p 1666 N93-18638
MPD thruster technology p 1666 N93-18639
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640
Magnetoplasmadynamic thruster flows: Problems and progress p 1666 N93-18642
Scaling and applied field studies of MPD thrusters with laser diagnostics p 1667 N93-18643
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644

**PLASMA RADIATION**
High-energy laser-particle interaction
p 1543 N93-18469
Method and apparatus for producing a thermal atomic oxygen beam
[NASA-CASE-LEW-15614-1] p 1656 N93-19026

**PLASMA RESONANCE**
The possibilities of observing plasma and gyro lines with the EISCAT polar cap radar p 1724 N93-19534
Enhancement of the gyro lines by suprathermal particles p 1724 N93-19535
Photoelectron enhanced plasma-line intensities at angles with the geomagnetic field as measured by EISCAT p 1724 N93-19536
Tristatic observations of natural plasma lines with the EISCAT UHF radar p 1725 N93-19537

**PLASMA SHEATHS**
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511
The lasing mechanism of the orbitron: A millimeter-wave maser based on a glow discharge
[AD-A258680] p 1543 N93-19950

**PLASMA SPRAYING**
Thermal coating development for impulse drying
[DE93-000710] p 1491 N93-17909
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A258768] p 1521 N93-19048

**PLASMA TURBULENCE**
Poloidal flow generation by resistive pressure-gradient-driven turbulence
[DE93-001638] p 1667 N93-18707
Introduction to ionospheric heating at Tromsoe (Norway). Part 2: Current scientific problems
p 1724 N93-19532
Self-regulated shear flow turbulence in confined plasmas: Basic concepts and potential applications to the L yields H transition
[DE93-002361] p 1668 N93-19743
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991
[INPE-5349-PRP/162] p 1668 N93-19793
Physics of transport phenomena in magnetic confinement plasmas
[NIFS-202] p 1670 N93-19942

**PLASMA WAVES**
Space plasma physics research
[NASA-CR-192158] p 1665 N93-18404
PACE and EISCAT radar observations of short-lived flow bursts on the nightside p 1726 N93-19549
Plasma flow bursts in the auroral zone
p 1726 N93-19550
Determination of D-region plasma velocity vector from scanning GEN-11 data p 1728 N93-19562
Altitude variations in amplitude and phase of tidal oscillations at high latitude p 1729 N93-19566
Vertical structure of AGW associated ionospheric fluctuations observed with EISCAT
p 1729 N93-19569
HF radar observations of temporal variations in the high latitude convection p 1730 N93-19571
The COSCAT experiment: EISCAT observations of coherent scatter at small aspect angles
p 1517 N93-19573
Real and spurious anticorrelations between V(parallel) and V(perpendiculars) in EISCAT data
p 1517 N93-19578
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991
[INPE-5349-PRP/162] p 1668 N93-19793

**PLASMA-ELECTROMAGNETIC INTERACTION**
Disturbances of both cometary and Earth's magnetospheres excited by single solar flares
p 1710 N93-19190

**PLASMAPAUSE**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214

**PLASMAS (PHYSICS)**
Studies of metal-semiconductor clusters
p 1678 N93-18493
Environmental interactions and the SP-100 power system
[NASA-TM-105866] p 1474 N93-18877
H2O(+) structures in the inner plasma tail of comet Austin p 1708 N93-19174
Doppler velocities in the ion tail of comet Levy 1990c
p 1708 N93-19176
Inexpensive capillary discharge x ray laser driver, phase 1
[AD-A259032] p 1542 N93-19372
Theoretical studies in medium-energy nuclear and hadronic physics
[DE93-004373] p 1657 N93-19503
Theory of radar scattering from dusty plasmas
p 1516 N93-19540
Multi-fluid modeling of interpenetrating plasmas
[DE93-002893] p 1668 N93-19829
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896

**PLASMASPHERE**
The flow of plasma in the solar terrestrial environment
[NASA-CR-192106] p 1744 N93-18780
A DE-1/whistler study of the thermal plasma structure and dynamics in the dusk bulge sector of the magnetosphere
[NASA-CR-192088] p 1579 N93-18850
Magnetohydrodynamic wave-associated plasma density fluctuations in the Earth's foreshock region
p 1667 N93-19385

A new approach to plasmasphere refilling: Anomalous plasma effects
[NASA-CR-192128] p 1670 N93-19945
**PLASTIC DEFORMATION**
Thermal cycling behavior of unidirectional and cross-plied P100 Gr/6061 aluminum composites
[AD-A257506] p 1477 N93-18077
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
**PLASTIC PLATES**
Three-dimensional elastic-plastic finite-element analyses of constraint variations in cracked bodies
[NASA-TM-107704] p 1555 N93-18090
**PLATE THEORY**
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
P-adaptivity applied to plate in bending problems p 1557 N93-18756
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443
**PLATES (STRUCTURAL MEMBERS)**
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Coupling between plate vibration and acoustic radiation
[NASA-CR-189741] p 1651 N93-18770
Stratified plate model for composite plate analysis
[AD-A259001] p 1481 N93-19359
Impact response of laminated plates subjected to transverse loading
[NIAR-92-5] p 1560 N93-19360
**PLATES (TECTONICS)**
Evolution of attached and detached slabs and their associated mantle dynamics
[NASA-CR-191920] p 1576 N93-18320
**PLATINUM**
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces
[DE93-004647] p 1483 N93-18453
High temperature sorbents for oxygen
[NASA-CASE-NPO-18409-1-CU] p 1483 N93-19025
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485
**PLOTTING**
Plotting the magnitude and direction of waveguide surface currents in three dimensions
[AD-A258872] p 1509 N93-19077
**PLUMES**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets
[NASA-TM-105999] p 1471 N93-17995
**PLY ORIENTATION**
Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue
[AD-A258907] p 1480 N93-19336
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
Damage mechanics of cross-ply laminates resulting from transverse concentrated loads
[AD-A259271] p 1481 N93-19839
**POINT DEFECTS**
Second Workshop Role of Point Defects/Defect Complexes in Silicon Device Fabrication
[DE92-016424] p 1675 N93-19467
**POINTING CONTROL SYSTEMS**
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978
Structural control sensors for the CASES GTF p 1464 N93-18837
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Precision slew/settle technologies for flexible spacecraft p 1468 N93-18938
Parameter and configuration study of the DSS-13 antenna drives p 1514 N93-19432
**POINTS (MATHEMATICS)**
An interior point approach to postoptimal and parametric analysis in linear programming
[REPT-92-21] p 1615 N93-17834
Output sensitive construction of the 3D Delaunay triangulation of constrained sets of points
[INRIA-RR-1415] p 1646 N93-18456
**POISSON DENSITY FUNCTIONS**
A central limit theorem for autoregressive integrated moving average processes
[AD-A258923] p 1650 N93-19445
**POLAR CAP ABSORPTION**
Polar cap absorption events observed during the EISCAT operation in 1981-1989 p 1727 N93-19556
EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989 p 1728 N93-19557
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558
D-region incoherent scatter spectra: Discrepancies between observations and current theory p 1728 N93-19559
Interpretation of incoherent scatter spectral width changes in the D-region during an auroral precipitation event p 1728 N93-19560
**POLAR CAPS**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
EISCAT Svalbard radar p 1516 N93-18744
EISCAT educational programs p 1579 N93-18745
Workshop on the Polar Regions of Mars: Geology, Glaciology, and Climate History, part 1
[NASA-CR-191225] p 1740 N93-19801
Condensation phase of the Martian south polar cap p 1740 N93-19804
Water on Mars: Inventory, distribution, and possible sources of polar ice p 1740 N93-19805
Do large impact basins in the Southern Hemisphere of Mars control the distribution of polar structures and deposits? p 1741 N93-19808
Evolution of the Martian atmosphere: The role of the polar caps p 1741 N93-19809
The polar layered deposits on Mars: Inference from thermal inertia modeling and geologic studies p 1741 N93-19810
The Mars water cycle at other epochs: Recent history of the polar caps and layered terrain p 1741 N93-19811
Possible recent and ancient glacial ice flow in the south polar region of Mars p 1742 N93-19812
Is CO2 ice permanent? p 1742 N93-19813
The interannual variability of polar cap recessions as a measure of Martian climate and weather: Using Earth-based data to augment the time line for the Mars observer mapping mission p 1742 N93-19814
Dust transport into Martian polar latitudes p 1742 N93-19815
Numerical simulations of drainage flows on Mars p 1742 N93-19816
Modeling interannual variability in the Martian seasonal CO2 cycle p 1743 N93-19820
**POLAR METEOROLOGY**
An experimental study of growth and phase change of polar stratospheric cloud particles
[NASA-CR-192369] p 1588 N93-19887
**POLAR REGIONS**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
The possibilities of observing plasma and gyro lines with the EISCAT polar cap radar p 1724 N93-19534
PACE and EISCAT radar observations of short-lived flow bursts on the nightside p 1726 N93-19549
Possible cause and consequence of laminated Polar Mesosphere Summer Echoes p 1728 N93-19561
HF radar observations of temporal variations in the high latitude convection p 1730 N93-19571
Martian volatiles determined using the Mars observer gamma ray spectrometer p 1741 N93-19807
Mars observer radio science (MORS) observations in polar regions p 1743 N93-19818
Wind transport near the poles of Mars: Timescales of changes in deposition and erosion p 1743 N93-19819
**POLARIMETERS**
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650
**POLARIMETRY**
Polarimetric observations of comet Levy 1990c and of other comets: Some clues to the evolution of cometary dust p 1711 N93-19196
**POLARIZATION**
Interpreting asteroid photometry and polarimetry using a model of shadowing and coherent backscattering p 1699 N93-19241
**POLARIZATION (WAVES)**
Study of narrow-band dichroic plates with circular, rectangular, or Pyleguide apertures p 1504 N93-18901
**POLARIZATION CHARACTERISTICS**
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655
**POLICIES**
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
Space is a different place
[AD-A258336] p 1453 N93-18219
Metrication report to the Congress
[NASA-TM-108601] p 1499 N93-18355
Metrication report to the Congress
[NASA-TM-108602] p 1499 N93-18356
Metrication report to the Congress. 1991 activities and 1992 plans
[NASA-TM-108603] p 1499 N93-18357
Health effects of low-frequency electric and magnetic fields
[DE93-005675] p 1599 N93-19838
**POLITICS**
Strategic factors in the development of the National Technology Transfer Network
[NASA-TM-108594] p 1694 N93-18169
**POLLEN**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
**POLLUTION CONTROL**
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095
NATO Advanced Research Workshop on Non-Thermal Plasma Techniques for Pollution Control
[AD-A258477] p 1665 N93-18323
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587
**POLLUTION MONITORING**
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587
**POLLUTION TRANSPORT**
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095
**POLYCARBONATES**
Short range order in amorphous polycondensates
[DE93-001650] p 1494 N93-18708
**POLYCHLORINATED BIPHENYLS**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290
**POLYCRYSTALS**
Thin film processing of photorefractive BaTiO3
[NASA-CR-192194] p 1673 N93-18427
Research on polycrystalline thin-film CuGaInSe2 solar cells
[DE92-016439] p 1571 N93-18656
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623
Polycrystalline tetragonal zirconia in the system CeO2-ZrO2 (Ce-TZP)
[INPE-5285-TAE/007] p 1676 N93-19643
Geometry of energy minimizing surfaces
[AD-A258694] p 1678 N93-19863
**POLYETHER RESINS**
Short range order in amorphous polycondensates
[DE93-001650] p 1494 N93-18708
**POLYETHYLENES**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158
**POLYIMIDES**
High temperature polymer from maleimide-acetylene terminated monomers
[NASA-CASE-LAR-14475-1] p 1495 N93-19327
Crosslinked polyimides prepared from N-(3-ethynylphenyl)maleimide
[NASA-CASE-LAR-14774-1] p 1495 N93-19388

**POLYMER CHEMISTRY**
Mesophase formation by specific interactions in low molecular and polymer systems
[ETN-93-93311] p 1491 N93-17949
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
Preceramic polymers: Past, present and future
[AD-A258327] p 1493 N93-18265
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985
Development of an electrochemical method for field testing of protective coatings
[AD-A258754] p 1496 N93-19866
**POLYMER MATRIX COMPOSITES**
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003
**POLYMERIC FILMS**
Positron lifetime spectroscopy for investigation of thin polymer coatings
[NASA-TM-4421] p 1491 N93-17945
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
**POLYMERIZATION**
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
Drag reduction by polymer additives
[AD-A258867] p 1534 N93-19076
The role of organic polymers in the structure of cometary dust p 1719 N93-19256
High temperature polymer from maleimide-acetylene terminated monomers
[NASA-CASE-LAR-14475-1] p 1495 N93-19327
**POLYMERS**
Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283
Teaching polymers to fold
[DE93-002670] p 1494 N93-18437
Molecular-scale hybrid polymer ceramics p 1496 N93-18487
**POLYNOMIALS**
Sub-groups of Z(sup n), standard basis, and linear diophantine systems
[INRIA-RR-1510] p 1615 N93-17836
Polynomial approximation of Poincare maps for Hamiltonian system p 1651 N93-19160
**POLYURETHANE RESINS**
Positron lifetime spectroscopy for investigation of thin polymer coatings
[NASA-TM-4421] p 1491 N93-17945
**POPULATIONS**
Bias correction factors for near-Earth asteroids p 1701 N93-19127
**POROUS MATERIALS**
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572
**PORTABLE EQUIPMENT**
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
**POSITION (LOCATION)**
Design optimization of the JPL Phase B testbed p 1466 N93-18845
Systems analysis for ground-based optical navigation p 1434 N93-18900
Locating an imaging radar in Canada for identifying spaceborne objects
[AD-A258969] p 1510 N93-19087
Automated detection of asteroids in real-time with the Spacewatch telescope p 1698 N93-19239
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392
Discrete optical fiber strain sensor
[NASA-CASE-LAR-14810-1-SB] p 1538 N93-19492
**POSITION ERRORS**
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010
Use of the VLBI delay observable for orbit determination of Earth-orbiting VLBI satellites p 1454 N93-19419
Modeling the global positioning system signal propagation through the ionosphere p 1434 N93-19420
Evaluation of the table Mountain Ronchi telescope for angular tracking p 1512 N93-19421
**POSITIONING**
Positioning a camera from a photograph and a scene model
[TELECOM-PARIS-92-D-002] p 1537 N93-17948
GPS Interferometry
[NASA-CR-192301] p 1432 N93-18873
**POSITRON ANNIHILATION**
Positron annihilation studies of the electronic structure and fermiology of the high-T(sub c) superconductors
[DE93-002982] p 1676 N93-19497
**POSITRONS**
Positron lifetime spectroscopy for investigation of thin polymer coatings
[NASA-TM-4421] p 1491 N93-17945
The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report
[DE92-041215] p 1624 N93-18867
**POSTURE**
Role of orientation reference selection in motion sickness
[NASA-CR-191912] p 1598 N93-18596
**POTABLE WATER**
Regenerable biocide delivery unit
[NASA-CASE-MSC-21763-1-SB] p 1590 N93-18351
**POTASSIUM**
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
**POTENTIAL ENERGY**
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems
[AD-A258693] p 1678 N93-19862
**POTENTIAL FLOW**
Application of the program profile for the design of low-speed, low-observable configuration airfoils
[AD-A258842] p 1417 N93-19364
**POWDER (PARTICLES)**
Device for applying powder coatings
[AD-A258229] p 1492 N93-18218
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051
Polycrystalline tetragonal zirconia in the system CeO2-ZrO2 (Ce-TZP)
[INPE-5285-TAE/007] p 1676 N93-19643
X ray crystal structure of InCl3(dot)2THF, a neural five-coordinate BIS-Adduct of an In3 trihalide
[AD-A258551] p 1678 N93-19954
**POWDER METALLURGY**
Characterization and defect analysis of high temperature aluminum-based metal matrix composites p 1480 N93-19060
A geometrical description of microstructure with application to Al powder metallurgy processing p 1489 N93-19061
**POWER AMPLIFIERS**
HF MOSFET power amplifiers
[AD-A258384] p 1519 N93-18258
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices
[NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278
**POWER CONVERTERS**
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices
[NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278
**POWER EFFICIENCY**
Power analysis in flexible automation
[AD-A259080] p 1549 N93-18961
**POWER LINES**
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system p 1496 N93-19402
**POWER SPECTRA**
The x ray variability of NGC6814: Power spectra p 1562 N93-18712
The x ray variability of AGN and the anomalous behavior of NGC6814 p 1562 N93-18713
EISCAT observations of spectral components of atmospheric gravity waves in the F region p 1578 N93-18743
**POWER TRANSMISSION**
Analysis of electromagnetic interference from power system processing and transmission components for Space Station Freedom
[NASA-CR-192281] p 1470 N93-19890
**POYNTING-ROBERTSON EFFECT**
Collisional and dynamic evolution of dust from the asteroid belt p 1707 N93-19165
**PRECESSION**
Precessional quantities for the Earth over 10 Myr p 1579 N93-18964
Numerical investigation of the Earth's rotation during a complete precession cycle p 1580 N93-18965
Modeling orbital changes on tectonic time scales p 1581 N93-18971
Evidence of orbital forcing in 510 to 530 million year old shallow marine cycles, Utah and western Canada p 1582 N93-18975
The cyclic carbonates of the Latemar Massif: Evidence for the orbital forcing of a carbonate platform during the Middle Triassic p 1582 N93-18976
On LAM's and SAM's for Halley's rotation p 1714 N93-19221
Forced precession of the cometary nucleus with randomly placed active regions p 1719 N93-19251
Rotation of split cometary nuclei p 1719 N93-19258
Orbital, rotational, and climatic interactions: Lessons from Earth and Mars p 1740 N93-19803
**PRECIPITATES**
Some recent results on stresses in thin films and precipitates
[AD-A258807] p 1559 N93-18966
**PRECIPITATION HARDENING**
Continuous measurement by eddy current methods of age hardening in an aluminum alloy
[AD-A257569] p 1486 N93-18176
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514
**PRECISION**
High precision navigation for flight testing (AERONAV) p 1434 N93-19920
**PREDICTION ANALYSIS TECHNIQUES**
The application of function points to predict source lines of code for software development
[AD-A258447] p 1616 N93-17892
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
The unique contribution of selected personality tests to the prediction of success in naval pilot training
[AD-A258144] p 1602 N93-18291
Application of a neural network as a potential aid in predicting NTF pump failure
[NASA-TM-107667] p 1620 N93-18332
Target fragmentation in radiobiology
[NASA-TM-4408] p 1598 N93-18381
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578
Model determination using predictive distributions with implementation via sampling-based methods
[AD-A258777] p 1650 N93-18947
User's reference guide for Noise Assessment Prediction System (NAPS)
[AD-A258865] p 1652 N93-19075
A numerical field experiment approach for determining probabilities of microburst intensity p 1419 N93-19599
Toward model-based discovery: A case study in ecosystem prediction p 1689 N93-19721
**PREDICTIONS**
Development of a standard set of software indicators for aeronautical systems center
[AD-A258424] p 1616 N93-17863
Predit: A temporal predictive framework for scheduling systems p 1639 N93-18691
Development and verification of methods for predicting flow rates through leaks in valves and couplings
[NASA-CR-192270] p 1533 N93-19013
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635
Prediction of success from training p 1430 N93-19702
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 1417 N93-19922
**PREFLIGHT ANALYSIS**
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050
**PREFLIGHT OPERATIONS**
Rescheduling with iterative repair p 1637 N93-18679
**PREMIXED FLAMES**
Time-dependent computational studies of premixed flames in microgravity
[NASA-CR-191051] p 1498 N93-18387
**PREPROCESSING**
Navigation of AVHRR/NOAA images: Operational procedure for SUN workstation
[INPE-5354-RPQ/654] p 1686 N93-18231

Enhancement of audio localization cue synthesis by adding environmental and visual cues
[AD-A259041] p 1652 N93-19001

**PRESSURE DEPENDENCE**
Piezoelectric response of precisely poled PVDF to shock compression greater than 10 GPa
[DE93-002469] p 1539 N93-19636

**PRESSURE DISTRIBUTION**
High speed laminar flow over cavities
[AERO-REPT-9110] p 1526 N93-18130
Hypersonic flows as related to the national aerospace plane
[NASA-CR-191980] p 1406 N93-18378
Experimental and numerical examinations of the influence of inlet distortion perturbations on the working behavior of turbofan compressors
[ETN-93-92733] p 1449 N93-18628
Experimental investigation of rotating stall in a mismatched three stage axial flow compressor p 1531 N93-18727
Performance of controlled diffusion blades p 1532 N93-18735
Numerical investigation of performance degradation of wings and rotors due to icing
[NASA-CR-192233] p 1440 N93-18783
Numerical computations using multi-domain technique p 1409 N93-19277
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320
Wind tunnel testing and CFD simulation in Mitsubishi Heavy Industries p 1416 N93-19325

**PRESSURE EFFECTS**
Optically pumped continuous wave CF4 laser
[ISBN-90-9004442-6] p 1541 N93-18429

**PRESSURE GRADIENTS**
Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053

**PRESSURE MEASUREMENT**
Experimental investigations of radial loads induced by partial cavitation with the LH2 Vulcain inducer
[ETN-93-93023] p 1525 N93-18094
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 1446 N93-19927

**PRESSURE OSCILLATIONS**
Oscillatory internal flow fields studies --- flow oscillations in solid propellant rocket engines
[AD-A258005] p 1524 N93-17815

**PRESSURE VESSELS**
Defect tolerance of hybrid pressure vessels: The total reliability versus total failure as an interpretation criterion
[ILR-MITT-272(1992)] p 1552 N93-18097

**PRESSURIZED CABINS**
Pressurized lunar rover
[NASA-CR-192034] p 1544 N93-18015
Design of a pressurized lunar rover
[NASA-CR-192033] p 1545 N93-18016

**PRESSURIZED WATER REACTORS**
Fuzzy logic: Artificial neural networks integration for transient identification
[DE93-002232] p 1632 N93-18389

**PREVENTION**
The US Navy Healthy Back Program: Effect on back knowledge among recruits
[AD-A258368] p 1596 N93-18210

**PRINCIPAL COMPONENTS ANALYSIS**
The efficacy of biographical inventory data in predicting early attrition in naval aviation officer candidate training
[AD-A258025] p 1601 N93-17919

**PROBABILITY DENSITY FUNCTIONS**
MOCAL: A Monte Carlo albedo code
[DE93-002049] p 1654 N93-18388

**PROBABILITY DISTRIBUTION FUNCTIONS**
Measurement of the hit distribution in resistive plate chambers equipped with a digital read out of the charge induced on strips
[NOTA-INTERNA-990] p 1659 N93-17940
MOCAL: A Monte Carlo albedo code
[DE93-002049] p 1654 N93-18388
Modeling expert opinion: Likelihoods under incomplete probabilistic specification
[AD-A258775] p 1649 N93-18946
Probabilistic data dependencies p 1688 N93-19713

**PROBABILITY THEORY**
An introduction to the statistical analysis of engineering data
[ESDU-92040] p 1648 N93-17950
An information theoretic approach to distributed inference and learning
[AD-A257935] p 1685 N93-18099
An examination of the performance of a natural truncation point and acceptance rule for a curtailed Wald sequential sampling plan with Bernoulli parameters
[AD-A257579] p 1649 N93-18180
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184
Possibilistic clustering for shape recognition p 1618 N93-18228
Location and distribution of local optima
[AD-A257791] p 1645 N93-18237
Discrete time system piecewise linear filtering with small observation noise
[INRIA-RR-1451] p 1633 N93-18611
Derivatives of likelihood ratios and smoothed perturbation analysis for the routing problem
[INRIA-RR-1495] p 1647 N93-18653
Probabilistic methods in nuclear power plant component ageing analysis
[VTT-PUBS-94] p 1660 N93-18696
Modeling expert opinion: Likelihoods under incomplete probabilistic specification
[AD-A258775] p 1649 N93-18946
Network problem threshold p 1516 N93-19397
Maximal codeword lengths in Huffman codes p 1513 N93-19427
Comparisons of theoretical limits for source coding with practical compression algorithms p 1513 N93-19428
Measurement uncertainty analysis techniques applied to PV performance measurements
[DE93-000019] p 1553 N93-19438
Assessment of helicopter component statistical reliability computations
[AD-A258931] p 1441 N93-19447
Detecting change as it occurs
[NASA-CR-191939] p 1574 N93-19484
A numerical field experiment approach for determining probabilities of microburst intensity p 1419 N93-19599
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 1431 N93-19707
Probabilistic data dependencies p 1688 N93-19713
Extracting knowledge from data: SYS6688 approach p 1688 N93-19715
CYRANO-3: An experiment in representational invention p 1629 N93-19733

**PROBLEM SOLVING**
Alternative optimization strategies for large-scale production-allocation problems
[REPT-92-13] p 1615 N93-17833
Preconditioned conjugate gradient techniques for the solution of time-dependent differential equations
[REPT-92-19] p 1643 N93-17844
Range scheduling automation for the Air Force satellite control network: A case study in computer system development
[AD-A258142] p 1454 N93-18084
An algorithm for the solution of a traveling salesman problem to minimize the average time to demand satisfaction
[AD-A258301] p 1645 N93-18302
Study and implementation of a set of primitives for constraint satisfaction in finite domains
[INRIA-RR-1389] p 1646 N93-18436
Randomization yields simple O(n log* n) algorithms for difficult Omega(n) problems
[INRIA-RR-1412] p 1621 N93-18455
Extended abstract: Managing disjunction for practical temporal reasoning p 1634 N93-18664
CABINS: Case-based interactive scheduler p 1635 N93-18670
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
Learning to integrate reactivity and deliberation in uncertain planning and scheduling problems p 1638 N93-18684
Predit: A temporal predictive framework for scheduling systems p 1639 N93-18691
Case-based reasoning for real-time problem solving
[AD-A258697] p 1641 N93-19865

**PROCESS CONTROL (INDUSTRY)**
Modeling process redesign
[AD-A257561] p 1617 N93-17983

**PRODUCT DEVELOPMENT**
SNECMA M88 engine development status
[ASME-90-GT-118] p 1448 N93-17849
The beta-CEZ, a new high performance titanium alloy for aerospace engines
[DS-2022] p 1485 N93-17852
Development of a standard set of software indicators for aeronautical systems center
[AD-A258424] p 1616 N93-17863
Stealth in the storm: Sorting the facts from the fiction
[AD-A258440] p 1434 N93-17889
Increase of operational reliability by feedback experience/return in the technical and industrial field
[ETN-93-93014] p 1685 N93-18075
The product and services design and development software aided tool RELIASEP
[ETN-93-93015] p 1617 N93-18076
A clearinghouse for software reuse: Lessons learned from RAPID/DSRS initiatives
[AD-A258782] p 1625 N93-19062
Software measurement guidebook, version 02.00.02
[AD-A258961] p 1625 N93-19083
Process engineering with the evolutionary spiral process model, version 01.00.01
[AD-A258966] p 1625 N93-19085
Process definition and modeling guidebook, version 01.00.02
[AD-A258967] p 1625 N93-19086
DARPA initiative in concurrent engineering (DICE). Phase 4: Electronics pilot project
[AD-A258927] p 1522 N93-19446
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 1443 N93-19906

**PRODUCTION ENGINEERING**
Ultrastructure processing of advanced materials
[AD-A258805] p 1479 N93-18984

**PRODUCTION PLANNING**
Alternative optimization strategies for large-scale production-allocation problems
[REPT-92-13] p 1615 N93-17833
Adaptive planning for applications with dynamic objectives p 1635 N93-18666
Global planning of several plants p 1635 N93-18667
The MICRO-BOSS scheduling system: Current status and future efforts p 1635 N93-18668
Uncertainty management by relaxation of conflicting constraints in production process scheduling p 1636 N93-18673
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681
Completable scheduling: An integrated approach to planning and scheduling p 1638 N93-18685
Constraint monitoring in TOSCA p 1639 N93-18693

**PRODUCTIVITY**
Late quaternary time series of Arabian Sea productivity: Global and regional signals p 1580 N93-18969

**PROGRAM VERIFICATION (COMPUTERS)**
Unit analysis and testing
[AD-A258435] p 1616 N93-17867
Software size measurement: A framework for counting source statements
[AD-A258304] p 1620 N93-18303
A model for merging software prototypes
[AD-A258781] p 1624 N93-18948

**PROGRAMMING**
Human performance assessment methods
[AGARD-AG-308-ADD] p 1603 N93-18868
Numerical Wind Tunnel: Requirements and the outline p 1411 N93-19288

**PROGRAMMING ENVIRONMENTS**
The design and implementation of a user interface for the computer-aided prototyping system
[AD-A258017] p 1614 N93-17818
Wrapping mathematical tools p 1648 N93-18504
Creating and manipulating a domain-specific formal object base to support a domain-oriented application composition system
[AD-A259018] p 1624 N93-19016

**PROGRAMMING LANGUAGES**
Modeling process redesign
[AD-A257561] p 1617 N93-17983
The dynamic semantics of Kernel ELLA
[AD-A258221] p 1617 N93-18024
G-LOG: A graph based query language
[REPT-92-013] p 1618 N93-18198
Integration of deductive and object oriented data bases: Theoretical and implementation aspects
[REPT-92-039] p 1618 N93-18199
Implementation of inheritance by means of relations
[INRIA-RR-1417] p 1621 N93-18513
An imperative language for task-level programming: Definition in temporal logics
[INRIA-RR-1406] p 1622 N93-18575
Task-level robot programming combining object-oriented design and synchronous approach: A tentative study
[INRIA-RR-1441] p 1622 N93-18610
A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649
The ESTEREL language
[INRIA-RR-1487] p 1623 N93-18651

Creating and manipulating a domain-specific formal object base to support a domain-oriented application composition system
[AD-A259018] p 1624 N93-19016
Creating and manipulating formalized software architectures to support a domain-oriented application composition system
[AD-A258900] p 1626 N93-19335
Unified approach for computer vision problems: Mathematical morphology
[INPE-5391-TAE/012] p 1641 N93-19640

**PROGRAMS**
EISCAT educational programs p 1579 N93-18745

**PROJECT MANAGEMENT**
An analysis of contract cost overruns and their impacts
[AD-A258422] p 1683 N93-17862
Development of a prototype Air Force Institute of Technology (AFIT) Research Management System (ARMS)
[AD-A258267] p 1685 N93-18028
National Airspace System flight planning operational concept NAS-SR-131
[DOT/FAA/SE-92/4] p 1418 N93-18031
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Metric transition
[NASA-TM-108599] p 1499 N93-18354
Metrication report to the Congress
[NASA-TM-108601] p 1499 N93-18355
Tech transfer outreach
[DE93-001553] p 1694 N93-18533
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
The future of the US space launch capability p 1456 N93-18865
A model of Global Positioning System (GPS) Master Control Station (MCS) operations
[AD-A258846] p 1433 N93-19067
Process engineering with the evolutionary spiral process model, version 01.00.01
[AD-A258966] p 1625 N93-19085
Process definition and modeling guidebook, version 01.00.02
[AD-A258967] p 1625 N93-19086
Corporate information management and business process improvement under the unit cost program: An analysis of a system for the Air Force Institute of Technology
[AD-A258984] p 1687 N93-19098
Advanced cockpit-mission and image management p 1607 N93-19760
The MOD (UK) integrated helmet technical demonstrator programme p 1609 N93-19769
Program manager: Journal of the Defense Systems Management College, volume 21, number 6, November-December 1992
[AD-A258766] p 1553 N93-19870

**PROJECT PLANNING**
SNECMA M88 engine development status
[ASME-90-GT-118] p 1448 N93-17849
Project Columbiad: Mission to the Moon. Book 2, volume 3: Stage configuration designs; volume 4: Program plan
[NASA-CR-192037] p 1733 N93-17999
Space radiation health program plan
[NASA-TM-108036] p 1598 N93-18375
Materials development program, ceramic technology project addendum to program plan: Cost effective ceramics for heat engines
[DE93-003663] p 1494 N93-18537
Space physics strategy: Implementation study. Volume 2: Program plan
[NASA-TM-108143] p 1453 N93-18544
Cardiopulmonary discipline science plan
[NASA-TM-108040] p 1599 N93-19648
Neuroscience discipline science plan
[NASA-TM-108041] p 1600 N93-19882
Regulatory physiology discipline science plan
[NASA-TM-108038] p 1594 N93-19891
Musculoskeletal discipline science plan
[NASA-TM-108039] p 1600 N93-19892

**PROJECT SETI**
The Telecommunications and Data Acquisition Report
[NASA-CR-191228] p 1511 N93-19413
SETI low-frequency feed design study for DSS 24 p 1514 N93-19433

**PROJECTILES**
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994

**PROLATENESS**
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model
[AD-A258197] p 1502 N93-18249

**PROP-FAN TECHNOLOGY**
Simulation of unsteady rotational flow over propfan configuration
[NASA-CR-192234] p 1407 N93-18585
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 4: Advanced fan section aerodynamic analysis computer program user's manual
[NASA-CR-187127] p 1449 N93-18702
Structural dynamic testing of composite propfan blades for a cruise missile wind tunnel model
[NASA-TM-105272] p 1558 N93-18875
Propfan noise propagation
[NASA-CR-192221] p 1652 N93-19888

**PROPAGATION VELOCITY**
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961

**PROPELLANT CASTING**
NASA's Advanced solid rocket motor
[NASA-CR-191950] p 1475 N93-19825

**PROPELLANT CHEMISTRY**
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840

**PROPELLANT COMBUSTION**
Performance and heat transfer characteristics of a carbon monoxide/oxygen rocket engine
[NASA-TM-105897] p 1474 N93-18878
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192285] p 1497 N93-19412

**PROPELLANTS**
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410

**PROPELLER FANS**
Structural dynamic testing of composite propfan blades for a cruise missile wind tunnel model
[NASA-TM-105272] p 1558 N93-18875
Propfan noise propagation
[NASA-CR-192221] p 1652 N93-19888

**PROPELLER NOISE**
Propfan noise propagation
[NASA-CR-192221] p 1652 N93-19888

**PROPELLERS**
Professor Wittenberg: His speciality and versatility
[ISBN-90-6275-670-0] p 1403 N93-19002
Propelling force and resistance p 1403 N93-19003

**PROPULSION SYSTEM CONFIGURATIONS**
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155

**PROPULSION SYSTEM PERFORMANCE**
Near term NEP missions and systems p 1661 N93-18637
MPD thruster technology p 1666 N93-18639
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644
Recent advances in MPD thruster research at Princeton p 1667 N93-18645
Stall and surge in axial flow compressors p 1530 N93-18724
Experimental investigation of rotating stall in a mismatched three stage axial flow compressor p 1531 N93-18727
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089

**PROPULSIVE EFFICIENCY**
Design of high speed proprotors using multiobjective optimization techniques p 1437 N93-18065
Optimum design of high speed prop rotors including the coupling of performance, aeroelastic stability and structures p 1438 N93-18066

**PROTECTION**
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 1428 N93-19693

**PROTECTIVE COATINGS**
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051
Oxidation resistant overlay coatings for low expansion substrates
[NASA-CASE-LEW-15154-1] p 1495 N93-19332
Development of an electrochemical method for field testing of protective coatings
[AD-A258754] p 1496 N93-19866

**PROTEIN CRYSTAL GROWTH**
Protein crystal growth in low gravity
[NASA-CR-191770] p 1498 N93-17886

**PROTEINS**
Area detectors for neutron protein crystallography
[DE93-001973] p 1673 N93-18514
The effects of prolonged growth in elevated CO2 concentrations in the field on the amounts of different leaf proteins
[DE93-002940] p 1594 N93-19751

**PROTOCOL (COMPUTERS)**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962
Improving security in the Fiber Distributed Data Interface (FDDI) protocol
[AD-A257546] p 1501 N93-17963
NPSNET: Aural cues for virtual world immersion
[AD-A257835] p 1503 N93-18417
A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649
Development of a protocol usage guideline for conservative parallel simulations
[AD-A258851] p 1630 N93-19070
PDES Application Protocol Suite for Composite (PAS-C) scoping and benefits criteria. Volume 1: Executive summary and overview
[AD-A258833] p 1687 N93-19074
Principles for integrating voice I/O in a complex interface p 1610 N93-19774

**PROTON FLUX DENSITY**
EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989 p 1728 N93-19557

**PROTON PRECIPITATION**
Enhancement of the gyro lines by suprathermal particles p 1724 N93-19535

**PROTOPLANETS**
Comets: Role and importance to exobiology p 1592 N93-18556

**PROTOTYPES**
Development of a prototype Air Force Institute of Technology (AFIT) Research Management System (ARMS)
[AD-A258267] p 1685 N93-18028
Range scheduling automation for the Air Force satellite control network: A case study in computer system development
[AD-A258142] p 1454 N93-18084
A classification and bibliography of software prototyping
[AD-A258466] p 1619 N93-18268
An investigation of a prototype OASYS effectiveness in maneuvering flight
[AD-A257901] p 1439 N93-18339
Data management plan for the Oak Ridge Environmental Information System, Version 1.1
[DE92-041219] p 1687 N93-18526
Time management situation assessment (TMSA) p 1639 N93-18692
Integrated modeling of advanced optical systems p 1463 N93-18832
A model for merging software prototypes
[AD-A258781] p 1624 N93-18948
Creating and manipulating formalized software architectures to support a domain-oriented application composition system
[AD-A258900] p 1626 N93-19335
Design and development of a high-speed Winograd fast Fourier transform processor board
[AD-A258919] p 1522 N93-19342
Examining a layered approach to function and design representation for reusable software components
[AD-A258920] p 1626 N93-19343
Development of a task analysis tool to facilitate user interface design p 1628 N93-19404
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407
Heavy ion backscattering spectrometry for high sensitivity
[DE93-002489] p 1484 N93-19624
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 1443 N93-19906

**PROVING**
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762

**PROXIMITY**
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282

**PSEUDOMONAS**
Biodegradation of Jet Fuel-4 (JP-4) in sequencing batch reactors
[AD-A258020] p 1496 N93-17917

**PSYCHOLOGICAL EFFECTS**
Human factors in aircraft accident investigation p 1422 N93-19654

**PSYCHOLOGICAL FACTORS**
Effectiveness of birthdate biorhythm theory on flight accidents p 1431 N93-19710
**PSYCHOLOGICAL TESTS**
Comparing performance on implicit memory tests [AD-A258168] p 1602 N93-17921
Diagnosing knowledge states in algebra using the rule space model [AD-A257757] p 1645 N93-18246
Using constraint satisfaction networks to study aircrew selection for advanced cockpits [AD-A258151] p 1606 N93-18293
**PSYCHOLOGY**
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 1430 N93-19704
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 1431 N93-19709
**PSYCHOMETRICS**
A computer-based visual analog scale [AD-A258152] p 1597 N93-18280
Human performance assessment methods [AGARD-AG-308-ADD] p 1603 N93-18868
**PSYCHOPHYSICS**
Spatio-temporal masking: Hyperacuity and local adaptation [AD-A257934] p 1595 N93-18006
Decision paths in complex tasks [NASA-CR-192121] p 1603 N93-18359
**PSYCHOPHYSIOLOGY**
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 1431 N93-19707
**PULMONARY CIRCULATION**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin [AD-A258185] p 1595 N93-17900
**PULMONARY FUNCTIONS**
Publications of the Space Physiology and Countermeasures Program, Cardiopulmonary Discipline: 1980-1990 [NASA-CR-4475] p 1598 N93-18376
Cardiopulmonary discipline science plan [NASA-TM-108040] p 1599 N93-19648
**PULSARS**
Two high-sensitivity pulsar searches p 1696 N93-19047
**PULSE CODE MODULATION**
The use of subcarriers in future DSN missions p 1507 N93-18915
**PULSE COMPRESSION**
A bandwidth extrapolation technique for improved range resolution of coherent radar data, revision 1 [AD-A258462] p 1502 N93-18262
**PULSE DOPPLER RADAR**
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
**PULSE DURATION**
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm [NASA-CR-192156] p 1541 N93-18772
Laser beam diagnostics for kilowatt power pulsed YAG laser [DE93-002928] p 1542 N93-19515
**PULSE RATE**
Optimization of flow-injection analysis for on-line in-process control [ETN-92-92826] p 1499 N93-18444
**PULSED LASER DEPOSITION**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser [AD-A257551] p 1491 N93-17966
**PULSED LASERS**
A Ti:Sapphire laser for the new polarized electron source [DE93-004016] p 1541 N93-18448
High-temperature superconducting electronics p 1523 N93-18464
Novel short-wavelength lasers p 1543 N93-18472
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm [NASA-CR-192156] p 1541 N93-18772
Laser beam diagnostics for kilowatt power pulsed YAG laser [DE93-002928] p 1542 N93-19515
**PURIFICATION**
Application of molten salts in pyrochemical processing of reactive metals [DE92-018618] p 1489 N93-19437
**PYROLYSIS**
Microgravity ignition experiment [NASA-CR-192057] p 1498 N93-18053
Toxicological investigations of flight accidetns: Findings and methods p 1428 N93-19695
**PYROXENES**
Refining the granulite suite p 1736 N93-18789

## Q

**Q FACTORS**
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
Experimental study of the selective properties of coaxial resonators [INPE-5375-PRE/1748] p 1522 N93-19740
Consumer interest in the air safety data of the airline quality rating. Testimony to the US House of Representatives, Committee on Government Operations, Government Activities and Transportation Subcommittee [NIAR-92-4] p 1432 N93-19941
**Q SWITCHED LASERS**
Method and apparatus for detection and control of prelasing in a Q-switched laser [NASA-CASE-LAR-14790-1] p 1542 N93-19373
**QUADRANTID METEOROIDS**
P/Machholz 1986 8 and quadrantid meteoroid stream. Orbital evolution and relationship p 1700 N93-19119
Evolution of the Quadrantid meteor stream p 1708 N93-19177
The spatial distribution of large cometary meteoroids in the inner solar system p 1712 N93-19208
**QUADRATIC EQUATIONS**
A bibliography of the qualitative theory of quadratic systems of differential equations in the plane [REPT-92-17] p 1642 N93-17842
Phase portraits of non degenerate quadratic systems with finite multiplicity one [REPT-92-42] p 1643 N93-17874
**QUADRATIC PROGRAMMING**
Methods and convergence analysis in large scale nonlinear optimization [AD-A258182] p 1616 N93-17898
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment [AD-A258904] p 1451 N93-19351
**QUADRATURES**
The rudes and the shrewds: An experimental comparison of several evolutionary heuristics applied to the QAP problem [REPT-91-042] p 1620 N93-18325
**QUALITATIVE ANALYSIS**
Applying commercial style acquisition practices to the procurement of commercially available aircraft [AD-A258143] p 1683 N93-18087
**QUALITY**
Consumer interest in the air safety data of the airline quality rating. Testimony to the US House of Representatives, Committee on Government Operations, Government Activities and Transportation Subcommittee [NIAR-92-4] p 1432 N93-19941
**QUALITY CONTROL**
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements [AD-A257548] p 1476 N93-17964
Segregation of defects in wrought alloy 718: Management of industrial safeguards [DS-2038] p 1486 N93-18150
A paradigm shift in Air Force medicine [AD-A258334] p 1596 N93-18159
An examination of the performance of a natural truncation point and acceptance rule for a curtailed Wald sequential sampling plan with Bernoulli parameters [AD-A257579] p 1649 N93-18180
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716
Structural Analysis 1992 [VTT-SYMP-128] p 1556 N93-18749
QA system for structural analysis p 1557 N93-18755
Integrated Blade Inspection System (IBIS) upgrade study [AD-A258912] p 1449 N93-19356
The international forum on airline quality teaching guide [NIAR-92-13] p 1680 N93-19376
Measurement uncertainty analysis techniques applied to PV performance measurements [DE93-000019] p 1553 N93-19438
Measurement process error determination and control [DE93-002948] p 1553 N93-19753
A Research Agenda for Scientific and Technical Information [AGARD-AR-316] p 1692 N93-19796
**QUANTILES**
Modeling expert opinion: Likelihoods under incomplete probabilistic specification [AD-A258775] p 1649 N93-18946
**QUANTUM CHEMISTRY**
Theory of artifact diamond [AD-A258474] p 1672 N93-18311
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems [AD-A258693] p 1678 N93-19862
**QUANTUM CHROMODYNAMICS**
High energy physics [DE93-002411] p 1659 N93-17911
Solid state and the standard model [NOTA-INTERNA-980] p 1653 N93-17932
Heavy quarks in lattice QCD [PREPRINT-786] p 1654 N93-18324
Workshop on hadron structure from photo-reactions at intermediate energies [DE93-001904] p 1655 N93-18509
Theoretical studies in medium-energy nuclear and hadronic physics [DE93-004373] p 1657 N93-19503
Software for parallel processing applications [DE93-002510] p 1627 N93-19744
**QUANTUM EFFICIENCY**
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142
**QUANTUM ELECTRODYNAMICS**
Theoretical studies in medium-energy nuclear and hadronic physics [DE93-004373] p 1657 N93-19503
**QUANTUM ELECTRONICS**
Solid-state dynamics and quantum transport in novel semiconductor nanostructures [AD-A258482] p 1672 N93-18314
Research programs at the Research Laboratory of Electronics p 1522 N93-19482
Organization of the Optical Society of America Photonic Science Topical Meeting series (1991), volume 16. Conference edition: Summaries of papers presented at the persistent spectral hole-burning: Science and applications topical [AD-A258663] p 1664 N93-19947
**QUANTUM MECHANICS**
Yang phase for non-Hermitian systems and biunitary transformations [PREPRINT-782] p 1645 N93-18197
Nanotechnology p 1678 N93-18489
Classical and quantum dynamics of the impulsively driven hydrogen atom [DE93-002430] p 1656 N93-19477
Decoherence of multimode thermal squeezed coherent states [DE93-002627] p 1679 N93-19489
**QUANTUM THEORY**
Lie-admissible perturbation methods for open quantum systems [PREPRINT-845] p 1651 N93-17840
**QUANTUM WELLS**
Theoretical investigations of ultrafast phenomena in condensed matter [AD-A258496] p 1661 N93-18088
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems [AD-A257799] p 1671 N93-18238
Optical and electronic properties of lattice-matched and strained semiconductor superlattices [ETN-92-92828] p 1673 N93-18446
Device applications of layered structures p 1523 N93-18461
Infrared photoluminescence spectroscopy p 1485 N93-18466
Design and characterization of optically pumped vertical cavity surface emitting lasers [AD-A258815] p 1541 N93-18994
Long wavelength infrared detector [NASA-CASE-NPO-17543-2-CU] p 1538 N93-19387
**QUARK MODELS**
Workshop on hadron structure from photo-reactions at intermediate energies [DE93-001904] p 1655 N93-18509
Incremental generation and exploration of hidden structure p 1690 N93-19726
**QUARKS**
High energy physics [DE93-002411] p 1659 N93-17911
Quark/gluon jet separation in the photoproduction region with a neural network algorithm [NOTA-INTERNA-992] p 1653 N93-17943
Heavy quarks in lattice QCD [PREPRINT-786] p 1654 N93-18324
**QUATERNIONS**
An intrinsic construction of the algebra of quaternions [REPT-92-31] p 1643 N93-17845
**QUERY LANGUAGES**
G-LOG: A graph based query language [REPT-92-013] p 1618 N93-18198
**QUEUEING THEORY**
On the optimality of LEPT and micron rules for parallel processors and dependent arrival processes [TW-92-01] p 1630 N93-18443

Optimality of a threshold policy on the M/M/1 queue with repeated vacations
[INRIA-RR-1419] p 1632 N93-18515
On optimal polling policies
[INRIA-RR-1541] p 1633 N93-18624
Derivatives of likelihood ratios and smoothed perturbation analysis for the routing problem
[INRIA-RR-1495] p 1647 N93-18653

Infrared photoluminescence spectroscopy p 1485 N93-18466
**RADIATION DISTRIBUTION**
Meteor radiant mapping with MU radar p 1699 N93-19259
**RADIATION DOSAGE**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz
[AD-A258136] p 1595 N93-17985
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model
[AD-A258197] p 1502 N93-18249

Indium phosphide photovoltaic technology p 1572 N93-18476
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events [NASA-TP-3300] p 1746 N93-19109

**RADIATION EFFECTS**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz [AD-A258136] p 1595 N93-17985
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model [AD-A258197] p 1502 N93-18249
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films [DE93-002325] p 1677 N93-19742
Health effects of low-frequency electric and magnetic fields [DE93-005675] p 1599 N93-19838

**RADIATION HARDENING**
VLSI microelectronics research p 1523 N93-18462
Portable RF leak detector evaluations and UDRI/MRC HAMS refinements [AD-A258819] p 1509 N93-19073

**RADIATION HAZARDS**
Space radiation health program plan [NASA-TM-108036] p 1598 N93-18375
Target fragmentation in radiobiology [NASA-TM-4408] p 1598 N93-18381

**RADIATION PROTECTION**
Space radiation health program plan [NASA-TM-108036] p 1598 N93-18375
Multi-function visor p 1609 N93-19770

**RADIATION SHIELDING**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission [NASA-TM-4422] p 1746 N93-18014
Pressurized lunar rover [NASA-CR-192034] p 1544 N93-18015
Design of a pressurized lunar rover [NASA-CR-192033] p 1545 N93-18016
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats [NASA-CR-192030] p 1605 N93-18018
Preliminary design of a radiator shading device for a lunar outpost [NASA-CR-192016] p 1605 N93-18019
Shielding from space radiations [NASA-CR-191966] p 1655 N93-18567
Resource availability at Taurus-Littrow p 1736 N93-18792
A fundamental study of contribution transport theory and channel theory applications [DE93-004315] p 1656 N93-19501

**RADIATION SOURCES**
Synchrotron radiation sources and condensers for projection x ray lithography [DE93-002964] p 1664 N93-19511

**RADIATION THERAPY**
Target fragmentation in radiobiology [NASA-TM-4408] p 1598 N93-18381

**RADIATION TOLERANCE**
Monopole elements with disk ground planes on flat earth: Atlas of directivity, radiation efficiency, radiation resistance, and input impedance [AD-A257911] p 1503 N93-18366

**RADIATION TRANSPORT**
A fundamental study of contribution transport theory and channel theory applications [DE93-004315] p 1656 N93-19501

**RADIATIVE TRANSFER**
A plan for developing a hierarchal three-dimensional landscape signature model [AD-A257550] p 1564 N93-17965
Low cloud investigations for project FIRE: Island studies of cloud properties, surface radiation, and boundary layer dynamics. A simulation of the reflectivity over a stratocumulus cloud deck by the Monte Carlo method [NASA-CR-192083] p 1585 N93-18001
A microwave scattering model for layered vegetation p 1565 N93-18074
ARM Fourier transform spectrometer data analysis tools [DE93-004648] p 1586 N93-18454

**RADICALS**
Formation of ions and radicals from icy grains in comets p 1708 N93-19172
Cometary implications of recent laboratory experiments on the photochemistry of the C2H and C3H2 radicals p 1708 N93-19173
Solvation effects on reactive intermediates: The benzyl radical and its clusters with Ar, N2, CH4, C2H6, and C3H88 [AD-A258764] p 1658 N93-19868

**RADII**
Minimum size of disc cams with radial translating roller followers [ESDU-92005] p 1544 N93-17998

**RADIO ASTRONOMY**
PARAS program: Phased array radio astronomy from space [NASA-CR-192025] p 1695 N93-18115
Observations of OH in comet Levy with the Nancay radio telescope p 1697 N93-19129
Observations of cometary parent molecules with the IRAM radio telescope p 1697 N93-19143
Radio spectroscopy of comets: Recent results and future prospects p 1697 N93-19144

**RADIO COMMUNICATION**
A technical review of cellular radio and analysis of a possible protocol [AD-A257560] p 1501 N93-17982

**RADIO CONTROL**
Operational and research aspects of a radio-controlled model flight test program [NASA-TM-104266] p 1440 N93-18616

**RADIO EMISSION**
The effects of correlated noise in intra-complex DSN arrays for S-band Galileo telemetry reception p 1458 N93-18910
Observations of OH in comet Levy with the Nancay radio telescope p 1697 N93-19129

**RADIO EQUIPMENT**
A technical review of cellular radio and analysis of a possible protocol [AD-A257560] p 1501 N93-17982
Portable RF leak detector evaluations and UDRI/MRC HAMS refinements [AD-A258819] p 1509 N93-19073

**RADIO FREQUENCIES**
Discrimination of ionic species from broad-beam ion sources [NASA-CR-4483] p 1654 N93-18140
Field-emitter arrays for RF vacuum microelectronics [AD-A258211] p 1518 N93-18203
A method of optimal radio frequency assignment for deep space missions p 1508 N93-18922
A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923
Field emitter array RF amplifier development project. Phase 1: Cathode technology development [AD-A258768] p 1521 N93-19048
Portable RF leak detector evaluations and UDRI/MRC HAMS refinements [AD-A258819] p 1509 N93-19073
Computer codes for RF cavity design [DE93-004002] p 1515 N93-19509
Reducing bunch disruption in transition crossing by modification of the RF waveform [DE93-002509] p 1515 N93-19625
Design of RF conditioner cavities [DE93-002576] p 1543 N93-19895

**RADIO FREQUENCY DISCHARGE**
A two-dimensional particle simulation of parallel plate Radio-Frequency (RF) glow discharges [AD-A258856] p 1510 N93-19349

**RADIO FREQUENCY INTERFERENCE**
Portable RF leak detector evaluations and UDRI/MRC HAMS refinements [AD-A258819] p 1509 N93-19073

**RADIO FREQUENCY SHIELDING**
Portable RF leak detector evaluations and UDRI/MRC HAMS refinements [AD-A258819] p 1509 N93-19073

**RADIO METEOROLOGY**
Radar based case study of a Northeast Colorado winter storm [AD-A258256] p 1585 N93-17901
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves [AD-A257969] p 1586 N93-18194

**RADIO METEORS**
Diurnal variation of overdense meteor echo duration and ozone p 1718 N93-19243

**RADIO NAVIGATION**
The Telecommunications and Data Acquisition [NASA-CR-191998] p 1504 N93-18897

**RADIO OCCULTATION**
Mars observer radio science (MORS) observations in polar regions p 1743 N93-19818

**RADIO RECEIVERS**
Acquisition of direct sequence spread spectrum signals using digital signal processing techniques [AD-A258974] p 1510 N93-19094

**RADIO SOURCES (ASTRONOMY)**
The goldstone real-time connected element interferometer p 1512 N93-19417

**RADIO SPECTRA**
The correlation between water production rates and visual magnitudes in comets p 1709 N93-19181
Submillimeter molecular line observations of cometary Levy (1990c) p 1698 N93-19237
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609

**RADIO SPECTROSCOPY**
Radio spectroscopy of comets: Recent results and future prospects p 1697 N93-19144

**RADIO TELEMETRY**
The effects of correlated noise in intra-complex DSN arrays for S-band Galileo telemetry reception p 1458 N93-18910

**RADIO TELESCOPES**
PARAS program: Phased array radio astronomy from space [NASA-CR-192025] p 1695 N93-18115

**RADIO TRANSMISSION**
Coupling losses in multiple beam antennas [AD-A257494] p 1500 N93-17903

**RADIOACTIVE AGE DETERMINATION**
Isotopic ages and characteristics of ancient (pre-Serenitatis) crustal rocks at Apollo 17 p 1738 N93-18808

**RADIOACTIVE DECAY**
Lie-isotropic energy-dependence of the neutral K(sub S) lifetime [PREPRINT-874] p 1652 N93-17824
Heavy quarks in lattice QCD [PREPRINT-786] p 1654 N93-18324
Nuclear structure from radioactive decay [DE93-002795] p 1654 N93-18392
Nuclear structure studies [DE93-002791] p 1654 N93-18402
Neutrino masses and solar neutrinos [DE93-002416] p 1655 N93-18522
Experiments on the nuclear interactions of pions and electrons [DE93-001800] p 1655 N93-18590

**RADIOACTIVE ISOTOPES**
Non-conventional measurement techniques for the determination of some long-lived radionuclides produced ion nuclear fuel: Literature survey [VTT-TIED-1357] p 1660 N93-18654
Isotopic ages and characteristics of ancient (pre-Serenitatis) crustal rocks at Apollo 17 p 1738 N93-18808

**RADIOACTIVE WASTES**
Non-conventional measurement techniques for the determination of some long-lived radionuclides produced ion nuclear fuel: Literature survey [VTT-TIED-1357] p 1660 N93-18654

**RADIOBIOLOGY**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission [NASA-TM-4422] p 1746 N93-18014
Target fragmentation in radiobiology [NASA-TM-4408] p 1598 N93-18381

**RADIOCHEMISTRY**
Proposed Lower Limits of Detection (LLD), Decision Limits (LC), and error terms for identified analytes from the inorganic, isotopic, bioassay, and organic groups [DE93-002942] p 1484 N93-19752

**RADIOGENIC MATERIALS**
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts p 1739 N93-18812

**RADIOGRAPHY**
Slit scan radiographic system for intermediate size rocket motors [NASA-CR-191798] p 1471 N93-18058
X Ray System, Lightweight Medical (XRSLM) [AD-A258159] p 1597 N93-18295

**RADIOISOTOPE BATTERIES**
Pressurized lunar rover [NASA-CR-192034] p 1544 N93-18015
Design of a pressurized lunar rover [NASA-CR-192033] p 1545 N93-18016

**RADIOLOGY**
X Ray System, Lightweight Medical (XRSLM) [AD-A258159] p 1597 N93-18295

**RADIOMETERS**
Submillimeter sources for radiometry using high power Indium Phosphide Gunn diode oscillators [NASA-CR-190885] p 1518 N93-18057
Determination of the dissipative loss of a two-port network from noise temperature measurements p 1505 N93-18904
The effect of tropospheric fluctuations on the accuracy of water vapor radiometry p 1511 N93-19416

**RADIOSONDES**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler [AD-A258189] p 1584 N93-17858

Proposal for a coordination between EISCAT and INTERBALL p 1726 N93-19544

**RAILGUN ACCELERATORS**
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling [DE93-004563] p 1456 N93-19496

**RAIN**
A comparison of airborne and ground-based radar observations with rain gages during the CaPE experiment p 1563 N93-18720

**RAIN FORESTS**
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia [AD-A257847] p 1566 N93-18346
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region [INPE-5325-PRE/1723] p 1566 N93-18761
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data [INPE-5443-TDI/489] p 1567 N93-19737
Multiple study inventory method for tropical forest [INPE-5319-PRE/1716] p 1568 N93-19790
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region [INPE-5330-PRE/1728] p 1568 N93-19821
Variational iterative method for the calculation of heat flux and mean energy balance [INPE-5236-RPQ/648] p 1583 N93-19824

**RAIN GAGES**
A comparison of airborne and ground-based radar observations with rain gages during the CaPE experiment p 1563 N93-18720

**RAMAN SPECTRA**
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets [NASA-TM-105999] p 1471 N93-17995
High-energy laser-particle interaction p 1543 N93-18469
Ion produced cometary organic crust p 1701 N93-19122
EISCAT radar observations of enhanced incoherent scatter spectra: Their relation to red aurora and field-aligned currents p 1517 N93-19581

**RAMJET ENGINES**
What is the progress in propulsion? p 1404 N93-19006

**RANDOM NOISE**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference [AD-A257580] p 1501 N93-18181
New methods for nonlinear tracking and nonlinear chaotic signal processing [AD-A259331] p 1516 N93-19850

**RANDOM PROCESSES**
Derivatives of likelihood ratios and smoothed perturbation analysis for the routing problem [INRIA-RR-1495] p 1647 N93-18653

**RANDOM SAMPLING**
Randomization yields simple O(n log* n) algorithms for difficult Omega(n) problems [INRIA-RR-1412] p 1621 N93-18455

**RANDOM VARIABLES**
An introduction to the statistical analysis of engineering data [ESDU-92040] p 1648 N93-17950

**RANDOM WALK**
Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138

**RANGE AND RANGE RATE TRACKING**
Application of high-precision two-way ranging to Galileo Earth-1 encounter navigation p 1454 N93-19415

**RANGEFINDING**
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario p 1454 N93-18899
Application of high-precision two-way ranging to Galileo Earth-1 encounter navigation p 1454 N93-19415
Spacecraft-spacecraft very long baseline interferometry. Part 1: Error modeling and observable accuracy p 1512 N93-19418

**RAPID QUENCHING (METALLURGY)**
Microstructural control of complex alloys p 1490 N93-18485

**RAPID TRANSIT SYSTEMS**
Proposal and preliminary design for a high speed civil transport aircraft. Swift: A high speed civil transport for the year 2000 [NASA-CR-192023] p 1436 N93-18049

**RARE EARTH ELEMENTS**
Atomic and electronic structure of metals and alloys: Clean surfaces and chemisorbed molecules [DE93-004371] p 1487 N93-18452

**RARE GAS-HALIDE LASERS**
Pulsed laser deposition of amorphous diamond-like carbon films with ArF (193 nm) excimer laser [AD-A257551] p 1491 N93-17966

**RAREFIED GAS DYNAMICS**
Hypersonic rarefied wake characterization [NASA-TP-3327] p 1529 N93-18604
Rarefied gas numerical wind tunnel. Part 7: OREX p 1410 N93-19280

**RATES (PER TIME)**
Optical communications and a comparison of optical technologies for a high data rate return link from Mars [NASA-TP-3180] p 1458 N93-18854
Correction of high-frequency noise-temperature inaccuracies p 1507 N93-18920

**RATINGS**
Category scaling within a given context as a common basis for the AHP, SMART and ELECTRE [REPT-92-22] p 1683 N93-17916
The airline quality report, 1992 [NIAR-92-11] p 1418 N93-18036
Consumer interest in the air safety data of the airline quality rating. Testimony to the US House of Representatives, Committee on Government Operations, Government Activities and Transportation Subcommittee [NIAR-92-4] p 1432 N93-19941

**RATIOS**
NO(+)-enhancement in the height range between 180 and 300 km during ion heating events p 1732 N93-19583

**RATS**
Dark-cycle monitoring of biological subjects on Space Station Freedom [NASA-TM-103976] p 1500 N93-19103

**RAY TRACING**
Space plasma physics research [NASA-CR-192158] p 1665 N93-18404
User's reference guide for Noise Assessment Prediction System (NAPS) [AD-A258865] p 1652 N93-19075
The CQL3D Fokker-Planck code [DE93-002962] p 1668 N93-19754

**RAYLEIGH SCATTERING**
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets [NASA-TM-105999] p 1471 N93-17995
A study of the structure of gaseous detonation waves using Rayleigh scattering p 1483 N93-19028
2D velocity and temperature measurements in high speed flows based on spectrally resolved Rayleigh scattering [NASA-TM-105784] p 1539 N93-19651

**REACTING FLOW**
Flow visualization and combustion diagnostic p 1485 N93-18480
Stability of nonequilibrium shear flows p 1534 N93-19056
Computational reacting gas dynamics [NASA-CR-192089] p 1535 N93-19859

**REACTION KINETICS**
Evaporation and burning of a spherical fuel droplet in a uniform convective flowfield [DE93-002223] p 1482 N93-17910
Heteroepitaxial diamond growth [AD-A257510] p 1671 N93-18079
Time-dependent computational studies of premixed flames in microgravity [NASA-CR-191051] p 1498 N93-18387
Nuclear structure studies [DE93-002791] p 1654 N93-18402
Novel short-wavelength lasers p 1543 N93-18472
Flame-front kinetics p 1485 N93-18481
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484
Thermal protection materials: Thermophysical property data [NASA-RP-1289] p 1558 N93-18765
Effects of surface structure and of embedded-atom pair functionals on adatom diffusion on FCC metallic surfaces [AD-A258793] p 1674 N93-18980

**REACTION PRODUCTS**
A condensed phase test cell assembly for the System for Thermal Diagnostic Studies (STDS) [AD-A258463] p 1497 N93-18242

**REACTION TIME**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz [AD-A258136] p 1595 N93-17985

**REACTIVITY**
Solid state, surface and catalytic studies of oxides [DE93-004640] p 1483 N93-18424
Learning to integrate reactivity and deliberation in uncertain planning and scheduling problems p 1638 N93-18684

**REACTOR SAFETY**
Nuclear safety for the space exploration initiative [NASA-CR-189180] p 1659 N93-18032
Probabilistic methods in nuclear power plant component ageing analysis [VTT-PUBS-94] p 1660 N93-18696

**REACTOR TECHNOLOGY**
Interagency Advanced Power Group semi-annual compilation of briefs, September 1992 [DE93-000703] p 1571 N93-19613

**REAGENTS**
Preconversion catalytic deoxygenation of phenolic functional groups [DE93-002941] p 1484 N93-19517

**REAL GASES**
Computational study of real gas effects in high speed high temperature flow [AERO-REPT-9102] p 1526 N93-18129
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective [NASA-TM-103937] p 1417 N93-19379

**REAL NUMBERS**
Comparing the theory of representations and constructing mathematics [ML-92-01] p 1644 N93-17913

**REAL TIME OPERATION**
Interactive satellite navigation for the Naval environmental operational nowcasting system [AD-A257920] p 1459 N93-18004
Holographic enhanced remote sensing system [NASA-CR-190867] p 1565 N93-18230
Near real-time stereo vision system [NASA-CASE-NPO-18593-1-CU] p 1662 N93-18276
Stimulated Brillouin scattering phase conjugation p 1664 N93-18471
Realization of real time graphics in vehicles with high dynamic motion [ETN-93-92739] p 1622 N93-18630
The ESTEREL language [INRIA-RR-1487] p 1623 N93-18651
Sensing the gas metal arc welding process [DE93-001957] p 1548 N93-18658
Adaptive planning for applications with dynamic objectives p 1635 N93-18666
Real-time scheduling using minimum search p 1637 N93-18676
Real-time contingency handling in MAESTRO p 1638 N93-18683
IOPS advisor: Research in progress on knowledge-intensive methods for irregular operations airline scheduling p 1638 N93-18686
On recursive least-squares filtering algorithms and implementations [NASA-CR-191396] p 1623 N93-18775
Evaluation of inertial devices for the control of large, flexible, space-based telerobotic arms p 1465 N93-18839
Technology test bed engine real-time failure control [NASA-CR-192414] p 1474 N93-18879
Development of an hp-version finite element method for computational optimal control [NASA-CR-192220] p 1639 N93-18882
A parallel implementation of a multisensor feature-based range-estimation method [NASA-TM-103999] p 1432 N93-18883
An intelligent real-time system architecture implemented in Ada [AD-A259002] p 1640 N93-18893
A synopsis of test results and knowledge gained from the Phase-0 CSI evolutionary model p 1467 N93-18933
Real-time diagnostics for a reusable rocket engine [NASA-TM-105792] p 1640 N93-19018
Real-time fault tolerant computer systems [AD-A258891] p 1625 N93-19334
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
NASA experimental airborne doppler radar and real time processor for wind shear detection p 1420 N93-19607
Aid in investigation by figure animation p 1422 N93-19659
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 1431 N93-19708
Case-based reasoning for real-time problem solving [AD-A258697] p 1641 N93-19865
Program manager: Journal of the Defense Systems Management College, volume 21, number 6, November-December 1992 [AD-A258766] p 1553 N93-19870

**REAL VARIABLES**
Canonical floquet perturbation theory [AD-A258970] p 1721 N93-19358

**REATTACHED FLOW**
An experimental investigation of the separating/reattaching flow over a backstep
[NASA-CR-192105] p 1408 N93-18781
**RECEIVERS**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales
p 1563 N93-18717
Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854
Application of multirate digital filter banks to wideband all-digital phase-locked loops design
p 1505 N93-18908
Correction of high-frequency noise-temperature inaccuracies p 1507 N93-18920
**RECESSION**
The interannual variability of polar cap recessions as a measure of Martian climate and weather: Using Earth-based data to augment the time line for the Mars observer mapping mission p 1742 N93-19814
**RECOMBINATION COEFFICIENT**
Determination of E region effective recombination coefficient using impulsive precipitation events
p 1723 N93-19526
**RECONNAISSANCE**
Terrain background signature research
[AD-A257917] p 1565 N93-18213
**RECONNAISSANCE AIRCRAFT**
A manned hypersonic reconnaissance vehicle which does not require airborne fueling p 1434 N93-17888
Advanced hypersonic aircraft design
[NASA-CR-192046] p 1436 N93-18037
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155
**RECONNAISSANCE SPACECRAFT**
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Low cost missions to explore the diversity of near Earth objects p 1453 N93-19124
**RECONSTRUCTION**
Reconstruction of linear and nonlinear continuous time models from discrete time sampled-data systems
[RR-406] p 1646 N93-18458
**RECRYSTALLIZATION**
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity
[AD-A257859] p 1487 N93-18308
The ancient lunar crust, Apollo 17 region
p 1736 N93-18795
**RECTANGULAR PANELS**
Effect of bow-type initial imperfection on reliability of minimum-weight, stiffened structural panels
[NASA-TP-3263] p 1556 N93-18615
**RECTANGULAR PLATES**
A numerical study of dynamic crack propagation in composites
[AD-A257544] p 1476 N93-17961
**RECTANGULAR WAVEGUIDES**
Plotting the magnitude and direction of waveguide surface currents in three dimensions
[AD-A258872] p 1509 N93-19077
**RECTANGULAR WINGS**
An experimental investigation of interacting wing-tip vortex pairs
[AD-A258471] p 1406 N93-18272
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
**RECURSIVE FUNCTIONS**
On recursive least-squares filtering algorithms and implementations
[NASA-CR-191396] p 1623 N93-18775
**RECYCLING**
Application of molten salts in pyrochemical processing of reactive metals
[DE92-018618] p 1489 N93-19437
**RED ARCS**
EISCAT radar observations of enhanced incoherent scatter spectra: Their relation to red aurora and field-aligned currents p 1517 N93-19581
**REDUCED GRAVITY**
Protein crystal growth in low gravity
[NASA-CR-191770] p 1498 N93-17886
Microgravity ignition experiment
[NASA-CR-192057] p 1498 N93-18053
Time-dependent computational studies of premixed flames in microgravity
[NASA-CR-191051] p 1498 N93-18387
A helium-3/helium-4 dilution cryocooler for operation in zero gravity
[NASA-CR-183632] p 1499 N93-18397
Microstructural development during directional solidification of peritectic alloys
[NASA-CR-192090] p 1488 N93-18603
Investigation of wheat coleoptile response to phototropic stimulations
[NASA-CR-192157] p 1593 N93-18608
A proposal to determine properties of the gravitropic response of plants in the absence of a complicating g-force (GTHRES)
[NASA-CR-192219] p 1593 N93-19377
**REDUNDANCY**
Redundant drive current imbalance problem of the Automatic Radiator Inspection Device (ARID)
p 1552 N93-19398
**REDUNDANCY ENCODING**
Fault-tolerant fiber optic backplane
[NASA-CASE-LAR-14785-1] p 1663 N93-19052
**REED-SOLOMON CODES**
An investigation of error characteristics and coding performance
[NASA-CR-191899] p 1620 N93-18373
Self-dual (48,24;12) codes p 1505 N93-18905
Binary weight distributions of some Reed-Solomon codes p 1514 N93-19430
**REELS**
US Army helicopter inertia reel locking failures
p 1427 N93-19689
**REENTRY VEHICLES**
Increase of stagnation pressure and enthalpy in shock tunnels p 1417 N93-18086
The role of computational fluid dynamics in aeronautical engineering. 9: Analysis of hypersonic equilibrium air flow p 1412 N93-19294
Computation of re-entry flows with two-temperature model p 1412 N93-19295
**REFILLING**
A new approach to plasmasphere refilling: Anomalous plasma effects
[NASA-CR-192128] p 1670 N93-19945
**REFLECTANCE**
Low cloud investigations for project FIRE: Island studies of cloud properties, surface radiation, and boundary layer dynamics. A simulation of the reflectivity over a stratocumulus cloud deck by the Monte Carlo method
[NASA-CR-192083] p 1585 N93-18001
Picosecond studies of space optical materials
p 1664 N93-18475
Polarized neutron reflection study of the unidirectional magnetic anisotropy of permalloy on Ni(0.5)Co(0.5)O
[DE93-000509] p 1487 N93-18528
Research on polycrystalline thin-film CuGaInSe2 solar cells
[DE92-016439] p 1571 N93-18656
Determination of the dissipative loss of a two-port network from noise temperature measurements
p 1505 N93-18904
The Terminal Doppler Weather Radar (TDWR) Moving Target Simulator (MTS) at Orlando, Florida
[AD-A258885] p 1509 N93-19080
Analysis of LANDSAT/TM and SPOT/XS data through vegetation indices, phase 2
[INPE-5450-RPQ/663] p 1569 N93-19857
**REFLECTING TELESCOPES**
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978
**REFLECTOR ANTENNAS**
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites
p 1507 N93-18921
**REFLECTORS**
Capacitlector-based virtual force control and centering
[NASA-CR-191805] p 1520 N93-18764
**REFLEXES**
Role of orientation reference selection in motion sickness
[NASA-CR-191912] p 1598 N93-18596
**REFRACTIVITY**
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
Exact calculation of light scattering from a particle on a mirror
[AD-A258464] p 1662 N93-18247
Thin film processing of photorefractive BaTiO3
[NASA-CR-192194] p 1673 N93-18427
Studies of regional and global tectonics and the rotation of the earth using very-long-baseline interferometry
[NASA-CR-191902] p 1577 N93-18591
Application of photorefractive crystals to solve matrix algebra problems optically
[AD-A259067] p 1662 N93-18957
**REFRACTORIES**
Impact glasses from the less than 20-micrometer fraction of Apollo 17 soils 72501 and 78221
p 1738 N93-18807
Ion produced cometary organic crust
p 1701 N93-19122
**REFRACTORY MATERIALS**
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170
The nature of comet nuclei p 1718 N93-19250
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851
**REFRIGERATORS**
A helium-3/helium-4 dilution cryocooler for operation in zero gravity
[NASA-CR-183632] p 1499 N93-18397
Helium compressors for closed-cycle, 4.5-Kelvin refrigerators p 1500 N93-18918
**REGIONAL PLANNING**
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856
**REGOLITH**
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192030] p 1605 N93-18018
The ancient lunar crust, Apollo 17 region
p 1736 N93-18795
The Apollo 17 regolith p 1737 N93-18799
Geochemistry of HASP, VLT, and other glasses from double drive tube 79001/2 p 1737 N93-18800
The Apollo 17 samples: The Massifs and landslide
p 1738 N93-18809
**REGRESSION ANALYSIS**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler
[AD-A258189] p 1584 N93-17858
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069
An orthogonal estimation algorithm for complex number systems
[RR-405] p 1621 N93-18568
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
Aircraft trajectory tracking and prediction
[AD-A259039] p 1441 N93-18999
A central limit theorem for autoregressive integrated moving average processes
[AD-A258923] p 1650 N93-19445
ARC.2: Linear regression in ABACUS
p 1629 N93-19731
**REINFORCED PLATES**
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
**REINFORCING FIBERS**
Sonogels in the preparation of advanced glass and ceramic materials
[AD-A258184] p 1491 N93-17899
Micromechanics-based analysis of fiber-reinforced laminated composites
[AD-A257816] p 1478 N93-18364
**REINFORCING MATERIALS**
Evaluation of test methods to determine the impact resistance of exterior insulation and finish systems (EIFS)
[AD-A258433] p 1490 N93-17866
Numerical control fabrication technique for dynamic composite models
[NASA-CASE-LAR-14004-1] p 1640 N93-19024
High strain-rate compression testing of a ceramic matrix composite
[AD-A258802] p 1495 N93-19439
**RELATIVE BIOLOGICAL EFFECTIVENESS (RBE)**
Target fragmentation in radiobiology
[NASA-TM-4408] p 1598 N93-18381
**RELATIVISTIC EFFECTS**
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
**RELATIVISTIC PARTICLES**
Relativistic two body equations and nuclear interactions
[NOTA-INTERNA-985] p 1653 N93-17876

A relativistic coupled-channel wave-equation with N and Delta degrees of freedom
[NOTA-INTERNA-993] p 1653 N93-17944

**RELATIVISTIC THEORY**
A relativistic study of nuclear interactions
[NOTA-INTERNA-981] p 1653 N93-17955
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187
Theoretical studies in medium-energy nuclear and hadronic physics
[DE93-004373] p 1657 N93-19503

**RELAXATION METHOD (MATHEMATICS)**
Use of the microcomputer to solve large p-median problems
[INPE-5336-PRE/1735] p 1628 N93-19786

**RELIABILITY**
Conceptual design of a high thrust Vulcain-derived low-cost rocket engine
[ETN-93-93018] p 1472 N93-18144
The Vulcain MK2 engine for Ariane 5 performance improvement
[ETN-93-93019] p 1472 N93-18145
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146
Optimum design of experiments in composite reliability
[AD-A257574] p 1477 N93-18178
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
Portable RF leak detector evaluations and UDRI/MRC HAMS refinements
[AD-A258819] p 1509 N93-19073
What makes a family reliable? p 1720 N93-19264
Availability analysis of the traveling-wave maser amplifiers in the deep space network. Part 1: The 70-meter antennas p 1514 N93-19435
NASA's Advanced solid rocket motor
[NASA-CR-191950] p 1475 N93-19825

**RELIABILITY ANALYSIS**
The product and services design and development software aided tool RELIASEP
[ETN-93-93015] p 1617 N93-18076
Application of a neural network as a potential aid in predicting NTF pump failure
[NASA-TM-107667] p 1620 N93-18332
A safety-based decision making architecture for autonomous systems
[NASA-CR-191864] p 1641 N93-19362
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 1422 N93-19653

**RELIABILITY ENGINEERING**
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
Reliability, Maintainability, and Supportability (RMS) education in engineering schools
[AD-A258260] p 1552 N93-18026
Defect tolerance of hybrid pressure vessels: The total reliability versus total failure as an interpretation criterion
[ILR-MITT-272(1992)] p 1552 N93-18097
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236

**RELIEF MAPS**
An approach to automated terrain classification from digital elevation model
[AD-A258210] p 1452 N93-17986
Updating topographic maps using orbital images in a microcomputer environment
[INPE-5409-PRE/1756] p 1567 N93-19739

**REMOTE CONTROL**
Teleprogramming: Remote site robot task execution p 1641 N93-19046
Cooperation of mobile robots for accident scene inspection
[DE93-002487] p 1551 N93-19478

**REMOTE MANIPULATOR SYSTEM**
Controlled motion in an elastic world. Research project: Manipulation strategies for massive space payloads
[NASA-CR-191895] p 1549 N93-18778
Control/structure interaction during Space Station Freedom-Orbiter berthing p 1463 N93-18831
Controls-structures-interaction dynamics during RCS control of the Orbiter/SRMS/SSF configuration p 1468 N93-18934

**REMOTE SENSING**
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada)
[NASA-CR-192091] p 1564 N93-17927
Image matching strategies for the co-registration of CAESAR sea-images: An hierarchical area-based approach, part 2
[BCRS-90-40B-PT-2] p 1564 N93-17951
Information system for co-registration of CAESAR sea-images based on two dimensional image matching techniques (SCORE). Part 3: Design and detailed design document
[BCRS-90-40C-PT-3] p 1564 N93-17953
Artificial intelligence for geologic mapping with imaging spectrometers
[NASA-CR-192086] p 1564 N93-17979
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Linear mixing model applied to coarse resolution satellite data p 1565 N93-18073
A microwave scattering model for layered vegetation p 1565 N93-18074
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A
[AD-A258299] p 1576 N93-18126
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Holographic enhanced remote sensing system
[NASA-CR-190867] p 1565 N93-18230
Analysis of AVHRR, CZCS and historical in situ data off the Oregon Coast
[NASA-CR-192120] p 1586 N93-18360
An investigation of error characteristics and coding performance
[NASA-CR-191899] p 1620 N93-18373
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430
Microwave remote sensing for forest monitoring purposes
[BCRS-91-15] p 1566 N93-18431
Feasibility of airborne laserbathymetry with respect to turbidity in Dutch coastal waters
[BCRS-91-19] p 1589 N93-18432
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525
Mars Observer: Mission toward a basic understanding of Mars p 1592 N93-18557
Sensing the gas metal arc welding process
[DE93-001957] p 1548 N93-18658
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
RAWS 1992 progress report
[NASA-CR-191382] p 1587 N93-18849
Slope effects on shortwave radiation components and net radiation
[NASA-CR-192199] p 1504 N93-18881
C-SIDE: The control-structure interaction demonstration experiment p 1467 N93-18931
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192305] p 1582 N93-19036
Analysis of kriging applied to resolution enhancement of digital satellite imagery
[AD-A258914] p 1626 N93-19337
Remote sensing of turbulence and transverse atmospheric wind profiles using optical reference sources
[AD-A258855] p 1587 N93-19370
Incorporation of orbital imagery into a cartographic data base
[INPE-5300-PRE/1705] p 1688 N93-19644
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data
[INPE-5327-PRE/1725] p 1567 N93-19646
On the computation of carbon and water cycles in forest ecosystems using a biogeochemical model and remotely sensed data
[INPE-5443-TDI/489] p 1567 N93-19737
Updating topographic maps using orbital images in a microcomputer environment
[INPE-5409-PRE/1756] p 1567 N93-19739
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789
Multiple study inventory method for tropical forest
[INPE-5319-PRE/1716] p 1568 N93-19790
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792
Use of teledetection in physiographic compartmentation to obtain multiple use geotechnic zoning in coastal regions
[INPE-5322-PRE/1720] p 1583 N93-19795
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region
[INPE-5330-PRE/1728] p 1568 N93-19821
Tube diode
[INPE-5438-NTC/304] p 1551 N93-19832
Texture enhancement of Synthetic Aperture Radar (SAR) images with speckle noise reduction filters
[INPE-5297-PRE/1702] p 1515 N93-19833
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856
Airborne Remote Sensing
[VTT-SYMPOSIUM-127] p 1569 N93-19871
What is the aerial telemapping system? p 1569 N93-19872
Business development considerations for the imaging spectrometer project p 1569 N93-19873
Microwave instruments p 1569 N93-19874
The Geological Research Center's aerial geological measuring system p 1569 N93-19875
Atmospheric measurements taken from an aeroplane p 1569 N93-19876
Present and future imaging spectrometers in telemapping p 1570 N93-19877
The use of imaging spectrometers p 1570 N93-19878
Airborne imaging spectrometer development tasks p 1539 N93-19880
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192098] p 1583 N93-19886
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898

**REMOTE SENSORS**
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856
Business development considerations for the imaging spectrometer project p 1569 N93-19873
Microwave instruments p 1569 N93-19874
Present and future imaging spectrometers in telemapping p 1570 N93-19877
The use of imaging spectrometers p 1570 N93-19878

**REMOTELY PILOTED VEHICLES**
RPH preliminary design, trend analysis and initial analysis of the NPS hummingbird
[AD-A257854] p 1439 N93-18304
JEFF: Air transport system design simulation
[NASA-CR-192069] p 1439 N93-18350

**REPLACING**
Evaluation of ultrasonic cavitation of metallic and non-metallic surfaces p 1652 N93-19400
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system p 1496 N93-19402

**REPORTS**
Activities report of the Kernfysisch Versneller Institute
[ETN-93-93340] p 1653 N93-17931

**REPRESENTATIONS**
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913

**REQUIREMENTS**
Issues in requirements elicitation
[AD-A258932] p 1627 N93-19448

**RESEARCH**
Activities report of the Kernfysisch Versneller Institute
[ETN-93-93340] p 1653 N93-17931
Activities report of the Institute of Space Physics
[ETN-93-93360] p 1665 N93-17947
Spectral features (200 nm - 10 micrometers) of atmospheric molecules: A bibliography (1979-1990)
[NOTA-INTERNA-982] p 1575 N93-17957
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108590] p 1564 N93-18070
The US global change research program: Early achievements and future directions p 1573 N93-18864

**RESEARCH AIRCRAFT**
X-31A high angle of attack and initial post stall flight testing p 1443 N93-19911
System identification for X-31A project support: Lessons learned so far p 1444 N93-19914
In-flight structural mode excitation system for flutter testing p 1444 N93-19915

Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 1446 N93-19927

**RESEARCH AND DEVELOPMENT**

Federal funds for research and development: Fiscal years 1990, 1991, and 1992, volume 40
[NSF-92-322-VOL-40] p 1694 N93-17853
EHR directory of awards, FY 1990
[NSF-92-75] p 1746 N93-17854
Dr. Alexander H. Flax: Technologist of aeronautics
[AD-A258441] p 1747 N93-17890
Air University Library index to military periodicals, volume 43, number 3, July - September 1992
[AD-A258452] p 1685 N93-18013
Vulcain: A cryogenic engine for Ariane 5
[ETN-93-93022] p 1472 N93-18082
Launch system development in the Pacific Rim
[NASA-TM-108595] p 1455 N93-18170
Research and development project summaries
[AD-A257518] p 1747 N93-18175
Highlights of engineering research centers technology transfer
[NSF-92-6] p 1694 N93-18457
Transportation and platforms perspective p 1453 N93-18636
National aero-space plane: Restructuring future research and development efforts
[AD-A258799] p 1441 N93-18981
Research interests of the Air Force of Scientific Research
[AD-A258806] p 1754 N93-18985
Improving NASA's technology for space science
[NASA-CR-192331] p 1695 N93-19389
NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-191004] p 1754 N93-19390
The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University
[NASA-CR-191362] p 1680 N93-19452
Calendar of selected aeronautical and space meetings, July 1991 onwards
[AGARD-CAL-91/2] p 1683 N93-19639
Technology absorption and technological learning: A study of the dynamics of the process and intervening factors
[INPE-5392-TAE/013] p 1695 N93-19741
Establishing a research agenda for Scientific and Technical Information (STI): Focus on the user p 1692 N93-19797
University research: Controlling inappropriate access to federally funded research results. Report to the Chairman, Human Resources and Intergovernmental Relations Subcommittee, Committee on Government Operations, House of Representatives
[GAO/RCED-92-104] p 1684 N93-19844
The National Aero-Space Plane program: A revolutionary concept p 1443 N93-19908

**RESEARCH FACILITIES**

Meeting the challenge of responding to stakeholder information needs: A program model
[DE93-002047] p 1683 N93-18409
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
The EISCAT Svalbard (Arctic) radar p 1517 N93-19574
Discussions on the organizational outline and suggested institutional guidelines for the INPE
[INPE-5406-RPQ/660] p 1684 N93-19642
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 1444 N93-19916

**RESEARCH MANAGEMENT**

Development of a prototype Air Force Institute of Technology (AFIT) Research Management System (ARMS)
[AD-A258267] p 1685 N93-18028
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471
Discussions on the organizational outline and suggested institutional guidelines for the INPE
[INPE-5406-RPQ/660] p 1684 N93-19642
A Research Agenda for Scientific and Technical Information
[AGARD-AR-316] p 1692 N93-19796
The organization and transfer of information p 1692 N93-19799

**RESEARCH PROJECTS**

Global Change Research Program: A component of the US Global Change Research Program. 1993 research opportunities
[NSF-92-77] p 1572 N93-18319
Highlights of engineering research centers technology transfer
[NSF-92-6] p 1694 N93-18457
Review of recent work on MPD thrusters at MIT p 1666 N93-18641
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471
Discussions on the organizational outline and suggested institutional guidelines for the INPE
[INPE-5406-RPQ/660] p 1684 N93-19642

**RESEARCH VEHICLES**

Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 1444 N93-19916

**RESIDUAL STRESS**

Residual contact stresses in cryotechnical environments
[ETN-93-93020] p 1555 N93-18080
Some recent results on stresses in thin films and precipitates
[AD-A258807] p 1559 N93-18986

**RESIDUES**

Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399

**RESIN MATRIX COMPOSITES**

Interface microstructure analysis of ceramic and metal-matrix composites: Sample preparation methods and analytical techniques
[DS-2154] p 1477 N93-18148
Carbon and graphite matrices in carbon-carbon composites: An overview of their formation, structure, and properties
[AD-A258386] p 1478 N93-18259
Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283

**RESISTANCE HEATING**

Overall results from the European sector of the worldwide atmospheric gravity-wave study: 1985-1990 p 1733 N93-19589

**RESONANCE**

The effect of secular resonances in the asteroid region between 2.1 and 2.4 AU p 1706 N93-19161
Long-term evolution of 1991 DA: A dynamically evolved extinct Halley-type comet p 1707 N93-19166
Asteroid-type orbit evolution near the 5:2 resonance p 1708 N93-19171
Asteroid proper elements and secular resonances p 1710 N93-19186

**RESONANCE CHARGE EXCHANGE**

Relativistic two body equations and nuclear interactions
[NOTA-INTERNA-985] p 1653 N93-17876

**RESONANCE LINES**

The possibilities of observing plasma and gyro lines with the EISCAT polar cap radar p 1724 N93-19534
Enhancement of the gyro lines by suprathermal particles p 1724 N93-19535
Photoelectron enhanced plasma-line intensities at angles with the geomagnetic field as measured by EISCAT p 1724 N93-19536
Tristatic observations of natural plasma lines with the EISCAT UHF radar p 1725 N93-19537

**RESONANT FREQUENCIES**

Experimental study of the selective properties of coaxial resonators
[INPE-5375-PRE/1748] p 1522 N93-19740

**RESONANT VIBRATION**

Add-on damping treatment for the F-15 upper-outer wing skin
[AD-A258470] p 1438 N93-18248
High speed thin plate fatigue crack monitor
[NASA-CASE-LAR-14816-1-SB] p 1559 N93-19329

**RESONATORS**

Self-collimated unstable resonator semiconductor laser
[NASA-CASE-NPO-18386-1-CU] p 1540 N93-18277

**RESOURCE ALLOCATION**

Decomposability and scalability in space-based observatory scheduling p 1634 N93-18663
Scheduling lessons learned from the Autonomous Power System p 1636 N93-18671
JIGSAW: Preference-directed, co-operative scheduling p 1639 N93-18689
Constraint monitoring in TOSCA p 1639 N93-18693

**RESOURCES MANAGEMENT**

Real-time contingency handling in MAESTRO p 1638 N93-18683
Corporate information management and business process improvement under the unit cost program: An analysis of a system for the Air Force Institute of Technology
[AD-A258984] p 1687 N93-19098
Vacuum deposition of copper on Type 304L stainless steel
[DE93-002704] p 1489 N93-19614
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 1430 N93-19704

**RESPIRATORY PHYSIOLOGY**

Cardiopulmonary discipline science plan
[NASA-TM-108040] p 1599 N93-19648

**RESUSCITATION**

Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**RETINA**

Retinal modeling: Segmenting motion from spatio-temporal inputs using neural networks
[AD-A258854] p 1599 N93-19369

**RETRACTABLE EQUIPMENT**

Retractable tool bit having latch type catch mechanism
[NASA-CASE-GSC-13359-1] p 1547 N93-18286
Split rail gripper assembly and tool driver therefor
[NASA-CASE-GSC-13370-2] p 1547 N93-18288

**RETURN TO EARTH SPACE FLIGHT**

Project Minerva: A low cost manned Mars mission based on indigenous propellant production
[NASA-CR-192020] p 1734 N93-18048

**REUSABLE ROCKET ENGINES**

Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018

**REVERSE ENGINEERING**

Re-engineering software systems in the Department of Defense using integrated computer aided software engineering tools
[AD-A257500] p 1617 N93-17905

**REVERSING**

Reversion studies of natural and guayule rubbers
[AD-A257501] p 1491 N93-17906

**REVIEWING**

Preceramic polymers: Past, present and future
[AD-A258327] p 1493 N93-18265
Accidents and errors: A review of recent UK Army Air Corps accidents p 1429 N93-19701

**REYNOLDS NUMBER**

Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
Parabolized Navier-Stokes methods for hypersonic flows p 1529 N93-18565
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896

**RHENIUM**

The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485

**RHEOLOGY**

Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806

**RHOMBOHEDRONS**

The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412

**RHYTHM (BIOLOGY)**

Effectiveness of birthdate biorhythm theory on flight accidents p 1431 N93-19710

**RIBBONS**

Microstructural control of complex alloys p 1490 N93-18485
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623

**RIBS (SUPPORTS)**

The aerodynamic characteristics of the Gottingen 797 and Wortmann FX63-137 aerofoil sections at very low Reynolds numbers
[ETN-93-92999] p 1406 N93-18128

**RIDGES**

Apollo 17: One giant step toward understanding the tectonic evolution of the Moon p 1739 N93-18811

**RIEMANN MANIFOLD**

Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215

**RIGID STRUCTURES**

Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938

Elastic dynamics of a complete wind turbine structure: Theoretical development
[DE93-002478] p 1555 N93-18524
Numerical investigation of the Earth's rotation during a complete precession cycle p 1580 N93-18965
A simulation study on take-off and landing dynamics of the aircraft of a fly-by-wire control system
[AD-A259286] p 1442 N93-19849

**RING CURRENTS**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214

**RING STRUCTURES**
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774

**RIPPLES**
Reducing the net torque and flow ripple effects of multiple hydraulic piston motor drives
p 1507 N93-18917

**RISK**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission
[NASA-TM-4422] p 1746 N93-18014
Hurricane risk assessment to rollback or ride out a cost versus loss decision making approach
p 1588 N93-19411
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 1428 N93-19692
Fires on board aircraft: Toxicological risk in flight
p 1428 N93-19694

**ROBOT ARMS**
Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938
Model reference adaptive control of robots
[NASA-CR-191871] p 1632 N93-18377
Capacifiector-based virtual force control and centering
[NASA-CR-191805] p 1520 N93-18764
Adaptive control of robotic manipulators
p 1640 N93-19031
Robust motion tracking control of robotic arms based on the generalized energy accumulation principle
p 1552 N93-19463

**ROBOT CONTROL**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
Design requirements for force reflecting master controllers p 1605 N93-18035
Model reference adaptive control of robots
[NASA-CR-191871] p 1632 N93-18377
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682
Capacifiector-based virtual force control and centering
[NASA-CR-191805] p 1520 N93-18764
Robot welding process control development task
[NASA-CR-192434] p 1549 N93-18851
Power analysis in flexible automation
[AD-A259080] p 1549 N93-18961
Adaptive control of robotic manipulators
p 1640 N93-19031
Voice control of a dual-arm telerobot
p 1549 N93-19044
Impedance control design for robot tasks involving free and contact motion p 1640 N93-19045
Teleprogramming: Remote site robot task execution
p 1641 N93-19046
An optimal control strategy for collision avoidance of mobile robots in non-stationary environments
[NASA-CR-191868] p 1641 N93-19345
Efficient visual grasping alignment for cylinders
[NASA-CR-191863] p 1663 N93-19346
Nonlinear robust controller design for multi-robot systems with unknown payloads p 1552 N93-19462
Robust motion tracking control of robotic arms based on the generalized energy accumulation principle
p 1552 N93-19463
Cooperation of mobile robots for accident scene inspection
[DE93-002487] p 1551 N93-19478

**ROBOT DYNAMICS**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Motion planning for rigid body robots
[AD-A257557] p 1544 N93-17980
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
Inverse kinematics problem in robotics using neural networks
[NASA-TM-105869] p 1558 N93-18876
Adaptive control of robotic manipulators
p 1640 N93-19031
Computational kinematics of multi-arm manipulators
p 1549 N93-19033
Impedance control design for robot tasks involving free and contact motion p 1640 N93-19045
An optimal control strategy for collision avoidance of mobile robots in non-stationary environments
[NASA-CR-191868] p 1641 N93-19345
Robust motion tracking control of robotic arms based on the generalized energy accumulation principle
p 1552 N93-19463

**ROBOT SENSORS**
Capacifiector-based virtual force control and centering
[NASA-CR-191805] p 1520 N93-18764

**ROBOTICS**
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
FLARE: The Far Side Lunar Research Expedition. A design of a far side lunar observatory
[NASA-CR-192029] p 1695 N93-18163
Near real-time stereo vision system
[NASA-CASE-NPO-18593-1-CU] p 1662 N93-18276
Retractable tool bit having latch type catch mechanism
[NASA-CASE-GSC-13359-1] p 1547 N93-18286
Split rail gripper assembly and tool driver therefor
[NASA-CASE-GSC-13370-2] p 1547 N93-18288
ORCCAD: Towards an open robot controller computer aided design system
[INRIA-RR-1396] p 1621 N93-18519
Formulation and error analysis for a generalized image point correspondence algorithm
[NASA-CR-192005] p 1621 N93-18570
Task-level robot programming combining object-oriented design and synchronous approach: A tentative study
[INRIA-RR-1441] p 1622 N93-18610
Estimation of angular velocity and acceleration from shaft encoder measurements
[INRIA-RR-1436] p 1633 N93-18633
Controlled motion in an elastic world. Research project: Manipulation strategies for massive space payloads
[NASA-CR-191895] p 1549 N93-18778
Evaluation of inertial devices for the control of large, flexible, space-based telerobotic arms
p 1465 N93-18839
Inverse kinematics problem in robotics using neural networks
[NASA-TM-105869] p 1558 N93-18876
CSI related dynamics and control issues in space robotics p 1467 N93-18929
Power analysis in flexible automation
[AD-A259080] p 1549 N93-18961
A computer architecture for intelligent machines
[NASA-CR-191861] p 1614 N93-19347
A safety-based decision making architecture for autonomous systems
[NASA-CR-191864] p 1641 N93-19362
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**ROBOTS**
Time-varying feedback stabilization of nonholonomic car-like mobile robots
[INRIA-RR-1515] p 1631 N93-17837
Motion planning for rigid body robots
[AD-A257557] p 1544 N93-17980
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
Estimation of displacements from two 3D frames obtained from stereo
[INRIA-RR-1440] p 1537 N93-18595
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682
Capacifiector-based virtual force control and centering
[NASA-CR-191805] p 1520 N93-18764
Future scientific exploration of Taurus-Littrow
p 1739 N93-18814
Computational kinematics of multi-arm manipulators
p 1549 N93-19033
Voice control of a dual-arm telerobot
p 1549 N93-19044
Kinematic analysis of the ARID manipulator
p 1552 N93-19393
Calibration of the ARID robot p 1552 N93-19394
ARID relative calibration experimental data and analysis p 1552 N93-19395
Redundant drive current imbalance problem of the Automatic Radiator Inspection Device (ARID)
p 1552 N93-19398
Nonlinear robust controller design for multi-robot systems with unknown payloads p 1552 N93-19462
Cooperation of mobile robots for accident scene inspection
[DE93-002487] p 1551 N93-19478
Case-based reasoning for real-time problem solving
[AD-A258697] p 1641 N93-19865

**ROBUSTNESS (MATHEMATICS)**
Robust control with structured perturbations
[NASA-CR-192195] p 1633 N93-18579
Robust control of systems with real parameter uncertainty and unmodelled dynamics
[NASA-CR-192008] p 1633 N93-18582
Design, analysis, and testing of high frequency passively damped struts p 1464 N93-18835
Robust stability of second-order systems
[NASA-CR-192246] p 1647 N93-18871
Average-cost based robust structural control
p 1469 N93-18939
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 1610 N93-19772

**ROCKET ENGINE CASES**
Slit scan radiographic system for intermediate size rocket motors
[NASA-CR-191798] p 1471 N93-18058

**ROCKET ENGINE DESIGN**
Conceptual design of a high thrust Vulcain-derived low-cost rocket engine
[ETN-93-93018] p 1472 N93-18144
The Vulcain MK2 engine for Ariane 5 performance improvement
[ETN-93-93019] p 1472 N93-18145
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
MPD thruster technology p 1666 N93-18639
Review of recent work on MPD thrusters at MIT
p 1666 N93-18641
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644
Recent advances in MPD thruster research at Princeton p 1667 N93-18645

**ROCKET ENGINES**
Performance and heat transfer characteristics of a carbon monoxide/oxygen rocket engine
[NASA-TM-105897] p 1474 N93-18878
What is the progress in propulsion?
p 1404 N93-19006

**ROCKET EXHAUST**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets
[NASA-TM-105999] p 1471 N93-17995
Plume: Instructions for use and description of a missile plume visibility program
[AD-A258201] p 1473 N93-18201
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
Propulsion diagnostics p 1475 N93-18482
Trends in middle-atmosphere ozone
p 1575 N93-18500
Emission spectra of selected SSME elements and materials
[NASA-RP-1286] p 1656 N93-18763
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851

**ROCKET LAUNCHING**
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235

**ROCKET NOZZLES**
Analysis of film cooling in rocket nozzles
[NASA-CR-192003] p 1473 N93-18518
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640
Magnetoplasmadynamic thruster flows: Problems and progress p 1666 N93-18642

**ROCKET SOUNDING**
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235
Chemical Release and Radiation Effects Satellite (CRRES) program archiving and Puerto Rican sounding rocket campaign
[NASA-CR-184503] p 1579 N93-18773

**ROLL**
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation
p 1443 N93-19909

**ROLLERS**
Minimum size of disc cams with radial translating roller followers
[ESDU-92005] p 1544 N93-17998
Blending profiles of disc cams with radial translating roller followers. Part 1: To reduce segment angle, reduce reference circle radius or increase follower lift
[ESDU-92014] p 1545 N93-18041
Design and application of electromechanical actuators for deep space missions
[NASA-CR-192227] p 1551 N93-19946
**ROOM TEMPERATURE**
Development of magnetostrictive active members for control of space structures
[NASA-CR-190846] p 1460 N93-18322
**ROTARY STABILITY**
AM-X high angle of attack flight test experience (single and two seat versions) p 1443 N93-19910
**ROTARY WING AIRCRAFT**
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333
Basic research on design analysis methods for rotorcraft vibrations
[NASA-CR-191917] p 1556 N93-18576
Numerical investigation of performance degradation of wings and rotors due to icing
[NASA-CR-192233] p 1440 N93-18783
Flexible rotorcraft system dynamics with time-variant contact conditions p 1441 N93-19034
Concepts for pilot interaction with an automated NOE obstacle-avoidance system
[NASA-TM-103960] p 1451 N93-19105
**ROTARY WINGS**
RPH preliminary design, trend analysis and initial analysis of the NPS hummingbird
[AD-A257854] p 1439 N93-18304
**ROTATING BODIES**
Spin vector and shape of 532 Herculina p 1711 N93-19193
Dynamic characterization, monitoring and control of rotating flexible beam-mass structures via piezo-embedded techniques p 1561 N93-19458
**ROTATING CYLINDERS**
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340
**ROTATING PLASMAS**
Self-regulated shear flow turbulence in confined plasmas: Basic concepts and potential applications to the L yields H transition
[DE93-002361] p 1668 N93-19743
**ROTATING STALLS**
Stall in axial flow aero engine compressors p 1530 N93-18723
Stall and surge in axial flow compressors p 1530 N93-18724
Experimental investigation of rotating stall in a mismatched three stage axial flow compressor p 1531 N93-18727
Application of recess vaned casing treatment to axial flow fans p 1531 N93-18726
Axial Flow Compressors, volume 2
[VKI-LS-1992-02-VOL-2] p 1531 N93-18731
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732
Rotating stall cell and Von Karman vortex street: A meteorological theory p 1531 N93-18734
Characterization of stall inception in high-speed single-stage compressors
[AD-A258973] p 1449 N93-19093
**ROTATION**
Elastic dynamics of a complete wind turbine structure: Theoretical development
[DE93-002478] p 1555 N93-18524
A wind tunnel study of magnus effects on a differentially rotating missile
[AD-A258812] p 1408 N93-18989
Spin vectors of asteroids 21 Lutetia, 196 Philomela, 250 Bettina, 337 Devosa, and 804 Hispania p 1713 N93-19211
Rotational behavior of comet nuclei under gravitational perturbations p 1714 N93-19216
On LAM's and SAM's for Halley's rotation p 1714 N93-19221
Rotation of split cometary nuclei p 1719 N93-19258
Flow and heat transfer characteristics of orthogonally rotating channel p 1413 N93-19303
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain
[AD-A258908] p 1559 N93-19353
**ROTOR BLADES**
Optimum Design of High Speed Prop-Rotors
[NASA-CR-190915] p 1437 N93-18064
Design of high speed proprotors using multiobjective optimization techniques p 1437 N93-18065
Optimum design of high speed prop rotors including the coupling of performance, aeroelastic stability and structures p 1438 N93-18066
**ROTOR BLADES (TURBOMACHINERY)**
Dynamics of rotating multi-component turbomachinery systems
[NASA-TM-105997] p 1555 N93-18426
Endwall flows and blading design for axial flow compressors p 1531 N93-18730
Axial Flow Compressors, volume 2
[VKI-LS-1992-02-VOL-2] p 1531 N93-18731
Performance of controlled diffusion blades p 1532 N93-18735
**ROTOR DYNAMICS**
Optimum Design of High Speed Prop-Rotors
[NASA-CR-190915] p 1437 N93-18064
Dynamics of rotating multi-component turbomachinery systems
[NASA-TM-105997] p 1555 N93-18426
**ROTOR SPEED**
An exploratory investigation of the flight dynamics effects of rotor rpm variations and rotor state feedback in hover
[NASA-TM-103968] p 1451 N93-19380
**ROTORS**
Brush seal bristle flexure and hard-rub characteristics
[NASA-TM-105864] p 1547 N93-18321
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705
**ROUTES**
Scheduling of an aircraft fleet p 1635 N93-18665
**ROVER PROJECT**
Extended mission/lunar rover, executive summary
[NASA-CR-192017] p 1547 N93-18162
**ROVING VEHICLES**
Planetary surface exploration: MESUR/autonomous lunar rover
[NASA-CR-192073] p 1546 N93-18102
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
**RUBBER**
Reversion studies of natural and guayule rubbers
[AD-A257501] p 1491 N93-17906
**RUBIDIUM**
Chaotic dynamics of atoms p 1659 N93-18491
**RUN TIME (COMPUTERS)**
Randomization yields simple O(n log* n) algorithms for difficult Omega(n) problems
[INRIA-RR-1412] p 1621 N93-18455
Output sensitive construction of the 3D Delaunay triangulation of constrained sets of points
[INRIA-RR-1415] p 1646 N93-18456
A model for determining task set schedulability in the presence of system effects
[AD-A258915] p 1626 N93-19338
**RUNGE-KUTTA METHOD**
Analysis of a multistep Jacobi multigrid method for solving the Euler equations
[INRIA-RR-1506] p 1644 N93-17879

## S

**S WAVES**
Reflecting model: P-S arrival
[REPT-92-029] p 1576 N93-18188
**SAFETY**
Flame-front kinetics p 1485 N93-18481
The Mini-Mast CSI testbed: Lessons learned p 1461 N93-18819
**SAFETY DEVICES**
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973
Valve lock
[NASA-CASE-MFS-29764-1] p 1550 N93-19049
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601
**SAFETY FACTORS**
Rocket engine monitoring system: Application to the Vulcain engine
[ETN-93-93016] p 1472 N93-18078
**SALT SPRAY TESTS**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299
**SALTS**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158
The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412
**SAMPLERS**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
NPSNET: Aural cues for virtual world immersion
[AD-A257835] p 1503 N93-18417
Future scientific exploration of Taurus-Littrow p 1739 N93-18814
**SAMPLING**
An examination of the performance of a natural truncation point and acceptance rule for a curtailed Wald sequential sampling plan with Bernoulli parameters
[AD-A257579] p 1649 N93-18180
Future scientific exploration of Taurus-Littrow p 1739 N93-18814
Model determination using predictive distributions with implementation via sampling-based methods
[AD-A258777] p 1650 N93-18947
Toward an optimal strategy for sampling chaotic time series using the Smale-Williams dynamical system
[AD-A258550] p 1650 N93-19953
**SANDWICH STRUCTURES**
Fibre reinforced plastic structures p 1557 N93-18752
Sandwiched structural panel having a bi-directional core structure
[NASA-CASE-MFS-28796-1] p 1479 N93-19022
Passive damping of a solar array
[AD-A258976] p 1559 N93-19096
**SAPPHIRE**
A Ti:Sapphire laser for the new polarized electron source
[DE93-004016] p 1541 N93-18448
**SATELLITE ATMOSPHERES**
Titan p 1592 N93-18553
Dynamics of planetary atmospheres
[NASA-CR-192117] p 1735 N93-18782
**SATELLITE ATTITUDE CONTROL**
Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938
**SATELLITE COMMUNICATION**
Coupling losses in multiple beam antennas
[AD-A257494] p 1500 N93-17903
On-board B-ISDN fast packet switching architectures. Phase 1: Study
[NASA-CR-189144] p 1457 N93-18703
Telemetering and telecommunications research
[NASA-CR-191903] p 1457 N93-18777
Mobile satellite services: A survey of business needs
[AD-A259031] p 1470 N93-18955
SATCOM general purpose modem DSCS 3 SCT beacon telemetry display
[AD-A258849] p 1458 N93-19441
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952
**SATELLITE DESIGN**
Spacecraft design project: High temperature superconducting infrared imaging satellite
[NASA-CR-192036] p 1458 N93-17887
Spacecraft design project: Low Earth orbit communications satellite
[NASA-CR-192038] p 1458 N93-17969
**SATELLITE IMAGERY**
Spacecraft design project: High temperature superconducting infrared imaging satellite
[NASA-CR-192036] p 1458 N93-17887
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada)
[NASA-CR-192091] p 1564 N93-17927
Interactive satellite navigation for the Naval environmental operational nowcasting system
[AD-A257920] p 1459 N93-18004
Linear mixing model applied to coarse resolution satellite data p 1565 N93-18073
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia
[AD-A257847] p 1566 N93-18346
Sea ice - atmosphere interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-192129] p 1566 N93-18571

Analysis of kriging applied to resolution enhancement of digital satellite imagery
[AD-A258914] p 1626 N93-19337
Spectral and spatial pattern recognition in digital imagery
[AD-A258910] p 1627 N93-19355
Incorporation of orbital imagery into a cartographic data base
[INPE-5300-PRE/1705] p 1688 N93-19644
A method for estimating the phytomass of a tropical forest region through the use of orbital data
[INPE-5320-PRE/1717] p 1567 N93-19645
Updating topographic maps using orbital images in a microcomputer environment
[INPE-5409-PRE/1756] p 1567 N93-19739
A system for segmentation and classification of satellite images
[INPE-5291-PRE/1696] p 1567 N93-19788
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789
Use of teledetection in physiographic compartmentation to obtain multiple use geotechnic zoning in coastal regions
[INPE-5322-PRE/1720] p 1583 N93-19795
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region
[INPE-5330-PRE/1728] p 1568 N93-19821
A knowledge-based system for satellite imagery segmentation
[INPE-5296-PRE/1701] p 1568 N93-19834
Methods for analysis of networks within a geographical information system
[INPE-5299-PRE/1704] p 1693 N93-19835
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856
Analysis of LANDSAT/TM and SPOT/XS data through vegetation indices, phase 2
[INPE-5450-RPQ/663] p 1569 N93-19857

**SATELLITE INSTRUMENTS**
EISCAT related satellites in near future
p 1578 N93-18738
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822

**SATELLITE NAVIGATION SYSTEMS**
A model of Global Positioning System (GPS) Master Control Station (MCS) operations
[AD-A258846] p 1433 N93-19067

**SATELLITE NETWORKS**
Spacecraft design project: Low Earth orbit communications satellite
[NASA-CR-192038] p 1458 N93-17969
Mobile satellite services: A survey of business needs
[AD-A259031] p 1470 N93-18955

**SATELLITE OBSERVATION**
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A
[AD-A258299] p 1576 N93-18126
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
Modeling energy and mass fluxes from prairie canopies
[NASA-CR-191801] p 1566 N93-18232
Analysis of AVHRR, CZCS and historical in situ data off the Oregon Coast
[NASA-CR-192120] p 1586 N93-18360
Numerical experiments on consistent horizontal and vertical resolution for atmospheric models and observing systems p 1563 N93-18718
A DE-1/whistler study of the thermal plasma structure and dynamics in the dusk bulge sector of the magnetosphere
[NASA-CR-192088] p 1579 N93-18850
Slope effects on shortwave radiation components and net radiation
[NASA-CR-192199] p 1504 N93-18881

**SATELLITE ORBITS**
EISCAT related satellites in near future
p 1578 N93-18738
Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894

**SATELLITE PERTURBATION**
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010

**SATELLITE TRACKING**
Interactive satellite navigation for the Naval environmental operational nowcasting system
[AD-A257920] p 1459 N93-18004
Data reduction with least squares differential correction using equinoctial elements
[AD-A259004] p 1454 N93-18894
A model to compare performance of space and ground network support of low-Earth orbiters
p 1508 N93-18925
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010
A synthetic environment for satellite modeling and satellite orbital motion
[AD-A258847] p 1470 N93-19068
Locating an imaging radar in Canada for identifying spaceborne objects
[AD-A258969] p 1510 N93-19087

**SATELLITE-BORNE RADAR**
Proposal for a coordination between EISCAT and INTERBALL p 1726 N93-19544

**SATURN (PLANET)**
Cassini: Mission to Saturn and Titan
p 1592 N93-18559

**SATURN ATMOSPHERE**
Cassini: Mission to Saturn and Titan
p 1592 N93-18559
Dynamics of planetary atmospheres
[NASA-CR-192117] p 1735 N93-18782

**SATURN 5 LAUNCH VEHICLES**
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410

**SAWTOOTH WAVEFORMS**
Critical issues and experimental examination on sawtooth and disruption physics
[NIFS-157] p 1670 N93-19951

**SCALE MODELS**
Operational and research aspects of a radio-controlled model flight test program
[NASA-TM-104266] p 1440 N93-18616

**SCALING LAWS**
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
Nondestructive evaluation of grain size distributions using multifractal analysis of backscattered ultrasonic signals
[AD-A259035] p 1553 N93-18956

**SCANNERS**
Slit scan radiographic system for intermediate size rocket motors
[NASA-CR-191798] p 1471 N93-18058
Photoelectric analysis of the solar granulation in IR
[AD-A257811] p 1744 N93-18334
Evaluation of the geometric quality of cartographic documents through the use of scanning imagery devices
[INPE-5298-PRE/1703] p 1692 N93-19738

**SCANNING TUNNELING MICROSCOPY**
Writing electronically active nanometer-scale structures with a scanning tunneling microscope
[MBB-Z-0367-91-PUB] p 1671 N93-18117

**SCATTERING**
Stimulated Brillouin scattering phase conjugation
p 1664 N93-18471

**SCATTERING AMPLITUDE**
Infinite relativistic Toda lattice: Scattering problem and canonical structure
[PREPRINT-785] p 1645 N93-18187

**SCATTERING COEFFICIENTS**
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886

**SCATTERING CROSS SECTIONS**
Theory of radar scattering from dusty plasmas
p 1516 N93-19540

**SCENE ANALYSIS**
Positioning a camera from a photograph and a scene model
[TELECOM-PARIS-92-D-002] p 1537 N93-17948

**SCHEDULES**
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning
[NASA-TM-108124] p 1634 N93-18659
A simulated annealing approach to schedule optimization for the SES facility p 1634 N93-18662
The MICRO-BOSS scheduling system: Current status and future efforts p 1635 N93-18668
Iterative refinement scheduling p 1635 N93-18669
CABINS: Case-based interactive scheduler
p 1635 N93-18670
Scheduling lessons learned from the Autonomous Power System p 1636 N93-18671
Uncertainty management by relaxation of conflicting constraints in production process scheduling
p 1636 N93-18673
Real-time scheduling using minimum search
p 1637 N93-18676
Rescheduling with iterative repair
p 1637 N93-18679
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
IOPS advisor: Research in progress on knowledge-intensive methods for irregular operations airline scheduling p 1638 N93-18686
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas
p 1638 N93-18688
Time management situation assessment (TMSA)
p 1639 N93-18692
Constraint monitoring in TOSCA p 1639 N93-18693
National aero-space plane: Restructuring future research and development efforts
[AD-A258799] p 1441 N93-18981

**SCHEDULING**
Effectiveness of heuristics and simulated annealing for the scheduling of concurrent tasks: An empirical comparison
[INRIA-RR-1379] p 1630 N93-18434
On optimal polling policies
[INRIA-RR-1541] p 1633 N93-18624
Working Notes from the 1992 AAAI Spring Symposium on Practical Approaches to Scheduling and Planning
[NASA-TM-108124] p 1634 N93-18659
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660
Temporal planning for transportation planning and scheduling p 1634 N93-18661
A simulated annealing approach to schedule optimization for the SES facility p 1634 N93-18662
Decomposability and scalability in space-based observatory scheduling p 1634 N93-18663
Scheduling of an aircraft fleet p 1635 N93-18665
Adaptive planning for applications with dynamic objectives p 1635 N93-18666
Global planning of several plants
p 1635 N93-18667
The MICRO-BOSS scheduling system: Current status and future efforts p 1635 N93-18668
Iterative refinement scheduling p 1635 N93-18669
CABINS: Case-based interactive scheduler
p 1635 N93-18670
Scheduling lessons learned from the Autonomous Power System p 1636 N93-18671
Planning for the semiconductor manufacturer of the future p 1636 N93-18672
Uncertainty management by relaxation of conflicting constraints in production process scheduling
p 1636 N93-18673
Experiments with a decision-theoretic scheduler
p 1636 N93-18674
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
Real-time scheduling using minimum search
p 1637 N93-18676
Planning, scheduling, and control for automatic telescopes p 1637 N93-18677
O-Plan2: The open planning architecture
p 1637 N93-18678
Realization of high quality production schedules: Structuring quality factors via iteration of user specification processes p 1637 N93-18680
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682
Real-time contingency handling in MAESTRO
p 1638 N93-18683
Learning to integrate reactivity and deliberation in uncertain planning and scheduling problems
p 1638 N93-18684
Completable scheduling: An integrated approach to planning and scheduling p 1638 N93-18685
IOPS advisor: Research in progress on knowledge-intensive methods for irregular operations airline scheduling p 1638 N93-18686
An extended abstract: A heuristic repair method for constraint-satisfaction and scheduling problems
p 1638 N93-18687
Combining constraint satisfaction and local improvement algorithms to construct anaesthetists' rotas
p 1638 N93-18688
JIGSAW: Preference-directed, co-operative scheduling
p 1639 N93-18689
A hybrid job-shop scheduling system
p 1639 N93-18690

Predit: A temporal predictive framework for scheduling systems p 1639 N93-18691
Constraint monitoring in TOSCA p 1639 N93-18693
SOCAP: Lessons learned in applying SIPE-2 to the military operations crisis action planning domain p 1639 N93-18694
A comparison of multiprocessor scheduling methods for iterative data flow architectures [NASA-CR-189730] p 1521 N93-19107
A model for determining task set schedulability in the presence of system effects [AD-A258915] p 1626 N93-19338

**SCHMIDT CAMERAS**
Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131

**SCHOOLS**
Reliability, Maintainability, and Supportability (RMS) education in engineering schools [AD-A258260] p 1552 N93-18026
The 1992 Science Olympiad National Tournament [NASA-CR-191379] p 1679 N93-18385

**SCHOTTKY DIODES**
Advanced electronic structures [AD-A258401] p 1519 N93-18261
Research and development on advanced silicon carbide thin film growth techniques and fabrication of high power and microwave frequency silicon carbide-based device structures [AD-A257913] p 1672 N93-18367
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation [AD-A259372] p 1522 N93-19853

**SCHROEDINGER EQUATION**
Yang phase for non-Hermitian systems and biunitary transformations [PREPRINT-782] p 1645 N93-18197

**SCHWASSMANN-WACHMANN COMET**
First images of a possible CO(+)-tail of comet P/Schwassmann-Wachmann 1 observed against the dust coma background p 1708 N93-19175
Activity in distant comets p 1712 N93-19202

**SCIENCE**
Decade of achievement: Educational leadership in mathematics, science and engineering [NSF-92-94] p 1679 N93-18383
The 1992 Science Olympiad National Tournament [NASA-CR-191379] p 1679 N93-18385

**SCIENTISTS**
NASA/DoD Aerospace Knowledge Diffusion Research Project: A comparison of the technical communications practices of Russian and US aerospace engineers and scientists [NASA-TM-107714] p 1686 N93-18160
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate [NASA-TM-108588] p 1561 N93-18709

**SCINTILLATION**
Solar wind velocity measurements with the EISCAT UHF antenna array p 1725 N93-19542

**SCINTILLATION COUNTERS**
Experimental particle physics [DE93-003884] p 1655 N93-18538
Experimental evaluation of software-driven digital gain-drift compensation in scintillator gamma ray spectroscopy [DE93-002623] p 1657 N93-19616

**SCREWS**
Power analysis in flexible automation [AD-A259080] p 1549 N93-18961
Design and application of electromechanical actuators for deep space missions [NASA-CR-192227] p 1551 N93-19946

**SEA ICE**
The effects of mixed layer dynamics on ice growth in the central Arctic [AD-A257553] p 1575 N93-17968
Multi-discipline Arctic oceanography and acoustics program: The Geodesic Underice Tramway System (GUTS) [AD-A258323] p 1589 N93-18254
Sea ice - atmosphere interaction: Application of multispectral satellite data in polar surface energy flux estimates [NASA-CR-192129] p 1566 N93-18571
Modelling of dynamic soil-structure-ice interaction p 1558 N93-18759

**SEA SURFACE TEMPERATURE**
US Navey regional climatic study of the Greenland-Iceland-United Kingdom gap and associated waters [AD-A257909] p 1586 N93-18342
Analysis of AVHRR, CZCS and historical in situ data off the Oregon Coast [NASA-CR-192120] p 1586 N93-18360

**SEA WATER**
The voltammetric determination of trace metal concentrations and organic complexation in seawater [AD-A257565] p 1588 N93-17984
Advanced atomic filters p 1664 N93-18468
Corrosion fatigue of titanium in sea water under cathodic polarization [VTT-PUBS-91] p 1488 N93-18655

**SEALERS**
Evaluation of EMP/EMI requirements versus corrosion prevention methods [AD-A257820] p 1503 N93-18352
Four space application material coatings on the long-duration exposure flight (LDEF) [NASA-TM-104574] p 1493 N93-18370

**SEALS (STOPPERS)**
Development and verification of methods for predicting flow rates through leaks in valves and couplings [NASA-CR-192270] p 1533 N93-19013
High-temperature, bellows hybrid seal [NASA-CASE-LEW-15570-1] p 1549 N93-19027

**SEAMOUNTS**
Topography-induced variation in benthic boundary layer particle dynamics and fauna [AD-A258230] p 1589 N93-18124

**SEARCH PROFILES**
Spike: AI scheduling for Hubble Space Telescope after 18 months of orbital operations p 1634 N93-18660

**SEARCHING**
Dynamic pattern matcher using incomplete data [NASA-CASE-MSC-21415-1-SB] p 1624 N93-18858

**SEAS**
Image matching strategies for the co-registration of CAESAR sea-images: An hierarchical area-based approach, part 2 [BCRS-90-40B-PT-2] p 1564 N93-17951
Information system for co-registration of CAESAR sea-images based on two dimensional image matching techniques (SCORE). Part 3: Design and detailed design document [BCRS-90-40C-PT-3] p 1564 N93-17953
Conditioning instabilities of the Greenland Sea [AD-A257547] p 1589 N93-18279

**SEATS**
Enabler operator station --- lunar surface vehicle [NASA-CR-192067] p 1546 N93-18050
AM-X high angle of attack flight test experience (single and two seat versions) p 1443 N93-19910

**SECONDARY COSMIC RAYS**
Enhancement of the gyro lines by suprathermal particles p 1724 N93-19535

**SECONDARY FLOW**
Similarity in laminar pipe flows with secondary flows p 1413 N93-19302

**SECONDARY ION MASS SPECTROMETRY**
CoMA: A high resolution Time-Of-Flight Secondary Ion Mass Spectrometer (TOF-SIMS) for in situ analysis of cometary matter p 1721 N93-19272

**SECULAR VARIATIONS**
Asteroid proper elements and secular resonances p 1710 N93-19186

**SECURITY**
Meeting the challenge of responding to stakeholder information needs: A program model [DE93-002047] p 1683 N93-18409

**SEDIMENT TRANSPORT**
Wind transport near the poles of Mars: Timescales of changes in deposition and erosion p 1743 N93-19819

**SEDIMENTARY ROCKS**
Evidence of orbital forcing in 510 to 530 million year old shallow marine cycles, Utah and western Canada p 1582 N93-18975

**SEDIMENTS**
Backscatter of bottom reflected light into the downwelling light stream [AD-A258165] p 1588 N93-18009
Topography-induced variation in benthic boundary layer particle dynamics and fauna [AD-A258230] p 1589 N93-18124
The orbital record in stratigraphy p 1582 N93-18974
Effect of the concentration of two types of sediment on water colorimetry and reflectance [INPE-5331-PRE/1729] p 1568 N93-19822

**SEEPAGE**
Flow rate logging seepage meter [NASA-CASE-LAR-14835-1] p 1538 N93-19328

**SEGMENTS**
Three-dimensional motion computation and object segmentation in a long sequence of stereo frames [INRIA-RR-1438] p 1651 N93-18634

**SEISMIC WAVES**
Reflecting model: P-S arrival [REPT-92-029] p 1576 N93-18188

**SEISMOLOGY**
Evaluation of regional seismic discriminants using the intelligent seismic event identification system [AD-A258936] p 1583 N93-19071

**SELECTION**
Selection and costing of heat exchangers [ESDU-92013] p 1524 N93-18040

**SELENIDES**
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488

**SELF ORGANIZING SYSTEMS**
Quark/gluon jet separation in the photoproduction region with a neural network algorithm [NOTA-INTERNA-992] p 1653 N93-17943
Computer and mathematical modelling of massively parallel architectures for self-organizing neural pattern recognition machines [AD-A258167] p 1630 N93-18297

**SELF TESTS**
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762

**SEMANTICS**
The Lambek calculus enriched with additional connectives [LP-91-04] p 1642 N93-17826
The semantics of plural noun phrases [LP-91-07] p 1614 N93-17827
Categorical grammar and natural reasoning [LP-91-08] p 1642 N93-17828
The kinematics of presupposition [LP-92-05] p 1613 N93-17829
A note on interrogatives and adverbs of quantification [LP-92-07] p 1615 N93-17830
A system of dynamic modal logic [LP-92-08] p 1615 N93-17831
Quantifiers into the world of types [LP-92-09] p 1642 N93-17832
An update semantics for dynamic predicate logic [LP-92-04] p 1615 N93-17841
The dynamic semantics of Kernel ELLA [AD-A258221] p 1617 N93-18024
Flow models of distributed computations: Three equivalent semantics for CCS [INRIA-RR-1484] p 1622 N93-18613
Observing localities [INRIA-RR-1485] p 1647 N93-18614
A hardware implementation of pure ESTEREL [INRIA-RR-1479] p 1622 N93-18649
A static view of localities [INRIA-RR-1483] p 1622 N93-18650
The ESTEREL language [INRIA-RR-1487] p 1623 N93-18651
Extended abstract: Managing disjunction for practical temporal reasoning p 1634 N93-18664

**SEMICONDUCTOR DEVICES**
Solid-state dynamics and quantum transport in novel semiconductor nanostructures [AD-A258482] p 1672 N93-18314
Device applications of layered structures p 1523 N93-18461
Application of multirate digital filter banks to wideband all-digital phase-locked loops design p 1505 N93-18908
Second Workshop Role of Point Defects/Defect Complexes in Silicon Device Fabrication [DE92-016424] p 1675 N93-19467
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions [DE93-002626] p 1675 N93-19488

**SEMICONDUCTOR DIODES**
Innovative techniques for the production of low cost 2D laser diode arrays [AD-A258485] p 1540 N93-18101
Laser phase front measurements using a phase conjugate Twyman-Green interferometer [AD-A258821] p 1542 N93-18996

**SEMICONDUCTOR JUNCTIONS**
Response of a Nb/Al2O3/Nb tunnel junction to picosecond electrical pulses [DE93-002625] p 1676 N93-19617

**SEMICONDUCTOR LASERS**
Innovative techniques for the production of low cost 2D laser diode arrays [AD-A258485] p 1540 N93-18101
Self-collimated unstable resonator semiconductor laser [NASA-CASE-NPO-18386-1-CU] p 1540 N93-18277
Development of simplified external control techniques for broad area semiconductor lasers [NASA-CR-192223] p 1541 N93-18584
Fabrication of photovoltaic laser energy converterby MBE [NASA-CR-4484] p 1571 N93-18866

Design and characterization of optically pumped vertical cavity surface emitting lasers
[AD-A258815] p 1541 N93-18994
Laser phase front measurements using a phase conjugate Twyman-Green interferometer
[AD-A258821] p 1542 N93-18996
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952

**SEMICONDUCTORS (MATERIALS)**
Theoretical investigations of ultrafast phenomena in condensed matter
[AD-A258496] p 1661 N93-18088
On the time dependent hydrodynamic model for semiconductors
[ETN-93-93027] p 1518 N93-18098
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
Development of ultra-low noise, high sensitivity planar metal grating coupled AlGaAs multiquantum well IR detectors for focal plane array staring IR sensor systems
[AD-A257799] p 1671 N93-18238
Solid-state dynamics and quantum transport in novel semiconductor nanostructures
[AD-A258482] p 1672 N93-18314
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D015534] p 1519 N93-18316
Studies of metal-semiconductor clusters
p 1678 N93-18493
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers
[DE93-002324] p 1674 N93-18521
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-000011] p 1571 N93-18657
Planning for the semiconductor manufacturer of the future p 1636 N93-18672
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions
[DE93-002626] p 1675 N93-19488
Theoretical and STM studies of the electronic structure of metal/semiconductor/hydrogen systems
[AD-A258693] p 1678 N93-19862

**SENSITIVITY**
Discrete optical fiber strain sensor
[NASA-CASE-LAR-14810-1-SB] p 1538 N93-19492
Heavy ion backscattering spectrometry for high sensitivity
[DE93-002489] p 1484 N93-19624

**SENSORS**
A high fidelity simulation of optical detection systems, volume 2
[AD-A258498] p 1661 N93-18089
Proceedings for Optical Fiber Sensors
[AD-A257801] p 1662 N93-18239
Optical fiber strain sensor with improved linearity
[NASA-CASE-LAR-14857-1-SB] p 1663 N93-19374
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493
NASA wind shear flight test in situ results
p 1418 N93-19593

**SENSORY PERCEPTION**
The role of central monoaminergic systems in arousal and selective attention
[AD-A258500] p 1597 N93-18264
NPSNET: Aural cues for virtual world immersion
[AD-A257835] p 1503 N93-18417
Role of orientation reference selection in motion sickness
[NASA-CR-191912] p 1598 N93-18596
Principles for integrating voice I/O in a complex interface p 1610 N93-19774

**SENSORY STIMULATION**
Developing virtual cockpits p 1608 N93-19764

**SENTENCES**
The semantics of plural noun phrases
[LP-91-07] p 1614 N93-17827

**SEPARATED FLOW**
Direct simulation of external separated flow with the 3-D Navier-Stokes equations
[ONERA-NT-1992-6] p 1527 N93-18326
Hypersonic flows as related to the national aerospace plane
[NASA-CR-191980] p 1406 N93-18378
Hypersonic rarefied wake characterization
[NASA-TP-3327] p 1529 N93-18604
An experimental investigation of the separating/reattaching flow over a backstep
[NASA-CR-192105] p 1408 N93-18781
Stall departure resistance enhancer
[NASA-CASE-LAR-14221-1] p 1447 N93-19023
Numerical calculations of separating flows around oscillating airfoil p 1410 N93-19284
Numerical simulation of unsteady large scale separated flow around oscillating airfoil p 1410 N93-19285
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313

**SEQUENCING**
Biodegradation of Jet Fuel-4 (JP-4) in sequencing batch reactors
[AD-A258020] p 1496 N93-17917
Doppler velocities in the ion tail of comet Levy 1990c
p 1708 N93-19176

**SEQUENTIAL ANALYSIS**
An examination of the performance of a natural truncation point and acceptance rule for a curtailed Wald sequential sampling plan with Bernoulli parameters
[AD-A257579] p 1649 N93-18180

**SERVICE LIFE**
TBD(exp 3)
[NASA-CR-192075] p 1436 N93-18054
The MPD thruster program at JPL
p 1666 N93-18638
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514

**SERVOMECHANISMS**
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Power analysis in flexible automation
[AD-A259080] p 1549 N93-18961
Efficient visual grasping alignment for cylinders
[NASA-CR-191863] p 1663 N93-19346

**SET THEORY**
The Lambek calculus enriched with additional connectives
[LP-91-04] p 1642 N93-17826
A simplified proof of Toyama's theorem
[CWI-CS-R9156] p 1642 N93-17839
Comparing the theory of representations and constructing mathematics
[ML-92-01] p 1644 N93-17913
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221

**SEYFERT GALAXIES**
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108588] p 1561 N93-18709
BBXRT and Ginga observations of the Seyfert 1 galaxy MRK 335 p 1561 N93-18710
The broad-band x ray spectral variability of Mkn 841
p 1561 N93-18711

**SHAFTS (MACHINE ELEMENTS)**
Calculation of the fatigue life of a surface-hardened shaft by the finite-element method
[VTT-PUBS-92] p 1548 N93-18695
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340

**SHALLOW WATER**
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009

**SHAPE CONTROL**
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309

**SHAPE MEMORY ALLOYS**
Robust control of smart structures
p 1550 N93-19057

**SHAPES**
Nuclear structure from radioactive decay
[DE93-002795] p 1654 N93-18392
Spin vector and shape of 532 Herculina
p 1711 N93-19193
Category A F-16 accidents in the Belgian Air Force
p 1425 N93-19675
Geometry of energy minimizing surfaces
[AD-A258694] p 1678 N93-19863

**SHARP LEADING EDGES**
Application of an Euler-equation method to a sharp-edged delta wing configuration with vortex flow
[NLR-TP-91] p 1404 N93-17809

**SHEAR FLOW**
Waves from an oscillating disturbance in a thermocline and in a linear shear flow
[AERO-REPT-9207] p 1527 N93-18134
Poloidal flow generation by resistive pressure-gradient-driven turbulence
[DE93-001638] p 1667 N93-18707
Stability of nonequilibrium shear flows
p 1534 N93-19056
Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows
[DE93-002794] p 1535 N93-19615
Self-regulated shear flow turbulence in confined plasmas: Basic concepts and potential applications to the L yields H transition
[DE93-002361] p 1668 N93-19743

**SHEAR LAYERS**
Vortical and turbulent structure of planar and lobed mixer free-shear layers p 1533 N93-19055

**SHEAR PROPERTIES**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007

**SHEAR STRAIN**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain
[AD-A258908] p 1559 N93-19353
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354

**SHEAR STRENGTH**
Large strain compression of two tungsten alloys at various strain rates
[AD-A258789] p 1488 N93-18979
Sandwiched structural panel having a bi-directional core structure
[NASA-CASE-MFS-28796-1] p 1479 N93-19022

**SHEAR STRESS**
Stress analysis of single lap bonded joints
[ESDU-92041] p 1553 N93-17952
Effect of bow-type initial imperfection on reliability of minimum-weight, stiffened structural panels
[NASA-TP-3263] p 1556 N93-18615

**SHEATHS**
High-temperature, bellows hybrid seal
[NASA-CASE-LEW-15570-1] p 1549 N93-19027

**SHELL THEORY**
Geometrically nonlinear analysis of laminated elastic structures
[NASA-CR-191055] p 1476 N93-17924

**SHELLS (STRUCTURAL FORMS)**
Optimum design of isotropic monocoque and ring-stiffened circular cylindrical shells subject to external hydrostatic pressure
[AD-A257864] p 1555 N93-18327

**SHOCK (PHYSIOLOGY)**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**SHOCK ABSORBERS**
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973

**SHOCK LAYERS**
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
Effect of non-equilibrium flow chemistry on the heating distribution over the MESUR forebody during a Martian entry
[NASA-CR-177601] p 1533 N93-19011
Assessment of nonequilibrium radiation computation methods for hypersonic flows
[NASA-TM-103994] p 1534 N93-19348

**SHOCK LOADS**
Shock and impact dynamics p 1558 N93-18760
Piezoelectric response of precisely poled PVDF to shock compression greater than 10 GPa
[DE93-002469] p 1539 N93-19636

**SHOCK TUBES**
Shock tube study of the effects of large density differences and blowing ratio on heat transfer to a film-cooled flat plate
[AD-A258813] p 1532 N93-18990
Computation of re-entry flows with two-temperature model p 1412 N93-19295

**SHOCK TUNNELS**
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
Increase of stagnation pressure and enthalpy in shock tunnels p 1417 N93-18086
Numerical simulation of hypersonic flow around H-2 Orbiting Plane (HOPE), part 3 p 1412 N93-19297
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312

**SHOCK WAVE INTERACTION**
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101
**SHOCK WAVE PROFILES**
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321
**SHOCK WAVES**
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
Development of computational methods for heavy lift launch vehicles
[NASA-CR-192298] p 1456 N93-18872
User's reference guide for Noise Assessment Prediction System (NAPS)
[AD-A258865] p 1652 N93-19075
Computation of internal flows using unstructured triangular meshes p 1409 N93-19276
Analytical and numerical study on steady Mach reflection p 1414 N93-19309
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
Perturbation problems in fluid dynamics
[AD-A258934] p 1535 N93-19450
X ray diffraction study of shock-modified tetragonal phases of SnO2 and MnO2
[DE93-002488] p 1535 N93-19479
Microphotography of shocks in crystals
[DE93-002888] p 1677 N93-19827
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation
[AD-A259372] p 1522 N93-19853
**SHORAN**
Aids to Navigation Service Force Mix 2000 Project: Overview
[AD-A259064] p 1433 N93-19386
**SHORT CIRCUITS**
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623
**SHORT TAKEOFF AIRCRAFT**
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
**SHORT WAVE RADIATION**
Slope effects on shortwave radiation components and net radiation
[NASA-CR-192199] p 1504 N93-18881
**SHROUDS**
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380
**SHUTTLE ENGINEERING SIMULATOR**
A simulated annealing approach to schedule optimization for the SES facility p 1634 N93-18662
**SICKNESSES**
A study of illness related lost time in transport aircraft crewmembers
[AD-A258193] p 1602 N93-18298
**SIDELOBES**
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
**SIGNAL ANALYSIS**
Wavelet-based multiresolution analyses of signals
[AD-A257496] p 1500 N93-17904
The advantage of cyclic spectral analysis
[AD-A258307] p 1502 N93-18251
Wavelet image analysis p 1628 N93-18506
A toposcopic investigation of brain electrical activity induced by motion sickness
[AD-A259024] p 1599 N93-18952
Theory and implementation of wavelet analyses in rational resolution decompositions
[AD-A259040] p 1509 N93-19000
G-load effects and efficient acoustic parameters for robust speaker recognition p 1610 N93-19775
**SIGNAL ANALYZERS**
Advanced Communication ESM System (ACES) design considerations
[AD-A259014] p 1510 N93-19100
DARPA initiative in concurrent engineering (DICE). Phase 4: Electronics pilot project
[AD-A258927] p 1522 N93-19446
NASA experimental airborne doppler radar and real time processor for wind shear detection
p 1420 N93-19607
Advanced concepts in distortion-invariant phase-only filter design
[AD-A258691] p 1523 N93-19861
**SIGNAL DETECTION**
Wavelet-based multiresolution analyses of signals
[AD-A257496] p 1500 N93-17904
The advantage of cyclic spectral analysis
[AD-A258307] p 1502 N93-18251
An analysis of I/O efficient order-statistic-based techniques for noise power estimation in the HRMS sky survey's operational system p 1508 N93-18926
Advanced Communication ESM System (ACES) design considerations
[AD-A259014] p 1510 N93-19100
**SIGNAL ENCODING**
Self-dual (48,24;12) codes p 1505 N93-18905
**SIGNAL MEASUREMENT**
Accurate measurement of signals close to the noise floor on a spectrum analyzer
[AD-A258666] p 1516 N93-19949
**SIGNAL PROCESSING**
Wavelet-based multiresolution analyses of signals
[AD-A257496] p 1500 N93-17904
Application of the total least squares technique to frequency estimation
[AD-A257562] p 1644 N93-17936
The first level energy trigger of the L3 experiment/description of the hardware
[NOTA-INTERNA-987] p 1659 N93-17937
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
Track-before-declare methods in IR image sequences
[AD-A257517] p 1661 N93-18174
One and two dimensional discrete wavelet transforms
[AD-A257981] p 1502 N93-18241
The advantage of cyclic spectral analysis
[AD-A258307] p 1502 N93-18251
Develop, apply and evaluate wavelet technology
[AD-A258484] p 1645 N93-18315
New techniques in optical communications and signal processing
[AD-A257894] p 1503 N93-18419
Artificial neural networks application simulator
p 1642 N93-18502
Tools of modeling, identification, and signal processing for fault diagnosis in continuous-time systems
[LAAS-92153] p 1649 N93-18625
On recursive least-squares filtering algorithms and implementations
[NASA-CR-191396] p 1623 N93-18775
Telemetering and telecommunications research
[NASA-CR-191903] p 1457 N93-18777
An analysis of I/O efficient order-statistic-based techniques for noise power estimation in the HRMS sky survey's operational system p 1508 N93-18926
Inverse problems for orthogonal matrices, Toda flows, and signal processing
[AD-A258810] p 1647 N93-18987
Real-time diagnostics for a reusable rocket engine
[NASA-TM-105792] p 1640 N93-19018
Acquisition of direct sequence spread spectrum signals using digital signal processing techniques
[AD-A258974] p 1510 N93-19094
Advanced Communication ESM System (ACES) design considerations
[AD-A259014] p 1510 N93-19100
Digital signal processing using lapped transforms with variable parameter windows and orthonormal bases
[AD-A258853] p 1511 N93-19368
DARPA initiative in concurrent engineering (DICE). Phase 4: Electronics pilot project
[AD-A258927] p 1522 N93-19446
Fast Fourier transform: A solution for digital signal processing in incoherent scatter experiments?
p 1516 N93-19541
NASA experimental airborne doppler radar and real time processor for wind shear detection
p 1420 N93-19607
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847
New methods for nonlinear tracking and nonlinear chaotic signal processing
[AD-A259331] p 1516 N93-19850
Advanced concepts in distortion-invariant phase-only filter design
[AD-A258691] p 1523 N93-19861
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 1446 N93-19925
**SIGNAL TO NOISE RATIOS**
Nonlinear joint transform correlator
[AD-A258329] p 1661 N93-18136
Optical communications and a comparison of optical technologies for a high data rate return link from Mars
[NASA-TP-3180] p 1458 N93-18854
The effects of correlated noise in intra-complex DSN arrays for S-band Galileo telemetry reception
p 1458 N93-18910
Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver
p 1506 N93-18913
SNR degradation in square-wave subcarrier downconversion p 1507 N93-18914
An analysis of I/O efficient order-statistic-based techniques for noise power estimation in the HRMS sky survey's operational system p 1508 N93-18926
Multiple symbol partially coherent detection of MPSK
p 1514 N93-19431
Advanced concepts in distortion-invariant phase-only filter design
[AD-A258691] p 1523 N93-19861
Accurate measurement of signals close to the noise floor on a spectrum analyzer
[AD-A258666] p 1516 N93-19949
**SIGNATURES**
Evaluation of regional seismic discriminants using the intelligent seismic event identification system
[AD-A258936] p 1583 N93-19071
**SILICA GLASS**
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493
**SILICATES**
Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806
**SILICIDES**
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers
[DE93-002324] p 1674 N93-18521
**SILICON**
Studies of metal-semiconductor clusters
p 1678 N93-18493
Second Workshop Role of Point Defects/Defect Complexes in Silicon Device Fabrication
[DE92-016424] p 1675 N93-19467
Heavy ion backscattering spectrometry for high sensitivity
[DE93-002489] p 1484 N93-19624
**SILICON CARBIDES**
Research and development on advanced silicon carbide thin film growth techniques and fabrication of high power and microwave frequency silicon carbide-based device structures
[AD-A257913] p 1672 N93-18367
High strain-rate compression testing of a ceramic matrix composite
[AD-A258802] p 1495 N93-19439
**SILICON DIOXIDE**
Prediction of rigid silica based insulation conductivity
[NASA-TP-3276] p 1524 N93-17925
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572
**SILICON NITRIDES**
Feasibility of silicon nitride films by vapor deposition at low temperature: Comparison of dichlorsilane-ammonia and disilane gaseous systems
[LAAS-92249] p 1490 N93-17812
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
**SILICON TRANSISTORS**
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191957] p 1523 N93-19893
**SILVER**
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
**SIMD (COMPUTERS)**
Numerical Wind Tunnel hardware
p 1411 N93-19289
**SIMPLIFICATION**
Towards a meta simplifier
[INRIA-RR-1402] p 1621 N93-18574
Stimulus presentation formats and measurement techniques for the quantification of target detection performance
[AD-A258933] p 1603 N93-19449
Computational reacting gas dynamics
[NASA-CR-192089] p 1535 N93-19859
**SIMULATED ANNEALING**
A simulated annealing approach to schedule optimization for the SES facility p 1634 N93-18662
**SIMULATION**
Hermes CX-7: Air transport system design simulation
[NASA-CR-192082] p 1437 N93-18056
Arrow 227: Air transport system design simulation
[NASA-CR-192053] p 1437 N93-18063
The S.T.o.R.M. (tm): Air transport system design simulation
[NASA-CR-192070] p 1439 N93-18349
Simulated coal-gas-fueled molten carbonate fuel cell development program
[DE93-000205] p 1570 N93-18527
Control/structure interaction during Space Station Freedom-Orbiter berthing p 1463 N93-18831

Interplanetary magnetic field changes and condensations in comet Halley's plasma tail
p 1704 N93-19147
The influence of individual sensivity to stress on the behavior (attitude and performance) of avoidance of an accident
p 1430 N93-19705
Multi-fluid modeling of interpenetrating plasmas
[DE93-002893] p 1668 N93-19829

**SINE WAVES**
Application of the total least squares technique to frequency estimation
[AD-A257562] p 1644 N93-17936

**SINGLE CRYSTALS**
Growth and characterization of single crystals
[NOTA-INTERNA-984] p 1670 N93-17935
Heteroepitaxial diamond growth
[AD-A257510] p 1671 N93-18079
Pseudomorphic stabilization of diamond on non-diamond substrates, part 1. Diamond grown on single crystal beryllium oxide, Part 2. Anomalous band gap behavior and phase stability of c-BN/Diamond alloys
[AD-A257845] p 1493 N93-18345
Determination of cleavage planes and fracture characterization of Ni-based single crystal superalloys
[NASA-CR-191932] p 1674 N93-18593
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848

**SINTERING**
Laboratory studies on cometary crust formation: The importance of sintering
p 1715 N93-19228
Comparative cost analysis of ceramic processing techniques
[DE93-003047] p 1496 N93-19632

**SIS (SUPERCONDUCTORS)**
Response of a Nb/Al2O3/Nb tunnel junction to picosecond electrical pulses
[DE93-002625] p 1676 N93-19617

**SISO (CONTROL SYSTEMS)**
The Mini-Mast CSI testbed: Lessons learned
p 1461 N93-18819

**SITE SELECTION**
Last chance at Taurus-Littrow
p 1740 N93-18817
Adverse weather test site selection study
[AD-A259012] p 1440 N93-18895
Earth observing system: Information on NASA's selection of data centers. Report to the Chairman, Committee on Science, Space, and Technology, House of Representatives
[GAO/IMTEC-91-67] p 1569 N93-19842

**SIZE DETERMINATION**
Method for non-destructive estimation of waveguide directional coupler dimensions
[NASA-CASE-NPO-18454-1-CU] p 1519 N93-18285

**SIZE DISTRIBUTION**
Nondestructive evaluation of grain size distributions using multifractal analysis of backscattered ultrasonic signals
[AD-A259035] p 1553 N93-18956
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud
p 1706 N93-19159
The flux of small asteroids near the Earth
p 1715 N93-19225
Velocity distribution of fragments of catastrophic impacts
p 1719 N93-19252

**SKIN (STRUCTURAL MEMBER)**
Add-on damping treatment for the F-15 upper-outer wing skin
[AD-A258470] p 1438 N93-18248

**SKIN FRICTION**
Reflection type skin friction meter
[NASA-CASE-LAR-14520-1-SB] p 1406 N93-18275

**SKY SURVEYS (ASTRONOMY)**
Pre-phase A: Development of a far-ultraviolet photometric- and spectroscopic-survey small-explorer experiment
[NASA-CR-192092] p 1696 N93-18415
An analysis of I/O efficient order-statistic-based techniques for noise power estimation in the HRMS sky survey's operational system
p 1508 N93-18926
Extreme Ultraviolet Explorer. Long look at the next window
[NASA-TM-108618] p 1700 N93-18992
Two high-sensitivity pulsar searches
p 1696 N93-19047
A Southern Hemisphere radar meteor orbit survey
p 1701 N93-19121
High resolution images of P/Tempel 1 and P/Tempel 2 constructed from IRAS survey data
p 1699 N93-19257
Automating sky object classification in astronomical survey images
p 1690 N93-19728

**SLABS**
Evolution of attached and detached slabs and their associated mantle dynamics
[NASA-CR-191920] p 1576 N93-18320
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896

**SLIDING FRICTION**
Friction and wear of plasma-deposited diamond films
[NASA-TM-105926] p 1495 N93-19035

**SLIP FLOW**
Baseline experiments on Coulomb damping due to rotational slip
[AD-A258840] p 1560 N93-19440

**SLITS**
Slit scan radiographic system for intermediate size rocket motors
[NASA-CR-191798] p 1471 N93-18058
Production rates for comet P/Temple 2 from long slit CCD spectroscopy
p 1705 N93-19156

**SLOPES**
Slope effects on shortwave radiation components and net radiation
[NASA-CR-192199] p 1504 N93-18881

**SLOT ANTENNAS**
Advanced electromagnetic methods for aerospace vehicles
[NASA-CR-192180] p 1503 N93-18580
Moment method analysis of linearly tapered slot antennas: Low loss components for switched beam radiometers
[NASA-CR-192094] p 1515 N93-19483

**SLURRY PROPELLANTS**
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192285] p 1497 N93-19412

**SMART STRUCTURES**
Robust control of smart structures
p 1550 N93-19057
Dynamic characterization, monitoring and control of rotating flexible beam-mass structures via piezo-embedded techniques
p 1561 N93-19458

**SNOW**
Radar based case study of a Northeast Colorado winter storm
[AD-A258256] p 1585 N93-17901

**SODIUM**
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption
p 1736 N93-18791

**SOFT LANDING**
A literature survey of airborne vehicles impacting with water and soil: Head injury criteria and severity index development of computer program KRASH
[DOT/FAA/CT-90/24] p 1421 N93-19647

**SOFTWARE ENGINEERING**
The design and implementation of a user interface for the computer-aided prototyping system
[AD-A258017] p 1614 N93-17818
A concept study for a national software engineering database
[AD-A258254] p 1614 N93-17823
A testbed for flow visualization research
[REPT-92-32] p 1616 N93-17846
System for Anomaly and Failure Detection (SAFD) system development
[NASA-CR-184475] p 1552 N93-17856
Repository-based software engineering program
[NASA-CR-191653] p 1616 N93-17885
The application of function points to predict source lines of code for software development
[AD-A258447] p 1616 N93-17892
Re-engineering software systems in the Department of Defense using integrated computer aided software engineering tools
[AD-A257500] p 1617 N93-17905
Software Engineering Process Groups: Results of the 1992 SEPG Workshop event evaluation and a first report on SEPG status
[AD-A258259] p 1617 N93-18011
A reuse-based software development methodology
[AD-A258255] p 1617 N93-18025
Theory of algorithm structure and design
[AD-A257948] p 1617 N93-18081
Range scheduling automation for the Air Force satellite control network: A case study in computer system development
[AD-A258142] p 1454 N93-18084
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
Software process development and enactment: Concepts and definitions
[AD-A258465] p 1619 N93-18243
A classification and bibliography of software prototyping
[AD-A258466] p 1619 N93-18268
Joint Integrated Avionics Working Group (JIAWG) object-oriented domain analysis method (JODA), version 3.1
[AD-A258468] p 1447 N93-18270
Analysis of a software maintenance system: A case study
[AD-A258469] p 1619 N93-18271
Automated documentation generator for advanced protein crystal growth
[NASA-CR-192452] p 1673 N93-18425
Wrapping mathematical tools
p 1648 N93-18504
Robot welding process control development task
[NASA-CR-192434] p 1549 N93-18851
Software Engineering Laboratory (SEL) database organization and user's guide, revision 2
[NASA-TM-108631] p 1624 N93-18860
Recommended approach to software development, revision 3
[NASA-TM-108630] p 1624 N93-18861
A model for merging software prototypes
[AD-A258781] p 1624 N93-18948
Development of a task analysis tool to facilitate user interface design
p 1628 N93-19404
Fast algorithms for transport models
[DE93-003881] p 1657 N93-19508
Flight above a virtual world
p 1609 N93-19766

**SOFTWARE RELIABILITY**
A conceptual framework for system fault tolerance
[AD-A258467] p 1619 N93-18269
Real-time fault tolerant computer systems
[AD-A258891] p 1625 N93-19334

**SOFTWARE REUSE**
Repository-based software engineering program
[NASA-CR-191653] p 1616 N93-17885
Using an object-oriented database management system to enhance the reusability of class definitions
[AD-A257559] p 1685 N93-17981
A reuse-based software development methodology
[AD-A258255] p 1617 N93-18025
Joint Integrated Avionics Working Group (JIAWG) object-oriented domain analysis method (JODA), version 3.1
[AD-A258468] p 1447 N93-18270
A clearinghouse for software reuse: Lessons learned from RAPID/DSRS initiatives
[AD-A258782] p 1625 N93-19062
Examining a layered approach to function and design representation for reusable software components
[AD-A258920] p 1626 N93-19343

**SOFTWARE TOOLS**
The design and implementation of a user interface for the computer-aided prototyping system
[AD-A258017] p 1614 N93-17818
A testbed for flow visualization research
[REPT-92-32] p 1616 N93-17846
The application of function points to predict source lines of code for software development
[AD-A258447] p 1616 N93-17892
The product and services design and development software aided tool RELIASEP
[ETN-93-93015] p 1617 N93-18076
Grammatica: An open software laboratory for artificial intelligence
[REPT-92-031] p 1632 N93-18331
Wrapping mathematical tools
p 1648 N93-18504
QA system for structural analysis
p 1557 N93-18755
P-adaptivity applied to plate in bending problems
p 1557 N93-18756
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures
[NASA-CR-189742] p 1532 N93-18769
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958
Development of a task analysis tool to facilitate user interface design
p 1628 N93-19404
DARPA initiative in concurrent engineering (DICE). Phase 4: Electronics pilot project
[AD-A258927] p 1522 N93-19446
A general experiment definition system and its applications
p 1517 N93-19576
NASA experimental airborne doppler radar and real time processor for wind shear detection
p 1420 N93-19607

Software users manual for the generic avionics data bus tool kit of the Ada technology insertion program
[AD-A259364] p 1628 N93-19852
Software programmers manual for the generic avionics data bus tool kit to the Ada technology insertion program
[AD-A259379] p 1628 N93-19855

**SOI (SEMICONDUCTORS)**
VLSI microelectronics research p 1523 N93-18462

**SOIL MECHANICS**
A literature survey of airborne vehicles impacting with water and soil: Head injury criteria and severity index development of computer program KRASH
[DOT/FAA/CT-90/24] p 1421 N93-19647

**SOIL MOISTURE**
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525

**SOIL SCIENCE**
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792

**SOILS**
Biodegradation of Jet Fuel-4 (JP-4) in sequencing batch reactors
[AD-A258020] p 1496 N93-17917
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia
[AD-A257847] p 1566 N93-18346
Bibliographic study of georadar principles, applications, advantages, and inconvenience
[CR-35/91] p 1509 N93-18993
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822

**SOL-GEL PROCESSES**
Fiber coating by sputtering for high temperature composites
[AD-A258119] p 1476 N93-17897
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
Thin film processing of photorefractive BaTiO3
[NASA-CR-192194] p 1673 N93-18427
Molecular-scale hybrid polymer ceramics
p 1496 N93-18487

**SOLAR ACTIVITY**
Influence of solar activity upon light curves of comets P/Halley (1986 3) and P/Churyumov-Gerasimenko (1982 8) p 1703 N93-19140

**SOLAR ACTIVITY EFFECTS**
Large-scale velocity fields and small-scale magnetic fields during the maximum of solar cycle 22
[AD-A258172] p 1744 N93-17922
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events
[NASA-TP-3300] p 1746 N93-19109
Influence of solar activity upon light curves of comets P/Halley (1986 3) and P/Churyumov-Gerasimenko (1982 8) p 1703 N93-19140
Disturbances of both cometary and Earth's magnetospheres excited by single solar flares
p 1710 N93-19190
The solar wind structure that caused a large-scale disturbance of the plasma tail of comet Austin
p 1710 N93-19192

**SOLAR ARRAYS**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
Hypervelocity impact effects on solar cells
[NASA-CR-192444] p 1571 N93-18601
Passive damping of a solar array
[AD-A258976] p 1559 N93-19096

**SOLAR ATMOSPHERE**
Atmospheric tides in the middle atmosphere
[INPE-5436-PUD/053] p 1583 N93-19791

**SOLAR CELLS**
Indium phosphide photovoltaic technology
p 1572 N93-18476
Hypervelocity impact effects on solar cells
[NASA-CR-192444] p 1571 N93-18601
Research on polycrystalline thin-film CuGaInSe2 solar cells
[DE92-016439] p 1571 N93-18656
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-000011] p 1571 N93-18657
Measurement uncertainty analysis techniques applied to PV performance measurements
[DE93-000019] p 1553 N93-19438
Second Workshop Role of Point Defects/Defect Complexes in Silicon Device Fabrication
[DE92-016424] p 1675 N93-19467
The status of photovoltaic concentrator development
[DE93-002298] p 1571 N93-19474
Spin dependent photocurrents in ribbon solar cells
[DE93-002486] p 1572 N93-19623
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952

**SOLAR COLLECTORS**
The status of photovoltaic concentrator development
[DE93-002298] p 1571 N93-19474

**SOLAR CORONA**
A study of physical mechanisms for filament eruption and coronal mass ejection via numerical simulation
[NASA-CR-192118] p 1744 N93-18577
Determination of coronal magnetic fields from vector magnetograms
[NASA-CR-191386] p 1744 N93-18869

**SOLAR CYCLES**
Large-scale velocity fields and small-scale magnetic fields during the maximum of solar cycle 22
[AD-A258172] p 1744 N93-17922
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events
[NASA-TP-3300] p 1746 N93-19109

**SOLAR ENERGY**
Interagency Advanced Power Group semi-annual compilation of briefs, September 1992
[DE93-000703] p 1571 N93-19613

**SOLAR ENERGY CONVERSION**
Fabrication of photovoltaic laser energy converterby MBE
[NASA-CR-4484] p 1571 N93-18866

**SOLAR FLARES**
A study of physical mechanisms for filament eruption and coronal mass ejection via numerical simulation
[NASA-CR-192118] p 1744 N93-18577
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events
[NASA-TP-3300] p 1746 N93-19109
Disturbances of both cometary and Earth's magnetospheres excited by single solar flares
p 1710 N93-19190

**SOLAR GRANULATION**
Photoelectric analysis of the solar granulation in IR
[AD-A257811] p 1744 N93-18334

**SOLAR GRAVITATION**
Rotational behavior of comet nuclei under gravitational perturbations p 1714 N93-19216

**SOLAR INSTRUMENTS**
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650

**SOLAR MAGNETIC FIELD**
Large-scale velocity fields and small-scale magnetic fields during the maximum of solar cycle 22
[AD-A258172] p 1744 N93-17922
A study of physical mechanisms for filament eruption and coronal mass ejection via numerical simulation
[NASA-CR-192118] p 1744 N93-18577
Determination of coronal magnetic fields from vector magnetograms
[NASA-CR-191386] p 1744 N93-18869
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650

**SOLAR NEUTRINOS**
Neutrino masses and solar neutrinos
[DE93-002416] p 1655 N93-18522

**SOLAR ORBITS**
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud p 1706 N93-19159
A computer search for asteroid families
p 1711 N93-19199
Dynamical timescales in the Jupiter family
p 1712 N93-19201
Cometary orbital evolution in the outer planetary region p 1712 N93-19204
Comet nongravitational forces and meteoritic impacts
p 1712 N93-19207
Long-term orbital evolution of short-period comets found in Project Cosmo-DICE p 1454 N93-19215

**SOLAR PHYSICS**
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459
Solar-terrestrial physics and astrophysics
p 1733 N93-18501
Space physics strategy: Implementation study. Volume 2: Program plan
[NASA-TM-108143] p 1453 N93-18544
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650
Theoretical studies on the chromosphere, corona, and solar wind
[NASA-CR-192116] p 1745 N93-19932

**SOLAR POSITION**
Lightcurve of comet Austin(1989c1) and its dust mantle development p 1707 N93-19167
Heliocentric distance dependencies of the C2 lifetime and C2 parent production rate in comet P/Brorsen-Metcalf (1989o) p 1711 N93-19195

**SOLAR PROBES**
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650

**SOLAR PROTONS**
Mars surface radiation exposure for solar maximum conditions and 1989 solar proton events
[NASA-TP-3300] p 1746 N93-19109
Polar cap absorption events observed during the EISCAT operation in 1981-1989 p 1727 N93-19556
EISCAT incoherent scatter radar observations and model studies on day to night variations in the ionospheric D-region during the PCA event of August 1989
p 1728 N93-19557
Initial results from the low altitude experiments CP-6 and UP-1 p 1728 N93-19558

**SOLAR RADIATION**
Large-scale velocity fields and small-scale magnetic fields during the maximum of solar cycle 22
[AD-A258172] p 1744 N93-17922
Solar extreme ultraviolet sensor and advanced langmuir probe
[NASA-CR-191972] p 1744 N93-18880
Geodynamic contributions to global climatic change
p 1575 N93-18963
Dust and gas jets: Evidence for a diffuse source in Halley's coma p 1704 N93-19142
Formation of ions and radicals from icy grains in comets p 1708 N93-19172

**SOLAR REFLECTORS**
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-000011] p 1571 N93-18657

**SOLAR ROTATION**
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650

**SOLAR SENSORS**
Solar extreme ultraviolet sensor and advanced langmuir probe
[NASA-CR-191972] p 1744 N93-18880

**SOLAR SYSTEM**
Exobiology in Solar System Exploration
[NASA-SP-512] p 1590 N93-18545
Overview: Exobiology in solar system exploration
p 1591 N93-18546
The solar system: Importance of research to the biological sciences p 1591 N93-18547
Extreme Ultraviolet Explorer. Long look at the next window
[NASA-TM-108618] p 1700 N93-18992
The state of knowledge concerning the Kuiper belt
p 1711 N93-19197
Dynamical timescales in the Jupiter family
p 1712 N93-19201

**SOLAR SYSTEM EVOLUTION**
Minor satellites and the Gaspra encounter
p 1719 N93-19255

**SOLAR TERRESTRIAL INTERACTIONS**
Auroral energization and geomagnetic disturbances
p 1584 N93-18499
Solar-terrestrial physics and astrophysics
p 1733 N93-18501
The flow of plasma in the solar terrestrial environment
[NASA-CR-192106] p 1744 N93-18780

**SOLAR WIND**
Cosmic ray decreases and magnetic clouds
p 1564 N93-18071
The solar wind structures associated with cosmic ray decreases and particle acceleration in 1978-1982
p 1565 N93-18072
Auroral energization and geomagnetic disturbances
p 1584 N93-18499
Initial overview of disconnection events in Halley's Comet 1986 p 1702 N93-19134
Plasma-beam instabilities in cometary ionospheres
p 1704 N93-19141

Disturbances of both cometary and Earth's magnetospheres excited by single solar flares p 1710 N93-19190
The solar wind structure that caused a large-scale disturbance of the plasma tail of comet Austin p 1710 N93-19192
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521
Solar wind velocity measurements with the EISCAT UHF antenna array p 1725 N93-19542

**SOLAR WIND VELOCITY**
Influence of solar activity upon light curves of comets P/Halley (1986 3) and P/Churyumov-Gerasimenko (1982 8) p 1703 N93-19140

**SOLAR-PUMPED LASERS**
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952

**SOLENOIDS**
Study of magnetic bearings with high temperature superconductors, phase 3
[NASA-CR-192229] p 1551 N93-19378

**SOLID LUBRICANTS**
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488

**SOLID PHASES**
A geometrical description of microstructure with application to Al powder metallurgy processing p 1489 N93-19061

**SOLID PROPELLANT ROCKET ENGINES**
Oscillatory internal flow fields studies --- flow oscillations in solid propellant rocket engines
[AD-A258005] p 1524 N93-17815
Data communication network at the ASRM facility
[NASA-CR-192085] p 1500 N93-17930
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
NASA's Advanced solid rocket motor
[NASA-CR-191950] p 1475 N93-19825
Performance of reinforced polymer ablators exposed to a solid rocket motor exhaust
[AD-A259341] p 1496 N93-19851

**SOLID PROPELLANTS**
International Workshop on Mathematical Methods in Combustion
[AD-A258478] p 1482 N93-18312

**SOLID SOLUTIONS**
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN
[AD-A258804] p 1675 N93-18983

**SOLID STATE**
Solid state and the standard model
[NOTA-INTERNA-980] p 1653 N93-17932
Solid state, surface and catalytic studies of oxides
[DE93-004640] p 1483 N93-18424

**SOLID STATE DEVICES**
HF MOSFET power amplifiers
[AD-A258384] p 1519 N93-18258
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924

**SOLID STATE LASERS**
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
A Ti:Sapphire laser for the new polarized electron source
[DE93-004016] p 1541 N93-18448
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Tunable infrared and visible solid-state laser p 1543 N93-18473
Characterization of radiation damage in solids p 1659 N93-18478

**SOLID STATE PHYSICS**
Research programs at the Research Laboratory of Electronics p 1522 N93-19482

**SOLID SURFACES**
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490

**SOLIDIFICATION**
Microstructural control of complex alloys p 1490 N93-18485
Principles of weld solidification and microstructures
[DE93-003012] p 1490 N93-19629

**SOLIDS**
Theoretical investigations of ultrafast phenomena in condensed matter
[AD-A258496] p 1661 N93-18088

**SOLITARY WAVES**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618

**SOLUBILITY**
Characterization of the water soluble component of inedible residue from candidate CELSS crops
[NASA-TM-107557] p 1605 N93-18111

**SOLVATION**
Picosecond molecular-beam studies of chemical reactivity p 1659 N93-18483
Energy storage in supercritical solvents p 1498 N93-18492

**SOLVENTS**
Picosecond molecular-beam studies of chemical reactivity p 1659 N93-18483
Energy storage in supercritical solvents p 1498 N93-18492
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051

**SONAR**
ARID relative calibration experimental data and analysis p 1552 N93-19395
Stimulus presentation formats and measurement techniques for the quantification of target detection performance
[AD-A258933] p 1603 N93-19449

**SORBENTS**
High temperature sorbents for oxygen
[NASA-CASE-NPO-18409-1-CU] p 1483 N93-19025

**SORPTION**
High temperature sorbents for oxygen
[NASA-CASE-NPO-18409-1-CU] p 1483 N93-19025

**SOUND PROPAGATION**
User's reference guide for Noise Assessment Prediction System (NAPS)
[AD-A258865] p 1652 N93-19075

**SOUND TRANSDUCERS**
Sensing the gas metal arc welding process
[DE93-001957] p 1548 N93-18658

**SOUND WAVES**
NPSNET: Aural cues for virtual world immersion
[AD-A257835] p 1503 N93-18417
Coupling between plate vibration and acoustic radiation
[NASA-CR-189741] p 1651 N93-18770
User's reference guide for Noise Assessment Prediction System (NAPS)
[AD-A258865] p 1652 N93-19075
Estimation of the direct acoustic radiation from turbulent spots. Using boundary layer velocity measurements
[AD-A258981] p 1534 N93-19097

**SOUNDING ROCKETS**
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235

**SOUTH CAROLINA**
Predicting the movement of Carolina coastal fronts
[AD-A258280] p 1585 N93-18012

**SOUTHERN HEMISPHERE**
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120
A Southern Hemisphere radar meteor orbit survey p 1701 N93-19121

**SOYBEANS**
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data
[INPE-5327-PRE/1725] p 1567 N93-19646

**SPACE CHARGE**
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957

**SPACE COMMERCIALIZATION**
Public space launch acquisition: A comparative case study
[AD-A258141] p 1455 N93-18083
Launch system development in the Pacific Rim
[NASA-TM-108595] p 1455 N93-18170
Industrial aerospace activities p 1404 N93-19007
Expendable launch vehicles technology: A report to the US Senate and the US House of Representatives
[NASA-TM-106141] p 1456 N93-19375

**SPACE COMMUNICATION**
Aerospace Sponsored Research
[ATR-91(8498)-1] p 1747 N93-18459
The Telecommunications and Data Acquisition
[NASA-CR-191998] p 1504 N93-18897
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites p 1507 N93-18921
The Telecommunications and Data Acquisition Report
[NASA-CR-191228] p 1511 N93-19413

**SPACE DEBRIS**
A methodology for selective removal of orbital debris
[NASA-CR-192052] p 1459 N93-18154
Predicting multi-wall structural response to hypervelocity impact using the hull code
[NASA-CR-4486] p 1461 N93-18406
Hypervelocity impact effects on solar cells
[NASA-CR-192444] p 1571 N93-18601
Debris about asteroids: Where and how much? p 1703 N93-19136
The geocentric particulate distribution: Cometary, asteroidal, or space debris? p 1713 N93-19209

**SPACE ENVIRONMENT SIMULATION**
Chemical and physical effects in the bulk of cometary analogs p 1716 N93-19234

**SPACE ERECTABLE STRUCTURES**
SHARC: Space Habitat, Assembly and Repair Center
[NASA-CR-192031] p 1606 N93-18153
Results of the Advanced Space Structures Technology Research Experiments (ASTREX) hardware and control development p 1466 N93-18844

**SPACE EXPLORATION**
Project Ares: A systems engineering and operations architecture for the exploration of Mars
[AD-A258082] p 1734 N93-18021
LOLA: The lunar operations landing assembly
[NASA-CR-192043] p 1734 N93-18038
Planetary surface exploration: MESUR/autonomous lunar rover
[NASA-CR-192073] p 1546 N93-18102
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5
[NASA-CR-192042] p 1606 N93-18156
Asteroid exploration and utilization: The Hawking explorer
[NASA-CR-192027] p 1699 N93-18164
Space education: Deriving benefits from industrial consortia
[NASA-TM-108593] p 1679 N93-18358
Exobiology in Solar System Exploration
[NASA-SP-512] p 1590 N93-18545
Overview: Exobiology in solar system exploration p 1591 N93-18546
MRSR: Rationale for a Mars Rover/Sample Return mission p 1593 N93-18560
Future NASA solar system exploration activities: A framework for international cooperation p 1453 N93-18562
Teaching, learning, and planetary exploration
[NASA-CR-192000] p 1734 N93-18569
An integrated mission planning approach for the Space Exploration initiative
[DE93-001512] p 1473 N93-18588
Near term NEP missions and systems p 1661 N93-18637
Space and surface power for the space exploration initiative: Results from project outreach
[NASA-CR-191254] p 1474 N93-18848
Extreme Ultraviolet Explorer. Long look at the next window
[NASA-TM-108618] p 1700 N93-18992
Automated detection of asteroids in real-time with the Spacewatch telescope p 1698 N93-19239
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410

**SPACE HABITATS**
Automation of closed environments in space for human comfort and safety
[NASA-CR-192045] p 1604 N93-17971
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats
[NASA-CR-192030] p 1605 N93-18018
Conceptual design of a thermal control system for an inflatable lunar habitat module
[NASA-CR-192014] p 1606 N93-18113
SHARC: Space Habitat, Assembly and Repair Center
[NASA-CR-192031] p 1606 N93-18153
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5
[NASA-CR-192042] p 1606 N93-18156

**SPACE INDUSTRIALIZATION**
Space education: Deriving benefits from industrial consortia
[NASA-TM-108593] p 1679 N93-18358

**SPACE MISSIONS**
Project Ares: A systems engineering and operations architecture for the exploration of Mars
[AD-A258082] p 1734 N93-18021
Comet nucleus and asteroid sample return missions
[NASA-CR-192055] p 1699 N93-18171
Exobiology in Solar System Exploration
[NASA-SP-512] p 1590 N93-18545

Future NASA solar system exploration activities: A framework for international cooperation p 1453 N93-18562
Transportation and platforms perspective p 1453 N93-18636
Near term NEP missions and systems p 1661 N93-18637
Iterative refinement scheduling p 1635 N93-18669
Results of the Advanced Space Structures Technology Research Experiments (ASTREX) hardware and control development p 1466 N93-18844
The use of subcarriers in future DSN missions p 1507 N93-18915
Low cost missions to explore the diversity of near Earth objects p 1453 N93-19124
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399
Design and application of electromechanical actuators for deep space missions
[NASA-CR-192227] p 1551 N93-19946

**SPACE NAVIGATION**
Systems analysis for ground-based optical navigation p 1434 N93-18900

**SPACE OBSERVATIONS (FROM EARTH)**
Activities report of the Institute of Space Physics
[ETN-93-93360] p 1665 N93-17947
IUE observations of periodic comets Tempel-2, Kopff, and Tempel-1 p 1697 N93-19153
The eleven observations of comets between 687 AD and 1114 AD recorded in the Anglo Saxon Chronicle p 1698 N93-19205
The recovery of asteroids after two observations p 1698 N93-19206
Ground-based observations of 951 Gaspra: CCD lightcurves and spectrophotometry with the Galileo filters p 1698 N93-19212
The importance of guiding on the motion of a comet in astrometric observations p 1698 N93-19219
The flux of small asteroids near the Earth p 1715 N93-19225
Visual data of minor meteor showers limits of the method p 1715 N93-19229
The unusual lightcurve of 1990 TR p 1720 N93-19265

**SPACE PLASMAS**
Radar-satellite studies of the high-latitude ionosphere
[AD-A257918] p 1576 N93-18214
Space plasma physics research
[NASA-CR-192158] p 1665 N93-18404
Interplanetary magnetic field changes and condensations in comet Halley's plasma tail p 1704 N93-19147
The solar wind structure that caused a large-scale disturbance of the plasma tail of comet Austin p 1710 N93-19192
Fifth EISCAT Scientific Workshop: Programme and abstracts
[REPT-120(1991)] p 1722 N93-19518
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522
Observations of topside ionospheric ion outflows during auroral activity: Are they turbulence induced? p 1723 N93-19525
Introduction to ionospheric heating at Tromsoe (Norway). Part 2: Current scientific problems p 1724 N93-19532
High altitude measurements with the EISCAT VHF radar and the development of Common Programme Seven p 1727 N93-19551
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991
[INPE-5349-PRP/162] p 1668 N93-19793

**SPACE PLATFORMS**
Mars Observer: Mission toward a basic understanding of Mars p 1592 N93-18557
Transportation and platforms perspective p 1453 N93-18636
The Mini-Mast CSI testbed: Lessons learned p 1461 N93-18819
A synopsis of test results and knowledge gained from the Phase-0 CSI evolutionary model p 1467 N93-18933
CSI/MMC studies for improving jitter performance for large multi-payload platforms p 1468 N93-18937

**SPACE POWER REACTORS**
Nuclear safety for the space exploration initiative
[NASA-CR-189180] p 1659 N93-18032
Space and surface power for the space exploration initiative: Results from project outreach
[NASA-CR-191254] p 1474 N93-18848
Environmental interactions and the SP-100 power system
[NASA-TM-105866] p 1474 N93-18877
A fundamental study of contribution transport theory and channel theory applications
[DE93-004315] p 1656 N93-19501

**SPACE PROCESSING**
Protein crystal growth in low gravity
[NASA-CR-191770] p 1498 N93-17886
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**SPACE PROGRAMS**
An evolving joint space campaign concept and the Army's role
[AD-A258112] p 1453 N93-18022
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
Space is a different place
[AD-A258336] p 1453 N93-18219
Space education: Deriving benefits from industrial consortia
[NASA-TM-108593] p 1679 N93-18358
The future of the US space launch capability p 1456 N93-18865

**SPACE SHUTTLE BOOSTERS**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030
Space shuttle solid rocket booster main parachute damage reduction team report
[NASA-TM-4437] p 1455 N93-18067
NASA's Advanced solid rocket motor
[NASA-CR-191950] p 1475 N93-19825

**SPACE SHUTTLE MAIN ENGINE**
System for Anomaly and Failure Detection (SAFD) system development
[NASA-CR-184475] p 1552 N93-17856
Identification and interpretation of patterns in rocket engine data
[NASA-CR-192100] p 1473 N93-18401
Emission spectra of selected SSME elements and materials
[NASA-RP-1286] p 1656 N93-18763
Technology test bed engine real-time failure control
[NASA-CR-192414] p 1474 N93-18879
NASA's Advanced solid rocket motor
[NASA-CR-191950] p 1475 N93-19825

**SPACE SHUTTLE ORBITERS**
Metrication report to the Congress. 1991 activities and 1992 plans
[NASA-TM-108603] p 1499 N93-18357
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955

**SPACE SHUTTLE PAYLOADS**
Metrication report to the Congress. 1991 activities and 1992 plans
[NASA-TM-108603] p 1499 N93-18357

**SPACE SHUTTLES**
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
Development of an intelligent hypertext manual for the space shuttle hazardous gas detection system
[NASA-CR-191898] p 1457 N93-18447
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050
A simple grid generation technique for hypersonic flow around complex configuration p 1409 N93-19275
Numerical computations using multi-domain technique p 1409 N93-19277
The role of computational fluid dynamics in aeronautical engineering. 9: Analysis of hypersonic equilibrium air flow p 1412 N93-19294
Computation of re-entry flows with two-temperature model p 1412 N93-19295
Numerical calculation of hypersonic non-equilibrium flow around OREX p 1412 N93-19296
Numerical simulation of hypersonic flow around H-2 Orbiting Plane (HOPE), part 3 p 1412 N93-19297
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392
Automatically calibrating admittances in KATE's autonomous launch operations model p 1456 N93-19401
Hurricane risk assessment to rollback or ride out a cost versus loss decision making approach p 1588 N93-19411
Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494

**SPACE STATION FREEDOM**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
Metrication report to the Congress
[NASA-TM-108600] p 1499 N93-18281
Metrication report to the Congress
[NASA-TM-108602] p 1499 N93-18356
Control/structure interaction during Space Station Freedom-Orbiter berthing p 1463 N93-18831
SSF loads and controllability during assembly p 1465 N93-18838
Optimization techniques applied to passive measures for in-orbit spacecraft survivability
[NASA-CR-184486] p 1466 N93-18859
Controls-structures-interaction dynamics during RCS control of the Orbiter/SRMS/SSF configuration p 1468 N93-18934
Dark-cycle monitoring of biological subjects on Space Station Freedom
[NASA-TM-103976] p 1500 N93-19103
Analysis of electromagnetic interference from power system processing and transmission components for Space Station Freedom
[NASA-CR-192281] p 1470 N93-19890

**SPACE STATION PAYLOADS**
Space station evolution: Planning for the future
[NASA-TM-108596] p 1460 N93-18353

**SPACE STATION POWER SUPPLIES**
Real-time contingency handling in MAESTRO p 1638 N93-18683
Analysis of electromagnetic interference from power system processing and transmission components for Space Station Freedom
[NASA-CR-192281] p 1470 N93-19890

**SPACE STATION STRUCTURES**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988

**SPACE STATIONS**
Project Wish: The Emerald City, phase 3
[NASA-CR-192081] p 1460 N93-18168
Space station evolution: Planning for the future
[NASA-TM-108596] p 1460 N93-18353
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
Transportation and platforms perspective p 1453 N93-18636

**SPACE SURVEILLANCE (SPACEBORNE)**
Spacecraft design project: High temperature superconducting infrared imaging satellite
[NASA-CR-192036] p 1458 N93-17887

**SPACE TOOLS**
Retractable tool bit having latch type catch mechanism
[NASA-CASE-GSC-13359-1] p 1547 N93-18286
Split rail gripper assembly and tool driver therefor
[NASA-CASE-GSC-13370-2] p 1547 N93-18288

**SPACE TRANSPORTATION**
Project Ares: A systems engineering and operations architecture for the exploration of Mars
[AD-A258082] p 1734 N93-18021
Conceptual design of a Mars transportation system
[NASA-CR-192039] p 1545 N93-18047
The SIMPSONS project: An integrated Mars transportation system
[NASA-CR-192035] p 1547 N93-18152
Launch system development in the Pacific Rim
[NASA-TM-108595] p 1455 N93-18170
Space station evolution: Planning for the future
[NASA-TM-108596] p 1460 N93-18353
Transportation and platforms perspective p 1453 N93-18636

**SPACE TRANSPORTATION SYSTEM FLIGHTS**
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050
Toward a history of the space shuttle. An annotated bibliography
[NASA-TM-108647] p 1457 N93-19494
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650

**SPACEBORNE EXPERIMENTS**
Microgravity ignition experiment
[NASA-CR-192057] p 1498 N93-18053
Design of microcontroller software for a satellite-based ferroelectric capacitor experiment
[AD-A257960] p 1460 N93-18240
An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329
Investigation of wheat coleoptile response to phototropic stimulations
[NASA-CR-192157] p 1593 N93-18608
Structural control sensors for the CASES GTF p 1464 N93-18837

**SPACEBORNE LASERS**
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952
**SPACEBORNE TELESCOPES**
PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115
**SPACECRAFT ANTENNAS**
A method for modeling discontinuities in a microwave coaxial transmission line p 1513 N93-19423
**SPACECRAFT CONFIGURATIONS**
The Vulcain MK2 engine for Ariane 5 performance improvement
[ETN-93-93019] p 1472 N93-18145
**SPACECRAFT CONSTRUCTION MATERIALS**
An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329
Picosecond studies of space optical materials p 1664 N93-18475
**SPACECRAFT CONTAMINATION**
An interim overview of LDEF materials findings
[NASA-TM-107664] p 1493 N93-18329
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
**SPACECRAFT CONTROL**
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Precision slew/settle technologies for flexible spacecraft p 1468 N93-18938
Controls and guidance research p 1451 N93-19454
**SPACECRAFT DESIGN**
Spacecraft design project: High temperature superconducting infrared imaging satellite
[NASA-CR-192036] p 1458 N93-17887
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
Project Columbiad: Mission to the Moon. Book 2, volume 3: Stage configuration designs; volume 4: Program plan
[NASA-CR-192037] p 1733 N93-17999
LOLA: The lunar operations landing assembly
[NASA-CR-192043] p 1734 N93-18038
Conceptual design of a Mars transportation system
[NASA-CR-192039] p 1545 N93-18047
Planetary surface exploration: MESUR/autonomous lunar rover
[NASA-CR-192073] p 1546 N93-18102
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116
The SIMPSONS project: An integrated Mars transportation system
[NASA-CR-192035] p 1547 N93-18152
SHARC: Space Habitat, Assembly and Repair Center
[NASA-CR-192031] p 1606 N93-18153
Asteroid exploration and utilization: The Hawking explorer
[NASA-CR-192027] p 1699 N93-18164
The design of a common lunar lander
[NASA-CR-192026] p 1459 N93-18165
Lunar scout: A Project Artemis proposal
[NASA-CR-192076] p 1460 N93-18167
Comet nucleus and asteroid sample return missions
[NASA-CR-192055] p 1699 N93-18171
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Physical insight into the simultaneous optimization of structure and control p 1461 N93-18821
Integrated design of the CSI evolutionary structure: A verification of the design methodology p 1463 N93-18830
Atlas mission planner's guide
[AD-A258845] p 1470 N93-19366
**SPACECRAFT DOCKING**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
**SPACECRAFT GUIDANCE**
Controls and guidance research p 1451 N93-19454
**SPACECRAFT INSTRUMENTS**
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
**SPACECRAFT LAUNCHING**
LOLA: The lunar operations landing assembly
[NASA-CR-192043] p 1734 N93-18038
Public space launch acquisition: A comparative case study
[AD-A258141] p 1455 N93-18083
Flame-front kinetics p 1485 N93-18481
Time management situation assessment (TMSA) p 1639 N93-18692
The future of the US space launch capability p 1456 N93-18865
Analysis of Titan 4 launch responsiveness
[AD-A259021] p 1456 N93-18950
Low cost missions to explore the diversity of near Earth objects p 1453 N93-19124
Automatically calibrating admittances in KATE's autonomous launch operations model p 1456 N93-19401
**SPACECRAFT MAINTENANCE**
Rescheduling with iterative repair p 1637 N93-18679
**SPACECRAFT MODELS**
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
**SPACECRAFT MODULES**
Project Columbiad: Mission to the Moon. Book 2, volume 3: Stage configuration designs; volume 4: Program plan
[NASA-CR-192037] p 1733 N93-17999
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
**SPACECRAFT ORBITS**
Precise tracking of the Magellan and Pioneer Venusorbiters by same-beam interferometry. Part 1: Dataaccuracy analysis p 1454 N93-19414
**SPACECRAFT PERFORMANCE**
Atlas mission planner's guide
[AD-A258845] p 1470 N93-19366
**SPACECRAFT POWER SUPPLIES**
An integrated mission planning approach for the Space Exploration initiative
[DE93-001512] p 1473 N93-18588
Scheduling lessons learned from the Autonomous Power System p 1636 N93-18671
**SPACECRAFT PROPULSION**
Increase of operational reliability by feedback experience/return in the technical and industrial field
[ETN-93-93014] p 1685 N93-18075
Vulcain: A cryogenic engine for Ariane 5
[ETN-93-93022] p 1472 N93-18082
Flame-front kinetics p 1485 N93-18481
Propulsion diagnostics p 1475 N93-18482
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
Near term NEP missions and systems p 1661 N93-18637
The MPD thruster program at JPL p 1666 N93-18638
MPD thruster technology p 1666 N93-18639
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640
Review of recent work on MPD thrusters at MIT p 1666 N93-18641
Magnetoplasmadynamic thruster flows: Problems and progress p 1666 N93-18642
Scaling and applied field studies of MPD thrusters with laser diagnostics p 1667 N93-18643
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644
Recent advances in MPD thruster research at Princeton p 1667 N93-18645
**SPACECRAFT SHIELDING**
Effects of radiobiological uncertainty on shield design for a 60-day lunar mission
[NASA-TM-4422] p 1746 N93-18014
Optimization techniques applied to passive measures for in-orbit spacecraft survivability
[NASA-CR-184486] p 1466 N93-18859
**SPACECRAFT STRUCTURES**
Development of magnetostrictive active members for control of space structures
[NASA-CR-190846] p 1460 N93-18322
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
Dynamics of aerospace vehicles
[NASA-CR-192179] p 1440 N93-18396
Predicting multi-wall structural response to hypervelocity impact using the hull code
[NASA-CR-4486] p 1461 N93-18406
The development and testing of the Lens Antenna Deployment Demonstration (LADD) test article p 1463 N93-18829
C-SIDE: The control-structure interaction demonstration experiment p 1467 N93-18931
Modal characterization of the ASCIE segmented optics testbed: New algorithms and experimental results p 1469 N93-18940
Modeling, system identification, and control of ASTREX p 1469 N93-18942
Structures research p 1447 N93-19453
**SPACECRAFT SURVIVABILITY**
Optimization techniques applied to passive measures for in-orbit spacecraft survivability
[NASA-CR-184486] p 1466 N93-18859
**SPACECRAFT TRACKING**
The Telecommunications and Data Acquisition
[NASA-CR-191998] p 1504 N93-18897
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
Systems analysis for ground-based optical navigation p 1434 N93-18900
Demonstration of a joint US-Russian very long baseline interferometry tracking capability p 1458 N93-18911
Adaptive low-bandwidth tracking of Galileo and Pioneer 10 carriers p 1506 N93-18912
The goldstone real-time connected element interferometer p 1512 N93-19417
Spacecraft-spacecraft very long baseline interferometry. Part 1: Error modeling and observable accuracy p 1512 N93-19418
Use of the VLBI delay observable for orbit determination of Earth-orbiting VLBI satellites p 1454 N93-19419
Evaluation of the table Mountain Ronchi telescope for angular tracking p 1512 N93-19421
Deep-space navigation applications of improved ground-based optical astrometry p 1513 N93-19422
**SPACECRAFT TRAJECTORIES**
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860
Debris about asteroids: Where and how much? p 1703 N93-19136
**SPACECREWS**
Exploration of the utility of military man in space in the year 2025
[AD-A258378] p 1453 N93-18267
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955
**SPACELAB**
A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650
**SPARK IGNITION**
Flame-front kinetics p 1485 N93-18481
**SPATIAL DISTRIBUTION**
About distribution and origin of the peculiar group of sporadic meteors p 1700 N93-19115
P/Halley: Spatial distribution and scale lengths for C2, CN, NH2, and H2O p 1706 N93-19157
Collisional and dynamic evolution of dust from the asteroid belt p 1707 N93-19165
On the asteroidal jet-stream Flora A p 1710 N93-19185
Particle emission from artificial cometary materials p 1710 N93-19188
The spatial distribution of large cometary meteoroids in the inner solar system p 1712 N93-19208
Spatial and temporal variations in the column density distribution of comet Halley's CN coma p 1717 N93-19238
The vicinity of Jupiter: A region to look for comets p 1719 N93-19253
**SPATIAL FILTERING**
A fuzzy logic based controller for the automated alignment of a laser-beam-smoothing spatial filter
[NASA-TM-105994] p 1540 N93-18091
**SPATIAL RESOLUTION**
Spatio-temporal masking: Hyperacuity and local adaptation
[AD-A257934] p 1595 N93-18006
Numerical experiments on consistent horizontal and vertical resolution for atmospheric models and observing systems p 1563 N93-18718
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529
STARE: A new coherent radar in Scandinavia p 1517 N93-19572
The BICORE project p 1517 N93-19587

**SPECIFICATIONS**
Formal development of Ada programs using Z and Anna: A case study
[AD-A235698] p 1623 N93-18847
Aircraft performance in practice p 1403 N93-19004
Creating and manipulating formalized software architectures to support a domain-oriented application composition system
[AD-A258900] p 1626 N93-19335
Formalization and transformation of informal analysis models into executive REFINE (tm) specifications
[AD-A258901] p 1627 N93-19442
Issues in requirements elicitation
[AD-A258932] p 1627 N93-19448
NASA requirements and applications environments for electrical power wiring
[NASA-CR-191064] p 1475 N93-19652
**SPECTRA**
Fixed and data adaptive kernels in Cohen's class of time-frequency distributions
[AD-A257979] p 1649 N93-18195
Study of statistical variations of load spectra and material properties on aircraft fatigue life
[AD-A257961] p 1440 N93-18451
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170
**SPECTRAL BANDS**
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792
**SPECTRAL CORRELATION**
The advantage of cyclic spectral analysis
[AD-A258307] p 1502 N93-18251
**SPECTRAL ENERGY DISTRIBUTION**
Turbulence scattering layers in the middle-mesosphere observed by the EISCAT 224 MHz radar p 1732 N93-19582
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
**SPECTRAL LINE WIDTH**
Interpretation of incoherent scatter spectral width changes in the D-region during an auroral precipitation event p 1728 N93-19560
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
**SPECTRAL METHODS**
Contribution to the solution of moment equations at two points by the spectral integral methods
[ECL-92-19] p 1525 N93-18096
LES turbulence modeling using DNS data base p 1409 N93-19274
New methods for nonlinear tracking and nonlinear chaotic signal processing
[AD-A259331] p 1516 N93-19850
**SPECTRAL RECONNAISSANCE**
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
**SPECTRAL REFLECTANCE**
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
Near infrared reflectance spectra: Applications to problems in asteroid-meteorite relationships p 1698 N93-19210
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822
**SPECTRAL RESOLUTION**
Deimos: A reddish, D-type asteroid spectrum p 1706 N93-19163
**SPECTRAL SENSITIVITY**
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200
Pre-phase A: Development of a far-ultraviolet photometric- and spectroscopic-survey small-explorer experiment
[NASA-CR-192092] p 1696 N93-18415
**SPECTRAL SIGNATURES**
High-energy laser-particle interaction p 1543 N93-18469
**SPECTROMETERS**
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures
[NASA-CR-191916] p 1577 N93-18599
Deimos: A reddish, D-type asteroid spectrum p 1706 N93-19163
A hyperspectral image analysis workbench for environmental science applications
[DE93-000603] p 1574 N93-19469
Heavy ion backscattering spectrometry for high sensitivity
[DE93-002489] p 1484 N93-19624
**SPECTROPHOTOMETRY**
Ground-based observations of 951 Gaspra: CCD lightcurves and spectrophotometry with the Galileo filters p 1698 N93-19212
**SPECTRORADIOMETERS**
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822
**SPECTROSCOPIC ANALYSIS**
Spectroscopic wear detector
[NASA-CASE-LEW-15200-1] p 1474 N93-18856
**SPECTROSCOPY**
Positron lifetime spectroscopy for investigation of thin polymer coatings
[NASA-TM-4421] p 1491 N93-17945
Crystalline-amorphous contrast formation in thermally crystallized SiC
[MBB-Z-0373-91-PUB] p 1671 N93-18118
Picosecond studies of space optical materials p 1664 N93-18475
Emission spectra of selected SSME elements and materials
[NASA-RP-1286] p 1656 N93-18763
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487
Electrical, magnetic and, spectroscopic properties of (TTF)5Fe(NO3)3
[AD-A259378] p 1485 N93-19854
Accurate measurement of signals close to the noise floor on a spectrum analyzer
[AD-A258666] p 1516 N93-19949
**SPECTRUM ANALYSIS**
Artificial intelligence for geologic mapping with imaging spectrometers
[NASA-CR-192086] p 1564 N93-17979
The advantage of cyclic spectral analysis
[AD-A258307] p 1502 N93-18251
Analysis of images and spectra of spacecraft-induced radiations
[AD-A257902] p 1473 N93-18340
The broad-band x ray spectral variability of Mkn 841 p 1561 N93-18711
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
The Apollo 17 region: A compositional overview p 1736 N93-18796
Plio-Pleistocene time evolution of the 100-ky cycle in marine paleoclimate records p 1581 N93-18972
Evidence of orbital forcing in 510 to 530 million year old shallow marine cycles, Utah and western Canada p 1582 N93-18975
The cyclic carbonates of the Latemar Massif: Evidence for the orbital forcing of a carbonate platform during the Middle Triassic p 1582 N93-18976
The first identification of C2 emission bands in comet Scorichenko-George (1989e1) spectrum p 1703 N93-19139
Ionospheric currents: Can the incoherent scatter plasma line spectrum provide routine current measurements? p 1724 N93-19533
D-region incoherent scatter spectra: Discrepancies between observations and current theory p 1728 N93-19559
Nonlinear interactions associated with TID's in the quiet polar F-region from EISCAT observations p 1584 N93-19568
Vertical structure of AGW associated ionospheric fluctuations observed with EISCAT p 1729 N93-19569
The COSCAT experiment: EISCAT observations of coherent scatter at small aspect angles p 1517 N93-19573
EISCAT radar observations of enhanced incoherent scatter spectra: Their relation to red aurora and field-aligned currents p 1517 N93-19581
Turbulence scattering layers in the middle-mesosphere observed by the EISCAT 224 MHz radar p 1732 N93-19582
Naturally enhanced ion-acoustic waves in the auroral ionosphere observed with the EISCAT 933 MHz radar p 1732 N93-19586
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
Discussion of some aspects of the relationship between the agronomic and spectral variables of the coffee plantations
[INPE-5324-PRE/1722] p 1568 N93-19792
Accurate measurement of signals close to the noise floor on a spectrum analyzer
[AD-A258666] p 1516 N93-19949
**SPEECH BASEBAND COMPRESSION**
Advances in speech processing p 1517 N93-19771
**SPEECH RECOGNITION**
A segmental hidden Markov model for speech pattern processing
[AD-A258220] p 1501 N93-18023
Advances in speech processing p 1517 N93-19771
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 1610 N93-19772
G-load effects and efficient acoustic parameters for robust speaker recognition p 1610 N93-19775
Fly-by voice, a technology demonstration p 1444 N93-19918
**SPHEROIDS**
A computer program to calculate planewave average specific absorption rate in a prolate spheroidal model
[AD-A258197] p 1502 N93-18249
**SPIN DYNAMICS**
High-energy magnetic excitations in Mn(sub 90)Cu(sub 10)
[DE93-001634] p 1488 N93-18706
Spin vector and shape of 532 Herculina p 1711 N93-19193
**SPIN TESTS**
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
**SPIN-ORBIT INTERACTIONS**
Spin effects in electron-atom collisions p 1659 N93-18494
**SPINEL**
X ray examination of Type 310S stainless steel during its oxidation in air at 900 C
[DE93-003031] p 1490 N93-19631
**SPIRAL ANTENNAS**
Finite difference time domain modeling of spiral antennas
[NASA-CR-192237] p 1503 N93-18586
**SPONTANEOUS COMBUSTION**
Test method for self-ignition of materials
[VTT-PUBS-96] p 1483 N93-18697
**SPORADIC E LAYER**
Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529
Gravity waves and sporadic E layers as measured by EISCAT and AIS p 1724 N93-19530
The EISCAT UHF radar as a meteor radar: Meteor radial velocities determined from a Barker coded power profile p 1517 N93-19579
**SPORADIC METEOROIDS**
Phobos and Deimos are sources of meteoroids p 1700 N93-19116
**SPOT (FRENCH SATELLITE)**
Multispectral imagery: An essential tool for today's Naval operations
[AD-A257957] p 1565 N93-18216
**SPOT WELDS**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030
**SPRAYED COATINGS**
Thermal coating development for impulse drying
[DE93-000710] p 1491 N93-17909
Device for applying powder coatings
[AD-A258229] p 1492 N93-18218
**SPRAYERS**
Drop/gas interactions in dense sprays
[AD-A257848] p 1527 N93-18347
**SPRAYING**
Progress report on conductive paints, 3 August - 30 September 1992
[DE93-001353] p 1494 N93-18530
**SPREAD SPECTRUM TRANSMISSION**
Coded performance of a fast frequency-hopped noncoherent BFSK ratio statistic receiver over a Rician fading channel with partial-band interference
[AD-A257580] p 1501 N93-18181
PACSIM: Using simulation in designing a communications satellite
[AD-A257857] p 1460 N93-18306
Acquisition of direct sequence spread spectrum signals using digital signal processing techniques
[AD-A258974] p 1510 N93-19094
**SPREADING**
Modelling studies in support of open-ocean convection field programs
[AD-A258324] p 1589 N93-18255

**SPUTTERING**
Thin film processing of photorefractive BaTiO3
[NASA-CR-192194] p 1673 N93-18427
**SQUARE WAVES**
SNR degradation in square-wave subcarrier downconversion p 1507 N93-18914
**SQUEEZED STATES (QUANTUM THEORY)**
Decoherence of multimode thermal squeezed coherent states
[DE93-002627] p 1679 N93-19489
**SQUID (DETECTORS)**
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391
**STABILITY**
Solid state and the standard model
[NOTA-INTERNA-980] p 1653 N93-17932
Regimes of improved confinement and stability in D3-D obtained through current profile modifications
[DE93-002674] p 1667 N93-19618
Reducing bunch disruption in transition crossing by modification of the RF waveform
[DE93-002509] p 1515 N93-19625
**STABILITY TESTS**
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716
**STABILIZATION**
Pseudomorphic stabilization of diamond on non-diamond substrates, part 1. Diamond grown on single crystal beryllium oxide, Part 2. Anomalous band gap behavior and phase stability of c-BN/Diamond alloys
[AD-A257845] p 1493 N93-18345
Active stabilization to prevent surge in centrifugal compression systems
[NASA-CR-191625] p 1549 N93-18862
**STAGNATION PRESSURE**
Increase of stagnation pressure and enthalpy in shock tunnels p 1417 N93-18086
**STAINLESS STEELS**
Vacuum deposition of copper on Type 304L stainless steel
[DE93-002704] p 1489 N93-19614
X ray examination of Type 310S stainless steel during its oxidation in air at 900 C
[DE93-003031] p 1490 N93-19631
**STANDARD DEVIATION**
Study of statistical variations of load spectra and material properties on aircraft fatigue life
[AD-A257961] p 1440 N93-18451
**STANDARDIZATION**
A technical review of cellular radio and analysis of a possible protocol
[AD-A257560] p 1501 N93-17982
Increase of operational reliability by feedback experience/return in the technical and industrial field
[ETN-93-93014] p 1685 N93-18075
Metrication report to the Congress
[NASA-TM-108600] p 1499 N93-18281
Interactive object-oriented display technologies: A study of two CD-ROM-based DMA products
[AD-A258896] p 1625 N93-19081
**STANDARDS**
Development of a standard set of software indicators for aeronautical systems center
[AD-A258424] p 1616 N93-17863
Measurement process error determination and control
[DE93-002948] p 1553 N93-19753
**STAR FORMATION**
Infrared studies of star-forming regions p 1696 N93-18497
**STATE ESTIMATION**
On-line aircraft state and parameter estimation p 1446 N93-19929
**STATIC CHARACTERISTICS**
Static and dynamic characteristics of a piezoceramic strut p 1462 N93-18827
**STATIC LOADS**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007
**STATISTICAL ANALYSIS**
An introduction to the statistical analysis of engineering data
[ESDU-92040] p 1648 N93-17950
A segmental hidden Markov model for speech pattern processing
[AD-A258220] p 1501 N93-18023
Defect tolerance of hybrid pressure vessels: The total reliability versus total failure as an interpretation criterion
[ILR-MITT-272(1992)] p 1552 N93-18097
Fixed and data adaptive kernels in Cohen's class of time-frequency distributions
[AD-A257979] p 1649 N93-18195
The direct measurement of damping coefficients using an inverse eigenvalue method
[AD-A258214] p 1555 N93-18204
Set convergences in nonlinear analysis and optimization, abstracts
[AD-A258403] p 1645 N93-18221
The advantage of cyclic spectral analysis
[AD-A258307] p 1502 N93-18251
Comparison properties of stochastic decision free Petri nets
[INRIA-RR-1433] p 1649 N93-18646
Probabilistic methods in nuclear power plant component ageing analysis
[VTT-PUBS-94] p 1660 N93-18696
An introduction to the method of averaging
[AD-A258990] p 1647 N93-18889
Fault detection using a two-model test for changes in the parameters of an autoregressive time series p 1505 N93-18907
An analysis of I/O efficient order-statistic-based techniques for noise power estimation in the HRMS sky survey's operational system p 1508 N93-18926
Detecting change as it occurs
[NASA-CR-191939] p 1574 N93-19484
Structure and dynamics of field-aligned currents inferred from EISCAT data p 1722 N93-19523
Vertical structure of AGW associated ionospheric fluctuations observed with EISCAT p 1729 N93-19569
Enhanced ion-acoustic lines in EISCAT's common programmes p 1517 N93-19580
ARC.2: Linear regression in ABACUS p 1629 N93-19731
Analysis of LANDSAT/TM and SPOT/XS data through vegetation indices, phase 2
[INPE-5450-RPQ/663] p 1569 N93-19857
**STATISTICAL CORRELATION**
Influence of solar activity upon light curves of comets P/Halley (1986 3) and P/Churyumov-Gerasimenko (1982 8) p 1703 N93-19140
Extracting knowledge from data: SYS8688 approach p 1688 N93-19715
**STATISTICAL DISTRIBUTIONS**
Fixed and data adaptive kernels in Cohen's class of time-frequency distributions
[AD-A257979] p 1649 N93-18195
Location and distribution of local optima
[AD-A257791] p 1645 N93-18237
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503 p 1735 N93-18788
Modeling expert opinion: Likelihoods under incomplete probabilistic specification
[AD-A258775] p 1649 N93-18946
Model determination using predictive distributions with implementation via sampling-based methods
[AD-A258777] p 1650 N93-18947
Comparative study of region 2 field-aligned currents and convection electric potential and implications for the dynamics of the magnetospheric ions p 1722 N93-19522
**STATISTICAL TESTS**
Graphic representation in managerial decision making: The effect of scale break on the dependent axis
[AD-A258989] p 1683 N93-18888
Radar cross section models for limited aspect angle windows
[AD-A258918] p 1510 N93-19341
Assessment of helicopter component statistical reliability computations
[AD-A258931] p 1441 N93-19447
**STATISTICS**
Measurement uncertainty analysis techniques applied to PV performance measurements
[DE93-000019] p 1553 N93-19438
**STATOR BLADES**
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
**STATORS**
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
**STEADY FLOW**
Development of a boundary element method program for numerical analysis of supersonic unsteady flow p 1410 N93-19283
Calculations of aerodynamic forces on a wing with thrust using BEM p 1410 N93-19286
**STEELS**
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299
Uncertainty management by relaxation of conflicting constraints in production process scheduling p 1636 N93-18673
Fatigue crack growth and coalescense in a notch region
[ISBN-0-315-68910-2] p 1559 N93-19042
Development of an electrochemical method for field testing of protective coatings
[AD-A258754] p 1496 N93-19866
**STEEPEST DESCENT METHOD**
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309
**STELLAR MAGNITUDE**
Asteroids with unusual lightcurves: 14 Irene and 51 Nemausa p 1701 N93-19123
**STELLAR MASS**
Evidence for a massive stellar black hole in x ray Nova Muscae p 1562 N93-18714
**STELLAR MASS EJECTION**
A study of physical mechanisms for filament eruption and coronal mass ejection via numerical simulation
[NASA-CR-192118] p 1744 N93-18577
**STELLAR SPECTRA**
Fluctuations at the blue edge of saturated wind lines in IUE spectra of O-type stars
[NASA-CR-191887] p 1696 N93-18776
**STELLAR WINDS**
Fluctuations at the blue edge of saturated wind lines in IUE spectra of O-type stars
[NASA-CR-191887] p 1696 N93-18776
**STEREOPHOTOGRAPHY**
Estimation of displacements from two 3D frames obtained from stereo
[INRIA-RR-1440] p 1537 N93-18595
Three-dimensional motion computation and object segmentation in a long sequence of stereo frames
[INRIA-RR-1438] p 1651 N93-18634
On the information contained in the motion field of lines and the cooperation between motion and stereo
[INRIA-RR-1453] p 1537 N93-18647
**STEREOSCOPIC VISION**
Near real-time stereo vision system
[NASA-CASE-NPO-18593-1-CU] p 1662 N93-18276
Trade-offs arising from mixture of color cueing and monocular, binoptic, and stereoscopic cueing information for simulated rotorcraft flight
[NASA-TP-3268] p 1439 N93-18333
A parallel stereo algorithm that produces dense depth maps and preserves image features
[INRIA-RR-1369] p 1620 N93-18433
**STIFFENING**
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920
Parameter and configuration study of the DSS-13 antenna drives p 1514 N93-19432
**STIFFNESS**
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
A comparison of viscoelastic damping models p 1464 N93-18836
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287
Interface fracture in composite materials p 1560 N93-19381
**STIFFNESS MATRIX**
Evaluation of finite element analysis on the parallel simulation machine Cenju p 1410 N93-19287
**STOCHASTIC PROCESSES**
Light diffusion in stochastically perturbed media
[REPT-92-41] p 1661 N93-17873
A structure detection algorithm for nonlinear dynamic rational models
[RR-439] p 1649 N93-18508
Particle approximation for first order stochastic partial differential equations
[INRIA-RR-1502] p 1646 N93-18597
On optimal polling policies
[INRIA-RR-1541] p 1633 N93-18624
Comparison properties of stochastic decision free Petri nets
[INRIA-RR-1433] p 1649 N93-18646
An extended abstract: A heuristic repair method for constraint-satisfaction and scheduling problems p 1638 N93-18687
Stochasticity of comet P/Slaughter-Burnham p 1702 N93-19128
Modeling of asteroidal dust production rates p 1705 N93-19150

A central limit theorem for autoregressive integrated moving average processes
[AD-A258923] p 1650 N93-19445
On the theory of turbulent dynamics
[AD-A258695] p 1650 N93-19864
Critical issues and experimental examination on sawtooth and disruption physics
[NIFS-157] p 1670 N93-19951

**STOICHIOMETRY**
Metallo-organic solution deposition of ferroelectric PZT films
[AD-A258345] p 1476 N93-17990
Preconversion catalytic deoxygenation of phenolic functional groups
[DE93-002941] p 1484 N93-19517

**STORAGE RINGS (PARTICLE ACCELERATORS)**
Identification of high Pt jet events produced by a resolved photon at HERA and reconstruction of the initial state parton kinematics
[NOTA-INTERNA-991] p 1653 N93-17942
Synchrotron radiation sources and condensers for projection x ray lithography
[DE93-002964] p 1664 N93-19511

**STORAGE TANKS**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030

**STORMS**
Determination and representation of electric charge distributions associated with adverse weather conditions
p 1588 N93-19403
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898

**STORMS (METEOROLOGY)**
Radar based case study of a Northeast Colorado winter storm
[AD-A258256] p 1585 N93-17901

**STRAIN DISTRIBUTION**
Thermal cycling behavior of unidirectional and cross-plied P100 Gr/6061 aluminum composites
[AD-A257506] p 1477 N93-18077

**STRAIN ENERGY METHODS**
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374

**STRAIN MEASUREMENT**
Wall strains produced by waves in water filled latex tubes. Part 1: Tethered tubes
[AERO-REPT-9206-PT-1] p 1526 N93-18133
Optical fiber strain sensor with improved linearity
[NASA-CASE-LAR-14857-1-SB] p 1663 N93-19374
Discrete optical fiber strain sensor
[NASA-CASE-LAR-14810-1-SB] p 1538 N93-19492

**STRAIN RATE**
Large strain compression of two tungsten alloys at various strain rates
[AD-A258789] p 1488 N93-18979
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
High strain-rate compression testing of a ceramic matrix composite
[AD-A258802] p 1495 N93-19439
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473
Discrete optical fiber strain sensor
[NASA-CASE-LAR-14810-1-SB] p 1538 N93-19492

**STRANGE ATTRACTORS**
Approximation of attractors and applications
[DE93-002420] p 1535 N93-19475
Toward an optimal strategy for sampling chaotic time series using the Smale-Williams dynamical system
[AD-A258550] p 1650 N93-19953

**STRANGENESS**
Strangeness signals in heavy ion collisions
[DE93-002935] p 1657 N93-19516

**STRATA**
Stratified plate model for composite plate analysis
[AD-A259001] p 1481 N93-19359

**STRATEGY**
Developmental strategy for United States space power
[AD-A258356] p 1650 N93-18208
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present
p 1425 N93-19673

**STRATIFIED FLOW**
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Waves from an oscillating disturbance in a thermocline and in a linear shear flow
[AERO-REPT-9207] p 1527 N93-18134
Penetrative and recirculating flows in enclosures with openings p 1533 N93-19040

**STRATIGRAPHY**
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites
p 1507 N93-18921
The orbital record in stratigraphy
p 1582 N93-18974

**STRATOCUMULUS CLOUDS**
Low cloud investigations for project FIRE: Island studies of cloud properties, surface radiation, and boundary layer dynamics. A simulation of the reflectivity over a stratocumulus cloud deck by the Monte Carlo method
[NASA-CR-192083] p 1585 N93-18001

**STRATOSPHERE**
Observation of meteors by MST radar
p 1697 N93-19180
Research of the polar middle and lower atmosphere with an MST radar on Spitsbergen (Svalbard, Arctic)
p 1584 N93-19555

**STRATOSPHERIC WARMING**
Climate model calculations of the effects of volcanoes on global climate
[NASA-CR-191999] p 1573 N93-18600

**STRATUS CLOUDS**
A higher order exponential function for fitting nonlinear curves
[AD-A258431] p 1647 N93-18886

**STREAMS**
Radar meteor orbital structure of Southern Hemisphere cometary dust streams p 1701 N93-19120

**STRESS (PHYSIOLOGY)**
Development and enhancement of a mode of performance and decision making under stress in a real life setting
[AD-A257796] p 1598 N93-18363
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955

**STRESS ANALYSIS**
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920
Stress analysis of single lap bonded joints
[ESDU-92041] p 1553 N93-17952
Structural performance of candidate ablatives for uptake section of vertical launching system
[AD-A258218] p 1455 N93-18300
Study of statistical variations of load spectra and material properties on aircraft fatigue life
[AD-A257961] p 1440 N93-18451
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
Numerical analysis of surface cracks
p 1556 N93-18750
High temperature component analysis with expert systems p 1557 N93-18751
Fibre reinforced plastic structures
p 1557 N93-18752
Analysis of structures under fire conditions
p 1557 N93-18754
Some recent results on stresses in thin films and precipitates
[AD-A258807] p 1559 N93-18986

**STRESS CONCENTRATION**
Micromechanics of crenulated fibers in carbon/carbon composites
[NASA-CR-192170] p 1478 N93-18767

**STRESS CORROSION CRACKING**
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels
p 1490 N93-19391

**STRESS CYCLES**
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443

**STRESS DISTRIBUTION**
Stress analysis of single lap bonded joints
[ESDU-92041] p 1553 N93-17952
Analysis of structures under fire conditions
p 1557 N93-18754
Computational and experimental investigation into fracture of brittle fiber-brittle matrix composite systems
[AD-A258913] p 1481 N93-19357

**STRESS INTENSITY FACTORS**
Numerical analysis of surface cracks
p 1556 N93-18750

**STRESS MEASUREMENT**
Residual contact stresses in cryotechnical environments
[ETN-93-93020] p 1555 N93-18080
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762

**STRESS TENSORS**
Some recent results on stresses in thin films and precipitates
[AD-A258807] p 1559 N93-18986

**STRESS-STRAIN DIAGRAMS**
Calculation of the fatigue life of a surface-hardened shaft by the finite-element method
[VTT-PUBS-92] p 1548 N93-18695

**STRESS-STRAIN RELATIONSHIPS**
Micromechanics-based analysis of fiber-reinforced laminated composites
[AD-A257816] p 1478 N93-18364
Large strain compression of two tungsten alloys at various strain rates
[AD-A258789] p 1488 N93-18979
Solving nonlinear composite material problems using the Automated Structural Optimization System (ASTROS)
[AD-A258811] p 1479 N93-18988
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846

**STRONTIUM**
Advanced atomic filters p 1664 N93-18468

**STRUCTURAL ANALYSIS**
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139
Characterization of alloy 718 microstructures
[DS-1935] p 1486 N93-18147
Interface microstructure analysis of ceramic and metal-matrix composites: Sample preparation methods and analytical techniques
[DS-2154] p 1477 N93-18148
Providing structural modules with self-integrity monitoring
[NASA-CR-190887] p 1555 N93-18374
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
High temperature component analysis with expert systems p 1557 N93-18751
Fibre reinforced plastic structures
p 1557 N93-18752
Mathematical modelling of materials
p 1557 N93-18753
QA system for structural analysis
p 1557 N93-18755
P-adaptivity applied to plate in bending problems
p 1557 N93-18756
Finite element analysis of stiffened plate vibrations
p 1557 N93-18757
Dynamics in condition monitoring, a case study
p 1558 N93-18758
Modelling of dynamic soil-structure-ice interaction
p 1558 N93-18759
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774
The Fifth NASA/DOD Controls-Structures Interaction Technology Conference, part 1
[NASA-CP-3177-PT-1] p 1461 N93-18818
The JPL Phase B interferometer testbed
p 1464 N93-18834

**STRUCTURAL BASINS**
A spectral survey of the Serenitatis Basin region of the Moon p 1736 N93-18793
The Serenitatis Basin and the Taurus-Littrow highlands: Geological context and history p 1736 N93-18794
Do large impact basins in the Southern Hemisphere of Mars control the distribution of polar structures and deposits? p 1741 N93-19808

**STRUCTURAL DESIGN**
CFD-based approximation concepts for aerodynamic design optimization with application to a 2-D scramjet vehicle
[AD-A258084] p 1435 N93-17893
Optimum Design of High Speed Prop-Rotors
[NASA-CR-190915] p 1437 N93-18064
Design of high speed proprotors using multiobjective optimization techniques p 1437 N93-18065
Optimum design of high speed prop rotors including the coupling of performance, aeroelastic stability and structures p 1438 N93-18066
Carbon and graphite matrices in carbon-carbon composites: An overview of their formation, structure, and properties
[AD-A258386] p 1478 N93-18259
Study of statistical variations of load spectra and material properties on aircraft fatigue life
[AD-A257961] p 1440 N93-18451

Controlled motion in an elastic world. Research project: Manipulation strategies for massive space payloads
[NASA-CR-191895] p 1549 N93-18778
A comparison of refined models for flexible subassemblies p 1464 N93-18833
Optimization for efficient structure-control systems p 1467 N93-18930
Structures research p 1447 N93-19453

**STRUCTURAL DESIGN CRITERIA**
Interlaminar stress analysis at the skin/stiffener interface of a grid-stiffened composite panel
[NASA-CR-192177] p 1476 N93-17920

**STRUCTURAL FAILURE**
Structural performance of candidate ablatives for uptake section of vertical launching system
[AD-A258218] p 1455 N93-18300
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
High temperature component analysis with expert systems p 1557 N93-18751
Can injury scoring techniques provide additional information for crash investigators? p 1423 N93-19663
Crash experience of the US Army Black Hawk helicopter p 1427 N93-19688

**STRUCTURAL PROPERTIES (GEOLOGY)**
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada)
[NASA-CR-192091] p 1564 N93-17927
Fault identification using multidisciplinary techniques at the Mars/Uranus Station antenna sites p 1507 N93-18921
Use of teledetection in physiographic compartmentation to obtain multiple use geotechnic zoning in coastal regions
[INPE-5322-PRE/1720] p 1583 N93-19795

**STRUCTURAL RELIABILITY**
The application of structural reliability techniques to plume impingement loading of the Space Station Freedom Photovoltaic Array
[NASA-TM-105949] p 1459 N93-17988
Effect of bow-type initial imperfection on reliability of minimum-weight, stiffened structural panels
[NASA-TP-3263] p 1556 N93-18615

**STRUCTURAL STABILITY**
Optimum Design of High Speed Prop-Rotors
[NASA-CR-190915] p 1437 N93-18064
Finite element analysis of stiffened plate vibrations p 1557 N93-18757
System identification and structural control on the JPL Phase B testbed p 1463 N93-18828

**STRUCTURAL VIBRATION**
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
Methods for improving damping. Part 3: Damping material data
[ESDU-92001] p 1554 N93-17997
Basic research on design analysis methods for rotorcraft vibrations
[NASA-CR-191917] p 1556 N93-18576
Structural Analysis 1992
[VTT-SYMP-128] p 1556 N93-18749
Coupling between plate vibration and acoustic radiation
[NASA-CR-189741] p 1651 N93-18770
The JPL Phase B interferometer testbed p 1464 N93-18834
SSF loads and controllability during assembly p 1465 N93-18838
Evaluation of inertial devices for the control of large, flexible, space-based telerobotic arms p 1465 N93-18839
Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846
CSI/MMC studies for improving jitter performance for large multi-payload platforms p 1468 N93-18937
Precision slew/settle technologies for flexible spacecraft p 1468 N93-18938
Robust control of smart structures p 1550 N93-19057

**STRUCTURED PROGRAMMING**
The integration of specification aspects in database design
[ISBN-90-9004461-2] p 1687 N93-18445

**STRUTS**
Equivalent lengths of struts (for use in buckling calculations)
[ESDU-92038] p 1554 N93-18046
Static and dynamic characteristics of a piezoceramic strut p 1462 N93-18827
Design, analysis, and testing of high frequency passively damped struts p 1464 N93-18835
A comparison of viscoelastic damping models p 1464 N93-18836
Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298

**STUDENTS**
Diagnosing knowledge states in algebra using the rule space model
[AD-A257757] p 1645 N93-18246
Decade of achievement: Educational leadership in mathematics, science and engineering
[NSF-92-94] p 1679 N93-18383
Nuclear structure from radioactive decay
[DE93-002795] p 1654 N93-18392
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471

**SUBASSEMBLIES**
A comparison of refined models for flexible subassemblies p 1464 N93-18833

**SUBDIVISIONS**
Space physics strategy: Implementation study. Volume 2: Program plan
[NASA-TM-108143] p 1453 N93-18544

**SUBDUCTION (GEOLOGY)**
Evolution of attached and detached slabs and their associated mantle dynamics
[NASA-CR-191920] p 1576 N93-18320

**SUBLIMATION**
Sublimation rates of carbon monoxide and carbon dioxide from comets at large heliocentric distances p 1717 N93-19240
Natural laminar flow test in-flight visualization p 1417 N93-19921

**SUBMARINES**
Motion simulation of underwater vehicles
[VTT-PUBS-97] p 1623 N93-18698

**SUBMERGING**
Immersion objective lenses in electron optics
[ETN-92-92799] p 1662 N93-18442

**SUBMILLIMETER WAVES**
Submillimeter sources for radiometry using high power Indium Phosphide Gunn diode oscillators
[NASA-CR-190885] p 1518 N93-18057
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192305] p 1582 N93-19036
Submillimeter molecular line observations of cometary Levy (1990c) p 1698 N93-19237
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192098] p 1583 N93-19886

**SUBSONIC FLOW**
Analytical and numerical study on steady Mach reflection p 1414 N93-19309

**SUBSTRATES**
High performance YBCO films
[AD-A258481] p 1672 N93-18313
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-000011] p 1571 N93-18657
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051
Oxidation resistant overlay coatings for low expansion substrates
[NASA-CASE-LEW-15154-1] p 1495 N93-19332

**SUCTION**
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321

**SUGARS**
Discovery of spatial concepts in crystallographic databases p 1690 N93-19727

**SULFIDATION**
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485

**SULFUR**
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
The effect of rhenium, sulfur, and alumina on the conversion of hydrocarbons over platinum single crystals: Surface science and catalytic studies
[DE93-002557] p 1484 N93-19485

**SUMMER**
Possible cause and consequence of laminated Polar Mesosphere Summer Echoes p 1728 N93-19561

**SUNGLASSES**
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200

**SUNLIGHT**
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-192184] p 1543 N93-19952

**SUNSPOTS**
Photoelectric analysis of the solar granulation in IR
[AD-A257811] p 1744 N93-18334

**SUPERCONDUCTING DEVICES**
Three-terminal superconducting device research
[AD-A257907] p 1520 N93-18341
Superconducting tunnel junction x-ray detectors with niobium absorbers and aluminum quasiparticle traps
[DE93-002885] p 1677 N93-19826

**SUPERCONDUCTING FILMS**
High performance YBCO films
[AD-A258481] p 1672 N93-18313
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391
Growth and properties of co-evaporated superconducting YBaCuO thin films
[ETN-92-92798] p 1673 N93-18441
High-temperature superconducting electronics p 1523 N93-18464
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487
Ion beam-based characterization of multicomponent oxide thin films and thin film layered structures
[DE93-003004] p 1676 N93-19627
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films
[DE93-002325] p 1677 N93-19742

**SUPERCONDUCTING MAGNETS**
Use of the CEBAF accelerator for IR and UV free electron lasers
[CEBAF-PR-92-023] p 1660 N93-18768

**SUPERCONDUCTIVITY**
Three-terminal superconducting device research
[AD-A257907] p 1520 N93-18341
Microstructural control of complex alloys p 1490 N93-18485
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498
Elements of scientific research: Modeling discoveries in oxide superconductivity p 1679 N93-19720

**SUPERCONDUCTORS**
Theoretical analysis of microwave and millimeter wave integrated circuits based on magnetic films
[AD-A257512] p 1518 N93-18173
Optical and electronic properties of lattice-matched and strained semiconductor superlattices
[ETN-92-92828] p 1673 N93-18446

**SUPERCRITICAL FLOW**
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581
Numerical simulation of flows in a supersonic air intake p 1415 N93-19314

**SUPERCRITICAL FLUIDS**
A condensed phase test cell assembly for the System for Thermal Diagnostic Studies (STDS)
[AD-A258463] p 1497 N93-18242
Energy storage in supercritical solvents p 1498 N93-18492

**SUPERCRITICAL PRESSURES**
Energy storage in supercritical solvents p 1498 N93-18492

**SUPERFLUIDITY**
A helium-3/helium-4 dilution cryocooler for operation in zero gravity
[NASA-CR-183632] p 1499 N93-18397

**SUPERHIGH FREQUENCIES**
An investigation of error characteristics and coding performance
[NASA-CR-191899] p 1620 N93-18373
Precision X-band radio Doppler and ranging navigation: Mars Observer interplanetary cruise scenario p 1454 N93-18899
An experimental investigation of a tandem relativistic backward wave oscillator-travelling wave tube amplifier system for generating high-power microwaves p 1521 N93-19058
Cascaded convolutional codes p 1458 N93-19429

**SUPERLATTICES**
Superlattices for infrared detectors
[AD-A257511] p 1671 N93-18172
Optical and electronic properties of lattice-matched and strained semiconductor superlattices
[ETN-92-92828] p 1673 N93-18446

Infrared photoluminescence spectroscopy
p 1485 N93-18466
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN
[AD-A258804] p 1675 N93-18983
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498

**SUPERNOVA 1987A**
EXITE/IPC observations of SN1987A and southern targets
[NASA-CR-192133] p 1696 N93-18607

**SUPERPLASTICITY**
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity
[AD-A257859] p 1487 N93-18308

**SUPERSATURATION**
An experimental study of growth and phase change of polar stratospheric cloud particles
[NASA-CR-192369] p 1588 N93-19887

**SUPERSONIC AIRCRAFT**
High speed civil transport
[NASA-CR-192041] p 1438 N93-18161
RTJ-303: Variable geometry, oblique wing supersonic aircraft
[NASA-CR-192054] p 1438 N93-18166
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298

**SUPERSONIC BOUNDARY LAYERS**
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321

**SUPERSONIC COMBUSTION**
Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317

**SUPERSONIC COMBUSTION RAMJET ENGINES**
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089
Generation of longitudinal vortices in supersonic flow
p 1411 N93-19292
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298
Numerical simulation of flow for a scramjet nozzle
p 1412 N93-19299
A numerical investigation of 3D transverse injection into the supersonic flow behind rearward facing step
p 1415 N93-19316
Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317
A numerical simulations of inner flow of scramjet
p 1415 N93-19318

**SUPERSONIC COMPRESSORS**
Advanced tactical fighter engine design: Front fan
[ETN-93-92998] p 1448 N93-18127

**SUPERSONIC FLIGHT**
TBD(exp 3)
[NASA-CR-192075] p 1436 N93-18054

**SUPERSONIC FLOW**
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
A computational study of a supersonic mixer-ejector exhaust system
[AD-A258456] p 1471 N93-17993
Novel short-wavelength lasers p 1543 N93-18472
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
Development of a boundary element method program for numerical analysis of supersonic unsteady flow
p 1410 N93-19283
Generation of longitudinal vortices in supersonic flow
p 1411 N93-19292
Numerical simulation of flow for a scramjet nozzle
p 1412 N93-19299
Numerical simulations of supersonic flow by a fourth-order compact MUSCL TVD scheme
p 1414 N93-19308
Analytical and numerical study on steady Mach reflection p 1414 N93-19309
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
Numerical simulation of flows in a supersonic air intake p 1415 N93-19314
A numerical investigation for supersonic inlet
p 1415 N93-19315
A numerical investigation of 3D transverse injection into the supersonic flow behind rearward facing step
p 1415 N93-19316
Computational fluid dynamics research
p 1536 N93-19455

**SUPERSONIC INLETS**
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
A numerical investigation for supersonic inlet
p 1415 N93-19315

**SUPERSONIC NOZZLES**
Infrared sensor technology and applications
p 1664 N93-18474
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089

**SUPERSONIC SPEED**
High speed civil transport
[NASA-CR-192041] p 1438 N93-18161
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110

**SUPERSONIC TRANSPORTS**
MM-122: High speed civil transport
[NASA-CR-192011] p 1435 N93-17974
Phoenix: Preliminary design of a high speed civil transport
[NASA-CR-192024] p 1435 N93-17976
Tesseract: Supersonic business transport
[NASA-CR-192072] p 1435 N93-17977
Proposal and preliminary design for a high speed civil transport aircraft. Swift: A high speed civil transport for the year 2000
[NASA-CR-192023] p 1436 N93-18049
TBD(exp 3)
[NASA-CR-192075] p 1436 N93-18054
The Edge supersonic transport
[NASA-CR-192074] p 1436 N93-18055
A second-generation high speed civil transport: Stingray
[NASA-CR-192022] p 1437 N93-18059
The Trojan --- supersonic transport
[NASA-CR-192013] p 1437 N93-18060
Preliminary design of a high speed civil transport: The Opus 0-001
[NASA-CR-192018] p 1437 N93-18061
High speed civil transport
[NASA-CR-192041] p 1438 N93-18161
RTJ-303: Variable geometry, oblique wing supersonic aircraft
[NASA-CR-192054] p 1438 N93-18166

**SUPERSONIC TURBINES**
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991
Advanced tactical fighter engine design: Front fan
[ETN-93-92998] p 1448 N93-18127

**SUPERSONIC WIND TUNNELS**
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320

**SUPPORT SYSTEMS**
Development of a prototype Air Force Institute of Technology (AFIT) Research Management System (ARMS)
[AD-A258267] p 1685 N93-18028
Software measurement for DoD systems: Recommendations for initial core measures
[AD-A258305] p 1619 N93-18250
A model to compare performance of space and ground network support of low-Earth orbiters
p 1508 N93-18925
Aids to Navigation Service Force Mix 2000 Project. Volume 1: Development and application of an Aids to Navigation Service Force Mix decision support system
[AD-A259065] p 1433 N93-19344
Aids to Navigation Service Force Mix 2000 Project: Overview
[AD-A259064] p 1433 N93-19386
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system
p 1496 N93-19402

**SURFACE CRACKS**
Numerical analysis of surface cracks
p 1556 N93-18750

**SURFACE DIFFUSION**
Effects of surface structure and of embedded-atom pair functionals on adatom diffusion on FCC metallic surfaces
[AD-A258793] p 1674 N93-18980

**SURFACE EMITTING LASERS**
Design and characterization of optically pumped vertical cavity surface emitting lasers
[AD-A258815] p 1541 N93-18994

**SURFACE ENERGY**
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525

**SURFACE GEOMETRY**
Geometry of energy minimizing surfaces
[AD-A258694] p 1678 N93-19863

**SURFACE LAYERS**
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers
p 1710 N93-19189

**SURFACE PROPERTIES**
Sensing the gas metal arc welding process
[DE93-001957] p 1548 N93-18658
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm
[NASA-CR-192156] p 1541 N93-18772
The Apollo 17 region: A compositional overview
p 1736 N93-18796
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605

**SURFACE REACTIONS**
Hydrogen induced C-C, C-N, and C-S bond activation on Pt and Ni surfaces
[DE93-004647] p 1483 N93-18453
The effect of catalyst preparation on catalytic activity
[DE93-003890] p 1483 N93-18539

**SURFACE ROUGHNESS**
Friction and wear of plasma-deposited diamond films
[NASA-TM-105926] p 1495 N93-19035

**SURFACE TEMPERATURE**
Sea ice - atmosphere interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-192129] p 1566 N93-18571
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers
p 1710 N93-19189

**SURFACE VEHICLES**
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
The SIMPSONS project: An integrated Mars transportation system
[NASA-CR-192035] p 1547 N93-18152

**SURFACE WATER**
Water quality modeling using geographic information system (GIS) data p 1575 N93-19396

**SURFACE WAVES**
SAR-related stress variability in the Marine Atmospheric Boundry Layer (MABL) (high resolution ARI)
[AD-A258317] p 1585 N93-17987
Development and calibration of two and four wire water surface wave height measurement systems
[AD-A257900] p 1589 N93-18394

**SURGES**
Fuzzy logic: Artificial neural networks integration for transient identification
[DE93-002232] p 1632 N93-18389
Stall in axial flow aero engine compressors
p 1530 N93-18723
Stall and surge in axial flow compressors
p 1530 N93-18724
Active control of stall and surge p 1530 N93-18725
Stall transients including effects of inlet distortion and intake geometry p 1530 N93-18726
Experimental investigation of rotating stall in a mismatched three stage axial flow compressor
p 1531 N93-18727
Active stabilization to prevent surge in centrifugal compression systems
[NASA-CR-191625] p 1549 N93-18862

**SURVEILLANCE**
Track-before-declare methods in IR image sequences
[AD-A257517] p 1661 N93-18174
Terrain background signature research
[AD-A257917] p 1565 N93-18213

**SURVEILLANCE RADAR**
Performance evaluation of a radar by computer
[AD-A257543] p 1500 N93-17960

**SURVEYS**
A concept study for a national software engineering database
[AD-A258254] p 1614 N93-17823
Federal funds for research and development: Fiscal years 1990, 1991, and 1992, volume 40
[NSF-92-322-VOL-40] p 1694 N93-17853
Software Engineering Process Groups: Results of the 1992 SEPG Workshop event evaluation and a first report on SEPG status
[AD-A258259] p 1617 N93-18011

NASA/DoD Aerospace Knowledge Diffusion Research Project: A comparison of the technical communications practices of Russian and US aerospace engineers and scientists
[NASA-TM-107714] p 1686 N93-18160
Pre-phase A: Development of a far-ultraviolet photometric- and spectroscopic-survey small-explorer experiment
[NASA-CR-192092] p 1696 N93-18415
Thermal protection materials: Thermophysical property data
[NASA-RP-1289] p 1558 N93-18765
Mobile satellite services: A survey of business needs
[AD-A259031] p 1470 N93-18955
Bibliographic study of georadar principles, applications, advantages, and inconvenience
[CR-35/91] p 1509 N93-18993
Carrier landing parameters from survey 45, fleet and training command aircraft landing aboard USS ENTERPRISE CVN-65, main text and appendix A
[AD-A258873] p 1433 N93-19078
Canadian Forces helicopter ditchings: 1952-1990 p 1426 N93-19685
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 1427 N93-19690
Aircrew acceptance of automation in the cockpit p 1608 N93-19761
Lessons learned from an historical look at flight testing p 1442 N93-19904
NASA scientific and technical program: User survey
[NASA-TM-108979] p 1693 N93-19937

**SURVIVAL**
Atmospheric entry survival of large micrometeorites: Implications for their sources and for the cometary contribution to the zodiacal cloud p 1706 N93-19159
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 1423 N93-19661
Canadian Forces helicopter ditchings: 1952-1990 p 1426 N93-19685
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 1427 N93-19690
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 1428 N93-19693

**SWEDEN**
Freja satellite program and its connection to EISCAT p 1578 N93-18739

**SWEDISH SPACE PROGRAM**
Activities report of the Institute of Space Physics
[ETN-93-93360] p 1665 N93-17947

**SWINE**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**SWITCHES**
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices
[NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278

**SWITCHING CIRCUITS**
Reconfiguration schemes for fault-tolerant processor arrays
[AD-A257833] p 1520 N93-18365
On-board B-ISDN fast packet switching architectures. Phase 1: Study
[NASA-CR-189144] p 1457 N93-18703

**SYMBOLIC PROGRAMMING**
Automatic analysis and transformation of FORTRAN programs using a typed functional language
[INRIA-RR-1518] p 1615 N93-17838
A simplified proof of Toyama's theorem
[CWI-CS-R9156] p 1642 N93-17839
Analytica: An experiment in combining theorem proving and symbolic computation
[AD-A258656] p 1628 N93-19958

**SYMBOLS**
Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver p 1506 N93-18913
Evaluation of the geometric quality of cartographic documents through the use of scanning imagery devices
[INPE-5298-PRE/1703] p 1692 N93-19738

**SYMMETRY**
Lie-isotropic energy-dependence of the neutral K(sub S) lifetime
[PREPRINT-874] p 1652 N93-17824

**SYNAPSES**
Electrically modifiable nonvolatile SONOS synapses for electronic neural networks
[AD-A258318] p 1596 N93-18252

**SYNCHRONISM**
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
Task-level robot programming combining object-oriented design and synchronous approach: A tentative study
[INRIA-RR-1441] p 1622 N93-18610
A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649
The ESTEREL language
[INRIA-RR-1487] p 1623 N93-18651
Subnanosecond GPS-based clock synchronization and precision deep-space tracking p 1434 N93-18898
A model for determining task set schedulability in the presence of system effects
[AD-A258915] p 1626 N93-19338

**SYNCHRONIZERS**
Tracking performance and cycle slipping in the all-digital symbol synchronizer loop of the block 5 receiver p 1506 N93-18913

**SYNCHRONOUS SATELLITES**
DSS-13 beam waveguide antenna frequency stability p 1513 N93-19424

**SYNCHROTRON RADIATION**
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621
Synchrotron radiation sources and condensers for projection x ray lithography
[DE93-002964] p 1664 N93-19511
The CQL3D Fokker-Planck code
[DE93-002962] p 1668 N93-19754

**SYNCHROTRONS**
A hodoscope made of resistive plate chambers to identify muons in a fixed target beauty hadroproduction experiment
[NOTA-INTERNA-994] p 1536 N93-17810

**SYNCOM SATELLITES**
Olympus: The communications satellite and its uses. An introduction
[ESA-F-29] p 1461 N93-18369

**SYNTAX**
Automatic analysis and transformation of FORTRAN programs using a typed functional language
[INRIA-RR-1518] p 1615 N93-17838

**SYNTHESIS (CHEMISTRY)**
International Symposium on Macrocyclic Ligands for the Design of Ne Materials: Programme and abstracts
[AD-A258402] p 1654 N93-18220
Preceramic polymers: Past, present and future
[AD-A258327] p 1493 N93-18265
Poly(1,2,4-triazole) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14440-1] p 1475 N93-18283
Polyaniline: Synthesis, chemistry and processing
[AD-A258330] p 1493 N93-18368
The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412
High temperature polymer from maleimide-acetylene terminated monomers
[NASA-CASE-LAR-14475-1] p 1495 N93-19327
Crosslinked polyimides prepared from N-(3-ethynylphenyl)maleimide
[NASA-CASE-LAR-14774-1] p 1495 N93-19388
Nanostructured materials
[DE93-002990] p 1656 N93-19499

**SYNTHESIZERS**
Enhancement of audio localization cue synthesis by adding environmental and visual cues
[AD-A259041] p 1652 N93-19001

**SYNTHETIC APERTURE RADAR**
SAR-related stress variability in the Marine Atmospheric Boundry Layer (MABL) (high resolution ARI)
[AD-A258317] p 1585 N93-17987
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430
Comparison of simulated and actual wind shear radar data products p 1421 N93-19610
Algorithims and methods for processing Synthetic Aperture Radar (SAR) images
[INPE-5301-PRE/1706] p 1515 N93-19787
Texture enhancement of Synthetic Aperture Radar (SAR) images with speckle noise reduction filters
[INPE-5297-PRE/1702] p 1515 N93-19833

**SYSTEM EFFECTIVENESS**
Dynamic pattern matcher using incomplete data
[NASA-CASE-MSC-21415-1-SB] p 1624 N93-18858

**SYSTEM FAILURES**
System for Anomaly and Failure Detection (SAFD) system development
[NASA-CR-184475] p 1552 N93-17856
Evaluation of test methods to determine the impact resistance of exterior insulation and finish systems (EIFS)
[AD-A258433] p 1490 N93-17866
Application of a neural network as a potential aid in predicting NTF pump failure
[NASA-TM-107667] p 1620 N93-18332
Spacecraft dynamics characterization and control system failure detection
[NASA-CR-192190] p 1466 N93-18852
Detection of spoofing, jamming, or failure of a Global Positioning System (GPS)
[AD-A259023] p 1433 N93-18951

**SYSTEM IDENTIFICATION**
An application of the Observer/Kalman Filter Identification (OKID) technique to Hubble flight data p 1462 N93-18825
System identification and structural control on the JPL Phase B testbed p 1463 N93-18828
Dynamic test results for the CASES ground experiment p 1455 N93-18843
Modeling, system identification, and control of ASTREX p 1469 N93-18942
CSI flight experiment projects of the Naval Research Laboratory p 1470 N93-18944
System identification for X-31A project support: Lessons learned so far p 1444 N93-19914
On-line aircraft state and parameter estimation p 1446 N93-19929

**SYSTEMS ANALYSIS**
Category scaling within a given context as a common basis for the AHP, SMART and ELECTRE
[REPT-92-22] p 1683 N93-17916
Grammatica: An open software laboratory for artificial intelligence
[REPT-92-031] p 1632 N93-18331
Systems analysis for ground-based optical navigation p 1434 N93-18900
Integrated Blade Inspection System (IBIS) upgrade study
[AD-A258912] p 1449 N93-19356
An object-oriented computer aided design program for traditional control systems analysis
[AD-A259231] p 1628 N93-19847

**SYSTEMS ENGINEERING**
System for Anomaly and Failure Detection (SAFD) system development
[NASA-CR-184475] p 1552 N93-17856
Project Ares: A systems engineering and operations architecture for the exploration of Mars
[AD-A258082] p 1734 N93-18021
Range scheduling automation for the Air Force satellite control network: A case study in computer system development
[AD-A258142] p 1454 N93-18084
TUNS/TCIS information model/process model
[NASA-CR-191654] p 1617 N93-18112
Systems design analysis applied to launch vehicle configuration
[NASA-TP-3326] p 1455 N93-18141
PACSIM: Using simulation in designing a communications satellite
[AD-A257857] p 1460 N93-18306
The integration of specification aspects in database design
[ISBN-90-9004461-2] p 1687 N93-18445
An integrated mission planning approach for the Space Exploration initiative
[DE93-001512] p 1473 N93-18588
Issues in requirements elicitation
[AD-A258932] p 1627 N93-19448
A general experiment definition system and its applications p 1517 N93-19576
The G2-system, a second generation experimental philosophy for EISCAT p 1517 N93-19577
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 1607 N93-19757
The integration of advanced cockpit and systems design p 1611 N93-19779
Fly-by voice, a technology demonstration p 1444 N93-19918

**SYSTEMS INTEGRATION**
Spacecraft design project: Low Earth orbit communications satellite
[NASA-CR-192038] p 1458 N93-17969
The SIMPSONS project: An integrated Mars transportation system
[NASA-CR-192035] p 1547 N93-18152
Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853
The integration of advanced cockpit and systems design p 1611 N93-19779

**SYSTEMS MANAGEMENT**
Implementation of a configuration and maintenance management system for local area networks
[AD-A257837] p 1686 N93-18344

Network management, status, and directions
[DE93-004003] p 1630 N93-19510
Program manager: Journal of the Defense Systems Management College, volume 21, number 6, November-December 1992
[AD-A258766] p 1553 N93-19870
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 1443 N93-19907

**SYSTEMS SIMULATION**
High-altitude electromagnetic pulse survivability assessment of the Harris RF-3200 transceiver
[AD-A258347] p 1502 N93-18207
PACSIM: Using simulation in designing a communications satellite
[AD-A257857] p 1460 N93-18306
The F-92 RELIANT: Air transport system design simulation
[NASA-CR-192050] p 1440 N93-18386
Tools of modeling, identification, and signal processing for fault diagnosis in continuous-time systems
[LAAS-92153] p 1649 N93-18625
Getting the model right: Coupling a cellular automata to a discovery system p 1629 N93-19723

**SYSTEMS STABILITY**
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155

**SYSTOLIC ARRAYS**
On recursive least-squares filtering algorithms and implementations
[NASA-CR-191396] p 1623 N93-18775

## T

**TABLES (DATA)**
Statistically based decompression tables 8: Linear-exponential kinetics
[AD-A257613] p 1595 N93-17926

**TABS (CONTROL SURFACES)**
Stability of TAE modes in DIII-D
[DE93-002677] p 1669 N93-19897

**TAKEOFF**
A simulation study on take-off and landing dynamics of the aircraft of a fly-by-wire control system
[AD-A259286] p 1442 N93-19849

**TARGET ACQUISITION**
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200
Stimulus presentation formats and measurement techniques for the quantification of target detection performance
[AD-A258933] p 1603 N93-19449

**TARGET RECOGNITION**
An optical consensus correlator for cluttered targets
[AD-A257594] p 1661 N93-18184
An analysis of USSPACECOM's space surveillance network sensor tasking methodology
[AD-A258971] p 1509 N93-19010
Locating an imaging radar in Canada for identifying spaceborne objects
[AD-A258969] p 1510 N93-19087
Stimulus presentation formats and measurement techniques for the quantification of target detection performance
[AD-A258933] p 1603 N93-19449
Man-machine interface with simulated automatic target recognition systems p 1611 N93-19781
Adaptive autonomous target cuer p 1612 N93-19784
Advanced concepts in distortion-invariant phase-only filter design
[AD-A258691] p 1523 N93-19861

**TARGET SIMULATORS**
The Terminal Doppler Weather Radar (TDWR) Moving Target Simulator (MTS) at Orlando, Florida
[AD-A258885] p 1509 N93-19080
Man-machine interface with simulated automatic target recognition systems p 1611 N93-19781

**TASK COMPLEXITY**
Dual-task training strategies and aging
[AD-A258261] p 1602 N93-18027

**TASK PLANNING (ROBOTICS)**
ORCCAD: Towards an open robot controller computer aided design system
[INRIA-RR-1396] p 1621 N93-18519
An imperative language for task-level programming: Definition in temporal logics
[INRIA-RR-1406] p 1622 N93-18575
An optimal control strategy for collision avoidance of mobile robots in non-stationary environments
[NASA-CR-191868] p 1641 N93-19345

**TASKS**
Behavioral effects of high peak power microwave pulses: Head exposure at 1.3 GHz
[AD-A258136] p 1595 N93-17985
Dual-task training strategies and aging
[AD-A258261] p 1602 N93-18027
Decision paths in complex tasks
[NASA-CR-192121] p 1603 N93-18359
Task-level robot programming combining object-oriented design and synchronous approach: A tentative study
[INRIA-RR-1441] p 1622 N93-18610
The MICRO-BOSS scheduling system: Current status and future efforts p 1635 N93-18668
Generating effective project scheduling heuristics by abstraction and reconstitution p 1636 N93-18675
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681

**TAURID METEOROIDS**
The spatial distribution of large cometary meteoroids in the inner solar system p 1712 N93-19208
A candidate for the parent body of the Taurid complex and its search ephemeris p 1721 N93-19271

**TAXIING**
Aircraft landing gear shimmy p 1441 N93-19029

**TDR SATELLITES**
Telemetering and telecommunications research
[NASA-CR-191903] p 1457 N93-18777
A model to compare performance of space and ground network support of low-Earth orbiters p 1508 N93-18925

**TECHNICAL WRITING**
Improving the quality of machine translations by providing stylistic guidelines to authors and editors
[AD-A258786] p 1687 N93-18977

**TECHNOLOGY ASSESSMENT**
The technological evolution of high thrust turbine engines
[DS-1881] p 1448 N93-17882
Mechanism of diamond film growth p 1678 N93-18479
Controls-structures interaction guest investigator program: Overview and phase 1 experimental results and future plans
[NASA-TM-4412] p 1466 N93-18853
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Fiberoptic characteristics for extreme operating environments
[NASA-CR-189189] p 1475 N93-19649

**TECHNOLOGY TRANSFER**
Strategic factors in the development of the National Technology Transfer Network
[NASA-TM-108594] p 1694 N93-18169
Research and development project summaries
[AD-A257518] p 1747 N93-18175
Highlights of engineering research centers technology transfer
[NSF-92-6] p 1694 N93-18457
Tech transfer outreach
[DE93-001553] p 1694 N93-18533
NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-191004] p 1754 N93-19390
Technology absorption and technological learning: A study of the dynamics of the process and intervening factors
[INPE-5392-TAE/013] p 1695 N93-19741
Information access: A research agenda p 1692 N93-19798
The organization and transfer of information p 1692 N93-19799
The AGARD tip research agenda for Scientific and Technical Information (STI) p 1692 N93-19800

**TECHNOLOGY UTILIZATION**
Proceedings of the 2nd International Workshop on Cellular Neural Networks and their Applications
[AD-A258245] p 1631 N93-17821
Dr. Alexander H. Flax: Technologist of aeronautics
[AD-A258441] p 1747 N93-17890
Preceramic polymers: Past, present and future
[AD-A258327] p 1493 N93-18265
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-189228] p 1694 N93-18762
Expendable launch vehicles technology: A report to the US Senate and the US House of Representatives
[NASA-TM-108141] p 1456 N93-19375
Improving NASA's technology for space science
[NASA-CR-192331] p 1695 N93-19389
The status of photovoltaic concentrator development
[DE93-002298] p 1571 N93-19474
NASA requirements and applications environments for electrical power wiring
[NASA-CR-191064] p 1475 N93-19652
Technology absorption and technological learning: A study of the dynamics of the process and intervening factors
[INPE-5392-TAE/013] p 1695 N93-19741

**TECTONICS**
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada)
[NASA-CR-192091] p 1564 N93-17927
Studies of regional and global tectonics and the rotation of the earth using very-long-baseline interferometry
[NASA-CR-191902] p 1577 N93-18591
Apollo 17: One giant step toward understanding the tectonic evolution of the Moon p 1739 N93-18811
Applications of marine gravimetry to mid-oceanic spreading centers and volcanos p 1590 N93-19382
Some interpretations on the geological evolution in the southeastern region of the State of Minas Gerais (Brazil), based on remote sensing imagery and gravimetric data
[INPE-5321-PRE/1718] p 1568 N93-19789

**TELECOMMUNICATION**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962
The Telecommunications and Data Acquisition
[NASA-CR-191998] p 1504 N93-18897
Systems analysis for ground-based optical navigation p 1434 N93-18900
The Telecommunications and Data Acquisition Report
[NASA-CR-191228] p 1511 N93-19413

**TELEMETRY**
Daily quality assurance software for a satellite radiometer system p 1562 N93-18716
Telemetering and telecommunications research
[NASA-CR-191903] p 1457 N93-18777
The use of subcarriers in future DSN missions p 1507 N93-18915
Validation of two temperature pill telemetry systems in humans during moderate and strenuous exercise
[AD-A259068] p 1599 N93-19072
Availability analysis of the traveling-wave maser amplifiers in the deep space network. Part 1: The 70-meter antennas p 1514 N93-19435
SATCOM general purpose modem DSCS 3 SCT beacon telemetry display
[AD-A258849] p 1458 N93-19441

**TELEOPERATORS**
Composite video and graphics display for camera viewing systems in robotics and teleoperation
[NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284
Teleprogramming: Remote site robot task execution p 1641 N93-19046

**TELEPHONES**
A study of current world telecommunications and a projection of the future
[AD-A257545] p 1501 N93-17962

**TELEROBOTICS**
Design requirements for force reflecting master controllers p 1605 N93-18035
Composite video and graphics display for camera viewing systems in robotics and teleoperation
[NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284
Evaluation of inertial devices for the control of large, flexible, space-based telerobotic arms p 1465 N93-18839
Voice control of a dual-arm telerobot p 1549 N93-19044
Teleprogramming: Remote site robot task execution p 1641 N93-19046
Cooperation of mobile robots for accident scene inspection
[DE93-002487] p 1551 N93-19478

**TELESCOPES**
Photoelectric analysis of the solar granulation in IR
[AD-A257811] p 1744 N93-18334
Planning, scheduling, and control for automatic telescopes p 1637 N93-18677
A bolometric millimeter-wave system for observations of anisotropy in the cosmic microwave background radiation on medium angular scales p 1563 N93-18717
Increasing the corrected field of view of an adaptive optical telescope
[AD-A258816] p 1663 N93-18995
Coma imaging of comet P/Brorsen-Metcalf at Calar Alto in late July to mid August 1989 p 1702 N93-19131
CCD imaging of the inner coma jets of comet P/Halley p 1702 N93-19133
Deimos: A reddish, D-type asteroid spectrum p 1706 N93-19163
Palomar Planet-Crossing Asteroid Survey (PCAS): Recent discovery rate p 1707 N93-19168
Evaluation of the table Mountain Ronchi telescope for angular tracking p 1512 N93-19421

A solar magnetic and velocity field measurement system for Spacelab 2: The solar optical universal polarimeter (SOUP)
[NASA-CR-191443] p 1745 N93-19650

**TELEVISION CAMERAS**
Composite video and graphics display for camera viewing systems in robotics and teleoperation
[NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284

**TELEVISION EQUIPMENT**
A technical review of cellular radio and analysis of a possible protocol
[AD-A257560] p 1501 N93-17982
Wake in faint television meteors p 1716 N93-19233

**TELEVISION SYSTEMS**
A technical review of cellular radio and analysis of a possible protocol
[AD-A257560] p 1501 N93-17982
Composite video and graphics display for camera viewing systems in robotics and teleoperation
[NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284

**TELLURIDES**
Liquid tellurides: Structure and properties
[DE93-002909] p 1677 N93-19830

**TEMPEL 2 COMET**
Light curve and fan-shaped coma of comet P/Tempel 2 in 1988-1989 p 1700 N93-19114
IUE observations of periodic comets Tempel-2, Kopff, and Tempel-1 p 1697 N93-19153
Production rates for comet P/Temple 2 from long slit CCD spectroscopy p 1705 N93-19156
Activity in distant comets p 1712 N93-19202
Twentieth century light curves and the nucleus of comet P/Tempel 2 p 1698 N93-19231

**TEMPERATURE CONTROL**
Preliminary design of a radiator shading device for a lunar outpost
[NASA-CR-192016] p 1605 N93-18019
Conceptual design of a thermal control system for an inflatable lunar habitat module
[NASA-CR-192014] p 1606 N93-18113
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116

**TEMPERATURE DEPENDENCE**
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473

**TEMPERATURE EFFECTS**
The pre-onset, transitional, and foot regions in resistance versus temperature behavior in high-T2 cuprates: Inferences regarding maximum T2
[AD-A258175] p 1670 N93-17923
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192
Computer modelling of cyclic deformation of high-temperature materials
[AD-A258404] p 1477 N93-18222
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330
HPM damage thresholds of GaAs FETs and HEMTs
[AD-A257897] p 1520 N93-18420
Optically pumped continuous wave CF4 laser
[ISBN-90-9004442-6] p 1541 N93-18429
Analysis of structures under fire conditions p 1557 N93-18754
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191957] p 1523 N93-19893

**TEMPERATURE GRADIENTS**
Microstructural development during directional solidification of peritectic alloys
[NASA-CR-192090] p 1488 N93-18603
Rewet performance of a rectangular grooved heat pipe wick after gravitationally induced dryout
[AD-A258852] p 1534 N93-19367

**TEMPERATURE MEASUREMENT**
Laser Rayleigh and Raman diagnostics for small hydrogen/oxygen rockets
[NASA-TM-105999] p 1471 N93-17995
Modeling energy and mass fluxes from prairie canopies
[NASA-CR-191801] p 1566 N93-18232
Electron beam probing of blow-down hypersonic flows
[ONERA-NT-1992-7] p 1408 N93-18701
Determination of the dissipative loss of a two-port network from noise temperature measurements p 1505 N93-18904
Minimizing noise-temperature measurement errors p 1507 N93-18919
Correction of high-frequency noise-temperature inaccuracies p 1507 N93-18920
Validation of two temperature pill telemetry systems in humans during moderate and strenuous exercise
[AD-A259068] p 1599 N93-19072
2D velocity and temperature measurements in high speed flows based on spectrally resolved Rayleigh scattering
[NASA-TM-105784] p 1539 N93-19651

**TEMPERATURE PROFILES**
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840

**TEMPERATURE RATIO**
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991

**TEMPORAL DISTRIBUTION**
Spatial and temporal variations in the column density distribution of comet Halley's CN coma p 1717 N93-19238

**TEMPORAL RESOLUTION**
Spatio-temporal masking: Hyperacuity and local adaptation
[AD-A257934] p 1595 N93-18006
Sporadic E layer formation during the Geminid meteor shower p 1723 N93-19529
STARE: A new coherent radar in Scandinavia p 1517 N93-19572

**TENSILE CREEP**
Mechanical behavior of titanium aluminide under engine operating conditions
[AD-A258884] p 1550 N93-19079

**TENSILE PROPERTIES**
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity
[AD-A257859] p 1487 N93-18308

**TENSILE STRENGTH**
The beta-CEZ, a new high performance titanium alloy for aerospace engines
[DS-2022] p 1485 N93-17852
Segregation of defects in wrought alloy 718: Management of industrial safeguards
[DS-2038] p 1486 N93-18150
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343
Characterization and defect analysis of high temperature aluminum-based metal matrix composites p 1480 N93-19060
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
Open and filled hole static tensile strength characterization of metal matrix composite SCS-9/Beta21s
[AD-A258829] p 1480 N93-19091

**TENSILE STRESS**
Segregation of defects in wrought alloy 718: Management of industrial safeguards
[DS-2038] p 1486 N93-18150
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846

**TENSILE TESTS**
Strength and rupture-life transitions caused by secondary carbide precipitation in HT-9 during high-temperature low-rate mechanical testing
[DE93-002917] p 1489 N93-19514

**TERMINAL BALLISTICS**
Flash radiographic studies of hypervelocity projectile interactions with explosives
[AD-A258387] p 1497 N93-18260

**TERMINOLOGY**
Software process development and enactment: Concepts and definitions
[AD-A258465] p 1619 N93-18243
From asteroid clusters to families: A proposal for a new nomenclature p 1705 N93-19151
An operational system for subject switching between controlled vocabularies
[NASA-CR-192333] p 1693 N93-19935

**TERNARY ALLOYS**
Electronic structure of substitutionally disordered alloys: Direct configurational averaging
[DE93-002548] p 1489 N93-19480

**TERNARY SYSTEMS**
A general approximation solution for the mass transfer in laminar multicomponent boundary layers along a streaming plate plane
[ETN-93-92738] p 1530 N93-18629

**TERRAIN**
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
An approach to automated terrain classification from digital elevation model
[AD-A258210] p 1452 N93-17986
Computer program for wind speeds and turbulence properties: Flat or hilly sites in terrain with roughness changes
[ESDU-92032] p 1585 N93-18043
Flight above a virtual world p 1609 N93-19766
Numerical simulations of drainage flows on Mars p 1742 N93-19816

**TERRAIN ANALYSIS**
Terrain background signature research
[AD-A257917] p 1565 N93-18213
A literature survey of airborne vehicles impacting with water and soil: Head injury criteria and severity index development of computer program KRASH
[DOT/FAA/CT-90/24] p 1421 N93-19647
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 1434 N93-19924

**TERRESTRIAL PLANETS**
Comets: Role and importance to exobiology p 1592 N93-18556

**TEST FACILITIES**
Meeting the challenge of responding to stakeholder information needs: A program model
[DE93-002047] p 1683 N93-18409
Active suspension design for a Large Space Structure ground test facility p 1469 N93-18941
Flight Testing
[AGARD-CP-519] p 1442 N93-19901

**TEST PILOTS**
Aircrew acceptance of automation in the cockpit p 1608 N93-19761

**TEST STANDS**
A proposal of an architecture for the coordination level of intelligent machines
[NASA-CR-191990] p 1613 N93-18516
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
Design and application of electromechanical actuators for deep space missions
[NASA-CR-192227] p 1551 N93-19946

**TETHERING**
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899

**TETHERLINES**
Design of a reusable kinetic energy absorber for an astronaut safety tether to be used during extravehicular activities on the Space Station
[NASA-CR-192015] p 1605 N93-17973
A method to predict the orbital lifetimes of free tethers and tether-trailing satellites using artificial neural networks
[AD-A258547] p 1471 N93-19899

**TETRAHYDROFURAN**
X ray crystal structure of InCl3(dot)2THF, a neural five-coordinate BIS-Adduct of an In3 trihalide
[AD-A258551] p 1678 N93-19954

**TEXTURES**
Computational and neural network models for the analysis of visual texture
[AD-A258166] p 1632 N93-18296

**THEMATIC MAPPERS (LANDSAT)**
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data
[INPE-5327-PRE/1725] p 1567 N93-19646

**THEMATIC MAPPING**
Methods for analysis of networks within a geographical information system
[INPE-5299-PRE/1704] p 1693 N93-19835

**THEOREM PROVING**
Quantifiers into the world of types
[LP-92-09] p 1642 N93-17832
Shortest paths of bounded curvature in the plane
[INRIA-RR-1503] p 1642 N93-17835

Sub-groups of Z(sup n), standard basis, and linear diophantine systems
[INRIA-RR-1510] p 1615 N93-17836
A simplified proof of Toyama's theorem
[CWI-CS-R9156] p 1642 N93-17839
Feasible interpretability
[ML-91-11] p 1643 N93-17868
Modal frame classes revisited
[ML-91-12] p 1643 N93-17869
Lambda-calculi for (strict) parallel functions
[INRIA-RR-1387] p 1646 N93-18435
Analytica: An experiment in combining theorem proving and symbolic computation
[AD-A258656] p 1628 N93-19958

**THEOREMS**
The kinematics of presupposition
[LP-92-05] p 1613 N93-17829
A system of dynamic modal logic
[LP-92-08] p 1615 N93-17831
Quantifiers into the world of types
[LP-92-09] p 1642 N93-17832
Shortest paths of bounded curvature in the plane
[INRIA-RR-1503] p 1642 N93-17835
A simplified proof of Toyama's theorem
[CWI-CS-R9156] p 1642 N93-17839
Modal frame classes revisited
[ML-91-12] p 1643 N93-17869
Testing superperfection of k-trees
[RUU-CS-92-09] p 1645 N93-18196
Lambda-calculi for (strict) parallel functions
[INRIA-RR-1387] p 1646 N93-18435
Observing localities
[INRIA-RR-1485] p 1647 N93-18614
Determination of the zone of the stall cell by means of the baroclinic wave theory p 1531 N93-18733
Rotating stall cell and Von Karman vortex street: A meteorological theory p 1531 N93-18734
A central limit theorem for autoregressive integrated moving average processes
[AD-A258923] p 1650 N93-19445
Analytica: An experiment in combining theorem proving and symbolic computation
[AD-A258656] p 1628 N93-19958

**THEORETICAL PHYSICS**
Workshop on hadron structure from photo-reactions at intermediate energies
[DE93-001904] p 1655 N93-18509
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471
Natural selection and particle physics: A thrust for artificial intelligence research
[INPE-5335-PRE/1734] p 1641 N93-19823

**THERMAL ANALYSIS**
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**THERMAL BARRIERS (PLASMA CONTROL)**
Thermal coating development for impulse drying
[DE93-000710] p 1491 N93-17909

**THERMAL BATTERIES**
DOE battery program for weapon applications
[DE93-002476] p 1522 N93-19637

**THERMAL CONDUCTIVITY**
Prediction of rigid silica based insulation conductivity
[NASA-TP-3276] p 1524 N93-17925
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191

**THERMAL CONTROL COATINGS**
Four space application material coatings on the long-duration exposure flight (LDEF)
[NASA-TM-104574] p 1493 N93-18370
Oxidation resistant overlay coatings for low expansion substrates
[NASA-CASE-LEW-15154-1] p 1495 N93-19332

**THERMAL CYCLING TESTS**
Thermal cycling behavior of unidirectional and cross-plied P100 Gr/6061 aluminum composites
[AD-A257506] p 1477 N93-18077

**THERMAL DEGRADATION**
A statistical analysis of elevated temperature gravimetric cyclic oxidation data of 36 Ni- and Co-base superalloys based on an oxidation attack parameter
[NASA-TM-105934] p 1486 N93-18069

**THERMAL EXPANSION**
Conditioning instabilities of the Greenland Sea
[AD-A257547] p 1589 N93-18279
High performance YBCO films
[AD-A258481] p 1672 N93-18313
Oxidation resistant overlay coatings for low expansion substrates
[NASA-CASE-LEW-15154-1] p 1495 N93-19332

**THERMAL FATIGUE**
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443
Investigation of fatigue behavior in notched cross-ply titanium metal matrix composite at elevated temperature
[AD-A258922] p 1481 N93-19444
Fatigue behavior of a cross-ply ceramic matrix composite under tension-tension and tension-compression loading
[AD-A259209] p 1482 N93-19846

**THERMAL INSULATION**
Prediction of rigid silica based insulation conductivity
[NASA-TP-3276] p 1524 N93-17925
Resource availability at Taurus-Littrow p 1736 N93-18792

**THERMAL MAPPING**
Linear mixing model applied to coarse resolution satellite data p 1565 N93-18073
Photoluminescent thermography in hypersonic blowdown wind tunnel: Feasibility study with pinpoint measurement
[ONERA-NT-1992-8] p 1407 N93-18617
Condensation phase of the Martian south polar cap p 1740 N93-19804

**THERMAL NOISE**
Performance evaluation of a radar by computer
[AD-A257543] p 1500 N93-17960

**THERMAL PLASMAS**
A DE-1/whistler study of the thermal plasma structure and dynamics in the dusk bulge sector of the magnetosphere
[NASA-CR-192088] p 1579 N93-18850

**THERMAL PROTECTION**
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155
Thermal protection materials: Thermophysical property data
[NASA-RP-1289] p 1558 N93-18765
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-52
[NASA-TM-107554] p 1457 N93-19050

**THERMAL REACTORS**
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements
[NASA-TM-105867] p 1474 N93-19106

**THERMAL RESISTANCE**
Growth and properties of co-evaporated superconducting YBaCuO thin films
[ETN-92-92798] p 1673 N93-18441

**THERMAL STABILITY**
A condensed phase test cell assembly for the System for Thermal Diagnostic Studies (STDS)
[AD-A258463] p 1497 N93-18242
Molecular-scale hybrid polymer ceramics p 1496 N93-18487
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system p 1496 N93-19402
Numerical calculation on ionospheric electron and ion temperatures in the presence of turbulence p 1726 N93-19548

**THERMAL STRESSES**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473

**THERMOCHEMISTRY**
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems
[DE93-001403] p 1679 N93-19470

**THERMOCLINES**
Modelling of interfacial and thermocline waves
[AERO-REPT-9209] p 1525 N93-18103
Modelling of interfacial and thermocline waves
[AERO-REPT-9210] p 1525 N93-18104
Modelling of interfacial and thermocline waves
[AERO-REPT-9211] p 1525 N93-18105
Modelling of interfacial and thermocline waves
[AERO-REPT-9212] p 1526 N93-18106
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Waves from an oscillating disturbance in a thermocline and in a linear shear flow
[AERO-REPT-9207] p 1527 N93-18134
Thermocline waves from a moving body and comparison of open-boundary conditions
[AERO-REPT-9208] p 1527 N93-18135

**THERMOCOUPLES**
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840

**THERMODYNAMIC PROPERTIES**
The effects of mixed layer dynamics on ice growth in the central Arctic
[AD-A257553] p 1575 N93-17968
A condensed phase test cell assembly for the System for Thermal Diagnostic Studies (STDS)
[AD-A258463] p 1497 N93-18242
Nanotechnology p 1678 N93-18489
Mathematical modelling of materials p 1557 N93-18753
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
Liquid tellurides: Structure and properties
[DE93-002909] p 1677 N93-19830
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**THERMODYNAMICS**
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578
Compatibility of potential reinforcing ceramics with Ni and Fe aluminides
[NASA-CR-192232] p 1494 N93-18784
Integrated modeling of advanced optical systems p 1463 N93-18832
Forced precession of the cometary nucleus with randomly placed active regions p 1719 N93-19251
Behavior of a quasi-isotropic ply metal matrix composite under thermo-mechanical and isothermal fatigue loading
[AD-A258902] p 1481 N93-19443
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635

**THERMOELASTICITY**
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473

**THERMOELECTRIC GENERATORS**
Pressurized lunar rover
[NASA-CR-192034] p 1544 N93-18015
AMTEC vapor-vapor series connected cells
[NASA-CASE-NPO-18667-1-CU] p 1522 N93-19330

**THERMOELECTRICITY**
Liquid tellurides: Structure and properties
[DE93-002909] p 1677 N93-19830

**THERMOGRAPHY**
Photoluminescent thermography in hypersonic blowdown wind tunnel: Feasibility study with pinpoint measurement
[ONERA-NT-1992-8] p 1407 N93-18617

**THERMOMECHANICAL TREATMENT**
The beta-CEZ, a new high performance titanium alloy for aerospace engines
[DS-2022] p 1485 N93-17852
Thermomechanical processing of aluminum alloy 2519 for grain refinement and superplasticity
[AD-A257859] p 1487 N93-18308
Deformation induced microstructural and microchemical changes during thermomechanical treatment
[DE93-005060] p 1490 N93-19635

**THERMOPHYSICAL PROPERTIES**
Thermal protection materials: Thermophysical property data
[NASA-RP-1289] p 1558 N93-18765

**THERMOPLASTIC RESINS**
Short range order in amorphous polycondensates
[DE93-001650] p 1494 N93-18708

**THERMOREGULATION**
A review of models of the human temperature regulation system
[AD-A258023] p 1595 N93-17918
Validation of two temperature pill telemetry systems in humans during moderate and strenuous exercise
[AD-A259068] p 1599 N93-19072

**THERMOSPHERE**
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A
[AD-A258299] p 1576 N93-18126
Visible Airglow Experiment data analysis
[NASA-CR-192119] p 1577 N93-18361
EISCAT measurements in the E and F regions during the 12-16 February 1990 LTCS campaign p 1726 N93-19546
INDI p 1730 N93-19570
Overall results from the European sector of the worldwide atmospheric gravity-wave study: 1985-1990 p 1733 N93-19589

**THESAURI**
An operational system for subject switching between controlled vocabularies
[NASA-CR-192333] p 1693 N93-19935

**THESES**
Nuclear structure from radioactive decay
[DE93-002795] p 1654 N93-18392

**THICKNESS**
Thickness selection for laminated plates subjected to in-plane loads and bending moments
[ESDU-92033] p 1477 N93-18044
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
**THICKNESS RATIO**
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490
**THIN AIRFOILS**
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Lifting-surface-method
p 1410 N93-19281
**THIN FILMS**
Feasibility of silicon nitride films by vapor deposition at low temperature: Comparison of dichlorsilane-ammonia and disilane gaseous systems
[LAAS-92249] p 1490 N93-17812
Positron lifetime spectroscopy for investigation of thin polymer coatings
[NASA-TM-4421] p 1491 N93-17945
Writing electronically active nanometer-scale structures with a scanning tunneling microscope
[MBB-Z-0367-91-PUB] p 1671 N93-18117
Crystalline-amorphous contrast formation in thermally crystallized SiC
[MBB-Z-0373-91-PUB] p 1671 N93-18118
The Fourth Conference on Organized Thin Films
[AD-A258315] p 1672 N93-18310
Theory of artifact diamond
[AD-A258474] p 1672 N93-18311
Research and development on advanced silicon carbide thin film growth techniques and fabrication of high power and microwave frequency silicon carbide-based device structures
[AD-A257913] p 1672 N93-18367
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391
Thin film processing of photorefractive BaTiO3
[NASA-CR-192194] p 1673 N93-18427
Growth and properties of co-evaporated superconducting YBaCuO thin films
[ETN-92-92798] p 1673 N93-18441
Atomic and electronic structure of metals and alloys: Clean surfaces and chemisorbed molecules
[DE93-004371] p 1487 N93-18452
High-temperature superconducting electronics
p 1523 N93-18464
Novel interconnect deposition technology
p 1523 N93-18465
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488
Photoemission from Ag, Cu, and CsI
[DE93-001964] p 1541 N93-18512
Interfacial reaction in a-Si/Au and a-Si/Cu thin film bilayers
[DE93-002324] p 1674 N93-18521
Research on polycrystalline thin-film CuGaInSe2 solar cells
[DE92-016439] p 1571 N93-18656
Amorphous magnetic insulators for microwave device applications
[AD-A259029] p 1508 N93-18954
Growth, nitrogen vacancy reduction and solid solution formation in cubic GaN thin films and the subsequent fabrication of superlattice structures using AlN and InN
[AD-A258804] p 1675 N93-18983
Some recent results on stresses in thin films and precipitates
[AD-A258807] p 1559 N93-18986
Processability of polythiophene thin films by ultraviolet photo bleaching
[AD-A259043] p 1495 N93-19021
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493
Generic properties of layered superconductors
[DE93-002985] p 1676 N93-19498
Ion beam-based characterization of multicomponent oxide thin films and thin film layered structures
[DE93-003004] p 1676 N93-19627
Magnetic multilayer interface anisotropy
[DE93-004951] p 1676 N93-19634
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848
X ray characterization of Au/Ni multilayer thin films
[NIAR-92-7] p 1678 N93-19881
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957
**THIN PLATES**
High speed thin plate fatigue crack monitor
[NASA-CASE-LAR-14816-1-SB] p 1559 N93-19329
**THREE BODY PROBLEM**
Asteroid-type orbit evolution near the 5:2 resonance
p 1708 N93-19171
3-D orbital evolution model of outer asteroid belt
p 1718 N93-19245
**THREE DIMENSIONAL BODIES**
Optimization of three dimensional meshes
[ETN-92-92554] p 1647 N93-19008
**THREE DIMENSIONAL FLOW**
A numerical study of mixing in supersonic combustors with hypermixing injectors
[NASA-CR-191027] p 1405 N93-17884
Thermocline waves from a moving body and comparison of open-boundary conditions
[AERO-REPT-9208] p 1527 N93-18135
Direct simulation of external separated flow with the 3-D Navier-Stokes equations
[ONERA-NT-1992-6] p 1527 N93-18326
Validation of central and upwind 3D compressible flow solvers p 1529 N93-18564
Endwall flows and blading design for axial flow compressors p 1531 N93-18730
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
Rarefied gas numerical wind tunnel. Part 7: OREX
p 1410 N93-19280
Code development for hypersonic real-gas flow simulations toward the design of space vehicles
p 1411 N93-19293
Numerical calculation of hypersonic non-equilibrium flow around OREX p 1412 N93-19296
Numerical simulation of hypersonic flow around H-2 Orbiting Plane (HOPE), part 3 p 1412 N93-19297
The 3D Navier-Stokes calculation of flow about scramjet inlet with strut p 1412 N93-19298
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
A numerical investigation of 3D transverse injection into the supersonic flow behind rearward facing step
p 1415 N93-19316
Three-dimensional measurement of turbulent shear flows using digital image processing
p 1415 N93-19319
**THREE DIMENSIONAL MODELS**
Aerodynamic design and analysis of fans using 3D computational codes
[DS-2140] p 1404 N93-17880
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
On the time dependent hydrodynamic model for semiconductors
[ETN-93-93027] p 1518 N93-18098
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
Interplanetary magnetic field changes and condensations in comet Halley's plasma tail
p 1704 N93-19147
3-D orbital evolution model of outer asteroid belt
p 1718 N93-19245
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
Analysis of relational concepts for the implementation of systems for three-dimensional visualization of meteorological data
[INPE-5435-TAE/016] p 1588 N93-19638
Dust transport into Martian polar latitudes
p 1742 N93-19815
**THRUST**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow
[AD-A258019] p 1404 N93-17819
Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory
[AD-A258827] p 1441 N93-19089
**THRUST VECTOR CONTROL**
Longitudinal-control design approach for high-angle-of-attack aircraft
[NASA-TP-3302] p 1451 N93-19108
**THRUSTORS**
Second Magnetoplasmadynamic Thruster Workshop
[NASA-CP-10109] p 1666 N93-18635
The MPD thruster program at JPL
p 1666 N93-18638
MPD thruster technology p 1666 N93-18639
Los Alamos research in nozzle based coaxial plasma thrusters p 1666 N93-18640
Review of recent work on MPD thrusters at MIT
p 1666 N93-18641
Magnetoplasmadynamic thruster flows: Problems and progress p 1666 N93-18642
OL-AC Phillips Laboratory MPD thruster research program p 1667 N93-18644
Recent advances in MPD thruster research at Princeton p 1667 N93-18645
**THYRISTORS**
Silicon device performance measurements to support temperature range enhancement
[NASA-CR-191957] p 1523 N93-19893
**TIDES**
Geophysical parameters from the analysis of laser ranging to Starlette
[NASA-CR-192406] p 1541 N93-18605
Altitude variations in amplitude and phase of tidal oscillations at high latitude p 1729 N93-19566
**TILT ROTOR AIRCRAFT**
Open airscrew VTOL concepts
[NASA-CR-177603] p 1403 N93-17883
**TILT WING AIRCRAFT**
Open airscrew VTOL concepts
[NASA-CR-177603] p 1403 N93-17883
**TIME**
An imperative language for task-level programming: Definition in temporal logics
[INRIA-RR-1406] p 1622 N93-18575
Predit: A temporal predictive framework for scheduling systems p 1639 N93-18691
**TIME DEPENDENCE**
Lie-isotropic energy-dependence of the neutral K(sub S) lifetime
[PREPRINT-874] p 1652 N93-17824
Preconditioned conjugate gradient techniques for the solution of time-dependent differential equations
[REPT-92-19] p 1643 N93-17844
On the behavior of non-Newtonian fluids: Analysis, computation, and experiment
[AD-A258177] p 1524 N93-17908
Non-fickian moisture diffusion in polymeric composites
[AD-A257919] p 1492 N93-18003
Time-dependent computational studies of premixed flames in microgravity
[NASA-CR-191051] p 1498 N93-18387
Computational Fluid Dynamics, volume 1
[VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Solution of the time-dependent incompressible Navier-Stokes equations by finite elements
p 1528 N93-18542
Time management situation assessment (TMSA)
p 1639 N93-18692
A first-order global model of Late Cenozoic climatic change: Orbital forcing as a pacemaker of the ice ages
p 1581 N93-18973
Development of a fractional-step method for the unsteady incompressible Navier-Stokes equations in generalized coordinate systems
[NASA-TM-103912] p 1532 N93-19009
Alternative formulations of the Laplace Transform Boundary Element (LTBE) numerical method for the solution of diffusion-type equations
[DE92-041172] p 1648 N93-19468
Space charge, heterojunction and elastic stress effects in ferroelectric thin films
[AD-A258655] p 1678 N93-19957
**TIME MEASUREMENT**
Time stress measurement devices for enhancement of onboard bit performance p 1608 N93-19762
**TIME OF FLIGHT SPECTROMETERS**
CoMA: A high resolution Time-Of-Flight Secondary Ion Mass Spectrometer (TOF-SIMS) for in situ analysis of cometary matter p 1721 N93-19272

**TIME OPTIMAL CONTROL**
Discrete time system piecewise linear filtering with small observation noise
[INRIA-RR-1451] p 1633 N93-18611
**TIME SERIES ANALYSIS**
Reconstruction of linear and nonlinear continuous time models from discrete time sampled-data systems
[RR-406] p 1646 N93-18458
Fault detection using a two-model test for changes in the parameters of an autoregressive time series
p 1505 N93-18907
Geodynamic contributions to global climatic change
p 1575 N93-18963
Late quaternary time series of Arabian Sea productivity: Global and regional signals p 1580 N93-18969
Modeling orbital changes on tectonic time scales
p 1581 N93-18971
Plio-Pleistocene time evolution of the 100-ky cycle in marine paleoclimate records p 1581 N93-18972
Analysis of whole-sky imager data to determine the validity of PCFLOS models
[AD-A259042] p 1587 N93-19020
Toward an optimal strategy for sampling chaotic time series using the Smale-Williams dynamical system
[AD-A258550] p 1650 N93-19953
**TIME SHARING**
Implementation of a parallel unstructured Euler solver on shared and distributed memory architectures
[NASA-CR-189742] p 1532 N93-18769
**TIMOSHENKO BEAMS**
A piecewise continuous Timoshenko beam model for the dynamic analysis of tapered beam-like structures
p 1561 N93-19459
**TIN OXIDES**
X ray diffraction study of shock-modified tetragonal phases of SnO2 and MnO2
[DE93-002488] p 1535 N93-19479
**TISSUES (BIOLOGY)**
High density cell culture system
[NASA-CASE-MSC-22060-1] p 1593 N93-19037
**TITAN**
Titan p 1592 N93-18553
Cassini: Mission to Saturn and Titan
p 1592 N93-18559
**TITAN LAUNCH VEHICLES**
Low cost, SPF aluminum cryogenic tank structure for ALS
[NASA-CR-189654] p 1554 N93-18030
**TITAN 4 LAUNCH VEHICLE**
Analysis of Titan 4 launch responsiveness
[AD-A259021] p 1456 N93-18950
**TITANIUM**
A Ti:Sapphire laser for the new polarized electron source
[DE93-004016] p 1541 N93-18448
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655
Melting of cognetic depleted and enriched reservoirs and the production of high Ti Mare basalts
p 1739 N93-18812
Mechanical behavior of titanium aluminide under engine operating conditions
[AD-A258884] p 1550 N93-19079
**TITANIUM ALLOYS**
The beta-CEZ, a new high performance titanium alloy for aerospace engines
[DS-2022] p 1485 N93-17852
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192
Fatigue of continuous fiber reinforced metallic materials
[NASA-TM-107700] p 1478 N93-18379
A first-principles study of the phase stability of fcc-based Ti-Al alloys
[DE93-002549] p 1487 N93-18390
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532
Corrosion fatigue of titanium in sea water under cathodic polarization
[VTT-PUBS-91] p 1488 N93-18655
Behavior of a titanium matrix composite under quasi-static tensile and compressive loading
[AD-A258828] p 1480 N93-19090
Phase stability of FCC- and HCP-based intermetallics: The Ti-Al and Cd-Mg systems
[DE93-002558] p 1489 N93-19486
**TITANIUM OXIDES**
neoKREEP: A new lunar component at Apollo 17
p 1737 N93-18797
**TOKAMAK DEVICES**
Bias-sustained shield plasma
[DE93-001908] p 1666 N93-18511
Poloidal flow generation by resistive pressure-gradient-driven turbulence
[DE93-001638] p 1667 N93-18707
Advanced divertor program results from D3-D
[DE93-002675] p 1668 N93-19619
The CQL3D Fokker-Planck code
[DE93-002962] p 1668 N93-19754
Suggestions for the magnetic diagnostic fixing system in the inside of tokamak TBR-E
[INPE-5277-NTC/298] p 1668 N93-19836
Stability of TAE modes in DIII-D
[DE93-002677] p 1669 N93-19897
Critical issues and experimental examination on sawtooth and disruption physics
[NIFS-157] p 1670 N93-19951
**TOLERANCES (MECHANICS)**
Damage tolerance assessment of boron/epoxy repairs to fuselage lap joints
[AD-A258383] p 1439 N93-18257
**TOLERANCES (PHYSIOLOGY)**
Effects of dextromethamphetamine on subjective fatigue
[AD-A258252] p 1594 N93-17822
**TOMOGRAPHY**
Flow visualization and combustion diagnostic
p 1485 N93-18480
The use of geometric prior information in Bayesian tomographic image reconstruction: A preliminary report
[DE92-041215] p 1624 N93-18867
**TOOLS**
Retractable tool bit having latch type catch mechanism
[NASA-CASE-GSC-13359-1] p 1547 N93-18286
Split rail gripper assembly and tool driver therefor
[NASA-CASE-GSC-13370-2] p 1547 N93-18288
**TOPOGRAPHY**
A plan for developing a hierarchal three-dimensional landscape signature model
[AD-A257550] p 1564 N93-17965
Code vector density in topographic mappings
[AD-A258222] p 1492 N93-18122
Multi-discipline Arctic oceanography and acoustics program: The Geodesic Underice Tramway System (GUTS)
[AD-A258323] p 1589 N93-18254
Mapping of sea bottom topography with spaceborne SAR
[BCRS-91-14] p 1589 N93-18430
Updating topographic maps using orbital images in a microcomputer environment
[INPE-5409-PRE/1756] p 1567 N93-19739
The image digitizing system
[AD-A258665] p 1628 N93-19948
**TOROIDAL PLASMAS**
Identification of toroidal field errors in a modified betatron accelerator
[AD-A257983] p 1660 N93-18289
Roles of electric field on toroidal magnetic confinement
[NIFS-200] p 1669 N93-19884
Hamiltonian for the toroidal helical magnetic field lines in the vacuum
[NIFS-201] p 1669 N93-19885
On the Lagrangian of the linearized MHD equations
[NIFS-154] p 1670 N93-19933
**TORQUE**
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Reducing the net torque and flow ripple effects of multiple hydraulic piston motor drives
p 1507 N93-18917
**TORQUE MOTORS**
Mathematical modeling of bent-axis hydraulic piston motors p 1507 N93-18916
Reducing the net torque and flow ripple effects of multiple hydraulic piston motor drives
p 1507 N93-18917
**TORSION**
Experimental investigation of cyclic thermomechanical deformation in torsion
[NASA-TM-105938] p 1554 N93-17996
A dynamic analysis of piezoelectric strained elements
[AD-A259011] p 1651 N93-19014
**TOTAL QUALITY MANAGEMENT**
Systems design analysis applied to launch vehicle configuration
[NASA-TP-3326] p 1455 N93-18141
A paradigm shift in Air Force medicine
[AD-A258334] p 1596 N93-18159
Paradigm shift: Can TQM save DOD's procurement process?
[AD-A258319] p 1552 N93-18253
Meeting the challenge of responding to stakeholder information needs: A program model
[DE93-002047] p 1683 N93-18409
Total quality management: It works for aerospace information services
[NASA-TM-108980] p 1684 N93-19938
**TOXICITY**
Fires on board aircraft: Toxicological risk in flight
p 1428 N93-19694
**TOXICOLOGY**
Toxicological investigations of flight accidetns: Findings and methods p 1428 N93-19695
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges
p 1429 N93-19696
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 1429 N93-19697
**TRACE ELEMENTS**
The voltammetric determination of trace metal concentrations and organic complexation in seawater
[AD-A257565] p 1588 N93-17984
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621
**TRACKING (POSITION)**
Aircraft trajectory tracking and prediction
[AD-A259039] p 1441 N93-18999
Inertial-space disturbance rejection for robotic manipulators
[NASA-CR-191867] p 1641 N93-19361
Precise tracking of the Magellan and Pioneer Venusorbiters by same-beam interferometry. Part 1: Dataaccuracy analysis p 1454 N93-19414
Feed-forward control upgrade of the deep space network antennas p 1514 N93-19434
Robust motion tracking control of robotic arms based on the generalized energy accumulation principle
p 1552 N93-19463
**TRACKING NETWORKS**
Demonstration of a joint US-Russian very long baseline interferometry tracking capability p 1458 N93-18911
**TRACKING STATIONS**
Demonstration of a joint US-Russian very long baseline interferometry tracking capability p 1458 N93-18911
**TRAFFIC**
Multi-agent planning and scheduling, execution monitoring and incremental rescheduling: Application to motorway traffic p 1637 N93-18682
**TRAILING EDGES**
An experimental study of a turbulent boundary layer in the trailing edge region of a circulation-control airfoil
[NASA-CR-191262] p 1405 N93-17934
Experimental analysis of the aeroacoustics of cascaded airfoils
[AD-A257945] p 1526 N93-18121
**TRAINING AIRCRAFT**
Carrier landing parameters from survey 45, fleet and training command aircraft landing aboard USS ENTERPRISE CVN-65, main text and appendix A
[AD-A258873] p 1433 N93-19078
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 1425 N93-19677
**TRAINING DEVICES**
Research and development project summaries
[AD-A257518] p 1747 N93-18175
Possibility expectation and its decision making algorithm p 1618 N93-18226
Membership generation using multilayer neural network p 1618 N93-18227
DROLS workbook
[AD-A259033] p 1687 N93-19017
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990
p 1427 N93-19687
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 1443 N93-19907
**TRAINING EVALUATION**
Training evaluation final report p 1682 N93-19405
**TRAINING SIMULATORS**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
Research and development project summaries
[AD-A257518] p 1747 N93-18175
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958
**TRAJECTORIES**
Vehicle guidance and control along circular trajectories
[AD-A257570] p 1450 N93-18177

**TRAJECTORY ANALYSIS**
Analytical solutions to constrained hypersonic flight trajectories
[NASA-CR-191987] p 1407 N93-18602
Gross-fragmentation of meteoroids and bulk density of Geminids from photographic fireball records
p 1703 N93-19137

**TRAJECTORY CONTROL**
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860
Motion planning for rigid body robots
[AD-A257557] p 1544 N93-17980

**TRAJECTORY MEASUREMENT**
Aircraft trajectory tracking and prediction
[AD-A259039] p 1441 N93-18999

**TRAJECTORY OPTIMIZATION**
Neighboring extremal guidance for systems with piecewise linear control using multiple optimization
[AD-A258191] p 1631 N93-17860
Analytical solutions to constrained hypersonic flight trajectories
[NASA-CR-191987] p 1407 N93-18602
Improved methods for reusable aeroclassified orbital transfer vehicle optimization
[DLR-FB-91-41] p 1454 N93-18785
Controls and guidance research p 1451 N93-19454

**TRAJECTORY PLANNING**
Design and control of a space based two link manipulator with Lyapunov based control laws
[AD-A257568] p 1543 N93-17938
Motion planning for rigid body robots
[AD-A257557] p 1544 N93-17980
Debris about asteroids: Where and how much?
p 1703 N93-19136

**TRANSFER FUNCTIONS**
Wavelet-based multiresolution analyses of signals
[AD-A257496] p 1500 N93-17904
ETANN hardware implementation for radar emitter identification
[AD-A259077] p 1508 N93-18958
Improvements to LQGI/LTR methodology for plants with lightly damped or low frequency poles
[AD-A258841] p 1648 N93-19112
Feed-forward control upgrade of the deep space network antennas p 1514 N93-19434

**TRANSFER OF TRAINING**
Automatic information processing and high performance skills
[AD-A258473] p 1602 N93-18273

**TRANSFER ORBITS**
Project Minerva: A low cost manned Mars mission based on indigenous propellant production
[NASA-CR-192020] p 1734 N93-18048

**TRANSFORMATIONS (MATHEMATICS)**
Automatic analysis and transformation of FORTRAN programs using a typed functional language
[INRIA-RR-1518] p 1615 N93-17838
Aharonov-Casher effect and geometrical phases
[PREPRINT-783] p 1644 N93-18186
Yang phase for non-Hermitian systems and biunitary transformations
[PREPRINT-782] p 1645 N93-18197
Optical Haar wavelet transforms using computer generated holography
[AD-A259079] p 1538 N93-18960
Data compression by wavelet transforms
p 1513 N93-19426

**TRANSFORMERS**
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391

**TRANSIENT RESPONSE**
Structural simulation coupling for transient analysis
[AD-A258192] p 1643 N93-17861
Shock and impact dynamics p 1558 N93-18760

**TRANSISTOR AMPLIFIERS**
HF MOSFET power amplifiers
[AD-A258384] p 1519 N93-18258

**TRANSITION FLOW**
Hypersonic rarefied wake characterization
[NASA-TP-3327] p 1529 N93-18604
Modeling the transition region
[NASA-CR-4492] p 1408 N93-19015
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278

**TRANSITION METALS**
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-001682] p 1488 N93-18589
Chemical interactions in multimetal/zeolite catalysts
[DE93-005133] p 1484 N93-19491

**TRANSITION TEMPERATURE**
High performance YBCO films
[AD-A258481] p 1672 N93-18313
High-temperature superconducting electronics
p 1523 N93-18464
The effects of heavy-ion irradiation of superconductivity in YBa2Cu3O7 epitaxial films
[DE93-002325] p 1677 N93-19742

**TRANSLATING**
A simplified proof of Toyama's theorem
[CWI-CS-R9156] p 1642 N93-17839
A hardware implementation of pure ESTEREL
[INRIA-RR-1479] p 1622 N93-18649

**TRANSMISSION**
Network problem threshold p 1516 N93-19397

**TRANSMISSION ELECTRON MICROSCOPY**
HRTEM observations of modulated structures in Ti-Pd-Cr beta(2) alloys
[DE93-001507] p 1487 N93-18532

**TRANSMISSION LINES**
Design and implementation of a fiber optic link for a token ring local area network
[AD-A257868] p 1662 N93-18335
A method for modeling discontinuities in a microwave coaxial transmission line p 1513 N93-19423
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation
[AD-A259372] p 1522 N93-19853

**TRANSMITTANCE**
Forward model and CO retrieval algorithm
[NASA-CR-191306] p 1620 N93-18414
High-spatial-resolution passive microwave sounding systems
[NASA-CR-192228] p 1577 N93-18704

**TRANSMITTER RECEIVERS**
High-altitude electromagnetic pulse survivability assessment of the Harris RF-3200 transceiver
[AD-A258347] p 1502 N93-18207
A 32-GHz phased array transmit feed for spacecraft telecommunications p 1508 N93-18923
Forward-scatter radiant mapping
p 1697 N93-19178

**TRANSMITTERS**
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
Automatic pulse shaping with the AN/FPN-42 and AN/FPN-44A Loran-C transmitters
[AD-A257860] p 1432 N93-18309
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924

**TRANSONIC COMPRESSORS**
Characterization of stall inception in high-speed single-stage compressors
[AD-A258973] p 1449 N93-19093

**TRANSONIC FLOW**
Application of an Euler-equation method to a sharp-edged delta wing configuration with vortex flow
[NLR-TP-91] p 1404 N93-17809
Numerical investigation of swirl-airfoil interactions in transonic area
[MPIS-8/1991] p 1407 N93-18627
Transonic flow calculation around NACA-0012
p 1413 N93-19301
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320

**TRANSONIC WIND TUNNELS**
Application of a neural network as a potential aid in predicting NTF pump failure
[NASA-TM-107667] p 1620 N93-18332
Wind tunnel test and CFD in Kawasaki Heavy Industries, Gifu p 1416 N93-19324

**TRANSPARENCE**
Research on polycrystalline thin-film CuGaInSe2 solar cells
[DE92-016439] p 1571 N93-18656

**TRANSPORT AIRCRAFT**
Improving military transport aircraft through highly integrated engine-wing design
[DS-1607] p 1434 N93-17850
Flight simulation evaluation of the flyability of curved MLS approaches with wide-body aircraft
[NLR-TP-90238-U] p 1452 N93-17875
Design of the advanced regional aircraft, the DART-75
[NASA-CR-192044] p 1435 N93-17972
Eagle RTS: A design for a regional transport aircraft
[NASA-CR-192032] p 1435 N93-18017
Proposal and preliminary design for a high speed civil transport aircraft. Swift: A high speed civil transport for the year 2000
[NASA-CR-192023] p 1436 N93-18049
A study of illness related lost time in transport aircraft crewmembers
[AD-A258193] p 1602 N93-18298
Flight tests of the transport aircraft viewed from the industrial standpoint p 1442 N93-19903

**TRANSPORT PROPERTIES**
Solid-state dynamics and quantum transport in novel semiconductor nanostructures
[AD-A258482] p 1672 N93-18314
Influence of the physical modelling of viscous terms on hypersonic flow computations
[INRIA-RR-1493] p 1408 N93-18652
Variational nodal transport methods for hexagonal and three-dimensional geometries
[DE93-002131] p 1648 N93-19472

**TRANSPORT THEORY**
Variational nodal transport methods for hexagonal and three-dimensional geometries
[DE93-002131] p 1648 N93-19472
Classical and quantum dynamics of the impulsively driven hydrogen atom
[DE93-002430] p 1656 N93-19477
A fundamental study of contribution transport theory and channel theory applications
[DE93-004315] p 1656 N93-19501

**TRANSPORTATION**
Transportation alternatives 92: Alternative fueled vehicles, volume 2
[DE93-001500] p 1548 N93-18531
Temporal planning for transportation planning and scheduling p 1634 N93-18661
Electric and hybrid vehicle technology: TOPTEC
[DE93-002810] p 1551 N93-19837

**TRANSPORTATION NETWORKS**
The SIMPSONS project: An integrated Mars transportation system
[NASA-CR-192035] p 1547 N93-18152

**TRANSVERSE LOADS**
Impact response of laminated plates subjected to transverse loading
[NIAR-92-5] p 1560 N93-19360
Damage mechanics of cross-ply laminates resulting from transverse concentrated loads
[AD-A259271] p 1481 N93-19839

**TRAPPING**
Single parameter analysis of hysteretic magnetic flux trapping in high T(sub c) superconductor ribbon
[DE93-001924] p 1674 N93-18619

**TRAVELING IONOSPHERIC DISTURBANCES**
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521

**TRAVELING SALESMAN PROBLEM**
Location and distribution of local optima
[AD-A257791] p 1645 N93-18237
An algorithm for the solution of a traveling salesman problem to minimize the average time to demand satisfaction
[AD-A258301] p 1645 N93-18302

**TRAVELING WAVE AMPLIFIERS**
An experimental investigation of a tandem relativistic backward wave oscillator-travelling wave tube amplifier system for generating high-power microwaves
p 1521 N93-19058
Availability analysis of the traveling-wave maser amplifiers in the deep space network. Part 1: The 70-meter antennas p 1514 N93-19435

**TRAVELING WAVE MASERS**
Helium compressors for closed-cycle, 4.5-Kelvin refrigerators p 1500 N93-18918
Availability analysis of the traveling-wave maser amplifiers in the deep space network. Part 1: The 70-meter antennas p 1514 N93-19435

**TRAVELING WAVE TUBES**
An experimental investigation of a tandem relativistic backward wave oscillator-travelling wave tube amplifier system for generating high-power microwaves
p 1521 N93-19058

**TRAVELING WAVES**
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183

**TREES (MATHEMATICS)**
Parallel contraction of binary dags
[REPT-92-36] p 1616 N93-17848
Testing superperfection of k-trees
[RUU-CS-92-09] p 1645 N93-18196
Study and implementation of a set of primitives for constraint satisfaction in finite domains
[INRIA-RR-1389] p 1646 N93-18436
Large-scale induction of ripple-down-rules: Some preliminary considerations p 1689 N93-19716

Use of the microcomputer to solve large p-median problems
[INPE-5336-PRE/1735] p 1628 N93-19786

**TRELLIS CODING**
Telemetering and telecommunications research
[NASA-CR-191903] p 1457 N93-18777

**TRENDS**
Trends in middle-atmosphere ozone p 1575 N93-18500
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 1422 N93-19653

**TRIANGULATION**
Output sensitive construction of the 3D Delaunay triangulation of constrained sets of points
[INRIA-RR-1415] p 1646 N93-18456

**TRIBOLOGY**
Residual contact stresses in cryotechnical environments
[ETN-93-93020] p 1555 N93-18080
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488
A new journal bearing tester: The VTT water tribotester
[VTT-TIED-1345] p 1548 N93-18632

**TROPICAL REGIONS**
Diabatic dynamic initialization p 1563 N93-18719
A comparison of airborne and ground-based radar observations with rain gages during the CaPE experiment p 1563 N93-18720
A method for estimating the phytomass of a tropical forest region through the use of orbital data
[INPE-5320-PRE/1717] p 1567 N93-19645

**TROPICAL STORMS**
Tropical cyclone motion and recurvature in TCM-90
[AD-A258258] p 1585 N93-18010
Definition of mean environmental steering flow for TCM-90 tropical cyclones
[AD-A257886] p 1586 N93-18338

**TROPOSPHERE**
The Rocket Electric Field Sounding (REFS) program: Prototype design and successful first launch
[AD-A257762] p 1473 N93-18235
In situ detection of tropospheric OH, HO2, NO2, and NO by laser-induced fluorescence in detection chambers at reduced pressures
[NASA-CR-191916] p 1577 N93-18599
Investigation of passive atmospheric sounding using millimeter and submillimeter wavelength channels
[NASA-CR-192305] p 1582 N93-19036
Observation of meteors by MST radar p 1697 N93-19180
The effect of tropospheric fluctuations on the accuracy of water vapor radiometry p 1511 N93-19416
Research of the polar middle and lower atmosphere with an MST radar on Spitsbergen (Svalbard, Arctic) p 1584 N93-19555

**TROUGHS**
Measurements of F-region drift velocities at the dusk sector mid-latitude trough
[AD-A257766] p 1575 N93-17907

**TRUSSES**
Development of magnetostrictive active members for control of space structures
[NASA-CR-190846] p 1460 N93-18322
Static and dynamic characteristics of a piezoceramic strut p 1462 N93-18827
Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846
Passive damping of a solar array
[AD-A258976] p 1559 N93-19096

**TUNABLE LASERS**
Doppler shift compensation system for laser transmitters and receivers
[NASA-CASE-GSC-13194-1] p 1540 N93-18287
Advanced helium magnetometer for space applications
[NASA-CR-190880] p 1537 N93-18399
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Tunable infrared and visible solid-state laser p 1543 N93-18473
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892

**TUNGSTEN**
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484

**TUNGSTEN ALLOYS**
Large strain compression of two tungsten alloys at various strain rates
[AD-A258789] p 1488 N93-18979

**TUNGSTEN CARBIDES**
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967

**TUNING**
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892

**TURBIDITY**
Feasibility of airborne laserbathymetry with respect to turbidity in Dutch coastal waters
[BCRS-91-19] p 1589 N93-18432

**TURBINE BLADES**
SNECMA M88 engine development status
[ASME-90-GT-118] p 1448 N93-17849
Three dimensional inviscid compressible calculations around axial flow turbine blades
[DS-2159] p 1524 N93-17881
Fatigue of turboengine discs
[DS-2136] p 1448 N93-18149
Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
Integrated Blade Inspection System (IBIS) upgrade study
[AD-A258912] p 1449 N93-19356

**TURBINE ENGINES**
Turbine engine combustor design at SNECMA
[DS-2129] p 1448 N93-17851
The technological evolution of high thrust turbine engines
[DS-1881] p 1448 N93-17882
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380

**TURBINE PUMPS**
Residual contact stresses in cryotechnical environments
[ETN-93-93020] p 1555 N93-18080
Experimental investigations of radial loads induced by partial cavitation with the LH2 Vulcain inducer
[ETN-93-93023] p 1525 N93-18094
HM7 turbopump CMC stator trials
[ETN-93-93021] p 1472 N93-18146

**TURBINES**
Segregation of defects in wrought alloy 718: Management of industrial safeguards
[DS-2038] p 1486 N93-18150
Test of a CMC liquid propulsion rocket engine turbine stator
[ETN-93-93017] p 1473 N93-18330

**TURBOCOMPRESSORS**
Fatigue of turboengine discs
[DS-2136] p 1448 N93-18149
Axial Flow Compressors, volume 1
[VKI-LS-1992-02-VOL-1] p 1530 N93-18721
The effect of aircraft inlets on the behaviour of aero engine axial flow compressors p 1530 N93-18722
Stall in axial flow aero engine compressors p 1530 N93-18723
Stall and surge in axial flow compressors p 1530 N93-18724
Active control of stall and surge p 1530 N93-18725
Experimental investigation of rotating stall in a mismatched three stage axial flow compressor p 1531 N93-18727
Application of recess vaned casing treatment to axial flow fans p 1531 N93-18728
A study of stall in a low hub/tip ratio fan p 1531 N93-18729
Endwall flows and blading design for axial flow compressors p 1531 N93-18730
Axial Flow Compressors, volume 2
[VKI-LS-1992-02-VOL-2] p 1531 N93-18731
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732
Determination of the zone of the stall cell by means of the baroclinic wave theory p 1531 N93-18733
Characterization of stall inception in high-speed single-stage compressors
[AD-A258973] p 1449 N93-19093

**TURBOFAN ENGINES**
SNECMA M88 engine development status
[ASME-90-GT-118] p 1448 N93-17849
MM-122: High speed civil transport
[NASA-CR-192011] p 1435 N93-17974
Advanced tactical fighter engine design: Front fan
[ETN-93-92998] p 1448 N93-18127
Experimental and numerical examinations of the influence of inlet distortion perturbations on the working behavior of turbofan compressors
[ETN-93-92733] p 1449 N93-18628
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 4: Advanced fan section aerodynamic analysis computer program user's manual
[NASA-CR-187127] p 1449 N93-18702

**TURBOFANS**
Improving military transport aircraft through highly integrated engine-wing design
[DS-1607] p 1434 N93-17850
Application of recess vaned casing treatment to axial flow fans p 1531 N93-18728
A study of stall in a low hub/tip ratio fan p 1531 N93-18729

**TURBOJET ENGINES**
Advanced tactical fighter engine design: Front fan
[ETN-93-92998] p 1448 N93-18127

**TURBOMACHINERY**
Dynamics of rotating multi-component turbomachinery systems
[NASA-TM-105997] p 1555 N93-18426
Performance of controlled diffusion blades p 1532 N93-18735

**TURBOPROP AIRCRAFT**
Eagle RTS: A design for a regional transport aircraft
[NASA-CR-192032] p 1435 N93-18017

**TURBULENCE**
A computational study of a supersonic mixer-ejector exhaust system
[AD-A258456] p 1471 N93-17993
Numerical analysis of the flow in a turbulated rectangular duct simulating the cooling passages in a turbine blade
[AD-A257855] p 1527 N93-18305
Drop/gas interactions in dense sprays
[AD-A257848] p 1527 N93-18347
Investigation of wall bounded turbulence: Coherence and chaos in a model of turbulent boundary-layer
[AD-A257794] p 1528 N93-18416
Vortical and turbulent structure of planar and lobed mixer free-shear layers p 1533 N93-19055
Drag reduction by polymer additives
[AD-A258867] p 1534 N93-19076
Estimation of the direct acoustic radiation from turbulent spots. Using boundary layer velocity measurements
[AD-A258981] p 1534 N93-19097
Three-dimensional measurement of turbulent shear flows using digital image processing p 1415 N93-19319
Approximation of attractors and applications
[DE93-002420] p 1535 N93-19475
Turbulence scattering layers in the middle-mesosphere observed by the EISCAT 224 MHz radar p 1732 N93-19562
On the theory of turbulent dynamics
[AD-A258695] p 1650 N93-19864
The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894
Profile characteristics of H-mode bifurcation models and turbulence simulations with Gyro-Landau fluid models in slab and toroidal geometry
[DE93-002676] p 1669 N93-19896

**TURBULENCE EFFECTS**
Application of laser Doppler velocimeter to chemical vapor laser system
[NASA-TM-4409] p 1540 N93-18068
Contribution to the study of vortex flow in an incompressible fluid
[ONERA-NT-1992-4] p 1527 N93-18191

**TURBULENCE MODELS**
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994
Investigation of wall bounded turbulence: Coherence and chaos in a model of turbulent boundary-layer
[AD-A257794] p 1528 N93-18416
Parabolized Navier-Stokes methods for hypersonic flows p 1529 N93-18565
Development of computational methods for heavy lift launch vehicles
[NASA-CR-192298] p 1456 N93-18872
Modeling the transition region
[NASA-CR-4492] p 1408 N93-19015
Scattering of acoustical waves by a spinning atmospheric turbule
[AD-A258783] p 1652 N93-19111
Numerical simulation of unsteady large scale separated flow around oscillating airfoil p 1410 N93-19285
The role of computational fluid dynamics in aeronautical engineering. 9: Analysis of hypersonic equilibrium air flow p 1412 N93-19294
Transonic flow calculation around NACA-0012 p 1413 N93-19301
Turbulence model calculations of the effects of body forces on turbulent flows in a pipe p 1413 N93-19306
Numerical study on transverse hydrogen injection into a supersonic flowfield p 1414 N93-19311

Numerical calculation of flow field in supersonic combustion chamber p 1415 N93-19317
Computational fluid dynamics research p 1536 N93-19455

**TURBULENT BOUNDARY LAYER**
An experimental study of a turbulent boundary layer in the trailing edge region of a circulation-control airfoil [NASA-CR-191262] p 1405 N93-17934
Contribution to the solution of moment equations at two points by the spectral integral methods [ECL-92-19] p 1525 N93-18096
Experimental analysis of the aeroacoustics of cascaded airfoils [AD-A257945] p 1526 N93-18121
Investigation of wall bounded turbulence: Coherence and chaos in a model of turbulent boundary-layer [AD-A257794] p 1528 N93-18416
An experimental investigation of the separating/reattaching flow over a backstep [NASA-CR-192105] p 1408 N93-18781
Coherent structures in a simulated turbulent mixing layer [NASA-TM-103980] p 1532 N93-18885
Modeling the transition region [NASA-CR-4492] p 1408 N93-19015
Transonic flow calculation around NACA-0012 p 1413 N93-19301

**TURBULENT FLOW**
Contribution to the solution of moment equations at two points by the spectral integral methods [ECL-92-19] p 1525 N93-18096
Investigation of wall bounded turbulence: Coherence and chaos in a model of turbulent boundary-layer [AD-A257794] p 1528 N93-18416
Flow visualization and combustion diagnostic p 1485 N93-18480
Development of computational methods for heavy lift launch vehicles [NASA-CR-192298] p 1456 N93-18872
Modeling the transition region [NASA-CR-4492] p 1408 N93-19015
Drag reduction by polymer additives [AD-A258867] p 1534 N93-19076
Program ELM: A tool for rapid thermal-hydraulic analysis of solid-core nuclear rocket fuel elements [NASA-TM-105867] p 1474 N93-19106
Scattering of acoustical waves by a spinning atmospheric turbule [AD-A258783] p 1652 N93-19111
LES turbulence modeling using DNS data base p 1409 N93-19274
Turbulence model calculations of the effects of body forces on turbulent flows in a pipe p 1413 N93-19306
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312
Three-dimensional measurement of turbulent shear flows using digital image processing p 1415 N93-19319
Approximation of attractors and applications [DE93-002420] p 1535 N93-19475
Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows [DE93-002794] p 1535 N93-19615
Self-regulated shear flow turbulence in confined plasmas: Basic concepts and potential applications to the L yields H transition [DE93-002361] p 1668 N93-19743
On the theory of turbulent dynamics [AD-A258695] p 1650 N93-19864

**TURBULENT JETS**
An investigation of the near and induced flow fields of an axially symmetric jet, issuing normal to a plane surface, into a quiescent medium p 1533 N93-19041

**TURBULENT MIXING**
Coherent structures in a simulated turbulent mixing layer [NASA-TM-103980] p 1532 N93-18885

**TURBULENT WAKES**
Modelling of interfacial and thermocline waves [AERO-REPT-9211] p 1525 N93-18105
Numerical investigation of swirl-airfoil interactions in transonic area [MPIS-8/1991] p 1407 N93-18627

**TURNING FLIGHT**
Flight simulation evaluation of the flyability of curved MLS approaches with wide-body aircraft [NLR-TP-90238-U] p 1452 N93-17875
Aircraft turns into and down wind [AERO-REPT-9201] p 1438 N93-18131

**TVD SCHEMES**
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278

**TWO BODY PROBLEM**
Relativistic two body equations and nuclear interactions [NOTA-INTERNA-985] p 1653 N93-17876
A two-body covariant equation for interacting nucleons [NOTA-INTERNA-986] p 1653 N93-17877
Lifetime of binary asteroids versus gravitational encounters and collisions p 1703 N93-19138

**TWO DIMENSIONAL BODIES**
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Lifting-surface-method p 1410 N93-19281
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282

**TWO DIMENSIONAL FLOW**
Flow visualization and combustion diagnostic p 1485 N93-18480
On the numerical approximation of the k-epsilon turbulence model for two dimensional compressible flows [INRIA-RR-1526] p 1530 N93-18622
Exact-gradient shape optimization of a 2D Euler flow [INRIA-RR-1540] p 1530 N93-18623
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Lifting-surface-method p 1410 N93-19281
Numerical calculations of separating flows around oscillating airfoil p 1410 N93-19284
Numerical simulation of flow for a scramjet nozzle p 1412 N93-19299
Numerical simulations of supersonic flow by a fourth-order compact MUSCL TVD scheme p 1414 N93-19308
A numerical investigation for supersonic inlet p 1415 N93-19315
A numerical simulations of inner flow of scramjet p 1415 N93-19318
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321
Computational techniques for flows with finite-rate condensation [NASA-CR-192093] p 1535 N93-19858

**TWO DIMENSIONAL MODELS**
Applied grid generation for complex domains in 2 and 3 dimensions p 1528 N93-18541
Numerical simulation of the flow through non-uniform airfoil cascade p 1414 N93-19310
A two-dimensional particle simulation of parallel plate Radio-Frequency (RF) glow discharges [AD-A258856] p 1510 N93-19349
Two-dimensional chirp mapping of deep, fluctuating radar targets p 1517 N93-19543
Physically transparent formulation of a free-electron laser in the linear gain regime [DE93-002577] p 1542 N93-19626

**TWO PHASE FLOW**
Numerical and physical modelling of bubbly flow phenomena [DE93-003145] p 1535 N93-19500

## U

**U.S.S.R.**
Demonstration of a joint US-Russian very long baseline interferometry tracking capability p 1458 N93-18911

**UH-60A HELICOPTER**
Crash experience of the US Army Black Hawk helicopter p 1427 N93-19688

**ULTRAHIGH FREQUENCIES**
Cascaded convolutional codes p 1458 N93-19429

**ULTRASONIC RADIATION**
Sonogels in the preparation of advanced glass and ceramic materials [AD-A258184] p 1491 N93-17899
Nondestructive evaluation of grain size distributions using multifractal analysis of backscattered ultrasonic signals [AD-A259035] p 1553 N93-18956

**ULTRASONIC TESTS**
In-suit Doppler technology assessment [NASA-CR-185692] p 1537 N93-18428

**ULTRAVIOLET ABSORPTION**
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399

**ULTRAVIOLET ASTRONOMY**
Fluctuations at the blue edge of saturated wind lines in IUE spectra of O-type stars [NASA-CR-191887] p 1696 N93-18776
Extreme Ultraviolet Explorer. Long look at the next window [NASA-TM-108618] p 1700 N93-18992

**ULTRAVIOLET LASERS**
Use of the CEBAF accelerator for IR and UV free electron lasers [CEBAF-PR-92-023] p 1660 N93-18768

**ULTRAVIOLET PHOTOMETRY**
Pre-phase A: Development of a far-ultraviolet photometric- and spectroscopic-survey small-explorer experiment [NASA-CR-192092] p 1696 N93-18415

**ULTRAVIOLET RADIATION**
Backscatter and transmission of aerosol at UV through middle IR wavelengths [AD-A258162] p 1540 N93-18008

**ULTRAVIOLET SPECTRA**
Propulsion diagnostics p 1475 N93-18482
Heliocentric distance dependencies of the C2 lifetime and C2 parent production rate in comet P/Brorsen-Metcalf (1989o) p 1711 N93-19195

**ULTRAVIOLET SPECTROSCOPY**
Water and dust production rates in comet P/Halley derived from ultraviolet and optical observations p 1705 N93-19154

**UNDERWATER ACOUSTICS**
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics [AD-A258938] p 1652 N93-19082

**UNDERWATER ENGINEERING**
Kinematic evaluation of end effector design [AD-A257519] p 1544 N93-18002

**UNDERWATER VEHICLES**
Motion simulation of underwater vehicles [VTT-PUBS-97] p 1623 N93-18698

**UNITED KINGDOM**
Aircrew acceptance of automation in the cockpit p 1608 N93-19761

**UNITED STATES**
Space is a different place [AD-A258336] p 1453 N93-18219
Global Change Research Program: A component of the US Global Change Research Program. 1993 research opportunities [NSF-92-77] p 1572 N93-18319
Decade of achievement: Educational leadership in mathematics, science and engineering [NSF-92-94] p 1679 N93-18383

**UNIVERSITIES**
Federal funds for research and development: Fiscal years 1990, 1991, and 1992, volume 40 [NSF-92-322-VOL-40] p 1694 N93-17853
Reliability, Maintainability, and Supportability (RMS) education in engineering schools [AD-A258260] p 1552 N93-18026
Highlights of engineering research centers technology transfer [NSF-92-6] p 1694 N93-18457

**UNIVERSITY PROGRAM**
Spacecraft design project: Low Earth orbit communications satellite [NASA-CR-192038] p 1458 N93-17969
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle [NASA-CR-192021] p 1604 N93-17970
Activities of the Boom and Chassis Group [NASA-CR-192028] p 1544 N93-17975
Phoenix: Preliminary design of a high speed civil transport [NASA-CR-192024] p 1435 N93-17976
Tesseract: Supersonic business transport [NASA-CR-192072] p 1435 N93-17977
Pressurized lunar rover [NASA-CR-192034] p 1544 N93-18015
Eagle RTS: A design for a regional transport aircraft [NASA-CR-192032] p 1435 N93-18017
Conceptual design of a fleet of autonomous regolith throwing devices for radiation shielding of lunar habitats [NASA-CR-192030] p 1605 N93-18018
The 1992 NASA/ASEE Summer Faculty Fellowship Program [NASA-CR-191266] p 1679 N93-18033
Advanced hypersonic aircraft design [NASA-CR-192046] p 1436 N93-18037
LOLA: The lunar operations landing assembly [NASA-CR-192043] p 1734 N93-18038
The Enabler: A reevaluation of design concepts and construction of a scaled model [NASA-CR-192061] p 1545 N93-18039
Conceptual design of a Mars transportation system [NASA-CR-192039] p 1545 N93-18047
Project Minerva: A low cost manned Mars mission based on indigenous propellant production [NASA-CR-192020] p 1734 N93-18048
Proposal and preliminary design for a high speed civil transport aircraft. Swift: A high speed civil transport for the year 2000 [NASA-CR-192023] p 1436 N93-18049

Enabler operator station --- lunar surface vehicle
[NASA-CR-192067] p 1546 N93-18050
Mechanical Design Engineering Enabler Project wheel and wheel drives
[NASA-CR-192060] p 1546 N93-18051
Boom and chassis articulation joints
[NASA-CR-192059] p 1546 N93-18052
Microgravity ignition experiment
[NASA-CR-192057] p 1498 N93-18053
TBD(exp 3)
[NASA-CR-192075] p 1436 N93-18054
The Edge supersonic transport
[NASA-CR-192074] p 1436 N93-18055
Hermes CX-7: Air transport system design simulation
[NASA-CR-192082] p 1437 N93-18056
A second-generation high speed civil transport: Stingray
[NASA-CR-192022] p 1437 N93-18059
The Trojan --- supersonic transport
[NASA-CR-192013] p 1437 N93-18060
Preliminary design of a high speed civil transport: The Opus 0-001
[NASA-CR-192018] p 1437 N93-18061
Arrow 227: Air transport system design simulation
[NASA-CR-192053] p 1437 N93-18063
Planetary surface exploration: MESUR/autonomous lunar rover
[NASA-CR-192073] p 1546 N93-18102
Conceptual design of a thermal control system for an inflatable lunar habitat module
[NASA-CR-192014] p 1606 N93-18113
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115
Project APEX: Advanced Phobos Exploration. Manned mission to the Martian moon Phobos
[NASA-CR-192056] p 1459 N93-18116
The SIMPSONS project: An integrated Mars transportation system
[NASA-CR-192035] p 1547 N93-18152
SHARC: Space Habitat, Assembly and Repair Center
[NASA-CR-192031] p 1606 N93-18153
A methodology for selective removal of orbital debris
[NASA-CR-192052] p 1459 N93-18154
SR-SCARLET 1: Peregrin
[NASA-CR-192048] p 1438 N93-18155
Asteroid exploration and utilization: The Hawking explorer
[NASA-CR-192027] p 1699 N93-18164
The design of a common lunar lander
[NASA-CR-192026] p 1459 N93-18165
RTJ-303: Variable geometry, oblique wing supersonic aircraft
[NASA-CR-192054] p 1438 N93-18166
Lunar scout: A Project Artemis proposal
[NASA-CR-192076] p 1460 N93-18167
Project Wish: The Emerald City, phase 3
[NASA-CR-192081] p 1460 N93-18168
Comet nucleus and asteroid sample return missions
[NASA-CR-192055] p 1699 N93-18171
Project Columbiad: Mission to the Moon. Book 1: Executive Summary. Volume 1: Mission trade studies and requirements. Volume 2: Subsystem trade studies and selection
[NASA-CR-192019] p 1734 N93-18233
Review of recent work on MPD thrusters at MIT p 1666 N93-18641
Space life support engineering program
[NASA-CR-192188] p 1607 N93-19039
The Center for Aerospace Research: A NASA Center of Excellence at North Carolina Agricultural and Technical State University
[NASA-CR-191362] p 1680 N93-19452
Aerospace engineering educational program p 1681 N93-19457
Harvard University high energy physics
[DE93-002091] p 1660 N93-19471
University research: Controlling inappropriate access to federally funded research results. Report to the Chairman, Human Resources and Intergovernmental Relations Subcommittee, Committee on Government Operations, House of Representatives
[GAO/RCED-92-104] p 1684 N93-19844

**UNIX (OPERATING SYSTEM)**
The operating system for Numerical Wind Tunnel p 1411 N93-19290

**UNSTEADY AERODYNAMICS**
Beyond the frequency limits of time-linearized methods
[NLR-TP-91216-U] p 1405 N93-17929
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
The unified method of aeroelasticity p 1450 N93-18143
Computational Fluid Dynamics, volume 2
[VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Algorithm development with applications to aerodynamics and aeroelasticity p 1529 N93-18566
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581

**UNSTEADY FLOW**
Experimental Investigation of Nozzle/Plume Aerodynamics at Hypersonic Speeds
[NASA-CR-191368] p 1472 N93-18085
Wall strains produced by waves in water filled latex tubes. Part 1: Tethered tubes
[AERO-REPT-9206-PT-1] p 1526 N93-18133
Direct simulation of external separated flow with the 3-D Navier-Stokes equations
[ONERA-NT-1992-6] p 1527 N93-18326
Simulation of unsteady rotational flow over propfan configuration
[NASA-CR-192234] p 1407 N93-18585
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732
Development of a boundary element method program for numerical analysis of supersonic unsteady flow p 1410 N93-19283

**UPLINKING**
Advanced communications technology satellite high burst rate link evaluation terminal experiment control and monitor software user's guide, version 1.0
[NASA-CR-189160] p 1620 N93-18382
A statistical model for evaluating GOPEX uplink performance p 1508 N93-18924

**UPPER ATMOSPHERE**
Visible Airglow Experiment data analysis
[NASA-CR-192119] p 1577 N93-18361
Atmospheric dynamics and coupling p 1584 N93-18495
Chemical Release and Radiation Effects Satellite (CRRES) program archiving and Puerto Rican sounding rocket campaign
[NASA-CR-184503] p 1579 N93-18773

**UPWELLING WATER**
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Late quaternary time series of Arabian Sea productivity: Global and regional signals p 1580 N93-18969

**URANUS (PLANET)**
Magnetic field waves at Uranus
[NASA-CR-192113] p 1735 N93-18779

**URBAN DEVELOPMENT**
Urban climatology in Africa. Special issue of the African urban quarterly, volume 5, numbers 1 and 2, February and May, 1990
[WCASP-19] p 1587 N93-18592

**URBAN PLANNING**
Urban climatology in Africa. Special issue of the African urban quarterly, volume 5, numbers 1 and 2, February and May, 1990
[WCASP-19] p 1587 N93-18592
Use of teledetection in physiographic compartmentation to obtain multiple use geotechnic zoning in coastal regions
[INPE-5322-PRE/1720] p 1583 N93-19795
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856

**URETHANES**
Material selection and evaluation of new encapsulation compounds for electric cables for launch support system p 1496 N93-19402

**USER MANUALS (COMPUTER PROGRAMS)**
Second generation integrated composite analyzer (ICAN) computer code
[NASA-TP-3290] p 1477 N93-18139
Advanced communications technology satellite high burst rate link evaluation terminal experiment control and monitor software user's guide, version 1.0
[NASA-CR-189160] p 1620 N93-18382
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 4: Advanced fan section aerodynamic analysis computer program user's manual
[NASA-CR-187127] p 1449 N93-18702
Software Engineering Laboratory (SEL) database organization and user's guide, revision 2
[NASA-TM-108631] p 1624 N93-18860
DROLS workbook
[AD-A259033] p 1687 N93-19017
Software measurement guidebook, version 02.00.02
[AD-A258961] p 1625 N93-19083
Software users manual for the generic avionics data bus tool kit of the Ada technology insertion program
[AD-A259364] p 1628 N93-19852
Software programmers manual for the generic avionics data bus tool kit to the Ada technology insertion program
[AD-A259379] p 1628 N93-19855

**USER REQUIREMENTS**
A concept study for a national software engineering database
[AD-A258254] p 1614 N93-17823
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 1608 N93-19763
NASA scientific and technical program: User survey
[NASA-TM-108979] p 1693 N93-19937

**UTAH**
Final report --- Mesozoic tectonic history of the northeastern Great Basin (Nevada)
[NASA-CR-192091] p 1564 N93-17927

## V

**VACUUM**
Modification of primordial ices by cosmic rays as simulated by cyclotron irradiation p 1709 N93-19183

**VACUUM CHAMBERS**
Suggestions for the magnetic diagnostic fixing system in the inside of tokamak TBR-E
[INPE-5277-NTC/298] p 1668 N93-19836

**VACUUM DEPOSITION**
Vacuum deposition of copper on Type 304L stainless steel
[DE93-002704] p 1489 N93-19614

**VALENCE**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
The synthesis and structural characterization of novel transition metal fluorides
[DE93-002551] p 1673 N93-18412

**VALLEYS**
The Taurus-Littrow dark mantle, light mantle, crater cluster, and scarp p 1737 N93-18801
Apollo 17: One giant step toward understanding the tectonic evolution of the Moon p 1739 N93-18811
Mavale project: Sensor techniques applied to macrozoning of the Paraiba Valley and littoral north of the State of Sao Paulo
[INPE-5332-PRE/1731] p 1583 N93-19856

**VALVES**
Development and verification of methods for predicting flow rates through leaks in valves and couplings
[NASA-CR-192270] p 1533 N93-19013
Tube diode
[INPE-5438-NTC/304] p 1551 N93-19832

**VANADIUM ALLOYS**
Dislocation cores structure and antiphase energies in DO22 intermetallics alloys versus temperature
[ONERA-NT-1992-5] p 1486 N93-18192

**VANADIUM OXIDES**
Solid state, surface and catalytic studies of oxides
[DE93-004640] p 1483 N93-18424

**VANES**
Application of recess vaned casing treatment to axial flow fans p 1531 N93-18728

**VAPOR DEPOSITION**
Feasibility of silicon nitride films by vapor deposition at low temperature: Comparison of dichlorsilane-ammonia and disilane gaseous systems
[LAAS-92249] p 1490 N93-17812
A comparison study of diamond films grown on tungsten carbide cobalt tools inserts with CH4 and CF4 gas sources
[AD-A257552] p 1492 N93-17967
Pseudomorphic stabilization of diamond on non-diamond substrates, part 1. Diamond grown on single crystal beryllium oxide, Part 2. Anomalous band gap behavior and phase stability of c-BN/Diamond alloys
[AD-A257845] p 1493 N93-18345
Novel interconnect deposition technology p 1523 N93-18465
Research on polycrystalline thin-film CuGaInSe2 solar cells
[DE92-016439] p 1571 N93-18656
Friction and wear of plasma-deposited diamond films
[NASA-TM-105926] p 1495 N93-19035
A new measurement of thermal conductivity of amorphous ice and its implications for the thermal evolution of comets p 1710 N93-19191
Multiple layer dielectrics, hot film sensors, and methods of producing same
[NASA-CASE-LAR-14591-1] p 1539 N93-19493
Optical/thermal analysis methodology for a space-qualifiable RTP furnace
[NASA-CR-192254] p 1539 N93-19889

**VAPOR PHASE EPITAXY**
High resistivity GaAs epilayers by oxygen doping
[AD-A257931] p 1670 N93-18005
**VAPOR PHASES**
A condensed phase test cell assembly for the System for Thermal Diagnostic Studies (STDS)
[AD-A258463] p 1497 N93-18242
Chemical activation of molecules by metals: Experimental studies of electron distributions and bonding
[DE93-002366] p 1654 N93-18398
A study of gas phase chemistry of solid propellant ingredients using a CO2 laser
[AD-A259277] p 1497 N93-19840
**VAPORS**
Application of laser Doppler velocimeter to chemical vapor laser system
[NASA-TM-4409] p 1540 N93-18068
**VARACTOR DIODES**
Submillimeter sources for radiometry using high power Indium Phosphide Gunn diode oscillators
[NASA-CR-190885] p 1518 N93-18057
**VARIABILITY**
SAR-related stress variability in the Marine Atmospheric Boundry Layer (MABL) (high resolution ARI)
[AD-A258317] p 1585 N93-17987
BBXRT and Ginga observations of the Seyfert 1 galaxy MRK 335 p 1561 N93-18710
The broad-band x ray spectral variability of Mkn 841 p 1561 N93-18711
The x ray variability of NGC6814: Power spectra p 1562 N93-18712
The x ray variability of AGN and the anomalous behavior of NGC6814 p 1562 N93-18713
**VARIABLE CYCLE ENGINES**
MM-122: High speed civil transport
[NASA-CR-192011] p 1435 N93-17974
**VARIABLE STARS**
Recent progress on astrophysical opacity
[DE93-002892] p 1722 N93-19513
**VARIATIONAL PRINCIPLES**
A first-principles study of the phase stability of fcc-based Ti-Al alloys
[DE93-002549] p 1487 N93-18390
Modeling of composite beams and plates for static and dynamic analysis
[NASA-CR-192222] p 1556 N93-18609
A dynamic analysis of piezoelectric strained elements
[AD-A259011] p 1651 N93-19014
Variational nodal transport methods for hexagonal and three-dimensional geometries
[DE93-002131] p 1648 N93-19472
**VARIATIONS**
Vertical structure of AGW associated ionospheric fluctuations observed with EISCAT p 1729 N93-19569
**VASOCONSTRICTION**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900
**VECTOR ANALYSIS**
Plotting the magnitude and direction of waveguide surface currents in three dimensions
[AD-A258872] p 1509 N93-19077
**VECTOR PROCESSING (COMPUTERS)**
Numerical Wind Tunnel: Requirements and the outline p 1411 N93-19288
Numerical Wind Tunnel hardware p 1411 N93-19289
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291
**VECTOR QUANTIZATION**
Code vector density in topographic mappings
[AD-A258222] p 1492 N93-18122
Advanced vector quantization techniques p 1648 N93-18505
Locally adaptive vector quantization: Data compression with feature preservation p 1513 N93-19425
**VECTOR SPACES**
An intrinsic construction of the algebra of quaternions
[REPT-92-31] p 1643 N93-17845
**VECTORS (MATHEMATICS)**
Vector approximation problems in geometric vector optimization
[REPT-92-39] p 1643 N93-17871
Determination of D-region plasma velocity vector from scanning GEN-11 data p 1728 N93-19562
**VEGETATION**
Manipulation of Landsat spectral characteristics to classify vegetation and soil wetness in the rainforest of Bolivia
[AD-A257847] p 1566 N93-18346
Analysis of the relationship between AVHRR/NOAA and TM/LANDSAT data in evaluating anthropism in the forest/Savanna transition region
[INPE-5325-PRE/1723] p 1566 N93-18761
Evaluation of the current status of the multisensor approach to monitoring vegetation of Brazil
[INPE-5328-PRE/1724] p 1567 N93-19641
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data
[INPE-5327-PRE/1725] p 1567 N93-19646
NOAA-AVHRR data for monitoring of ground vegetation cover in the Amazon region
[INPE-5330-PRE/1728] p 1568 N93-19821
Comparative analysis of the indices of vegetation in urban areas obtained from the TM-Landsat and HRV-Spot data: City of Taubate
[INPE-5418-TDI/482] p 1575 N93-19831
**VEGETATION GROWTH**
Characterization of the water soluble component of inedible residue from candidate CELSS crops
[NASA-TM-107557] p 1605 N93-18111
Active synthetic soil
[NASA-CASE-MSC-21954-1-NP] p 1593 N93-19054
**VEGETATIVE INDEX**
Navigation of AVHRR/NOAA images: Operational procedure for SUN workstation
[INPE-5354-RPQ/654] p 1686 N93-18231
Analysis of vegetation indices obtained from LANDSAT/TM and SPOT/XS data
[INPE-5327-PRE/1725] p 1567 N93-19646
Analysis of LANDSAT/TM and SPOT/XS data through vegetation indices, phase 2
[INPE-5450-RPQ/663] p 1569 N93-19857
**VEHICLE WHEELS**
Mechanical Design Engineering Enabler Project wheel and wheel drives
[NASA-CR-192060] p 1546 N93-18051
**VELOCITY DISTRIBUTION**
Large-scale velocity fields and small-scale magnetic fields during the maximum of solar cycle 22
[AD-A258172] p 1744 N93-17922
Lagrangian chaos: Transport, mixing, and diffusion in fluids
[NOTA-INTERNA-988] p 1651 N93-17939
Modelling of interfacial and thermocline waves
[AERO-REPT-9210] p 1525 N93-18104
Contribution to the study of vortex flow in an incompressible fluid
[ONERA-NT-1992-4] p 1527 N93-18191
Definition of mean environmental steering flow for TCM-90 tropical cyclones
[AD-A257886] p 1586 N93-18338
Infrared sensor technology and applications p 1664 N93-18474
High-resolution observations of the spatial and velocity distribution of cometary hydrogen p 1703 N93-19135
Doppler velocities in the ion tail of comet Levy 1990c p 1708 N93-19176
Velocity distribution of fragments of catastrophic impacts p 1719 N93-19252
Velocity distributions of H and OH produced through solar photodissociation of H2O p 1720 N93-19266
Monte Carlo simulation of normal shock wave. Part 1: Lennard-Jones potential p 1409 N93-19279
Application of the program profile for the design of low-speed, low-observable configuration airfoils
[AD-A258842] p 1417 N93-19364
Solar wind velocity measurements with the EISCAT UHF antenna array p 1725 N93-19542
Determination of D-region plasma velocity vector from scanning GEN-11 data p 1728 N93-19562
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606
**VELOCITY MEASUREMENT**
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194
Stabilized iodine flow for long run time chemical oxygen-iodine lasers
[AD-A257760] p 1540 N93-18234
An experimental investigation of interacting wing-tip vortex pairs
[AD-A258471] p 1406 N93-18272
Electron beam probing of blow-down hypersonic flows
[ONERA-NT-1992-7] p 1408 N93-18701
Solar wind velocity measurements with the EISCAT UHF antenna array p 1725 N93-19542
Possible cause and consequence of laminated Polar Mesosphere Summer Echoes p 1728 N93-19561
Determination of D-region plasma velocity vector from scanning GEN-11 data p 1728 N93-19562
Altitude variations in amplitude and phase of tidal oscillations at high latitude p 1729 N93-19566
The EISCAT UHF radar as a meteor radar: Meteor radial velocities determined from a Barker coded power profile p 1517 N93-19579
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606
2D velocity and temperature measurements in high speed flows based on spectrally resolved Rayleigh scattering
[NASA-TM-105784] p 1539 N93-19651
Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus p 1446 N93-19926
**VENTILATION**
Ventilation loss in the NASA Space Shuttle crew protective garments: Potential for heat stress
[AD-A258552] p 1612 N93-19955
**VENTS**
Space shuttle solid rocket booster main parachute damage reduction team report
[NASA-TM-4437] p 1455 N93-18067
**VENUS (PLANET)**
Venus: A search for clues to early biological possibilities p 1591 N93-18549
Precise tracking of the Magellan and Pioneer Venusorbiters by same-beam interferometry. Part 1: Dataaccuracy analysis p 1454 N93-19414
**VENUS ATMOSPHERE**
Venus: A search for clues to early biological possibilities p 1591 N93-18549
Dynamics of planetary atmospheres
[NASA-CR-192117] p 1735 N93-18782
**VERBAL COMMUNICATION**
Comparing performance on implicit memory tests
[AD-A258168] p 1602 N93-17921
**VERTICAL DISTRIBUTION**
Numerical experiments on consistent horizontal and vertical resolution for atmospheric models and observing systems p 1563 N93-18718
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
**VERTICAL MOTION SIMULATORS**
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation p 1443 N93-19909
**VERTICAL TAKEOFF AIRCRAFT**
Open airscrew VTOL concepts
[NASA-CR-177603] p 1403 N93-17883
**VERY HIGH FREQUENCIES**
High altitude measurements with the EISCAT VHF radar and the development of Common Programme Seven p 1727 N93-19551
**VERY LARGE SCALE INTEGRATION**
Structure-based design and analysis for concurrent error detection and recovery in reliable electronic systems
[AD-A257790] p 1519 N93-18236
Electrically modifiable nonvolatile SONOS synapses for electronic neural networks
[AD-A258318] p 1596 N93-18252
VLSI microelectronics research p 1523 N93-18462
A generic template extractor (GENTEX) in C for VLSI design verification
[AD-A259078] p 1521 N93-18959
Design and development of a high-speed Winograd fast Fourier transform processor board
[AD-A258919] p 1522 N93-19342
**VERY LONG BASE INTERFEROMETRY**
PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115
Studies of regional and global tectonics and the rotation of the earth using very-long-baseline interferometry
[NASA-CR-191902] p 1577 N93-18591
Correlated flux densities from VLBI observations with the DSN p 1506 N93-18909
Demonstration of a joint US-Russian very long baseline interferometry tracking capability p 1458 N93-18911
The goldstone real-time connected element interferometer p 1512 N93-19417
Spacecraft-spacecraft very long baseline interferometry. Part 1: Error modeling and observable accuracy p 1512 N93-19418
Use of the VLBI delay observable for orbit determination of Earth-orbiting VLBI satellites p 1454 N93-19419
**VESTIBULAR TESTS**
Medical evaluation of spatial disorientation mishaps p 1430 N93-19703
**VIBRATION**
Dynamics of rotating multi-component turbomachinery systems
[NASA-TM-105997] p 1555 N93-18426
A dynamic analysis of piezoelectric strained elements
[AD-A259011] p 1651 N93-19014
Baseline experiments on Coulomb damping due to rotational slip
[AD-A258840] p 1560 N93-19440

**VIBRATION DAMPING**
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
Methods for improving damping. Part 3: Damping material data
[ESDU-92001] p 1554 N93-17997
Add-on damping treatment for the F-15 upper-outer wing skin
[AD-A258470] p 1438 N93-18248
A comparison of viscoelastic damping models p 1464 N93-18836
Piezoelectric devices for vibration suppression: Modeling and application to a truss structure p 1466 N93-18846
CSI/MMC studies for improving jitter performance for large multi-payload platforms p 1468 N93-18937
Analysis, design, and testing of a low cost, direct force command linear proof mass actuator for structural control p 1469 N93-18943
CSI flight experiment projects of the Naval Research Laboratory p 1470 N93-18944
Robust control of smart structures p 1550 N93-19057
Passive damping of a solar array
[AD-A258976] p 1559 N93-19096
Vibration suppression in large flexible space structures using active control techniques
[AD-A258916] p 1470 N93-19339
Baseline experiments on Coulomb damping due to rotational slip
[AD-A258840] p 1560 N93-19440
Dynamic characterization, monitoring and control of rotating flexible beam-mass structures via piezo-embedded techniques p 1561 N93-19458
Damping characterization in large structures
[NASA-CR-192140] p 1560 N93-19944
**VIBRATION ISOLATORS**
Design of a vibration isolation system for a cycle ergometer to be used onboard the Space Shuttle
[NASA-CR-192021] p 1604 N93-17970
**VIBRATION MODE**
Add-on damping treatment for the F-15 upper-outer wing skin
[AD-A258470] p 1438 N93-18248
Dynamics in condition monitoring, a case study p 1558 N93-18758
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774
**VIBRATIONAL STRESS**
Finite element analysis of stiffened plate vibrations p 1557 N93-18757
**VIDEO EQUIPMENT**
Composite video and graphics display for camera viewing systems in robotics and teleoperation
[NASA-CASE-NPO-17836-1-CU] p 1502 N93-18284
**VIEWING**
Effect of contrast on human speed perception
[NASA-TM-103898] p 1607 N93-19104
Methods for viewing radar cross section data in three dimensions
[AD-A258905] p 1626 N93-19352
HippoDraw
[DE93-004005] p 1627 N93-19633
**VIKING MARS PROGRAM**
Mars: A reassessment of its interest to biology p 1591 N93-18550
**VIRTUAL MEMORY SYSTEMS**
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291
**VIRTUAL REALITY**
Developing virtual cockpits p 1608 N93-19764
Panoramic cockpit displays p 1608 N93-19765
Flight above a virtual world p 1609 N93-19766
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 1434 N93-19768
**VISCOELASTIC DAMPING**
Add-on damping treatment for the F-15 upper-outer wing skin
[AD-A258470] p 1438 N93-18248
A comparison of viscoelastic damping models p 1464 N93-18836
**VISCOELASTICITY**
Thermo-visco-inelasticity in large deformations
[DE93-002284] p 1560 N93-19473
**VISCOPLASTICITY**
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
**VISCOSITY**
Predicting viscosities of aqueous salt mixtures
[DE93-002421] p 1483 N93-18523
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101
**VISCOUS DAMPING**
The direct measurement of damping coefficients using an inverse eigenvalue method
[AD-A258214] p 1555 N93-18204
**VISCOUS FLOW**
H-P adaptive methods for finite element analysis of aerothermal loads in high-speed flows
[NASA-CR-189739] p 1525 N93-18093
A Blottner type numerical model for nonequilibrium viscous hypersonic flows in upwind finite elements
[INRIA-RR-1476] p 1407 N93-18648
Influence of the physical modelling of viscous terms on hypersonic flow computations
[INRIA-RR-1493] p 1408 N93-18652
Numerical investigation of performance degradation of wings and rotors due to icing
[NASA-CR-192233] p 1440 N93-18783
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101
Numerical simulations of supersonic flow by a fourth-order compact MUSCL TVD scheme p 1414 N93-19308
Perturbation problems in fluid dynamics
[AD-A258934] p 1535 N93-19450
**VISCOUS FLUIDS**
A numerical simulation of flows around a deformable gas bubble p 1413 N93-19300
**VISIBILITY**
Engineering the visibility of small features on electronic flight displays p 1607 N93-19758
**VISIBLE SPECTRUM**
Equipment, more or less ready to be used in helicopters p 1612 N93-19785
**VISORS**
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200
Multi-function visor p 1609 N93-19770
**VISUAL ACUITY**
Realization of real time graphics in vehicles with high dynamic motion
[ETN-93-92739] p 1622 N93-18630
**VISUAL DISCRIMINATION**
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200
**VISUAL FIELDS**
The detection of lateral motion by US Navy jet pilots
[AD-A258115] p 1595 N93-17896
**VISUAL OBSERVATION**
Geology of the Apollo 17 site p 1738 N93-18803
Light curve and fan-shaped coma of comet P/Tempel 2 in 1988-1989 p 1700 N93-19114
Water and dust production rates in comet P/Halley derived from ultraviolet and optical observations p 1705 N93-19154
Visual data of minor meteor showers limits of the method p 1715 N93-19229
**VISUAL PERCEPTION**
The detection of lateral motion by US Navy jet pilots
[AD-A258115] p 1595 N93-17896
Spatio-temporal masking: Hyperacuity and local adaptation
[AD-A257934] p 1595 N93-18006
Toward the ideal military aviation sunglass
[AD-A258200] p 1606 N93-18200
Computational and neural network models for the analysis of visual texture
[AD-A258166] p 1632 N93-18296
Validity of clinical color vision tests for air traffic control specialists
[AD-A258219] p 1597 N93-18301
Effect of contrast on human speed perception
[NASA-TM-103898] p 1607 N93-19104
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case p 1426 N93-19681
Engineering the visibility of small features on electronic flight displays p 1607 N93-19758
Image quality measurement techniques
[INPE-5362/NTC/302] p 1664 N93-19794
**VISUAL STIMULI**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816
**VISUAL TASKS**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816
Effects of terfenadine and diphenhydramine on brain activity and performance in a UH-60 flight simulator
[AD-A258012] p 1594 N93-17817
**VLASOV EQUATIONS**
A low velocity approximation for the relativistic Vlasov-Maxwell system
[AD-A258300] p 1665 N93-18100
**VOICE COMMUNICATION**
Advances in speech processing p 1517 N93-19771
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 1610 N93-19772
Principles for integrating voice I/O in a complex interface p 1610 N93-19774
G-load effects and efficient acoustic parameters for robust speaker recognition p 1610 N93-19775
**VOICE CONTROL**
Voice control of a dual-arm telerobot p 1549 N93-19044
Fly-by voice, a technology demonstration p 1444 N93-19918
**VOICE DATA PROCESSING**
A segmental hidden Markov model for speech pattern processing
[AD-A258220] p 1501 N93-18023
Advances in speech processing p 1517 N93-19771
**VOLCANOES**
Climate model calculations of the effects of volcanoes on global climate
[NASA-CR-191999] p 1573 N93-18600
Mare volcanism in the Taurus-Littrow region p 1736 N93-18790
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
**VOLCANOLOGY**
Workshop on Geology of the Apollo 17 Landing Site
[NASA-CR-191637] p 1735 N93-18786
Mare volcanism in the Taurus-Littrow region p 1736 N93-18790
Abundances of sodium, sulfur, and potassium in lunar volcanic glasses: Evidence for volatile loss during eruption p 1736 N93-18791
neoKREEP: A new lunar component at Apollo 17 p 1737 N93-18797
Morphology and composition of condensates on Apollo 17 orange and black glass p 1737 N93-18802
**VOLT-AMPERE CHARACTERISTICS**
VLSI microelectronics research p 1523 N93-18462
**VOLTAGE AMPLIFIERS**
Cascaded transformerless DC-DC voltage amplifier with optically isolated switching devices
[NASA-CASE-NPO-17994-1-CU] p 1519 N93-18278
**VORTEX ALLEVIATION**
Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053
**VORTEX BREAKDOWN**
A dynamical theory for hurricane spiral bands
[AD-A258190] p 1584 N93-17859
Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053
**VORTEX FLAPS**
Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053
**VORTICES**
Application of an Euler-equation method to a sharp-edged delta wing configuration with vortex flow
[NLR-TP-91] p 1404 N93-17809
A dynamical theory for hurricane spiral bands
[AD-A258190] p 1584 N93-17859
Contribution to the study of vortex flow in an incompressible fluid
[ONERA-NT-1992-4] p 1527 N93-18191
Simulation of unsteady rotational flow over propfan configuration
[NASA-CR-192234] p 1407 N93-18585
Experimental and numerical examinations of the influence of inlet distortion perturbations on the working behavior of turbofan compressors
[ETN-93-92733] p 1449 N93-18628
The stability of a trailing-line vortex in compressible flow
[NASA-CR-189738] p 1408 N93-18771
Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053
Vortical and turbulent structure of planar and lobed mixer free-shear layers p 1533 N93-19055
Proceedings of the Ninth NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-16] p 1409 N93-19273
Generation of longitudinal vortices in supersonic flow p 1411 N93-19292
Numerical treatment of laminar flow in curved rectangular channels with inlet and outlet straight region p 1413 N93-19304
Three dimensional calculation of flow inside supersonic inlet p 1414 N93-19313
Perturbation problems in fluid dynamics
[AD-A258934] p 1535 N93-19450
Observational evidence for field-aligned potential drops at very low altitudes associated with travelling convection vortices p 1722 N93-19521

The effects of gravity on wrinkled laminar flames
[DE93-002572] p 1485 N93-19894

**VORTICITY**
A dynamical theory for hurricane spiral bands
[AD-A258190] p 1584 N93-17859
A computational study of a supersonic mixer-ejector exhaust system
[AD-A258456] p 1471 N93-17993
Analytical surface singularity distributions for flow about elliptical cylinders
[AERO-REPT-9202] p 1526 N93-18132
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194

## W

**WAFERS**
Planning for the semiconductor manufacturer of the future p 1636 N93-18672
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681

**WAKES**
An experimental study of a turbulent boundary layer in the trailing edge region of a circulation-control airfoil
[NASA-CR-191262] p 1405 N93-17934
Projectile base bleed technology. Part 1: Analysis and results
[AD-A258459] p 1405 N93-17994
Numerical simulation and stability analysis of the absolutely and convectively unstable wake
[ESA-TT-1119] p 1529 N93-18581

**WALL FLOW**
Contribution to the solution of moment equations at two points by the spectral integral methods
[ECL-92-19] p 1525 N93-18096
A wall interference assessment/correction system
[NASA-CR-191889] p 1406 N93-18384
Investigation of wall bounded turbulence: Coherence and chaos in a model of turbulent boundary-layer
[AD-A257794] p 1528 N93-18416
Numerical simulations of hypersonic rarefied transition regime flows: DSMC method and Navier-Stokes computation p 1409 N93-19278
Lagrangian analysis of contaminant dispersal in bounded turbulent shear flows
[DE93-002794] p 1535 N93-19615

**WALL PRESSURE**
Wall strains produced by waves in water filled latex tubes. Part 1: Tethered tubes
[AERO-REPT-9206-PT-1] p 1526 N93-18133
A wall interference assessment/correction system
[NASA-CR-191889] p 1406 N93-18384

**WALL TEMPERATURE**
Analysis of film cooling in rocket nozzles
[NASA-CR-192003] p 1473 N93-18518

**WALLS**
Heat transfer and aerodynamics of a high rim speed turbine nozzle guide vane with profiled end walls
[AD-A258346] p 1405 N93-17991

**WARFARE**
Stealth in the storm: Sorting the facts from the fiction
[AD-A258440] p 1434 N93-17889
An evolving joint space campaign concept and the Army's role
[AD-A258112] p 1453 N93-18022
The evolving defense communications system
[AD-A258335] p 1502 N93-18206
The effect of combat on aircrew subjective readiness and LSO grades during Operation Desert Shield/Storm
[AD-A258156] p 1602 N93-18294

**WARNING SYSTEMS**
The 1991 LLWAS anemometer test program
[AD-A258844] p 1538 N93-19365
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Program overview: 1991 flight test objectives p 1418 N93-19591
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601
Airborne doppler radar research at Rockwell International p 1420 N93-19602
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612
Model-based reasoning applied to cockpit warning systems p 1611 N93-19778
Aviation safety: Users differ in views of collision avoidance system and cite problems. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/RCED-92-113] p 1434 N93-19843

**WATER**
Biodegradation of Jet Fuel-4 (JP-4) in sequencing batch reactors
[AD-A258020] p 1496 N93-17917
Radiation properties of high-temperature flames p 1485 N93-18477
Botswana water and surface energy balance research program. Part 2: Large scale moisture and passive microwaves
[NASA-TM-108608] p 1590 N93-18525
Europa: Prospects for an ocean and exobiological implications p 1591 N93-18552
A new journal bearing tester: The VTT water tribotester
[VTT-TIED-1345] p 1548 N93-18632
H2O(+) structures in the inner plasma tail of comet Austin p 1708 N93-19174
Evaluation of ultrasonic cavitation of metallic and non-metallic surfaces p 1652 N93-19400
A literature survey of airborne vehicles impacting with water and soil: Head injury criteria and severity index development of computer program KRASH
[DOT/FAA/CT-90/24] p 1421 N93-19647
Royal Naval helicopter ditching experience p 1426 N93-19684
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 1426 N93-19686
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990 p 1427 N93-19687
Water on Mars: Inventory, distribution, and possible sources of polar ice p 1740 N93-19805
Rheology of water-silicate mixtures at low temperatures p 1741 N93-19806

**WATER COLOR**
Backscatter of bottom reflected light into the downwelling light stream
[AD-A258165] p 1588 N93-18009
Effect of the concentration of two types of sediment on water colorimetry and reflectance
[INPE-5331-PRE/1729] p 1568 N93-19822

**WATER DEPTH**
Thermohaline circulations and global climate change
[DE93-004601] p 1574 N93-19505

**WATER EROSION**
Water quality modeling using geographic information system (GIS) data p 1575 N93-19396

**WATER LOSS**
Systemic and pulmonary hypertension after resuscitation with cell-free hemoglobin
[AD-A258185] p 1595 N93-17900

**WATER POLLUTION**
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095
Water quality modeling using geographic information system (GIS) data p 1575 N93-19396

**WATER QUALITY**
Space life support engineering program
[NASA-CR-192188] p 1607 N93-19039
Water quality modeling using geographic information system (GIS) data p 1575 N93-19396

**WATER RECLAMATION**
Space life support engineering program
[NASA-CR-192188] p 1607 N93-19039

**WATER RESOURCES**
Aquatic plant control research program. Biological control of Pistia stratiotes L. (waterlettuce) using Neohydronomus affinis hustache (coleoptera: curculionidae)
[AD-A257463] p 1574 N93-18945

**WATER SPLITTING**
Lunar resources: Oxygen from rocks and soil p 1735 N93-18787

**WATER TREATMENT**
Regenerable biocide delivery unit
[NASA-CASE-MSC-21763-1-SB] p 1590 N93-18351

**WATER VAPOR**
IUE observations of periodic comets Tempel-2, Kopff, and Tempel-1 p 1697 N93-19153
Water and dust production rates in comet P/Halley derived from ultraviolet and optical observations p 1705 N93-19154
P/Halley: Spatial distribution and scale lengths for C2, CN, NH2, and H2O p 1706 N93-19157
A strong 3.4 micron emission feature in comet Austin 1989c1 p 1706 N93-19162
The correlation between water production rates and visual magnitudes in comets p 1709 N93-19181
The effect of tropospheric fluctuations on the accuracy of water vapor radiometry p 1511 N93-19416
Is CO2 ice permanent? p 1742 N93-19813

**WATER VEHICLES**
Vehicle guidance and control along circular trajectories
[AD-A257570] p 1450 N93-18177

**WATER WAVES**
Modelling of interfacial and thermocline waves
[AERO-REPT-9210] p 1525 N93-18104
Modelling of interfacial and thermocline waves
[AERO-REPT-9211] p 1525 N93-18105
Modelling of interfacial and thermocline waves
[AERO-REPT-9213] p 1526 N93-18119
Wall strains produced by waves in water filled latex tubes. Part 1: Tethered tubes
[AERO-REPT-9206-PT-1] p 1526 N93-18133
Waves from an oscillating disturbance in a thermocline and in a linear shear flow
[AERO-REPT-9207] p 1527 N93-18134
Thermocline waves from a moving body and comparison of open-boundary conditions
[AERO-REPT-9208] p 1527 N93-18135
Development and calibration of two and four wire water surface wave height measurement systems
[AD-A257900] p 1589 N93-18394

**WAVE AMPLIFICATION**
A theory for whistler wave amplification and wave particle interactions in the magnetosphere
[AD-A257782] p 1576 N93-18212

**WAVE ATTENUATION**
Nondestructive evaluation of grain size distributions using multifractal analysis of backscattered ultrasonic signals
[AD-A259035] p 1553 N93-18956

**WAVE EQUATIONS**
Relativistic two body equations and nuclear interactions
[NOTA-INTERNA-985] p 1653 N93-17876
A two-body covariant equation for interacting nucleons
[NOTA-INTERNA-986] p 1653 N93-17877
A relativistic coupled-channel wave-equation with N and Delta degrees of freedom
[NOTA-INTERNA-993] p 1653 N93-17944
A harmonic half-space fundamental solution
[SER-R-271] p 1644 N93-17946
A relativistic study of nuclear interactions
[NOTA-INTERNA-981] p 1653 N93-17955
Develop, apply and evaluate wavelet technology
[AD-A258484] p 1645 N93-18315

**WAVE FUNCTIONS**
The use of the wavelet cluster analysis for asteroid family determination p 1701 N93-19126
Electron correlations in semiconductors: Bulk cohesive properties and magnetic-field-induced Wigner crystal at heterojunctions
[DE93-002626] p 1675 N93-19488

**WAVE INTERACTION**
A relativistic coupled-channel wave-equation with N and Delta degrees of freedom
[NOTA-INTERNA-993] p 1653 N93-17944
Modelling of interfacial and thermocline waves
[AERO-REPT-9209] p 1525 N93-18103
A theory for whistler wave amplification and wave particle interactions in the magnetosphere
[AD-A257782] p 1576 N93-18212
Nonlinear interactions associated with TID's in the quiet polar F-region from EISCAT observations p 1584 N93-19568
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991
[INPE-5349-PRP/162] p 1668 N93-19793

**WAVE PACKETS**
High resolution photoelectron spectroscopy and femtosecond intramolecular dynamics using supersonic molecular beams
[DE93-002555] p 1658 N93-19746

**WAVE PROPAGATION**
Flexural wave propagation in anisotropic laminates and inversion algorithms to recover elastic constants using phase velocity measurements
[AD-A257548] p 1476 N93-17964
Identification of nonlinear wave forces. Part 2: Frequency-domain analysis
[RR-442-PT-2] p 1528 N93-18440

Aeronomy of auroral and airglow emissions
p 1584 N93-18496
Identification of nonlinear wave forces. Part 1: Time domain-analysis
[RR-441-PT-1] p 1528 N93-18510
Understanding curved detonation waves
[DE93-000799] p 1528 N93-18529
A neutron scattering study of the quasi-one-dimensional, dilute Ising-like antiferromagnet CsCo(0.83)Mg(0.17)Br3
[DE93-001718] p 1674 N93-18618
Coupling between plate vibration and acoustic radiation
[NASA-CR-189741] p 1651 N93-18770
Perturbation problems in fluid dynamics
[AD-A258934] p 1535 N93-19450
PACE and EISCAT radar observations of short-lived flow bursts on the nightside p 1726 N93-19549
Overall results from the European sector of the worldwide atmospheric gravity-wave study: 1985-1990
p 1733 N93-19589
Distributed nonlinear devices for millimeter-wave and picosecond pulse generation
[AD-A259372] p 1522 N93-19853

**WAVE REFLECTION**
EHF fiber optic transmitter module
[AD-A257586] p 1661 N93-18183
Reflecting model: P-S arrival
[REPT-92-029] p 1576 N93-18188

**WAVEFORMS**
Evaluation of regional seismic discriminants using the intelligent seismic event identification system
[AD-A258936] p 1583 N93-19071
Reducing bunch disruption in transition crossing by modification of the RF waveform
[DE93-002509] p 1515 N93-19625

**WAVEGUIDE ANTENNAS**
Analysis and applications of a general boresight algorithm for the DSS-13 beam waveguide antenna
p 1505 N93-18902
Atmospheric refraction correction for Ka-band blind pointing on the DSS-13 beam waveguide antenna
p 1505 N93-18903
Fault detection using a two-model test for changes in the parameters of an autoregressive time series
p 1505 N93-18907
DSS-13 beam waveguide antenna frequency stability
p 1513 N93-19424
SETI low-frequency feed design study for DSS 24
p 1514 N93-19433
Antenna pattern control using impedence surfaces
[NASA-CR-192182] p 1516 N93-19934

**WAVEGUIDES**
Method for non-destructive estimation of waveguide directional coupler dimensions
[NASA-CASE-NPO-18454-1-CU] p 1519 N93-18285
Experimental study of the selective properties of coaxial resonators
[INPE-5375-PRE/1748] p 1522 N93-19740

**WAVELENGTH DIVISION MULTIPLEXING**
Investigation of the bandwidth of multimode optical fibers used with 1550-nm LED and laser sources
p 1664 N93-19409

**WAVERIDERS**
The effects of viscosity on a conically derived waverider
[AD-A259019] p 1534 N93-19101

**WEAK INTERACTIONS (FIELD THEORY)**
Theoretical aspects of electroweak and other interactions in medium energy physics
[DE93-003714] p 1657 N93-19507

**WEAPON SYSTEMS**
AQUIS: A PC-based air quality and permit information system
[DE92-040092] p 1573 N93-18587
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 1434 N93-19768
Program manager: Journal of the Defense Systems Management College, volume 21, number 6, November-December 1992
[AD-A258766] p 1553 N93-19870
Test and evaluation challenges in the nineties
p 1442 N93-19902

**WEAR**
Spectroscopic wear detector
[NASA-CASE-LEW-15200-1] p 1474 N93-18656
Friction and wear of plasma-deposited diamond films
[NASA-TM-105926] p 1495 N93-19035

**WEAR INHIBITORS**
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488

**WEAR RESISTANCE**
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
A new journal bearing tester: The VTT water tribotester
[VTT-TIED-1345] p 1548 N93-18632
Asphalt mixtures modified with tall oil pitches and cellulose fibres
[VTT-PUBS-99] p 1494 N93-18699

**WEAR TESTS**
Brush seal bristle flexure and hard-rub characteristics
[NASA-TM-105864] p 1547 N93-18321
Integrity testing of brush seal in shroud ring of T-700 engine
[NASA-TM-105863] p 1548 N93-18380
Evaluation of high-temperature lubricants for low-heat rejection diesel engines
[AD-A257893] p 1494 N93-18418
Evaluation and silicon nitride internal combustion engine components
[DE93-003628] p 1548 N93-18536
A new journal bearing tester: The VTT water tribotester
[VTT-TIED-1345] p 1548 N93-18632
Dynamics in condition monitoring, a case study
p 1558 N93-18758

**WEATHER**
Flight director information and pilot performance in instrument approaches
[AD-A258186] p 1601 N93-17857
Terrain background signature research
[AD-A257917] p 1565 N93-18213
Adverse weather test site selection study
[AD-A259012] p 1440 N93-18895
Determination and representation of electric charge distributions associated with adverse weather conditions
p 1588 N93-19403

**WEATHER FORECASTING**
Predicting the movement of Carolina coastal fronts
[AD-A258280] p 1585 N93-18012
The Terminal Doppler Weather Radar (TDWR) Moving Target Simulator (MTS) at Orlando, Florida
[AD-A258885] p 1509 N93-19080
Analysis of relational concepts for the implementation of systems for three-dimensional visualization of meteorological data
[INPE-5435-TAE/016] p 1588 N93-19638

**WEAVING**
Integral fill yarn insertion and beatup method using inflatable membrane
[NASA-CASE-LAR-14046-1] p 1500 N93-18857
Method and apparatus for three dimensional braiding
[NASA-CASE-LAR-14047-1] p 1500 N93-19038

**WEIGHTING FUNCTIONS**
Binary weight distributions of some Reed-Solomon codes p 1514 N93-19430

**WEIGHTLESSNESS**
A helium-3/helium-4 dilution cryocooler for operation in zero gravity
[NASA-CR-183632] p 1499 N93-18397

**WELD STRENGTH**
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343

**WELDABILITY**
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343

**WELDED JOINTS**
Instruction manual for UTEP weld gas hydrogen detector
[NASA-CR-184477] p 1537 N93-18034
Sensing the gas metal arc welding process
[DE93-001957] p 1548 N93-18658
Principles of weld solidification and microstructures
[DE93-003012] p 1490 N93-19629

**WELDING**
Robot welding process control development task
[NASA-CR-192434] p 1549 N93-18851

**WENTZEL-KRAMER-BRILLOUIN METHOD**
An approximate solution for the linearized spinup dynamics of a dual-spin spacecraft
[AD-A258903] p 1470 N93-19350

**WHEAT**
Investigation of wheat coleoptile response to phototropic stimulations
[NASA-CR-192157] p 1593 N93-18608

**WHEELS**
Design of a compliant wheel for a miniature rover to be used on Mars
[NASA-CR-192012] p 1546 N93-18114
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 1431 N93-19708

**WHISKER COMPOSITES**
High temperature chemistry of fibers and composites
[AD-A258788] p 1479 N93-18978

**WHISTLERS**
A theory for whistler wave amplification and wave particle interactions in the magnetosphere
[AD-A257782] p 1576 N93-18212
A DE-1/whistler study of the thermal plasma structure and dynamics in the dusk bulge sector of the magnetosphere
[NASA-CR-192088] p 1579 N93-18850
Report of activities in the Gas and Plasma Physics Laboratory (LPGP) of the Paris-South University, April - May 1991
[INPE-5349-PRP/162] p 1668 N93-19793

**WHITE NOISE**
Application of the total least squares technique to frequency estimation
[AD-A257562] p 1644 N93-17936
Classification of complex sounds
[AD-A258405] p 1596 N93-18223

**WIDEBAND COMMUNICATION**
Variable wide band fiber optic delay line
[AD-D015539] p 1662 N93-18318

**WIGGLER MAGNETS**
Use of the CEBAF accelerator for IR and UV free electron lasers
[CEBAF-PR-92-023] p 1660 N93-18768
Physically transparent formulation of a free-electron laser in the linear gain regime
[DE93-002577] p 1542 N93-19626
The multi-cavity free-electron laser
[DE93-002569] p 1543 N93-19747

**WIND (METEOROLOGY)**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler
[AD-A258189] p 1584 N93-17858
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A
[AD-A258299] p 1576 N93-18126
Annual, orbital, and enigmatic variations in tropical oceanography recorded by the Equatorial Atlantic amplifier p 1581 N93-18970
EISCAT-MICADO coordinated measurements of meridional neutral winds and temperatures in the F region p 1584 N93-19563
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606

**WIND DIRECTION**
Aircraft turns into and down wind
[AERO-REPT-9201] p 1438 N93-18131
US Navey regional climatic study of the Greenland-Iceland-United Kingdom gap and associated waters
[AD-A257909] p 1586 N93-18342
Wind transport near the poles of Mars: Timescales of changes in deposition and erosion p 1743 N93-19819

**WIND EFFECTS**
Tropical cyclone motion and recurvature in TCM-90
[AD-A258258] p 1585 N93-18010
Response of structures to atmospheric turbulence: Computer programs A9236 and B9236
[ESDU-92036] p 1554 N93-18045
Aircraft turns into and down wind
[AERO-REPT-9201] p 1438 N93-18131
Parameter and configuration study of the DSS-13 antenna drives p 1514 N93-19432

**WIND EROSION**
Wind transport near the poles of Mars: Timescales of changes in deposition and erosion p 1743 N93-19819

**WIND MEASUREMENT**
Radar interferometer investigations of the horizontal winds, vertical velocities, vorticity, and divergence around frontal zones and in mesoscale waves
[AD-A257969] p 1586 N93-18194
RAWS 1992 progress report
[NASA-CR-191382] p 1587 N93-18849
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Program overview: 1991 flight test objectives
p 1418 N93-19591
Flight test operations p 1418 N93-19592
NASA wind shear flight test in situ results
p 1418 N93-19593
Flight test of an infrared wind shear detector
p 1419 N93-19596
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601

Airborne doppler radar research at Rockwell International p 1420 N93-19602
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611

**WIND PROFILES**
Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler
[AD-A258189] p 1584 N93-17858
Remote sensing of turbulence and transverse atmospheric wind profiles using optical reference sources
[AD-A258855] p 1587 N93-19370

**WIND SHEAR**
The 1991 LLWAS anemometer test program
[AD-A258844] p 1538 N93-19365
Airborne Wind Shear Detection and Warning Systems: Fourth Combined Manufacturers' and Technologists' Conference, part 1
[NASA-CP-10105-PT-1] p 1418 N93-19590
Program overview: 1991 flight test objectives p 1418 N93-19591
Flight test operations p 1418 N93-19592
NASA wind shear flight test in situ results p 1418 N93-19593
Air/ground wind shear information integration: Flight test results p 1418 N93-19594
Doppler radar results p 1419 N93-19595
Flight test of an infrared wind shear detector p 1419 N93-19596
Wind shear hazard determination p 1419 N93-19597
Three-dimensional numerical simulation of the 20 June 1991, Orlando microburst p 1419 N93-19598
A numerical field experiment approach for determining probabilities of microburst intensity p 1419 N93-19599
An approach to evaluating reactive airborne wind shear systems p 1419 N93-19600
RDR-4B doppler weather radar with forward looking wind shear detection capability p 1420 N93-19601
Airborne doppler radar research at Rockwell International p 1420 N93-19602
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
Vertical wind estimation from horizontal wind measurements p 1420 N93-19604
Microburst characteristics determined from 1988-1991 TDWR testbed measurements p 1420 N93-19605
NASA experimental airborne doppler radar and real time processor for wind shear detection p 1420 N93-19607
Ground clutter measurements using the NASA airborne doppler radar: Description of clutter at the Denver and Philadelphia airports p 1421 N93-19608
Spectrum characteristics of Denver and Philadelphia ground clutter and the problem of distinguishing wind shear targets from moving clutter p 1421 N93-19609
Comparison of simulated and actual wind shear radar data products p 1421 N93-19610
NASA airborne radar wind shear detection algorithm and the detection of wet microbursts in the vicinity of Orlando, Florida p 1421 N93-19611
Signal processing for airborne doppler radar detection of hazardous wind shear as applied to NASA 1991 radar flight experiment data p 1421 N93-19612

**WIND TUNNEL APPARATUS**
Application of a neural network as a potential aid in predicting NTF pump failure
[NASA-TM-107667] p 1620 N93-18332
Study of optical techniques for the Ames unitary wind tunnel, part 7
[NASA-CR-192165] p 1452 N93-18520

**WIND TUNNEL CALIBRATION**
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110

**WIND TUNNEL MODELS**
Structural dynamic testing of composite propfan blades for a cruise missile wind tunnel model
[NASA-TM-105272] p 1558 N93-18875
Rarefied gas numerical wind tunnel. Part 7: OREX p 1410 N93-19280
Numerical Wind Tunnel: Requirements and the outline p 1411 N93-19288
Numerical Wind Tunnel hardware p 1411 N93-19289
The operating system for Numerical Wind Tunnel p 1411 N93-19290
The language processor system for the Numerical Wind Tunnel p 1411 N93-19291
Numerical simulation of hypersonic flow around H-2 Orbiting Plane (HOPE), part 3 p 1412 N93-19297
Role of wind tunnel tests and CFD analysis for the development of aero-engines in IHI p 1417 N93-19326

**WIND TUNNEL STABILITY TESTS**
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395

**WIND TUNNEL TESTS**
A computational and experimental investigation of the propulsive and lifting characteristics of oscillating airfoils and airfoil combinations in incompressible flow
[AD-A258019] p 1404 N93-17819
Aerodynamic aspects of offshore structures
[NLR-TP-91188-U] p 1405 N93-17928
The aerodynamic characteristics of the Gottingen 797 and Wortmann FX63-137 aerofoil sections at very low Reynolds numbers
[ETN-93-92999] p 1406 N93-18128
An experimental investigation of the separating/reattaching flow over a backstep
[NASA-CR-192105] p 1408 N93-18781
An experimental investigation of a finite circulation control wing
[AD-A259044] p 1440 N93-18896
A wind tunnel study of magnus effects on a differentially rotating missile
[AD-A258812] p 1408 N93-18989
Propelling force and resistance p 1403 N93-19003
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110
Aerodynamic heating analysis for axisymmetric bodies in supersonic flow p 1414 N93-19312
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321
On the roles of wind tunnel testing and computational fluid dynamics in the aircraft development p 1416 N93-19322
Wind tunnel tests and CFD in Fuji Heavy Industries p 1416 N93-19323
Wind tunnel test and CFD in Kawasaki Heavy Industries, Gifu p 1416 N93-19324
Wind tunnel testing and CFD simulation in Mitsubishi Heavy Industries p 1416 N93-19325
Experimental investigation of the aerodynamics of independently rotating cylindrical shells
[AD-A258917] p 1417 N93-19340
AM-X high angle of attack flight test experience (single and two seat versions) p 1443 N93-19910
System identification for X-31A project support: Lessons learned so far p 1444 N93-19914
Natural laminar flow test in-flight visualization p 1417 N93-19921
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 1446 N93-19927

**WIND TUNNEL WALLS**
A wall interference assessment/correction system
[NASA-CR-191889] p 1406 N93-18384
Wind tunnel wall interference correction at subsonic speeds p 1416 N93-19320
Two problems reducing the data accuracy in Transonic Wind Tunnel testing p 1416 N93-19321
Wind tunnel tests and CFD in Fuji Heavy Industries p 1416 N93-19323

**WIND TUNNELS**
A wall interference assessment/correction system
[NASA-CR-191889] p 1406 N93-18384
Study of optical techniques for the Ames unitary wind tunnel: Digital image processing, part 6
[NASA-CR-192164] p 1452 N93-18766
Flight and wind-tunnel calibrations of a flush airdata sensor at high angles of attack and sideslip and at supersonic Mach numbers
[NASA-TM-104265] p 1447 N93-19110

**WIND TURBINES**
Elastic dynamics of a complete wind turbine structure: Theoretical development
[DE93-002478] p 1555 N93-18524
A discussion of the results of the rainflow counting of a wide range of dynamics associated with the simultaneous operation of adjacent wind turbines
[DE93-000016] p 1571 N93-18705

**WIND VARIATIONS**
The neutral wind in the E-region from CP-1 data p 1729 N93-19565

**WIND VELOCITY**
Computer program for wind speeds and turbulence properties: Flat or hilly sites in terrain with roughness changes
[ESDU-92032] p 1585 N93-18043
Aircraft turns into and down wind
[AERO-REPT-9201] p 1438 N93-18131
Definition of mean environmental steering flow for TCM-90 tropical cyclones
[AD-A257886] p 1586 N93-18338
US Navey regional climatic study of the Greenland-Iceland-United Kingdom gap and associated waters
[AD-A257909] p 1586 N93-18342
Remote sensing of turbulence and transverse atmospheric wind profiles using optical reference sources
[AD-A258855] p 1587 N93-19370
Four-dimensional data assimilation of gale data using a multivariate analysis scheme and a mesoscale model with diabatic initialization
[AD-A258549] p 1587 N93-19481
Algorithms for airborne Doppler radar wind shear detection p 1420 N93-19606

**WIND VELOCITY MEASUREMENT**
The neutral wind in the E-region from CP-1 data p 1729 N93-19565

**WINDS ALOFT**
Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A
[AD-A258299] p 1576 N93-18126
RAWS 1992 progress report
[NASA-CR-191382] p 1587 N93-18849

**WING NACELLE CONFIGURATIONS**
Improving military transport aircraft through highly integrated engine-wing design
[DS-1607] p 1434 N93-17850

**WING OSCILLATIONS**
Lift enhancement using a close-coupled oscillating canard
[AD-A257877] p 1406 N93-18336

**WING PANELS**
Underwing compression vortex attenuation device
[NASA-CASE-LAR-14744-1] p 1408 N93-19053

**WING TIP VORTICES**
Contribution to the study of vortex flow in an incompressible fluid
[ONERA-NT-1992-4] p 1527 N93-18191
An experimental investigation of interacting wing-tip vortex pairs
[AD-A258471] p 1406 N93-18272

**WING TIPS**
Wind-tunnel free-flight investigation of a supersonic persistence fighter
[NASA-TP-3258] p 1407 N93-18395

**WINGS**
Pitching moment of low aspect ratio wing-body combinations up to high angles of attack at supersonic speeds
[ESDU-92043] p 1435 N93-17958
Add-on damping treatment for the F-15 upper-outer wing skin
[AD-A258470] p 1438 N93-18248
Lift enhancement using a close-coupled oscillating canard
[AD-A257877] p 1406 N93-18336
Analysis of a 2-D airfoil motion flying in-proximity-to a wavy-wall surface: Finite difference method p 1410 N93-19282
Calculations of aerodynamic forces on a wing with thrust using BEM p 1410 N93-19286

**WINTER**
Radar based case study of a Northeast Colorado winter storm
[AD-A258256] p 1585 N93-17901
Climate model calculations of the effects of volcanoes on global climate
[NASA-CR-191999] p 1573 N93-18600
Nocturnal high latitude E-region in winter during extremely quiet conditions p 1723 N93-19527
Wildfire and MAMS data from STORMFEST
[NASA-TM-108393] p 1588 N93-19898

**WIRE**
Development and calibration of two and four wire water surface wave height measurement systems
[AD-A257900] p 1589 N93-18394

**WIRING**
Design and implementation of a fiber optic link for a token ring local area network
[AD-A257868] p 1662 N93-18335
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391
NASA requirements and applications environments for electrical power wiring
[NASA-CR-191064] p 1475 N93-19652

**WORDS (LANGUAGE)**
The semantics of plural noun phrases
[LP-91-07] p 1614 N93-17827

**WORK FUNCTIONS**
Current density limitations in a fast-pulsed high-voltage diode
[AD-A257866] p 1520 N93-18328

**WORK-REST CYCLE**
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
**WORKING FLUIDS**
Study and development of an air conditioning system operating on a magnetic heat pump cycle (design and testing of flow directors) p 1536 N93-19407
**WORKLOADS (PSYCHOPHYSIOLOGY)**
Design of a microprocessor-based control system control system for the Monterey Institute for Research in Astronomy 36 in. telescope
[AD-A257554] p 1695 N93-17978
Automatic information processing and high performance skills
[AD-A258473] p 1602 N93-18273
The effect of combat on the work/rest schedules and fatigue of A-6 and F-14 aviators during Operation Desert Shield/Storm
[AD-A258146] p 1597 N93-18292
Concepts for pilot interaction with an automated NOE obstacle-avoidance system
[NASA-TM-103960] p 1451 N93-19105
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 1430 N93-19706
Modeling the dynamics of mental workload and human performance in complex systems
[AD-A258553] p 1603 N93-19956
**WORKSTATIONS**
Scheduling revisited workstations in integrated-circuit fabrication p 1637 N93-18681
Software for parallel processing applications
[DE93-002510] p 1627 N93-19744
**WROUGHT ALLOYS**
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189221] p 1448 N93-18578

## X

**X RAY ABSORPTION**
Electron yield XAFS study of evaporated Co/Pd multilayers with various thickness ratios of Co to Pd sublayers: Simulations of the Co K-edge XAFS and Fourier transforms
[DE93-003142] p 1675 N93-19490
**X RAY ANALYSIS**
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621
**X RAY APPARATUS**
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
**X RAY ASTRONOMY**
EXITE/IPC observations of SN1987A and southern targets
[NASA-CR-192133] p 1696 N93-18607
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108588] p 1561 N93-18709
**X RAY DETECTORS**
Superconducting tunnel junction x-ray detectors with niobium absorbers and aluminum quasiparticle traps
[DE93-002885] p 1677 N93-19826
**X RAY DIFFRACTION**
Microstructural control of complex alloys
p 1490 N93-18485
X ray diffraction study of shock-modified tetragonal phases of SnO2 and MnO2
[DE93-002488] p 1535 N93-19479
X ray examination of Type 310S stainless steel during its oxidation in air at 900 C
[DE93-003031] p 1490 N93-19631
X ray characterization of Au/Ni multilayer thin films
[NIAR-92-7] p 1678 N93-19881
**X RAY FLUORESCENCE**
Synchrotron radiation induced x ray micro analysis: A realistic alternative for electron and ion beam microscopy?
[DE93-001975] p 1656 N93-18621
**X RAY INSPECTION**
Slit scan radiographic system for intermediate size rocket motors
[NASA-CR-191798] p 1471 N93-18058
**X RAY LASERS**
Inexpensive capillary discharge x ray laser driver, phase 1
[AD-A259032] p 1542 N93-19372
**X RAY SOURCES**
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
The x ray variability of AGN and the anomalous behavior of NGC6814 p 1562 N93-18713
Evidence for a massive stellar black hole in x ray Nova Muscae p 1562 N93-18714
Synchrotron radiation sources and condensers for projection x ray lithography
[DE93-002964] p 1664 N93-19511
**X RAY SPECTRA**
Goddard Visiting Scientist Program for the Space and Earth Sciences Directorate
[NASA-TM-108588] p 1561 N93-18709
The broad-band x ray spectral variability of Mkn 841
p 1561 N93-18711
Evidence for a massive stellar black hole in x ray Nova Muscae p 1562 N93-18714
**X RAY SPECTROSCOPY**
Atomic layer epitaxy group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A259244] p 1677 N93-19848
**X RAY TELESCOPES**
BBXRT and Ginga observations of the Seyfert 1 galaxy MRK 335 p 1561 N93-18710
**X RAYS**
The x ray variability of NGC6814: Power spectra
p 1562 N93-18712
X ray examination of Type 310S stainless steel during its oxidation in air at 900 C
[DE93-003031] p 1490 N93-19631
X ray crystal structure of InCl3(dot)2THF, a neural five-coordinate BIS-Adduct of an In3 trihalide
[AD-A258551] p 1678 N93-19954
**XENON**
Electronic excited states as a probe of surface adsorbate structure and dynamics in liquid xenon
[DE93-002550] p 1482 N93-18411

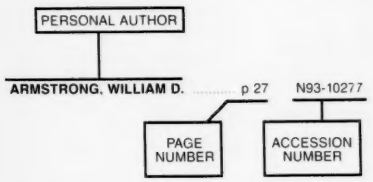
## Y

**YAG LASERS**
Backscatter and transmission of aerosol at UV through middle IR wavelengths
[AD-A258162] p 1540 N93-18008
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Laser beam diagnostics for kilowatt power pulsed YAG laser
[DE93-002928] p 1542 N93-19515
**YARNS**
Integral fill yarn insertion and beatup method using inflatable membrane
[NASA-CASE-LAR-14046-1] p 1500 N93-18857
**YAW**
Application of recess vaned casing treatment to axial flow fans p 1531 N93-18728
**YBCO SUPERCONDUCTORS**
Processing and fabrication of high temperature oxide superconductors
[AD-A258281] p 1671 N93-18125
High performance YBCO films
[AD-A258481] p 1672 N93-18313
Three-terminal superconducting device research
[AD-A257907] p 1520 N93-18341
The fabrication and performance of YBa2Cu3O(7-x) SQUID magnetometers
[DE93-002561] p 1520 N93-18391
Growth and properties of co-evaporated superconducting YBaCuO thin films
[ETN-92-92798] p 1673 N93-18441
High-temperature superconducting electronics
p 1523 N93-18464
Process for applying a superconductive powder to a wide variety of substrates
[NASA-CASE-LAR-14729-1-CU] p 1521 N93-19051
Design of high-T(sub c) superconducting bolometers for a far infrared imaging array
[DE93-002564] p 1538 N93-19487
Positron annihilation studies of the electronic structure and fermiology of the high-T(sub c) superconductors
[DE93-002982] p 1676 N93-19497
**YF-16 AIRCRAFT**
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present
p 1425 N93-19673
**YIELD POINT**
HPM damage thresholds of GaAs FETs and HEMTs
[AD-A257897] p 1520 N93-18420
Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm
[NASA-CR-192156] p 1541 N93-18772
**YIELD STRENGTH**
Evaluation of 8090 and Weldalite-049 aluminum-lithium alloys
[AD-A258121] p 1485 N93-18007
Microstructure and mechanical properties of high copper HSLA-100 steel in 2-inch plate form
[AD-A257582] p 1486 N93-18182
Factors influencing the microstructure and mechanical properties of ultra low carbon bainitic 100 tungsten inert gas multipass weldments
[AD-A257853] p 1555 N93-18343

## Z

**ZEOLITES**
Decomposition of halogenated organic materials by electrified microheterogeneous catalysis
[AD-A257984] p 1482 N93-18290
Chemical interactions in multimetal/zeolite catalysts
[DE93-005133] p 1484 N93-19491
**ZERO ANGLE OF ATTACK**
Transonic flow calculation around NACA-0012
p 1413 N93-19301
**ZINC COATINGS**
The effects of co-mingling dissimilar fastener coatings on the corrosion behavior of steel bolt assemblies
[AD-A258217] p 1486 N93-18299
**ZINC COMPOUNDS**
Poly(ethylene oxide)-based Zn(2) halide electrolytes
[AD-A258331] p 1492 N93-18157
The effect of low molecular weight additives on the properties of poly (ethylene oxide)-based Zn(2) and Li(1) electrolytes
[AD-A258332] p 1492 N93-18158
Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2
[AD-A258996] p 1674 N93-18892
**ZIRCONIUM OXIDES**
Thermal coating development for impulse drying
[DE93-000710] p 1491 N93-17909
**ZODIACAL DUST**
The origin and evolution of the zodiacal dust cloud
p 1704 N93-19148
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170
**ZONAL FLOW (METEOROLOGY)**
Axial Flow Compressors, volume 2
[VKI-LS-1992-02-VOL-2] p 1531 N93-18731
Determination of the zone of the stall cell by means of the baroclinic wave theory p 1531 N93-18733
Rotating stall cell and Von Karman vortex street: A meteorological theory p 1531 N93-18734

### Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

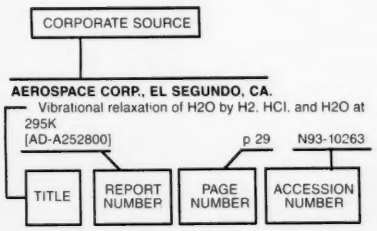
# CORPORATE SOURCE INDEX

## Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

## A

**ABERDEEN UNIV. (SCOTLAND).**
Self-questioning and experimentation in an exploratory discovery system p 1689 N93-19717
Machine discovery by model driven analogy p 1629 N93-19724

**ACADEMY OF SCIENCES, GRAZ (AUSTRIA).**
The effect of a non-volatile dust mantle on the energy balance of cometary surface layers p 1710 N93-19189

**ACADEMY OF SCIENCES (USSR), PERM.**
On the distribution of minor planet inclinations p 1454 N93-19242

**ACADEMY OF SCIENCES OF THE TAJIK SSR, DOUSHANBE.**
Fragmentation and densities of meteoroids p 1700 N93-19118
P/Machholz 1986 8 and quadrantid meteoroid stream. Orbital evolution and relationship p 1700 N93-19119

**ACADEMY OF SCIENCES (USSR), DUSHANBE.**
Metallic atoms and ions in comets: Comet Halley 1986 3 p 1707 N93-19170

**ACADEMY OF SCIENCES (USSR), LENINGRAD.**
Integrated software package STAMP for minor planets p 1628 N93-19187

**ACADEMY OF SCIENCES (USSR), MOSCOW.**
Asteroid-type orbit evolution near the 5:2 resonance p 1708 N93-19171

**ACADEMY OF SCIENCES (USSR), MURMANSK.**
Electric fields and currents in the cusp region as a result of diffusion effects on the magnetopause p 1730 N93-19575
The BICORE project p 1517 N93-19587

**ADAM MICKIEWICZ UNIV., POZNAN (POLAND).**
Spin vector and shape of 532 Herculina p 1711 N93-19193
Spin vectors of asteroids 21 Lutetia, 196 Philomela, 250 Bettina, 337 Devosa, and 804 Hispania p 1713 N93-19211

**ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).**
Human performance assessment methods [AGARD-AG-308-ADD] p 1603 N93-18868
Calendar of selected aeronautical and space meetings, July 1991 onwards [AGARD-CAL-91/2] p 1683 N93-19639
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques [AGARD-CP-532] p 1422 N93-19653
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface [AGARD-CP-521] p 1607 N93-19757
A Research Agenda for Scientific and Technical Information [AGARD-AR-316] p 1692 N93-19796
Flight Testing [AGARD-CP-519] p 1442 N93-19901

**AERODATA FLUGMESSTECHNIK G.M.B.H., BRUNSWICK (GERMANY).**
High precision navigation for flight testing (AERONAV) p 1434 N93-19920

**AERODYNE RESEARCH, INC., BILLERICA, MA.**
An optical consensus correlator for cluttered targets [AD-A257594] p 1661 N93-18184

**AERONAUTICA MACCHI S.P.A., VARESE (ITALY).**
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 1443 N93-19907

**AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).**
Damage tolerance assessment of boron/epoxy repairs to fuselage lap joints [AD-A258383] p 1439 N93-18257

**AERONAUTICAL SYSTEMS DIV., WRIGHT-PATTERSON AFB, OH.**
Adverse weather test site selection study [AD-A259012] p 1440 N93-18895

**AEROPLANE AND ARMAMENT EXPERIMENTAL ESTABLISHMENT, BOSCOMBE DOWN (ENGLAND).**
Helicopter night vision goggle testing in the United Kingdom p 1444 N93-19917

**AEROSPACE CORP., EL SEGUNDO, CA.**
Determining the effects of microwave power variations on the output frequency of a high-performance cesium frequency standard [AD-A258342] p 1518 N93-17989
Metallo-organic solution deposition of ferroelectric PZT films [AD-A258345] p 1476 N93-17990
Exact calculation of light scattering from a particle on a mirror [AD-A258464] p 1662 N93-18247
Carbon and graphite matrices in carbon-carbon composites: An overview of their formation, structure, and properties [AD-A258386] p 1478 N93-18259
HPM damage thresholds of GaAs FETs and HEMTs [AD-A257897] p 1520 N93-18420
Aerospace Sponsored Research [ATR-91(8498)-1] p 1747 N93-18459
Acousto-optic frequency excision p 1523 N93-18460
Device applications of layered structures p 1523 N93-18461
VLSI microelectronics research p 1523 N93-18462
Nonlinear circuits and components p 1523 N93-18463
High-temperature superconducting electronics p 1523 N93-18464
Novel interconnect deposition technology p 1523 N93-18465
Infrared photoluminescence spectroscopy p 1485 N93-18466
Nanorecording p 1539 N93-18467
Advanced atomic filters p 1664 N93-18468
High-energy laser-particle interaction p 1543 N93-18469
Transition dynamics and guest-host interactions in laser materials p 1543 N93-18470
Stimulated Brillouin scattering phase conjugation p 1664 N93-18471
Novel short-wavelength lasers p 1543 N93-18472
Tunable infrared and visible solid-state laser p 1543 N93-18473
Infrared sensor technology and applications p 1664 N93-18474
Picosecond studies of space optical materials p 1664 N93-18475
Indium phosphide photovoltaic technology p 1572 N93-18476
Radiation properties of high-temperature flames p 1485 N93-18477
Characterization of radiation damage in solids p 1659 N93-18478
Mechanism of diamond film growth p 1678 N93-18479
Flow visualization and combustion diagnostic p 1485 N93-18480
Flame-front kinetics p 1485 N93-18481
Propulsion diagnostics p 1475 N93-18482
Picosecond molecular-beam studies of chemical reactivity p 1659 N93-18483
Kinetics and infrared spectroscopy of organometallic reactive intermediates p 1485 N93-18484
Microstructural control of complex alloys p 1490 N93-18485
Nonlinear acoustic-electromagnetic coupling in materials p 1482 N93-18486
Molecular-scale hybrid polymer ceramics p 1496 N93-18487
Experimental and theoretical studies of the structure of metal dichalcogenides p 1490 N93-18488
Nanotechnology p 1678 N93-18489
Scanning tunneling microscope studies of nickel oxyhydroxides p 1678 N93-18490
Chaotic dynamics of atoms p 1659 N93-18491
Energy storage in supercritical solvents p 1498 N93-18492
Studies of metal-semiconductor clusters p 1678 N93-18493
Spin effects in electron-atom collisions p 1659 N93-18494
Atmospheric dynamics and coupling p 1584 N93-18495
Aeronomy of auroral and airglow emissions p 1584 N93-18496
Infrared studies of star-forming regions p 1696 N93-18497
Ionospheric processes p 1584 N93-18498
Auroral energization and geomagnetic disturbances p 1584 N93-18499
Trends in middle-atmosphere ozone p 1575 N93-18500
Solar-terrestrial physics and astrophysics p 1733 N93-18501
Artificial neural networks application simulator p 1642 N93-18502
Barrier synchronization of distributed-memory architectures p 1631 N93-18503
Wrapping mathematical tools p 1648 N93-18504
Advanced vector quantization techniques p 1648 N93-18505
Wavelet image analysis p 1628 N93-18506
Plotting the magnitude and direction of waveguide surface currents in three dimensions [AD-A258872] p 1509 N93-19077
Accurate measurement of signals close to the noise floor on a spectrum analyzer [AD-A258666] p 1516 N93-19949

**AEROSPACE CORP., LOS ANGELES, CA.**
Evaluating auroral processes within a magnotospheric model [NASA-CR-192122] p 1577 N93-18606

**AEROSPACE MEDICAL RESEARCH LABS., BROOKS AFB, TX.**
Flight director information and pilot performance in instrument approaches [AD-A258186] p 1601 N93-17857
The Proceedings of the Hypobaric Decompression Sickness Workshop [AD-A257612] p 1597 N93-18362

**AEROSPATIALE, TOULOUSE (FRANCE).**
Flight tests of the transport aircraft viewed from the industrial standpoint p 1442 N93-19903

Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus p 1446 N93-19926

**AIR FORCE ACADEMY, CO.**

An introduction to the method of averaging [AD-A258990] p 1647 N93-18889

**AIR FORCE HUMAN RESOURCES LAB., BROOKS AFB, TX.**

Epidemiology of United States Air Force spatial disorientation accidents: 1990-1991 p 1425 N93-19679

**AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OH.**

Temporal variability of the trade wind inversion: Measured with a boundary layer vertical profiler [AD-A258189] p 1584 N93-17858

A dynamical theory for hurricane spiral bands [AD-A258190] p 1584 N93-17859

Neighboring extremal guidance for systems with piecewise linear control using multiple optimization [AD-A258191] p 1631 N93-17860

Structural simulation coupling for transient analysis [AD-A258192] p 1643 N93-17861

An analysis of contract cost overruns and their impacts [AD-A258422] p 1683 N93-17862

Development of a standard set of software indicators for aeronautical systems center [AD-A258424] p 1616 N93-17863

The application of function points to predict source lines of code for software development [AD-A258447] p 1616 N93-17892

CFD-based approximation concepts for aerodynamic design optimization with application to a 2-D scramjet vehicle [AD-A258084] p 1435 N93-17893

Radar based case study of a Northeast Colorado winter storm [AD-A258256] p 1585 N93-17901

Robust multivariable feedback design for uncertain linear systems [AD-A258257] p 1648 N93-17902

Tropical cyclone motion and recurvature in TCM-90 [AD-A258258] p 1585 N93-18010

Predicting the movement of Carolina coastal fronts [AD-A258280] p 1585 N93-18012

Project Ares: A systems engineering and operations architecture for the exploration of Mars [AD-A258082] p 1734 N93-18021

Reliability, Maintainability, and Supportability (RMS) education in engineering schools [AD-A258260] p 1552 N93-18026

Dual-task training strategies and aging [AD-A258261] p 1602 N93-18027

Development of a prototype Air Force Institute of Technology (AFIT) Research Management System (ARMS) [AD-A258267] p 1685 N93-18028

Public space launch acquisition: A comparative case study [AD-A258141] p 1455 N93-18083

Range scheduling automation for the Air Force satellite control network: A case study in computer system development [AD-A258142] p 1454 N93-18084

Applying commercial style acquisition practices to the procurement of commercially available aircraft [AD-A258143] p 1683 N93-18087

A low velocity approximation for the relativistic Vlasov-Maxwell system [AD-A258300] p 1665 N93-18100

Method of preparing a diamond-abrasive mixture [AD-A258228] p 1492 N93-18123

Analysis and comparisons of inverted meridional winds from space-borne measurements of (OI) 5577A [AD-A258299] p 1576 N93-18126

Device for applying powder coatings [AD-A258229] p 1492 N93-18218

A study of illness related lost time in transport aircraft crewmembers [AD-A258193] p 1602 N93-18298

An algorithm for the solution of a traveling salesman problem to minimize the average time to demand satisfaction [AD-A258301] p 1645 N93-18302

Method of processing composites on a latex base (Description of an invention for an author's certificate) [AD-A258455] p 1478 N93-18423

An investigation of the influence of advanced aircraft diagnostics on the technological sophistication of maintenance personnel [AD-A258988] p 1403 N93-18887

Graphic representation in managerial decision making: The effect of scale break on the dependent axis [AD-A258989] p 1683 N93-18888

Generalization and parallelization of messy genetic algorithms and communication in parallel genetic algorithms [AD-A258994] p 1630 N93-18890

A user interface to a true 3-D display device [AD-A258995] p 1614 N93-18891

Cathodoluminescence spectroscopy of zinc germanium phosphide ZnGeP2 [AD-A258996] p 1674 N93-18892

An intelligent real-time system architecture implemented in Ada [AD-A259002] p 1640 N93-18893

Data reduction with least squares differential correction using equinoctial elements [AD-A259004] p 1454 N93-18894

An experimental investigation of a finite circulation control wing [AD-A259044] p 1440 N93-18896

The effects of iconic presentation on individuals [AD-A258785] p 1603 N93-18949

Analysis of Titan 4 launch responsiveness [AD-A259021] p 1456 N93-18950

Detection of spoofing, jamming, or failure of a Global Positioning System (GPS) [AD-A259023] p 1433 N93-18951

A toposcopic investigation of brain electrical activity induced by motion sickness [AD-A259024] p 1599 N93-18952

The non-linear dynamics of composite cylindrical shells [AD-A259026] p 1558 N93-18953

ETANN hardware implementation for radar emitter identification [AD-A259077] p 1508 N93-18958

A generic template extractor (GENTEX) in C for VLSI design verification [AD-A259078] p 1521 N93-18959

Optical Haar wavelet transforms using computer generated holography [AD-A259079] p 1538 N93-18960

Power analysis in flexible automation [AD-A259080] p 1549 N93-18961

Improving the quality of machine translations by providing stylistic guidelines to authors and editors [AD-A258786] p 1687 N93-18977

Solving nonlinear composite material problems using the Automated Structural Optimization System (ASTROS) [AD-A258811] p 1479 N93-18988

A wind tunnel study of magnus effects on a differentially rotating missile [AD-A258812] p 1408 N93-18989

Shock tube study of the effects of large density differences and blowing ratio on heat transfer to a film-cooled flat plate [AD-A258813] p 1532 N93-18990

Excitation and de-excitation mechanisms of Er-doped GaAs and AlGaAs [AD-A258814] p 1675 N93-18991

Design and characterization of optically pumped vertical cavity surface emitting lasers [AD-A258815] p 1541 N93-18994

Increasing the corrected field of view of an adaptive optical telescope [AD-A258816] p 1663 N93-18995

Laser phase front measurements using a phase conjugate Twyman-Green interferometer [AD-A258821] p 1542 N93-18996

Development of an engine/airframe performance matching scheme for jet engine retrofit [AD-A258822] p 1449 N93-18997

An experimental determination of the effects of blending collocated and non-collocated sensor measurements to control a flexible structure [AD-A258823] p 1559 N93-18998

Theory and implementation of wavelet analyses in rational resolution decompositions [AD-A259040] p 1509 N93-19000

Enhancement of audio localization cue synthesis by adding environmental and visual cues [AD-A259041] p 1652 N93-19001

An analysis of USSPACECOM's space surveillance network sensor tasking methodology [AD-A258971] p 1509 N93-19010

Parallel simulation of structural VHDL circuits on Intel Hypercubes [AD-A258999] p 1521 N93-19012

Creating and manipulating a domain-specific formal object base to support a domain-oriented application composition system [AD-A259018] p 1624 N93-19016

Analysis of whole-sky imager data to determine the validity of PCFLOS models [AD-A259042] p 1587 N93-19020

Processability of polythiophene thin films by ultraviolet photo bleaching [AD-A259043] p 1495 N93-19021

Cation production and reactions induced by electron impact on tetraethoxysilane [AD-A258830] p 1675 N93-19064

X-AAARF: An X window based version of the AFIT Algorithm Animation Research Facility [AD-A258832] p 1625 N93-19065

Extended Lyapunov exponents for second order systems [AD-A258838] p 1647 N93-19066

A model of Global Positioning System (GPS) Master Control Station (MCS) operations [AD-A258846] p 1433 N93-19067

A synthetic environment for satellite modeling and satellite orbital motion [AD-A258847] p 1470 N93-19068

The effect of an adaptive optical system's spatio-temporal response on imaging performance [AD-A258848] p 1663 N93-19069

Development of a protocol usage guideline for conservative parallel simulations [AD-A258851] p 1630 N93-19070

Locating an imaging radar in Canada for identifying spaceborne objects [AD-A258969] p 1510 N93-19087

Phase conjugation in optical fiber via stimulated Brillouin scattering with feedback from a barium titanate crystal [AD-A258824] p 1675 N93-19088

Nozzle/cowl optimization for a hypersonic vehicle on a typical trajectory [AD-A258827] p 1441 N93-19089

Behavior of a titanium matrix composite under quasi-static tensile and compressive loading [AD-A258828] p 1480 N93-19090

Open and filled hole static tensile strength characterization of metal matrix composite SCS-9/Beta21s [AD-A258829] p 1480 N93-19091

Collisional detachment of anions using Fourier transform mass spectrometry [AD-A258972] p 1656 N93-19092

Characterization of stall inception in high-speed single-stage compressors [AD-A258973] p 1449 N93-19093

Acquisition of direct sequence spread spectrum signals using digital signal processing techniques [AD-A258974] p 1510 N93-19094

Strategies for optimal control design of normal acceleration command following on the F-16 [AD-A258975] p 1450 N93-19095

Passive damping of a solar array [AD-A258976] p 1559 N93-19096

Corporate information management and business process improvement under the unit cost program: An analysis of a system for the Air Force Institute of Technology [AD-A258984] p 1687 N93-19098

The effects of viscosity on a conically derived waverider [AD-A259019] p 1534 N93-19101

Automated control of aircraft in formation flight [AD-A259020] p 1450 N93-19102

Improvements to LQGI/LTR methodology for plants with lightly damped or low frequency poles [AD-A258841] p 1648 N93-19112

Creating and manipulating formalized software architectures to support a domain-oriented application composition system [AD-A258900] p 1626 N93-19335

Behavior of a centrally notched cross-ply and unidirectional ceramic matrix composite in tension-compression fatigue [AD-A258907] p 1480 N93-19336

Analysis of kriging applied to resolution enhancement of digital satellite imagery [AD-A258914] p 1626 N93-19337

A model for determining task set schedulability in the presence of system effects [AD-A258915] p 1626 N93-19338

Vibration suppression in large flexible space structures using active control techniques [AD-A258916] p 1470 N93-19339

Experimental investigation of the aerodynamics of independently rotating cylindrical shells [AD-A258917] p 1417 N93-19340

Radar cross section models for limited aspect angle windows [AD-A258918] p 1510 N93-19341

Design and development of a high-speed Winograd fast Fourier transform processor board [AD-A258919] p 1522 N93-19342

Examining a layered approach to function and design representation for reusable software components [AD-A258920] p 1626 N93-19343

A two-dimensional particle simulation of parallel plate Radio-Frequency (RF) glow discharges [AD-A258856] p 1510 N93-19349

An approximate solution for the linearized spinup dynamics of a dual-spin spacecraft
[AD-A258903] p 1470 N93-19350
Helicopter flight control system design using the linear quadratic regulator for robust eigenstructure assignment
[AD-A258904] p 1451 N93-19351
Methods for viewing radar cross section data in three dimensions
[AD-A258905] p 1626 N93-19352
Nonlinear large displacement and moderate rotational characteristics of composite beams incorporating transverse shear strain
[AD-A258908] p 1559 N93-19353
Effect of thickness and ply layup on the collapse characteristics of cylindrical composite shells with large cutouts
[AD-A258909] p 1481 N93-19354
Spectral and spatial pattern recognition in digital imagery
[AD-A258910] p 1627 N93-19355
Integrated Blade Inspection System (IBIS) upgrade study
[AD-A258912] p 1449 N93-19356

Laser damage of HR, AR-coatings, monolayers and bare surfaces at 1064 nm
[NASA-CR-192156] p 1541 N93-18772
NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-191004] p 1754 N93-19390
Use of cyclic current reversal polarization voltammetry for investigating the relationship between corrosion resistance and heat-treatment induced variations in microstructures of 400 C martensitic stainless steels p 1490 N93-19391
Hydrogen leak detection in the Space Shuttle p 1457 N93-19392
Kinematic analysis of the ARID manipulator p 1552 N93-19393
Calibration of the ARID robot p 1552 N93-19394
ARID relative calibration experimental data and analysis p 1552 N93-19395
Chemical characterization of some aqueous leachates from crop residues in 'CELSS' p 1594 N93-19399
Training evaluation final report p 1682 N93-19405
Needs assessment final report p 1682 N93-19406
Investigation of the bandwidth of multimode optical fibers used with 1550-nm LED and laser sources p 1664 N93-19409
A logistics and potential hazard study of propellant systems for a Saturn 5 derived heavy lift (three-stage core) launch vehicle p 1475 N93-19410
**UNIVERSITY OF NORTHERN ILLINOIS, DE KALB.**
Impedance and voltammetric studies of electrogenerated polyaniline conducting films
[AD-A258328] p 1493 N93-18256
**UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.**
Velocity distributions of H and OH produced through solar photodissociation of H2O p 1720 N93-19266
Development of an electrochemical method for field testing of protective coatings
[AD-A258754] p 1496 N93-19866
**UNIVERSITY OF SOUTHWESTERN LOUISIANA, LAFAYETTE.**
Comet nongravitational forces and meteoritic impacts p 1712 N93-19207
**UNIVERSITY OF WESTERN CAROLINA, CULLOWHEE, NC.**
Hurricane risk assessment to rollback or ride out a cost versus loss decision making approach p 1588 N93-19411
**UNIVERSITY OF WESTERN ONTARIO, LONDON.**
Evolution of the Quadrantid meteor stream p 1708 N93-19177
Forward-scatter radiant mapping p 1697 N93-19178
Cartography of asteroids and comet nuclei from low resolution data p 1718 N93-19249
**UTAH STATE UNIV., LOGAN.**
The flow of plasma in the solar terrestrial environment
[NASA-CR-192106] p 1744 N93-18780
**UTAH UNIV., SALT LAKE CITY.**
Deeply penetrating events in the extremely high-energy cosmic ray flux p 1746 N93-19384
**UTRECHT STATE UNIV. (NETHERLANDS).**
Testing superperfection of k-trees
[RUU-CS-92-09] p 1645 N93-18196

## V

**VANDERBILT UNIV., NASHVILLE, TN.**
An investigation of the near and induced flow fields of an axially symmetric jet, issuing normal to a plane surface, into a quiescent medium p 1533 N93-19041
**VIRGINIA POLYTECHNIC INST., BLACKSBURG.**
Analysis and optimal design of pressurized, imperfect, anisotropic ring-stiffened cylinders
[NASA-CR-191375] p 1479 N93-18774
**VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.**
Geometrically nonlinear analysis of laminated elastic structures
[NASA-CR-191055] p 1476 N93-17924
Pressurized lunar rover
[NASA-CR-192034] p 1544 N93-18015
Design of a pressurized lunar rover
[NASA-CR-192033] p 1545 N93-18016
PARAS program: Phased array radio astronomy from space
[NASA-CR-192025] p 1695 N93-18115
An experimental investigation of interacting wing-tip vortex pairs
[AD-A258471] p 1406 N93-18272
Micromechanics of crenulated fibers in carbon/carbon composites
[NASA-CR-192170] p 1478 N93-18767
Formulation of a structural model for flutter analysis of low aspect ratio composite aircraft wings p 1450 N93-19019
Partial-wave analyses of hadron scattering below 2 GeV
[DE93-004368] p 1657 N93-19502
**VIRGINIA UNIV., CHARLOTTESVILLE.**
Superconducting materials performance report, 1 May 1992 - 28 February 1993
[DE93-002786] p 1672 N93-18400
Experiments on the nuclear interactions of pions and electrons
[DE93-001800] p 1655 N93-18590
Characterization and defect analysis of high temperature aluminum-based metal matrix composites p 1480 N93-19060
A geometrical description of microstructure with application to Al powder metallurgy processing p 1489 N93-19061
Numerical simulations of drainage flows on Mars p 1742 N93-19816
**VON KARMAN INST. FOR FLUID DYNAMICS, RHODE-SAINT-GENESE (BELGIUM).**
Introduction to Flutter of Winged Aircraft, volume 1
[VKI-LS-1992-01] p 1450 N93-18142
Computational Fluid Dynamics, volume 1
[VKI-LS-1992-04-VOL-1] p 1528 N93-18540
Computational Fluid Dynamics, volume 2
[VKI-LS-1992-04-VOL-2] p 1529 N93-18563
Validation of central and upwind 3D compressible flow solvers p 1529 N93-18564
Axial Flow Compressors, volume 1
[VKI-LS-1992-02-VOL-1] p 1530 N93-18721
Axial Flow Compressors, volume 2
[VKI-LS-1992-02-VOL-2] p 1531 N93-18731
Rotating stall: Modeling-measurement techniques; unsteady loss-unsteady flow field p 1531 N93-18732

## W

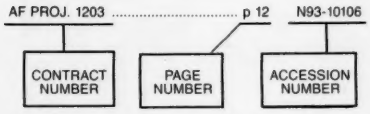
**WALES UNIV. INST. OF SCIENCE AND TECHNOLOGY, CARDIFF.**
The Fourth Conference on Organized Thin Films
[AD-A258315] p 1672 N93-18310
**WASHINGTON STATE UNIV., PULLMAN.**
Theoretical investigations of ultrafast phenomena in condensed matter
[AD-A258496] p 1661 N93-18088
Circular dislocation loops and their application to the micromechanics of fibrous composites p 1480 N93-19043
Ray methods for acoustic scattering, optics of bubbles, diffraction catastrophes, and nonlinear acoustics
[AD-A258938] p 1652 N93-19082
**WASHINGTON UNIV., SAINT LOUIS, MO.**
Enhanced performance using physiological feedback
[AD-A258006] p 1601 N93-17816
North Massif lithologies and chemical compositions viewed from 2-4 mm particles of soil sample 76503 p 1735 N93-18788
Resource availability at Taurus-Littrow p 1736 N93-18792
Possible petrogenetic associations among igneous components in North Massif soils: Evidence in 2-4 mm soil particles from 76503 p 1737 N93-18798
The Apollo 17 regolith p 1737 N93-18799
**WASHINGTON UNIV., SEATTLE.**
Project Minerva: A low cost manned Mars mission based on indigenous propellant production
[NASA-CR-192020] p 1734 N93-18048
Multi-discipline Arctic oceanography and acoustics program: The Geodesic Underice Tramway System (GUTS)
[AD-A258323] p 1589 N93-18254
Formulation and error analysis for a generalized image point correspondence algorithm
[NASA-CR-192005] p 1621 N93-18570
A combined experimental analytical methodology for characterizing the thermoviscoplastic deformation of a metal matrix composite p 1479 N93-19032
Stability of nonequilibrium shear flows p 1534 N93-19056
**WESTFIELD COLL., LONDON (ENGLAND).**
Philosophy and updating of the asteroid photometric catalogue p 1693 N93-19203

Formation of the Leonid meteor stream and storm
p 1721 N93-19267
On the dynamical structure of the Trojan group of asteroids p 1721 N93-19269
**WESTINGHOUSE ELECTRIC CORP., BALTIMORE, MD.**
DARPA initiative in concurrent engineering (DICE). Phase 4: Electronics pilot project
[AD-A258927] p 1522 N93-19446
Acquisition and use of Orlando, Florida and Continental Airbus radar flight test data p 1420 N93-19603
**WESTINGHOUSE ENVIRONMENTAL MANAGEMENT CO. OF OHIO, CINCINNATI.**
Proposed Lower Limits of Detection (LLD), Decision Limits (LC), and error terms for identified analytes from the inorganic, isotopic, bioassay, and organic groups
[DE93-002942] p 1484 N93-19752
**WESTINGHOUSE HANFORD CO., RICHLAND, WA.**
MOCAL: A Monte Carlo albedo code
[DE93-002049] p 1654 N93-18388
Meeting the challenge of responding to stakeholder information needs: A program model
[DE93-002047] p 1683 N93-18409
**WESTINGHOUSE IDAHO NUCLEAR CO., INC., IDAHO FALLS.**
Verification of thermodynamic codes REACT and EQUILIB for the study of non-aqueous inorganic systems
[DE93-001403] p 1679 N93-19470
**WICHITA STATE UNIV., KS.**
The airline quality report, 1992
[NIAR-92-11] p 1418 N93-18036
Impact response of laminated plates subjected to transverse loading
[NIAR-92-5] p 1560 N93-19360
The international forum on airline quality teaching guide
[NIAR-92-13] p 1680 N93-19376
Proceedings of the ML-92 Workshop on Machine Discovery (MD-92)
[NIAR-92-12] p 1688 N93-19711
Discovery of regularities in databases
p 1688 N93-19714
Incremental generation and exploration of hidden structure p 1690 N93-19726
X ray characterization of Au/Ni multilayer thin films
[NIAR-92-7] p 1678 N93-19881
Consumer interest in the air safety data of the airline quality rating. Testimony to the US House of Representatives, Committee on Government Operations, Government Activities and Transportation Subcommittee
[NIAR-92-4] p 1432 N93-19941
**WIEN UNIV. (AUSTRIA).**
Uncertainty management by relaxation of conflicting constraints in production process scheduling
p 1636 N93-18673
**WISCONSIN UNIV., GREEN BAY.**
Determination and representation of electric charge distributions associated with adverse weather conditions
p 1588 N93-19403
**WISCONSIN UNIV., MADISON.**
Self-similar fluid dynamic limits for the Broadwell system
[AD-A257950] p 1527 N93-18215
Modeling energy and mass fluxes from prairie canopies
[NASA-CR-191801] p 1566 N93-18232
X Ray System, Lightweight Medical (XRSLM)
[AD-A258159] p 1597 N93-18295
ARM Fourier transform spectrometer data analysis tools
[DE93-004648] p 1586 N93-18454
Development of phosphate-based ceramic membranes
[DE93-003285] p 1494 N93-18572
Study of magnetic bearings with high temperature superconductors, phase 3
[NASA-CR-192229] p 1551 N93-19378
**WISCONSIN UNIV., MILWAUKEE.**
Pax permanent Martian base: Space architecture for the first human habitation on Mars, volume 5
[NASA-CR-192042] p 1606 N93-18156
**WOODS HOLE OCEANOGRAPHIC INST., MA.**
Kinematic evaluation of end effector design
[AD-A257519] p 1544 N93-18002
**WORCESTER POLYTECHNIC INST., MA.**
Microgravity ignition experiment
[NASA-CR-192057] p 1498 N93-18053
**WORLD METEOROLOGICAL ORGANIZATION, GENEVA (SWITZERLAND).**
Hydrological aspects of accidental pollution of water bodies
[WMO-754] p 1572 N93-18095
Urban climatology in Africa. Special issue of the African urban quarterly, volume 5, numbers 1 and 2, February and May, 1990
[WCASP-19] p 1587 N93-18592
**WRIGHT LAB., EGLIN AFB, FL.**
Architecture/environment evaluation
[AD-A257849] p 1613 N93-18348
**WRIGHT LAB., WRIGHT-PATTERSON AFB, OH.**
Add-on damping treatment for the F-15 upper-outer wing skin
[AD-A258470] p 1438 N93-18248
**WRIGHT RESEARCH DEVELOPMENT CENTER, WRIGHT-PATTERSON AFB, OH.**
Panoramic cockpit displays p 1608 N93-19765

## Y

**YALE UNIV., NEW HAVEN, CT.**
Plio-Pleistocene time evolution of the 100-ky cycle in marine paleoclimate records p 1581 N93-18972
A first-order global model of Late Cenozoic climatic change: Orbital forcing as a pacemaker of the ice ages
p 1581 N93-18973

## Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

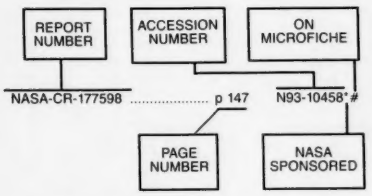
# REPORT NUMBER INDEX

## Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

## NASA SCIENTIFIC AND TECHNICAL INFORMATION PROGRAM PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Program provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

*Scientific and Technical Aerospace Reports* (*STAR*) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications;
- Other U.S. Government agency and foreign patents and patent applications;
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *International Aerospace Abstracts* (*IAA*). *IAA* is issued on the 1st and 15th of each month and is available from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, NY 10019.

## ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points — central points of document acquisition and control within qualified organizations — or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Program (JTT)
International STI Program
Washington, DC 20546-0001
USA
703-271-5640

## SUBJECT SCOPE

The subject scope of *STAR* and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

## HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

**16 SPACE TRANSPORTATION**
Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance*. For space suits see *54 Man/System Technology and Life Support*.

## CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

## DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

## LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

## COLOR COPIES

An increasing number of NASA scientific and technical reports are being produced with color graphs, charts, illustrations, and photographs. An indication that a document has color pages follows the source and pricing (SAP) information in the *STAR* citation.

Registered users of the NASA Scientific and Technical Information Program will receive ordered documents with color at no additional cost, as long as stock copies of the document are available. Otherwise, an additional fee of $2.00 per color page will be charged. The NASA Center for AeroSpace Information staff will contact registered users to determine individual user's needs.

## NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

## SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, address inquiry to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum, Karlsruhe. Gesellschaft fur wissenschaftlich-technische Information mbH 7514 Eggenstein-Leopoldshafen 2, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

**FEDERAL DEPOSITORY LIBRARIES:** To provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. (These libraries are not sales outlets.) At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, appears on page A-8. A local library can contact a regional depository library to help locate specific reports, or direct contact may be made by an individual.

## PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintianed by the British Library Lending Divison, Boston Spa, Wetherby, Yorkshire, England, for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*.

European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA—Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those you will transmit to NASA, DOD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR*'s companion journal, *IAA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

## PURCHASE OF *STAR*

*STAR* is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI) at $94.00 domestic, $117.00 foreign. Single copy prices: $33/domestic, $41/foreign.

An annual, cumulative *STAR Index* is also available at $54/domestic and $65/foreign.

*STAR* is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Microfiche of the abstract sections of *STAR* are available, on annual subscription, from CASI. Annual subscription rates are $216.00 North America; $432.00 foreign.
